1. Yahweh's Military Retinue. *ṣābāʾ* is also used to designate the retinue of Yahweh, reflecting the Hebrew belief that Yahweh led the armies of Israel (Num 10:35–36; Deut 33:2–5, 26–29; Josh 5:13–15; Judg 5:23; Isa 13:1–5; Joel 4:11b—Eng 3:11b; Ps 68:8–13, 18—Eng 68:7–12, 17; etc.). This usage could be applied to the arena of human warfare (Exod 6:26; 7:4; 12:17, 41, 51). One of the clearest examples of this is found in David's exchange with Goliath, where the young Israelite notes that he has come out to fight in the name of "Yahweh *Ṣĕbāʾôt,* the god of the battle lines of Israel *(maʿarkôt yiśrāʾēl)*" (1 Sam 17:45). Additionally, the association of Yahweh war with the ark (cf. especially 1 Sam 4:1–7:2) further exemplifies the conception of Yahweh's involvement in military affairs.

In the cosmic arena, Yahweh is depicted as the one who musters the heavenly army *(ṣĕbāʾ milḥāmâ;* Isa 13:4). As the "host of the heights" *(ṣĕbāʾ hammārôm;* Isa 24:21), the celestial bodies are depicted as the heavenly corps under the command of Yahweh. This "host of heaven" is conceived as the creation of Yahweh, the members of which constitute his heavenly army (Isa 40:26; 45:12; Pss 33:6; 103:21; 148:2; Gen 2:1; Sir 17:32; 24:2; 43:8). Indeed, the sun, moon, and stars may be depicted as composing this heavenly retinue (Josh 10:12–13; Judg 5:20; Hab 3:11; Dan 8:10). While preparing for the conquest of Jericho, Joshua encountered his heavenly counterpart, "the commander of the army of Yahweh" *(śar-ṣĕbāʾ-yhwh),* who appeared in the guise of a warrior to deliver a message prior to the conquest of the land (Josh 5:14–15; see also Dan 8:11). In this function, the members of this heavenly army might be conceived as angels, i.e., "messengers" of Yahweh. In Ps 103:20–21 Yahweh's messengers *(malʾākāyw),* the mighty warriors *(gibbōrê kōaḥ),* are included among his host *(ṣĕbāʾāyw),* his ministers who do his will. When Jacob encounters the "messengers of God" *(mălʾākê ʾĕlōhîm),* he responds by calling them "the army of God" *(maḥănēh ʾĕlōhîm),* providing an etiology for the place name Mahanaim (Gen 32:2–3—Eng 32:1–2). At Qumran the angelic figures are often designated as warriors (1QM 15: 14; 12: 8; 1QH 3: 35–36; 5: 21; 8: 11–12; etc.), and in the NT, the "heavenly host" is depicted alongside the angels (Luke 2:13).

2. Yahweh's Council. In conjunction with this messenger function attributed to the members of Yahweh's heavenly armies, the "host of heaven" are also depicted as members of Yahweh's heavenly council. In 1 Kgs 22:19, the prophet Micaiah ben Imlah proclaims: "I saw Yahweh seated upon his throne and all the host of heaven were stationed about him *(wĕkol-ṣĕbāʾ haššāmayim ʿōmēd ʿālāyw* [cf. 2 Chr 18:18])." It was these figures who served to execute the will of the deity (1 Kgs 22:19–23 = 2 Chr 18:18–22; Isaiah 6). Within the context of the depictions of the divine council, these beings are called *bĕnê ʾēlîm,* "sons of god" (Pss 29:1; 89:7—Eng 89:6; compare *bĕnê [hā]ʾĕlōhîm,* Deut 32:8 [LXX; 4QDt]; Gen 6:2, 4; Job 1:6; 2:1; *bĕnê ʿelyôn,* Ps 82:6). More commonly, they are referred to as "holy ones" *(qĕdōšîm,* Deut 33:2–3; Job 5:1; 15:15 [Q]; Pss 16:3; 89:6, 8—Eng 89:5, 7; Zech 14:5; *qōdeš,* Exod 15:11; Pss 77:14—Eng 77:13; 93:5). These beings, while clearly assigned an inferior status (cf. Deut 3:24; 10:17; Jer 10:6; Pss 86:8; 95:3; 135:5; etc.), constituted the "host of heaven." The parallelism of "the morning stars" with "all the sons of god" *(kôkĕbê bōqer//kol-bĕnê ʾĕlōhîm;* Job 38:7), when coupled with those references to the heavenly bodies as participants in the wars of Yahweh (Josh 5:13–15; 10:12b-13a; Judg 5:20; Ps 148:2–3), clearly suggests the identity of the groups. As members of the assembly, they also serve to praise Yahweh in his court (Pss 29:1; 148:2–3).

3. Objects of Worship. Given the distinctive function of these heavenly beings, it should occasion no surprise that they were accorded special status by some and became the object of worship. The worship of "the host of heaven" *(ṣĕbāʾ haššāmayim)* is consistently condemned in the biblical materials. Such worship practices were equated with the worship of "other gods" *(ʾĕlōhîm ʾăḥērîm;* Deut 17:3), and they are often listed alongside "the sun, the moon, and the stars" (Deut 4:19; 17:3; Jer 8:2; 2 Kgs 23:4–5). In these instances, the *ṣĕbāʾ haššāmayim* seem to include the totality of the celestial bodies and the signs of the zodiac (2 Kgs 23:5), as did the militaristic application of the term. The practice of worshipping these beings constitutes the reason for part of the Deuteronomistic Historian's condemnation of both Israel and Judah; the historian condemns the worship of "the host of heavens" along with that of Baal and Asherah. Altars were built to the *ṣĕbāʾ haššāmayim,* to whom incense and libations were offered (2 Kgs 17:16; 21:3, 5 = 2 Chr 33:3, 5; Jer 19:13; Zeph 1:5). Though

Babylonian and Assyrian influences are often cited as motivating factors in such practices, a common Canaanite background seems more likely.

C. Yahweh *Ṣĕbāʾôt*

According to certain traditions contained in the Hebrew Bible, the god of Israel was called "Yahweh [the god] of Hosts," *yhwh [ʾĕlōhê] ṣĕbāʾôt,* for that was "his name" (Isa 47:4; 48:2; 51:15; Jer 10:16; 31:35; 46:18; Amos 4:13; 5:27). The plural form *ṣĕbāʾôt* occurs as part of the divine name 285 times in the Hebrew Bible. In 267 of these occurrences, *ṣĕbāʾôt* follows the name Yahweh immediately, while the longer phrase *yhwh ʾĕlōhê (haṣ)ṣĕbāʾôt* occurs 18 times. The precise meaning and grammatical explanations for the name and its various forms continue to be debated. The interpretation of the divine name Yahweh as well as the broad range of possible meanings for the epithet *ṣĕbāʾôt* heighten the difficulties involved in a resolution to the issue.

Three general approaches are characteristic of the attempts to resolve the problem. If the original form *yahweh* was a verb, possibly a causative form of "to be," then the phrase *yhwh ṣĕbāʾôt* might be interpreted as a part of a longer sentence name, perhaps an original epithet of the Canaanite god El. According to this explanation, the name would mean "he creates the heavenly armies." The longer form of the epithet, *yhwh ʾĕlōhê ṣĕbāʾôt,* "Yahweh, the god of hosts," might then be viewed as a secondary interpretation that developed when the name Yahweh was seen as only a proper name.

Though it is possible that the phrase *yhwh ṣĕbāʾôt* preserves the verbal force of the divine name, it is also clear that the divine name functions in most instances as a proper noun. If Yahweh is so interpreted, then the term *ṣĕbāʾôt* may be taken as an abstract or intensive plural noun, "might" or "mighty," used in apposition to Yahweh. Such an interpretation might be suggested by the common LXX translation of *yhwh ṣĕbāʾôt* as *kyrios pantokratōr,* "the Lord Almighty." This explanation avoids the problem of interpreting *yhwh* as a proper name in the construct state. The inscriptions discovered at Kuntillet ʿAjrud, which refer to *yhwh šmrn* and to *yhwh tmn,* may be relevant to this problem. If these are to be read as "Yahweh of Samaria" and "Yahweh of Teman" (cf. Hab 3:3), then these might furnish a Hebrew parallel for understanding *yhwh ṣĕbāʾôt* as a construct chain, hence "Yahweh of hosts." The LXX translation *kyrios tōn dynameōn* reflects such an understanding of the term.

1. Cultic Name. Despite the controversies surrounding the exact nature of the epithet *ṣĕbāʾôt,* there is general agreement that the origin of the name is to be found within the Israelite cultus, most probably in association with the militaristic qualities associated with the independent use of the term *ṣābāʾ.* The epithet *yhwh ṣĕbāʾôt* is not attested in the Pentateuch, Joshua, or Judges. The first occurrence of the phrase, according to the canonical arrangement of the Hebrew Bible, is in association with the ark of the covenant and the cult center at Shiloh. In 1 Sam 4:4 the ark is called "the ark of the covenant of *yhwh ṣĕbāʾôt,* who is enthroned on the cherubim" (cf. 2 Sam 6:2). The association of *yhwh ṣĕbāʾôt* with the ark and with the cultic shrine of Shiloh (1 Sam 1:3, 11) suggests that the origins of the epithet are to be found in the pre-Jerusalem cultus. The significance of the ark and the traditions associated with it is illustrated by David's establishment of the ark in his new cult center, with which it came to be associated (2 Sam 6:2, 18; 2 Sam 7:8, 26; Isa 6:3; etc.).

The premonarchical Israelite traditions which interpret the ark as a war palladium upon which the god of Israel was enthroned and from which he led the armies of Israel make explicit the association of the epithet "Lord of Hosts" with the ark and with its military functions (1 Sam 17:45). The warrior imagery of the Lord of the heavenly armies, marching victoriously from war over his enemies, is clearly portrayed in Ps 24:8, 10 where "Yahweh of Hosts," "Yahweh strong and mighty," the "mighty warrior," the "king of glory," is praised.

2. Associations with Prophetic Speech. Of the 285 occurrences of *ṣĕbāʾôt* as part of a divine epithet, 251 (88%) are to be found in the prophetic books. Additionally, 244 instances (97.2%) of the phrase *yhwh ṣĕbāʾôt* (or the variant *yhwh ʾĕlōhê [haṣ]ṣĕbāʾôt*) occur in the following six works: Isaiah 1–55 (62x); Jeremiah (82x); Amos (9x); Haggai (14x); Zechariah (53x); Malachi (24x). A major conceptual background for Hebrew prophecy was formed by the idea of the prophet as the messenger of Yahweh (Hag 1:13; Mal 3:1) who had been privy to Yahweh's council (Jer 23:18, 22; Amos 3:7). The frequent introduction of prophetic oracles with the phrase "thus says Yahweh" *(kōh ʾāmar yhwh)* suggests a further connection between the prophetic messenger role and the name *yhwh ṣĕbāʾôt.*

Regrettably, the connection of the epithet *ṣĕbāʾôt* with the formula *kōh ʾāmar yhwh* is not at all clear. Despite the attractiveness of the suggestion that the formula *kōh ʾāmar yhwh ṣĕbāʾôt* might have originated as part of a priestly oracle ritual associated with the ark, the use of the epithet with the messenger formula does not seem to support such a position. The inability to demonstrate that such a connection can be traced back to early traditions does not diminish the significance of the name *yhwh ṣĕbāʾôt* in Hebrew prophecy. For Isaiah, Yahweh *ṣĕbāʾôt,* "Yahweh of Hosts," was the god of Israel (5:16, 24; 21:10; 44:6), the one who mustered and commanded the heavenly armies (13:4; 34:4; 45:12). The abstract nature conveyed by the epithet might be indicated by the LXX's transliteration of *ṣĕbāʾôt* by *sabaōth* throughout the book of Isaiah (see also Rom 9:29; Jas 5:4). A connection between *ṣĕbāʾôt* and *kōh ʾāmar yhwh* may be demonstrated for Jeremiah, Haggai, Zechariah, and Malachi, however. While such might indicate that this is a late, postexilic prophetic development, the importance of the epithet as an expression of the power and majesty of Israel's god is not diminished. Additionally, with the possible exception of Amos, these prophetic works display a close association of one kind or another with Jerusalem and the temple establishment. For these prophetic voices, Yahweh *ṣĕbāʾôt,* envisioned as the leader of both the earthly and heavenly armies, directed the affairs of history, both earthly and cosmic, through the proclamation of his divine decree, delivered by either heavenly or prophetic messengers.

HOSTS, LORD OF. One of the most enigmatic divine names in the Hebrew Bible is *yhwh ṣĕbāʾôt* (here = YHWH Seba'ot), commonly translated "LORD of Hosts," or "Yahweh of Hosts." The LXX usually renders it as *kyrios pantokratōr,* "Lord Almighty," or *kyrios tōn dynameōn,* "Lord of the Forces" (*dynamis* is used in the military sense in both Attic and Hellenistic Greek). Alternatively, one may simply get the transcription *sabaōth.* This is the form of the name quoted in the NT (Rom 9:29; Jas 5:4).

In addition to the name YHWH Seba'ot, which occurs 261 times, we also get the forms *yhwh ʾĕlōhê ṣĕbāʾôt,* "YHWH God of Hosts," and *ʾĕlōhê ṣĕbāʾôt,* "God of Hosts." All told, variant forms of the epithet occur 284 times in the Hebrew Bible, twice in the NT.

A. The Host(s)
B. Origin
C. YHWH Seba'ot as Divine Warrior
D. YHWH Seba'ot as King
E. Significance

A. The Host(s)

The most obvious place to begin an examination of this divine epithet is the meaning of "hosts." The related Heb verb *ṣbʾ* occurs 14 times in the Bible, 9 times in clearly military contexts (Num 31:7, 51; 2 Kgs 25:19 = Jer 52:25; Isa 29:7 [2x], 8; 31:4; Zech 14:12). The occurrence in Isa 31:4 is especially noteworthy, since the verb occurs together with the name YHWH Seba'ot.

The noun *ṣābāʾ* is used in a variety of ways, including (1) war or warfare, (2) an army celestial or terrestrial, (3) luminaries of the sky and, by extension, astral deities and other celestial beings, and (4) creation in general. It is found in predominantly military contexts, in numerous instances in connection with holy war. The commanders of the military are regularly called *śārê ṣĕbāʾôt,* "commanders of the hosts" (Deut 20:9; 1 Kgs 2:5; 1 Chr 27:3). A peculiar story in Joshua 5 tells of Joshua's encounter with a celestial military figure who is said to be *śar ṣĕbāʾ yhwh,* "the commander of YHWH's army" (Josh 5:14; cf. Dan 8:10). Clearly, the texts speaks of YHWH as the commander of some celestial host that fights on Israel's behalf (cf. 2 Sam 5:22–25). The heavenly host apparently is comprised of the luminaries, sometimes perceived as gods of the heavenly council, who fight at YHWH's command against the enemies of YHWH's people (Judg 5:11–21; Josh 10:12–14).

In Ps 148, the heavenly hosts are extolled to praise YHWH (vv 1–5):

> Praise YHWH from the heavens,
> Praise him from on high.
> Praise him, all his angels,
> Praise him all his host.
> Praise him, O Sun and Moon,
> Praise him, all you radiant Stars.
> Praise him, O heaven of heavens,
> You waters of high heavens.
> Praise the name of YHWH,
> For he commanded and they were created.

The heavenly host which YHWH created (cf. Gen 2:1; Ps 33:6; Isa 40:26; Neh 9:6) is perceived here as members of the celestial court. This view is evident also in Ps 103:19–21:

> YHWH has established his throne in heaven,
> His kingship rules over all.
> Bless YHWH, all his angels,
> Mighty ones who do his bidding,
> Obeying his every word.
> Bless him, all his hosts,
> His ministers who do his will.

The pl. noun *ṣĕbāʾôt* is used in reference to Israel as "the hosts of YHWH" (Exod 12:41; cf. Exod 7:4; 6:26; 12:17, 51). Israelite armies are called *ṣĕbāʾôt* (2 Kgs 2:5 = 1 Chr 27:3). Several psalms contain laments that God had failed to "go forth" with Israel's *ṣĕbāʾôt* (Pss 44:10—Eng 44:9; 60:12—Eng 60:10; 108:12—Eng 108:11). The implication is that YHWH's march with Israel's hosts was something to be expected.

It is not surprising, therefore, that *ṣĕbāʾôt* is taken to refer to YHWH's celestial and/or terrestrial hosts, the divine council, the luminaries of the sky, and the totality of creation. Some would take the name to mean "Militant YHWH," "Powerful YHWH," or the like. A few scholars stress the military aspect of the epithet; others deny it, or prefer to stress the royal aspects. No doubt the epithet denotes all these elements; they are not mutually exclusive.

B. Origin

The epithet YHWH Seba'ot does not occur at all in the Pentateuch or in Joshua and Judges. It first appears in connection with the central sanctuary at Shiloh where the ark was located. Given the military connotations of the root *ṣbʾ* and the use of the ark as a war palladium (see ARK OF THE COVENANT) it is likely that the title was first used at Shiloh in association with the ark. In that period the ark was called by its full name, "the ark of YHWH Sĕba'ot who sits enthroned upon the cherubim" (cf. 1 Sam 4:4; 2 Sam 6:2; 1 Chr 13:6; Isa 37:16).

The origin of the name *yhwh ṣĕbāʾôt* is not known. F. M. Cross posits plausibly that it was originally the epithet *par excellence* of the divine warrior in Israel (*CMHE,* 65–71). In its full and primitive form, the name may have been

something like *ʾil dū yahwi ṣabaʾōt, "the god who created the hosts," the divine name YHWH being originally a causative verb. As a proper name, YHWH would not have been put in the construct state, argues Cross. That is to say, the epithet *yhwh ṣĕbāʾôt* originally denoted the role of Israel's god as creator of the heavenly hosts, the luminaries that sit as lesser divine beings in the heavenly council. The name *yhwh ʾĕlōhê ṣĕbāʾôt* is actually secondary, according to Cross; *ʾĕlōhê* was inserted after YHWH came to be known as a personal name to ease the awkward construction. Nevertheless, the divine epithet is overwhelmingly *yhwh ṣĕbāʾôt;* the inserted form occurs only 21 times out of the possible 284, including 4 occurrences of the peculiar name *yhwh ʾĕlōhîm ṣĕbāʾôt.* The designation *ʾĕlōhê ṣĕbāʾôt*—without *yhwh*—occurs twice. If the juxtaposition of a proper name with another noun is indeed intolerable in Heb syntax, one may conclude that the name YHWH, whatever its origin, came to be understood as a virtual synonym for "god"—in the same way that the proper name El became a generic term in West Semitic. The inscriptions from Kuntillet ʿAjrud in the Sinai desert seem to confirm that YHWH could, in fact, be juxtaposed in this manner. There we find the names *yhwh šmrn* "YHWH (god) of Samaria," and *yhwh tmn* "YHWH (god) of Teman."

The close association of the name YHWH Seba'ot with the expression *yōšēb hakkĕrūbîm,* "the one who sits enthroned on the cherubim," leads Cross and others to consider the representations of El in West Semitic texts and iconography. Mettinger, indeed, argues for the original epithet being *ʾēl ṣĕbāʾôt.* El was the chief god of the Canaanite pantheon. He is known in the Ugaritic texts as the ultimate king. In reliefs from the region, he is portrayed as one who is enthroned, frequently on seats supported by cherubim. He is known as the creator (Ug "creator of creatures") who formed all things, including the gods of the divine council. In Philo Bylius' account of Sanchuniathon's "Phoenician History" from around the 7th century B.C.E., Kronos (El) is a triumphant warrior-king surrounded by *symmachoi,* "allies," called *eloeim,* that is, *ʾĕlōhîm* "gods" (*Praep. Evang.* 1.10.17–21). The image of El as a warrior is supported by the appearance of an Ugaritic personal name *ʾilmhr,* "El is a Warrior" (cf. Heb *ʾēl gibbôr,* Isa 9:5; 10:21), as well as various West Semitic names indicating the might of El.

Even though El may have been regarded as a divine warrior in Canaanite myth, the paradigmatic warrior-god is Baal. According to Sanchuniathon's "history" reported by Philo, Baal was called Demaros (Ug *ḏmr,* "brave one"). In Ugaritic mythology, Baal was the god who fought the unruly waters Sea and River, and the monsters of the waters, Tannin (cf. Ps 74:13; Job 7:12), Lothan (=Leviathan), and *Šlyṭ* with the seven heads." It was Baal who fought for his right to rule and to take possession of his temple in "the mount of victory."

If the name *yhwh ṣĕbāʾôt* is ultimately linked with the El traditions, the ties of the Shiloh cultus with El are noteworthy. There was apparently an annual festival at Shiloh to which Samuel's ancestor Elkanah went regularly "to offer sacrifices to YHWH Seba'ot" (1 Sam 1:3; cf. Judg 21:19). The name Elkanah means "El has created," and recalls the epithet "El (God), the Highest One, who created Heaven and Earth" (Gen 14:19, 22). A similar name, "El (God), Creator of the Earth" is attested in several West Semitic inscriptions and is reflected in the name Ilkunirsa from a Hittite adaptation of a Canaanite myth. The creative function of El is clear in the Ugaritic texts where El is called by the gods "our creator *(qnyn).*" In all these cases the verb used of creation is the same as in the name Elkanah.

In any case, Elkanah is said to be the son of Jeroham. There is no theophoric element on the latter name, but one may conjecture from the El-names of both Jeroham's father (Elihu, but 1 Chr 6:27 has Eliel—i.e., "My God is El") and son (Samuel) that the unmentioned deity may have been El. The LXX renders the name as *Ieremeel,* that is, with the theophoric element El. The names Jerahmeel and Jerahmeeli are attested only in late biblical texts; the former also on a late 7th-century seal. In Amorite onomastica, however, we find the names *Ya-ar-ha-mu, Ya-ar-ha-am-AN (=Yarḥamʾil), Ir-ḥa-mi-AN (=Yirḥamʾil), Ir-ḥa-mi-la,* and *Ir-ḥa-mi-il-la*—all names expressing confidence in the compassion of El. This is in accord with the character of El, who is called "the kindly one" and "the Compassionate" in Ugaritic (cf. also the epithet *ʾēl raḥûm* "Compassionate God" in Exod 34:6; Deut 4:31; Ps 86:15).

The issue at hand in 1 Samuel 1 appears to be the childlessness of Hannah, one of Elkanah's two wives. She went to the Shiloh sanctuary year after year, and yet remained barren. She wept bitterly and prayed that YHWH Seba'ot would give her a son. Certain facets of the story parallel the Ugaritic tales of Kirta and Aqhat. In the latter Ugaritic tale, a childless Danel performed a ritual, probably to induce a dream theophany. Subsequently he was blessed with fecundity by El. Kirta, too, became childless when all his seven children died. In a dream vision El descended to ask why Kirta was weeping and what it was that he desired. Kirta asked for nothing but the blessing of a son. In these stories, as elsewhere in West Semitic myths, El is the one who grants life and progeny.

The child who was born to Elkanah and Hannah was, of course, given the El-name Samuel. The boy ministered under the tutelage of Eli at the Shiloh sanctuary. There, as he slept before the ark, he received a dream vision. It is typical of El to communicate with an authoritative word through dreams, visions, or messengers. This is evident also in the tales of Kirta and Aqhat.

Yet the function of the ark in 1 Samuel 4–5 suggests a bellicose deity fighting to gain supremacy (note the mention of YHWH Seba'ot in 1 Sam 4:4). As in the myth of Baal, it appeared for a time that the status of Israel's god was in question. The ark was captured and placed in the temple of Dagon. In a confrontation with the Philistine god, YHWH gained dominion. The statue of Dagon fell prostrate before the ark of YHWH, as if in obeisance. Eventually, the heads and hands (power) of Dagon were cut off. Clearly, YHWH had triumphed over his rival god.

In another battle with the Philistines at Baal-perazim, YHWH Seba'ot's victory over his enemies is likened to the defeat of unruly waters: "YHWH has broken my enemies like the breaking of waters" (2 Sam 5:20; see the divine epithet in v 10). It was a victory scored over other gods. The divine images of the Philistines were abandoned and carted away by the Israelites. In the next chapter (2 Samuel 6), the emblem of triumphant YHWH Seba'ot (v 2) was brought into the newly won mount and put in its place

(v 17). A symbolic banquet was given in the name of YHWH Seba'ot (v 18).

It appears that the epithet YHWH Seba'ot combines themes and dominant imagery in the El and Baal traditions: of El a god enthroned, and of Baal a god in battle. The El tradition was certainly known at Shiloh, but it is uncertain precisely when that tradition might have been combined with motifs normally associated with Baal.

C. YHWH Seba'ot as Divine Warrior

The name YHWH Seba'ot is mentioned in the ancient Ark Narrative (1 Samuel 4–6), in the context of Israel's battle with the Philistines, near Ebenezer and Aphek. In the face of defeat, the Israelites brought forth from Shiloh "the ark of the covenant of YHWH Seba'ot who is enthroned upon the cherubim" (1 Sam 4:4). The expressed purpose of that act was to engage YHWH in the battle. The entry of the ark into the battlefield was understood as YHWH's participation in Israel's war. Ironically, through the ark's capture and subsequent sojourn in Philistine territory, the power of YHWH was demonstrated.

From the start, the epithet YHWH Seba'ot is understood in military terms—at least in part. The epithet appears later in connection with a holy war against the Amalekites (1 Sam 15:2). Even more poignantly, this divine name is invoked by David against Goliath: "You have come to me with sword and spear and lance, but I have come to you in the name of YHWH Seba'ot, the God of the armies of Israel" (1 Sam 17:45). Elsewhere, too, YHWH Seba'ot is linked with David's rise to power: "David became greater and greater because YHWH, the God of *ṣĕbā'ôt,* was with him" (2 Sam 5:10; cf. 1 Chr 11:9). The language of the deity's accompaniment of the king belongs with the oracles of holy war in some Akkadian and Hittite texts, and is found also in certain propagandistic inscriptions in Old Aramaic.

D. YHWH Seba'ot as King

The Ugaritic texts portray El as a king in the divine council, surrounded by the minor gods *(bn 'ilm).* This is also the view of YHWH Seba'ot. In Isaiah's inaugural vision, he saw the deity sitting enthroned in the *hêkāl,* "temple/palace" (Isaiah 6). YHWH's stature exceeded earthly dimensions by far. Around him stood a host of seraphim, winged creatures in the service of the cosmic king. One is reminded here of Sanchuniathon's description of divine creatures: "two wings for each on the shoulders in order that they may fly with Kronos" (Eusebius *Praep. Evang.* 1.10.37). As in Sanchuniathon, the deity is presented as the triumphant king in the heavenly court. Isaiah declared: "My eyes have seen the King, YHWH Seba'ot!" (Isa 6:5, cf. v 3). This vision should be compared with that of Micaiah ben-Imlah, for Michaiah, too, saw "YHWH sitting on his throne, with all the host of heaven standing beside him" (1 Kgs 22:19 = 2 Chr 22:18). The royal imagery is unmistakable, but here, as in Isaiah, the military significance of YHWH Seba'ot is evident. In both cases, war with the Arameans was imminent. The same is true of the picture painted in Ps 89:6–12—Eng 89:5–11:

> Let the heavens confess your wonder, O YHWH,
> Your fidelity in the assembly of the holy ones.
> For who in heaven is equal to YHWH,
> Or likened to YHWH among the *bĕnê 'ēlîm?*
> A god *('ēl)* awesome in the council of the holy ones;
> Great is he, and feared above all around him.
> O YHWH, God of *ṣĕbā'ôt,* who is like you?
> Your might and your fidelity surround you.
> You rein the swelling of Sea;
> When its waves rise you calm them.
> You crushed Rahab like a carcass;
> With your mighty arm you scattered your enemy.
> The heavens are yours, yea, the earth is yours,
> The world which you created.

Again, the royal character of YHWH Seba'ot is combined with the martial character. The cosmic king is surrounded by his heavenly host. He is evidently enthroned by virtue of his defeat of Chaos in cosmogonic battle. Images of El and Baal are once again combined: YHWH is the God enthroned as heavenly king, but he is also the brave warrior who defeated the waters and the dragons of the sea.

The gods of the heavenly council are variously called *qĕhal qĕdōšîm,* "assembly of the holy ones" (v 6—Eng v 5), *bĕnê 'ēlîm,* "sons of God" (v 7—Eng v 6), *sôd qĕdōšîm,* "council of the holy ones" (v 8—Eng v 7), and *kol-sĕbîbâw,* "all who surround him" (v 8—Eng v 7). The expression *bn 'lm* is found also in Ps 29:1, various Ugaritic texts, Phoenician inscriptions from Karatepe and Arslan Tash, and in the Amman citadel inscription, where Milcom the patron god of the Ammonites is said to be "feared among the *bn 'lm.*" These divine beings are the hosts of heaven who fight at YHWH's command (Judg 5:20; cf. Josh 5:14–15; 10:12–14; Hab 3:10–11; Isa 40:26; 45:12) and are summoned to praise YHWH (Job 38:7; Pss 29:1–2; 103:19–22; 148:1–5). These luminaries were perceived as gods of the divine council. Hence the Israelites were commanded not to worship the hosts of heaven, for that was tantamount to worshipping other gods (Jer 19:13; Deut 4:19; 17:3; etc.).

E. Significance

The implication of the name YHWH Seba'ot is discernible in its conspicuously uneven distribution in the Hebrew Bible. It appears 82 times in MT of Jeremiah, but only 12 of these are reflected in the shorter and probably more authentic Greek version. Apart from this, the greatest number occur in texts deriving from the Zion tradition, or those in which the temple of Jerusalem was of utmost concern. The appellation occurs 56 times in Isaiah, 53 in Zechariah, 24 in Malachi, 14 in Haggai, and 15 in the Psalms. The contrast in the number of occurrences in First Isaiah (56 times) and Second Isaiah (6 times) is telling. The name does not appear at all in the Pentateuch, Ezekiel, or Third Isaiah, and it is relatively infrequent in the extensive histories of the Deuteronomist(s) and the Chronicler. The reason for this uneven distribution probably lies in the ideas of God associated with the name YHWH Seba'ot, namely God as warrior and God as king.

For Isaiah, YHWH Seba'ot is the great king (Isa 6:3, 5) who dwells on Mt. Zion (Isa 8:18). This is in accord with the view in the Zion psalms. In that tradition, Mt. Zion is called God's holy mountain and is equated with *yarkĕtê ṣāpôn,* "the far reaches of the north" (Ps 48:3—Eng 48:2).

This reference again reflects a conscious or unconscious merger of Baal and El traditions. Though Saphon is normally the abode of Baal, it is El who lives in the far reaches. It was there in his mountain abode that El convened the divine council (cf. Isa 14:12–14, the far north is the divine council where the "stars of El" are convened). Thus Zion is called "the city of the great king" and "the city of YHWH Seba'ot" (Ps 48:3, 9—Eng 48:2, 8). Therein is a river "whose streams make glad the city of God, the holy tabernacle of the Highest One"—that is, of the divine council (Ps 46:5—Eng 46:4). This again recalls the abode of El in the far north, "at the source of the two-rivers, in the midst of the double-deep" where the tabernacle of El was located (*CTA* 2.3.4; 4.4.21–22, etc.; Ezek 28:2, 16).

According to these Songs of Zion, the city cannot be successfully attacked because it is the dwelling place of YHWH Seba'ot. Thus the unruly nations may encroach upon Zion like the chaotic waters, but they will be held at bay because YHWH Seba'ot is in Zion (Pss 46:2–4, 7–8—Eng 46:1–3, 6–7; 48:1–12; cf. Isa 17:12–13). So YHWH Seba'ot is asked to rouse up and punish the unruly nations (Ps 59:6). At all events, YHWH Seba'ot is invoked at once as warrior and king to fight on Zion's behalf (Ps 80:3—Eng 80:2; cf. 84:4, 8—Eng 84:3, 7). Thus, in the face of Sennacherib's attack, Hezekiah went to the temple to pray (Isa 37:16 = 1 Kgs 19:15):

> O YHWH Seba'ot, who sits enthroned upon the cherubim,
> You alone are God of all the kingdoms of the earth.

The mention of YHWH's enthronement on the cherubim is a reference to YHWH as both warrior and king. All the explicit references to YHWH's enthronement on the cherubim are associated with his role as king and warrior (cf. 1 Sam 4:4; 2 Sam 6:2 = 1 Chr 13:6; Pss 80:2; 99:1; also 2 Sam 22:11 = Ps 18:11). At issue in Hezekiah's petition is the kingship of YHWH. Sennacherib had dared to call himself *hammelek haggādôl,* "the great king" (Isa 36:4, 13). In Zion theology, that was the title reserved for YHWH Seba'ot, who was perceived as the *ʿelyôn,* "the Highest One," in the divine assembly. Sennacherib had come to Jerusalem "to mock the living God." Hence YHWH was asked to vindicate his honor and deliver the city of his dwelling. For Isaiah, YHWH Seba'ot was at once king and warrior, who would fight *(liṣbō')* on Zion's behalf and protect the city (Isa 31:4–5).

Thus, in the Zion tradition, the name YHWH Seba'ot served to legitimate Jerusalem as YHWH's chosen city. The epithet is theologically loaded. Hence, even though Isa 9:6, 37:32, and 2 Kgs 19:31 all carry the same idiom, in the Deuteronomistic History the loaded term *ṣĕbā'ôt* is omitted (i.e., assuming the Hebrew consonantal text is correct). Such reticence in using this epithet is understandable, given the connotations that it carried. In the face of Judah's humiliation at the hands of the Babylonians, the name YHWH Seba'ot became theologically problematic. Thus, for example, Ezekiel and P (Priestly Writer) prefer to speak of God's presence in nonroyal and nonmilitary terms.

Isaiah 13 purports to be an oracle against Babylon. It is replete with literary and historical problems. Nevertheless, it is clear that it speaks with the idioms of the Zion tradition about a holy war, an eschatological battle on the Day of YHWH. The God of Zion has gathered "his consecrated ones" and his warriors for a holy war (Isa 13:3); YHWH Seba'ot is mustering a host for battle (Isa 13:4). The army will be comprised of troops from the nations, as well as from the ends of the heavens; celestial and terrestrial divisions of YHWH's hosts are gathered at YHWH Seba'ot's command.

The battle of YHWH Seba'ot is clearly waged not only in the historical realm but also in the end time. In the Isaianic apocalypse, YHWH Seba'ot is expected to punish "the host of heaven in heaven." Thereupon he will reign once again on Mt. Zion in his glory (Isa 24:21, 23). The victorious warrior will celebrate with an eschatological banquet for all peoples on Zion, the mount of his victory (Isa 25:6).

The eschatological battle is nowhere more emphatically articulated than in Zechariah 14, a chapter replete with the language of holy war. On that final day YHWH will go forth and fight against all nations, coming with "all the holy ones" *(kol-qĕdōšîm).* Then he will reclaim kingship over all the earth, and all nations will come to Jerusalem annually (cf. Judg 21:19; 1 Sam 1:3, 7, 21) "to worship the King, YHWH Seba'ot, and to keep the feast of Sukkoth" (Zech 14:16–17).

Thus the name YHWH Seba'ot denotes God as a victorious warrior enthroned as king of the divine council. He is ever ready to fight battles with the forces of chaos. As YHWH Seba'ot fought and won the cosmogonic battle, so he fights the battles of his people in the historical realm and will fight the ultimate battle in the end time.

HOTHAM (PERSON) [Heb *ḥôtām*]. Two persons appear in the Hebrew Bible with this name.

1. An Asherite, the son of Heber and brother of Japhlet, Shomer (=Shemer, 1 Chr 7:34?), and sister Shua, of the family of Beriah (1 Chr 7:30–32). He is apparently the same person as "Helem" [Heb *hēlem*] in 1 Chr 7:35, to whom is attributed four sons and at least eleven grandsons through his (firstborn?) son Zophah (1 Chr 7:36). His name occurs in a list of the heads of fathers' houses within the tribe of Asher (1 Chr 7:30–40), a list perhaps derived from some earlier military census. While the names in 1 Chr 7:30–31, up to "Malchiel," are paralleled in Gen 46:17 and Num 26:44–46, the rest of the list, Hotham included, is without parallel elsewhere. The numerous inconsistencies in the names in this Asher pericope point possibly to a collection of disparate notices loosely attached to the person of Heber, the son of Beriah the son of Asher (Braun *1 Chronicles* WBC, 119). That the Chronicler had an open mind on the extent and breadth of God's ideal people is evidenced here in his inclusion within that vision of so peripheral a tribe as Asher.

2. The father of Shama and Jeiel, two of David's famous military heroes (1 Chr 11:44b). In the KJV his name is given as Hothan and that of his second son as Jehiel. He is called an "Aroerite," and though it is possible that he came from Aroer in S Judah (1 Sam 30:28; *IDB* 1: 231), as the immediate context (1 Chr 11:41b–47) ostensibly singles out a number of warriors as hailing from Transjordan, he more probably had his residence either in Aroer in Gilead (Josh 13:25; Judg 11:33) or Aroer on the edge of the valley of the Arnon river (Deut 2:36; 3:12; 4:48). See AROER. While the upper portion of the complete list of David's mighty men or "officers" (if one is willing to read Heb *šālīšîm* in place of MT *sēlōšîm* in 2 Sam 23:13, 23, and 24; cf. Na'aman 1988: 79) is synoptic (2 Sam 23:8–17, 18–39=1 Chr 11:10–19, 20–41a), the additional sixteen names in 1 Chr 11:41b–47 are not. It is unlikely that this non-synoptic section is a postexilic invention, as there would seem to be no good reason for such a fabrication (see Williamson *1 and 2 Chronicles* NCBC, 104). The Chronicler evidently had access to a source beyond 2 Sam 23:8–39 and used it expeditiously to illustrate how supportive all Israel was to the rise of David as king (1 Chr 11:1–9; 12:1–41—Eng 12:1–40). While this support included men of valor mostly from Judah and Benjamin (*MBA*, map no. 94), some of it came even from Transjordan (1 Chr 11:10–41a, 41b–47). This emphasis upon the inclusiveness of Israel in the past was part of the Chronicler's theological agenda and hope for the Israel of his own day.

ROGER W. UITTI

HOTHIR (PERSON) [Heb *hôtîr*]. One of the fourteen sons of Heman who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:4). Hothir received the twenty-first lot cast to determine duties (1 Chr 25:28). Scholars have long suggested that the final nine names in 1 Chr 25:4 can be read as a liturgical prayer. For instance, Hothir is the *Hip'il* perf. form of the verb *yātar*, "show excess, give plentifully." It would function as the verb in the final line of the liturgical prayer as it is reconstructed by scholars. For a reconstruction and translation of the prayer, a summary of interpretative possibilities, and bibliography, see ELIATHAH.

J. CLINTON MCCANN, JR.

HOUSE OF THE FOREST OF LEBANON. See FOREST OF LEBANON, HOUSE OF THE.

HOUSE, ISRAELITE. From the beginning of the Iron Age until the Babylonian Exile, two major types dominated Israelite domestic architecture: the larger is usually called the "four-room house," the smaller, the "three-room house." A "two-room" variant appears in exceptional settings. Through 1987, more than 155 examples of these houses have been discovered (Shiloh 1987: 3), with new examples being found in the excavation of almost every Israelite Iron Age site. Against this, few examples occur in patently non-Israelite sites of the same period. On this basis it seems appropriate, at our present stage of understanding, to refer to these as "Israelite" houses.

Despite their ubiquitousness in the archaeological record, no satisfactory functional interpretation of these plans presently exists, and the satisfactory development of needed analyses would exceed the permissible limits of a dictionary article. In lieu of a useful present consensus, the following discussion is based on theoretical approaches and findings reached in the author's own working paper on the subject, intended for future monographic publication (Holladay fc.).

A. Definition and Description
 1. Floor Plan
 2. Major Constructional Features
 3. Interaction between Houses and Fortifications
 4. Family Unit
 5. Origins of the House Type
B. Functional Analysis and Reconstruction
 1. Unsatisfactory Current Consensus
 2. An Alternative Interpretation
C. Toward a New Consensus
 1. Ethnoarchaeological Data
 2. Ethnoarchaeology and the Israelite House
D. Socioeconomic Analysis

A. Definition and Description

1. Floor Plan. With few exceptions, the "four-room house" is known only from its ground plan. See Figs. HOU.01 (A and C), and HOU.04(B). By Iron II times, the entry is usually in the center of the front wall, leading into a large central space generally floored with beaten earth (rarely covered with marly chalk plaster). To either side of this larger area are side aisles delimited by pillars, gener-

ally associated with a stub wall. These aisles often have stone paving: cobbles or flagstones. Farther back, the columns generally give way to stone walls and doorways leading into small rooms, generally with dirt floors; in fact, one side may lack columns altogether, having only walled rooms. Across the back stretches the "fourth" room, usually entered from the central space, and usually having a dirt floor. Not infrequently it is subdivided.

Three-room houses vary mainly in having only one row of pillars, generally off center. See Figs HOU.01(B); HOU.02; HOU.04(A). Variations in floor plans often occur, however, when space constraints do not allow for the realization of the plan's regular arrangement (House 581 of Fig. HOU.01B), or when the owner's requirement for additional space leads to additions. See the side room in Figs. HOU.01(C) and HOU.04(B).

2. Major Constructional Features. a. Pillars. Regional availability of materials dictated variability in details. The hallmark pillars, allowing for shared air space and visibility in the forepart of the interior, vary according to the geography. Many sites in the central hill country, the Shephelah, and the Galilee used monolithic pillars, hewn from the local caprock. These regularly were reused from one period to the next. In the Negeb, pillars were often built of blocks or "drums" of roughly trimmed chert or limestone. The coastal region (e.g., Tell Qasile: Mazar 1951: 76) and the Jordan valley (e.g., Tell es-Saʿidiyeh: Pritchard 1964: 6) have examples of pillars built of mudbrick. The central hill country, Galilee, and the coastal plain also have examples of column bases on which apparently stood wooden pillars. In all cases, the load-bearing capacities of these pillars are in excess of that required to support a simple flat mud-plastered roof.

b. Wall Construction. Walls were usually founded upon at least a single course of stones, whether one or two stones wide, and in stone-rich areas several courses might be stone-built. Above this foundation the walls were built of mudbrick, plastered inside and out with a mud-chaff plaster. This was essential, and required at least yearly renewal to ward off the erosion of the mudbrick during the winter rains (see the prophetic reference to the dangers of shoddy maintenance in Ezek 13:10–18). Within spatially restricted fortified town sites, houses were regularly built adjacent to one another, often sharing their side wall(s) with their neighbors.

c. Roofing. As today in the Middle East, roofs were flat and served as important areas of domestic activity (cf. Josh 2:6–8; 2 Sam 11:2; Jer 19:13; 32:29). They were built upon beams and lintels over which were placed slats or poles (cf. Callaway 1976: 29), reeds, etc., which in turn were covered with mud and chaff plaster. This required regular compaction and resurfacing to maintain its waterproof qualities (cf. Eccl 10:18). Limestone cylinders (i.e., roof-rollers) are occasionally found in domestic contexts, but careful foot compaction is often used today. At Hasanabad, only two out of 43 active households owned stone roof-rollers, the landlord's agent owning a third (Watson 1979: 119–20). Deut 22:8 mandates the construction of parapets around house roofs. These are regularly depicted in Egyptian (Wreszinski 1935, pt. 2: pls. 35, 53, 54a, 56–58, etc.) and Assyrian (e.g., Ussishkin 1982: 80–85) representations of monumental Palestinian architecture. Since no houses have yet been found preserved to the roof line, house parapets cannot be demonstrated archaeologically. If they existed, waterspouts would have been required to remove water safely from the rooftops, but their remains would also be difficult to identify in the archaeological record (see, however, evidence for downspouts at Taanach [Lapp 1967: 21–22] and Gezer [Holladay 1971: 116, fig. 1]). No efforts seem to have been made as yet to discover erosional features around houses suggestive of drainage arrangements.

d. Other Features. Several other architectural and domestic features have been found in excavations, which can help to clarify the organization and functions of rooms and buildings. Shallow troughs are often found on top of the stubwalls between the characteristic pillars toward the front of the house. These are similar to the mud and stone mangers found in the stables at Beer-sheba and Hazor (Herzog 1973; Yadin et al. 1960: 6–9; pls. 4, 200–1; see STABLE, STABLES). Evidence of stairways (which are usually placed on the exterior) exists at many sites (e.g., Figs. HOU.01[C] and HOU.04[B]; Tell Beit Mirsim [Albright 1943: 51], Beer-sheba [Beit-Arieh 1973: 31, Fig. HOU.04(A) here], and Hazor [Yadin 1972: 184]), which in turn implies either the existence of upper stories (e.g., Shechem [Wright 1965: 161]; Jerusalem [Shiloh 1984: 14, 18–19]), or intensive use of the roof. Estimates of the heights of first stories, based upon the height of stairways or preserved stone lintels, etc., range from a low of 1.1 m (Tell en-Nasbeh [McCown 1947: 213]) to a more normal ca. 2.0 m (Tel Masos [Fritz and Kempinski 1983: 25]). Such heights are more in line with domestic stabling and storage functions than for areas of human habitation (below).

Ovens (cf. Gunneweg 1983: 106–12) are relatively frequent, generally in sheltered exterior settings, but also in the central space. Cooking hearths, on the other hand, are relatively infrequent (cf. Hazor [Yadin et al. 1960: pls. 7:3; 202 9/F], Mesad Hashavyahu [Naveh 1962: 92], Shechem [Wright 1965: 151–52; cf. also Figs. HOU.02 and HOU.04(B) here, the square, stone-lined heating and cooking hearths of Fig. HOU.03(A), and the round plastered heating hearths of Fig. HOU.03(B)]). Simple cooking pits also appear, e.g., in many of the central spaces of the Strata III-II houses at Tel Masos (Fritz and Kempinski 1983: 13), but they are by no means regularly present. The relative sparseness of these and similar facilities in the archaeological record suggests that cooking activities were regularly carried out in parts of the house not typically recovered archaeologically (below).

3. Interaction between Houses and Fortifications. The reference to Rahab, whose "house was in the wall of the city-wall" (Heb *bêtah bĕqîr haḥômâ;* Josh 2:15), may suggest that the passage dates to the later Iron II. Archaeologically attested city walls are in extremely short supply for the LB II (although that does not necessarily mean that there were none, since gates are known). Casemate walls would, in any case, not be expected. In the early Iron Age I, there is some evidence that houses were arranged around the perimeter of the town site in such fashion that the back rooms, together with connector walls, made up a sort of *ad hoc* casemate wall (Shiloh 1978: 45–46). This, however, does not seem to be what is implied by the account. Early Iron II casemate walls, as these are presently known, do

not incorporate private houses, although palaces may be built in (Hazor, Megiddo; [Yadin et al. 1960: pls. 199--200; Yadin 1972: 154–58, fig. 40]). On the other hand, the casemate town walls characteristic of the later Judean Iron II period regularly incorporated private houses, the casemate often serving as the rear, transverse architectural element of the three- and four-room houses of the period (e.g., Fig HOU.04[A]).

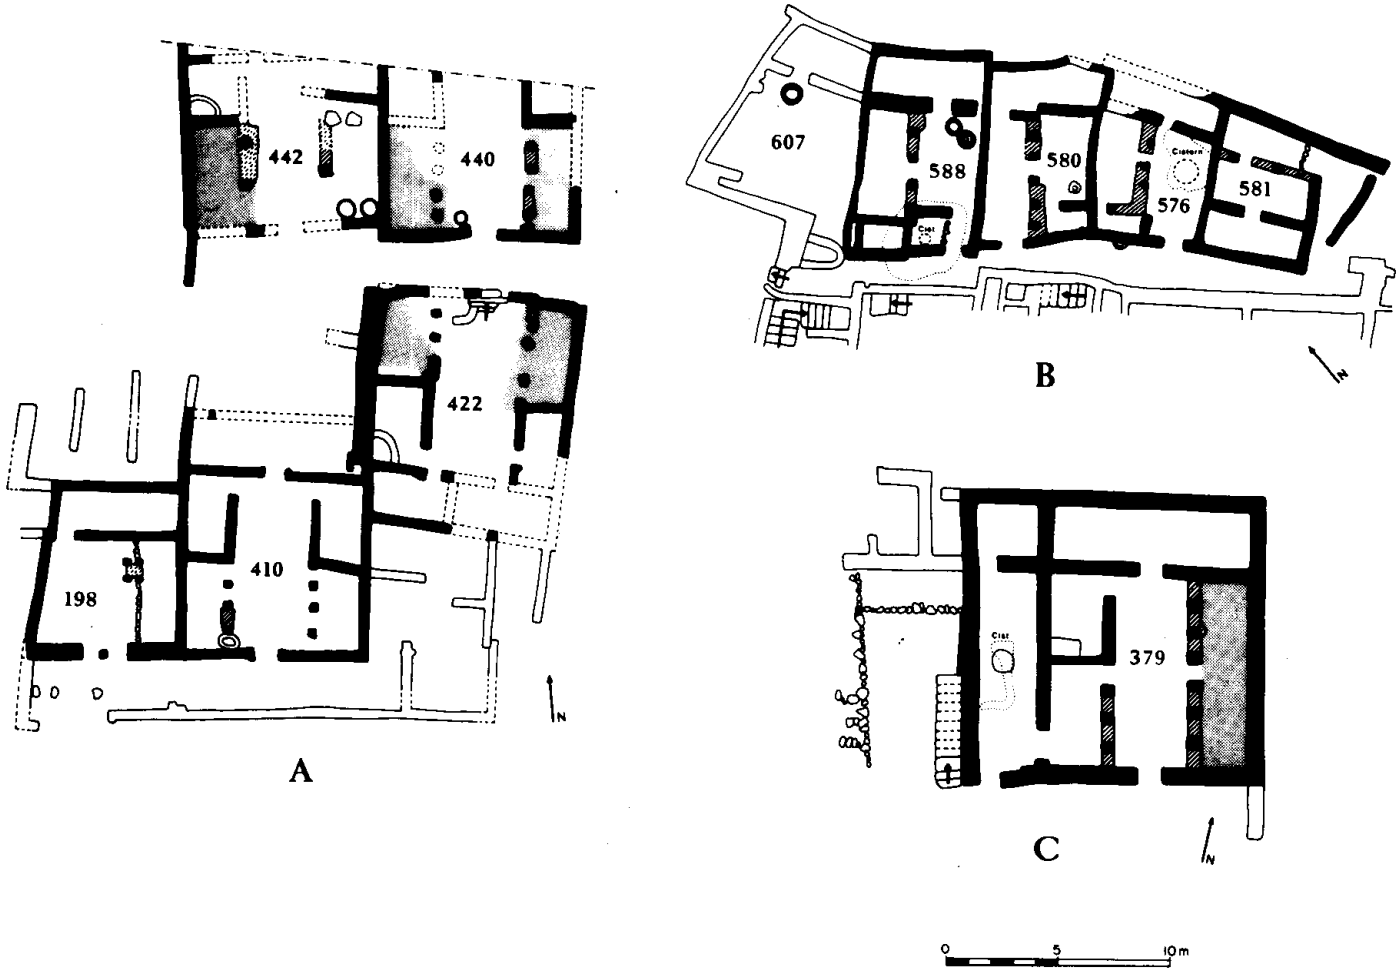
4. Family Unit. Cross-cultural analysis strongly suggests that houses of this general size were occupied by nuclear families, i.e., typically a mother, father, and their dependent children, plus any resident servants or slaves (Shiloh 1980: 29; Stager 1985: 17–18). Clustering of houses around shared common space (e.g., Figs. HOU.02 and HOU.01[A] [?]) may be taken as evidence for patrilocal residence patterns, reflecting the extended family structure known in the Bible as the *bêt ʾab*, "House of the Father" (Stager 1985: 18–23), although such residential patterning may, in the long run, be incompatible with the realities of long-term land use in the constrained urban environment.

5. Origins of the House Type. Houses of this general plan were already common in the "Israelite" hill country settlements, beginning perhaps as early as ca. 1200 B.C. (A. Mazar 1982: 168–70; Stager 1985: 3; Finkelstein *AIS*, 30, 254–55, 315–23), but it is unclear whether the general plan was an independent innovation of these people, or an outgrowth of a rare earlier LB house type (cf. summaries by Stager 1985: 17; Finkelstein *AIS*, 254–59). The only reasonable LB antecedent is the "Burnt Building" from LB II Tell Batash Stratum VII (Kelm and Mazar 1982: 9–13). Appeal to Philistine prototypes seems counterproductive, since the only examples of these plans associated with Sea People's settlement come from late 10th-century contexts (Tell esh-Shariʿa, Tell Qasile; cf. Holladay 1990). On balance, the very general use of houses of the three- and four-room type in the early hill country settlements versus the extreme paucity of reasonable LB prototypes seems to argue in favor of a hypothesis of independent invention, though future discoveries could easily alter this balance of probability.

Particularly in the late 10th century B.C., a few houses of this type do appear at theoretically non-Israelite sites, and some explanation of this phenomenon must be sought. Assuming as a test hypothesis that houses of this general plan were as strong a marker for ethnic self-differentiation as the "Amarna"-style house (which has a much longer history than simply the Amarna period) may have been for Bronze Age Egyptian residents of Canaan, one may ask: "What sort of house did David (assuming there is any trace of truth in the traditions) occupy at Ziklag?" The answer, suitably adjusted for date and occupant (e.g., traders), could easily account for the evidence presently in hand. I.e., it is not improbable that there was a sizable "Israelite" component to Tell Esh-Shariʿa Stratum VIII and Tell Qasile Stratum X, etc. This would be expected within the Solomonic *koine*. The fact that this house form does not characterize later Iron II Ashdod or Tel Miqne/Ekron seems sufficient basis to suggest that considerations other than simple function or availability governed the later Philistine's choice of architectural styles, since, by then, the three- and four-room house had an unbroken use-history of some 400–500 years in the region.

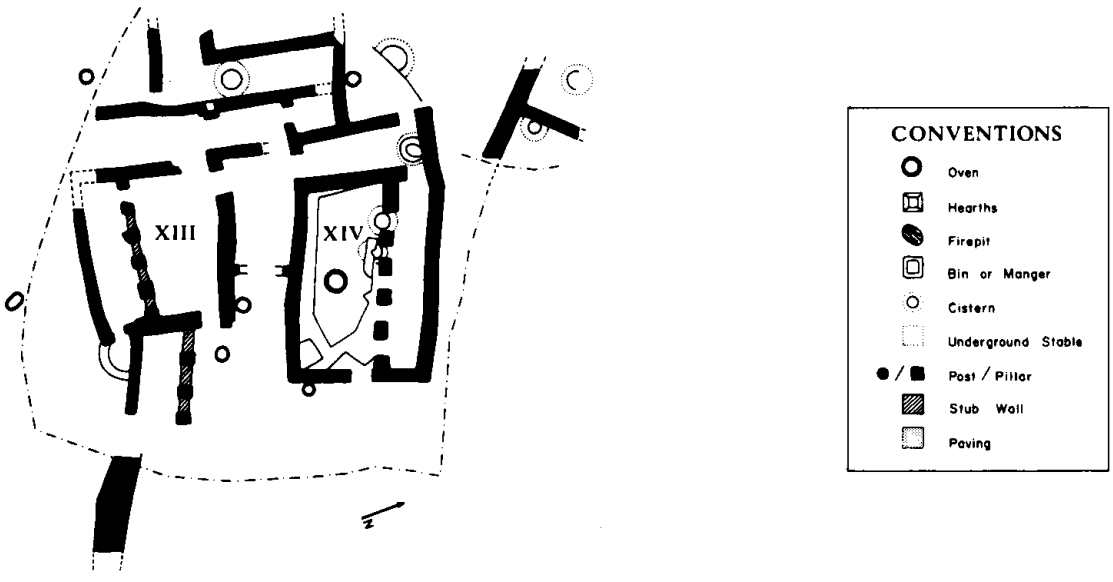
B. Functional Analysis and Reconstruction

1. Unsatisfactory Current Consensus. In spite of the large body of archaeological data available, published archaeological analyses attempting to interpret either the plan or its constituent elements have been few (note, however, Stager 1985: 11–17; Holladay 1986: 153–54). The prevailing general understanding of these structures is summed up in evolutionary terms by Herzog (1984: 76–77):



> The sole fundamental and constant feature [of the four-room house is] the broadroom at the rear. Considering primarily the function of the room (which is a factor of its shape), it is obvious that it served as the main living and sleeping quarters of the household (Shiloh 1970: 186). [Over the course of time] a courtyard was added to the front of the broadroom. . . . Subsequently, this enlarged courtyard may have been subdivided and one or two units partitioned off as work or storage areas.

This view of the broadroom's function, which lies at the heart of most present treatments, simply will not work. The broadroom of Beer-sheba House 75 (Fig. HOU.04 [A]) measures ca. 1.15 × 4 m, or ca. 4.5 m² (ca. 3′9″ × 13′1.5″). A person leaning against one wall could completely block passage by holding out one arm, and only four sleeping pallets would occupy the entire floor space, leaving no room for furnishings or storage. While the above is one of the smaller rear rooms, a survey of Braemer's catalogue of houses (1982: 162–269) shows a median width of 1.98 m, a measurement which does not significantly improve the problem of domestic logistics.



2. An Alternative Interpretation. More reasonably, in terms of space, Braemer has suggested that the central space was, in fact, the living area. A significant problem with this interpretation (if one is limited to a single-story structure) is that it enforces a strong interaction between the inhabitants and their livestock, assuming that animals were stalled in the side aisles (below), since the main function of the pillared structure, as opposed to solid walls, is to provide for open communication between the side aisle(s) and the central space.

C. Toward a New Consensus

A useful starting point is the recognition of the strong similarities between operative aspects of the Israelite and Judean tripartite pillared stables and the smaller-scaled side aisle(s) of the domestic houses, including bench-type mangers and paved standings, together with pillared construction. See STABLE, STABLES. Together with semicircular ground-level mangers and typically low ceiling heights, these features imply that the provision of stalling and folding facilities were central concerns both of the original designers and of following generations (cf. Wright 1965: fig. 79; Holladay 1982; 1986: 153–54; Stager 1985: 11–15; *contra* Herzog 1984: 77; Fritz and Kempinski 1983: 27). Since this very specialized house type is already characteristic at the early subsistence-based settlements (e.g., Ai and Kh. Radannah, cf. Fig. HOU.02), one may infer that the design was either an indigenous innovation aimed at solving the needs of agriculturalist and horticulturalist peasants, or was soon adapted to those needs. While facil-

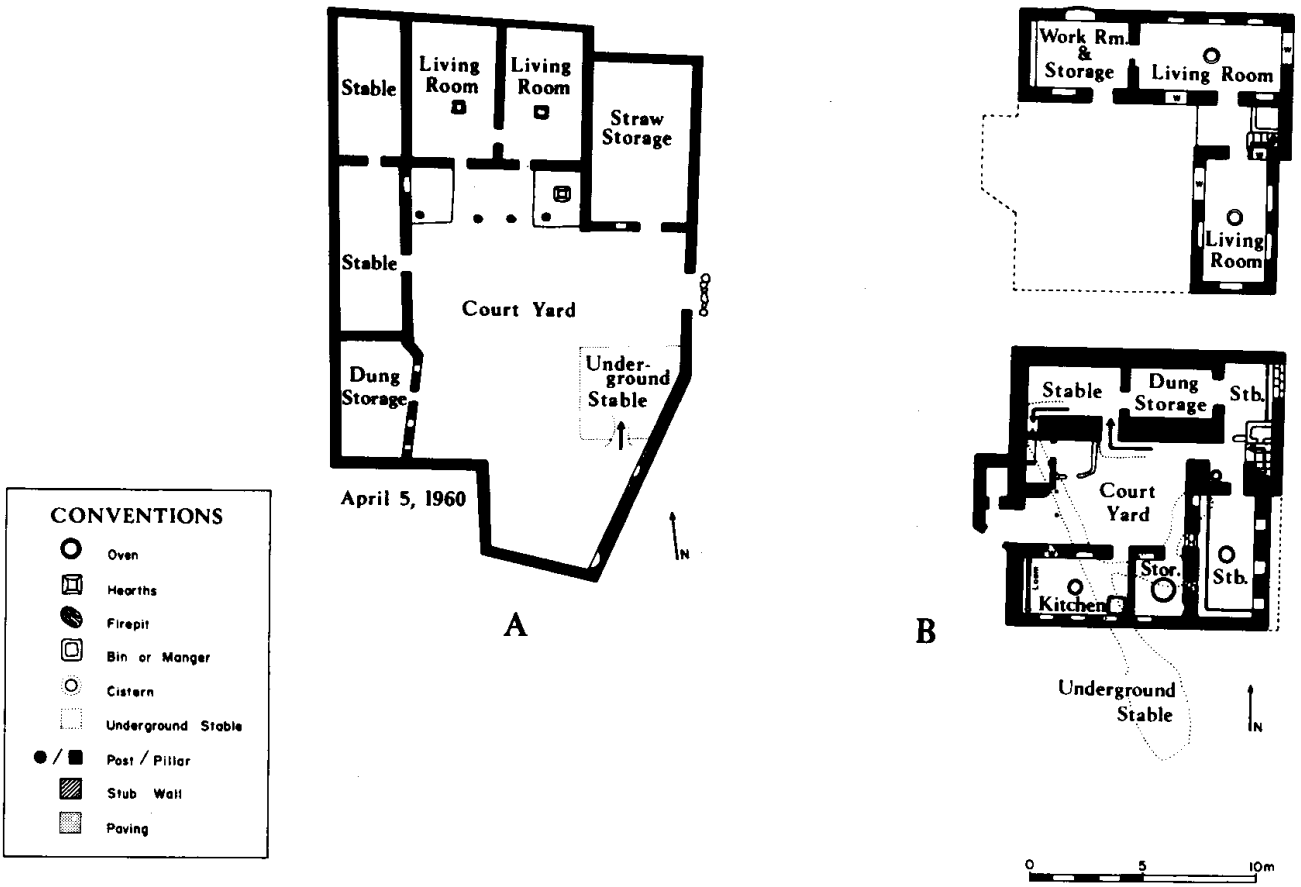
ities for animal care and agricultural storage can, from this perspective, readily be seen in the ground plan, one must consider what other needs must have been met in the layout, especially since the design was so successful that it became the standard house type for two independent kingdoms and lasted for more than 600 years. In particular, what can be inferred about other basic spatial requirements, layout, specialized room function, and overall form of the three- and four-room house—particularly of those elements not evident from the floor plan? And not only "what," but *how* can we reliably go about asking these questions about a vanished civilization? This is, of course, only another version of the basic question of valid archaeological inference.

As with other questions involving complex models of operating systems, the best source of insight is the study of similar systems in contemporary societies living at roughly the same stage of development and under most of the same environmental constraints. I.e., we should turn to the sphere of ethnology, particularly that of communities living in similar biospheres, keeping similar domesticates, and following similar subsistence strategies, which in the present case means mixed dry farming employing the simple plow.

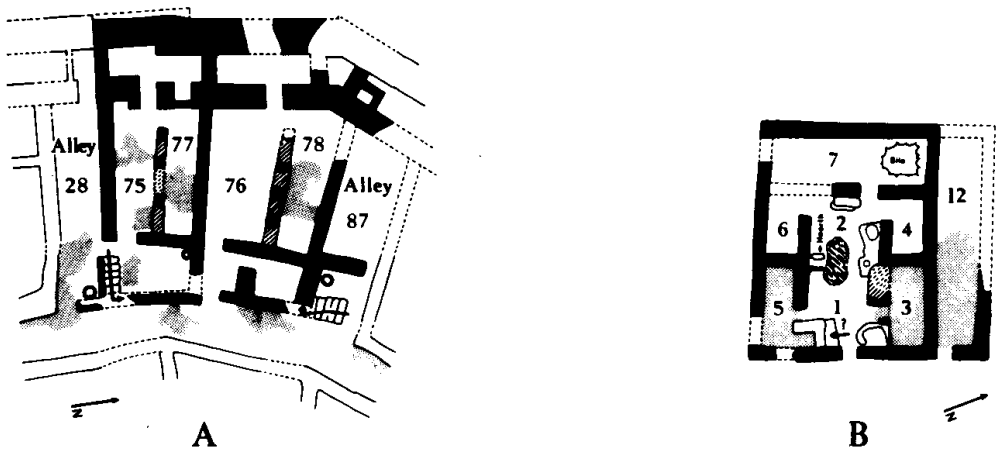
1. Ethnoarchaeological Data. Recent ethnographic studies (e.g., Watson 1979; Kramer 1979; 1982), explicitly conducted from the perspective of archaeologists' needs (which involves far greater concern for aspects of the material culture complex than is typical of most ethnographic approaches), have provided valuable new data to assist in generating hypotheses about ancient material remains and their functional implications. Among other issues, these researchers have studied the areal requirements for domestic occupation, which prove to be surprisingly similar among widely varying societies. While the figure of 10 m^2 roofed dwelling area per person (Naroll 1962) is most frequently cited, a more significant figure is that involving total roofed area per person, which, for Iranian peasant societies living under conditions closely similar to those of ancient Israel, work out to ca. 21 m^2 per person (LeBlanc 1971). This figure includes not only living space but also stabling, storage, and other activity space, and is more truly reflective of total domestic needs than the former.

Data from the ethnoarchaeological study of Hasanabad (a pseudonymous village in W Iran) show that a typical household of 4.5–5 people lived in roofed space, including wall thickness, ranging from 94.5 to 105 m^2 (the 21 m^2/person cited above; Watson 1979; LeBlanc 1971). Of this, slightly more than half was devoted to economic activities such as stabling and storage. See Fig. HOU.03. Hasanabad basically was a single-storied, sprawling village. In the few houses there which had second stories, in all cases the second floors were used for living rooms and light storage. Elsewhere, in houses within walled enclosures (e.g., a fortified city where space was at a premium), ground floors typically were devoted to the stabling of herds and flocks and heavy storage, while the second story was typically devoted to human habitation and light storage, the warmth of the animals contributing significantly to human comfort during the winter's cold (Fig. HOU.03 [B]; cf. Stager 1985: 12). This pattern can be seen today all around the Mediterranean.



While few of the ethnographically attested plans from modern Iran and Turkey (or those of late 19th- to early 20th-century Palestine) resemble those of ancient Israel, the function and spatial characteristics of the individual architectural elements involved in a nontechnological pastoralist/agriculturalist economy's housing must have been closely similar. Various animals require certain facilities and space, various goods must be stored under varying conditions for varying parts of the year, and domestic functions require a certain amount of space and various essential facilities. What differs among individual societies (even villages) are the "mental templates" and aesthetics governing the arrangements, together with technical details of construction. Compare the relative architectures of a New England fishing village (e.g., wooden "Cape Cod" houses), a densely packed urban environment (brick "townhouses"), a New Mexico adobe "ranch house," and a classic California suburb (stuccoed "California bungalows"). For a traditional Middle Eastern agriculturalist community, these similarities may be grouped into two major functional categories: the "Living Domain" and the "Economic Domain."

a. The "Economic Domain." From an architectural perspective, this involves adequate and appropriate housing for the goods and chattels involved in the quest for economic survival: animals, stored agricultural produce, and tools and supplies.



The typical Iranian agriculturalist's house (e.g., Fig. HOU.03) included a stable area for traction and transport animals (cows, bullocks, and donkeys), together with folding space for an average of 21 sheep and goats. Cattle and donkeys had their own stables. The floors characteristically were unfinished and covered with accumulations of dung and decomposing fodder which was occasionally cleaned out and used for fuel (Kramer 1982: 106). Watson does not give ceiling or beam heights but describes stables as being typically "low" (1979: 160). Stables were usually fitted with adobe mangers. Both semicircular ground-level and rectilinear bench types were used, the latter predominating. Some stables for sheep/goats were subterranean, with ceiling heights ranging from 1.5 to 3.5 m (Watson 1979: 160–61).

Other rooms served either as utility or store rooms, storing items such as food; animal feed; chaff/straw for fodder, mudbrick making, plastering, and mixing with dung for fuel; agricultural implements; and seasonal furniture. Room use often changed with the seasons, or as contents were consumed (note that Fig. HOU.03[A] reflects usage as of 5 April 1960). Grain and milled flour was sometimes stored in sacks or large mud-plastered wicker baskets, but most often on the ground floor in mud bins or chests raised on short legs (Watson 1979: 295; Kramer 1982: 100, 102, 105). Grain pits, mostly bell-shaped and averaging ca. 1 m^3, were variously used for either wheat or barley, or, in some villages, for barley alone. Some villages did not practice underground storage. Grain pits could be located in ground-level living rooms (often in the corners), storerooms, or courtyards.

Stables averaged 12.25 m^2 in area (internal), and many families had more than one stable. Storerooms averaged

HOU.04. House plans. *A*, "three-room" houses with controlled "side alley" space, incorporating elements of the casemate town wall as their rear transverse room at Beer-sheba Stratum 2, destroyed 701 B.C.; *B*, "four-room" house with an attached side room at Shechem. The building is restored to its configuration as of its primary destruction, ca. 725 B.C. Note the industrial installations in the central space. This building employed wooden pillars upon tall stone pillar bases and had a grain silo in the rear transverse room. *(Redrawn,* A, *from Ussishkin 1977;* B, *from Wright 1965: fig. 76, courtesy of J. S. Holladay, Jr.)*

12.4 m². Folding space for the (at the time strongly depressed) sheep/goat herd probably would average ca. 20 m².

Watson's research indicated that a family of five needed ca. 1800 kg of wheat (=ca. 66 bushels), including ca. 300 kg for seed and assuming an 80% extraction rate for flour, to subsist from harvest to harvest. Barley was considered feed for the animals and was useful as a cash crop. It was considered starvation food for humans (1979: 291). Barley requirements worked out to ca. 1080 kg/year (=ca. 49 bushels).

In ancient Palestine grain was often stored in in-ground silos or bell-shaped pits (Currid and Navon 1989). Some features in ground-level rooms could be interpreted as bins, although twofold bins (for wheat and barley) would be anticipated. Grain was also stored in store jars. For purposes of concrete visualization of the quantities of storage required, if we were to convert the above figures to the average capacities of the typical Judean *lmlk* store jar (Lachish Type 484; cf. Ussishkin 1983: 161–63), which would have held a median capacity of ca. 1.277 bushels of wheat each, 55 jars would have been needed to hold one family's annual requirements, with another 36 being needed for the lighter barley. The total aggregate weight would have necessitated ground-level storage, and, closely packed together, they would have occupied about 22.75 m² of floor space (11.5 m² if stacked two deep).

Other required foodstuffs must be factored in, such as legumes (e.g., Kramer 1982: 34), and, particularly for Palestine, wine and oil. To these must be added dung-cake and wood storage, dried fodder, a large straw store (above), and furniture, equipment, and tools. These items constitute subsistence requirements alone. Obviously, additional space would be required for surplus production. In season, portions of storerooms (or even ground-level living rooms) were partitioned off for the keeping of baby animals.

b. The "Living Domain." This is the portion of the house reserved for human occupation and food preparation, together with lighter storage and utility rooms. See Fig. HOU.03 In the ethnographic literature (esp. Watson 1979; Kramer 1982), this space usually consisted of a living room (ranging from ca. 11 m² to over 40 m², but averaging ca. 19 m² at Hasanabad), an entrance hall or foyer, and storage and/or utility rooms. Kitchens were present in most communities, but not in all.

Each nuclear family had its own living room. This was where the family ate, slept, did indoor work, and entertained. Some families had two living rooms (a mark of wealth), one for the entertainment of guests, the other for family living. Families with three living rooms rented out the third. Depending upon the location of cooking facilities and local custom, the living room, with its hearth and vertical loom, was sometimes considered women's domain (Hasanabad; Watson 1979), or men's domain ("Aliabad"; Kramer 1982), the kitchen, in the latter setting, being the domain of the women (often of an extended family), the vertical loom being set up there (Fig. HOU.03[B]), or, occasionally, in the foyer, which looked out upon the courtyard and was a preferred location for spinning and women's socialization and tea drinking. At Hasanabad, the entrance hall served for the storage of men's goods and outer clothing but was not a setting for social activity.

The living rooms studied were always characterized by the presence of a central hearth, either rectangular and stone-lined, or round and plastered, which provided winter warmth, light, and, at Hasanabad, served for cooking. In the summer, cooking was usually done in a special area of the courtyard. The living area was invariably mud-plastered, with annual renewal. Most living rooms were whitewashed, and special white earth (probably the Arabic *huwwar*) was often used to plaster the floors. Around the walls were pegs, niches, and window ledges, used to provide off-the-floor storage. Although less detailed and largely wanting measurements, observations in Palestine during the early decades of this century present much the same picture (Dalman 1942).

Kitchens varied from one community to another. Hasanabad had none, nor was bread baked in ovens, but on a metal baking tray not unlike Iron Age Palestinian pottery exemplars; at Aliabad there was one kitchen per compound (invariably housing a bread oven), usually serving the needs of several living rooms, occupied by members of one extended family. (In the villages studied, as in contemporary traditionalist Arab communities in Palestine, extended family groupings are based upon the principle of virilocality, i.e., having subordinate nuclear family residence patterns established in relation to the residence of the father or senior brother in the family; cf. Stager 1985: 18–22; below). Not infrequently, widows, or even whole families, also used the kitchen, appropriately furnished, as a living room. At other villages, kitchens occurred on a household-by-household basis, often associated with stables, and sometimes in semi-underground settings. At still other sites, including late 19th- to early 20th-century (A.D.) Palestine, they were separate rooms, often totally detached, entered from the courtyard. Except at Aşvan (Turkey: Hall et al. 1973: figs. 3, 4, 7; 273), disused fireplaces at Hasanabad, and elite houses in Palestine, chimneys were unknown, simple holes in the roof or side wall allowing some smoke to escape.

The ethnographic studies demonstrated a consistent need for light-duty storage and/or utility rooms for various domestic needs (cf. Fig. HOU.03[B]). In addition to furniture and miscellaneous storage, a wide variety of dried and otherwise preserved milk products, fruits, produce, and other more delicate and less bulky foodstuffs could be stored in these, or in facilities in or near the kitchen.

Exterior space was an important part of the household economy. Courtyard surfaces, which were often used as nighttime folding space in good weather, were customarily swept daily. The surface, however, was uneven, with damp spots, and was characteristically embedded with potsherds, mud oven fragments, pebbles, animal dung, and other rubbish. The corners would be used to store various bulky materials, including dungheaps (which otherwise were often located in village common space and served as an important area for women's socialization, dung cakes being the standard domestic fuel). Fixtures (not all occurring at individual sites) were ovens, hearths, food preparation platforms or areas, unroofed animal pens, and, in one semisedentarized village, a platform for the black tent. Customary courtyard activities included shearing, milking,

milk processing, cooking and baking, and various household manufacturing activities (e.g., felt making, horizontal looms). Kramer's (1982) data on 67 courtyards at Aliabad revealed great variability in size, with a mean of 103.3 m^2, but a median of only 74 m^2 and a standard deviation of 112.2 m^2.

Roofs were accessed either by stairs (including mudbrick staircases), ladders, or ramps. Roofs were important activity areas, generally within the women's domain, serving for socialization, the drying of clothes, food, and other agricultural products (including washed grain), and for the temporary storage of dried fodder, brush, wood, and wooden equipment. In densely settled towns, contiguous rooftops served as women's thoroughfares between households. Rooftops were also used in many locales for normal extensions of domestic activities, including sleeping during the summer months.

c. Summary Observations. Whatever the degree of observed virilocal residence association, each nuclear family occupied its own living room. The number of rooms associated with a house varied significantly, ranging from essentially one room to as many as nine. The mean number of rooms at Hasanabad was 4.55, the median being 5.0. Average total roofed space (including wall thickness) per individual at Hasanabad, the site best studied in this respect, was 21 m^2. The average number of individuals per rural household across the total sample studied ranged from 4.2 to 5.9 (Korosan and Ilam provinces, Iran; Sumner 1979: 169–70). Usage of grain pits varied between communities but never accounted for total grain storage space. Rooms for heavy storage, animal stables, and protected folding space were essential parts of the household complex. Where second stories existed, the upper story was invariably used for human occupation and light storage.

2. Ethnoarchaeology and the Israelite House. a. Spatial and Functional Determinants. For 43 households, Watson (1979: Table 5.2) recorded 56 living rooms, 12 entry halls, 32 stables, 11 utility rooms, 6 wood storage rooms, 7 dung storage rooms, 24 straw storerooms, 17 underground stables, and 25 courtyards (note that storeroom functions varied seasonally). Kramer lists 67 courtyards, 90 living rooms, 74 kitchens, 137 storerooms, and 33 stables (1979: Table 5.1). Assuming as average requirements, for the economic domain, one stable, one protected "folding area," and one storeroom, all necessarily at ground level, and, for the domestic domain, one living room, an entry hall, and one utility/store room, reference to the well-documented Hasanabad data set (Watson 1979: 119–61) yields a more or less generic requirement for the average household of ca. 83 m^2 of unencumbered floor space. A comparable figure for Aliabad is ca. 72 m^2, probably brought about by the shared use of kitchen facilities. Estimating on the basis of a family size of 4.5 to 5.0 individuals, an overall roofed space requirement (including walls, above) would stand at ca. 94.5–105 m^2.

Sheltered folding space would have been a necessity for wintering sheep in most of ancient Israel and all of Judah, except the Jordan valley and the Negeb. But one may wonder why a subsistence-level agricultural economy, such as that of the average Israelite town and village, should invest simultaneously in pastoralist activity. The answer for ancient times is the same as that which applies to traditionalist societies in the region today. Diversification of subsistence strategies is a significant means of spreading risk, and hence better insures the family unit's survival in otherwise marginally viable environmental zones, such as those characterizing most of ancient Israel (Ruthenberg 1976: 25; Hopkins 1985: 213–50).

Other figures gleaned from the ethnographic literature useful for archaeological reconstruction include the following: *ceiling heights* for kitchens and living rooms at Aliabad ranged from 2.0 to 2.6 m (Kramer 1982: 104); at Hasanabad they averaged ca. 2.55 m (Watson 1979: figs. 5.8–5.27); the narrowest and widest *living rooms* at Hasanabad were 2.42 m and 3.95 m respectively (the mean for 25 living rooms was 3.02); at Aliabad, the mean width of 7 illustrated living rooms was 2.78 m, the narrowest being 2.57 m, the widest being 2.95 m (Kramer 1982: figs. 4.6, 4.7, 4.12, 1.18).

b. Reconstructing the Three-Room House. Analysis of Beer-sheba House 75 (Fig. HOU.04[A]) yields ca. 29.5 m^2 of floor space, exclusive of walls. Including wall thickness, and assuming average walls in place of the fortification wall enclosing the casemate room, the total ground-plan area comes to ca. 42 m^2. The central space and side aisle (Loci 75 and 77) encompass only ca. 19 m^2—in the range of a Hasanabad living room. However, not only are the floors of these two areas unsuited to living-room functions, one has to ask where the necessary room can be found for the entire range of ground-level functions of the economic domain. Even allocating all the ground-floor space to stables, folding, and heavy storage, we find it necessary to suggest that the adjacent alleyway (Locus 28) probably was also incorporated as shelterable folding space, which need not have been as well protected as at sites in the hill country. This combination yields a usable total area of ca. 45 m^2, as compared with our theoretical requirement of ca. 44.7 m^2.

Reviewing other data, we note that the Beer-sheba excavations provided some evidence for casemates having served a storage function (Beit-Arieh 1973: 33; Sheffer 1973). The stalling facilities (Locus 77) are exceptionally narrow, and may have operated more as a narrow loosebox than as a proper set of stalls. Room 75 seems to have served store functions at the time of its destruction (Aharoni 1973: pottery pls. 64–65). An oven is situated in a screened location near an entrance, here beside the stairs at the entrance to the alleyway. It is typical in Israel and Judah for such facilities to be placed at points easy of access.

In this particular set of houses we have good evidence for a second story in the form of well-constructed exterior stairways. That they are not there simply to access the roof is self-evident from the lack of suitable living-room facilities on the ground floor. Adding a second story yields another 30 m^2 to the total house plan, the space required for an average-sized ethnographically attested living room plus light-storage/utility room. At these overall dimensions, including the use of alleyway, this house plan, realized in two stories, closely approximates the mean at Hasanabad and is slightly over the Aliabad mean. By any reckoning, this is an impressive degree of "fit" between an ethnographically based model and an archaeological re-

construction attained by simply extending the perimeter walls and columned interior structure upward for one more story, easily within the load-bearing capabilities of the walls and massive stone columns (cf. Beit-Arieh 1973: 32).

With respect to the relationship between houses and fortifications for a casemate-walled small site like Beer-sheba, the above would suggest a reasonable height for the top of the battlements of some 6.5 m above interior ground levels, with the broad rooftops of the houses affording excellent fighting platforms. Greater heights for the fortification walls would necessitate narrower fighting platforms and more difficult access arrangements.

c. Four-Room House. The ethnographically informed archaeological reconstruction of the medium-sized four-room house can be demonstrated through an analysis of House 1727 at Shechem (Fig. HOU.04[B]). Its overall dimensions, after the elimination of 7th-century rooms tacked onto its S side, are ca. 8.0 × 10.4 m (=83.2 m^2). With the addition of the N side room, the total ground-floor area increases to ca. 108.6 m^2, the internal area of the side room being ca. 17.5 m^2. The ground level of the main house block consists of two paved stable areas (Rooms 3 and 5) with both semicircular and bench-style mangers. Unpaved rooms (Rooms 4 and 6) stand behind each of the paved side rooms. The central space (Room 1-2) has two large grinding installations, a large industrial hearth and a smaller, possibly domestic, hearth, and, immediately to the left of the entrance, what may be the foundation platform for a flight of steps to an upper story. The lateral broadroom at the back (Room 7) measured 6.85 × 1.95 m and had a large horseshoe-shaped stone-lined pit (probably a grain silo) at the N end. The unencumbered internal ground-floor space totaled ca. 54 m^2. With the addition of the N side room, the total ground-floor space was 71 m^2.

As with the Beer-sheba house, if one assumes, with much of contemporary thinking, that this was a one-story house, the areal requirements are unrealistic to accommodate storage, stabling, folding (which, however, is adequately addressed by the added side room), and living. Furthermore, the central area, the only one large enough to be a typical living area (assuming conformity with the general outlines of the ethnographic data cited above), is restricted by the presence of the large industrial hearth. The back room is undersized for a living room, lacks an appropriate floor surface, and is significantly narrower than any of the attested peasant agriculturalist living rooms in the literature cited above. Significantly, even if the structure to the left of the main doorway is not the basis for an inner staircase, the house has yielded perhaps the strongest evidence yet for a second-floor living room: closely spaced split poles covered by a rough mud plaster layer which in turn was covered by a mud plaster finish coat characterized by a heavy concentration of calcite crystals, ground down on the upper surface to a remarkably close approximation of a terrazzo floor. Uncritical assessment suggesting that this might only be an unusual roof surface ignores the fact that the roofing material for this house, typically comprised of many layers of mud and chaff plaster well rolled out, was carefully observed and documented in the field (Wright 1965: fig. 80). Acting in accordance with the principles applied to the Beer-sheba house, if we simply carry the perimeter walls up for a second story, perhaps replacing some of the interior walls with pillar lines and continuing the first-floor columned structure into the second story, we will add some 55 m^2 to the overall house plan, making it ca. 126 m^2. This almost duplicates the area of one of the larger Hasanabad houses (125.5 m^2; Watson 1979: 139), in which six people resided. In that Hasanabad is a wretched poor isolated village, and Shechem was a thriving central place in the last half of the 8th century B.C., that seems a not improper order of magnitude for a medium-sized version of the larger model of standard Israelite house.

Much larger houses, of course, existed, e.g., the 9th-century elite houses flanking the "Citadel" at Hazor (Yadin et al. 1960: pl. 205), or the 7th–6th-century "West Tower" at Tell Beit Mirsim, styled along the lines of a typical four-room house with added side room (Shiloh 1970: 186), but these were houses of the governing elite. As with the analysis of "nonstandard" houses at Israelite sites (e.g., the "House of Makbiram," better, "House of the Servers" at Hazor; Yadin et al. 1960: 72–73; cf. Naveh 1981: 301–2; 85*), the effort would take us beyond the permissible limits of the present article.

D. Socioeconomic Analysis

1. "Israelite House" and the Populace. From the time of its emergence in force until its demise at the end of the Iron II Age, the economic function of the "Israelite House" seems to have been centered upon requirements for storage and stabling, functions for which it was ideally suited. While the design stabilized and became ubiquitous during the time of the open rural hamlet (i.e., Iron Age IA–B), its compact layout, neatly separating the domestic from the economic sphere, allowed for easy adaptation to the confinements and constraints of the urban or fortified village environment. Furthermore, its durability as preferred house type, lasting over 600 years throughout all the diverse environmental regions of Israel and Judah, even stretching down into the wilderness settlements in the central Negeb (Cohen 1979; Herzog 1983), testifies that it was an extremely successful design for the common—probably landowning—peasant. From the frequency of the appearance of this design, one may infer that individuals requiring facilities for managing mixed agricultural pursuits constituted the great majority of the population in ancient Israelite and Judean nucleated, as well as nonnucleated, settlements.

2. Israelite House, Settlement Hierarchy, and Social Stratification. It may be assumed that at sites with little architectural variation (e.g., Tell Beit Mirsim) the social organization was on a village level, with few specialized services being available. Although more detailed studies need to be carried out, it appears that the falloff of proportions of "Israelite Houses" (i.e., three- and four-room houses) in relation to other buildings (e.g., other types of domestic and/or public structures) seems to become progressively greater as one graduates from village to town (e.g., Beth-shemesh[2]), to city (central place), to major governmental center/regional capital (e.g., Lachish, Megiddo, probably Hazor), to the national/state capital (Jerusalem and Samaria). If one may assume a direct relationship between the magnitude and/or sophistication

of domestic architectural features and wealth (note that Kramer 1982: 126–36 cautions against such conclusions on the village level), and if both the richest and the poorest lived in the urban environments, then, given the relatively narrow range of sizes of three- and four-room houses, it might be argued that—apart from those who lived in palaces (e.g., in Samaria, Ramat Rahel, Megiddo, Hazor, Gezer, Lachish, etc.)—the disparity in wealth between various households was not great.

The excavations at Tell Beit Mirsim have provided a fairly large horizontal exposure of the town plan. From it one may infer that, in many cases, the smallest and largest houses actually reflect the habitations of differing generations of the same extended family (Stager's *bêt ʾab*, above). The lack of significant intrasite architectural variability (as opposed to that which exists at Megiddo, Lachish, and Hazor) implies that Tell Beit Mirsim was not a "central place," but that it should be seen as a fortified expanded village (Amiran 1953: 70–73), instead of a "town" or "city" in any modern sense of the terms. There is only one large house, misnamed the "West Tower," and its location and structure seem to mark it off as the residence of the local town magistrate. Furthermore, as noted above, its plan is essentially that of an enlarged four-room house with additions.

Future study probably will demonstrate a discontinuity in ground-floor plan areas between normative three- and four-room houses (which probably form a continuum) and structures of the governmental elite like the Tell Beit Mirsim "West Tower" and the outsized "Elite Houses" at Hazor (above). The point to consider, however, is that—ideologically—the middle tier of rulers lived in houses comparable to those of their subjects, and the present evidence indicates that only governors and kings lived in architecturally distinct palaces or "citadels."

3. Fortified Farming Villages and Regional Security. The demographer D. Amiran (1953) has argued an inverse relationship between strong centralized government and site size in unstable peripheral regions. The security of a strong government fosters the budding-off of dispersed and smaller "daughter" settlements: farmers living farther afield from the population centers and nearer their fields. With governmental weakening or collapse, the dispersed settlements are abandoned and the landscape is dominated by a few very large villages, to which people relocate for greater mutual security, at the expense of convenient access to their fields (1953: 66–73; 205–8; 259–60).

Given this model, the size and occupational density of such largely undifferentiated fortified settlements as Tell Beit Mirsim, Beth-shemesh, and Tell en-Nasbeh, as well as the planned chariot city of Beer-sheba (the settlement of Strata III-II being partially or largely self-sustaining despite a heavy governmental investment in its construction—note the substantial quantities of cedar of Lebanon in its construction; Liphschitz and Waisel 1973: 99–108), speak volumes of the lack of security, not only of the Shephelah and the Negeb during the 8th–7th centuries, but also of the more exposed S reaches of the central hill country N of Jerusalem. The other side of such considerations, of course, is that population estimates based upon the supposed presence of a sizable extramural population in these regions (e.g., Shiloh 1980: 32b) may still be much too high (similarly for the central highlands, cf. Hopkins 1985: 164).

HOUSEHOLD CODES. From the German *Haustafeln*, a word used by scholars to designate certain biblical texts that outline the duties and responsibilities associated with the proper or ideal management of private affairs. Significant advances have been made in understanding the form and function of these codes (Col 3:18–4:1; Eph 5:21–6:9; 1 Pet 2:11–3:12; 1 Tim 2:8–15; 5:1–2; 6:1–2; Titus 2:1–10; 3:1) since the mid-1970s. The following article surveys recent research, characterizes the relevant biblical and early Christian texts, suggests how the ethic functioned, and gives alternative evaluations of it.

A. Recent Research on the Source of the Form

Earlier in this century, Dibelius and his student, Weidinger, argued that these household codes were slightly Christianized versions of a code borrowed from the Stoics, e.g., from Hierocles (trans. in Malherbe 1986). Crouch (1972), however, argued that the Stoic influence was minimal compared to that of Oriental-Jewish values. Discussion of (1) social duties in reciprocal terms and (2) the distinction between subordinate and superior persons are non-Stoic features which characterize Hellenistic Jewish codes (Philo *Apol. Jud.* 7.14; Jos. *AgAp* 2.190–219). Therefore, NT codes mirror Jewish morality; they are one aspect of a nomistic tendency in Pauline churches over against the license allowed women in Hellenistic cults of Dionysus, Isis, and Cybele.

In the mid-seventies, three scholars—D. Lührmann, K. Thraede, and D. Balch—independently rejected both hypotheses, suggesting instead that the NT codes are related to the stereotypical Hellenistic discussion of "household management" *(peri oikonomias)*, especially as formulated by Aristotle (*Pol.* 1.1253b.1–14). This Aristotelian text (cf. *Mag. Mor.* 1.1194b.5–28) is parallel to the form of Col 3:18–4:1 and Eph 5:21–6:9 in that (1) it outlines relationships among three pairs of social classes; (2) these classes are related reciprocally; and (3) it describes one social class in each of these three pairs as "being ruled."

Since the Aristotelian structure is found only in Colossians and Ephesians, Müller (1983: 266, 317) suggests restricting the designation "household code" *(Haustafel)* to these texts alone, but this poses two problems. (1) Modern categories would then be narrower than the classical Greek terms. The structured Hellenistic discussion of "household management" did not always, or even usually, have an Aristotelian outline. (2) Relationships in the "house" were discussed in the larger context of "city" management. Therefore the exhortation to be obedient to the emperor and his governors in 1 Pet 2:13–14 is consistent with the observation that 1 Pet 2:11–3:12 is also a household code, as is *1 Clem.* 21:4–9. However, the concerns reflected in 1 Pet 5:1–5 are combined with exhortations about domestic relationships in other codes, so that the designation "congregational code" is more appropriate for 1 Tim 2:8–15; 6:1–10; Titus 2:1–10; *Ign. Pol.* 4–6; and Polyc. *ep.* 4–6.

Verner (1983) focuses on the structure of individual exhortations within the code: (a) an address; (b) an imperative, grammatically expressed in various ways; (c) an amplification, often in the form "not . . . but . . ."; and (d) a reason clause. The sources of this "schema" (Verner's term) remain to be specified, but Verner is incorrect that it is exclusively Christian (cf., e.g., Epict. *Dis.* 3.12.10;

3.14.4–5; Tobit 4:3–21; Philo *Cher.* 48–49; *Spec. Leg.* 2.67–68; 3.137).

B. Biblical and Other Early Christian Texts

Many scholars (e.g., Crouch 1972; Müller 1983) assume that the Colossian code is the earliest. However, the code in 1 Peter may be just as early and is not literally dependent on the one in Colossians. Nor is the Colossian code a later interpolation (as suggested by Munro 1983). Colossians Christianizes institutional Greek values about managing households, and scholars sometimes exaggerate either the christological deepening or the new motivation involved in the editor's addition to the formula "in the Lord (Christ)" (Col 3:18, 20, 22, 23, 24; 4:1; see Müller 1983: 310–16).

On the other hand, the christological grounding is clear in 1 Peter and Ephesians. In 1 Peter the slaves are exhorted to patience in unjust suffering because Christ left them an example (2:21). They sing an early christological hymn which interprets Isaiah 53 of Christ (2:22–24), their shepherd and Episcopos (2:25).

Ephesians (5:21, 22–33; 6:5–8) transforms the Colossians code by specifically Christian motivation. Wives are exhorted to "be subject" to their "head," their husbands, who are to "love" their wives. The author employs a parallel christological model: the Church is "subject" to its "head," Christ, who "loves" it. This is founded on the confession that Christ is "Savior" of the Church, the body (5:23, 25). Further, as the baptized (5:26) are members of the body of Christ (5:30), so husband and wife are one body, one flesh (5:28–29), an emphasis on unity in marriage and in Christ.

The reformulation of these codes in 1 Timothy and Titus is not focused exclusively on the household: (a) more groups are included, e.g., community officers, widows, and the wealthy, and (b) the context of the exhortations changes, e.g., to men's roles and women's behavior in worship. Passages on the bishop and deacons emphasize qualifications for entering the office so that they will be models of behavior in a Church and society valuing prosperity and propriety.

Reciprocal exhortations to masters are absent in the Pastorals, as in 1 Peter. Whereas Colossians and Ephesians exhort slaves to noble character, the prosperous writer of Titus 2:9–10 wants slaves not to steal. Further, restriction of the leadership of wealthy women is evident in texts about "widows" (1 Tim 5:3–16; *Ign. Pol.* 4; Polyc. *ep.* 4). Laub (1982: 90–94) suggests that these growing patriarchal emphases are not characteristic; rather the distinctive, new elements are that (a) slaves are addressed, (b) various households are united in *ekklesiai,* "churches," and (c) slaves are integrated into these churches in ways unusual for Greco-Roman society. MacDonald (1983; and Verner 1983: 178), on the other hand, shows that the Pastorals were written to oppose oral traditions whose values are reflected in the *Acts of Paul and Thekla:* celibate women teach in public, baptize, and exercise leadership while male bishops, presbyters, and deacons remain unmentioned; i.e., the Pastorals do patriarchalize Pauline traditions over against socially marginal Christian groups which are disrupting pagan and Christian households.

C. The Function of These Codes

Following Roman and Jewish precedents, the author of 1 Peter adopts the domestic code, exhorting Christians to "apologize" (3:15, a technical term denoting both defense and eulogy of their faith and behavior). But in Colossians (Schweizer 1977 cites Col 3:11) the code opposes "false teaching," as does 1 Timothy, Ign. *Pol.* 3 (immediately preceding the duties of chaps. 4–6), and Polyc. *ep.* 7 (immediately following chaps. 4–6). Positively stated, these orthodox authors emphasize social duties as given in secular society.

D. Evaluation of the Ethic

Thraede (1980) insists that these codes do not represent general Greco-Roman ethics but take a partisan position over against other available options. Müller (1983) interprets this as a specific choice for a liberalizing, pragmatic, moderate, "middle," humane, sensible social-ethical orientation, not as a hard insistence on the existing order of authority.

More critically, Schweizer (1977) writes of the "paganization" of Christianity by these household codes. Eph 5:22–33 sanctions hierarchical order by salvation history. Whereas Col 3:22–23 distinguishes one's fleshly lord from the Lord, Eph 6:5 directly connects the two. One no longer fears God alone (Col 3:22; 1 Pet 2:17; 3:6), but also one's master (Eph 6:5). This suggests the misunderstanding that service to God is identical with service to the higher social classes. One no longer pleases the Lord alone (Col 3:20), but the master (Titus 2:9). *Didache* 4:11 says masters are a type of god for the slaves, so identifies social and divine orders! This becomes the divine cosmic order of Stoicism in *1 Clement* 20.

Schüssler Fiorenza (1984: 290–91) observes that the leadership and behavior of women and slaves become restricted and defined according to the patriarchal standards of Greco-Roman society so that outsiders will not take offense at their insubordinate behavior. The Pastorals merge the leadership of wealthy patrons with that of local male bishops, which patriarchializes Church order according to the model of the wealthy Greco-Roman household, a move which leads to the exploitation of slaves and women even within the Church community.

Balch agrees with Schüssler Fiorenza, with the qualification that the original adaptation of the household codes in 1 Peter and Colossians does contain critical elements. Whereas Aristotle (*Eth. Nic.* 5. 1134b.9–18; 8. 1060a.23–1661a.10) argues that the proper relationship between master and slave is one of "tyranny," not "justice," 1 Pet 2:19–20 reports that Christian slaves are suffering "unjustly," but unlike Roman masters, God judges "justly" (2:21–23). Col 4:1 exhorts masters to treat slaves "justly and fairly." A second critique is clear in 1 Pet 3:1; the wife is independent enough from her husband to choose her own God over against foolish, lawless pagans (1 Pet 1:18; 4:3). The earliest household codes reject the unjust treatment of slaves and the absolute subordination of wives to the religious inclination of their husbands. See also HAUSTAFELN.

DAVID L. BALCH

HOUSEHOLD GODS. See IDOL, IDOLATRY.

HOZAI (PERSON) [Heb *ḥôzāy*]. Apparently the author of a chronicle that included information about the reign of Manasseh, king of Judah (2 Chr 33:19). The text mentions nothing further about the man, nor have his writings survived. Some of the content of his work is specified, however. His chronicle told of Manasseh's prayer, God's answer, and Manasseh's sins, especially in setting up idols. The reference to the prayer inspired the later, apocryphal book the *Prayer of Manasseh.* The name Hozai means "my seers." Both his name and his activity in recording the story of the spiritual highlights of a king's reign may indicate that he was a prophet.

The Greek appears to be based on a Heb text that had *ḥôzîm (tōn horōntōn),* i.e., "the seers" (RSV). A proposal that we read *hôzāyw,* "his (Manasseh's) seers," has also been made (*BHS;* Myers *2 Chronicles* AB, 197). Nearly all modern translations prefer the rendering based on the Greek (thus RSV, KJV, AB, NEB, NAB). Very few (JB, NJPSV, Douay) consider Hozai to be the name of an individual. Nevertheless, several scholars believe that there is nothing that actually rules out a reference to a specific, otherwise unknown, historiographer/prophet (*IDB* 2: 658). McAllister (*ISBE* 2: 773) is of the opinion that the Gk "seers" is an error resulting from confusing v 19, *dibrê ḥôzāy* ("writings of Hozai"), with v 18, *wĕdibrê haḥōzîm* ("writings of the seers"). The Syr reads *(d)ḥnn nbyʾ* = *ḥānān hannābî* ("favor [?] of the prophet).

KENNETH H. CUFFEY

HUKKOK (PLACE) [Heb *ḥûqōq*]. A town defining part of the border of the tribe of Naphtali (Josh 19:34). It is usually identified with Yaquq (M.R. 195254), 3 miles W of Chinnereth overlooking the Sea of Galilee. However, this identification is problematic, mainly because it is much too far E for a town that is apparently located near Aznoth-tabor (Kh. umm-Jubeil? M.R. 186237) and ostensibly along the S and W boundary shared with Zebulun and Asher. The Chronicler also mentions a levitical city by the same name (MT *ḥûqōq,* but RSV "Hukok"), but includes it among a list of towns belonging to Asher (1 Chr 6:60—Eng 6:75). See also HUKOK. It is possible that this is the same town mentioned in Josh 19:34 as having belonged to Naphtali. On the one hand, if the Chronicler's "Hukok" is indeed a variant for HELKATH, and if the Josh 19:34 "Hukkok" refers to this place, then the SW quadrant of Naphtali would include virtually all of the tribal territory of Zebulun. Aharoni, apparently assuming that Hukkok = Helkath (*LBHG,* 105, 271), correctly observes that this is incomprehensible (*LBHG,* 239). On the other hand, the Chronicler may have had in mind a town other than Helkath (which is just E of Mt. Carmel). Thus, some have suggested that Hukkok/Hukok be identified with Kh. el-Jemeija (M.R. 175252), 3 miles E of Cabul (see *MBA,* 179 and map 72). A line drawn from here to Aznoth-tabor would leave the territory of Zebulun intact and would be consistent with the general picture we have of Asher's E border (Josh 19:27–28).

GARY A. HERION

HUKOK (PLACE) [Heb *ḥûqōq*]. Var. HELKATH? A town in the tribe of Asher which, along with its pasture lands, was set aside for the Levites (1 Chr 6:60—Eng 6:75). In the parallel list of levitical towns in Joshua 21, the Asherite town listed between Abdon and Rehob is not Hukok but HELKATH. If Hukok here is a variant of Helkath, then it could be identified with either Kh. Harbaj (M.R. 158240), Tel el-Amar (M.R. 159237), or Tel Qashish (M.R. 160232), all along or close to the Kishon river just E of the Mt. Carmel range. If Hukok is not a variant of Helkath, it is possible that the Chronicler had in mind the same town

listed in Josh 19:34 as lying along Naphtali's W border with Asher, possibly Kh. el-Jemeija (M.R. 175252). See also HUKKOK.

GARY A. HERION

HUL (PERSON) [Heb *ḥûl*]. According to the Table of Nations, the second son of Aram, the grandson of Shem and great-grandson of Noah (Gen 10:23). The corresponding genealogy in 1 Chr 1:17 places him as the seventh son of Shem and brother of Aram. This is probably due to the eye of an early scribe slipping from the first to the second of two lines each ending with the same word "Aram" when copying the text. This led to the loss of the line reading "the sons of Aram (are)" which is found in the Genesis genealogy. Originally the two genealogies were undoubtedly identical. Certain mss of the Sam. Pent. render the name *ḥûṣ*. Little else apart from his Semitic roots is known regarding the identity or geographical location of Hul and his descendants.

DAVID W. BAKER

HULDAH (PERSON) [Heb *ḥuldâ*]. A prophetess during the reign of Josiah, king of Judah (2 Kgs 22:14; 2 Chr 34:22). Nothing is known of her but that she is the wife of Shallum, "keeper of the wardrobe." It is not known whether he was in charge of the king's wardrobe or the vestments of the priests in the temple; thus it is not known whether she was the wife of a court official or one of the temple personnel. She is alternately identified as a cult or court prophet. From the role she plays in 2 Kings, court prophet is the more likely possibility. Her prophetic oracle is divided into two parts, 2 Kgs 22:16–17 and 22:18–20. The first part is a word of judgment against Judah, and the second a word of assurance to the king that he will die in peace before that judgment is carried out. The word of judgment is written in typically Deuteronomistic style and is fulfilled in subsequent chapters. The second part of the prophetic oracle is not fulfilled. Though the king dies before Judah is destroyed, he does not die in peace but in battle. Such unfulfilled prophecy is not characteristic of the Deuteronomistic Historian, and may be an indication of the authenticity of the second part of Huldah's oracle. Huldah is the only female prophet mentioned in the books of Kings. It is impossible to determine from this isolated case the characteristic roles of female prophets in Judah or their frequency, but we have evidence of the existence of female prophets in Mari and Assyria. These prophets, like their male counterparts, uttered oracles, some of which were addressed to kings on matters of safety and divine protection.

PAULINE A. VIVIANO

HUMANITY, NT VIEW OF. The human being *(anthrōpos)* is seen in the NT as a living being who is to be distinguished from animals as well as from God and other higher beings such as angels. To that extent the NT is in continuity with the OT and Judaism, as well as with much of the Greek tradition (Taylor 1981: 11–317).

Also in continuity with the OT, the *anthrōpos* is understood as a psychosomatic unity, over against much of the Greek world. The Greek language of the NT can be misleading, as utilization of Greek terms such as soul *(psychē)* and body *(sōma)* can incorrectly give the reader a dualistic view of anthropology, since the terms are used that way in the non-Christian Greek world. In the NT the terms are, however, used in a manifestly Hebrew/OT way; that is, not as ways to speak of different parts of the individual but as different ways to speak of the entire unified, integrated person (*BTNT* 1: 192–239). For that matter, there is no independent reflection on anthropology in the NT dealing with humanity's qualities, constituent parts, or nature, and therefore little definition of terms and no standardization of their usage. Rather, the *anthrōpos* is always understood in terms of the relationship with God. In relationship to God there is a dual perspective on who humanity is and who humanity is to become. In the present the *anthrōpos* is sinful (Synoptics) and enslaved under the power of sin (Paul and John). The individual person and humanity as a whole are weak, mortal, and sinful (Matt 16:23; Rom 1:18–3:20; 1 Cor 1:25.)

The relationship of humanity to God has, however, been changed in the Christ event (Rom 3:21–26; Eph 2:1–22; 1 Pet 1:18–2:10). Believing humanity has been reconciled to God in Christ and therefore, as the justified image of God, is destined to become a new humanity (Eph 2:14–16) because of the saving activity of the true *anthrōpos*, Jesus Christ (Rom 5:12–21). In the present the Christian person thus lives in the tension of having been freed of the past but not yet having reached the completed future. At the same time the identification of that future and of the eschatological significance of Jesus enabled the early Church to proclaim a Christ who had come not only for Jews but for all people. This-worldly distinctions between people were radically eliminated (Gal 3:26–28) as one unified Church was created from the variety of individual human lives.

A. Synoptic Gospels
B. John
C. Paul
D. Rest of the NT
E. Early Church Outside the NT

A. Synoptic Gospels

The Jesus of the Synoptic Gospels comes proclaiming the kingdom of God which is breaking into history by his sheer presence. That presence forces each person to make a decision about repentance and belief (Mark 1:14–15 [=Matt 4:17]; Matt 11:21–22, 12:41), calling on the individual to leave the wrong way and to enter the way of God's will (Luke 15:11–32).

Jesus evaluates humanity very highly, yet humanity is far from God. His high evaluation of humanity is illustrated not only by the fact that he brings God's message to humanity but also by his view, in tandem with the OT, that the *anthrōpos* is the crown of God's creation and therefore worth more than ravens, lilies, sparrows, and sheep (Matt 6:26–30 [=Luke 12:24–28]; Matt 10:29–31 [=Luke 12:6–7]; Matt 12:12). The human being is worth more even than the sabbath observance (Mark 2:27–28; 3:1–6 [=Matt 12:9–14; Luke 6:6–11]; Luke 13:10–17). Yet hu-

manity lives in danger of gaining the world and losing the self (Mark 8:36–37 [=Matt 16:26; Luke 9:25]) by living as God's enemy. The enmity is expressed as "thinking what humanity thinks" rather than what God thinks (Mark 8:33 [=Matt 16:23]). Merely being religious is not the answer, as is illustrated by the scribes and Pharisees, whose human religious thinking seeks to replace the command of God with the statutes of people (Mark 7:5–13 [=Matt 15:2–9]; Matt 5:21–48). Humanity refuses to recognize God's care and is therefore unable to entrust itself to God (Matt 6:25–34 [=Luke 12:22–32]; Mark 4:35–41; 9:14–29 [=Matt 8:18, 23:27; Luke 8:22–25]). Part of the manifestation of that inability is humanity's concrete lack of care for the neighbor (Matt 25:31–46), which is set in the sharpest contrast to Jesus' radical definition of "neighbor" to include enemies and foreigners (Matt 5:43–48 [=Luke 6:27–28, 32–36]; Luke 10:29–37). All people are evil (Matt 7:11 [=Luke 11:13]) and are a sinful generation in God's eyes (Luke 11:29 [=Matt 12:39]; Matt 16:4). The heart of humanity is misdirected and needs to be turned around (Matt 5:28; Mark 7:21–23 [=Matt 15:19–20]).

The *anthrōpos* is, however, addressable and changeable, and so Jesus comes with his message of the kingdom, which sets in proper order the relationship of God and humanity. That proper order is one of master and slave (Luke 17:7–10), in which the human slave is called to glorify, by his or her life and good works, the Father who is in heaven (Matt 5:16). As Kümmel writes (1963: 29), "To Jesus, man is simply God's slave and as a created being is pledged to the service of God, who will call him to account." It is the failure to recognize the proper God-human relationship which results in the self-justifying schemes of the religious (Luke 14:7–14; 18:9–14), and thus the believer needs to realize the truth of what Jesus teaches: no one can serve two masters (Matt 6:24 [=Luke 16:13]). The one called to be a slave is also called to be a disciple (Mark 6:6–11) and thus to function as a light to others (Matt 5:16) and a fisher of people (Mark 1:16–20 [=Matt 4:18–22; Luke 5:1–11]), knowing that such commitment can lead to persecution and homelessness (Matt 5:10–12; Luke 6:20–23; Matt 8:20 [=Luke 9:58]).

In both his actions and his words, Jesus illustrates the meaning of fishing for people. He has table fellowship with tax collectors and sinners (Mark 2:15–17 [=Matt 9:10–12; Luke 5:29–32]; Matt 11:19 [=Luke 7:34]), he treats women with dignity and equality (Mark 1:29–31 [=Matt 8:14–15; Luke 4:38–39]; 5:21–43; Luke 10:38–42), he restores outcasts (Mark 1:40–45 [=Matt 8:2–4; Luke 5:12–16]), and he heals gentiles (Mark 5:1–20 [=Matt 8:28–34; Luke 8:26–39]; 7:24–30 [=Matt 15:21–28]), treating all as full human beings. He also speaks of a God who seeks even the single lost individual, especially the nonreligious (Luke 15:1–32). The God of Jesus is not, in fact, the God of the religious but the God of the lowly (Luke 18:9–14; see 1:52), who calls the followers of Jesus to take the gospel to all people regardless of race or nation (Matt 28:19; Acts 10:28; 15:8–9).

B. John

Just as Jesus in the Synoptics knows what is in the heart of humanity, so in John he knows and understands people (1:47–48; 2:24–25; 4:17–19). What he (and thus the author of John) understands about people is that they live in darkness *(skotia, skotos)*, being blind and without understanding or knowledge (9:39–41; 12:40; 1 John 2:11). This condition is universal. All humanity sins (3:19; 7:19; 16:8–9; 1 John 1:8, 10) to such an extent that people cannot recognize their lack of freedom (8:34–45). The primary example of sin is humanity's refusal to believe the revelation of God in Jesus (8:24; 9:41; 15:22–25; 16:8–9; 1 John 4:3). Bultmann writes (*BTNT* 2: 18): "*Darkness*, then, means that a man does not seize this possibility—that he shuts himself up against the God revealed in the creation. Darkness is nothing other than shutting one's self up against the light." The humanity which lives in the darkness is equated with the world, or *kosmos* (1:10–11; 3:19), so that *kosmos* usually means the negative totality of humanity (1:29; 3:16; 1 John 2:2) to such an extent that it seems that mere existence in the *kosmos* results in alienation from God. Yet Jesus can resist praying that his followers be removed from the world (17:15), for existence in the world is not in and of itself negative. Sin means living *in* the world in such a way that one is *of (ek)* the world (3:31; 8:23; 15:19; 17:14–16; 18:36; 1 John 2:16; 4:5). To be *of* the world is to be not of God but to identify one's source of being and life with the world.

The division between those who are of God and those who are of the world seems insurmountable. On the one side are those who are of God (8:42, 47; 1 John 4:6) and of the truth (18:37). They are from above (3:3, 7). On the other side are the people who are from below (8:23). They are from this world (8:23) and are of the devil (8:44). The point of distinction between the two types is the reaction to the encounter with Jesus; by one's reaction to him one constitutes oneself as from above or below and shows one's true origin (3:20–21; 8:23). While close to a gnostic-metaphysical dualism in which some people seem by nature to be destined for salvation while others are destined for damnation, John's gospel ultimately avoids that position by its conception that the redeeming activity of God in the Son is directed toward the entirety of humanity (1:29; 3:16; 8:26; 1 John 2:2), with a universal call to decision (12:46–48). Each person who hears has the opportunity to be drawn by the Father (6:44; 12:32). The "dualism," if one uses that term, is more properly a dualism of decision rather than a dualism of nature (*BTNT* 2: 21). There is nothing inherent in any *anthrōpos* that necessarily saves or condemns.

C. Paul

"In the whole of the NT it is only Paul who expounds what we should call a thoroughly thought-out doctrine of man" (Käsemann 1971: 1). Yet one may well question how systematic Paul's anthropology really is. As Jewett (1971: 1–10) has shown, Paul's anthropology seems erratic because of his great sensitivity to the terminology being utilized by his partners in conversation. For that reason he can use different terms to mean the same thing, and he can use the same anthropological term to designate different things. Unfortunately, Paul did not develop a lexicon of anthropological terms to which he then slavishly adhered. So while on the one hand we can say with Betz (1972: 165) that "the apostle Paul was the first Christian theologian who developed and presented a well-conceived

anthropology," we need also to admit with Betz that "Paul's lack of terminological systematization and his excessive intricacies appear overwhelming," for, "apparently, conceptual systematization was not the goal of Paul's anthropology." At the same time, anthropology is a pervasive concern in Paul's letters to such an extent that Bultmann (*BTNT* 1: 191) could write: "Every assertion about God is simultaneously an assertion about man and vice versa. For this reason and in this sense Paul's theology is, at the same time, anthropology."

For Paul, humans are historical beings who belong to the *kosmos* (Rom 1:8; 3:19; 11:12, 15; 1 Cor 1:20–22, 27–28; 4:13; 2 Cor 1:12). They are to be properly understood as creatures (Rom 9:19–21; 1 Cor 11:9) who are marked by weakness and mortality (Rom 7:13–20; 1 Cor 15:53–54). Humans, moreover, inevitably stand over against God (Rom 1:18, 21; 3:4; 14:18; 1 Cor 1:25; 2 Cor 5:11). There is nothing divine in the *anthrōpos* (1 Thess 2:4; 4:8).

In addition, human beings are inevitably and inexorably enmeshed in and ruled by sin, which in Paul is to be understood as virtually a hypostasized power (Rom 7:15–20) which takes over the life of the individual and rules his or her will. The universal sinfulness of all of humanity is a fundamental presupposition of Paul's anthropology and is painstakingly developed in Rom 1:18–3:20. In that section he turns first to the gentile who indeed might claim exemption from culpability, since God's revelation in the law had been given not to gentiles but to Jews. Paul dismisses that plea by means of an argument from a general revelation that has come to all people who, however, have rejected it and have "exchanged the glory of the immortal God for images resembling mortal humanity or birds or animals or reptiles" (Rom 1:19–23). He similarly removes any claim of the religious Jew (2:1, 18–24) and ends his lengthy discussion of sin with a chain of OT quotations that illustrates that "the whole world" is "held accountable to God" for its sin (3:10–20). From a negative perspective, the distinctions between people are removed, because "all have sinned and fall short of the glory of God" (3:23), whether they have the law or not. Sin is thus introduced through disobedience and it brings with it death (Rom 5:12; 6:23a).

When Paul wishes to speak of humanity from the perspective of its sinfulness, he uses the term "flesh" *(sarx)*. *Sarx* is what is opposed to God's spirit (Rom 7:14–25) but, in agreement with the OT, flesh and spirit do not refer to two parts of human nature but to two ways of carrying out one's life: one lives either according to the flesh or according to the spirit (Rom 8:4, 5, 9, 12, 13). *Sarx*, however, does not refer to the physical aspect of humanity as in some way separable from the mental or spiritual. Rather, *sarx* refers to the totality of a person's existence as understood from the perspective of humanity's fallenness. Indeed, *sarx* is the regular shorthand way in which Paul indicates the *anthrōpos* in his or her fallen, sinful condition. Flesh thus means the totality of the fallen individual, including the mind, and so both the physical and the mental are understood to be polluted and in need of cleansing (Rom 1:28).

To be distinguished from flesh is the term for body, *sōma*. As opposed to an important part of the Greek tradition running from Plato through Gnosticism, in which the body is viewed as the prison of an immortal soul, the body for Paul is not necessarily bad (soul in Paul should be understood in the Hebrew rather than the Greek sense, which means that the distinction between body and soul does not indicate opposition). Theoretically the body is neither good nor bad in itself, but its evaluation depends on whether sin or spirit rules it. When the body is misused, it "becomes" flesh. That is, when Paul writes of the body as it is misused by sinful humanity, he writes of it as flesh. Body as body, however, is not evil simply by being material. In fact, humanity falls and in fact the body has fallen victim to sin and death, but it is not the body that is constitutively bad. Flesh is the negative term which allows Paul to retain a potentially positive view of the body. Indeed, his view of the body is so positive that a body is required in the resurrection (1 Cor 15:35–44; Phil 3:20–21). At the same time Paul is skeptical of what happens in the reality of life in this world, in which the weak part of humanity, the *sarx*, becomes the beachhead in the body for the operation of sin. When the flesh is thus elevated and becomes the focus of life, that life is misdirected and opposed to the spirit. A life, therefore, that is oriented to the flesh serves the flesh and does its thinking (Rom 8:5–8, 12–13). Believers, however, no longer live in the flesh (Rom 7:5–6; 8:8–9), which signals not a putting aside of the body but a living in the body in a new way, namely, in relationship to God.

One obvious question to be addressed to Paul's anthropology is that of metaphysical dualism. Is the *anthrōpos* in Paul to be comprehended as having two parts (body and soul) or three parts (body, soul, and spirit) or is the *anthrōpos* a unified being who cannot properly be divided? Certainly there are sections which exhibit dichotomous or trichotomous thought (2 Cor 4:6; 5:1–9; 1 Thess 5:23), but in interpreting Paul at this point one has to deal with the fact of his Hebraic background, in which humanity is looked upon as a whole, rather than as assembled but discrete parts. The human being is seen as a psychosomatic unity there and in Paul as well (see *BTNT* 1; Kümmel 1963; Robinson 1963; Gutbrod 1934; Stacey 1956). A more accurate use of the term dualism would be for the sort of ethical dualism one sees in the anthropological dividedness Paul identifies in Rom 7:7–24. In his discussion of non-Christian humanity he points to the unresolved conflict between the ability of the nonbeliever to will the right and his or her inability to carry out the right (7:15–20).

A second obvious question for Paul is how humanity can move from the dividedness of Romans 7 and break the power that sin and flesh exert over the body. His answer is in part anthropological, for he identifies the solution to the anthropological dilemma in the One *Anthrōpos*, the One Man, Jesus (Rom 5:15, 17–19; 1 Cor 15:21, 47; see also 1 Tim 2:5). Jesus has redone correctly what the first *anthrōpos*/human did incorrectly (Rom 5:15–21). Humanity is thus confronted with two fundamental options: the humanity of the sinful Adam and the humanity of the redeemer Adam (Betz 1972: 166). By faith and through the ritual action of baptism the person is identified with both the redeeming activity of Christ and the body of that redeemer, the Church (Rom 6:3–6; 12:3–8; 1 Cor 12:12–31, especially vv 12–13). The transfer from one realm to another is such a dramatic one (Rom 5:12–6:11) that Paul

expresses it in terms of dying and living. The transfer, moreover, is not a return to the beginning, where the first *anthrōpos* was, but a recreation and the bringing forth of a new person (Rom 6:4; 7:6; 12:2; 2 Cor 4:16; 5:17; Gal 2:19–20; 6:15). The new person lives in the confidence that God is the giver of life. Seeking life within one's self is thus given up, and the destructive direction seen in Rom 1:18–3:20 is reversed. The believer is freed from sin and death (Rom 6:15–23; Gal 5:1–16) to a life of service and love (1 Cor 7:22; 9:19). In addition, the reprobate mind of Rom 1:28 is being changed into the renewed mind of Rom 12:2, and the Christian is enabled to present his or her body as a living sacrifice to God (12:1).

Another way that Paul expresses his anthropology is by means of the concept of the image of God. Christ himself is the image of God (2 Cor 4:4, 6), in that uniquely in Christ God's presence is most fully revealed. Through the powerful message of that Christ, people are in turn being changed into the image of the Son (Rom 8:29; 1 Cor 15:48–49; 2 Cor 3:18). What needs to be noted is that the Christ Paul identifies as the image of God is the resurrected and exalted Christ; image of God is therefore an eschatological concept which points to the resurrection of the believer as the ultimate transformation (Childs 1978: 85–102). Thus Christ as the image of God is the final destiny of the humanity that is in Christ (1 Cor 15:23–28, 44–49; see also Eph 1:9–10). That final destiny is already in part realized in the elimination of the distinctions that separate people from each other; in Christ a united humanity is already effected in which racial, social, and sexual barriers are pronounced void (Gal 3:26–28; 1 Cor 12:12–13). In the present the Christian is called to a life of radical obedience, set free to love others (Rom 13:8–10; 1 Cor 8:1; 13:1–13; Gal 5:6, 13–14, 22; 1 Thess 3:12). Yet until the eschaton the Christian lives in the tension that exists between the future promised in the new Man and the sin inherited from the first (Rom 8:18–30; 2 Cor 12:5–10). While moving toward the future (Phil 3:12–14), the believer is always drawn backward by the past.

On the whole, the deutero-Pauline letters of Ephesians and Colossians move in the same direction as the historical Paul. Christ is the image of God (Col 1:15) through whom believers are being renewed in the image of God (Col 3:10). Formerly dead in their sins (Eph 2:1–3; Col 2:13; 3:7), Christians have been raised to a new life in Christ (Eph 2:4–10; Col 3:1–4) in which the divisions of this world are overcome (Col 3:11) as a new humanity is being created by God in Christ (Eph 2:14–16; 4:15–16, 22–24; Col 3:9–10).

D. Rest of the NT

On the whole the rest of the NT has a less highly developed anthropology, although the basic concepts of the gospels and Paul are essentially present, especially in terms of the sinfulness of humanity and the God-human alienation apart from Christ. Two exceptions are Acts 17:27–29 and 2 Pet 1:4. In the former text the kinship of every person with God is outlined; in the latter the goal of attaining divine nature is held out. The Acts passage is heavily Stoic and is unique in the NT; the 2 Peter passage is also strongly Hellenistic and quite uninfluenced by Hebraic thought, with its escape from the corruption of this world into divine nature. Indeed, as the later NT authors utilize even more frequently the Hellenistic concepts, they do tend to a more dichotomous and trichotomous view of the human person (1 Pet 1:9; 2:11; Heb 4:12). In the Pastorals humanity is viewed less in the individual anthropological sense that Paul had developed and much more in the direction of the person as a member of a Church which no longer expects the imminent end of the world but which is settling in for the indefinite future. Thus Church discipline, orthodox doctrine, and good works are emphasized, and so the Christian is understood as the man/person *(anthrōpos)* of God (2 Tim 3:17; cf. 2:21; 1 Tim 6:11 seems to reserve the phrase as a title [and office designation?] for Timothy). James continues the basic anthropology of the OT and NT, although he sharpens the negative evaluation of humanity with terms such as "empty" (2:20) and "double-hearted" (1:8; 4:8). The universal sinfulness of humanity is indicated in Hebrews (2:14–15; 10:22), and therefore humanity is destined for judgment (6:2). At the same time, for the believer God is the future (13:13; chaps. 11–12), and so the believer is called to live as a pilgrim (11:8) who realizes that persecution will come (11:32–40). The model for such living is the forerunner Jesus (6:20).

E. Early Church Outside the NT

In the Apostolic Fathers there are no extensive anthropological discussions as in Paul, but the writings continue many of the themes seen in the NT. There is thus a high view of the *anthrōpos* (*1 Clem.* 33:4) at the same time that humanity is also viewed as sinful (*2 Clem.* 1:6; 18:2).

While there is some continuity in the use of anthropological terms (*Diogn.* 5.8 uses *sarx* in a way quite similar to Paul in Rom 8:12–13, and *psychē* frequently refers to the whole life of the individual, as in *2 Clem.* 15:1; *Barn.* 19:5; *Did.* 2:7) and while flesh can designate that which is opposed to God (Ign. *Magn.* 3.2; *Rom.* 8.3), *sarx* in the Apostolic Fathers is consistently used in a positive way quite distinct from the usage of Paul. God can therefore be designated the God or Lord of all flesh (*1 Clem.* 59:3; 64:1). Jesus came in the flesh and gave his flesh for the flesh of humanity (*1 Clem.* 49:6; Ign. *Smyrn.* 1:2; *Barn.* 5:1, 6, 10, 11; 6:7, 9; 7:5; 12:10). Ignatius frequently referred to the eucharistic flesh of Jesus Christ (Ign. *Trall.* 8:1; *Rom.* 4:1; 7:3; *Smyrn.* 7:1; cf. *Phld.* 5:1; *Smyrn.* 12:2). Moreover, believers are to be pure in flesh (*1 Clem.* 38:2), guarding their flesh from impurities so that the flesh may be justified (*Herm. Sim.* 5.7.1–4). The flesh, in fact, can be understood as the temple of God (Ign. *Phld.* 7:2; *2 Clem.* 9:3), and the Church can be designated as flesh (*2 Clem.* 14:4). It is the flesh that will be resurrected (*2 Clem.* 9:1–2, 4–5; 14:5; *Herm. Sim.* 5.6.7) just as Jesus was in the flesh after the resurrection (Ign. *Smyrn.* 3:1–2). Flesh, in distinction from Paul, is constitutive of the human person, so that "flesh and spirit" becomes a way to refer to the *anthrōpos* (Ign. *Smyrn.* 1:1; *Pol.* 5:1; *Magn.* 13:2; *Rom.* Int; on Jesus as flesh and spirit, see Ign. *Eph.* 7:2). In general, it would be accurate to say that the Apostolic Fathers use "flesh" where Paul would have used "body"; "body" is therefore less important as an anthropological term, and the Pauline nuances of "flesh" are largely missing. Nor is the NT understanding of Jesus as the new *anthrōpos* very promi-

nent. Only Ign. *Eph.* 20:1 speaks of the new man Jesus Christ (*Diogn.* 11:4).

At the same time the combination of a more positive view of flesh and a rigorous ethical stance led to a certain optimism about the ability of humanity, under God's grace, to be pure and attain salvation. If the flesh is kept pure, believers shall obtain eternal life (*2 Clem.* 8:4, 8:6). The Christian strives for perfection through the new law of Jesus Christ (*Barn.* 2:6; 4:10, 11; *Did.* 6:2–3), knowing that deeds are important for salvation (*2 Clem.* 8:4, 11:7, 19:1; *Barn.* 3:4–5, 4:12; *Herm. Vis.* 2.3.2; *Man.* 12.3.4–6). At the same time, sexual sins are especially highlighted (*Barn.* 10:6–8, 19:4; *Did.* 2:2; *Herm. Vis.* 1.1), and the ideal is sexual chastity (*1 Clem.* 38:2; Ign. *Pol.* 5:2). Thus, although there is a kind of optimistic view of the ability of redeemed humanity to live properly, there is need for repentance (*1 Clem.* 7:5–7; 8:2; 51:1 and 3; *2 Clem.* 8:1; 9:8; 13:1; 16:1; 17:1; Ign. *Phild.* 8:1; *Herm. Vis.* 1.1.9). On the other hand, the rigorism that continues to emerge in the 2d century begins to limit repentance to the beginning of the Christian life, for the baptized Christian should no longer sin (Ign. *Eph.* 14:2; *Herm. Vis.* 2.2.5). At the most, one postbaptismal repentance is allowed (*Herm. Man.* 4.1.8; 4.3.1–7).

There are elements of anthropological dualism in the Apostolic Fathers (*Diogn.* 6:1–10; *2 Clem.* 12:4), but the most consistent dualistic conception is that of *dipsychia* (dividedness, double-mindedness, literally "double-souledness"). The Christian is constantly tempted to be double-minded, that is, to be split in loyalties (*1 Clem.* 23:2; *2 Clem.* 19:2; *Herm. Man.* 9; 10.1.1; 10.2.2 and 4; *Vis.* 2.2.4; 3.7.1; 3.10.9; 3.11.2; cf. the two angels in *Man.* 6). Dualism, however, is more accurately applied to the ethical perspective of the Apostolic Fathers, where two opposite ways of living are available to people (*Barn.* 5:4; 18:1–2, 19–21; *Did.* 1:1 and the rest of the document; *Herm. Sim.* 1).

Where anthropological dualism is quite evident in the 2d century is in developing Gnosticism, where anthropology is placed at the center. Because the physical world was created by an inferior, unstable, and capricious God, gnostics are to have nothing to do with this world, for they do not belong to it. While that view is expressed most clearly in "The Song of the Pearl" in *The Acts of Thomas* and the cosmogonies from Nag Hammadi, we find the beginnings of the later clarified dualism in the *Gospel of Thomas,* which in origin goes back well into at least the 2d century A.D. A key term is the Greek loan word *monachos,* which occurs in sayings 16, 49, and 75. Related Coptic terms occur in sayings 4, 11, 22, 23, and 106. Later the Greek term designated a monk, but at this earlier stage the term means "solitary one." In saying 16, Jesus comes "to throw divisions upon the earth." The divisions are those between the gnostics and the rest of the world. The gnostics are the separated ones—separated from the evil in their own bodies and separated from whatever binds them to the evil world, especially the family (sayings 55, 101, 105). Gnostics are also to separate themselves from such outward trappings of the world as clothing (saying 36) and the conventional forms of (Jewish) piety (saying 14). Yet, somewhat ironically, the relationship of the gnostics to the world can be summed up as one of fasting (sayings 27, 81, and 110). The world tries to invade the gnostics to take their "goods," that is, belief in their otherworldly origin and existence, which is the only thing of worth gnostics possess (saying 21). Put in other language, the goal of the life of gnostics in this world is to become passersby (saying 42) in relationship to this world, for gnostics are aliens or strangers who do not properly belong to this creation. Their origin is in the higher world of the true God, and the important part of gnostics, the soul, is therefore divine (sayings 13, 49, 50, 108). The goal of gnostics is to be independent of the fleshly body and ultimately free of it (sayings 87 and 112).

By the middle of the 2d century the stage was set for the ongoing battle with Gnosticism, which forced the emerging catholic theologians, who also appropriated non-Christian Greek anthropological understandings, to themselves take a more and more dualistic view of anthropology.

HUMOR AND WIT. Because humor requires a somewhat "playful" disposition and a willingness (at least temporarily) to suspend all seriousness, many people—especially those with strong and well-defined religious beliefs—may be reluctant to admit that portions of Scripture may be funny or may have been written by someone trying to be humorous. The assumption often is that religion is serious and that it demands a transformation of human nature—especially the eradication of that aspect of human nature that derives pleasure from "worldly" things. Yet in the past century this theological assumption has been abandoned by many people, some of whom point out that humor can be a powerful vehicle for making important points, while others go further and insist that even biblical writing may have been intended primarily to *entertain* the reader. Because humor is such a fundamental aspect of human nature, there can be little doubt that the ancients laughed at things that struck them as funny. Of course, because humor is so greatly dependent upon the cultural conventions of the moment, it is often difficult (and sometimes impossible) for the modern Western mind-

set to appreciate what was humorous in ancient Israel or in the early Christian Church. Nevertheless, with the appropriate methodological cautions, something can be said about humor and wit in the ancient world from which the Bible emerged. This entry is intended to survey what is known about humor in antiquity and in the Bible. It consists of four articles, one surveying ancient Egypt, one surveying ancient Mesopotamia, one surveying the Hebrew Bible, and one surveying the NT.

GARY A. HERION

ANCIENT EGYPT

Anyone attempting to discuss the humor of an extremely different and distant culture will indubitably reveal much more about his/her sense of humor than about that of the people under study. Though cultural differences make it doubtful whether we can correctly identify all of the references which the ancient Egyptians intended as humorous without errors of both commission and omission, and more doubtful that we can grasp the import or impact of their humor on its intended audience, a profusion of representational as well as textual materials testifies to what we are likely justified in regarding as a pervasive vein of humor and wit (van de Walle 1969; *LÄ* 3:73–77; Mueller 1973; Guglielmi 1980).

A. Representations

The highly visual ancient Egyptian culture produced an untold number of representations on all scales and in a wide array of media (Saleh 1964; cf. Lesko 1986: 86).

1. Monumental Art. While much of Egyptian sculpture, relief, and painting belongs to cultic, mortuary, and display contexts involving a high degree of convention and motives other than the aesthetic, and while the conventions of Egyptian art are normally regarded as subordinating the individual/particular to the general/essential, Egyptian art often relishes observational detail and provides a "snapshot" which seems to freeze a moment or "frame" of activity. This includes many details which have attracted the modern observer, such as the calf and its mother bleating at each other (tomb of Ti, Old Kingdom; Westendorf 1968; 55), and some which seem humorous, e.g., two girls pulling each other's hair (tomb of Menna, New Kingdom; Smith 1981: 265). Some of these recur over long periods of time or are revived in periods of "archaism" (cf. Aldred 1985: 222). Some details, such as a huge baboon helping to press grapes (an Old Kingdom tomb; Lesko 1977: 19), baboons picking and eating figs (tomb of Khnumhotpe, Middle Kingdom; Aldred 1985: 120), or pet animals under the queen's throne (tomb of Anen, New Kingdom; Smith 1981: 260), strike the modern observer, at least, as humorous touches. One of the most celebrated humorous vignettes in monumental art is the relief of the immense queen of Punt and the little donkey she rides, in Hatshepsut's temple at Deir el-Bahri (Nims 1965: 36); the queen is also sketched on a Ramesside ostracon by a later artist who may have found her amusing (Peck 1978: 115).

These scenes can be accompanied by captions, comprising description and/or dialogue (see below).

2. Graffiti, Ostraca, Illustrated/Pictorial Papyri, etc. These media, especially the former two, lent themselves to humorous and perhaps more personal expression on the part of the artist.

Figured ostraca included some likely to be "practice sketches," some "doodles" or "cartoons," and are especially numerous from the artisans' community at Deir el-Medina during the New Kingdom. Humorous themes found on them include the "topsy-turvy" or "*mundus inversus*" type, cat-mouse reversals, etc. (cf. Vycichl 1983; Brunner-Traut 1977a; Peck 1978: 142–47). A unique object from Amarna is a children's toy depicting a family of monkeys in a chariot in obvious burlesque of the chariot theme so frequent in Amarna art depicting the royal family (Wilson 1956: 220).

Among graffiti is an erotic sketch in ink at Deir el-Bahri which has been regarded as a "political cartoon" of Hatshepsut and perhaps Senmut (Wente 1984; Romer 1982: 158–159). Erotic scenes are also found on ostraca (Peck 1978: 151–53), as well as on the great Turin erotic-satirical papyrus (Omlin 1973), which has one side devoted to the somewhat caricatured sexual encounters between a young woman and a priest, and the other to a group of "topsy-turvy" vignettes. These latter have been regarded by some as illustrations for animal stories which have not survived in writing (Brunner-Traut 1968; 1977b).

3. Hieroglyphic Writing System. The visual dimension of Egyptian culture is also found in its writing system, which, in its hieroglyphic form, is in a way an extension of artistic representation (cf. Meltzer 1980). This script lends itself to "sportive" writings based on puns and creative combinations/variations of signs, and scribes seem to delight in showing their erudition and ingenuity and, perhaps, matching wits with each other. Some such writings are found in standard hieroglyphic texts, while this tendency reaches its apex in "cryptographic" or "enigmatic" texts, often with religious importance, or sometimes display texts closely integrated with architectural decoration, and in the temple inscriptions of the Greco-Roman period at the tail end of the hieroglyphic tradition (cf. Derchain-Urtel 1978).

B. Texts

Wordplay is ubiquitous in Egyptian texts (Meltzer 1975; Morenz 1975). Frequently it is not humorous but religiously significant or characteristic of literary sophistication and elegance. There are cases in which, apparently, punning or polysemy can yield two readings of a passage (Fecht 1958; Williams 1981: 6), a procedure which, if deliberately employed as a literary device, certainly has humorous potential and was likely so employed.

The "satire" is well attested in Egyptian literature (Curto 1965; Seibert 1967; Wilson 1971; Millet 1988), especially in wisdom compositions and the curriculum of the scribal academy. The "Satire on the Trades," in which various occupations are compared disadvantageously with that of scribe (*AEL* 1: 184–92), begins a tradition elaborated in the Late Egyptian Miscellanies (*AEL* 2: 167–78). These latter compositions include the scathing description of the dissipated scribal student enjoying nightlife, and the "satirical letter" in which some basic facts about the Syro-Canaanite region and other things that every military scribe should know are livened up by being couched as a denunciation of the ignorant scribe Amenemope by the scribe

Hori (Fischer-Elfert 1983). In a similar vein is the description of the drunkard in the 18th Dynasty Instruction of Anii (*AEL* 2: 137), and, earlier, the well-known characterization of the hapless Asiatics in the Instruction for Merykare (*AEL* 1: 103–4). Turning to Demotic wisdom, there are undoubtedly humorous highlights, such as Papyrus Insinger's characterization of the plight of a sexagenarian (*AEL* 3: 199); a Demotic fragment of advice for "a little child who is very, very young," continuing with bawdy maxims (Williams 1976: 270–71), is also perhaps a comic piece.

Egyptian stories are sometimes predominantly humorous and frequently give considerable play to humor in a lively and sophisticated approach to composition. The classic Middle Egyptian story of Sinuhe features a scene which has always been regarded as humorous, the homecoming of the protagonist who has "gone native" as a Canaanite and is seen by an incredulous royal family (*AEL* 1: 231–33). The story of the "Petitioner of Memphis" or "King Neferkare and General Sisenet" features a petitioner whose suit is drowned out by musicians and who, investigating, discovers an apparent liaison between the king and a general (Posener 1971: 237–38). The interminable speechmaking of the Eloquent Peasant might have been facilitated, according to one suggestion, by the extremely generous beer ration provided by the high steward (Leprohon 1975). The tale of the Shipwrecked Sailor ends with a grim proverb: "What good is there in giving a drink to a goose on the eve of its slaughter?" (Gilula 1976). The entire story takes on a humorous cast in light of a recent suggestion according to which the sailor is an illustration of how to disobey all of the injunctions of the Wisdom Literature regarding etiquette—that is, how to be an overbearing, rude, arrogant boor (Bryan 1979). As such, it is part of a persistent thread of protagonists who can be regarded as "anti-heroes." One possible reading of the story as a whole is as a "tall tale," which, if justified, can represent another kind of humor. The episodes of the magicians in Papyrus Westcar (*AEL* 1: 215–22) feature a number of humorous touches. King Snofru is diverted by young women rowers dressed, if that is the right word, in nets; Khufu is entertained by the magician Djedi, who eats and drinks an immense quantity daily; a group of gods and goddesses assist at a birth and meet a distraught expectant father (though his tying his kilt upside down may rather be an example of *"Bindeszauber"*). It is possible to interpret the courtly conversation between Djedi and Prince Hardedef as a verbal display of elegant sarcasm and one-upmanship (for an opposite interpretation, see Goedicke 1986).

In Late Egyptian narrative, our attention is immediately caught by the "Contendings of Horus and Seth," a slapstick burlesque treatment of that narrative (which has a fragmentary Middle Kingdom predecessor; (*AEL* 2: 214–23; cf. Meltzer 1974; Redford 1973: 71–78). The picaresque misadventures of Wenamun, who makes himself *persona non grata* at Dor and Byblos and narrowly escapes being lynched in Alashiya (*AEL* 2: 224–30), have an appreciable element of humor; it has been suggested that this text is a documentary account rather than a tale. Among other documentary texts, one of the Late Ramesside Letters includes a rare example of an actual joke (Wente 1967: 80). The Late Egyptian love poetry's sensitive portrayal of young lovers includes a number of humorous touches (*AEL* 2: 181–93; cf. Foster 1974; Lesko 1986). The rather grim story of Apophis and Sekenenre, the missing conclusion of which is often linked with the hideously wounded mummy of Sekenenre, features the insulting message or challenge sent by the Hyksos king to his Theban opponent. While most Egyptologists have regarded that message as a provocation leading to war, an early suggestion recently revived is that it is part of a context of escalating verbal ripostes (Redford 1970: 36–39; 1973: 58–59). Outwitting by verbal cleverness provides the denouement of yet another Late Egyptian story, that of Truth and Falsehood (*AEL* 2: 211–14).

Demotic narrative richly repays the search for humor and wit. The two stories of Setna Khamwas (*AEL* 3: 125–51; cf. Posener 1971: 250) portray that formidable magician as being soundly upstaged by the dead sorcerer Naneferkaptah and the boy wonder Si-Osiri respectively. Naneferkaptah puts him in his place with several extremely grim practical jokes in the first story, while the second features the magical abduction of Pharaoh every night to Kush, where he is beaten in the public square. The Petubastis epic cycle includes the story of Prince Pedikhons and Queen Sarpot (*AEL* 3: 151–56), in which what begins as the combat between the Egyptian prince and the Amazon queen becomes a different kind of encounter by the fragmentary conclusion. The Demotic Chronicle includes the escapades of the tippling king Amasis (cf. Posener 1971: 250).

While instances of intended humor are hard to come by in royal and other commemorative or display inscriptions, the possibility can be considered that in the triumphal inscription of the Kushite king Piye ("Piankhy" formerly), if the ostensibly cheering Egyptians at the end are being quoted accurately, they are actually jeering the monarch and casting aspersions on his legitimacy (*AEL* 3: 80). If so, this might be one instance of the intercultural misunderstanding which characterizes the Kushite-Egyptian encounter. At an earlier period, the autobiographical inscription of an 18th Dynasty viceroy of Nubia, Usersatet, quotes a letter from King Amenhotep II, apparently reminiscing in his cups about foreign women, or foreign chieftains disparagingly characterized as such (Helck 1984: 1343–44). The conversations, exclamations, and songs or chants represented as spoken by workmen, fishermen, herdsmen, etc., in "daily life scenes" starting in Old Kingdom tombs (*"Reden und Rufe"*—Erman 1919; Guglielmi 1973; Montet 1925) contain a number of apparently lighthearted or jocular exchanges and sometimes seem to be humorous (e.g., the "herdsman's song").

It is difficult if not impossible to separate "religious" or "mythological" narrative from stories in general (cf. the Horus and Seth narrative cited above), but those which are designated *r3*, "utterance," or found in "magical" or mortuary contexts include some which could perhaps be considered humorous. Some commentators have seen humor in the "Myth of Re and Isis," in which the aged and doddering sun god must tell the goddess his secret name to stop the torment of a snakebite, and in the "Book of the Divine Cow" (commonly known as the "Destruction" or "Deliverance of Mankind") found in some New Kingdom

royal tombs, in which the rampaging goddess is foiled in her intention to destroy mankind when she gets drunk on beer dyed red to resemble blood (Redford 1973: 69–71). Whether the Egyptians did, I cannot say.

Herodotus may have played a role in the dissemination of Egyptian humor to new audiences insofar as such episodes as Khufu's prostituting of his daughter and the racy story of Rhampsinitus have authentic roots in Egyptian tradition (cf. Posener 1971: 237–38).

EDMUND S. MELTZER

MESOPOTAMIA

Humor, or the perception and expression of the ludicrous or amusing, is known in both Sumerian and Akkadian literary tradition, and was no doubt as much a part of everyday life in Mesopotamia as in contemporary societies. At its most basic, Mesopotamian humor was scatological and crass; at its most obvious, diverting and jocose; at its most subtle, refined and penetrating. As with all humorous literatures, the point lies in breaking a taboo, inverting or reversing expectations, drawing attention to the gap between what is and what is wished for, pretended, or ignored.

Humorous allusions to excretion and flatulence are commonplace. Here the point can lie in unappetizing imagery, such as an Akkadian parody on a menology that enjoins wild donkey dung in garlic as the diet for the month kislimu, and for shabat hot bread and donkey anus stuffed with dog turds and fly dirt (Foster 1974: 77–78; Römer 1975: 63–66). A spoof Akkadian incantation, to be recited by a person losing sleep to the bleating of a goat, has the Babylonian national god Marduk stuffing the offending

goat's left ear with its own dung, in an "ear-for-an-ear" reprisal (Genouillac 1925: pl. 3, C1 [cuneiform text only]). Some errant Babylonian scholar offered a precative paradigm of the verb "to break wind" in the context of a Sumerian grammatical treatise, taking advantage of a graphic ambiguity in his original (Foster 1974: 84). Flatulence as an enemy of intimacy is alluded to in Babylonian "love lyrics": "Why did you break wind and feel mortified? Why did you stink up her boyfriend's wagon like a wi[ld ox]?" (Lambert 1975: 120–21). A Sumerian joke alludes to a bride's flatulence as an example of inconsequence; in another a boastful fox opines that when he urinated in the ocean he created it (Gordon 1959: 495; 222–23).

Humorous allusions to personal habits, appearance, and behavior abound in Sumerian debates and dialogues, wherein the interlocutors trade elaborately artificed but now often scarcely understandable insults. These reflect on the opponent's genealogy, appearance, intelligence, competence, and education, as in the following example: "(You) dog spawn, wolf seed, mongoose stench . . . hyena whelp, carapaced fox, addlepated mountain monkey of reasoning nonsensical" (Sjoberg 1972: 108). Likewise in Akkadian: "I saw my girl friend and was stunned: You are chalky like a gecko, your hide is swart like a cook[ing pot]!" (Lambert 1975: 120–21).

Sexual activity is, of course, a favored subject of jokes and double entendres in both Sumerian and Akkadian (examples in Farber 1986; Gordon 1959; Foster 1974). The infamous "love lyrics," for example, have the ardent man begging the women of "Babylon-town" for a rag to swab his girl friend's genitalia. He later plants a watchbird in her vulva, enjoining it not to peck at the fungus and to stay clear of the stench of her armpits (Lambert 1975: 104–5; 122–23).

Forsaking the bodily for the social, we find satirical quips on various trades and professions. The launderer, for example, is the butt of a Sumerian joke: "Men say, 'I'm dirty.' 'By god I'm dirty too!' says the laundryman" (Gadd 1963: 187). The singer of Sumerian cultic laments is pilloried for his absurd piety: if his boat sinks he wishes the river enjoyment of his cargo; if he slips and falls he is doubtful of the propriety of getting up since his mishap was a visitation from heaven (Gordon 1959: 248–49, 251–52, 483–84). An Akkadian parody of exorcism has the would-be exorcist burning down the haunted house to free it of its ghost (Foster 1974: 77).

Extended texts of a light or jocose nature include a Sumerian composition about three ox drivers from Adab, owners of an ox, cow, and wagon, who fall into a dispute as to who will fetch water. They solve it by going off together. Upon their return they find that the ox has mated with the cow, the cow has produced a calf, and the calf is suckling(?) on the wagon. They dispute now who shall be owner of the calf. They seek judgment from the king, whose dilemma is resolved by a "cloistered woman," perhaps the Sumerian equivalent of the "lady from Philadelphia." Her pronouncement is unclear, owing to damage to the unique manuscript (Foster 1974: 70–72).

A well-preserved Akkadian folktale is referred to as the "Poor Man of Nippur." This man sells his shirt to buy a ewe for a feast to ease his hunger pangs, ends up with a male goat instead, and, loath to share his repast with his relatives and neighbors, takes it to the mayor of Nippur. The mayor proceeds to dine on the goat himself, leaving the poor man only a bit of gristle and a quaff of cheap beer. The poor man's threefold revenge takes up the rest of the tale (Gurney 1956: 142–62; 1972: 149–58; Cooper 1975: 163–74; Jason 1979: 189–215). In another humorous Akkadian text, a sophomoric fop lectures a cleaner in detail as to how to clean his garments, whereupon the exasperated cleaner tells the youth to go and wash them in the canal himself. He then offers some good advice to the effect that no one would help such a self-important young man (Gadd 1963: 181–88; Livingstone 1988: 176–82).

In another, comparable text, a physician from Isin goes to Nippur, the center for Sumerian learning, to collect a fee. As he asks directions in the street, he is answered in Sumerian, which, as a man of letters, he is supposed to have mastered. The physician imagines that he is being cursed at and remonstrates. After several reprises of this situation, he learns that his client is not at home anyway, and the author apparently suggests that such an illiterate be run out of town forthwith (Reiner 1986: 1–6). A satirical Akkadian letter in the name of the hero Gilgamesh threatens and cajoles its addressee, and makes a series of gargantuan demands: "send . . . 100,000 mares whose bodies have markings like wild tree roots, 40,000 continually gambolling miniature calves, 50,000 fine calves with well-turned hooves and horns intact, 50,000 teams of dappled mules . . ." (Kraus 1980: 109–21). Sumerian epistolary literature includes a plaintive effort by a homesick monkey (Dunham 1985: 244–45).

Humor can show a more serious side in satire, and, if carried far enough, becomes bitter. Perhaps the best-known example is the "Dialogue of a Master and His Servant," wherein a seemingly capricious master sets forth a proposition, then its opposite, to each of which the servant has a glib reply: "Servant, listen to me!" "Yes, master, yes!" "I will fall in love with a woman." "[So], fall in love, master, fall in love! The man who falls in love with a woman forgets sorrow and care." "No, servant, I will certainly not fall in love with a woman." "[Do not] fall in love, master, do not fall in love. A woman is a pitfall, a hole, a ditch; a woman is a sharp iron dagger that slashes a man's throat" (Lambert 1960: 139–49).

Other satirical possibilities are exploited in narrative poems that are not primarily humorous or satirical in intent. In the Akkadian Gilgamesh Epic, for example, satirical passages include Ishtar's occasional use of colloquial speech; the pedantic scorpion woman correcting her mate concerning the genealogy of Gilgamesh; and the reversal of the irreversible curse of Enkidu upon the prostitute, where he concludes by wishing her an ardent, moneyed, and marriageable clientele (Foster 1987: 36–39). Sumerian narrative poems, even at the present level of understanding, teem with witty and satirical passage. In "Enmerkar and the Lord of Aratta," for example, the plot turns upon limitations of royal power, trickery, bluffing, and trials, and climaxes in an etiology for the origins of writing as a means of conveying messages too prolix to be memorized. Such texts presuppose an audience sure enough of itself to see its strategies and values parodied (Cohen 1973).

The vocabulary of humor in Sumerian and Akkadian seems rather sparse: Sumerian for "funny" (ZU-LILI) may mean something like "making the teeth flash," whereas Akk *sâḫu,* "laugh," may rather refer to the sound of laughter as a loud noise. The Akkadian word is mostly attested in contexts of ridicule or amusement at the discomfiture of others. An interesting Sumerian expression, ISIŠ-LÁ, refers to "breaking down" or "giving way" to either tears or laughter. For discussion and examples, see Foster 1974: 84–85; Römer 1975: 48–49.

The professional jester or clown seems to have existed in the profession called *aluzinnu.* The personage is known from Assyrian and Babylonian manuscripts that preserve what seem to be snatches of songs and routines. These deal with his gross appetites and sexuality, his inept performance of various trades, the revolting monthly diet alluded to above, and a heroic journey in the manner of the kings of old (Foster 1974: 74–79; Römer 1975: 53–68).

Pranks and practical jokes are best known from the "Poor Man of Nippur" alluded to above, where three tricks are worked on the mayor.

Wit and humor outside of literary contexts are more difficult to assess. Heavy sarcasm and irony can sometimes be read in letters, for example: "Do go on being such a good sister to me! Even though we grew up together, you didn't pay me two cents worth (text: ¼ shekel) of attention when you got your big break . . . if that big chief you're married to needs beams, let him write me; I'll send him five beams . . . send me (in return) a hundred locusts and a cent-and-a-half's worth (text: ⅓ shekel) of food, so I can see what sort of sister you are" (Stol 1981: 10–11). An Assyrian king allows himself a bit of "gallows" humor in a letter to the Babylonians (Lambert 1960: 281). In an inscription Sennacherib sneers at the incontinence of his enemies (Grayson 1963: 95). A Sargonic official lightheartedly invokes a magic spell in asking his correspondent to come see him (Thureau-Dangin 1926: 23–29).

Although some Mesopotamian humor was undoubtedly considered "vulgar" by the Mesopotamians themselves (Foster 1974: 85), one can be sure that, as always with humor, what was produced by the few was enjoyed by the many.

BENJAMIN R. FOSTER

OLD TESTAMENT

Humor appears in many forms and serves various functions in the Hebrew Bible, although there are those (notably the philosopher A. N. Whitehead) who question its presence there. Since humor is found to be a universal phenomenon, and it has been recognized in other literature of the ANE (see, e.g., Foster 1974; Rosenthal 1956; van de Walle 1969), one expects to find it in ancient Israelite literature, too, even in texts as serious in purpose as the Hebrew Scriptures.

A. Laughter and Humor

The Bible has no term for humor per se, but it has an etymologically related set of verbs for "to laugh" (*ṣāḥaq, śāḥaq;* e.g., Gen 18:12–13; Qoh 3:4), "to laugh at, scoff" (*śāḥaq;* e.g., Prov 31:25; Job 5:22), and "to laught at, mock" (*śāḥaq;* e.g., Job 30:1; Lam 1:7; *lāʿag;* e.g., Ps 2:4; 59:9; on the etymology see Steiner 1977: 111–12). Note also the *Piʿel* conjugation *śîḥēq/ṣîḥēq,* "to amuse" (e.g., 2 Sam 2:14; Judg 16:25), and *ṣîḥēq,* "to mock" (Gen 39:14, 17). Laughter, both harmless and that directed at a victim, is a sign of humor, reference to laughter in the Bible indicates the presence of humor.

It is instructive to examine the single elaborate episode of laughter. Gen 18:9–15, in which Sarah overhears an angel (or God) tell Abraham that his elderly wife will bear a son. Sarah laughs (v 12); when YHWH challenges Sarah's apparent disbelief (vv 13–14), she denies having laughed, only to be contradicted by YHWH (v 15). Sarah's laughter here can be explained handily by a common theory (cf., e.g., Paulos 1980; Williams 1978) according to which three factors together occasion humor: a sense of the incongruous, a relaxed or lightheaded mood or attitude, and an effect of suddenness or surprise. In conjunc-

tion with the third element one finds a characteristic technique of humor: economy of expression.

The episode of Sarah's laughter confirms the workability of the widely held theory of humor. The incongruity is the idea that a postmenopausal woman (v 11) can conceive; second, the mood of the scene is festive and Sarah is uninhibited, thinking she is unnoticed (she doesn't know how far God's ears reach); and third, the joke is unexpected—Sarah catches the conversation by accident. This episode is related to two nearby passages, Gen 17:15–17, where Abraham laughs at the prospect of Sarah conceiving, and 21:1–7, where Sarah says, after giving birth, "God has made laughter for me; every one who hears will laugh over me" (v 6). The implication is that Sarah's incongruous situation would be a source of humor to anyone. As for economy, Sarah laughs at the mere statement that she will give birth. A joke or humorous situation must be immediately perceived. Thinking about or analyzing it, as has been done here, kills the humor.

B. Types of Humor

Humor is notoriously difficult to classify, and definitions of types vary. The remarkably comprehensive treatment by Freud (1938) assumes complex categorization. One can distinguish, with Freud, wit in word from wit in thought and harmless wit from tendentious wit. In a discussion of biblical humor, it might be useful to divide tendentious wit between lowbrow burlesque and the more serious highbrow satire, such as one encounters frequently in the prophets. The categories below have been adopted from convention and for convenience and should not be viewed rigidly.

This is particularly so because biblical humor and wit often intermix a variety of types. Consider, for example, one of the Bible's few extended comical scenes, the Israelite judge Ehud's slaying of the Moabite king Eglon in Judg 3:15–30. Ehud exploits his abnormality, left-handedness, to trick the Moabite and stab him. Eglon, whose name suggests both "bovine" and "rotund," is described as "very fat" (v 17), a visually comic image. Ehud's dagger punctures the obese king blade, hilt, and all (v 22). In a moment of rare scatological humor in the Bible, the fatal blow causes Eglon's bowels to loosen, which, in a sense of high dramatic irony, allows Ehud to escape while the Moabite guards wait around judging by the odor that their king is relieving himself (vv 24–26). Ehud magnifies the comedy through verbal wit as well. In v 19 he tells Eglon he has a "word" (Heb *dābār*, "word, thing") for him—the dagger, of course. The pun involves another wordplay: the Heb expression for the weapon's two "edges" has the basic meaning of "mouths" (v 16; cf. Good 1965: 33). The dagger's "mouths" surely have a "word" to say to the king. The double entendre embodies the joke.

The scene vents hostility toward Moab through its satire of the royal court and its flawed security, and Ehud's role as deft trickster (cf. Niditch 1987) would no doubt entertain an Israelite audience. When comedy is aimed at a victim, it is only amusing to those who are aggressive or hostile toward the butt of the humor. The audience's attitude as well as motives (e.g., laughing with versus laughing at) are important to consider in identifying humor. Haman's parading Mordecai through Susa (Esther 6) may well have pleased the Jews, but it was more than a little distressing to Haman, his wife, and his friends (Esth 6:13).

C. Comedy and the Comical

In classical Greek comedy a dissembling "ironist" (Gk *eirōn*) undoes an overblown "imposter" (Gk *alazōn*). The Bible, in a general way, includes a number of comedies. YHWH through Moses and Aaron exposes Pharaoh as a false god and ironically drowns him in the sea (Exodus 14–15) as he had drowned Hebrew boys in the Nile (Exod 1:22; see further Robertson 1977: 16–32). In a perhaps more obvious example, Mordecai and Esther unmask Haman as the man who would annihilate the Jews, the very antithesis of what the king (now) wants. At the suggestion of the obsequious eunuch Harbona, the king orders that Haman be impaled on the stake he erected for hanging Mordecai, the epitome of poetic justice—and humor (Esth 7:10; see further Beet 1921).

Within such comedies and others are various comical moments. Pharaoh's magicians, who had displayed modest powers in earlier plagues, cannot assist their god-king with the boils because they themselves are afflicted (Exod 9:11). The wicked Ninevites, in Jonah 3, are so eager to repent—itself a ludicrous notion—that they dress their cattle in mourning clothes and force them to fast too (vv 7–8). Not every biblical comedy is comical; cf., e.g., the Tower of Babel (Gen 11:1–9), which is witty—note the play on Babel's name—but not necessarily funny.

The classical form of comedy, as in Aristophanes' plays, is farce. Pure farce would be hard to find in the largely high-minded religious literature of Scripture. There are, however farcical scenes, usually at the expense of an enemy. When Esther exposes Haman's plot to the king, the king storms out in an exaggerated rage. Upon his return he sees Haman fallen on his wife's divan. Although we know Haman was begging for mercy, the king assumes he was making a move on the queen (Esth 7:7–8). The outrage is compounded, and any idea of Haman's to appeal for clemency is quashed. Samson's tying torches to fox tails and burning down the Philistine crops, as well as his massacre of a thousand Philistines with the jawbone of an ass (Judges 15), might also have been farce were it not that these actions led to tragic consequences.

As Landy (1980: 14) has observed, biblical jokes often abort because they loop back into the continuing narrative. Nevertheless, certain characters exhibit comical traits, especially when they repeat a pattern of behavior without developing (cf. Bergson's theory of humor as mechanical conduct, in Sypher 1956: 61–190; cf. Exum and Whedbee 1984: 27). They are caricatured. Pharaoh repeatedly changes his mind the wrong way; Samson ever impetuous, is continually duped; Jonah insists on a theology at odds with God's.

Fables as a genre tend to feature the comical. Consider Balaam's talking ass, who halted at the sight of the angel in spite of Balaam's multiple beatings (Num 22:21–35); or Jotham's fable in which the trees by process of elimination choose the thornbush to be their king (Judg 9:7–15).

D. Forms of Irony

Irony underlies virtually all humor in the Bible, but it will be useful to enumerate some victim-directed types.

1. Sarcasm. Sarcastic speech is not common in the Bible, and, without hearing speech intonation, it is hard to detect. A clear example is Gen 37:19. When Joseph's brothers say, "Here comes this dreamer," lit., "master of dreams," they would seem to deride or deny his alleged talent. Note also Amos 4:4–5: "Come to Bethel, and transgress; to Gilgal, and multiply transgression; bring your sacrifices every morning, your tithes every three days . . . for so you love to do, O people of Israel!"

2. Ridicule. In the biblical ethos, the ignominious crushing of Abimelech's head by the woman of Thebez (Judg 9:53–54) is calculated ridicule; Abimelech had his aide run him through lest people say: "A woman killed him" (cf. 2 Sam 11:21 and Jael's murder of Sisera in Judges 4–5). The most oft-cited example of biblical humor is Elijah's mockery of the Baal prophets in 1 Kgs 18:27: "Cry aloud [i.e., louder, to Baal], for he is a god; either he is musing or he is gone aside, or he is on a journey, or perhaps he is asleep and must be awakened." The humor does not exclude Elijah's seriousness: gods in the ANE may be out of touch (cf. Ps 44:24, where YHWH is said to sleep), so the prophet wants to remove any possible excuses from his opponents when they inevitably fail.

3. Satire. Representation of a target such that the image becomes ironic or ludicrous is most common in the Hebrew Bible in prophetic and other attacks on foreign gods, cults, and kings (e.g., Isa 44:9–20; Ezekiel 29, 31; Nahum 2; Daniel 4). A notable example is the "taunt" of the king of Babylon in Isaiah 14; e.g., "your pomp is brought down to Sheol . . . maggots are the bed beneath you, and worms are your covering" (v 11). The description of the king's humiliating end is rather more vivid than expected and accordingly humorous. Human justice, or just being human, would seem to be satirized in the Garden of Eden when each character in turn passes the guilt to the next (Gen 3:9–13). Many (e.g., Burrows 1970; Ackerman 1981; Fisher 1977: 577) read the story of Jonah as a satire on a prophet.

4. Parody. Some (e.g., Miles 1974–75) interpret Jonah, whose values are the inverse of those of the real prophets, as a prophetic narrative, i.e., as parody. The account of Ahasuerus' silly, irreversible edicts in Esther 1–3 may parody Persian protocol (see, e.g., Greenstein 1987: 227–28).

5. Trickery. A trickster amuses when one is on his or her side. Laban's deceit of Jacob in Genesis 29 would not please an Israelite, but Jacob's "breeding trick" (Gen 30:29–43; cf. Good 1965: 101–3), by which he uses his wits to get rich from wily Laban, would. In the biblical context, Jacob's deception of his father Isaac in Genesis 27 is not humorous because of its moral ambiguity and our sympathy for Isaac (cf. Gammie 1979: 127–28). A gallery of tricksters figures in Judges: Ehud (chap. 3), Jael (chap. 4), Gideon (chaps. 7–8), and Samson (chaps. 14–16).

One can deceive through language, too, as in Samson's riddle (Judges 14) and Abraham's representation of his wife as his sister (Gen 12:10–20; 20)—she was his *half* sister, after all, as the patriarch explains (Gen 20:12; cf. Niditch 1987: 50).

6. Verbal Wit. While verbal trickery manifests wit, far more common is wordplay, especially punning (see WORDPLAY, HEBREW). When Jeremiah addresses the heavens and begins by saying "Be appalled, O heavens . . ." (Jer 2:12), Heb *šōmmû,* "Be appalled," puns on Heb *šimʿû,* "Hearken," which opens a standard, innocuous formula (e.g., Isa 1:2). His bite is louder than his bark. Wit serves up so-called gallows humor in Gen 40:19. The Heb idiom "to lift the head" means "to elevate (to status)." Joseph announces to the baker his sorry fate by saying: "Within three days Pharaoh will lift up your head—from you!" No doubt the baker would have preferred the more figurative usage.

A contest of wits may characterize such scenes as Abraham's haggling with YHWH over the hypothetical righteousness of Sodom (Gen 18:23–33; see, e.g., Landy 1980: 16–17) and Delilah's deadly game with Samson (Judg 16:4–21).

7. Proverbial Humor. A special case of verbal wit, proverbs emblematize the typical biblical use of humor: occasionally proverbs are humorous—but they also make a serious point. Consider Prov 11:22: "Like a gold ring in a swine's snout/ is a beautiful woman without discretion." The grotesque hyperbole and surrealism of the simile produce the humor. In Prov 26:17 the situation in the simile is comical: "He who meddles in a quarrel not his own/ is like one who takes a passing dog by the ears." Prov 26:18–19 reads: "Like a madman who throws firebrands, arrows, and death,/ is the man who deceives his neighbor and says, 'I am only joking!' " As though following this advice, the Bible is careful with its humor.

EDWARD L. GREENSTEIN

NEW TESTAMENT

Humor exploits the observation of the absurd, the incongruous, and the comical, often poking fun at the foibles of human life. Wit is the quick perception of cleverness and ingenuity. Both humor and wit delight in deviations from what is expected or what is required in various social situations.

They are often expressed by means of verbal subtleties, indirection, and clever turns of phrases. Consequently, humor and wit do not translate well from one culture, age, or language to another. Context can also encourage or stifle our perception of humorous incongruity. When we read the biblical writings as sacred Scripture, enshrined by centuries of liturgical use and theological reflection, we often miss the light touches, sly remarks, witty expressions, and comical elements in them.

Jesus made use of incongruity, drawing pictures of a camel passing through the eye of a needle (Mark 10:25), a beam of wood in an eye (Matt 7:3–5; Luke 6:41–42), straining out a gnat and swallowing a camel (Matt 23:24), whitewashing tombs (Matt 23:27), and washing the outside of a cup while leaving the inside dirty (Matt 23:25). Jesus also applauded the quick repartee of the Syrophoenician woman (Mark 7:24–30). He himself outwitted the chief priests, scribes, and elders (Mark 11:27–33); the Pharisees and Herodians (Mark 12:13–17); and the Sadducees (Mark 12:18–27). While giving instructions on fasting, Jesus comments, "They disfigure *(aphanizousin)* their faces that they may figure *(phanōsin)* in public as fasting" (Matt 6:16).

2 Cor 1:21 plays on the words *Christ* and *christen.* John frequently employs double entendre and words that have multiple meanings: wind-spirit [*pneuma*] (3:8); flowing water-living water (4:11); asleep-dead (11:11–14). The NT also plays on the meaning of names. "Jesus" is derived from the verb "to save" (Matt 1:21). Jesus gives Simon a new name: "You are Peter [Gk *petros;* Aram *kepha*] and on this rock [Gk *petra;* Aram *kepha*] I will build my church" (Matt 16:18). Later, the leader of the early Church is left pounding on the door while the maid, Rhoda, runs to tell the others of his escape from prison (Acts 12:6–16). When the sons of the Jewish high priest Sceva attempt to exorcise demons in the name of Jesus, the unclean spirit answers, "Jesus I know, and Paul I know; but who are you?" (Acts 19:15).

Mark pokes fun at physicians, saying, "And there was a woman who had had a flow of blood for twelve years, and who had suffered much under many physicians, and had spent all that she had, and was no better, but rather grew worse" (Mark 5:25–26).

Zacchaeus, the short tax collector who climbed a sycamore tree to see Jesus, is a comical figure, and one can overhear the delight of early Christians laughing at a chief tax collector (Luke 19:2–5).

The story of the healing of the man born blind makes wonderful use of irony, wit, and sarcasm. When the Pharisees interrogate the man, they challenge him to praise God and discredit Jesus as a sinner. He answers, "Whether he is a sinner, I do not know; one thing I know, that though I was blind now I see" (John 9:25). When the Pharisees ask (for the second time) how the healing occurred, the man answers, "Why do you want to hear it again? Do you want to become his disciples?" (John 9:27). Later, when Jesus asks the man if he believes in the Son of Man, and he responds, "And who is he, sir?" Jesus answers, "You [a man born blind] have seen him!" (John 9:37). The story ends by underscoring the irony that those who could see have chosen blindness, while one who was born blind has received sight and come to faith.

Humor in the Bible celebrates the goodness of God, the world God created, and the life God gives. A foundational incongruity sustains the NT. God enters the world as a baby born to a peasant girl, is unrecognized by all but a few, and redeems the world by dying on a cross. Rejecting wisdom and signs, God chose to save those who believe through the foolishness of preaching (1 Cor 1:21).

R. ALAN CULPEPPER

HUMTAH (PLACE) [Heb *ḥumṭâ*]. Town situated in the central hill country of Judah (Josh 15:54), within the same district as Hebron. This settlement is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). Although we know its general location, somewhere in the country between Hebron and Aphekah, a suitable candidate for the ancient town has not been identified.

WADE R. KOTTER

HUNCHBACK. See SICKNESS AND DISEASE.

HUNDRED, TOWER OF THE (PLACE) [Heb *migdal hammēʾâ*]. A tower in the outer wall of Jerusalem protecting the N approach to the city, E of the Fish Gate and the Tower of Hananeel. Nehemiah mentions these two towers in both the restoration (3:1) and procession (12:39) texts. Reference to the Tower of Hananeel by Jeremiah

and Zechariah (Jer 31:38; Zech 14:10) affirms the location of the Tower of the Hundred as indicated by Nehemiah. The two towers (overlooking the fish market) were intended to protect the Fish Gate that opened to a ridge leading to the Benjamin Plateau and most likely correspond to the fortress (Heb *bîrâ*) of Neh 7:2 and the later "Hasmonaean Baris" and Antonia Fortress. Avi-Yonah, on the other hand, places the two towers on either side of the Fish Gate (1954: 240, fig. 1, 241–42).

The name "Tower of the Hundred" suggests to some that a substantial garrison was stationed in the tower, while others would emend the texts to read *me'â,* "hundred," as a measurement. Critical issues raised by Vincent have prompted him to omit both of Nehemiah's references to the Tower of the Hundred (Vincent and Steve 1954: 240, 242) and likewise prompted Simons to discount the existence of the tower (1952: 343 and fn. 1).

HUNTING. See ZOOLOGY.

HUPHAM (PERSON) [Heb *hûpām*]. Var. HUPPIM. One of the descendants of Benjamin and ancestor of the Huphamites (Num 26:39). The descendants of Benjamin are listed in three geneaological tables: Gen 46:21; Num 26:38–40; and 1 Chr 7:6–12. Confusion from these lists concerning Hupham exists along two lines. First, the Genesis list establishes Hupham as a son of Benjamin, whereas Numbers and 1 Chronicles record him as a grandson or later descendant. The 1 Chronicles list appears more orderly; three sons of Benjamin are listed and their sons in order, Hupham being the son of Ir and grandson of Benjamin. A second difficulty centers in the name "Hupham." The Genesis and 1 Chronicles source uses the name "Huppim" while the Numbers source employs the name "Hupham." Both are supposed to be the same. Jacob Myers suggests that Huppim may be of Arabic origin (Myers *1 Chronicles* AB, 53). Others theorize that the same name has a different Hebrew form. Speiser, on the other hand, suggests that Huppim in the Genesis source should be corrected to Hupham as Numbers (*Genesis* AB, 343).

JOEL C. SLAYTON

HUPPAH (PERSON) [Heb *ḥuppâ*]. A priest who received the sixteenth position in the priestly order of the temple during David's reign (1 Chr 24:13). 1 Chronicles 24 is the only place where Huppah appears in the OT. Therefore, an evaluation of the historical reliability of his appearance depends upon the literary context of 1 Chr 24:1–19. Though generally agreed that this list of priests originated after the Exile, its exact date remains debated. See HAKKOZ. Huppah may represent a Judean individual or priestly family in the late Persian period that the Chronicler has retrojected into the reign of David.

JOHN W. WRIGHT

HUPPIM (PERSON) [Heb *ḥuppîm*]. See HUPHAM (PERSON).

HUR (PERSON) [Heb *ḥûr*]. The name of five persons in the OT.

1. A "king" of Midian (Num 31:8; Josh 13:21). Historically, the five Midianite kings in Numbers 31 may be drawn from a list of place names that form an itinerary through N Arabia and S Transjordan in the Persian period (Knauf 1988: 166–67). "Hur" can be identified, then, with the Nabatean town of Auara/*Ḥaurâ'* (today al-Ḥumaymah; M.R. 180929).

2. A companion and assistant of Moses and Aaron during the battle against the Amalekites (Exod 17:10, 12), and, together with Aaron, a "substitute judge" while Moses stayed on the mountain of the Lord, Exod 24:14.

3. The grandfather of Bezalel, from the tribe of Judah; it was Bezalel who designed and crafted the paraphernalia of the Israelite cult, according to the P source (Exod 31:2; 35:30; 38:22; 2 Chr 2:1). According to 1 Chr 2:19–20, 50, this Hur was a Calebite, and grandfather of the town of Bethlehem; 1 Chr 4:1, 4 makes him a Judean, and father of Bethlehem. In the original genealogies of the tribe of Judah (1 Chr 2:50; 4:1, 4), the father of Bezalel is not mentioned among Hur's sons. This observation gives rise to the suspicion that Hur #2 (see above) and the "grandfather of Bezalel" both personify a claim to fame and dignity by this Calebite (later Judahite) clan.

4. The father of Rephaiah, head of half the district of Jerusalem (Neh 3:9). Since Heb *ben,* "son of," can precede a family/tribal name as well as a personal name, this Hur may be identical with Hur #3 above (i.e., the name of a prominent clan).

5. The father of Solomon's governor in Ephraim (1 Kgs 4:8). See also BEN-HUR. The note to Hur #4 also applies to this Hur, if one does not prefer Alt's explanation that "the son of Hur" is a designation for the holder of the hereditary fief of Hur (*KlSchr,* 211–12). However, the question of how "Canaanite" (and institutionalized) Solomon's principality actually was is disputed, as is the reliability of 1 Kgs 4:7–9 (*HAIJ,* 205–7).

For Hur #2, 4, and 5 above (if referring to persons), compare Ugaritic, Phoenician, and Aramaic names with *ḥr,* all of which can be connected with the Egyptian god Horus. For Hur #3, the Calebite clan, compare the name *ḥwr* in Sabaic, Minean, Thamudic, and Safaitic (Nabatean *ḥwrw*), meaning "a camel's kid" (Knauf 1988: 89).

ERNST AXEL KNAUF

HURAI (PERSON) [Heb *ḥûray*]. See HIDDAI (PERSON).

HURAM (PERSON) [Heb *ḥûrām*]. **1.** A son of Bela and grandson of Benjamin (1 Chr 8:5). The lists of Benjamin's sons (Genesis 46; Numbers 26) exhibit considerable variations which are difficult to explain. The two lists of Bela's sons (1 Chr 7:7; 8:3–5) also differ quite considerably. The Syriac version of 1 Chr 8:5 reads Hupham, who in Num 26:39 is said to be one of Benjamin's sons. The LXX provides a further variant to the list by reading *Arouam*. Bela is said to have nine sons with Huram in ninth position. However, in Num 26:40 only two sons of Bela are recorded, with five named in 1 Chr 7:7; in both cases Huram is omitted. It is clear that the tradition of Benjamin's sons and their descendants showed considerable variation. Some of the names of Bela's sons (Num 26:39–40; 1 Chr 7:7; 8:3–4) are identical to names of Benjamin's sons in other lists (Gen 46:21; Num 26:38; 1 Chr 7:6; 8:1–2). These genealogical lists in 1 Chronicles are often dated to the postexilic period, which would help to explain their divergences over a long period of time (Braun *1 Chronicles* WBC, 122–28).

2. The king of Tyre. See HIRAM (PERSON).

KEITH W. WHITELAM

HURAMABI (PERSON) [Heb *ḥûrām'âbî*]. See HIRAM (PERSON).

HURI (PERSON) [Heb *ḥûrî*]. A Gadite who was the father of Abihail, the father of the eleven (or ten; see SHAPHAT) sons named in 1 Chr 5:12–14. Although some have related his name to the cult of the Egyptian god Horus, others have seen a connection with the Heb *ḥāwar*, "to be or grow white," and interpreted it to mean "linen weaver." More likely, perhaps, is the connection with the Akk *ḥūru*, "child" (*IPN*, 38, 221). Neither Huri nor the others named in the Chronicler's genealogy for Gad (1 Chr 5:11–17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15).

M. PATRICK GRAHAM

HURRIAN LANGUAGE. See LANGUAGES (HURRIAN).

HURRIANS. An ethnic group attested in the ANE from the 3d to the 1st millennium B.C. During the second half of the 2d millennium B.C. they reached their greatest geographical extent and figured prominently in the history and culture of the Near East. The Hurrians may be the people referred to in the OT as *ḥōrî*. For all that is known concerning their significance, there are major difficulties in studying the Hurrians: (1) their language is imperfectly understood, largely because there are still relatively few extant Hurrian texts; (2) the chronology of the epigraphic and archaeological evidence relating to the Hurrians is not always clear; (3) much of the information concerning the Hurrians comes from non-Hurrian sources, i.e., their neighbors in Mesopotamia, Syria, Egypt, and Anatolia; (4) it is difficult to identify what is Hurrian and what is indigenous in the cultures in which they played a role, because they appear to have assimilated easily to the cultures that they joined. Nonetheless, it is possible to identify their language and many of its characteristics, to trace a general history of the Hurrians, and to discuss certain cultural features associated with Hurrians and Hurrian sites.

A. Hurrian Language
B. History before ca. 1550 B.C.
C. History after ca. 1550 B.C.
D. Hurrians in Mitanni
E. Hurrians of Syria
F. Hurrians in Anatolia
G. Hurrians in Canaan
H. Hurrian Culture
I. The Hurrian Participation in the ANE

A. Hurrian Language

Like many of the ethnic groups entering Mesopotamia, Syria, and Anatolia, the Hurrians chose the local language and script for their records. Thus, most of the records coming from sites known to have had Hurrian populations are written in Akkadian (often a Peripheral variety such as at Nuzi or Amarna), Hittite, or Ugaritic. However, some texts completely in Hurrian have been found at Boghazköy, Mari, Ugarit, and elsewhere. Furthermore, a great many Hurrian words appear in texts written in other ANE languages, and Hurrian personal names, which tend to be "sentence names," provide additional information. On the basis of the available evidence, it is clear that the Hurrian language is an agglutinative language of the Asianic group. Of the known languages of the ANE, it is most closely related to Urartian, which appears later in the history of the Near East, and a number of dialects within the Hurrian language may be discerned (Bush 1968; *SCCNH* 1: 77–89 and 1971; Speiser 1941; Gelb, Purves, and MacRae 1943).

B. History before ca. 1550 B.C.

The Hurrians may have originated in the S Caucasus and Armenia. Their history is normally divided into two phases: before and after ca. 1550 B.C. In the first, they are always somewhat shadowy figures who appear to have migrated S and W from their original homeland into the Near East. Evidence from geographical names places them in the N Transtigris region during the pre-Sargonic period (Astour *SCCNH* 2: 3–68). As early as the Sargonic period of the 3d millennium B.C. they may have been established at Urkiš near Diyarbakr if the letter of Tish-atal, king of Urkiš and Nawar, belongs in fact to the late Akkadian period (Hrouda 1958; Gelb 1956). In fact, Urkiš figures in Hurrian mythology as the seat of Kumarbi, one of the major Hurrian deities. During the Ur III period, Hurrian names appear on texts relating to the regions to the N and E of southern Mesopotamia—areas in which the Ur III kings campaigned and conquered. Some of the individuals with Hurrian personal names are high officials in conquered territories while others are prisoners of war (Gelb 1944). This evidence suggests that the Ur III kings engaged in what are called the "Hurrian Wars."

In the 19th and early 18th centuries B.C. Hurrians appear among the populations of Mari, Chagar Bazar, and

Šemšara. Indeed, some Hurrian texts were found at Mari. During the reign of Šamši-Adad, who consolidated an empire stretching from Assyria to Mari, Hurrians appear among the "hill people" raiding the territories N and E of Assyria as reported by Ishme-Dagan, who campaigned for his father in those regions. Furthermore, there is evidence for Hurrian states in the "High Country" in N Syria at this time. By the time of Zimri-Lim of Mari, Hurrians were well established N of Aleppo. After the fall of Mari to Hammurabi of Babylon the sources are scarce for the regions in which Hurrians are attested. By the 18th and 17th centuries B.C., however, significant numbers of Hurrians are found in the texts of Alalakh Level VII. Furthermore, Hurrian month names were in use in both Alalakh and Yamhad at that time. Thus, it appears that from the pre-Sargonic period through the OB period the Hurrian presence in the Near East grew and expanded S and W into Mesopotamia and Syria. This was possible, particularly during the later OB period, because Babylonian rule did not extend far enough N to encompass the Hurrian areas, the kingdom of Yamhad in Syria was concentrated W of the Euphrates, and Assyria was divided and weak. Therefore the way was clear for Hurrian settlement in upper Mesopotamia and Syria. Indeed, by the time of Ḫattušiliš I and Maršiliš I of the Hittite Old Kingdom in the later 17th century B.C., there are references to a Hurrian threat to the Hittites in Anatolia. Moreover, Muršiliš I fought a battle with the Hurrians on his return march from the sack of Babylon (Kupper *CAH* 2/1: 1–41).

C. History after ca. 1550 B.C.

In the second phase, after ca. 1550 B.C., the Hurrians in the ANE present a startlingly different picture. First, they are present in sizable numbers in upper Mesopotamia (Tepe Gawra, Arraphe, and Nuzi, for example), in Syria (Alalakh, Ugarit, Qatna, and Tunip), and in Anatolia (Kizzuwadna and in the Hittite lands). Hurrians, then, are attested in the area stretching at least from the Zagros Mountains to the Mediterranean and far into Anatolia. Moreover, their influence was felt in Cyprus and in Canaan, though the evidence in these cases is far from clear. Second, the Hurrian states of N Syria and Mesopotamia had unified. This "confederation" was known by a number of names, most famous of which is Mitanni, with its capital at Wašukanni (perhaps Tell Fakhāriyyah; see also MITANNI). Though the precise relationship between the two is not clear, one of the states within Mitanni was the kingdom of Hurri or the Hurri lands, apparently located in the N region of Mitanni, which may have had some claim to primacy within Mitanni. The exact process by which the Hurrians spread so quickly into new areas and Mitanni was formed is not known (Drower *CAH* 2/1: 417–525).

At the same time, a new element appears among Hurrian names. More than 100 Indo-Aryan names, most belonging to kings, princes, or high officials, appear in the records. The Indo-Aryan elements include the names of gods equated with the Vedic gods Indar, Soma, Vaya, the Devas, Svar, and Rta. Also a number of Indo-Aryan numerical terms and terms relating to horses and chariots appear as well in the records. Of particular importance, the nobility in Hurrian areas, those of the chariot-owning class, were called *maryannu,* which probably stems from Indo-European *marya,* "young man or warrior."

The Indo-Aryan element among the Hurrians has been linked to the "Indo-European migrations" of the 2d millennium B.C. The coincidence of the appearance of this element and the changes in Hurrian political organization have been interpreted as a takeover of the Hurrians by an Indo-Aryan ruling class with a chariot-based aristocracy who molded the Hurrians into an efficient military power. On the other hand, the percentage of Indo-Aryan names is very small, Hurrian states did exist before this time, and Mitanni and the other Hurrian centers remained essentially "Hurrian." Therefore it is possible that the Hurrians simply felt a strong Indo-European influence, particularly in the technology of warfare

D. Hurrians in Mitanni

Mitanni (including the kingdom of Hurri) represents the most important Hurrian political entity in the later 2d millennium B.C. The history of Mitanni is discussed elsewhere; here it is sufficient to note that Mitanni, with its core Hurrian population, expanded rapidly to become the most powerful nation in Syria and Mesopotamia. After a period of hostilities with Egypt during the campaigns of the New Kingdom pharaohs, Mitanni and Egypt entered diplomatic relations during the Amarna period. So Mitanni became a principal participant in the great age of internationalism in the ANE. As a result, the Hurrians of Mitanni were in contact politically and culturally with Egypt, Mesopotamia, the Levant, the Aegean, and S Mesopotamia (Drower *CAH* 2/1: 417–525). The archaeological evidence from such sites as Nuzi and Alalakh demonstrates clearly the effect of these contacts in wall painting, pottery, and glyptic arts (Smith 1965)

After the fall of the kingdom of Mitanni (ca. 1350 B.C.) its territory and Hurrian populace were ruled at times by Assyrians in the E and Hittites in the W. Although the latter ultimately controlled Mitanni as a vassal state, the area was contested by the Assyrians and Hittites until the reign of Shalmaneser I of Assyria (1274–1245 B.C.), who annexed what remained of Mitanni to Assyria. Throughout this period of occupation and conflict, Hittite and Assyrian influence was keenly felt in the Hurrian territories of Mitanni, particularly in the city-states of N Syria that were early on absorbed by the Hittite Empire (Goetze *CAH* 2/2: 1–20; Munn-Rankin *CAH* 2/2: 274–306).

It is important to note that some of the "Neo-Hittite" states that grew up in N Syria and the Taurus Mountains in the wake of the Hittite Empire and the general confusion in the Near East after ca. 1200 were well within the old Mitannian territory. The extent to which the Hurrian population of Mitanni was still present in these areas and their contribution to the culture of the Neo-Hittite states are matters that require further evidence and research. However, it is reasonable to believe that the Hurrian presence was still alive in these areas, especially in light of certain scattered references to individuals with Hurrian personal names in Assyrian records after ca. 1100 B.C. (Gelb 1944).

E. Hurrians of Syria

Mitanni grew to include numerous city-states and territories in which Hurrians were only a part of the popula-

tion. Moreover, Hurrians were present in areas never controlled by Mitanni, though such Hurrians may have been disposed politically to Mitanni. This was particularly true in Syria where earlier Semitic-speaking peoples still dominated. Evidence for the Hurrians in Syria comes from the records of the Egyptian campaigns in Syria during the New Kingdom and native sources. Repeatedly, the Egyptians met stiff resistance from Syrian cities with pro-Mitannian parties such as Kadesh, Tunip, and Qatna. References to captured *maryannu* warriors in the records of Thutmose III and Amenhotep II demonstrate at least the Hurrian influence in Syria. The actual presence of Hurrians is indicated in that Amenhotep II took booty including Hurrians and their wives during one of his Syrian campaigns (Drower *CAH* 2/1: 417–525).

At the site of Ugarit, Hurrians appear as soldiers and craftsmen. Tablets in Hurrian appear among the archives there along with bilingual glossaries and a lexical text containing four languages: Hurrian, Sumerian, Akkadian, and Ugaritic. Hurrian loan words, personal names, and divine names appear in Ugaritic and Akkadian texts found at Ugarit. Moreover, Hurrian divinities were worshipped at Ugarit (Drower *CAH* 2/2: 130–160; Gelb 1944).

Similarly at Alalakh (Level IV), where Hurrians were attested only minimally in the OB period, Hurrian names abound and Hurrian deities were worshipped. The Amarna texts and other sources provide Hurrian names from Amurru, Neya, Nuhasse, Qatna, and Tunip (Gelb 1944).

F. Hurrians in Anatolia

Kizzuwadna in Cilicia was a vassal state alternately of Mitanni and of the Hittites as the fortunes of the two nations changed in the later 2d millennium B.C. On the basis of personal names associated with Kizzuwadna, this state appears to have been predominantly Hurrian (Goetze 1940).

In the Hittite lands the Hurrians appear to have exerted considerable influence from the beginning of the empire period, and some of what became accepted as "Hittite" in religion, literature, and art may well have had Hurrian origins (Güterbock 1954). Indeed, the dynasty of the Hittites in the Empire period may have been Hurrian. King Urḫi-Tešup and Queen Pudu-ḫepa of that dynasty had Hurrian names. Moreover, the Boghazköy archives produced Hurrian texts, and Hurrian loan words abound in Hittite documents. Furthermore, Hurrian deities figured in the pantheon of the Hittites.

G. Hurrians in Canaan

The evidence for Hurrians in Canaan is far less clear than that for other ANE areas. Among the rulers of Egypt's Syro-Canaanite sphere of influence who appear in the Amarna Letters is one Abdi-Ḫepa of Jerusalem, whose name includes that of the Hurrian goddess Ḫepa (EA 280: 285–90). Other Hurrian names appear on tablets from Tell Ta'annek. The evidence of these personal names has been taken to reflect a Hurrian presence in Palestine (Gelb 1944; Albright *CAH* 2/2: 98–116 and 1935). The Egyptians used the term Khor or Khurri-land for Syria and Canaan, presumably because they perceived all or part of the land as occupied by Hurrians. By the 19th Dynasty Khor was used generally for Asia or "The North." Thutmose IV claimed to have taken "Hurrians" from Gezer and made them temple slaves in Egypt. Most famous of the supposed Hurrians in Palestine are the biblical Horites described as original occupants of the land of Canaan (Albright 1935). Certainly the existence of individuals with Hurrian names suggests at least a Hurrian influence in the region. However, it is far from clear whether the captives from Gezer and the Horites were Hurrians. Instead, their designation may derive from the Egyptian term for the area—"Khurri-land." That is, individuals from "Khurri-land" would be called "Khurri"—Hurrians.

H. Hurrian Culture

As noted above, it is difficult to separate what is Hurrian from what is native in the cultures where Hurrians were present, particularly in the second half of the 2d millennium B.C. when there was such cross-cultural activity among the nations of the Near East. A complex of cultural features is attested throughout known Hurrian areas, however, and these features are thereby associated with the Hurrians.

In religion, the pantheon is reasonably clear. Tešup, a storm god, was the chief male deity, often equated in Syria with Dagan, Adad, and Baal in Syria and Canaan. His consort was Ḫepet/Ḫepa and their son Šarruma. Šeriš and Hurri were two bull gods who were attributed of Tešup. Tilla was also a bull god related to Tešup. Simika was the sun god and Kušukh the moon god. Kumarbi, celebrated in the "Song of Ullikummi," was an elder god replaced by the storm god. In addition to these Hurrian gods, certain Vedic or proto-Indian gods attached to the Indo-Aryan element among the Hurrians appear occasionally (Drower *CAH* 2/1: 417–525; Kupper *CAH* 2/1: 1–41).

A number of the Hurrian texts and Hurrian portions of texts in other languages that survive are ritual and magic texts, attesting to the importance of Hurrian religious practices in areas such as Mari, Ugarit, and the Hittite lands. Apparently Hurrians carried their practices to Syria and Anatolia, where the original forms of the rituals were valued. The Hurrians also translated divination texts from Akkadian and appear to have transmitted their knowledge in this area to Syria and Hittite centers (Kupper *CAH* 2/1: 1–41; Drower *CAH* 2/1: 417–525).

In literature, the mythological text "The Myth of Kumarbi and the Song of Ullikummi" describes an epic cycle of the birth of the gods and their struggles for supremacy. This text is thought to have influenced both Canaanite and later Greek ideas about intergenerational conflict among the gods. The relationship between the Hurrian myth and the Mesopotamian *Enūma eliš* is, itself, unclear. The Hurrians also translated the Epic of Gilgamesh, as did the Hittites (Drower *CAH* 2/1: 417–525).

In the area of art it is far more difficult to identify anything specifically Hurrian. Truly remarkable ivory carvings and glyptic arts originate in sites associated with Hurrians (Ugarit, Alalakh, Ashur, Nuzi) but more of the motifs and crafts involved can be attributed to Hurrians. In both crafts, Syrian, Mitannian, Egyptian, Mesopotamian, and Aegean elements are mixed in the "International Style" of the Amarna period. The fine "Nuzi ware" pottery and Khabur ware are associated with Hurrian sites

in the later 2d millennium B.C. (Drower *CAH* 2/1: 417–525; Smith 1965).

Another craft closely associated with Hurrian areas was metallurgy. Bronze, copper, gold, silver, and rarely iron tools and weapons are widely attested in the archaeological and epigraphic record. At least one style of weapon, that in which the blade seems to come out of the mouth of a lion, is found throughout the Hurrian areas (Drower *CAH* 2/1: 417–525).

Yet another craft closely linked to Hurrian areas is glassmaking. West Semitic *mekku* and synonymous Hurrian *eḫlipakku* both refer to "glass," specifically raw material used in making glass vessels. Though glazes were known from early times in the Near East and a recipe for glassmaking dates to the end of the OB era, glass itself appears from the 15th century B.C. in Mesopotamia, throughout the Hurrian areas (Ashur, Nuzi, Chagar-Bazar, Ugarit, Alalakh) and in Egypt. Shapes and techniques are the same in all of these areas. The center for this industry appears to have been upper Syria, from which came both the raw materials and the craftsmen who spread glassmaking throughout the Amarna-age world.

In one area of expertise the Hurrians were the masters of the ANE: horse training. Clearly, their society held the chariotry in high esteem. The *maryannu* or "charioteer" class denoted the nobility and high officials throughout the predominantly Hurrian areas and beyond in the Syrian city-states. Not all of the individuals called "charioteers" actually owned and used chariots in war. Instead, the title evolved into an honorific term used for the elite of the society. It is not surprising, then, that hippic texts are found at Nuzi, Boghazköy, Ugarit, Alalakh, and Ashur. From Boghazköy in Anatolia are the famous Kikkuli texts named for their author, the Hurrian horse trainer from the land of Arraphe (where Nuzi was located) E of the Tigris (Drower *CAH* 2/1: 417–525; O'Callaghan 1948).

For discussion of typical Hurrian society, see also NUZI. Among the special characteristics worth noting here are the position of women and slaves. Women in Hurrian society enjoyed considerably more freedom than in other areas of the Near East. They could own property, enter into contracts, litigate, and participate independently in most areas of public life. Similarly, slaves, though bound to masters or households, had considerable economic and legal rights.

I. The Hurrian Participation in the ANE

Once considered the base population of the N part of the ANE, the Hurrians clearly entered the Near East at a comparatively late date. Their political influence was enormous, as they dominated N Mesopotamia and portions of Syria and Anatolia for three centuries and some areas for even longer. The cities and nations in which they lived were linked by trade and conquest during the late 2d millennium B.C., a crucial period in the cultural history of the Near East. However vague their own contribution to Near Eastern culture is, there is ample evidence for their role as transmitters of literature, art, and technology during this all-important era (Speiser 1953).

As for their role vis-à-vis the OT, the customs documented in the Nuzi tablets were long held forth as evidence for Hurrian influence, particularly on the patriarchal narratives. For a discussion of this issue, see also NUZI.

MARTHA A. MORRISON

HUSBAND. See FAMILY.

HUSHAH (PERSON) [Heb *ḥûšâ*]. Var. HUSHATHITE. The son of Ezer (1 Chr 4:4), who appears to have been one of the sons of Hur. The name Hushah is then eponymously applied to a town of Judah, which was possibly first settled as an Israelite town by Ezer the son of Hur. It was the home of two of David's notable men, Mebunnai (2 Sam 23:27) and Sibbecai (2 Sam 21:18). Sibbecai is described as having killed Saph, one of the descendants of the giants, and was eventually made a commander in David's army (1 Chr 27:1, 11).

The village of Hushah is strategically located about 6 km W of Bethlehem at the top of a ridge that gave access to Bethlehem and Jerusalem from the Elah valley in the Shephelah (M.R. 162124). While Bethlehem overlooked the wilderness to the E from the Judean ridge, Hushah overlooked the Shephelah or lower hill country to the W. Hushah was in the path of the Philistine expansion from the coast as the Philistines tried to penetrate into the Judean hill country, and it was probably down the Hushah ridge that David went to inquire about his brothers (who were facing the Philistines) and which ultimately led to David's confrontation with Goliath (1 Samuel 17).

HUSHAI (PERSON) [Heb *ḥûšay*]. **1.** A member of the Archite branch of the tribe of Benjamin (2 Sam 15:32).

During the reign of David he served as the king's *rēʿeh*, commonly translated as "friend" or "companion" although those terms are perhaps too informal in tone (2 Sam 15:37; 16:16, 17). In 1 Chr 27:33 Hushai is listed with other officers in David's service (there termed *rēaʿ hammelek*). On the possible origin of his name and office, see McCarter (*2 Samuel* AB, 371–72).

Hushai played a prominent role in the unfolding of events surrounding Absalom's rebellion. With torn clothes and dirt on his head, he met David as the latter was fleeing the city (2 Sam 15:32). David did not allow him to flee with him, but instead requested that Hushai return to the city. There he was to swear allegiance to Absalom and, having gained Absalom's confidence, he was to frustrate the advice of Ahithophel and be an informant reporting to Zadok and Abiathar (2 Sam 15:33–37). Absalom mocked Hushai's lack of loyalty to David, but Hushai forcefully pledged his commitment to serve Absalom (2 Sam 16:16–19). Absalom was convinced, for he later requested Hushai to evaluate Ahithophel's plan to pursue David immediately. Hushai countered by suggesting a delay during which time Absalom could rally a larger military force to counter the skill of David as a military commander. His advice was accepted over that of Ahithophel. The narrator comments that this sequence of events was exactly what Yahweh had ordained (2 Sam 17:5–14). Hushai reported the proceedings to Zadok and Abiathar, and David was able to gain a strategic advantage (2 Sam 17:15ff.). Hushai's role, if any, in the rest of the events of Absalom's rebellion is not reported.

2. The father of Baana (1 Kgs 4:16). He is not connected with Hushai #1, but many commentators regard them as the same person. Hushai's son Baana was from the region of Asher and Bealoth, and is listed as one of twelve deputies Solomon appointed to raise the monthly provisions for the royal household.

RICHARD W. NYSSE

HUSHAM (PERSON) [Heb *ḥušām*]. The third ruler in the Edomite king list (Gen 36:34f.; 1 Chr 1:45f.). Opinions vary as to date of this list (Gen 36:31–39). Suggestions range from the 11th century B.C. (Weippert 1982: 155) through the 8th to 6th centuries B.C. (Bennett 1983: 16) to the 6th–5th centuries B.C. (Knauf 1985a). Scholars tend to agree, however, that the succession scheme of this list is artificial and that, in all likelihood, the rulers listed in it were contemporaries (Bartlett 1972: 27; Weippert 1982: 155). The name is attested in Arabic (*Ḥusām*, Safaitic and Classical) and means "sword" (Knauf 1985a: 246). One may also compare the Arabic names *Khushām/Khushaim*, "Little Nose" (Harding 1971: 189). This comparison, however, is less likely, since Arabic *š* would require to be represented by Hebrew *ś*.

Husham is said to stem "from the country of the Temanite" (Gen 36:34). A "Temanite" could be an inhabitant of Teman, or of the city of Tayma in NW Arabia. Since Teman as the name of a country seems to be another name for Edom, it is more likely that Husham immigrated into Edom from the territory of Tayma (Knauf 1985a: 249f.; 1987). This immigration may be reflected in Pliny's note (*Geog.* 6.28 [32]. 157): *Nabataeis Thimaneos iunxerunt veteres,* "The ancients linked the Temanites with the Nabateans," the Nabateans being the descendants of a Qedarite clan which gained control over Edom in the course of the late 6th to early 5th century B.C. (Knauf 1985b: 103–8).

ERNST AXEL KNAUF

HUSHATHITE [Heb *ḥūšāṯî*]. See HUSHAH (PERSON).

HUSHIM (PERSON) [Heb *ḥūšîm*]. Var. SHUHAM. **1.** The only descendant of Dan (Gen 46:23) mentioned in the genealogy of Jacob in Genesis 46. In Num 26:42 again, only one descendant of Dan is mentioned, but here he is called Shuham (possibly resulting from the transposition of the letters *ḥet* and *šin*).

2. Descendants or a descendant of Aher (1 Chr 7:12). The MT reads Heb *bĕnê*, "sons," but only mentions Hushim, which makes the plural form of the name itself ambiguous. The larger group to which these Hushites belong is a matter of dispute, too. As the MT stands, they are listed among the Benjaminites (1 Chr 7:6–12). In Genesis 46 the genealogy of Benjamin precedes that of Dan and is in turn followed by that of Naphtali, while in 1 Chronicles 7 Benjaminites precede the sons of Naphtali, which leads commentators to suggest that the text be emended to connect the Hushim to Dan. In that case, the Hushites named in 1 Chr 7:12 would be the same as #1 above. For contrasting views, see Braun (*1 Chronicles* WBC, 106–7) and Williamson (*1 & 2 Chronicles* NCBC, 78).

3. One of the wives of Shaharaim of the descendants of Benjamin (1 Chr 8:8, 11). Shaharaim divorced her as well as Baara before he had additional children in Moab, presumably with Hodesh, his third named wife. Hushim was the mother of Abitub and Elpaal. The genealogy is continued through Elpaal.

RICHARD W. NYSSE

HUSN, EL- (M.R. 232210). A cave site in Jordan containing remains of the EB of both domestic occupation and funereal activity.

A. Identification and Excavation of the Site

This cave site, situated some 22 km N of Jerash, Jordan, takes its name from the nearby modern town of el-Ḥuṣn. It lies just 1 km S of Tell el-Ḥuṣn, one of the largest mounds in Jordan. The mound remains unexcavated, although past surveys seem to indicate that it was important throughout the Bronze and Iron Ages. The cave itself is described as an amorphous hole in the ground whose roof had collapsed in antiquity. Thus, whether it was originally a cave or a shaft tomb is impossible to determine. The disturbance to the chamber was such that the excavation uncovered no stratification, although on the basis of the pottery it was clear that there were two periods of use. The tomb was excavated by G. L. Harding. A more extensive comparative analysis of the finds was done by B. S. J. Isserlin (Harding and Isserlin 1953).

B. History of the Site

There were two periods of use in this cave, a domestic EB I level (Harding thought it was EB II) and an EB IV burial interment. The former consisted entirely of sherds of two distinct pottery types: heavy, coarse storejars with "grain wash" decoration, plain ledge handles, and flaring rims; and undecorated storejars and gritty holemouth jars that may have been cooking pots (Harding and Isserlin 1953: fig. 5). Harding's postulation that this level represented a domestic usage of the cave is probably correct, on the basis of the cooking pots. The skeletal remains intermixed with the pottery must, therefore, reflect a burial interment in the EB IV period. The ceramic remains of the latter period consisted of intact vessels of a variety of types well known from other EB IV burial sites. Two copper pins with convoluted head and a flint implement round out the burial offerings.

The EB IV corpus comprised mostly storejars, amphoriskoi, and one-handled jugs, although it also included teapots, cups, bowls, and a four-spouted lamp (Harding and Isserlin 1953: figs. 1–4). Storejars were of both the round-based and flat-based type with the latter showing the typical envelope ledge-handle. There were about 50 vessels in all. What has always been notable about the el-Ḥuṣn assemblage is its distinctive style of vase painting. Generally referred to as "trickle-paint," this red paint and/or red slip decoration is characterized at el-Ḥuṣn by vertical and horizontal bands, as well as by vertical rows of wavy or straight lines on the upper shoulder.

The corpus under discussion has been variously categorized. R. Amiran (1960) assigned the el-Ḥuṣn assemblage to ceramic Families B (round-based jars and single-point incision) and C (red paint and slip). In Dever's geographical-cultural classification, el-Ḥuṣn belongs to Family (NC) North Central (1980: 45–47). Contrary to Amiran, it is clear that the red-slip and red-paint decoration continues a well-known EB tradition and is therefore the mark of early EB IV (Richard 1980). Although in a new schema (EB IVA-B-C) the el-Ḥuṣn assemblage was dated to the EB IVB period (Dever 1973; Richard 1980), it now appears highly likely that the several distinctive ceramic "families" in this period may well be more regional than chronological. There is in any case a great deal of overlap (Richard and Boraas 1988).

C. Sociocultural Considerations

Recent excavation and analysis suggest that "trickle-painted" ware may represent a "fine ware" produced at certain sites for dissemination to other villages in the region (Falconer 1987; Hess 1984). If so, then production and exchange of this product are indicated primarily in the following regions: from Tiberius to Beth-shan and Tel ʾArtal (W of the Jordan river), and E of the Jordan from el-Ḥuṣn S to the Jordan valley settlements (opposite Beth-shan) of Tell el-Hayyāt and Tell ʾAbu en-Niʾaj. "Trickle-paint" ware is an important diagnostic trait for cross-cultural comparisons. The discovery recently of this distinctive decorative type as far S as Khirbet Iskander (Richard fc.) not only provides a chronological link with the above sites but likewise widens exchange to an interregional orbit.

This evidence for trade among settlement sites in the EB IV may be added to a growing list of new elements to consider in any evaluation of the sociopolitical organization of the population. This "dark age" (ca. 2350–2000 B.C.) was once thought to be a nomadic interlude. It is now evident that cultural adaptation in the EB IV included a range of adaptive strategies. Following EB III, it is true, there was a shift from a complex urban society to a less specialized nonurban sociopolitical framework; however, the latter is characterized not only by seasonal settlements of pastoral nomads but likewise by permanent towns and villages (Richard 1987).

SUZANNE RICHARD

HYDASPES (PLACE) [Gk. *Hydáspēs*]. The name of a river mentioned in Jdt 1:6 along with the Euphrates, Tigris, and the plain of Elymais (Elam). However, no river by that name is attested in this region. In Greek literary sources the name renders (Sanskrit) *Vitasta* (=modern Jhelum), a tributary of the Indus in NW India, well known

since Alexander's battle against Porus on its banks (cf. Arrian *Anab.* 5.9–18). Given the unconventional geography (and history) of the book of Judith, the above association is not unexpected. If the author had in mind more than the name of a river somewhere in the distant E, he may have meant the Choaspes (modern Karkheh), which flowed past Susa (Herodotus 1.188; 5.49). Corruption in the Gk text, though not impossible, seems unlikely.

ALBERT PIETERSMA

HYENA. See ZOOLOGY.

HYKSOS. The Greek form of an Egyptian word (Eg *ḥk3[w] ḫ3s[w]t*) meaning "ruler(s) of foreign land(s)," i.e., of alien origin (Redford 1970), used to refer to nonnatives who ruled over portions of Lower Egypt as the 15th Dynasty in the first half of the 2d millennium B.C. (the "Second Intermediate Period").

HISTORY

Folk etymology of the 4th–3d centuries B.C. incorrectly derived the Eg term from *š3sw*, "shepherd" (thus "shepherd kings"), and from *ḫ3k*, "plunder, captivity" (thus "captive shepherds"; *AgAp* 1.14 §§82–83). Neither of these latter writings occurs in contemporary New Kingdom sources, and are best attributed to the eisegesis of Judeo-pagan polemics in the Hellenistic period. The translation of Manetho's *anthrōpoi to genos asēmoi* (cited in *AgAp* 1.14 §75) as "men of obscure race" diverted earlier scholarship into a fruitless search for unlikely candidates: Arabs (Redford 1986b: 278, n. 77); Indo-Iranians (Albright 1957: 30–31; *YGC*, 57, n. 12); Hittites (Duncan 1931: 69–72); Hurrians (Engberg 1939; Helck 1972: 100–6); Hebrews (*AgAp* 1.14 §§91–92); or a mysterious horse-breeding aristocracy from Asia (Mayani 1956). In fact, *asēmoi* is simply the rendering of Eg *ḥsi*, "vile," in Manetho's Demotic source (Redford 1986b: 242).

A. Ethnic Composition
B. Advent and Extent of Rule
C. The Fifteenth Dynasty
D. Administration
E. Religion and Culture
F. Expulsion
G. Later Traditions

A. Ethnic Composition

Although human skeletal remains from excavations at Tel ed-Dabʿa reportedly exhibit European traits (Jungwirth 1970), too few specimens have survived and the analysis is too premature to inspire confidence (Kemp *AESH*, 157). One is therefore thrown back on an attempt to establish the linguistic affiliation of the newcomers. Contemporary texts from Egyptian sources call them *ʿ3mw*, a term roughly designating any "Asiatic," but used especially of those who spoke a W Semitic, "Amorite" tongue (Alt 1961; Redford 1986a); and for most of the score of "Hyksos" names surviving, a W Semitic, "Amorite" etymology may be convincingly proposed (Astour 1965: 94, n. 4; Van Seters 1966: 181–83; Ward 1975; Kempinski 1985). In corroboration may be viewed the notice in the Epitome of Manetho (*apud* Africanus) that the 15th Dynasty was "Phoenician" in origin (= Eg *Ḫ3rw/Fnhw*, general terms for the Levantine littoral; Waddell 1940: 90; Redford 1986b: 200, n. 249).

B. Advent and Extent of Rule

The sole, connected account of the Hyksos takeover of power in Egypt comes from Manetho (Waddell 1940: 78–81), who describes it in terms of a destructive invasion which took place under a king called Tutimaeus (plausibly identified with the Djed-mose of TC IX, 9 [Redford 1970: 2, n. 1; Helck 1975: 43]). Since World War II, new evidence has revealed that a sizable proportion of the Egyptian population in the 13th Dynasty comprised an immigrant Asiatic element, convincing a number of scholars to construe the Asiatic assumption of power as a peaceful fulfillment of self-determination on the part of the majority of the population of the E delta. The alleged violence associated with this rise to power could be attributed to the anti-Asiatic bias in Manetho's sources, a bias stemming from much later Assyrian and Persian invasions of Egypt (Säve-Söderbergh 1951; Van Seters 1964; 1966). On the other hand, that the Hyksos perpetrated wanton devastation was part of the record of the texts contemporaneous with their occupation (Kamose I, 4–5, 13); and their stubborn refusal to acculturate themselves militates against the postulate of a prior period of peaceful infiltration and assimilation (Redford 1970).

All sources agree that the Hyksos rulers established their headquarters (and later capital) at Avaris (= Egyptian *Ḥwt-wʿrt*, "Mansion of the Desert Tract [or Department (?)]"; Kees 1961: 197) on the easternmost of the delta branches, a site already patronized by Egyptian kings (Habachi 1974; Helck 1975: 48; Bietak 1984a), now identified as Tell el-Dabʿa, ca. 5 miles NNE of modern Faqus (Bietak 1975a; 1975b; 1979). The sources also agree that Memphis was also taken; a tradition in Eusebius (*Chron.* [ed. Helm] pp. 32, 44) credits Apophis (Epafus/Apis) with having founded Memphis, perhaps a recollection of his residence there. The environs of the old capital and Saqqara were pillaged for their monuments both to adorn Avaris and to be transported abroad (Weinstein 1975: 9–10; Helck 1976a). Find-spots of MB II A-B horizon (first half of 2d millennium B.C.) are confined to the E half of the delta (Tell el-Yehudiyeh, Heliopolis, Farash, Tell ed-Dabʿa, Tell el-Maskhuta, El-Salhiya, Sahaba, etc.) and betray the presence of an unassimilated Asiatic population (Kemp *AESH*, 156–57), perhaps partly nomadic (Gardiner 1946: pl. 6:36ff.). But textual evidence indicated that Hyksos hegemony extended over Middle Egypt as far as Hermopolis (Kamose II, 16) and Kusae (Kamose I, 6). While it is questionable whether the Hyksos ever threatened or took Thebes (as Vernus 1982), inscribed objects found in Upper Egypt mentioning Sheshy (Edfu: Engelbach 1921), Khayan (Gebelein: Von Beckerath 1965: 271), and Apophis (Gebelein, Su-menu: Von Beckerath 1965: 273; James 1961) may indicate local acknowledgment of their authority. Certainly Kamose of the 17th Dynasty seems to confess to vassal status at the outset of his career (Kamose II, 1ff.).

The alleged "world-empire" of the Hyksos, postulated

by scholars of an earlier generation on the basis of small objects with royal names found in Crete, Baghdad, and Boghazköy, has long since been rejected. These undoubtedly must be construed as diplomatic gifts or as plunder from Levantine cities centuries later (Von Bissing 1936–37; Stock 1963; Helck 1979: 45–48). But the distribution of Hyksos inscriptions does demarcate a sphere of influence. In Asia scarabs and seal impressions are found sporadically along the Palestinian coast and as far N as Shikmona (Giveon 1965; 1974; 1981), but no farther (Vercoutter 1954: 78), while a passage in the second Kamose stela refers to "300 ships of new wood filled with . . . all the fine products of Retenu" (Kamose II, 13–15). Such evidence might betoken nothing but simple commerce, but Apophis' dedication to "[Seth], lord of Avaris" who had "placed all lands under his feet" sounds like a record of foreign conquest late in the Hyksos period (Helck 1975: 55). The same impression is conveyed by Apophis' epithets on the scribal palette of Atchu: "stout-hearted on the day of battle, with a name greater than any king's, one who protects strange lands which have never (even) seen him" (Helck 1975: 58). In Nubia numerous scarabs and seal impressions are found, especially in Kerma (Giveon 1983), evidence surely of a lively trade with the Sudan via the oases of the Sahara desert, with overtones of Hyksos suzerainty (Stadelmann 1965a; 1965b; Redford 1977). While some trade with Cyprus (Merrillees 1970; 1971; 1975) and diplomatic contacts with the Aegean (Helck 1979: 48–49) cannot be denied, to postulate Hyksos influence on the shaft graves at Mycenae is too daring (Huxley 1961: 36–37).

C. The Fifteenth Dynasty

With very few exceptions Hyksos royal names have come to us either on minor objects in contemporary hieroglyphic transcription or in garbled Greek forms from over one millennium later. Of the first, the number of Hyksos royal scarabs are too meager and their style too unreliable to establish a sequence of kings from such primary material. Moreover, no contemporary king-list has survived from the Hyksos period, and the six names in the Turin Canon of Ramesside times (13th century B.C.) are all missing except for the last, *H3mwdy*.

From the various versions of the Epitome of Manetho (Waddell 1940) the following names (with variants) emerge for the 15th Dynasty and can be compared with the 17th Dynasty names recounted by Manetho (see Table 1).

Table 1

15th Dynasty		17th Dynasty
Josephus' version	Africanus' version	Eusebius' version
Salitis 19 yrs	Saites 19 yrs	Saites 19 yrs
Bnon 44 yrs	Bnon 44 yrs	Bnon 40 yrs
Apachnan 36 yrs 7 mo	Pachnan 61 yrs	———
Apophis 61 yrs	Staan 50 yrs	———
Iannas 50 yrs 1 mo	Archles 49 yrs	Archles 30 yrs
Assis 49 yrs 2 mo	Apophis 61 yrs	Apophis 14 yrs

As can be clearly seen from the table, some of these names have been reduplicated in Manetho's 17th Dynasty, owing to his inability to accommodate contemporaneity in his linear king-list (Redford 1986b: 240). Common to all are the three personal names Salitis (Saites), Bnon, and Apophis. Of the five remaining, "Staan" can plausibly be derived from "Iannas" through an orthographic error, while "Archles," through position and length of reign, can be identified with "Assis." The total is thus reduced to six in agreement with the Turin Canon, but the only two which can with certainty be equated with contemporary royal names are Iannas (Bietak 1981) and Apophis. A major discrepancy concerns the position of Apophis (fourth *apud* Josephus, sixth *apud* Africanus); this can now be resolved in favor of Africanus as a result of the discovery of a doorjamb of Khayan from Tell el-Dabʿa. It commemorates "the king's eldest son," whose name is very likely to be read *Ynss* (= Iannas). Iannas (Staan) thus occupies fourth position, and the fact that his father and predecessor was Khayan rules out the order in Josephus.

Of names surviving from earlier pharaonic times, "Sharek" (mentioned in an 8th-century genealogy used to date a high priest of Ptah) *may* be Salitis (Albright's attempt to identify the latter with a "Caludi" [= *Za-a-lu-ti*], chief of the Umman-manda in a 17th-century Hittite text [1957] has gained no acceptance). "Apep" in the same genealogy (appearing one generation later than Sharek) is clearly Apophis. The *ḥ3mwdi* who fills the sixth and only surviving line in the Turin Canon's list of Hyksos rulers remains problematical. The name occurs in none of the inscribed objects naming kings which come from the Hyksos period itself; and the only recourse, if one wishes to treat the name seriously, is to identify its bearer arbitrarily with one of the attested kings. But the question remains unresolved as to whether the Turin Canon recorded the throne names of the Hyksos kings or their birth names.

Contemporary finds have yielded large numbers of seals and a few stone monuments of the 15th Dynasty rulers. From these, the following cartouche-bearing names and their known titularies can be elicited (see in general Von Beckerath 1965; Helck 1975; Kempinski 1985):

1. The Good God, *M3ʿ-ib-rʿ*, the son of Re, Sheshy.
2. The Good God, *Mr-wsr-rʿ*, the son of Re, Yaʿḳob-har (Yeivin 1959; Giveon 1981).
3. Horus: He-who-encompasses-the-lands; the Good God, *Swsr.n-rʿ*, son of Re, Khayan.
(4. The Eldest king's-son, Yansas-? [Bietak 1981; Kempinski 1985].)
5. The Good God, Lord of the Two Lands, Master of the cult, *ʿ3-sḥ-rʿ*, the son of Re [. . .] (but see Bietak 1984a).
6. The Good God, Lord of the Two Lands, *Nb-hpš-rʿ*, the son of Re, Apophis.
7. Horus: who-pacifies-the-Two-Lands, the Good God, *ʿ3-ḳnn-rʿ*, the son of Re, Apophis.
8. The King of Upper and Lower Egypt, *ʿ3-wsr-rʿ*, the son of Re, Apophis.

The position of 1 and 2, although not their relative order, is guaranteed by the style of their scarabs, the lack of sophistication in their carving, and the absence of monumental inscriptions. The order 3–4 is confirmed by the doorjamb from Tell el-Dabʿa (see above). That 8 is

close to, or at the end of, the list is demonstrated by the fact that he was the opponent of Kamose of the 17th Dynasty, within a decade of the final expulsion of the Hyksos (Habachi 1972). Finally, it is very likely that 6 and 7, both rarely attested, are earlier forms of 8, and that we are dealing with a single Apophis (Redford 1967: 44, n. 90).

A relatively small number of scarabs provides a group of names, not in cartouche, but preceded by the title *ḥḳ3ḫ3s(w)t*, "foreign ruler":

1. Yat (?) (Giveon 1980: 90–91)
2. ʿAper-ʿanat (Martin 1971: no. 318)
3. ʿAnat-har (Von Beckerath 1965: 279; Martin 1971: nos. 349–50)
4. User-ʿanat (Petrie 1917: XXI, D 15.1)
5. Khayan (Von Beckerath 1965: 272)
6. Samḳuna (Martin 1971: no. 1453)

These are sometimes classed as "Lesser Hyksos," and are construed as a line of rulers either earlier than the 15th Dynasty (Hayes, *CAH* 2/2; Albright 1965: 448–49 [distinguishing 3 groups]; *YGC*, 153, n. 1) or following them (references in Redford 1967: 43). But in light of the unanimous tradition that Hyksos domination of Egypt began with Salitis and ended in the reign of Apophis or shortly thereafter, the hegemony of these rulers would have to be located outside Egypt (in contradiction of the provenience of the majority of their scarabs within Egypt). It is much more likely that this group is to be understood as chieftains of small enclaves within the delta, subservient in a quasi-feudal manner to the kings of the 15th Dynasty.

D. Administration

Very little is known about how the Hyksos kings governed their domain. The plethora of seals mentioning "treasurers" (*imy-r sḏ3t* [or *ḥtmt*]; Helck 1975: 57.83; Labib 1936: pl. 6; Säve-Söderbergh 1951: 65; Martin 1971: nos. 479–508, 904–912; Ward 1976) has suggested to some a continued strength in that branch of the government (Helck 1958: 79–80). While attractive, it remains unprovable whether native Egyptian dynasts, as well as Asiatic chiefs, were subordinated as a species of "feudal" vassal to the Hyksos king, modeling their names on his (Stadelmann 1965a: 65). Certainly there were many Egyptians who cooperated with the Hyksos (cf. Kamose II, 17–18) and allowed garrisons to be stationed in their towns (cf. Kamose I, 14).

E. Religion and Culture

Initially, it would appear, the ruling class among the invaders retained the religion and social customs they had brought with them, and the rank and file indeed probably never gave them up. Until the reign of Khayan there is a notorious carelessness in the transcription into Egyptian of Hyksos personal names (Giveon 1976; 1981), as though the conquerors cared little how the conquered represented them. At Avaris they maintained a royal ancestor cult of Amorite origin (Redford 1986b: 199–201), constructed temples on Asiatic, not Egyptian, patterns (Bietak 1979: 249–50), and continued to practice non-Egyptian inhumations, with sacrifices of the ass and sheep (Bietak 1979: pl. 15A; Leclant 1986: 245–46). Hyksos seals suggest the worship of a hero-god of the Baal type and a female deity of the Qodsu type (Stadelmann 1967: 14–20). The former came shortly to be identified with the Egyptian Seth, a god renowned locally for his physical strength and wild temperament, who had long been worshipped in Avaris and the E delta (Habachi 1974; Stadelmann 1965b; Helck 1975: 48) and was to be associated with the Hyksos in New Kingdom tradition and folklore (Gardiner 1931: 85–86; Redford 1970: 35–37). In contradiction to later New Kingdom propaganda (Gardiner 1946), the Hyksos kings did not eschew the worship of Re, the Egyptian sun god, suffering their prenomina to be constructed with Re-infixes, and modeling them on patterns of 13th Dynasty usage (Redford fc.). Again, in the tradition of the 13th Dynasty, the Hyksos maintained the important role assigned to the titular "king's (eldest) son," whether a physical offspring or a surrogate (Giveon 1976; Bietak 1981; Schmitz 1976: 203–57). "King's daughters (and sisters)" are also known (Simpson 1959; Van Seters 1966: 182; Gamer-Wallert 1978: 39–40); and the vivid description of the walls of Avaris recorded by Kamose apparently mentions the harem and its inmates (Kamose II, 9).

By the end of the period of Hyksos occupation the royal family at least appears to have come under the influence of Egyptian culture. Apophis dons the pharaonic image and mimics the sophistication of the true wearer of the Double Crown. Most of the Hyksos monumental texts come from his reign, and include dedications on offering tables (Kamal 1909: 61; Helck 1975: 55, 57), building texts mentioning flagstaves (Helck 1975: 56, no. 79; Simpson 1959); and folkloristic tradition remembers him for having built a temple to Seth and to have modeled part of the ritual on that of Re (Gardiner 1931: 85–86; Goedicke 1986b: 11–14). The Rhind Mathematical Papyrus dates to his 33d year (Peet 1923: pl. 4), and the Westcar papyrus may likewise have been copied at this time (*AEL* 1: 215). Apophis even had pretentions to literary activity in the hieroglyphic script, for he calls himself a "scribe of Re, taught by Thoth himself . . . multi-talented (?) on the day when he recited faithfully all the difficult (passages) of the writings . . ." (Berlin 7798).

F. Expulsion

The Thebaid was not initially, or directly, affected by the Hyksos incursion, and thither fled the remnants of the native regime ousted from the Middle Kingdom capital of Itj-towy (Hayes 1953). Here, shorn of its former Nubian (Säve-Söderbergh 1956) and N holdings, the 13th Dynasty withered away and was succeeded by an equally impoverished 16th Dynasty whose ephemeral kings were once listed in the final, surviving column (xi) of the Turin Canon. These in turn were supplanted during the first quarter of the 16th century B.C. by a 17th Dynasty, possibly of partly Nubian extraction (Redford 1967: 67–69; Harris and Weeks 1973: 123), and arguably in some way related to the movement into the Thebaid of "Pan-grave" mercenaries (Kemp, *AESH*, 169–71).

That Thebes, the savior of Egypt in the First Intermediate Period, would once again consider itself the instrument of the gods' will in initiating a war of liberation is understandable; still, the immediate cause of the outbreak

of hostilities with the Hyksos dynasts remains obscure. (The Tale of Apophis and Seqnenre of the 19th Dynasty, which blames Apophis for having picked a quarrel over a fantastic and implausible charge, is to be discounted as pure folklore [Redford 1970: 35–38; Störk 1981a; Goedicke 1986a]). The mummy of Seqnenre Taʿo shows signs of a violent death, and it is almost certain that he fell in battle with the Hyksos (Bietak and Strouhal 1974).

The fortunately surviving text of two stelae of Seqnenre's son and successor Kamose (Gardiner 1916; Habachi 1956; 1972; Smith 1976) strongly implies that, on Seqnenre's death, Kamose had been reduced to vassal status and bound by treaty (Störk 1981b). This he broke unilaterally by invading Hyksos territory N of Kusae. The fifteenth Upper Egyptian nome of Nefrusy was captured, and the seventeenth Upper Egyptian nome Cynopolis was destroyed; Apophis' attempt to raise Nubian support was thwarted by the timely capture of the Hyksos messenger on the oasis route. But while Kamose penetrated as far as Avaris and was able to destroy a merchant fleet in the harbor, he was unable to sustain a formal siege, and the lapse into vague generalizations at the end of his second stela may conceal a reverse.

His younger brother Ahmose succeeded him and pursued the war by recovering the lost ground and by capturing Memphis. From *obiter dicta* in contemporary biographies and daybooks it transpires that in the second month of summer in the 11th year of an unnamed Hyksos king (= Khamudy?) Heliopolis was taken, and two months later the border fort of Sile fell (Helck 1976a; Goedicke 1986b). Avaris itself suffered a series of assaults but must have been captured fairly soon afterward (Vandersleyen 1971). A series of attacks over three years on Sharuhen (perhaps Tell el-Ajjul; Kempinski 1974), apparently a base or residence of the Hyksos royal family, resulted in the reduction of this site also (Goedicke 1974: 40f.; 1986b: 42; *ANET*, 233–34). Thereafter the term *ḥḳ3(w) ḫ3swt* occurs sporadically during the 18th and 19th Dynasties (see *ANET*, 230–34), especially in the inscriptions of Thutmose III (*ANET*, 234–41); however, it is doubtful whether there was any blood or political relationship between the former 15th Dynasty and the king of Kadesh whose minions aimed at marching on Egypt during the reign of Thutmose III.

G. Later Traditions

The Hyksos invasion lived on in oral and written tradition, both in Egypt and the E Mediterranean littoral, long after their expulsion. In the 6th–5th centuries B.C. a reasonably accurate portrayal could still be written up in Demotic, based on surviving sources (Redford 1986b: 241–42). A more distorted recollection of the 15th Dynasty and its expulsion underlies the Greek legends about Io and Danaus (Berard 1952a; 1952b; Astour 1965: 91–94); while the "Canaanite" version of these events allegedly inspired the Hebrew "Descent" and "Exodus" legends (Redford 1987).

DONALD B. REDFORD

ARCHAEOLOGY

Properly speaking, the term "Hyksos archaeology" refers only to the material remains associated with the Canaanite rulers of Egypt during Manetho's 15th Dynasty (ca. 1648–1540 B.C.). However, archaeologists generally use this phrase in a broader sense, i.e., to encompass all of the archaeological materials relating to the Asiatics living in Egypt during the Second Intermediate Period. Also coming under this heading are any sites and remains outside the Nile valley that are connected in some way to the Hyksos rule in Egypt.

A. Archaeological Sources in Egypt
B. Tell el-Dabʿa and Other Hyksos Sites
C. Hyksos Fortifications
D. Hyksos Objects
E. Trade in the Hyksos Period
F. End of the Hyksos Period

A. Archaeological Sources in Egypt

The primary archaeological data for the Hyksos come from a small number of sites located E of the ancient Pelusiac branch of the Nile in the E delta (Bietak 1975b: 102, 165, fig. 35). These include Tell el-Yahudiyeh (Petrie 1906: 3–15; Tufnell 1978; Leclant and Clerc 1985: 344); Tell el-Maskhuta and a series of small pastoral sites along the Wadi Tumilat (Holladay 1982: 44–47, 50; Redmount 1986); Inshas (Anonymous 1949: 12); Tell Farasha (Yacoub 1983); and especially Tell el-Dabʿa (Bietak 1968; 1970; 1975b; 1979; 1984b; 1989). Unpublished Asiatic remains have been reported from Tell Basta, Ghita, and Tell el-Sahaba (van den Brink 1982: 56–57). Tell el-Dabʿa is the only urban settlement in this group. Tell el-Maskhuta had a small, seasonally occupied Asiatic village with associated burials, while Tell el-Yahudiyeh has yielded a cemetery and perhaps a large defensive enclosure (but see below). The remaining Asiatic sites have revealed only cemetery materials so far. Other important sources of archaeological data on the Hyksos include scarabs inscribed with Hyksos royal names (which have been found in Egypt, Nubia, and Palestine) and a small number of inscribed monuments (e.g., architectural blocks and metal artifacts inscribed with Hyksos names and the two stelae of King Kamose) from the delta, Nile valley, and outside Egypt.

B. Tell el-Dabʿa and Other Hyksos Sites

The principal Hyksos site in Egypt is Avaris (Eg *Ḥwt-wʿrt*), located in the Khatana-Qantir region of the NE delta. The ruins of this enormous city cover an area of about 2.5 km². Identification of this site as both the Hyksos capital and the later Ramesside residence called Piramesse was first made by Hamza (1930: 64–68). The largest surviving portion of Avaris is at Tell el-Dabʿa, which has been under excavation since 1966. As the only Egyptian site where continuous occupation by Asiatics during the Second Intermediate Period can be traced, Tell el-Dabʿa is the primary source of archaeological data and cultural information on the Hyksos.

The two principal areas of excavation at Tell el-Dabʿa are Tell A and Area F/1. At Tell A, which has the best-documented sequence, the Second Intermediate Period strata are labeled G through D/2. The levels within this sequence that can be assigned to the Hyksos period are E/2, E/1, D/3, and D/2 (Bietak 1979: 236–37; 1984b: 37, table 1; 1989: 95–96, fig. 7). The chronological placement

of these occupational levels is uncertain: Bietak (1984b: table 3) dates these strata to ca. 1660/1630–1540/1530 B.C., while Dever (1985: 78–79, fig. 2) opts for an earlier dating (ca. 1725–1550 B.C.). Stratum G represents an early 13th Dynasty occupation and includes a palace of Egyptian type in Area F/1. The excavator attributes the architectural and other cultural changes in the succeeding Stratum F to Asiatics arriving from the area of Byblos at the time of the 13th Dynasty. He construes this supposed movement to Avaris as providing the impetus for the rise of Hyksos rule in Egypt (Bietak 1987: 52). Whether there is any connection between this purported migration and the Manethonian account of the Hyksos takeover of Egypt as a violent event (Waddell 1940: 78–81) is unknown, but the absence of distinctively N Levantine architectural traditions, ceramic types, and funerary offerings in Stratum F requires a cautious approach to the theory of a Syrian influx. (For the claim of "material culture parallels" between Hyksos period sites in the Wadi Tumilat and N Syria, see Redmount 1986: 22.)

The religious architecture and burial practices at Tell el-Dabʿa reflect the Levantine heritage of the Hyksos. The major religious structures at the site include an immense cult temple (Temple III) and two mortuary temples (Temples I and II), all of which are of Canaanite or mixed Egyptian-Canaanite types; these structures were erected during the time of Strata F and E/3 (Bietak 1989: 82–84). The principal tomb type at Tell el-Dabʿa through most of the Second Intermediate Period is the vaulted mudbrick chamber tomb. Donkey sacrifices appear outside some of these tombs (Bietak 1979: 245–46, pl. 15A). Similar tombs, also with donkey sacrifices, are attested at Tell el-Maskhuta (Holladay 1982: 44, figs. 66–67) and at Inshas (Anonymous 1949: 12, unnumbered pl. at top of p. 9). Two tombs having mudbrick vaulting but no donkey burials were found in a small MB II–III cemetery at Tell el-Yahudiyeh; the pottery in this cemetery is comparable to that in Strata E/1, D/3, and D/2 at Tell el-Dabʿa (Petrie 1906: 10–14, pls. 5–8, 12; Tufnell 1978: 101, n. 38). Vaulted MB II–III tombs have also been reported from Tell el-Sahaba, Tell Basta, and Ghita in the delta (van den Brink 1982: 56–57). Bietak (1987: 52), following van den Brink (1982), views these tombs as possibly Mesopotamian in origin, whereas Dever (1985: 82, n. 9) considers them a local adaptation of the Palestinian MB I rectangular cist tomb. The equine burials are paralleled in Palestine at Jericho, Lachish, and Tell el-ʿAjjul (Stiebing 1971: 114–16).

The material culture of the Hyksos was an amalgam of Syro-Palestinian and Egyptian features. There was a gradual trend toward Egyptianization in the burial practices and ceramics at Tell el-Dabʿa during the 17th and early 16th centuries B.C. (This development has also been observed at Hyksos period sites in the Wadi Tumilat: see Redmount 1986: 22–23.) Tombs in the later Hyksos phases (especially Strata D/3 and D/2) also sometimes contain Cypriot pottery and follow Egyptian rather than Asiatic funerary practices (Bietak 1989: 79–81). Among the metal objects in the burials at Tell el-Dabʿa and at several of the other delta sites are bronze daggers and axheads of Levantine forms. Egyptian goods in these tombs include scarabs, jewelry, and alabaster vessels. No royal tombs have been discovered at Tell el-Dabʿa, but a rich collection of funerary offerings, possibly from a Hyksos royal burial, is said to come from El Salhiya, 10 km SE of Tell el-Dabʿa (Fischer 1969–70). The outstanding piece in this group, which is now in the Metropolitan Museum of Art in New York, is an electrum circlet with a magnificent stag's head at the front (Aldred 1971: 204–5, pl. 59).

C. Hyksos Fortifications

Data on Hyksos fortifications in Egypt are minimal. The high water table and activities of the *sebbākhin* have obscured all traces of the defensive system at Tell el-Dabʿa (Bietak 1979: 268, 287). Large square embankments of sand with brick facing and rounded corners have been found at Tell el-Yahudiyeh (Petrie 1906: 3–10, pls. 2–4) and Heliopolis (Petrie and Mackay 1915: 3–4, pls. 1–3). The similarity of these two enclosures to embankments constructed in the Levant during the MB has led many archaeologists to identify them as Hyksos defense systems, but a growing number of scholars (mostly Egyptologists) feel that these embankments were retaining walls for Egyptian temple foundations (Ricke 1935; Wright 1968; cf. Kemp 1982: 744).

D. Hyksos Objects

Objects of substantial size inscribed with the names of Hyksos rulers are rare outside the delta (Giveon 1983). The southernmost occurrence of such finds is at Gebelein, where a granite block of Khyan (Daressy 1894: 42) and a limestone lintel of Awoserre Apophis (Daressy 1893: 26) were found. The paucity of Hyksos monuments and the lack of Asiatic settlements in the Nile valley suggest that the Hyksos maintained their authority in Middle Egypt and much of Upper Egypt through local vassals. This interpretation accords well with the reference in the "second stela" of the 17th Dynasty Theban king Kamose to Egyptians serving the Asiatics (Habachi 1972: 38, fig. 24, lines 17–18). The history of Hyksos expansion and rule in Egypt cannot be traced, since most Hyksos rulers are known solely from the appearance of their names on scarabs and other small objects. Some success has been achieved in arranging the Hyksos kings in chronological order by a typological analysis of the royal-name scarabs (Ward 1984). Numerous scarabs inscribed with the names and/or titles of officials who lived during this period and may have been Hyksos officials (e.g., the Chancellor Ḥar) have been found, but the rarity of non-Egyptian names on these scarabs (see, e.g., Giveon 1976: 127) makes it difficult to distinguish scarabs of Hyksos officials who adopted Egyptian names from scarabs belonging to contemporary Egyptian bureaucrats.

E. Trade in the Hyksos Period

The Asiatics in the E delta maintained an active commercial relationship with Cyprus, the Levant, and Nubia. This international trade appears to have been an important factor in the development of their wealth and power. The second stela of Kamose reports the seizure by the Theban king of hundreds of cargo ships in the harbor at Avaris (Habachi 1972: 37, fig. 23, lines 13–15). The goods aboard these ships included many substances originating in or traded through W Asia: gold, silver, bronze, lapis lazuli, turquoise, oil, incense, fat, honey, and precious

woods. Stone and faience vessels, jewelry, amulets, scarabs, and other Egyptian merchandise were exported to the S Levant in exchange for such raw materials and finished products. Many Egyptian objects have been found at Tell el-ʿAjjul, Gezer, Tell el-Farʿah (South), Jericho, Megiddo, and other Palestinian sites. The widespread distribution of Tell el-Yahudiyeh ware in Egypt, Upper and Lower Nubia, the Levant, and Cyprus and the manufacture of this pottery in Egypt as well as the Levant provides further confirmation for the existence of an extensive trade network (Kaplan 1980; Kaplan, Harbottle, and Sayre 1982; Bietak 1987). The discovery of Middle Kingdom statuary in MB II–III and even later contexts in Palestine as well as in the Aegean and Nubia suggests that some of this trade consisted of items looted by the Hyksos from earlier Egyptian cemeteries (Weinstein 1974; Helck 1976a). The horse was first brought into Egypt from W Asia during the Second Intermediate Period (Boessneck 1976: 25; Dixon, Clutton-Brock, and Burleigh 1979), but it is unclear what part the Hyksos may have played in its introduction and dispersal up the Nile valley. The absence of occupational remains in N Sinai during the Second Intermediate Period indicates that Egyptian-Levantine trade went by sea rather than overland (Oren 1979).

F. End of the Hyksos Period

According to the autobiographical inscription of a naval officer from El Kab named Ahmose Son of Abana, the first king of the 18th Dynasty, Ahmose, besieged and plundered Avaris (Sethe 1961: 4, lines 13–14). Erosion and modern agricultural activity make it impossible to determine whether Avaris was destroyed by Ahmose, but occupation in the latest Hyksos stratum (D/2) at Tell el-Dabʿa ended abruptly, the tombs of this phase were looted, and the area was largely abandoned until the end of the 18th Dynasty (Bietak 1979: 268; 1989: 79). The Ahmose Son of Abana text reports that, after the taking of Avaris, Ahmose besieged and plundered Sharuhen (Sethe 1961: 4, lines 14–15). This town should be identified with Tell el-ʿAjjul in Gaza (Kempinski 1974), which has produced a large number of Hyksos royal-name scarabs and was probably a Hyksos stronghold and trading emporium (Weinstein 1981: 3; fc.). The lower city and Palace I at Tell el-ʿAjjul show evidence of a major destruction (Petrie 1931–32, 1: 3; 2: 4; Albright 1938: 348–51). Many other towns in S Palestine were destroyed and/or abandoned at the end of MB III or early in LB I. Dever (1985), Weinstein (1981; fc.), and the majority of Palestinian archaeologists attribute most or all of the devastation to the Egyptian army, while Redford (1973; 1979a; 1979b: 278, 286, n. 146; 1982: 117), Shea (1979), and Hoffmeier (1989) deny that the Egyptians were directly responsible for these events.

DONALD B. REDFORD
JAMES M. WEINSTEIN

HYMENAEUS (PERSON) [Gk *Hymenaios*]. Hymenaeus was a heretical Christian, apparently living in Ephesus (cf. 1 Tim 1:3), mentioned in connection with Alexander in 1 Tim 1:20 and with Philetus in 2 Tim 2:17. That the references are to the same Hymenaeus is generally agreed since in each instance he is characterized as having deviated from the faith.

From 1 Tim 1:19 it is learned that Hymenaeus and Alexander "by rejecting conscience" had "made shipwreck of their faith." As a result, Paul "delivered [them] to Satan" that they might "learn not to blaspheme" (1:20). Although one's attention is often immediately captured by the vivid image of shipwreck, a metaphor used often in Greek philosophy (Dibelius and Conzelmann *The Pastoral Epistles* Hermenia, 33), most commentators focus on the deliverance. This is reminiscent of Paul's instruction to the Corinthians concerning the incestuous man in their community: "When you are assembled, and my spirit is present, with the power of our Lord Jesus, you are to deliver this man to Satan for the destruction of the flesh, that his spirit may be saved in the day of the Lord Jesus" (1 Cor 5:5). The author of 1 Timothy, presumably not Paul, must have known this text, yet he obviously does not intend for Hymenaeus and Alexander to experience "destruction of the flesh," i.e., death, in the same physical sense implied in 1 Cor 5:5. Nor does he envision deliverance to Satan as mere exclusion, putting them outside the Church, back into Satan's sphere. Rather, in 1 Timothy there is a nuance of potential reform before death through punishment. The author does, however, appear to expect physical consequences (1 Cor 11:32 and 2 Cor 6:9 may express a similar understanding). As Dibelius and Conzelmann (Hermenia, 34) note, "Since 'Satan' in 1 Tim 1:20 . . . can only refer to his function as the destroyer of body and of life, one has to think of sickness or the like." Thus it appears that great misfortune was wished upon Hymenaeus and Alexander with some thought, although the emphasis probably remains on punishment, that they might repent of their blasphemy, the precise content of which is never stated.

The author of 1 Timothy presupposes, unlike Paul in 1 Cor 5:5, that the apostle possessed magical powers enabling him to deliver the recalcitrant Hymenaeus and Alexander to Satan. Paul himself, however, understands such a deliverance to be a community action done in the "power of our Lord Jesus" (1 Cor 5:5). For this reason, commentators often draw parallels between 1 Tim 1:20 and various magical papyri (Collins 1980: 258). At the same time, it must be noted that a different stance is presupposed in 1 Timothy, where Paul presumably had carried out the excommunication of Hymenaeus and Alexander, while in 1 Cor 5:5 he instructs the Corinthians to carry out the action in his absence.

From 2 Tim 2:17, where Hymenaeus is linked with Philetus, it is learned that these two men had "swerved from the truth by holding that the resurrection is past already." Apparently they had embraced a gnostic-type doctrine of non-bodily resurrection which viewed that event as having merely a spiritual sense, i.e., the resurrection of a person from a sinful past. Hymenaeus and Philetus, since they were "upsetting the faith of some" (2:18), must have been teachers or leaders in the Ephesian church and rather effective ones at that. The author of 2 Timothy cites them as an example of those to be avoided in their "disputing about words, which does no good, but only ruins the hearers" (2:14). Timothy is warned that "such godless chatter . . . will lead people into more and

more ungodliness, and their talk will eat its way like gangrene" (2:16–17). Unlike 1 Timothy, 2 Timothy does not suggest that Hymenaeus was excommunicated.

Given the convergence of names and ideas between the Pastorals and the later apocryphal *Acts of Paul,* one would expect to find Hymenaeus and Philetus in the apocryphal *Acts.* While they are not present (Alexander is present, probably the same as above), their position on resurrection is prominent and its proponents are DEMAS and Hermogenes. Regarding the possibility that characters in the Pastoral letters such as Hymenaeus, Alexander, and Philetus might be fictional creations of the deutero-Pauline author, see HERMOGENES.

FLORENCE MORGAN GILLMAN

HYMN OF THE PEARL.

The Hymn of the Pearl (also entitled *The Hymn of the Soul,* and *The Hymn of Jude Thomas the Apostle in the Country of the Indians*) is a mythological poem "which presents a Hellenistic myth of the human soul's entry into bodily incarnation and its eventual disengagement" (Layton 1987: 366). This myth of human salvation is not literally expressed but is conveyed in the form of an allegorical folktale, possibly originally oral, in which a young prince from the East (Parthia?) is sent on a westward mission to Egypt to rescue "the one pearl" from a dragon, is distracted and forgets his true identity and mission, is revived by a message of remembrance sent from his father the king, and finally returns home with his prize pearl amid great pomp and circumstance.

A. The Manuscript Tradition and the Acts of Thomas

The text of *Hymn Pearl* is only known as one part of a larger work in the early Christian literary tradition of the apocryphal acts of the apostles (MacDonald 1986: 1–6; Bovon and Junod 1986: 161–71) known as the *Acts of Thomas* (Klijn 1962). Considering the relationship between *Hymn Pearl* and *Acts Thom.,* researchers have yet to determine (1) whether or not *Hymn Pearl* existed prior to the composition of *Acts Thom.* and (2) whether it was included in the first edition of *Acts Thom.* or is a secondary addition to that text. As the "host text" for *Hymn Pearl, Acts Thom.* itself purports to transmit stories of the eastward journeys and miraculous activities of the ascetic apostle Didymus Jude Thomas and his divine twin brother Jesus. As is typical with many of the apocryphal acts of the apostles, *Acts Thom.* has a rich but complicated ms tradition (Poirier 1981). Although that tradition is limited to the Syriac (6 mss) and Greek (75 mss) languages, scholars have not reached a consensus concerning which of these two was the original language of composition. The *Hymn Pearl* is found in only two of the 81 extant mss containing *Acts Thom.:* a Syr ms dated to 936 C.E. and a Gk ms of ca. 1050 C.E. Also extant is an 11th-century epitome by Nicephoras of Thessalonica based on the Gk version (Lipsius and Bonnet 1903: 219–24; cf. Poirier 1981).

B. Time and Place of Composition

All indicators of time and place of composition are obscure and offer no easy solutions. The relevant data and most likely options have been discussed by Layton (367–69) and are reviewed here. First, the Syriac style and content of the story demonstrate that *Hymn Pearl* was composed independently of *Acts Thom.,* suggesting that it was either one of the author's sources which he incorporated into *Acts Thom.* or was interpolated into the text at a later time, from an unknown place, and by an unknown editor. The second option concerns the relationship between *Hymn Pearl* and the other literature from the Syrian Thomas tradition (see THOMAS, GOSPEL OF (NHC II,2) and THOMAS THE CONTENDER, BOOK OF) which employ the distinctive theological model of "divine twinship" (Layton, 359–64) reflected in the tripartite titular name *Didymus* (Gk title: twin) *Judas* (personal name) *Thomas* (Aram title: twin). If *Hymn Pearl* was composed in the general locale of the Thomas tradition (Syrian Edessa), one could argue that the strong similarity with Thomas theology (model of divine twinship) is due to the fact that *Hymn Pearl* either provided the model for the other Thomas texts (in which case *Hymn Pearl* would predate those texts) or it presupposed that model (in which case *Hymn Pearl* would postdate those texts). The chronological order of composition for these three texts is a crucial factor yet to be determined by researchers. But if *Hymn Pearl* was not composed in Syrian Edessa, then the interpretive framework of the text cannot be supplied by reference to the other texts in the Syrian Thomas tradition and their model of divine twinship. With this option, one would suppose that *Hymn Pearl* originated in another religious milieu, was secondarily introduced into the Syrian Thomas tradition, and was then adapted to the new religious context. Layton notes that the favorable mention (*Hymn Pearl* 38) of the Parthian dynasty of Persia (247 B.C.E.–224 C.E.), which lost control of Syrian Edessa in 165 C.E., strongly suggests that *Hymn Pearl* could have been composed in Syrian Edessa sometime before 165 C.E.

C. The Allegory

A résumé of the story line is presented in the introduction to this brief article and need not be expanded here (for recent English translation, see Layton, 371–75). The allegorical theme of a highly desirable pearl was a popular image in antiquity and is found in Christian form in the so-called "Parable of the Pearl of Great Price" (Matt 13:45–46 and *Gos. Thom.* 76; cf. Matt 13:44). Similarly, the theme of a young man's journey into personal loss, self-recognition, and final restoration is also known in the so-called "Parable of the Prodigal Son" (Luke 15:11–32; but cf. Phil 2:5–11).

The hermeneutical key which unlocks the deeper allegorical meaning of the myth is given at several points near the end of the story. The prince's garment (*Hymn Pearl* 76–78, 88, 98) is clearly shown to be an allegorical representation of his newly gained "self-recognition" (= gnosis?) which ushers him into the realm of authentic existence and peace. With these suggestive clues to the allegorical method of interpretation "an ancient reader could work back through the story at another level, retell-

ing it as an account or model of the quest for self-knowledge and salvation" (Layton, 366).

The lack of any exclusively sectarian elements (whether Jewish, Christian, or other) is striking and suggests a popular allegorical story which was adaptable to any number of specific religious sects in numerous cultures. The general requirement for its adaptation was the presupposition in the receiving group that the human soul had its birth and true home in a spiritual realm, that the soul's present condition of material incarnation was negative, and that it could be rescued from this unfortunate fate only through a spiritual experience of self-recognition which would ultimately free the soul from the shackles of the fleshly body and the material world.

PAUL ALLAN MIRECKI

HYMN OF THE THREE YOUNG MEN. See DANIEL, ADDITIONS TO.

HYMNS, EARLY CHRISTIAN.

The term "hymn" is derived from the Greek word *hymnos*, which in classical Greek from Homer on means a song of praise in honor of the gods, heroes, and conquerors. In the NT it is used in reference to songs of praise honoring the God of Israel (Matt 26:30; Mark 14:26; Acts 16:25).

A. Terminology

In certain passages in the Pauline Epistles (Eph 5:19; Col 3:16) the word *hymnos* is used with two other terms as well. One is *psalmos*, which was already used by the translators of the LXX for the Hebrew book of Psalms (Heb *tĕhillîm*, or "songs of praise"). In classical Greek the word *psalmos* meant "plucking musical strings with the fingers" and, later, a song sung to the accompaniment of a stringed instrument. (No doubt this was found by the translators to be the most satisfactory Greek equivalent because of the instrumental implications of the superscriptions to many of the psalms.)

The other term used by Paul is *ōdē pneumatikē* ("spiritual song"). The Greek word *ōdē* means a song, lay, or strain (from which derives the English word "ode"). In the plural it means "lyric poetry." While these terms might be considered synonymous, there must be some distinction, be it ever so slight.

B. Songs, Hymns, and Psalms in the Bible

1. Complete Hymns. The term *ōdē* (or song) seems to be generic. The fact that Paul feels the need to add the adjective *pneumatikē* ("spiritual") seems to corroborate this view. It was not an ordinary or secular, pagan, heathen song that they were to sing, but a spiritual one, that is, one that had Christian orientation.

The other two terms, *hymnos* and *psalmos*, then, are specific, the latter taking the characteristics of the OT psalms if not the psalms themselves. It is to be remembered that Jewish Christians were accustomed to using the biblical book of Psalms in the synagogue and gentile converts had the Psalter available in the LXX. Besides the psalms themselves there were other OT songs such as the song of Moses (Exod 15:1–18), the song of Deborah and Barak (Judges 5), and the song of Hannah (1 Sam 2:1–10), to name but a few. In addition there are the various NT songs (especially in Luke), such as the *Magnificat* (Luke 1:46–55), the *Benedictus* (Luke 1:68–79), and the *Nunc Dimittis* (Luke 2:29–32), which bear close resemblance to the psalms.

Hymnologists are agreed that these NT songs were inspired by older poems, for example, the *Magnificat* by the song of Hannah, and the *Benedictus* by the language used by the OT prophets and by the eighteen benedictions used in the temple service. Szövérffy (*NCE* 7: 287) indicates that "with few exceptions, early Christian hymns were not written down but were very often the product of sudden inspiration. They probably resembled Hebrew Psalms and Canticles, using parallelism in structure, long enumerations of the attributes of the Deity, Etc."

2. Fragmentary Hymns. Many hymnologists also believe that fragments of primitive hymns can be found throughout the NT. This certainly harmonizes with Szövérffy's assertion regarding momentary and sudden inspiration and an attempt to recapture the thought later. Most of these fragments seem to be found in the Pauline Epistles and one might conclude that he was quoting from them as he was writing to the various congregations he had founded, and he might even originally have heard them there.

In general these fragments fall into two categories. The first category includes those that are doctrinal, didactic, or liturgical in scope. Some examples of this first category can be found in Eph 5:14; 1 Tim 3:16 and 6:15–16; 2 Tim 2:11–13; Titus 3:4–7; Phil 2:6–11; and Rev 22:17. Many of the early teachings of the Christian Church seem to be found in some of these hymn fragments. It must be remembered that outside the OT there were no written documents in the Church of the apostolic age except those that appeared and were circulated either as general epistles (such as those of John, James, and Peter) or the specific letters of Paul; the gospels only began to appear later. It must also be kept in mind that many other documents were being circulated, and that controversy and conflict already appeared at this early time as a result of conflicting views being circulated by those who opposed the apostles. Paul, the great Jewish convert, zealous missionary, and champion of orthodoxy, seems to have an abundance of these primitive hymn fragments supporting and reflecting his views about the essence of the Christian gospel.

In the second category are those that are doxological in content. These are all found in the book of Revelation

(1:4–8; 4:8; 4:11; 5:9–10; 5:12; 11:15; 11:17–18; and 15:3–4).

While none of these fragments are strophic (as are later Greek and Latin hymns), they are nevertheless in metrical prose (as is the *Te Deum* of a later date), and they certainly meet the standards of good poetry; there is music in their very sound.

C. Extrabiblical References to Early Christian Hymns

We also gain a little information about early Christian hymnody from the famous letter of Pliny the Younger to the Emperor Trajan, written shortly after the close of the apostolic era (ca. A.D. 107–15). In asking the emperor how he should deal with the Christians, Pliny, governor of Bithynia and Pontus, briefly summarized their gatherings on the basis of information he had been able to glean through interrogation of witnesses. The pertinent portion of his letter states that "they were accustomed to come together on a regular day (probably Sunday) before dawn and to sing a song alternately to Christ as to a god."

Another early source, the *Apostolic Constitutions* (completed before the end of the 4th century), mentions a number of primitive Greek hymns which may very well have been the sort of "hymn to Christ" which Pliny refers to in his letter (Funk 1905: 7, 47, 454; 8, 13, 517).

One of these hymns is the *hymnos eothinos* or "morning hymn," which is also found in a number of other ancient sources, such as were appended to the Codex Alexandrinus (5th century). These "anonymous hymns" had considerable influence in shaping the liturgy of the early Church. The morning hymn is an expansion of the greater doxology ("Glory to God in the highest"). Another hymn mentioned in the *Apostolic Constitutions* is an "evening hymn" *(hymnos espirinos)*. There are three noteworthy sections to this hymn: (1) the beginning seems to be taken from Psalm 113: "Praise the Lord! Praise, O servants of the Lord, praise the name of the Lord!"; (2) the next portion paraphrases the "Gloria in Excelsis" section of the morning hymn; and (3) the last portion consists of the song of Simeon (Luke 2:29–32), the *Nunc Dimittis* (Funk 1905: 7; 8).

Numerous other hymns are to be found in these documents, but we shall restrict our discussion to those which have been retained in present-day liturgies. One of these is the *Tersanctus* or "Thrice Holy" taken from the opening verses of Isaiah 6 (the *qādôš* of the Hebrew liturgy). In the Clementine liturgy it appears in this form: "Holy, holy, holy is the Lord of Sabaoth. The whole creation is full of His glory. Praise to all ages. Amen." (Werner 1959: 284). The liturgies of St. Mark, St. James, and St. John Chrysostom have slight alterations to this basic text, the latter two including the "Hosanna" section: "Hosanna in the highest. Blessed is he that cometh in the Name of the Lord. Hosanna in the highest." (Brightman 1922: 43).

In passing we should also make mention of another trinitarian hymn which became important in the Eastern Church. This is the *Trisagion*, which should not be confused with the *Tersanctus*. In the Eastern liturgies it is a short hymn verse sung after the Little Entrance. The text is as follows: "Holy God, Holy Mighty, Holy Immortal, have mercy on us." It is also found in the old Roman Good Friday liturgy in both Latin and Greek, sung antiphonally by the choirs. (In the latter language it seems to be a vestigial remainder from the days when the liturgy was still recited in Greek.)

A final hymn is the lesser doxology, *Doxa Patri*, which is identical with the Latin *Gloria Patri* ("Glory be to the Father, and to the Son, and to the Holy Spirit: as it was in the beginning, is now, and ever shall be, world without end. Amen"). In Rome it was already in use at the time of Clement (ca. 91). In the Western usage of St. Benedict (ca. 480) the lesser doxology was to be used after each psalm, a practice which has persisted to the present day and gives a Christian trinitarian orientation to the OT psalms. The same applies to the three Lukan canticles *(Magnificat, Benedictus, Nunc Dimittis)* which do not themselves actually contain such an orientation.

The use of hymns not derived from Scriptural sources varied in certain locations throughout the Church and were used sparingly in the liturgy, mostly as paraliturgical devotions—this as late as the 4th and 5th centuries. Duchesne (1903: 452, n. 1) points out that down to the 9th century hymns were unknown at Rome, "chants, psalms, and other Scriptural canticles alone being used."

It was primarily because of the activity of certain heretical sects (such as Gnosticism) that some hymns found gradual acceptance in order to combat heresy with truth. In his interesting collection of heretical writings from the early Christian periods Grant (1961: 105, 115; 116–22) quotes a number of these gnostic hymns. On the other hand, Schalk (1978: 189) points up the fact that "a steady hymn production was maintained by the more orthodox hymnists." Among these is to be found the evening hymn *Phos hilaron hagias doxas* which has come down to us in translation as "O Gladsome Light, O Grace."

It would seem in order to conclude our discussion by making a brief comparison of Eastern and Western liturgies, the substantial lack of early non-Scriptural hymns notwithstanding.

The culmination of all Eastern rites is to be found in the Divine Liturgy of St. John Chrysostom (Brightman 1922), which is still in usage today. The elaborateness and richness of the Divine Liturgy with its numerous litanies and supplications make the Roman Tridentine Mass with its abbreviated ninefold *Kyrie* somewhat pale by comparison.

HYPOCORISTIC NAMES. See NAMES, HYPOCORISTIC.

HYPOSTASIS OF THE ARCHONS (NHC II,4).

Cast in the form of a revelatory discourse, the *Hypostasis of the Archons* (NHC II,4) from the Nag Hammadi Library is a Sethian gnostic treatise in which an anonymous teacher offers secret knowledge *(gnosis)* to a gnostic Christian community. This knowledge clarifies both the origin and nature of the evil archons (rulers) who created and presently dominate the visible universe and the situation of the elect in their struggle against these archons.

Utilizing a clearly gnostic interpretation of the Genesis 1–6 story line, the author recounts the drama of salvation from the creation of the material universe by the blind Samael (alias laldabaoth), to the fabrication of Adam and Eve, to the births of Seth and Norea (sister of Seth), to the Flood and Noah's role (86.27–92.19). There follows a revelation to Norea by the great angel Eleleth of the ultimate banishment of the ignorant creator laldabaoth, the advent of the savior ("the true human being" [96.32]), the destruction of the evil archons, and the salvation of the "spirituals" (93.13–97.20). The final victory is achieved through the savior's gift of "gnosis" to the elect, informing them of their intrinsic, spiritual, immortal nature.

The presence in the text of Hellenistic-Jewish speculation on the figures of Sophia and Norea, the homiletic interpretation of Genesis 1–6, the influence of the early Church's christology, and the presence of religiously oriented Middle Platonic philosophical tradition focused on ontological and theological speculation—all have led most scholars to identify *Hyp. Arch.* with the Sethian cycle of texts found in the Nag Hammadi Library (e.g., Schenke 1981: 588–616; Bullard and Layton 1989: 220ff.; Layton 1974: 371–72). Also, comments in the text about Norea (91.34–94.2), daughter of Eve, reveal connections of *Hyp. Arch.* with a literary tradition about this figure found among the Sethian Ophites, Jewish apocryphal and rabbinical works, and *Orig. World* in NHC II,5. Indeed, the last-mentioned refers to a "Book of Norea" (102,11.24–25) to which Epiphanius alludes (*Haer.* 39.5.2). Some would identify *Hyp. Arch.* with this "Book," though convincing demonstration has not been made.

While some maintain *Hyp. Arch.* was originally a non-Christian gnostic text that has been subsequently Christianized (Hedrick 1986: 9; Barc 1981: 10ff.; Roberge 1980: 7–9), an increasing number of commentators view the work as Christian gnostic, the author drawing the structure and much terminology in the text from the only authority actually cited, the "spirit-inspired Apostle," Paul (Bullard 1970: 161; Pagels 1986: 258, 266; Layton 1974: 363f.).

Hyp. Arch. appears fourth among the seven tractates in Codex II. Apart from minor lacunae in the first 10 lines, the text is fairly well preserved. Written principally in Sahidic Coptic with significant incursions of Subachmimic forms, the tractate has clearly been translated from a Greek original. Though it undoubtedly contains earlier traditional material, *Hyp. Arch.* was probably composed in the 3d century C.E., perhaps in Egypt (cf. the Coptic puns in 86.30; 94.22; and reference to theriomorphic rulers in 87.29).

HYPSIPHRONE (NHC XI,4).

Hypsiphrone, which means "high-minded one" or perhaps "she of exalted thought," is the fourth and last treatise of Codex XI of the Coptic Library from Nag Hammadi (NHC XI,4: 69.23–72.35). It presently consists of four large and two small fragments containing the lower portions of the inner and outer margins of two papyrus leaves, which must have originally contained the entirety of this short treatise. It is written in the same script as the much longer and better-preserved treatise of that codex, *Allogenes,* although there is no discernible further relationship beyond these two treatises. *Hypsiphrone* is written in an apparently standard Sahidic Coptic dialect, unlike the other treatises of Codex XI. It bears the superscript title "Hypsiph[rone]," the remainder of the title being restored from other occurrences within the treatise; since the conclusion of the treatise is not extant, it may or may not have borne a subscript title.

Apart from the poor condition of the treatise, even its cryptic title affords little insight into its content. The *incipit* "The book (or scroll) [of visions] which were seen [by Hypsiphrone; and] they [are revealed] in the place of [her] virginity" adds little more. Although there is mentioned a plurality of persons speaking with one another, the treatise does not appear to be a dialogue. Instead, the whole is presented as a speech of Hypsiphrone, who reports the receipt of certain revelations during her descent from the "place of her virginity" into the world. The only figure mentioned by Hypsiphrone is one Phainops, "he of the gleaming eye," who apparently presides over a fount of

blood into which he breathes, and which seems to produce a fiery effect.

One may conjecture that Hypsiphrone represents some form of the personified thought of a high deity who leaves her dwelling in the transcendental realm, where there are no distinctions of gender, to descend to the earthly realm at the time of the creation of humankind. There she encounters Phainops, probably in the act of creating humankind, who apparently produces "a [man in the likeness] of blood" from his fiery fount of blood.

In spite of the paucity of text, what remains seems to have some affinity with the group of gnostic texts generally designated as "Sethian." To judge from the name "Hypsiphrone," one may have to do here with the Sethian figure of Eleleth, called Phronesis in *Hyp. Arch.* 93.8–97.21, one of the traditional Sethian Four Illuminators, whose name might be derived from Aramaic *Fillith,* "the tall one," which could be rendered by Gk *hypsiphrone.*

The fount of blood may refer to the heavenly Adamas or heavenly archetype of Adam, described in *Orig. World* (108.2–31) as the "enlightened bloody one" (based on the Hebrew pun on *Eadam,* "man," and *dam,* "blood"). In this case, Hypsiphrone would be the Illuminator Eleleth, who in some Sethian texts is regarded as the abode of Sophia and certain "repentant souls" and in others *(Trim. Prot.; Gos. Egypt.)* is held responsible for the act usually ascribed to Sophia: that of producing the demiurge Yaldabaoth. Eleleth/Hypsiphrone would also be responsible for the downward projection of the likeness of Adamas, the divine image after which the earthly Adam is modeled by the demiurge. In any case, Hypsiphrone is certainly a figure similar to that of the descending and restored Sophia. Phainops, "radiant-faced one," might then be a name for either the enlightened archetypal Adamas, or—since he seems to be distinguished from the "fount of blood"—for the fiery angel Sabbaoth, the brother of the evil demiurge produced by the breath of Zoe, Pistis Sophia's daughter, in an effort to imprison the demiurge (*Hyp. Arch.* 95.5–96.4). Thus, although it bears no trace of the traditional Sethian names for these figures, *Hypsiphrone* may in fact be very closely related to the other Sethian texts.

JOHN D. TURNER

HYRAX. See ZOOLOGY.

HYRCANUS (PERSON) [Gk *Hyrkanos*]. **1.** The son of Tobias, a wealthy depositer to the temple treasury (2 Macc 3:11).

2. John Hyrcanus I ruled as high priest and ethnarch from 135/4 to 104 B.C.E. He succeeded Simon Maccabeus, his father, who was murdered with Hyrcanus I's two elder brothers by Ptolemy, Simon's son-in-law. Antiochus VII, king of Syria, laid siege to Jerusalem, forcing Hyrcanus I to pay heavy tribute (Jos. *Ant* 13.8.2–3), but the long struggle with Syria ended when Antiochus VII was succeeded by Demetrius II and internal strife. An embassy sent by Hyrcanus I received Roman confirmation of the Hasmoneans' independence.

Hyrcanus I conquered Shechem, destroyed the Samaritan temple on Mt. Gerizim, and invaded Idumea, forcibly circumcising many of the inhabitants (Jos. *Ant* 13.9.1). Hyrcanus I razed the city of Samaria (Jos. *Ant* 13.10.2–3) and occupied the Esdraelon valley to Mt. Carmel (Jos. *JW* 1.2.7). According to Josephus, Hyrcanus I employed foreign mercenaries for his campaigns paid with money plundered from King David's tomb (Jos. *Ant* 13.8.4).

Hyrcanus I was the first Jewish ruler to mint coins bearing his own name. The coins read on the obverse side, "John the High Priest, and the Community of the Jews," and on the reverse side was a horn of plenty with a poppy head inside (Greek symbols of prosperity and fertility). The Pharisees and Sadducees also rose to prominence during the reign of Hyrcanus I (Jos. *Ant* 13.10.5–7; but see also *Ant* 13.10.9).

3. Hyrcanus II was the irresolute son of Alexander Jannaeus and Alexandra Salome. He served as high priest during his mother's reign from 76 to 67 B.C.E. After his mother's death, his claim to the kingship was challenged by his younger brother Aristobulus II, embroiling the two in civil war. Hyrcanus II was reinstated in the office of high priest by Pompey and served from 63 to 40 B.C.E. He was executed by Herod the Great in 30 B.C.E. See also HASMONEAN DYNASTY.

IBEX. See ZOOLOGY.

IBHAR (PERSON) [Heb *yibḥār*]. One of 13 sons of David listed as having been born to David's wives in Jerusalem (2 Sam 5:15; 1 Chr 3:6; 14:5), in addition to his six sons born at Hebron. His mother's name is unknown: four of the 13 sons born in Jerusalem were Bathsheba's sons; the remainder were born to unnamed wives. Besides these 13, David had numerous (unnamed) sons born to his concubines, according to 1 Chr 3:9. Ibhar is the first son listed after Bathsheba's four sons, but nothing further is known of him. See also DAVID, SONS OF.

DAVID M. HOWARD, JR.

IBLEAM (PLACE) [Heb *yiblĕʿām*]. Var. BILEAM. A town in the territory of Issachar, given to Manasseh, but from which Manasseh could not drive out the Canaanite inhabitants (Josh 17:11–12; Judg 1:27). Ibleam was an important city in the Bronze Age, mentioned as a royal city in Egyptian archives (*LBHG*, 152) and occurs in the conquest list of Thutmose III (*GP* 2: 357; *ANET*, 242). During the Iron Age (2 Kgs 9:27), Jehu mortally wounded Ahaziah, king of Judah, at the ascent of Gur, outside Ibleam. It is possible that in 2 Kgs 15:10 the Heb *qblʿm*, "before the people," should be read *byblʿm* as the Lucian version of the LXX renders it (Gk *en Ieblaam*) and that Zechariah, the king of Israel, was therefore killed "in Ibleam" (Cogan and Tadmor *2 Kings* AB, 170–71). Other scholars (Albright 1945: 69) restore Ibleam to the list of levitical cities, replacing Bileam in 1 Chr 6:55 (—Eng 6:70) and Gath-rimmon in Josh 21:25.

Ibleam is almost universally identified with Kh. Belʿameh (M.R. 177205), which guards the easternmost pass through the mountains of Ephraim into the Jezreel valley (*LBHG*, 436). The site has strong natural defenses (Phythian-Adams 1922: 143), which may have been supplemented by an ancient underground water system from Bir Senjar at the foot of the tell (Schumacher 1907: 107). Ibleam, along with Megiddo and Jokneam, was one of the fortress cities which guarded access to and from the S limits of the Jezreel valley.

MELVIN HUNT

IBNEIAH (PERSON) [Heb *yibnĕyāh*]. One of the Benjaminites who is listed in 1 Chr 9:8 as having returned from exile in Babylon to Jerusalem. Ibneiah is not listed in Neh 11:7–9, which is a parallel passage to 1 Chr 9:7–9. Although some have attempted to equate Ibneiah with Gabbai in Neh 11:8, Braun (*1 Chronicles* WBC, 140) has stated that this identification is doubtful. It is more likely that the author of 1 Chronicles 9 and the author of Nehemiah 11 simply had different traditions at their disposal. The name Ibnijah, which occurs later in 1 Chr 9:8, has the same consonants as the name Ibneiah *(ybnyh)*. Although Dahlberg (*IDB* 2: 671) has suggested that these two names in reality refer to the same person, the text presents them as two individuals separated by several generations.

ROBERT C. DUNSTON

IBNIJAH (PERSON) [Heb *yibnîyāh*]. A Benjaminite who returned to Jerusalem from exile in Babylon (1 Chr 9:8). The consonants in the name Ibnijah are identical to the consonants in the name Ibneiah *(ybnyh)*, which occurs earlier in 1 Chr 9:8. Dahlberg (*IDB* 2: 671) suggested that the two names referred to the same person but the text presents them as separate individuals from separate generations. Ibnijah does not appear in the parallel passage in Nehemiah (Neh 11:7–9) but 1 Chr 9:7–9 and Neh 11:7–9 vary at several points, which seems to indicate that the authors had different traditions from which to work.

ROBERT C. DUNSTON

IBRI (PERSON) [Heb *ʿibrî*]. One of the "remaining Levites" who, according to the Chronicler, casts lots before David, Zadok, and Ahimelek in order to receive his place among the levitical household leaders (1 Chr 24:27). Although only mentioned in 1 Chr 24:27, the Chronicler grants Ibri a levitical lineage as the son of Jaaziah, a descendant of Merari, along with his brothers, Shoham, Zaccur, and Beno (1 Chr 24:27). Although Liver (1968: 8. 29–32) believes that this list may have originated from an authentic source composed during the reign of David or Solomon, most commentators have attributed the list in which Ibri appears to a time later than the main composition of Chronicles, either to the late Persian period (Williamson 1979: 259–60, 265–68) or, more commonly, to the Maccabean era (Rudolph *Chronikbücher* HAT, 163–65). The style of the list, however, corresponds closely with the compositional techniques of the Chronicler. Ibri, a gentilic form meaning "a Hebrew" [Heb *ʿibrî*], may represent the

Chronicler's notion of a suitable name for a levitical household leader in the reign of David.

JOHN W. WRIGHT

IBSAM (PERSON) [Heb *yibśom*]. Ibsam was a descendant, perhaps grandson, of Issachar, according to the genealogy of 1 Chr 7:1–5. The sons of Issachar were Tola, Puah, Jashub, and Shimron and the sons of Tola were Uzzi, Rephaiah, Jeriel, Jahmai, Ibsam, and Samuel. Tola's "sons" were probably not immediate sons but descendants.

Other listings of the sons of Issachar are found in Gen 46:13 and Num 26:23–25. Neither passage mentions any of the sons of Tola; thus 1 Chr 7:2 is the only OT occurrence of Ibsam. However, Judg 10:1 names Tola, a man of Issachar, as one of the minor judges. He is son of Puah, son of Dodo, who resided in Shamir in Ephraim. Curtis (*Chronicles* ICC, 144–45) has theorized that all four names given as Issachar's sons can be obtained from this information in Judg 10:1.

Tola's sons are said to be "heads of their fathers' households," a phrase that has different usages in the OT but in genealogies refers to military commanders (Williamson *1 and 2 Chronicles* NCBC, 67). Assuming a military background for the Chronicles' genealogy, then "fathers' households" would have been the means of military conscription (*1 Chronicles* WBC, 7). Ibsam and the other sons of Tola are also called "mighty men of valor" *(gibbor ḥayil),* a term that usually means "warrior" or "soldier" in Chronicles, but could possibly be a technical term for the social class, "nobles," who bore arms for their king (Oswalt 1980: 148).

Oswalt, J. N. 1980. *gabar.* Vol. 1, p. 148 in *Theological Wordbook of the Old Testament,* ed. R. L. Harris; G. L. Archer, Jr.; and B. K. Waltke. Chicago.

M. STEPHEN DAVIS

IBZAN (PERSON) [Heb *ʾibṣan*]. One of the leaders who "judged Israel" in the premonarchic period and is mentioned only in Judg 12:8–10, immediately following the stories of Jephthah. The brief notice indicates that Ibzan, whose name means "swift" (if related to Ar *ʿabuṣun*), had 30 sons for whom he arranged exogamous marriages, bringing women from "outside," presumably from beyond the clan or protective association of villages. Similarly his 30 daughters were sent "outside" in marriage. Given the same round number in the notice about Jair (Judg 10:4), the kinship language most likely denotes sociopolitical affiliation. Ibzan's extended family was the regional subgroup of nuclear Israelite families over which he exercised direct leadership.

Ibzan's leadership lasted seven years. His place of residence and burial was Bethlehem. A tradition of interpretation as old as Josephus assumed this to be the famous Bethlehem in Judah; but the context of the Ibzan pericope makes it more likely that the reference is to a N Bethlehem close to the border of Asher (Josh 19:15). The book of Judges appears to be structured, at least in part, by the idea that each of the tribes had at one time or another produced a leader who "judged Israel." Whereas Elon of Zebulun comes next, Ibzan was possibly regarded as the leader who came out of Asher.

Ibzan is the third in a series of five such leaders about whom no warfare stories survive. He is preceded by Tola and Jair (10:1–5) and followed by Elon and Abdon (12:11–15). Each of them, like most of those whose achievements are recounted at some length, "judged Israel." If this implies military leadership, it is not described. With such scant information given about them, it may be that they represent two major interludes of relative peace, framing the crisis which generated the stories of Jephthah (10:6–12:7) and which are enclosed within the same rubrics that mark the so-called minor judges.

How far the leader's authority extended beyond clan or tribe is unclear. It is conceivable but not demonstrable that an archival list of persons who filled a central position in the early intertribal organization was the source of such information for the compiler of the book of Judges. With no difference in the formula indicating that each "judged Israel," it is more likely not a difference in the office filled by major and minor judges, but a difference of literary purpose, a quickening of the pace before and after the career of Jephthah (Mullen 1982: 196).

ROBERT G. BOLING

ICHABOD (PERSON) [Heb *ʾîkābôd*]. Son of Phinehas, grandson of Eli (1 Sam 4:19–21; 14:3). His mother is shocked into a premature labor when she learns that the Ark has been captured by the Philistines and that her husband and father-in-law are dead. Before she dies she gives her child the name Ichabod, a name whose exact meaning is disputed. The Hebrew word *kābôd* means glory and refers to the radiant light that surrounds a deity. It had been thought that the particle *ʾî* was to be taken as a negation, thus Ichabod would mean "no glory." This would support Josephus' reading of the name as "Inglorious" (*adoxia, Ant* 5.360). More recently, however, it has been suggested that Ichabod is derived from the Ug *ʾiy* which means "where is . . ." or "alas" and *kbd,* glory. Accordingly Ichabod would mean "Where is the Glory?," or "Alas, (for) the Glory" and signifies the absence of the deity. Thus the name of the child is related to the departure of the glory of the Lord signified by the loss of the Ark, an association made explicit in 1 Sam 4:22.

Though in 1 Sam 14:3 Ichabod is said to be the brother of Ahitub, father of Ahimelech whose son is Abiathar, such a relationship seems unlikely. Verse 3, which relates Abiathar to the family of Eli, is probably a gloss.

PAULINE A. VIVIANO

ICONIUM (PLACE) [Gk *Ikonion*]. A city in S central Anatolia (modern Konya, Turkey [37°51′N; 32°30′E]) visited by Paul on his missionary journeys (Acts 13:51; 14:1, 19,21; 16:2). Located approximately 170 mi (280 km) S of Ankara (ancient Ancyra) on the border between mountainous Phrygia to the W and the broad plain of Lycaonia to the S and E, it lies on a high, fertile plateau (3,770 feet or 1,150 m). One of the oldest continually occupied cities in the world, it dates back at least to the 3d millennium B.C. According to local legend, it was the first city to be built following the great Flood. Its location caused it to be linked at various times with both Phrygia and Lycaonia. Founded as a Phrygian settlement and linked with Phrygia both geographically and culturally, the native people would have considered themselves Phrygians. As a part of the empire of the Seleucid successors to Alexander the Great, and later as a part of the Roman empire, it was linked with the cities of Lystra and Derbe (in Lycaonia). Those who were strongly attached to the Gk language and culture would have considered themselves Greeks, while a few would have identified with the vision of the Roman empire. For millennia, Iconium has been—and, as Konya, continues to be today—"a prosperous city of peace and commerce as well as a center of agriculture" (Hagner *ISBE* 2: 792). Located on an important crossroads linking Rome and the Greek cities of the Roman provinces of Asia, Macedonia, and Achaia with the luxuries of the Levant, Iconium was a large and wealthy city in NT times.

The city figures in Greek mythology as the place where Perseus cut off the head of the Gorgon Medusa (Hes. *Theog.* 270). An ancient tradition saw in the name of the city, connecting it with the Gk *eikōn* (image), an allusion to this event. The foundations of the city are, however, lost in the prehistory of antiquity. From the 3d century B.C. it was ruled variously by the Seleucids to the SE, who were responsible for its partial Hellenization, and by the kings of Galatia and Pontus to the N. It came under the influence of Rome in 65 B.C. and was later incorporated into the empire in 25 B.C. when Galatia became a province. During the time of the Emperor Claudius (A.D. 41–54), the city received the honorific imperial prefix and thus became known as Claudiconium. Under the Emperor Hadrian (117–138), Iconium became a Roman colony. In the time of Paul's 1st-century visits, the city became a center of early Christian vitality, a fact attested by numerous inscriptions, traditions, and legends, and remained so until the Islamic conquest in 708. In 235 a church council was held there. In 372 the city became the capital of the Roman province of Lycaonia. During the Middle Ages, Konya was the capital of the Seljuk empire of Roum and the center of a dynamic religious and cultural movement (11th–14th century) that produced great works of literature, beautiful art, and magnificent buildings. Marco Polo reported that the carpets made in Konya were the best and the most beautiful in the world. Perhaps its most famous son during this period was Maulana Jelal-uddin Rumi (1207–1273), the Islamic mystic and founder of the order popularly known as "the Whirling Dervishes." Even today the city continues in its importance—hence the continued popularity of the old Turkish proverb: "See all the world, but see Konya!"

The narrative of the Acts of the Apostles focuses on a visit of Paul and his missionary associate Barnabas to the cities of Pisidian Antioch, Iconium, Lystra, and Derbe (13:14–14:24) in A.D. 47–48. Having been expelled from Antioch as a result of their successful evangelistic endeavor, they found refuge in Iconium, 90 miles (150 km) away. Here history repeated itself: as a result of their witness, there were many conversions, which led, in turn, to hostility among both local Jews and gentiles. So Paul and Barnabas had to flee across the regional border into the Lycaonian cities of Lystra and Derbe. At the end of their mission they retraced their footsteps through the same cities for the purpose of "strengthening" or "confirming" (Gk *epiststerizō*) the new disciples and encouraging them to remain faithful to their commitment (14:22). Acts also says that they appointed elders for the churches at this time (14:23), though many interpreters would regard this as an anachronism introduced into the narrative as a result of later practice.

Later, during what is traditionally called his "second missionary journey" (A.D. 49), Paul, this time accompanied by Silas, visited these cities again to "strengthen/confirm" (Gk *epiststerizō*) the churches that had been founded earlier (Acts 15:36–16:6). It was on this trip that he was joined by a younger associate named Timothy, who was a native of this region. And it also seems likely that the author of Acts (18:23; so Bruce *Acts* NICNT, 357–58 and *Galatians* NIGTC, 13; Finegan 1981: 92; *ISBE* 2: 792–93; Hemer fc.) intends to suggest a further visit to this region for the same purpose on his way back to Ephesus on the so-called "third missionary journey" (A.D. 52). The consensus of recent scholarship is that these cities are to be identified with the churches addressed in the Epistle to the Galatians (Bruce *Galatians* NIGTC, 3–18). See GALATIANS, EPISTLE TO THE. In 2 Timothy 3:11 we have an independent reference to "persecutions [and] sufferings" experienced by Paul "in Antioch, Iconium, and Lystra." The intended recipient of the letter, Timothy, was, according to Acts, "well spoken of by the brethren of Lystra and Iconium" (16:2).

The apocryphal work entitled *The Acts of Paul*, dating from the second half of the 2d century, contains traditions and legends about Paul's missionary activity. It was written by an elder of the church in this very region, who, unfortunately, was disciplined by his compatriots for his labor of love (he said he had done his work "out of love for Paul"). One famous series of episodes focuses on Paul's friendship of a young woman by the name of Thecla and on her evangelism, teaching, and exploits for the Lord. The narrative tells us more about the late 2d century tendencies to asceticism, religious enthusiasm, and credulity than about the events of a century earlier. But it does contain this description of Paul, set in Iconium, that many scholars have regarded as historically trustworthy: "And [Onesiphorus] saw Paul coming, a man small of stature, with a bald head and crooked legs, in a good state of body, with eyebrows meeting and nose somewhat hooked, full of friendliness; for now he appeared like a man, and now he had the face of an angel" (*NTApocr* 2: 354). For further discussion see *HDB* 2: 443–45.

ICONOGRAPHY AND THE BIBLE. The study of artistic subject matter or content (as opposed to artistic techniques and styles). Iconography therefore strives to describe the appearance, development, and disappearance of certain motifs and compositions, or the substitution of one artistic form by another.

A. Introduction
B. Iconography and History
C. Iconography and the Material Culture of Biblical Times
D. Iconography and the Culture of Concepts

A. Introduction

The relationship between iconography and iconology is somewhat similar to that between geography and geology. *Iconography* describes, e.g., the development of artistic representations of Christ from the triumphant Savior on the Cross to the man of sorrows depicted by Grünewald, or e.g., the depiction of the romanesque Virgin from the *sedes sapientiae* ("throne of wisdom") to the "Virgin of Lourdes" represented without the child at all. *Iconology* attempts to establish which movements of social and religious life and thought manifest themselves through the changes described by iconography (see Kaemmerling 1979).

The relationship between the Bible and iconography is not understood here as the edifying illustration of biblical texts by the arts, although this pictorial expression is a valuable contribution to the history of biblical exegesis. Many of the insights and results won in a century of research in this very broad field are compiled in the 8 volumes of the *Lexikon der christlichen Ikonographie* (Kirschbaum and Braunfels 1968–76). The relationship between the Bible and iconography is here understood as the influence of the contemporaneous art on the biblical texts in Israel itself (Schroer 1987) and in the neighboring countries, or as the scientific pictorial reconstruction of certain data given by the biblical texts (e.g., description of architecture).

Although innumerable biblical handbooks are illustrated with pictures from ANE sources, and each year sees the appearance of yet another volume of this kind (Lamp 1982–1983), the relationship between biblical texts and pictures contemporaneous to them remains neglected, in that it has never been studied in a systematically thought-out way, as is normal in the other disciplines of biblical research. These relationships are manifold: (1) A biblical text can explicitly describe a work of art, as e.g., the descriptions of drawings of Chaldean warriors in Ezek 23:14. (2) Descriptions can also be implicit. There are sound reasons for believing that Ezekiel was influenced by pictorial representations when describing the 4 living creatures supporting the sky (Ezekiel 1; Keel 1977: 125–273). (3) A text and a picture can independently deal with the same subject matter, as e.g., the appointment of an official or his being rewarded (Gen 41:37–45 and several Egyptian tomb paintings of New Kingdom date; Vergote 1959: 121–135).

What is the purpose of seeking and studying such pictures? First of all we usually want to see something of which we hear or read, or on the contrary, to have an explanation of what we visually behold. Our wish is to hear and to see. But what exactly is the advantage of seeing something which we have heard about? In his book on Giotto, M. Imdahl (1980) coined the term *Ikonizität*, describing the particular possibilities of a picture in contrast to words. The visual image is better adapted for the portrayal of complicated relationships. The proportions of a human face or body, or any other object, are far more easily conveyed by means of a picture than through the use of descriptive words; the relationships uniting family members are more easily understood by a family tree than by the use of mere words. Also, it would require an extraordinary number of words to provide information regarding the exact relationships between a large number of buildings, streets, rivers, etc. to each other—relationships that are more conveniently conveyed by a simple map. Conversely, a series of actions is more easily described by words than by pictures.

This is related to the second important characteristic of visual information. The figurative picture always maintains a certain affinity to the object represented. It has a natural relationship to it. A horse or a cow in an ancient Egyptian or Chinese painting is recognizable to every human being (familiar with horses and cows), despite the stylistic variations. It is, however, impossible to recognize the Chinese or Egyptian words for horse or cow without proper knowledge of these languages and their scripts, since language is wholly artificial. This artificiality permits differentiation *ad libitum*. You can give every human being a different name and even one to every different aspect of one individual human being (e.g., as father, son, husband, etc.). But language is equally capable of generalizing; pictures usually depict a man or woman, adult or child, black or white, standing or seated, etc., while language can easily create terms like "humanity." Language can easily distinguish one aspect of a thing; pictures lend themselves to the representation of clusters of aspects. The description of the cherubim in 1 Kgs 6:23–28 mentions a few aspects (the materials of which they are made, their measurements, the positions of their wings) but fails to furnish an all-around picture. Thus Josephus may claim, "as for the cherubim themselves, no one can say or imagine what they looked like" (*Ant* 8.73). If we had a picture, we would have fewer doubts concerning the appearance of the cherubim; and were there a god or goddess seated upon the cherubim, we would also be informed about the nature of the relationships between both, as well as the meaning of the arrangement as a whole.

The significance of pictorial representation in the realm of man-made objects (useful and artistic) has long been recognized. Iconography is also important—perhaps even more important—when considering entities with which we ourselves are familiar, such as the sun, moon, storms,

earth, and trees. We far too readily assume that these phenomena possessed the same significance in the ANE as they do today. The merism "heaven and earth," for example, sounds quite natural to us, without any peculiar connotations. When looking at illustrations from the Egyptian *Book of the Dead,* where the sky is the figure of the goddess Nut arched over the extended figure of the earth god (e.g., *ANEP,* no. 542; Keel 1972: figs. 27–30, 32–33), it becomes quite clear that in ancient Egypt the concepts "heaven and earth" were associated with ideas and feelings very different from ours. Faced with words and ideas, the individual hearer quite often understands them in terms supplied primarily by his or her own cultural heritage. It is considerably more difficult for the terms of that cultural heritage to prevail when a concept is visually rendered, because we are then confronted with a cluster of aspects and not with a mere abstract pattern permitting arbitrary interpretations.

Iconography allows this influence of the cultural heritage considerably less latitude than does the abstract phoneme. It can thus emphasize a number of very common peculiarities in the reasoning and imagination of the ANE more quickly and effectively than can the written word. Iconography unavoidably compels us to see with the eyes of the ANE (Keel 1972: 8).

B. Iconography and History

Palestinian Judaism regarded the Bible as *Torah,* as "instruction." Josephus however presented it to the Greco-Roman world as a history book (cf. his *Antiquities* and *AgAp* 1.37f). Corresponding to this new historical understanding, a desire was awakened for historical pictures of biblical personalities and events, in a naturalistic style, preferably of "photographic" quality. Since the middle of the 5th century B.C., the Greek world had been cultivating a realistic type of portraiture which the Romans subsequently developed even further.

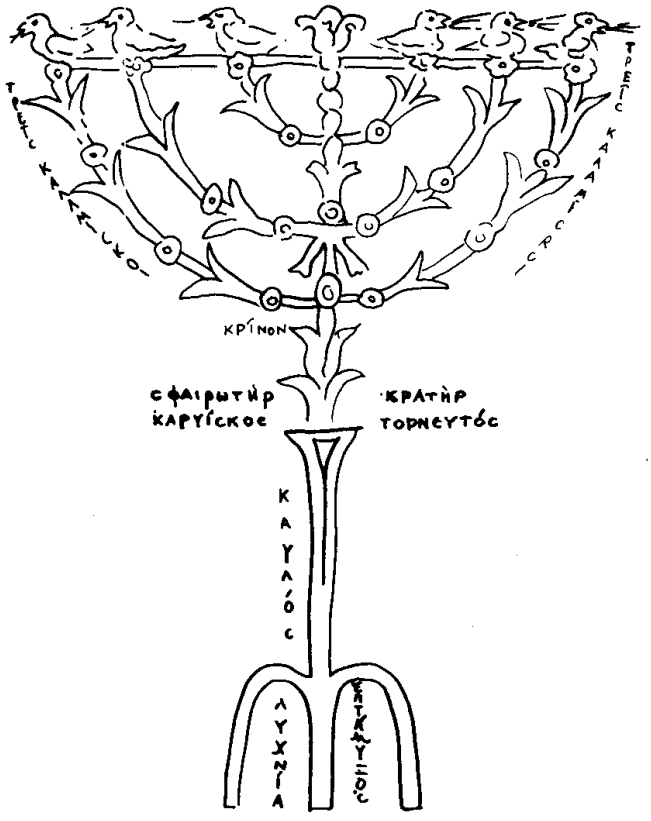
When the pilgrim Egeria (Etheria) visited the Lands of the Bible about 400 A.D., the Bishop of Arabia showed her a double statue of Moses and Aaron amid the ruins of Ramesses (Peregrinatio Etheriae 8.2; Wilkinson 1971: 217; Maraval 1982: 159). Most probably what she saw was a statue of Ramesses II (1279–1213 B.C.) with some Egyptian deity. When the famous English nobleman and traveller Sir Robert Ker Porter visited the Behistun (Bisutun) Mountain in 1812, encountering the relief of Darius I (*ANEP,* nos. 249 and 462) with 10 subjugated rebels before him, he was quite convinced that he was looking at a monument of the Assyrian King Shalmaneser before the 10 tribes of N Israel he had deported to N Syria and Media (2 Kgs 17:3–6). In Porter's view, the location of the relief in Median territory was intended to remind the deportees of their situation (Porter 1821–22, 2: 149–63).

J. G. Wilkinson (1878, 1: 479; see C below) thought that the well-known painting from Beni Hassan (*ANEP,* no. 3; Keel 1972: fig. 308) showing "Asiatic nomads" represented the arrival of the sons of Jacob in Egypt. A correct rendering of the inscriptions proved this interpretation to be misguided, since these "nomads" were connected with antimony (used as eye-paint) and equipped with a bellow, presenting desert game to the Egyptians but without any apparent flocks. They are perhaps best regarded as coppersmiths and hunters, together with their wives and children, who have come to Egypt as specialists to work in an antimony mine (Goedicke 1984; Kessler 1987). They are thus quite an inappropriate illustration of seminomads, such as the biblical patriarchs are generally represented.

H. Rosellini (1832–44, 2: tav. 49,1), who accompanied Champollion on his Egyptian expedition in 1828–29, labelled the brick makers in the Tomb of Rechmire (*ANEP,* no. 115), "The Hebrews who are making the bricks." Wilkinson (1878, 1: 343–345) argued, however, that the Israelites had not been detained at Thebes (where the inscription places the scene) and that in the course of the centuries, thousands of Asiatics—in addition to the Israelites—would have been compelled to fabricate bricks.

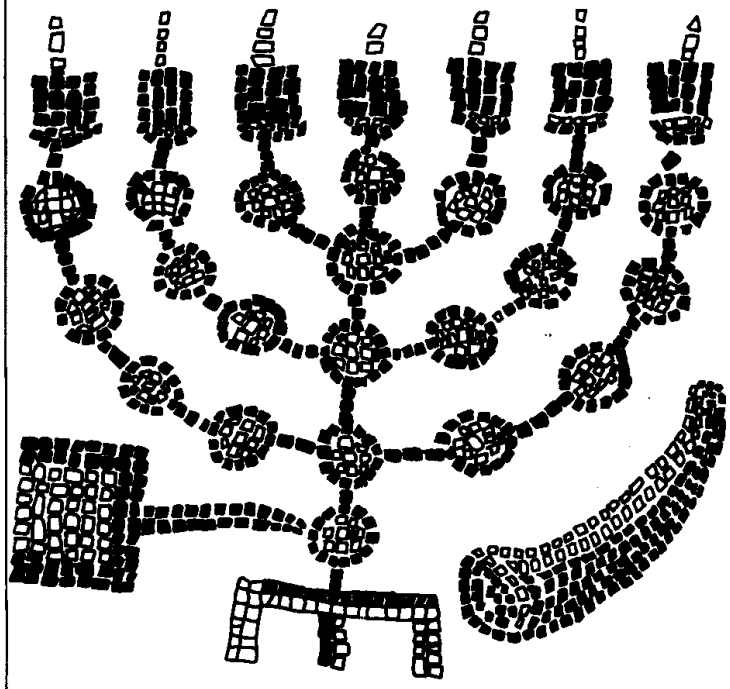
Rosellini (1832–44, 1: tav. 148A) and to a lesser degree also Champollion (1909, 2: 161f.) were convinced that they had found a portrait of Solomon's son, Rehoboam, in Shishak's reliefs at Karnak (*ANEP,* no. 349) because they had read one of the 150 names of conquered cities as *ywdh mr(= 1)k,* "Judah's king." The 150 figures are all identical however, representing Asiatics in general—without individual traits—and, more importantly, they do not identify individuals, but represent place-names. The one referred to is perhaps *yd-hmlk,* "hand (= stronghold) of the King" (*CTAED,* 197).

It has often been stated that Jehu is the only historical personality of ancient Israel represented on an ANE monument (*ANEP,* nos. 351–54). What does this actually mean? The English explorer A. H. Layard, who in 1846 at Kalah discovered the Black Obelisk with the famous picture, thought that the 20 small images on the obelisk commemorated a victorious expedition to the East, perhaps as far as India. He was led to this conclusion by the 2-humped bactrian camels and the Indian (but in reality perhaps N Syrian) elephant (Layard 1849, 2: 433–37). Only the decipherment of the legends revealed that one of the two prostrate figures before the Assyrian king was "Jehu of the House of Omri." The costume and physiognomy of the figure representing him, unfortunately, appear to be identical to that of his counterpart, King Sua of Gilzanu. The figures are thus not portraits but mere "determinatives" for vassal kings paying homage to the Assyrian overlord (Smith 1977). Israel and Gilzanu were probably selected since they represented Shalmaneser III's most distant conquests, lying (respectively) far to the SW and NE of Assyria (Liebermann 1985).



In a lavishly illustrated volume, D. Ussishkin (1982) has attempted to demonstrate that the Lachish reliefs of Sennacherib (*ANEP,* nos. 371–74) give a realistic picture of the conquest of Lachish in 701 B.C. We can view a landscape with hills, fig trees, vineyards, and a city situated on a hill with a double wall (most probably representing the city walls and the acropolis) and square towers. Walls with square towers are conventionally used to represent the cities of the hilly and mountainous regions to the N and W of Mesopotamia. Since fig trees, vineyards, and cities built atop hills were common in these regions, the Assyrian scheme would fit many cities. W. M. F. Petrie (1891: 38) believed that Tell el-Hesi, which he excavated in 1890, was the ancient Lachish, thinking that the Sennacherib reliefs matched his finds. Ussishkin thinks the same today; however, he correctly identifies Lachish with Tell ed-Duweir,

not with Tell el-Hesi. Apart from the general scheme, however, the reliefs do not bear much resemblance to the archaeologically based reconstruction of Lachish. There is no double wall and no traces of square towers have been found. The access road follows the W flank of the tell to a saddle, and does not zigzag down to the foot of the tell, as shown in the reliefs. Only the isolated gate tower before the city seems to be a specific feature of Lachish.

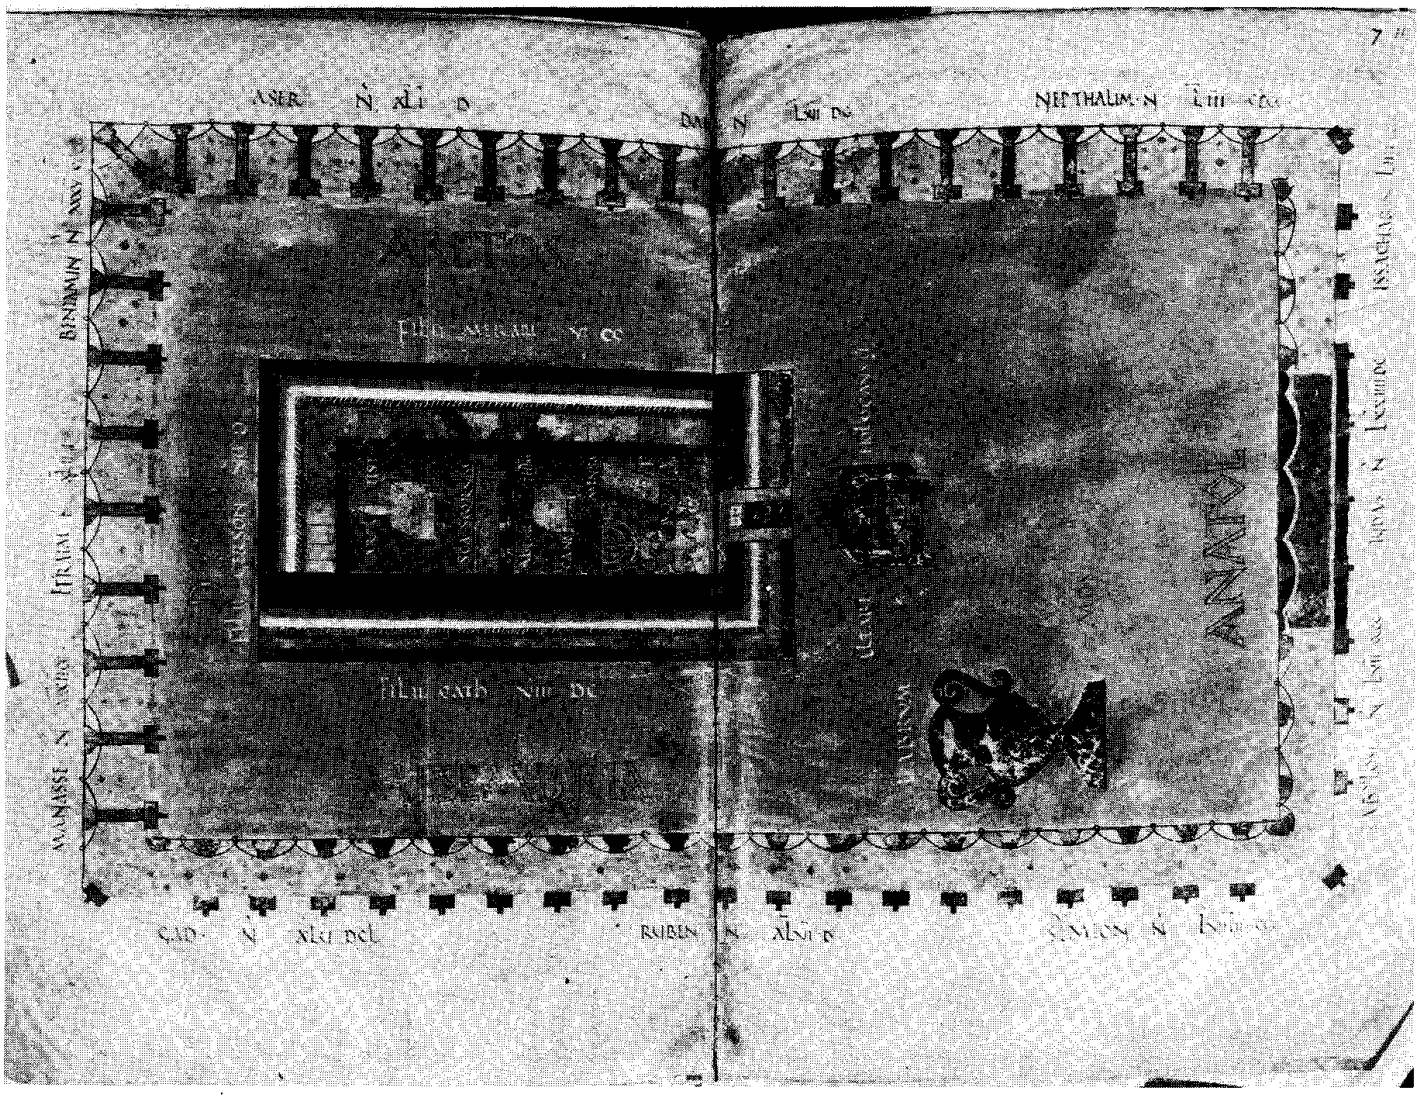


Thus, ANE art does not supply "historical photographs" as W. Keller suggests in his popular book, *The Bible as History*. Pictures had more or less the same function as Egyptian hieroglyphic determinatives: representing a class of objects, and not specific individual phenomena. (This is also true of medieval iconography; in the famous Nuremberg Chronicle of 1439, the same woodcut "illustrated" such very different cities as Syrian Damascus and Italian Mantua; Gombrich 1959: 59f.) Once this is recognized, it becomes clear that the entire section "Royalties and Dignitaries" in *ANEP* (nos. 376–463) is somewhat misleading. This section presents statues and heads of statues with the names of various rulers in the captions. This form of presentation reminds one of a modern encyclopedia with photographs of Churchill, Freud, Jung, and Kennedy, etc. But especially alarming is the caption of no. 419, "Statue of Tut-ankh-Amon usurped by Hor-em-heb." It sounds like "photograph of Kennedy used as photograph of Nixon." Even if Egyptian art occasionally attempted to portray certain individual features (especially in comparison to that of Mesopotamia), the custom of labeling older statues with the names of living kings, as Ramesses II was particularly inclined to do, reveals that they could not have been primarily intended as "portraits" in the modern sense, but rather intended to represent a *role* and not an individual.

History was conceived as the perpetually repeated fulfillment of divine decrees, a kind of ritual; history was a festival where the roles were more important than the individuals who filled them. In this manner, ANE art intended to emphasize the position and functions of the king and to a lesser extent individual kings and dignitaries. This was the approach selected by H. Frankfort and O. Keel (see D below).

Because the need for historical illustrations of the Bible will continue to remain strong, ancient oriental pictures will continue to be presented as such, regardless of what the scientific value of this practice might be. Ancient oriental iconography really cannot achieve more than to furnish the historical names and events of the Bible with contemporary clothes, weapons, etc., and to provide "portraits" of the various types of peoples (e.g., the Philistines, cf. *ANEP*, no. 341).

ICO.01. Seven-branched candelabrum as illustrated in the *Topographia Christiana* (ca. 550 A.D.). The illustrator was trying to depict word-for-word the almost incomprehensible technical terms of Exod 25:31–40. The use of doves instead of lamps goes back to the allegorical interpretation of the seven lamps as the gifts of the Holy Spirit. *(Codex Sinaiticus Graecus Nr. 1186, fol. 81 recto—11th century A.D. Redrawn from Wolska-Conus 1970: 61)*

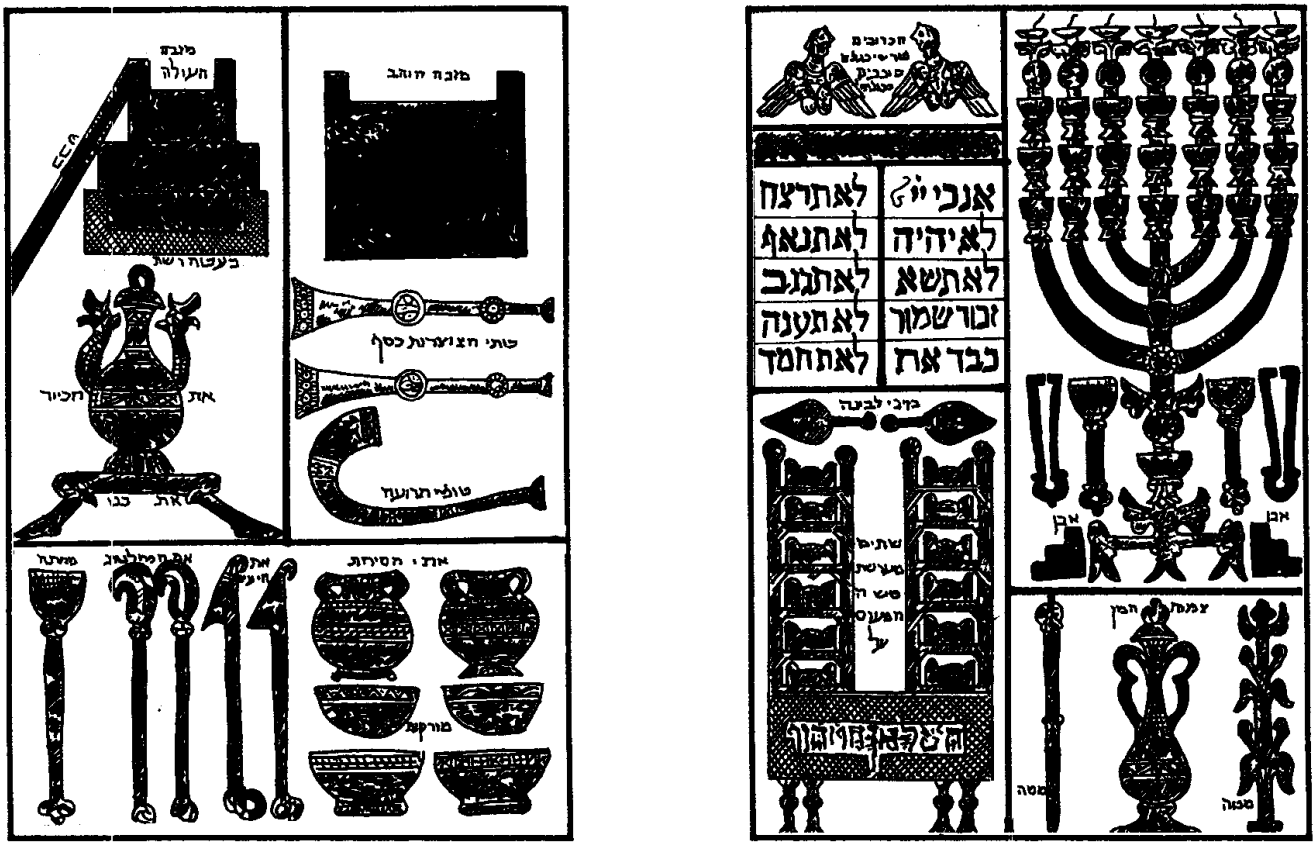


ICO.02. Mosaic from the synagogue in Hulda (550 A.D.). Note the three-legged base on the candelabrum which is typically found in the Byzantine period (as in Figs. ICO.01, ICO.03, and ICO.05). According to Josephus (*Ant* 3.145), the candelabrum had a solid base. Cf. Fig. ICO.10. *(Redrawn from Keel 1972: 319, fig. 458)*

C. Iconography and the Material Culture of Biblical Times

ANE iconography is suitable for the illustration of the typical and the institutional, but not for that of the individual person or the historical event. The interest in the actual appearance of certain objects and in the functioning of certain institutions was linked to a literal exegesis which already at an early date had attempted with the help of pictures to illustrate such things as the Tent of Meeting described in detail in Exodus 25–31 and the Temple of Solomon (described in less detail in 1 Kgs 5:15–6:37 and 7:17–51. In the Christian realm it was particularly Theodore of Mospsuestia who, influenced by the philological exegesis of Homer by the pagans (Schäublin 1974), in turn influenced the anonymous author of the *Topographia Christiana,* written around A.D. 550 and attributed since the 11th century to Kosmas Indicopleustes. In this work the author attempted to arrive at an illustration of the Tent of Meeting and its contents with the help of reconstructive sketches (Wolska-Conus 1968: 183–96; 1970: 38–65). See Fig. ICO.01. He was inspired not only by the biblical texts but also by pictures of the 7-branched candelabrum, the tables for the bread of offering, and similar furnishings which had frequently been reproduced in Jewish context since the 1st century B.C. (albeit for religious and political purposes rather than for scholarly ones). See Fig. ICO.02.

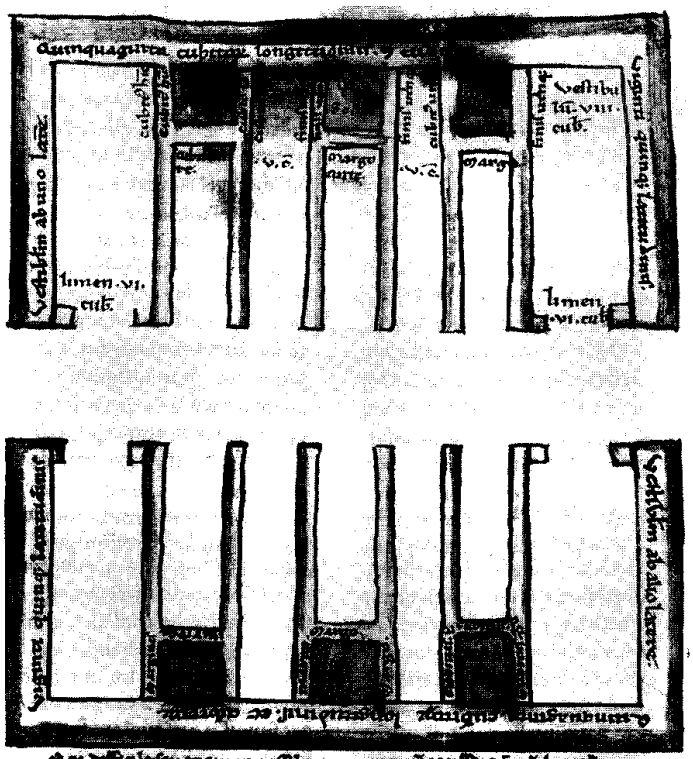
In the West, Cassiodorus (ca. A.D. 490–583) made a similar attempt. Influenced by the historicizing explanations of Josephus in his *Antiquities* (3.102–50; 8.61–98) and by the Jewish devotional art, he added a sketch of the Tent of Meeting (see Fig. ICO.03) and one of the temple to be added to his *Codex Grandior,* "so that which the text of the Holy Scriptures says about them might be more clearly laid before the eyes" (Adriaen 1958: 789; cf. 132). As was the case with the *Topographica Christiana,* Cassidorus was dependent not only on the biblical text but also on Jewish devotional art. See Fig. ICO.04. Cassidorus' reconstructive sketches found imitators far into the Middle Ages (Herrmann 1905: 148, fig. 49; 1926: 51, fig. 27).



ICO.03. Representation of the Tent of Meeting—Codex Amiatinus (ca. 690–712 A.D.). This codex provides a faithful copy of Cassiodorus' Codex Grandior. *(Biblioteca Laurenziana, Florence, Codex Amiatinus 1, fol. 2 verso, 3 recto, photograph by G. Sansoni, courtesy of O. Keel)*

ICO.04. Coin from the period of the Bar-Kokhba Revolt depicting the water basin. Exod 30:17–21 mentions a stand that is not depicted in the representation of the water basin *(labrum)* in Fig. ICO.03; nevertheless, note the striking similarity between the water basins in Figs. ICO.03 and ICO.04. *(Drawing by H. Keel-Leu from Meshorer 1967: pl. XXI, no. 169, courtesy of O. Keel)*

Another root of the literal exegesis was the philological Quran exegesis, which had an effect on the Karaïtes beginning in the 8th century A.D. In opposition to the ever increasing influence of the Talmud, this Jewish group held to a type of *sola scriptura* principle which stimulated rabbinic Judaism to a new and vigorous type of philologically oriented commentary. The most famous commentator of this school was Rabbi Shlomo ben-Izhaq, known as Rashi (A.D. 1040–1105). Parallel to this development, it became customary to begin the biblical manuscripts with 2 or more pages of illustrations of Jewish liturgical objects, in which the East and West (particularly Spain in the 13th–15th centuries) each may have had its own tradition (Gutmann 1978: 14, 16; cf. Roth 1953: 28; Schubert 1983: 81). In spite of the fact that this catalogue of liturgical objects had primarily the religious function of reminding one of the glory of God in the temple and of keeping alive the hope of its rebuilding, the painstaking, captioned illustrations of the individual objects oblige a scholarly curiosity. See Fig. ICO.05.



The Jewish literal exegesis first gained noticeable influence in Christian circles with members of the Victorine school in Paris (Smalley 1952: 83–195). In his commentary *In visionem Ezechielis* written before 1150, Richard of St. Victor (d. 1173) interpreted Ezek 1:5–10 and 40:1–45:5 in an exclusively literal way, and for the sake of better understanding he illustrated the interpretation with 13 diagrams (*PL* 196: cols. 527–600). Among other things he

ICO.05. Two manuscript pages from a Hebrew Bible prepared by Salomo ben Raphael in Perpignan, France (ca. 1299 A.D.). Here each individual cult object is carefully rendered and identified with the help of labels. The influence of Jewish tradition is noticeable in the case of the steps flanking the menorah (extreme right), which are labelled *ʾeben*, "stone." The illustration of the basin (*hakkiyyôr*, extreme left) betrays the influence of Islamic art. *(Redrawn by G. Herion)*

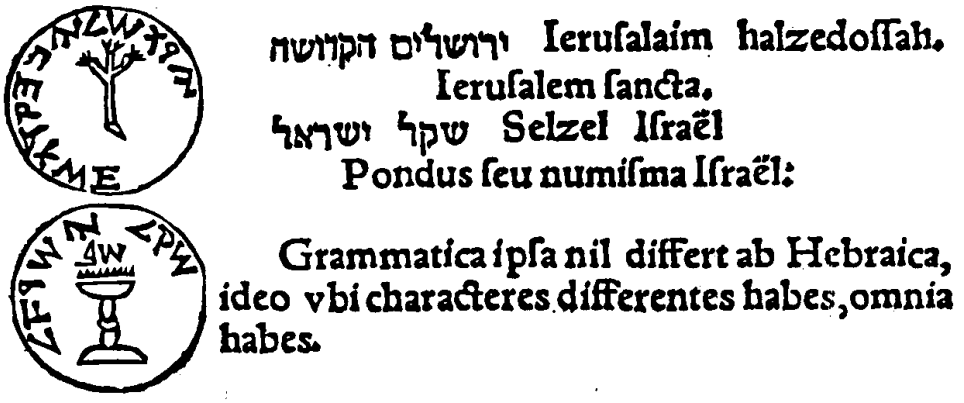
offered an interesting reconstruction of the gateway designs, which strongly resemble the "four-entry type" gates excavated in Lachish, Megiddo, Hazor, etc. (Keel 1972: figs. 159–60, 174). See ICO.06. Richard of St. Victor showed that particularly architectural descriptions, if they want to be understood literally, hardly ever succeed without accompanying diagrams. A short time later, Maimonides added floor plans of the Herodian temple to his *Mishneh Torah,* finished in A.D. 1180 (Wischnitzer 1974: 16–27).

The Victorine reception of Jewish literal exegesis remained a prelude to the more-lasting reception through the N French Franciscan, Nicholas of Lyra. He wrote a tremendously successful literal commentary to all the books of the Bible *(Postilla Litteralis).* Between 1350 and 1450, 700 mss of this work were copied (some admittedly incomplete). The period of the first half of the 16th century saw the appearance of more than 100 printed versions. Lyra's work was illustrated with over 30 technical drawings, particularly with architectural plans, but also illustrating cultic furniture: e.g., the ark with the cherubim, the molten sea, and similar items. He took the architectural drawings in part from Richard of St. Victor. He did not stop with one reconstruction, but included, e.g., the ark of the covenant according to the opinion of Rashi as well as one according to the Christian exegetes. See Fig. ICO.07. Such a degree of objectivity is seldom found even in modern handbooks.

ICO.06. One of the 13 drawings with which Richard of St. Victor illustrated his tractate concerning the design of the temple in the book of Ezekiel. It shows the outline of a gate construction as it is described in Ezek 40:6–32. Modern excavations show that the tradition utilized by Richard succeeded surprisingly well in preserving authentic, archaic features. Cf. esp. Fig. FOR.03. *(Badische Landesbibliothek, Karlsruhe, Hs. Aug. CCXIV, courtesy of Badische Landesbibliothek)*

Through his literal exegesis but also through his graphic illustration Nicholas of Lyra exercised a great influence on Martin Luther. Already for his 1523 translation of the OT Luther adopted a number of Lyra's archaeological illustrations (Netter 1943; Schmidt 1962). In his foreword to Ezekiel from 1541, Luther expressly stated that it would be futile to understand Ezekiel 40–45 without the figures from Lyra (WA 11/1: 406). What is new about the illustrations of the Luther Bible is that they place the objects decidedly in a German Renaissance landscape so that an imaginary "biblical museum" results. In the previously mentioned preface to Ezekiel, Luther says that the best thing would be to have a 3-dimensional woodcut model of the temple. Exactly 100 years later the Dutch Jew, Jacob Jehuda da Leon, made a large (about 1 meter tall) wooden model of the temple and exhibited it with great success in many places (Herrmann 1967: 148).

The "archaeological" illustrations of the Luther Bible have also found their way into French Bibles. Sebastian Châtillon, who made a new translation of the Bible into Latin (1551) and French (1555, which was published by Oporin in Basel), provided it with an appendix "Annotationes" to which he added about 30 illustrations. Some of these come from the Luther Bible, others from Vatable's illustrations in Estienne's Bibles. Still others are original. In this way Châtillon presented the most exact reconstructions of the 4 beings in the vision in Ezekiel 1.



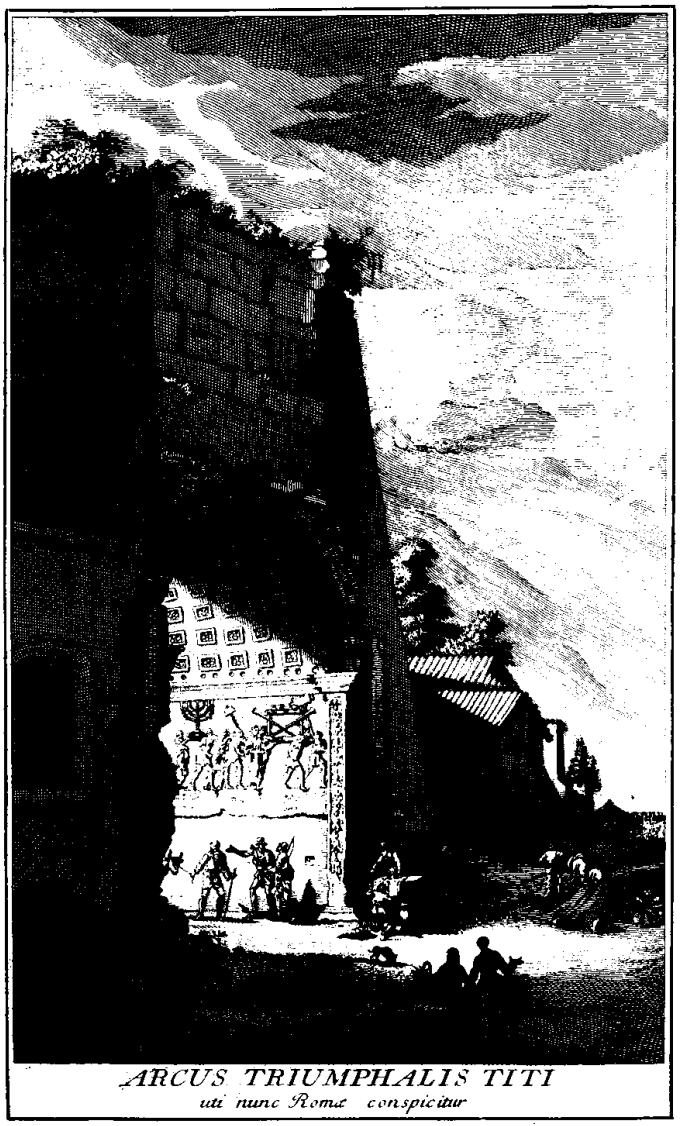
Other famous exegetes of the 16th century repeated the effort of Lyra to provide adequate visual reproductions of Noah's ark, the Tent of Meeting, the Temple of Solomon, and Ezekiel's temple (e.g., Francois Vatable for Robert Estienne's critical edition of the Vulgate published in Paris in 1540, and Benedictus Arias Montanus for the Archaeological treatises of vol. 8 of the *Antwerp Polyglot* published in 1572).

In the 17th century the proper conception of the temple in Jerusalem became the subject of a widespread debate in which the participants, including the best exegetes, were separated into the idealists and the historians. The idealists saw the Temple of Solomon as the prototype of all classical buildings, thinking that the Phoenicians had conveyed its proportions to the Greeks and Romans. The historians, however, reconstructed the temple strictly according to the textual descriptions and considered it to be a more modest and primitive building (Herrmann 1967).

This thought-provoking concern about the way things actually looked aroused interest in archaeological monuments. Perhaps the oldest evidence of this can be found in an addition to Moshe ben Nahman's commentary on the Pentateuch. Driven out of Spain in A.D. 1267, he went to Acre where he was shown an Israelite shekel (from the time of the Jewish War, A.D. 66–70), which he then weighed with a money-changer's scales in order to determine its precise weight. He interpreted the images on the coin as

ICO.07. Nicholas of Lyra's drawings of the ark of the covenant. The drawings first appeared in his *Postilla litteralis* (ca. 1320–30) and subsequently were added as woodcuts to the first printed edition (1481). On the left is an "illustration of the ark and of the expiation according to rabbi Salomo" [i.e., Rashi]; on the right is an "illustration of the ark and of the expiation according to Catholic scholars." *(Drawings from Schramm 1934: taf. 1, Abb. 5–6; from the edition of Anton Koberger, Nuremberg 1481, courtesy of O. Keel)*

ICO.08. Drawing of a coin that appeared in Postellius' *Opusculum linguarum* (1538), a study of ancient alphabets. The obverse reads *yrwšlym hqdwšh*, "Jerusalem the Holy," while the reverse reads *šql yśr'l*, "shekel of Israel." At the time of Postellius, the script was known in connection with the Samaritans, and such coins were mistakenly attributed to the time of Solomon. Cf. with Fig. ICO.09. *(Redrawn from Postellius 1538: 24)*



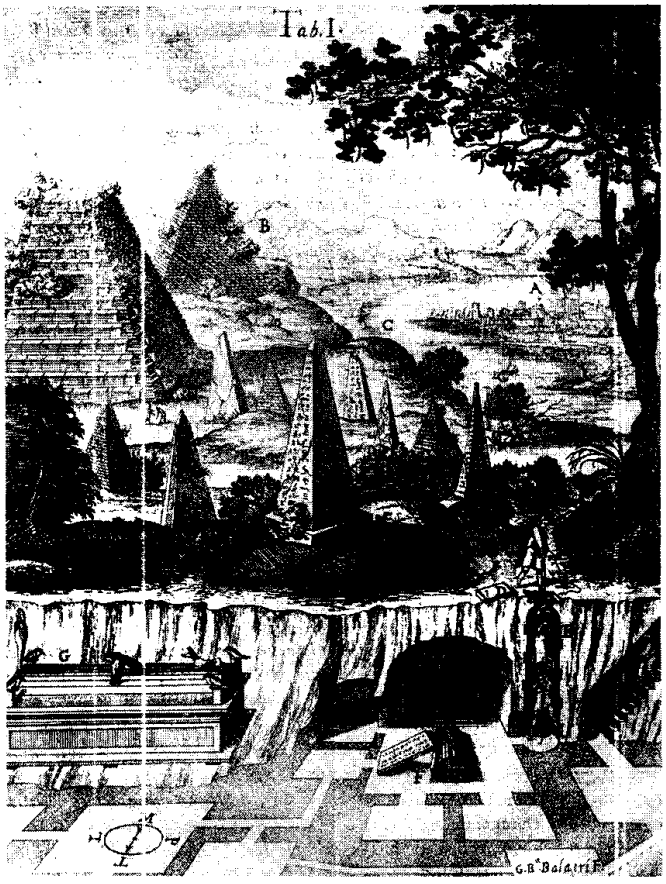
being Aaron's rod and the vase of Manna (Chavel 1959: 507). The humanist Guilelmus Postellius seems to have been the first to have published such a coin; shown as an illustration in his *Opusculum Linguarum duodecium characteribus differentium Alphabetum* (Paris 1538). See Fig. ICO.08. Arias Montanus published another shekel from the first Jewish War in his treatise *Thubalcain sive de mensuris Sacris liber* which appeared in vol. 8 of the *Polyglot* published in Antwerp by Plantin in 1572. See Fig. ICO.09. There Arias celebrated the emergence of this coin as an act of divine providence. In the first serious work devoted not to weights and measurements in general but *exclusively* to Jewish coins, C. Waser (1605) recognized thoroughly the meaning of the iconography of the coins.

During the 17th century the debate revolved mainly around chronology and genuineness (since at the same time interest was budding a multitude of counterfeits were also in circulation). About half of the 13 coins published by B. Walton in the first volume of the *London Polyglot* in 1657 are counterfeits, although Walton had already taken out the crudest ones. At the end of the 17th century the question was for the most part cleared up, the counterfeits were separated out, and it was clear that there had been no Jewish coins before the exile (Kadman 1960: 155; Minc 1985). In addition to the Jewish coins, the 17th century also saw the rise into consciousness of the reliefs of the arch of Titus in Rome with its representations of the Jewish liturgical objects (Pfanner 1983). See Fig. ICO.10.

Regarding both Jewish coins and these reliefs, the most clear-sighted observations from this early period come from Hadrian Reland of Utrecht. His *Dissertationes V de nummis veterum hebraeorum, qui ab inscriptarum literarum forma samaritani appellantur* appeared in Utrecht in 1709. As the title implies, it had been known for quite a while that the Samaritan script was in reality the old Hebrew which was archaized and used on the Jewish coins. Reland paid attention not only to weights, legends, and dates, but also to the iconography. In his fifth dissertation, based upon the 2 trumpets *(ḥăṣōṣĕrôt)* on a coin of Simon Bar Kokhba (which he, however, dated to Simon the Hasmo-

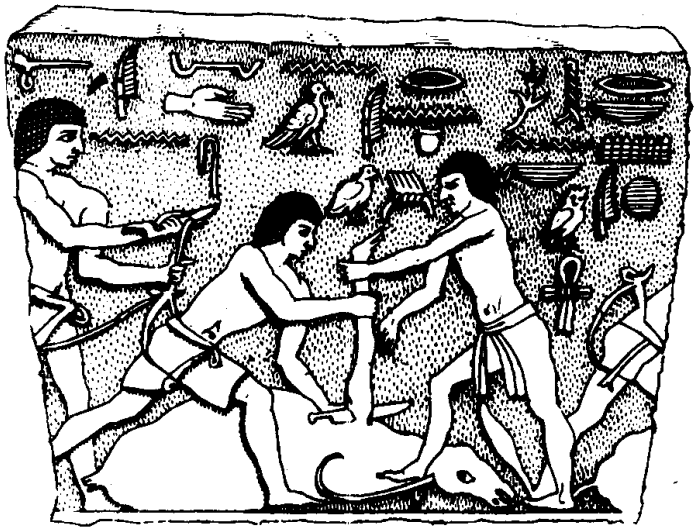
ICO.09. A shekel from the First Jewish War, as published by Arias Montanus (1572). The inscription on the front (left) side reads *šql yśr'l* ("Israelite shekel"), with the letter *'alep* in the center indicating year 1 of the revolt (A.D. 66). On the back (right), the inscription reads *yrwšlm qdšh* ("Jerusalem the Holy"). Cf. Fig. ICO.08. In order to be as exact as possible, Arius also depicted the thickness of the coin *(crassitudo). (Drawing from Arius Montanus 1572: 16, courtesy of O. Keel)*

ICO.10. The arch of Titus in Rome as it looked at the beginning of the 18th century. The illustration is from Hadrian Reland's 1716 work about the pieces plundered from the Jerusalem temple. *(Drawing from Ugolinus 1748: frontispiece to vol. 9, courtesy of O. Keel)*



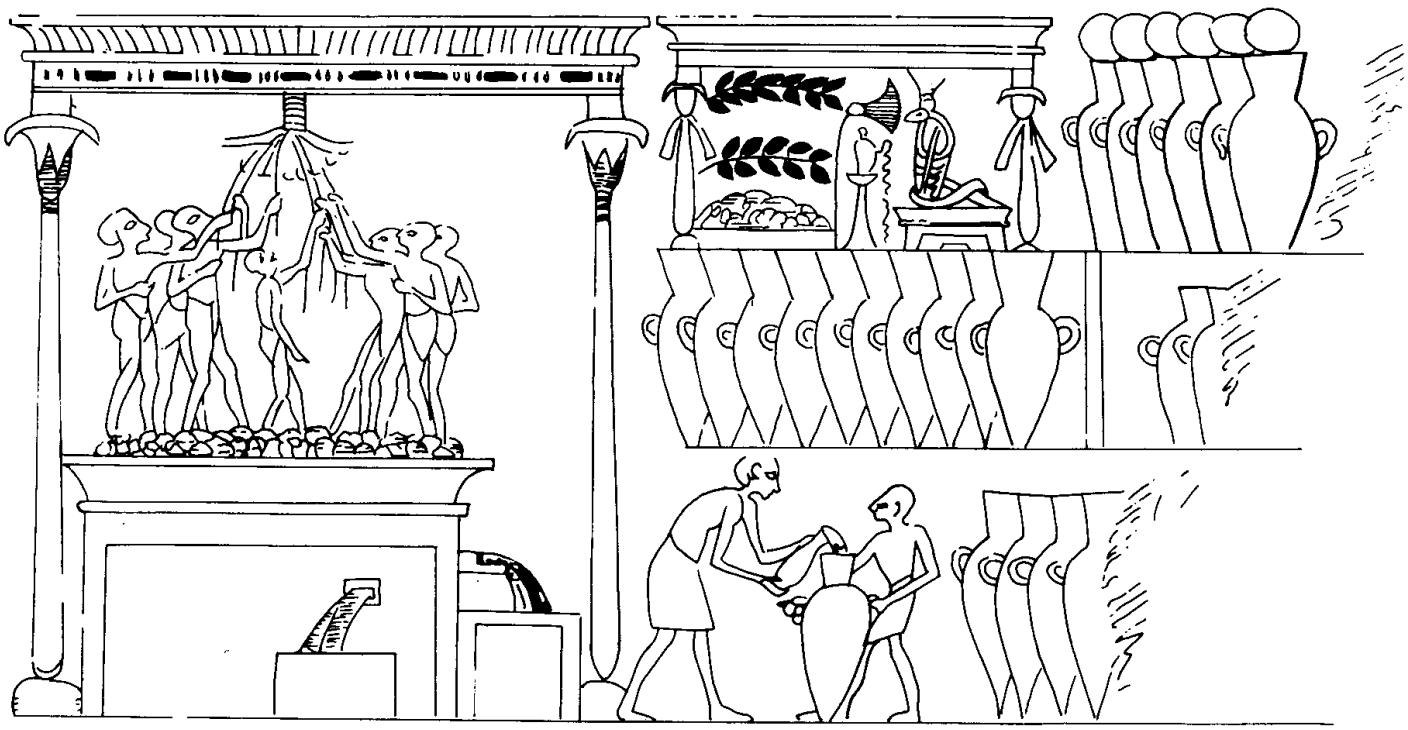
nean, 143–134 B.C.), Reland was able to conclude that the "trumpets" in Num 10:1 and 20:9 were straight, and should not be confused with the curved ram's horns (*šōpārôt*) of the New Year, as was done quite often. In another work, *De spoliis templi Hierosolymitani in arcu Titiano conspicuis* (Utrecht, 1716), a penetrating analysis of the representation of the 7-branched candelabrum demonstrated that this could hardly have been that of Moses, which was smaller and golden, aside from having been stolen—at the latest—by Antiochus IV. The thick branches of the candelabrum on the Titus Arch would have been those of the wooden lampstand which, according to Rabbi Jose (*b. Talm. ʿAbod. Zar.* 43a), the Hasmoneans had made; furthermore, the base showing mythological scenes must have been Roman since the representation of living creatures was prohibited by the Law.

Apart from the coins and reliefs mentioned, other monuments of antiquity played a relatively limited role. Nevertheless small collections began to emerge in the 17th and 18th centuries, containing mainly Egyptian antiquities (amulets, scarabs, statues, stele, relief fragments, coffins, and of course mummies). Only rarely were these used in connection with biblical texts. Athanasius Kircher collected, published, and interpreted all the then-known works of Egyptian art (including all the obelisks) in his monumental 3-volume work, *Oedipus aegyptiacus*, which was published in Rome between 1652 and 1654 by V. Mascardi. In his work a representation of the subterranean Egyptian burial vaults is also included (See Fig. ICO.11) as well as a fragment of a relief from such a vault with a slaughter scene containing legends in hieroglyphs (falcon, ibis, owl, etc.), which he interpreted as proof of a cult with gods in animal form, such as that attacked in Ezek 8:7. See Fig. ICO.12.



Both of Reland's tracts, along with numerous other works of a similar nature, were gathered together and published by Blas Ugolinus in the 34 volumes of the *Thesaurus antiquatatum sarcarum*, Venice 1744–69). Thus, the gleanings of these limited sources were all available towards the end of the 18th century.

The scholars who accompanied Napoleon on his military expedition to Egypt in 1798 broadened the horizons considerably with their monumental description of Egypt (Jomard 1809–13). Their interests were mainly in the realm of landscape and architecture, with iconography neglected and relations between Egypt and the Bible almost completely ignored. As a consequence of the atmosphere of the Revolution, the French were possessed by a quite distracted fascination for classical antiquity. Even Champollion (1845: 3, text concerning pl. 361f) was convinced that the "nomads" of Beni Hassan represented Greeks.



For biblical scholars, J. G. Wilkinson's work was far more important than Jomard's *Déscription de l'Égypte*. He spent more than a decade in Egypt (1821–33) studying and drawing the monuments. Unable to read the hieroglyphs properly, he relied merely on the pictorial evidence, the Bible, and classical authors for his *Manners and Customs of the Ancient Egyptians* (1837). Such titles were very popular at the time because the entire world was swarming with

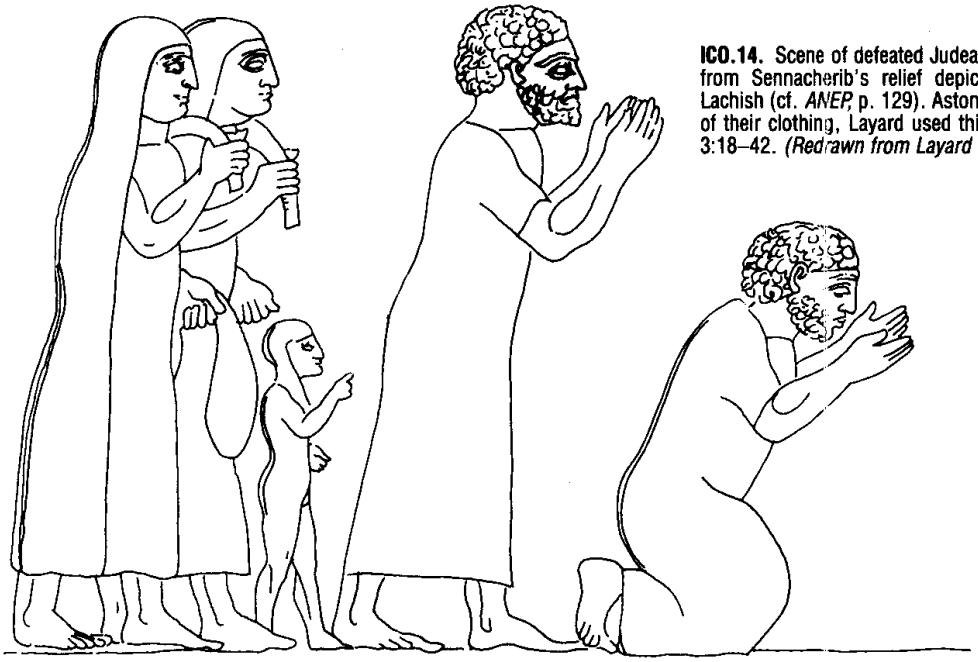
ICO.11. A drawing of a subterranean Egyptian burial chamber, which Athanasius Kircher published between 1652 and 1654. He related these burial techniques with the chambers mentioned in Ezek 8:7–13. *(Drawing from Kircher 1654, vol. 3: 402, fig. I, courtesy of O. Keel)*

ICO.12. Relief from an Egyptian Old Kingdom burial chamber. Kircher interpreted the relief as Egyptians slaying a bull in the presence of their deities, which are represented as birds. Kircher did not realize that the "birds" were phonetic characters used in Egyptian hieroglypics. *(Drawing from Kircher 1654, vol. 3: 417, fig. 5, courtesy of O. Keel)*

ICO.13. Agricultural scene from a New Kingdom Period tomb at Thebes. Wilkinson used this to explain why the word "treading" in the OT means "to press/squeeze out" (e.g., wine or oil—Judg 9:27; Neh 13:15; Isa 63:3). *(Redrawn from Wilkinson 1878, 1: 385)*

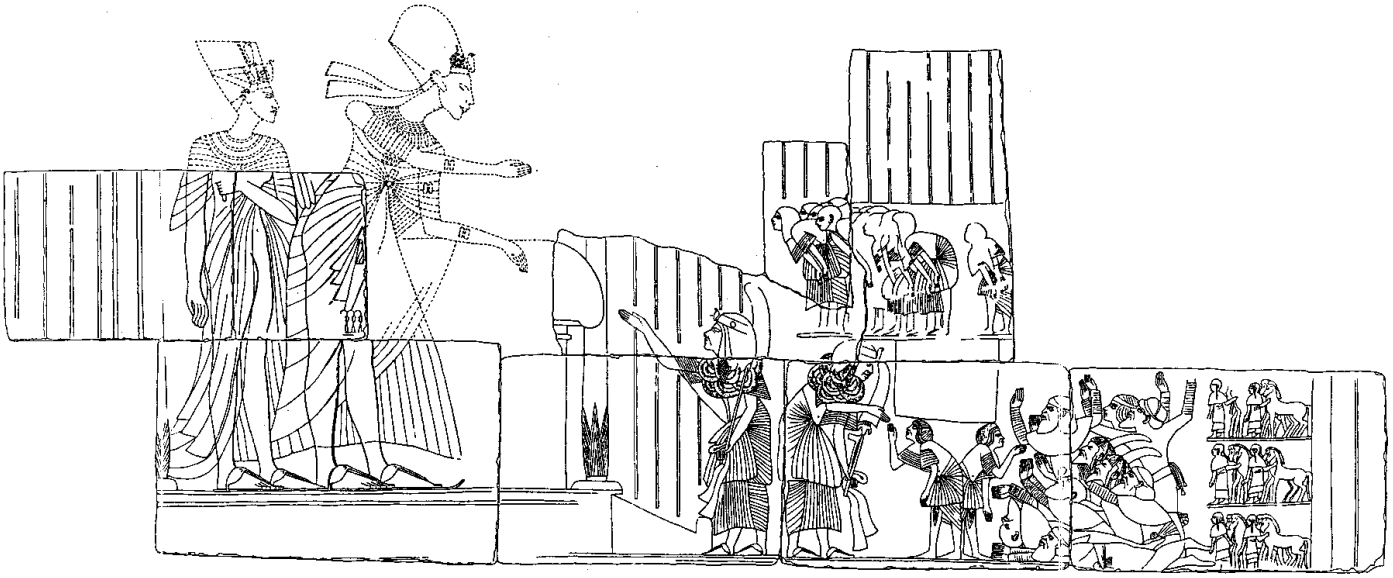
travellers and explorers. The innumerable illustrations of private life, agriculture (See Fig. ICO.13), technology, governmental institutions, warfare, etc. influence biblical dictionaries of all kinds until today.

The first person significantly to use the Egyptian materials supplied by Jomard (1809–13), by Wilkinson (1837; cf. 2d edition), by Champollion (1835–45), and by Rosellini (1832–44) was L. Philippson, a German rabbi who published the Hebrew text of the Bible, a German translation, and a commentary illustrated with woodcuts (1844–54). Of the 500 woodcuts, 211 were derived from Egyptian sources, the remainder consisting mainly of Greco-Roman antiquities and fanciful artistic reconstructions of biblical scenes with institutions, landscapes, flora, and fauna. This was the Bible that Sigmund Freud had known since childhood, and its illustrations may have been responsible for his convictions concerning the impact of Egypt on the Bible (Pfrimmer 1982). Philippson only sparingly employed material from Mesopotamia, claiming that such simply could not be found: Because the prophets had announced the demise of the Babylonian and Assyrian idols (Isa 21:9), it followed that they had all been completely destroyed (1848–54, 2: 783).



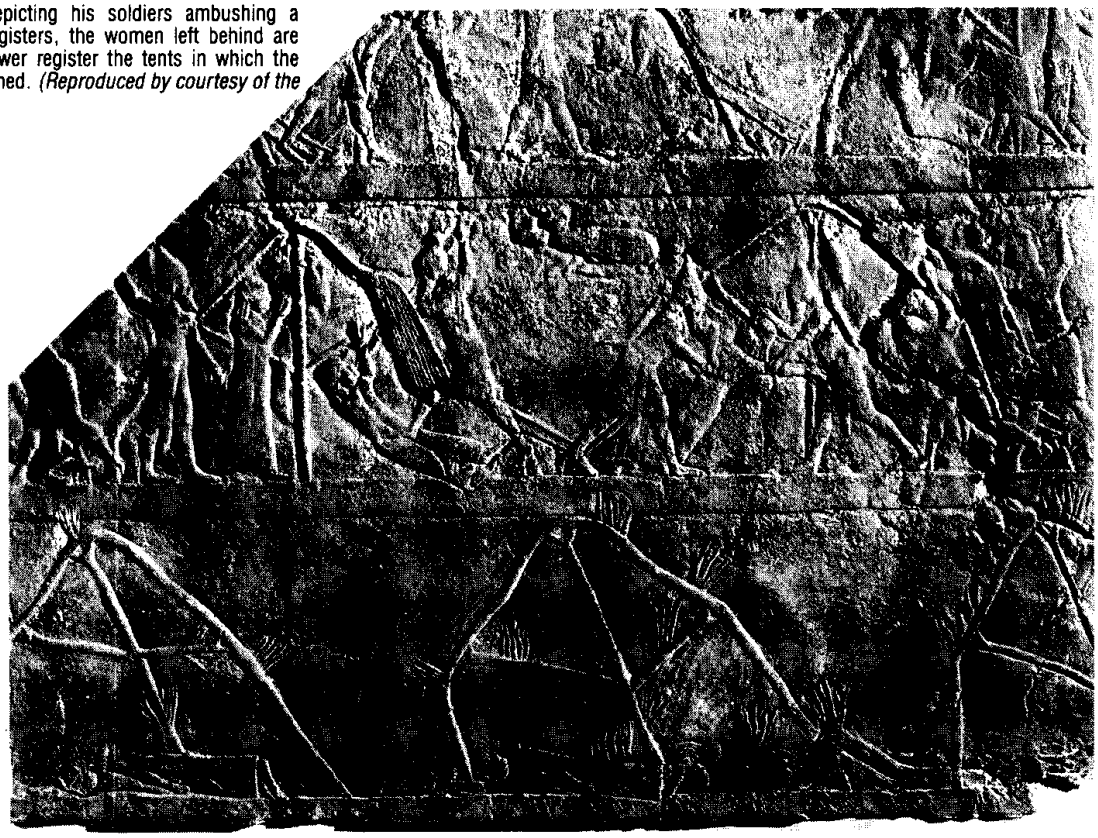
Actually Botta had already excavated at Khorsabad in 1843–44, and his success was documented in the 5 volumes of his *Monuments de Ninive* (Paris 1846–50). More important was Layard's work at Kalah (Nimrud, 1845–47 and 1849–51) and Nineveh (Kuyunjik, 1847 and 1849–50). The second volume of Layard's *Nineveh and its Remains* (London 1849) contained "An Enquiry into the Manners and Arts of the Ancient Assyrians," as a kind of Assyrian counterpart to Wilkinson's *Manners and Customs*. Layard's second work of this type, *Discoveries in the Ruins of Nineveh and Babylon* (London 1853) usefully supplemented the first with more material of this nature. In a fashion similar to Wilkinson's, Layard also connected only small sections of the reliefs with individual biblical verses. See Fig. ICO.14.

Wilkinson and Layard were the main sources from which the biblical dictionaries of the following decades, such as Smith's *Dictionary of the Bible* (2d ed. 1893) or Riehm's *Handwörterbuch des Biblischen Altertums* (2d ed. 1893–94), drew their Egyptian and Assyrian material. F. Vigouroux' *Dictionnaire de la Bible* (1895–1912) was the most comprehensive of them all since he made extensive use of additional sources. However, of the 338 illustrations relating to Assyria, 123 (or ca. 36 percent) still came from Layard. One hundred forty-four (34 percent) of the 502 pictures relating to Egypt were taken from R. Lepsius' colossal *Denkmäler aus Aegypten und Aethiopien* (12 volumes: Berlin 1849–59), the collection of the best and most accurate pictures then available, and Wilkinson still supplied 90 pictures (or ca. 18 percent).



Fragmentation, as initiated by Wilkinson and Layard and followed by many biblical scholars, is still typically the way in which Egyptian and Assyrian pictures are presented in illustrating biblical civilization. Very seldom is an entire relief or a complete wall painting reproduced. Usually particular kinds of agricultural activity, specific cult utensils, or single musical instruments are selected for illustration. This is legitimate for those interested in material culture in a narrow sense. For example, to illustrate "dress," individual figures are—as a space-saving mea-

sure—invariably removed from their contexts (as in Fig. ICO.14). Although technical aspects are thus clear, the social significance of a given dress is lost. Egyptian harvest scenes (Davies and Gardiner 1936: pl. 50f) show that the field workers wore a kilt (if anything at all), while the overseer wore a sleeved garment; Joseph's robe with "sleeves" (Gen 37:3) thus may not be a mere gown but a status symbol. As mentioned above, individual figures from Sennacherib's Lachish reliefs have been used repeatedly to illustrate contemporary Jewish dress. These figures were, however, unable to illustrate the several social classes present, as e.g., Ussishkin (1982) has done by examining the whole set of reliefs.



The arrival of the Hebrews and other refugees in Egypt is sometimes illustrated by a section only of the famous reliefs from the tomb of Haremhab in Memphis (e.g., Grollenberg 1957: fig. 128; *ANEP*, no. 5). In contrast to this fragment, the whole relief shows how the refugees are confronted with the sophisticated machinery of the Egyptian government at whose end is the unapproachable Pharaoh (cf. Gen 12:10–20). See Fig. ICO.15. With respect to the situation of minorities like the early Hebrews, the

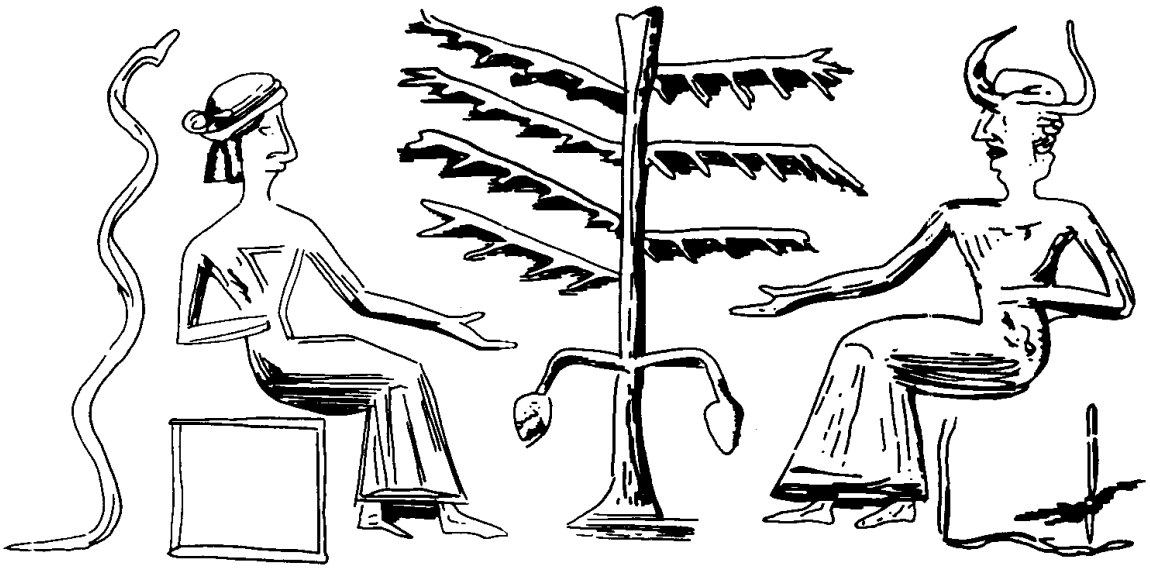
ICO.14. Scene of defeated Judeans begging for mercy, from Sennacherib's relief depicting the conquest of Lachish (cf. *ANEP*, p. 129). Astonished by the simplicity of their clothing, Layard used this scene to explain Isa 3:18–42. *(Redrawn from Layard 1853: 152)*

ICO.15. Relief of Haremhab graphically depicting the "distance" separating the Asiatic refugees from the Pharaoh. At the right, the crowd of Asiatics and Libyans (lying on the ground) appeal to a translator, who in a "second scene" (center) communicates their appeal to the vizier. In yet a "third scene" (left), the vizier presents the appeal to the king and queen, who are represented in gigantic dimensions. The point is that Asiatics have no direct access to the center of decision making. *(Redrawn from Hari 1965: 112–15, fig. 36–41, pl. 19–20; drawing by H. Keel-Leu)*

ICO.16. A relief of Assurbanipal depicting his soldiers ambushing a nomadic camp. In the upper two registers, the women left behind are being raped (?) and killed. In the lower register the tents in which the corpses have been piled are being burned. *(Reproduced by courtesy of the Trustees of the British Museum)*

pictures of nomads on Assurbanipal's reliefs in the British Museum are also of great interest (Barnett 1976: pl. 33). Aside from the shape of the tents (round!), they show that nomadic woman—in contrast to their urban sisters—were mercilessly abused and slaughtered. See Fig. ICO.16. This unusual behavior by the Assyrian army may reflect the opinion that nomads were somehow subhuman, or that their women were actively engaged in conflict (which is less likely since the women are not depicted defending themselves). If this very interesting relief was used at all, then it tended to be used only to illustrate how tents in biblical times may have looked (cf., e.g., Benzinger 1907: fig. 54).

Under such fragmentization the sociological aspect of the pictures is not revealed. For example, when the great relief of the conquest of Lachish by Sennacherib serves to illustrate "battering rams," "women's clothes," and "wagon types" (*BRL*, 39, 188, 356), that is indeed useful; but the picture's possibilities for information do not stop there. This method of presenting only fragments, characteristic of all the handbooks, pays no respect to the original message of these works, the purpose of which was not the illustration of perceptual material culture, but of concepts like divine rule, world order, kingship and the gods, etc. The same also holds for Yadin's very informative work on the art of war (1963), which indeed uses entire relief cycles and impressively presents the technical side of war with the help of numerous illustrations, but does not take into account the sociological and ideological aspects of warfare which are expressed in these relief cycles.



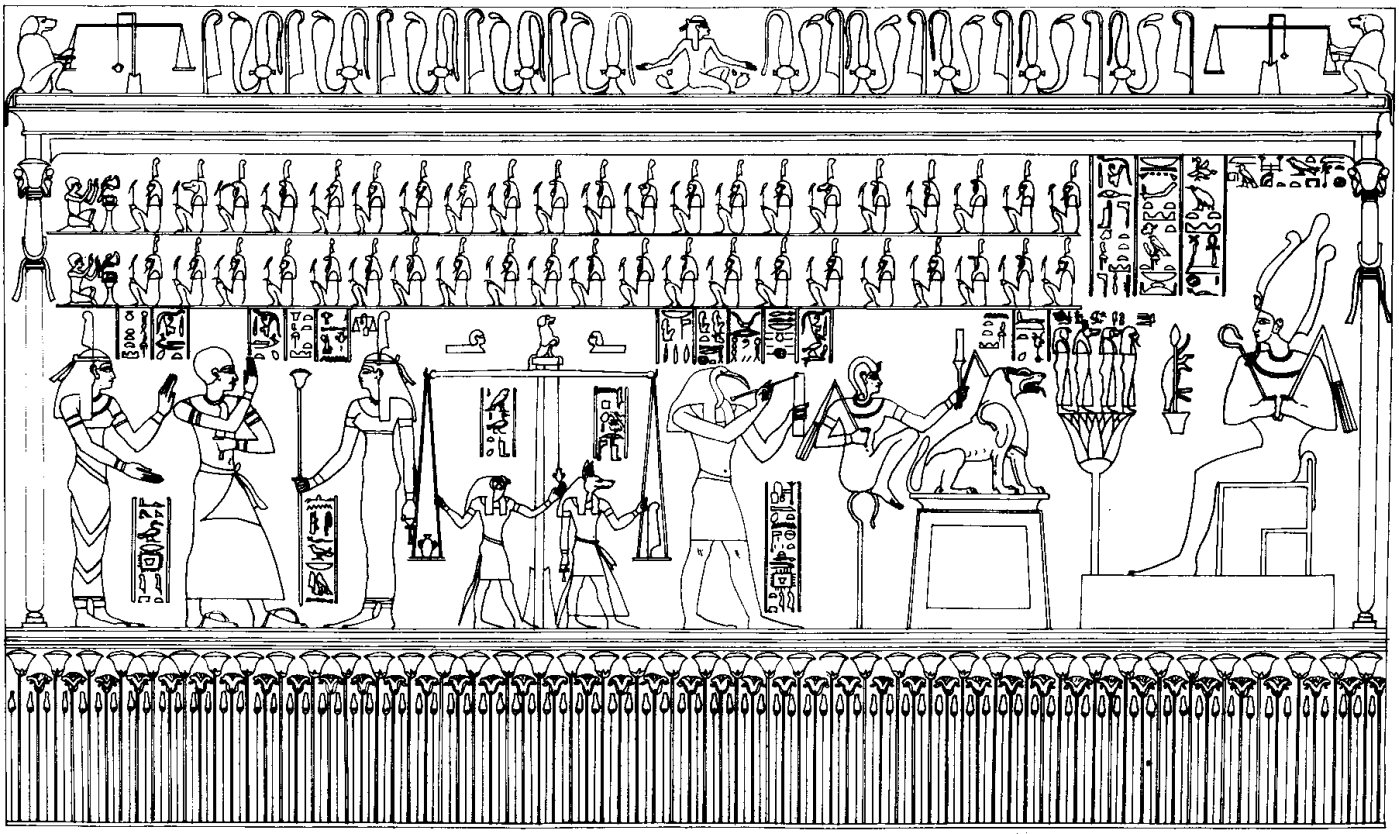
Because the Bible itself is no more concerned with material culture and its achievements than is the art of the ANE, it would be better to evolve a system of comparison identifying their common points. Since neither deals primarily with history in a modern sense nor with material culture, one needs to search at the conceptual level.

D. Iconography and the Culture of Concepts

Comparisons at this level reflect the influence of the Enlightenment and a liberal theology receptive to the notion that the basic tenets of one's own creed can also be found elsewhere. Comparative theology may also be employed within the framework of a relatively literal belief in the Revelation, assuming that an original revelation *(Uroffenbarung)* really did reach all the nations. Catholics, like F. Vigouroux, were particularly interested in interpreting the new discoveries in this way. That was already the case with Layard, who, after uncovering the gate genii *(Torgenien)* in Nimrud in the spring of 1846, assumed that Ezekiel was influenced by having seen these genii when describing his vision of the creatures in Ezekiel 1 (Layard 1849, 1: 69f; 2: 464f.)

G. Smith's *Chaldean Account of Genesis* is a famous case where pictures were exploited in this fashion. He was the first to suggest that the early chapters of Genesis might have been based on Babylonian concepts, and he published a cylinder seal which, in his opinion, represented a Baby-

ICO.17. Impression of a cylinder seal. For about 40 years this was the most discussed oriental scene, believed to illustrate the fall from creation as depicted by the Mesopotamians, with clear parallels to biblical traditions in Genesis 3 (note the man, the woman, the tree, the fruit, and the serpent). However, the scene probably should be viewed in the tradition of the divine banquet, possibly representing enhanced vitality. *(Redrawn from Smith 1876: 9)*

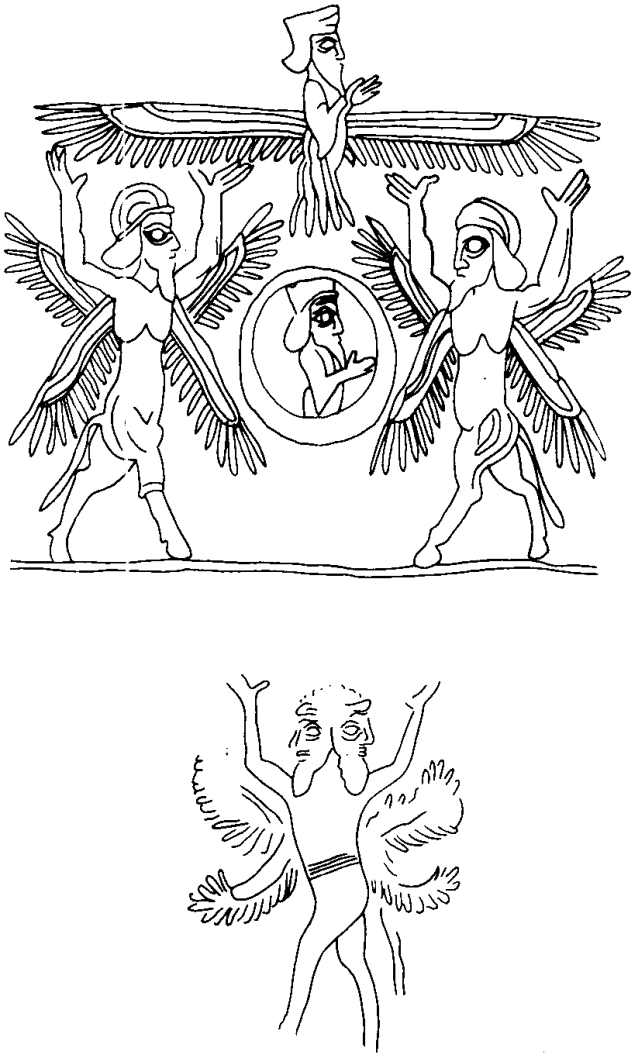


lonian version of the Fall (Genesis 3; Smith 1876: 91). See Fig. ICO.17. In 1902, F. Delitzsch presented a widely publicized lecture in which he considered this seal to be the nucleus of the whole Pauline teaching on sin and redemption (1903: 37, 67). This provoked a wave of protest, not only from the defenders of orthodoxy, but also from more sober contemporaries like Gressmann and Jeremias, whose research essentially pursued a similar line of thought, but in a more restrained fashion. The latest publication of the "Adam and Eve" seal places it in the tradition of Akkadian banquet scenes (Collon 1982: 124, no. 302; Collon 1987: 37, no. 112). In the first edition of Gressmann's *Altorientalische Bilder zum Alten Testament* (1909), 116 pages are devoted to illustrating the history of religion, with a mere 23 reserved for secular subjects. Admittedly, his selection was influenced by the overriding concern for material culture prevailing since the days of Layard and Wilkinson. Thus, sacred pillars, altars, and similar cultic furniture are well represented not only in the biblical dictionaries but also in Gressmann's work.

Exceptions to this general line were already to be found in works like Vigouroux' *Dictionnaire de la Bible*, where the entry on *âme* ("soul, spirit") uses an Egyptian painting with the judgment scene (see Fig. ICO.18) to illustrate a concept quite familiar to the 19th-century Catholic author (A. Vacant). This "hall of judgment" scene probably entered the Judeo-Christian world from ancient Egypt, and repeatedly came to be displayed prominently on Gothic Cathedrals and other important Christian monuments. Unaware of the probable Egyptian origin of this motif, Vacant understood it as an integral part of the true religion (about the immortality of the soul and the individual judgment at death), and he was surprised not at its presence in Egypt but rather at its absence from the Law of Moses. He was thus able to conclude that since Moses refrained from condemning this religious motif in particular while otherwise disparaging so many Egyptian superstitions, Moses must have believed in it.

Jeremias (1904), who further developed G. Smith's ideas, was less concerned with the uniqueness of the biblical revelation and Lutheran orthodoxy than the *Dictionnaire de la Bible* was with Catholic dogma; he also was less dominated by interest in material culture than was Gressmann. His work was the first to present the cosmic order as perceived by the ancients using their own pictures, and discussing the Bible's share in that world. He understood the peculiarities of ANE art better than did most of his contemporaries. He did not understand the pair on the "Adam and Eve Seal" (Fig. ICO.17) as the first couple, since he knew that their horned crowns identified them as deities. He also showed the connection between the "dragon combat" on Assyrian cylinder seals and Ps 74:13 and Isa 30:6 (1904: 53–60; cf 3d ed., pp. 9–21). Jeremias likewise saw the similarity between the temples depicted in Neo-Assyrian reliefs (a temple on a mountain with a park and rivers) and the descriptions of Paradise in Genesis 2 and Ezekiel 28 (3d ed., pp. 65–87). Along the same line as Jeremias, L. Dürr (1917) systematically used the ancient oriental iconography along with the texts to come to an appropriate understanding of the complex visions in Ezekiel 1 and 10.

In his first work which treated an ancient oriental theme, H. Gunkel (1895) still made no use of the ancient oriental iconography. In his commentary on the Psalms, however, he frequently cited ancient Mesopotamian and Egyptian pictures, particularly for the Royal Psalms (Psalms 2, 45, 110, etc.), identifying a number of common points. For example, he compared Ps 110:1, which speaks of making a footstool of enemies, to an Egyptian tomb painting depicting subjugated peoples beneath a royal footstool (*Psalms* HKAT, 481ff.; see Davies and Gardiner 1936, 1: pl. 29; Keel 1972: fig. 341). It is striking that his introduction refers only to "ancient oriental lyrics" with the intention to "clarify both the similarity and contrast to the singularity of the Bible" (*Psalms* HKAT, viii): Theory was limping behind practice.



ICO.18. Drawing of an Egyptian relief depicting the Hall of Judgment. The relief was published in the *Dictionaire de la Bible* to illustrate the pre-Christian origin of concepts such as immortality of the soul and individual judgment after death. In this scene, Osiris (right) presides, while the heart of the deceased is weighed against an ostrich feather, symbolizing Maat (truth, justice). *(Drawing from Lepsius, vol. 9, Abtl. IV, Bl. 16b, courtesy of O. Keel)*

The comparative work done by Gressman, Jeremias, Gunkel, and other scholars was based on a liberal theology that assumed that any expression of the human spirit could contain potential insights into the nature and deeds of God *(revelatio generalis)*. The danger, to which they often fell victim, was a leveling of biblical belief whenever it could not be completely integrated into the contemporaneous world. K. Barth led the dialectic theology which responded in the 1920's by asserting that the biblical revelation alone was totally different from everything conceivable in the religions of Egypt and Mesopotamia. Comparisons could merely demonstrate that the biblical message expressed serious doubts about everything of any significance in the entire ancient world. The best policy was to avoid all comparisons, lest the suspicion arise that analogies were advocated. Only Scripture could elucidate Scripture. All forms of nonbiblical comparison were thus brought to a halt. The a priori assertion of an absolute and total uniqueness for the Bible was, of course, not intellectually satisfying.

Archaeologists, after all, were nevertheless emphasizing the influence of the ANE on the Bible. In the 1950s, Parrot published a series of studies in the *Cahiers d'Archéologie Biblique*, where elements of ANE art were compared with biblical passages. In his 2 books dealing with the tower of Babel (1949; 1954) he criticized the restrictive view of the Bible which had failed to grasp the iconographically established significance of the ziggurat. He himself often showed a strong attraction to historicizing interpretations (cf., e.g., Parrot 1955). In *Babylone et l'Ancien Testament* (1956), half a dozen pictures for Ezekiel 1 were presented; the insights, however, do not go any farther than those of Dürr (1917). A year later (1957: 11) he illustrated the conception of Paradise in Genesis 2 (4 rivers, Cherubim, etc.) with the famous Mari wall painting (See Keel 1972: fig. 191; the scene is only partially reproduced in *ANEP*, no. 610). For the god gathering his foes in a net (Hab 1:14), he cited the Stele of Eannatum (*ANEP*, no. 298), and almost 50 pages are devoted to Canaanite divine images, with their correspondences in the Bible. Vanel's comprehensive study on the iconography of the weather god (1965) scrupulously avoided references to the Bible since a second volume (which has not appeared) was intended to show how these Canaanite concepts were adopted and adapted in biblical texts.

The 1950's also saw the appearance of 2 large pictorial works. The first is Pritchard's classic and still extremely useful collection *(ANEP)*, which is, however, dominated by an historico-cultural orientation; beside this, the reader must take the initiative in supplying the purported "relationship" to the OT. The second collection is that edited by Mazar, Avi-Yonah, and Malamat (1958). In this work, connections between the pictures and biblical texts are explicitly made, but in a partial, secular manner reflecting historical and semi-historical ideas that cannot do justice to ANE art, which was primarily conceptual in form and ideological or religious in content.

After the Second World War there arose a great deal of interest in other cultures (including the ancient ones). It was taken for granted that the different religions should

ICO.19. Late Babylonian and early Achaemenid porters of heaven, as depicted on early Persian seal impressions. These may have served as the models for the four living creatures in Ezekiel 1, which also had human bodies, four wings, the feet of bullocks, and several faces. *(Redrawn from Keel 1977: 214, Abb. 166; and 234, Abb. 182)*

be compared. The time was ripe to compare the ancient oriental iconography with the (ideal?) biblical conceptions, not in its historical character or in the context of the development of civilization, but in its primarily ideological-religious character. Building on efforts in the history of religions at the turn of the century (Jeremias, Gressmann), Keel (1972) attempted a systematic comparison of ideas about the world, the temple, the king, etc. found in the Psalms, with concepts represented in ANE art, identifying points of contact and divergence. The attempted comparison is that of thought with thought, and pictures are only one type of evidence, while words are another. For the representation of the world, Keel was inspired by H. Schaefer's study on the representation of the world by the ancient Egyptians, while the chapter on the king stood under the influence of H. Frankfort (1969). While Pritchard (*ANEP*, nos. 376–463) illustrates royalty almost exclusively with "portraits" (see, e.g., *ANEP*, no. 419), Keel (1972) illustrates the *role* of Pharaoh using relief cycles of the birth, enthronement, temple foundation, etc., stressing the role and functions of the king (not royal individualities) and comparing this role with that played by the Israelite king in the Royal Psalms.

In recent years Keel endeavored to show that certain of the motifs used in the Bible were to be found not only in Egyptian Temple reliefs, or their counterparts in the Assyrian palaces, etc., but also in the realm of miniatures, such as seals, amulets, ivories, textiles, etc. which were well distributed in Israel itself. He was able to interpret Isaiah 6, Ezekiel 1 and 10, and Zechariah 4 by drawing on contemporaneous glyptic art (1977). See Fig. ICO.19. A year later (1978) he interpreted the singular passage in Job 39 (where Yahweh refers to his dealings with lions, wild oxen, onagers, ostriches, etc.) as an exploitation of the "Lord of the Animals" motif, thus providing this part of the speech with a meaning, without being obliged to seek recourse in modern theological reasoning. See Fig. ICO.20. The advantage of a picture for the clear representation of stellar constellations was particularly useful for the interpretation of Job 38 (concerning the significance of constellations in general, see Assmann 1983: 54–60).

In his comprehensive work on women and goddesses, U. Winter (1983) compared the images of Syrian goddesses with the feminine ideals (and their negative counterparts) found in the Bible. In 2 contributions to the interpretation of the Song of Songs, Keel (1984; *Song of Songs* ZBK) has used Egyptian and Mesopotamian sources in order to isolate the Egyptian and Mesopotamian motifs in the love song. For example, the dove as the messenger of love (cf. Jesus' baptism, where the dove represents the words "You are my son, whom I love," Mark 1:10) is clearly a concept originating in W Asia (see Fig. ICO.21), while the lotus (as a symbol of regeneration) is thoroughly Egyptian.

S. Schroer (1987) has collected and critically analyzed all the accounts about representative art in the OT and related them to the finds of the archaeological work done in biblical lands. A global presentation of Canaanite-Israelite iconography (cf. Keel and Schroer 1985) presupposes a systematic treatment of the smaller works of art—especially the seals (Keel 1986a; 1986b; Keel, Keel-Leu, and Schroer 1989)—to provide material for further comparative work, the possibilities and methodology of which will demand more reflection in order to consolidate what has been hitherto achieved, and to assure a solid basis for additional possible results.

ICO.20. Scarab from Acco (left) and stamp seal from Beth-shemesh (right). These suggest that the motif of "the Lord of the Animals" was well known in Iron Age Israel. This motif probably underlies YHWH's association with the animals in Job 39. See also Fig. ART.35. *(Redrawn from Keel 1978: 93, fig. 19b; and 103, fig. 36)*

ICO.21. Old Syrian cylinder seal impression. This depicts the connection between the goddess of love and the dove. The goddess of love (left of center) apparently bares herself in front of the storm-god, who strides over the mountains. A dove, which flies from her toward him, symbolizes her love for him and her readiness to make love (cf. Song of Songs 1:15; 4:1; 5:12). *(Drawing courtesy of O. Keel)*

OTHMAR KEEL

IDALAH (PLACE) [Heb *yiḏʿālâ*]. A town located in the territory of Zebulun (Josh 19:15). Many scholars emend the name to Iralah (*GTTOT,* 183) on the basis of the reading of the Talmud. Kallai notes that the Jerusalem Talmud identifies Iralah with a site called Huriyah (*HGB,* 417). This site has been linked with the remains at Kh. el-Hurwarah (M.R. 167236) located SW of the Bethlehem in Zebulun and 9.5 miles N of Megiddo.

MELVIN HUNT

IDBASH (PERSON) [Heb *yidbaš*]. Idbash is listed in the OT as being related to Etam of the tribe of Judah in 1 Chr

4:3. The MT of this verse reads "And these the father of Etam: Jezreel and Ishma and Idbash; and the name of their sister was Hazzelelponi." Since this phrase apparently makes no sense, we would expect the versions to differ in their understanding of this passage, which is precisely what we have. The LXX reads "And these are the sons of Aitam: Jezrael (Gk *iezraēl*) and Jesman (Gk *iesman*) and Jebdas (Gk *iebdas*); and the name of their sister was Eselebbon." The LXX form of the name is easily accounted for as a metathesis of the labial *b* and the dental *d*. But which is the authentic reading: "father" or "son" of Etam? The Targum to Chronicles solves the problem by reading "And these are the chiefs who were dwelling in Etam: Jezreel and Ishma and Idbash; and the name of their sister was Hazzelelponi." The quite-unreliable (for Chronicles) Peshitta reads, "And these are the sons of Aminadab: Ahizarel (Syr *ʾăḥîzarʿēl*) and Neshma (Syr *nēšmāʾ*) and Dibash (Syr *dîbāš*)." The Vg interprets *ʾăbî* differently by reading "That too is the *stock* of Etam: Iezrahel and Iesema and Iedebos; and the name of their sister was Asalelphuni." The great diversity between the versions demonstrates their inability to understand the Hebrew text.

Probably the best solution is still that of C. F. Keil (1978: 86) who proposed that on the basis of the end of the preceding verse, *mišpaḥâ* should be supplied. The whole clause would then be elliptical for "And these are the [families/clans] of Abi Etam." The noun, *ʾăbî*, would then be part of the name of the individual. This reading has the principle of the *lectio difficilior* in its favor, as well as fitting more naturally with the expected connection to the previous verse (which the RSV lacks, as pointed out by Williamson *1 and 2 Chronciles* NCBC, 59). The name *yidbaš* is probably a verbal form cognate with the noun *debaš* meaning "honey," which was most likely named for its black or brown color (cf. *BDB* 185). It then would literally mean "he will be brown" or "may he be brown" (if a jussive).

H. Eldon Clem

IDDO (PERSON) [Heb *ʿiddô*]. Var. JADDAI; ADAIAH. The English translation of several different Hebrew names *(ʾiddô; ʿiddô; ʿiddoʾ; ʿiddôʾ; yiddô)*, some etymologically related, others possibly not. The name seems to have arisen in Babylon during the 6th century B.C.E. and to have been relatively popular in postexilic Judah, expecially in priestly circles. The occurrence of the name in an authentic source from the time of the united monarchy seems to have resulted from Massoretic assimilation to this postexilic name (see #1). Found authentically within the book of Zechariah and the Ezra and Nehemiah memoirs, the Chronicler then employed the name anachronistically in order to fill out incomplete Levitical genealogies (see #2), to establish the administrative structure for the Davidic kingdom (see #3), and to provide prophetic legitimation for portions of his history (see #4).

1. The father of Ahinadab, a district governor under Solomon in the region of Mahanaim, the S half of the Transjordan (1 Kgs 4:14). 1 Kings 14 provides the only preexilic context where the name Iddo appears in the biblical writings. This statement, however, is slightly misleading. The name is embedded in what is generally regarded as an authentic source from the reign of Solomon (Mettinger 1971:111–27). Yet the identification of the Hebrew name here *(ʿiddoʾ)* with similar postexilic names is not without difficulties and is complicated further by the textual variations of the name in the various versions of 1 Kgs 4:14. The appearance of the name Iddo in 1 Kgs 4:14 may be the result of the Massoretic assimilation of a rare early name to a more common postexilic name than of onomastic continuity throughout the history of Israel.

2. According to 1 Chronicles, a Gershomite (1 Chr 6:6—Eng 6:21). Iddo *(ʿiddô)* first appears as a Levite in 1 Chr 6:6 (—Eng 6:21) as the son of Joah and the father of Zerah. He appears soon after in 1 Chr 6:26 (—Eng 6:41) within the genealogy of his kinsman Asaph, this time as Adaiah *(ʿadāyāh)*, a Yahwistic form of the same name. This text still portrays him as the father of Zerah, but changes his father to Ethan. Such discrepancies within 2 genealogical lists have led to several hypotheses concerning the origin and nature of the Levitical genealogies in 1 Chronicles 5–6. See JAHATH. Yet the structure of the lists suggest that they were composed by the Chronicler himself for the purposes of his history (Williamson *1 and 2 Chronicles* NCBC, 68–72). Iddo the Gershomite, therefore, most likely represents the Chronicler's borrowing of a prominent name from the Second Temple period to complete artificial Levitical genealogies.

3. The prince over the half-tribe of Manasseh in Gilead during the reign of David, according to the Chronicler (1 Chr 27:21). The inclusion of both the sons of Levi and the sons of Aaron into the 12-tribe structure of Israel reveals the late, artificial nature of the list of the princes of Israel in 1 Chr 27:16–22. Iddo here appears as the son of Zechariah, reversing the genealogical relationship between Zechariah the prophet and Iddo his "father." The Chronicler thereby seems to have retrojected both Zechariah and Iddo anachronistically into the reign of David.

4. According to the Chronicler, the prophetic author of histories of the reigns of Jereboam (with pertinent information on the reign of Solomon, 2 Chr 9:29), Rehoboam (2 Chr 12:15) and Abijah (2 Chr 13:22). If the onomastic variation (compare, *yeʿddoy*, 2 Chr 9:29 with *ʿiddô*, 2 Chr 12:15 and 13:22) is inconsequential as is generally assumed, the Chronicler portrays Iddo as one of the most-prominent historians in the history of Israel, the author or coauthor of 3 different works: his "visions" *(ḥezôt)* concerning Jereboam the son of Nebat (2 Chr 9:29); a genealogical "record" *(dibrē)* coauthored with Shemaiah the prophet (2 Chr 12:15); and a "misdrash" *(midraš)* of Iddo the prophet (2 Chr 13:22). The Chronicler here transforms Iddo from a "seer" *(haḥozeh)* to a "prophet" *(hannābîʾ)*, a change that suggests the prophet's special advisory role to the king in Chronicles (see Micheel 1983: 38). Whether the Chronicler actually knew of and drew upon such independent historical accounts is a matter of debate and largely contingent upon the presupposed historical accuracy of the non-synoptic materials in Chronicles. Literary analysis of similar references to the activities

and writings of prophets and seers, however, suggests that the Chronicler invented such references to legitimate his portrayal of the history of Judah (see Micheel 1983: 79–80).

5. The grandfather of Zechariah the prophet (Zech 1:1). While the book of Ezra (Ezra 5:1 and 6:14) names Zechariah as the "son of Iddo," the introduction to the book of Zechariah ("Zechariah the son of Berechiah, son of Iddo," Zech 1:1) more accurately describes Iddo as the grandfather of Zechariah or possibly the name of Zechariah's family. While we cannot with certainty place Iddo, and thus Zechariah within a priestly family, it seems that the editor of Ezra-Nehemiah did. The editor of the Nehemiah Memoir found Iddo as a familial name in an authentic priestly list from the early 5th century B.C.E. (Neh 12:6) and erroneously portrayed him as a priestly participant in the repatriation of Judah under Zerubbabel (Neh 12:4; see Williamson *Ezra, Nehemiah* WBC, 358–61). This same editor, then, would have used Iddo as a best means to tie Zechariah into a priestly family and to identify him within the Ezra Memoirs (Ezra 5:1; 6:14).

6. A Judean community leader in Babylon, whom Ezra petitioned for Levitical personnel necessary for Ezra's Jerusalem temple reforms (Ezra 8:17). Iddo (*ʾiddô*) responded by releasing 38 Levites and 220 temple slaves to Ezra (Ezra 8:18–20). The narrative, embedded within the authentic Ezra Memoir, clearly presupposes Iddo's role as a leading person within the Judean diaspora community of Casiphia. Indications within the passage of the presence of a Judean temple in Casiphia (see Blenkinsopp *Ezra-Nehemiah* OTL, 165–66), Iddo's association with, but superior status to the temple slaves ("his brothers, the temple slaves," v 17), and the subsequent release of temple slaves to Ezra suggest that Iddo occupied a top administrative position within a Judean temple enclave in Babylon, a social structure commonly found within Achamenid Babylon (see Dandamaev 1984: 56–58; 506–8; and 522–24). Iddo of Casiphia, therefore, was most likely a priest, especially in light of the presence of a priestly familial name Iddo in Babylon (see #5).

7. A Judean, from the family of Nebo, who divorced his non-Judean wife under the threat of complete ostracism from the Jerusalem temple state under the reforms of Ezra (Ezra 10:43). See JERIMOTH.

JOHN W. WRIGHT

IDOL, IDOLATRY. An idol is a physical representation of a deity, usually used as an object of worship, though idols and images were used in a variety of ways throughout the ANE.

A. Images in the ANE
B. Images in Israel
C. Images in the NT

A. Images in the ANE

A major focus of worship in Mesopotamia from the Sargonic period on (Hallo 1983: 4–11; 1988: 54–66) and in Egypt was the cult image. While there are few extant examples of these statues, literary texts and artistic representations provide significant information as to their manufacture, appearance, and use in the ancient world. These statues varied in size, appearance, and method of manufacture (see *RLA* 6: 310–13), but cult statues in Mesopotamia were typically life-size and made of a wooden core overlaid with metal and precious stones. The statue played a central role in various cult festivals (*RLA* 3:480–83) and the proper care of the statue was an essential task of the priests. Hallo (1970) has suggested that many divine hymns were composed at the dedication of the cult statue and were used on important cult occasions involving the statue. Prayers were continually deposited before these images.

Akkadian texts give instructions for making these statues (Oppenheim 1977: 186). They were to be made of specific materials and detailed procedures were to be followed in their manufacture. In the Erra Epic, Erra points out to Marduk that his appearance and attire (i.e., that of his statue) have lost their luster, presumably because the people had neglected Marduk's cult. Marduk explains that after a previous disaster caused by him, he changed the location where *mesu* wood, lapiz lazulli, and the kind of gold needed to make cult statues could be obtained. Marduk's statue could not be properly restored without the specific materials and craftsmen required for the project.

In addition to the general requirements that prevailed for cult statues, some texts suggest that in Babylon images of particular deities had to be made in a specific way for the statue to be legitimate. A text describing Nabu-apla-iddina's restoration of the Šamaš cult at Sippar (9th cent. B.C.E.) reports that the statue of Šamaš had been taken in a raid by the Sutu, and consequently the Šamaš cult had been neglected. An earlier king had tried to restore the cult and had sought instruction from the gods as to how the statue was to be made. He did not receive the necessary instruction and was thus unable to make the statue. He was forced to reinstitute the cult using another symbol of Šamaš. In the course of Nabu-apla-iddina's general restoration, a priest found a clay model of Šamaš, and this made it possible to make a new cult image. According to Lambert (1957–58: 399), "The providential finding of the model alone made possible the manufacture of a totally new statue, for had one been made without the model, it would not have been Shamash." In Assyria and Egypt more flexibility as to how images of deities were made seems to have been permitted, but fairly fixed general conventions were followed.

Apart from the earliest periods, when deities were sometimes depicted theriomorphically (Jacobsen 1967: 14), and a number of minor deities were depicted as animals or as part-human, part-animal (Köcher 1953: 57–105), gods in Mesopotamia were depicted anthropomorphically. It seems clear that the basic purpose of the statues was not to describe the appearance of the god since there is little difference in how the various deities are depicted. Often the only basis for determining the god represented is the symbol or weapon characteristic of that particular god.

There is, in fact, little difference in size, shape, features, etc. between the way humans and deities are depicted in Mesopotamia, and many statues once thought to be gods are now recognized as votive statues of worshippers (Spycket 1968: 105) presented by them to the god. The criteria for distinguishing the image of a deity from that of a human being is that the gods are depicted wearing the horned crown and the flounced garment (Hallo 1983: 4–5). Occasionally a stone without any representation is called an image *(ṣalam)* of an individual. As Dalley (1986: 88) notes, "This shows that the noun [*ṣalmu*, 'image'] may also stand for an object that represents a person without bearing a picture of him."

In Egypt, too, "gods are recognized, not from their facial traits or bodily stature, but from the emblems they bear, or from the head of their sacred animal placed on a human body" (Bleeker 1973: 23). Often the face on Egyptian statues of gods is the face of the reigning monarch. Gods are depicted in various ways in Egypt (see Hornung 1982: 100–42), and the same god is often depicted in both human and animal form. Anthropomorphic depictions of gods are relatively rare in the early periods, but there is little evidence to suggest an evolutionary development. Certain gods like Min were from the earliest time only depicted anthropomorphically, and most gods were depicted in animal forms to the end of Egypt's independence. One way of representing a god did not replace other forms. Rather, different ways of depicting the same god existed side by side. In one example from the Louvre, 4 different ways of representing the goddess Hathor are presented next to one another (Hornung 1982: 113 n. 27). This makes it clear that images were not intended to describe the appearance of the god. Rather, they depict various ways in which the deity was thought to manifest himself or herself, and the images were meant to describe aspects of the function and attributes of the god. As Frankfort (1961: 12) has suggested the images were "probably pictograms rather than portraits."

While the incident about the statue of Dagan in 1 Samuel 5 makes it clear that cult statues were used by Israel's neighbors, representations of gods from Syria-Palestine are limited in number, and no cult statues are extant. There are, however, many figurines that have been identified as deities. It is likely, as Tigay (1986: 91) has noted, that some of these are in fact votive statues since they are lacking the distinctive symbols of divinity such as the Hathor headdress, papyrus stalks, and lotus blossoms or animals beneath their feet. At the same time certain statuettes and artistic representations have been plausibly identified as Baal. As Dever (1987: 226) points out, "The most common are rather standardized representations of a warlike Baal, often brandishing in his upraised arm a bundle of thunderbolts," representing his function as storm god. He is regularly depicted wearing a horned crown. In some instances he is represented as a bull or standing on the back of a bull. Several representations from Ugarit have been identified as El. They depict him as an old man with a thick beard seated on a throne and wearing a horned crown; as Caquot and Sznycer (1980: 12) note, "The representations of the god confirm and complete the descriptions given in the texts." Many female figurines, plausibly identified as Asherah (e.g., Maier 1986: 81–121) have been found. They are usually nude and with the reproductive aspects emphasized.

To the Egyptians and Mesopotamians—and almost certainly to the Canaanites as well—images were not the inanimate objects that the Hebrew prophets insisted they were; rather, they were living, feeling beings in which the deity was actually present. The primary significance of images lay in the fact that the life of the deity was thought to be present in the statue. The Egyptian view is expressed in a passage from the Memphite Theology which says, "He placed the gods in their shrines, He settled their offerings, He established their shrines, He made their bodies according to their wishes. Thus the gods entered into their bodies, Of every wood, every stone, every clay" (*AEL* 1:55). The gods were thought to manifest themselves in a variety of ways and to animate a variety of objects, but the cult image was a primary focus of the god's presence on earth. Numerous Egyptian texts (though coming mostly from the Greek and Roman periods) describe the god in the form of a bird descending from heaven to alight on his image. Morenz (1973: 157) says that this figure "represents the living substance of the deity which is imparted to the inanimate image." A similar view of images existed in Mesopotamia and appears to be an idea commonly associated with the use of images in religion (Bernhardt 1956). Oppenheim (1977: 184) says, "Fundamentally, the deity was considered present in its image. . . . The god moved with the image when it was carried off. . . . Only on the mythological level were the deities thought to reside in cosmic localities." It is this living presence of the deity in the statue that accounts for the Mesopotamian practice of taking away the gods of a conquered people and depositing them in the temple of the victorious deity. This demonstrated the power of the conquering god and removed the deity from the conquered area so that he or she would not be able to help the people overthrow the conqueror's authority. Certain literary compositions celebrate the return of the deity from exile to his or her city and the subsequent prosperity that the god's presence brings.

This living presence of the god in the image was magically accomplished through the "opening (or washing) of the mouth" ceremony, a ceremony that Jacobsen (1987: 15–32) suggests was a cultic reenactment of the birth of the deity in heaven. The presence of the deity in the statue was then maintained through offerings and the proper care of the statue. Morenz (1973: 155) says that "from early times onward Egyptians were not satisfied with just fashioning an image, i.e., with the creation of a work of art. On the contrary, a ritual was performed on the statues while they were still in the sculptor's workshop . . . , as a result of which the work of human hands was thought to come alive. This ceremony of 'opening the mouth' had the purpose of making all the organs serviceable and so vitalizing the image." An Akkadian text (Ebeling 1931: 120–21) dealing with the consecration of a sacred object (perhaps a statue, although the text is broken at the point where the object is mentioned) describes the purpose of the ceremony. It reads "this [statue ?] without the mouth-opening ceremony cannot smell incense, cannot eat food, and cannot drink water." Some texts suggest that the opening of the mouth ritual was performed on the statue periodically in order to maintain the vitality of the statue.

The daily care given to the statue reflects the belief that the statue was alive and thus needed the same attention and sustenance that any living individual would require. Two meals a day were provided for the images in the Uruk temple, and Oppenheim (1977: 188–89) has provided a composite picture of these meals. A table was brought in and placed before the image, and water for washing was provided. Various dishes including specific cuts of meat were presented to the statue and finally fruit was brought in an aesthetically attractive arrangement. Musicians played during the meal and curtains were drawn around the statue while the image partook of the food. The table was cleared and water was again provided for washing after the meal. Great attention was also given to proper and splendid attire for the image.

A similar situation prevailed in Egypt. Except for festive occasions when the image was carried in procession along the festival routes in a special shrine—where it was still normally hidden from the people—the cult statue was kept in a dark niche in the interior of the temple where it was accessible only to the officiating priest. Each day the priest opened the shrine containing the image, cleansed and perfumed it with incense, put a crown on it, and anointed and beautified it with cosmetics. According to Morenz (1973: 88) the purpose of this cultivation "was to furnish the image with vital force and to ensure that the deity—with whom it is not identical—lodges within it."

Among the numerous figurines used for apotropaic purposes are some that can be identified as deities, and perhaps some of these were household gods similar to the *tĕrāpîm* of Gen 31:30. The protective function of many of the Mesopotamian figures is clear from inscriptions like "that the foot of evil may not approach a man's house" or "overthrower of the evil *gallû* demons" found on some of them (see Rittig 1977: 185–208 for a collection of these inscriptions). They also probably served to promote good fortune and prosperity for those who possessed them.

B. Images in Israel

The position of official Israelite religion as defined in the Hebrew Bible stands in striking contrast to the thought and practice of their ANE neighbors. The Israelite view is clearly stated in Exod 20:4–5a, "You shall not make for yourselves a graven image *(pesel)* or any likeness *(tĕmûnâ)* of what is in heaven above or on the earth below or in the water under the earth. You shall not worship them or serve them; for I, the LORD your God am a jealous God." This prohibition of images is repeated in Exod 20:23; 34:17; Lev 19:4; 26:1; Deut 4:15–19, 25; 5:8, and is probably presupposed in Josh 24:18–23. The prohibition seems to underlie both the prophetic condemnation of Israel and Judah (e.g., Jer 11:10–13) and the prophetic contempt for images in passages like Jer 10:3–5.

The earliest date for the prohibition is difficult to establish without dispute (see Curtis 1984: 274–86) because of differences of opinion among critical scholars about the date of the various sources, and the various components of those sources generally assumed to underlie the Pentateuch. While some scholars argue for an origin of the prohibition that predates the conquest and provides a basis for the Israelites' resistance to assimilating their beliefs with those of the Canaanites, others would argue for a later date for the origin of the material. All would agree, however, that the prohibition was in place by the time of the 8th century prophets Isaiah, Hosea and Micah.

The negative attitude of Israel's official religion is clearly illustrated in the biblical vocabulary used for images. A number of words for images are descriptive of the way the image was made or the material from which it was made. The word *pesel* comes from a root that means "to hew, hew into shape" and the verb is used of shaping stones of various kinds. The word *ʿiṣṣāb* comes from a root that means "to shape or form." The words *massēkâ, nesek,* and *nasîk* are all probably related to the root *nāsak,* "to pour out," and the words refer primarily to molten images. Words such as *semel, ṣelem,* and *tĕrāpîm* are of uncertain etymology. A few words denote the resemblance between the image and that which it depicts or represents. The word *tabnît* means "copy" or "pattern," and it can refer to the pattern from which something is made (e.g., Exod 25:9; 2 Kgs 16:10) or that which resembles its prototype (e.g., Deut 4:16; Josh 22:28). Other words for images such as *dĕmût,* "likeness," and *tĕmûnâ,* "form, shape," belong in this category as well.

Another group of words constitutes a theological evaluation of images and the gods they represent (in general the biblical authors made little distinction between the two), and it is here that the contempt in which idols were held by the prophets is evident. Images were called *gillûlîm,* (e.g., Jer 50:2; Ezek 22:3–4); irrespective of etymology, it appears that the negative and derogatory associations of the word come from its similarity to the words *gēl* and *gālāl,* both of which mean "dung." Thus the idols are referred to as "dung pellets." The word *ʾĕlîlîm* sounds much like *ʾĕlōhîm,* "god," but it suggests rather an association with the adjective *ʾĕlîl,* "weak, worthless." The biblical authors declare that the "god" that the person thinks he is worshipping is in fact worthless and weak and impotent (e.g., Lev 26:1). Habakkuk calls the images made by the craftsman "dumb, worthless idols" (2:18–20). Another word for idol is *šiqqûṣ,* "detestable thing" (e.g., Ezek 20:7–8). The related noun *šeqeṣ* is used of various ritually unclean creatures that would render anyone eating them ceremonially unclean. Thus idols pollute anyone using them and render them unclean before God. The word *tôʿēbâ* refers to that which goes against established religious or ethical conventions, and more specifically to that which violates the moral and ritual standards of God's covenant with Israel. An idol is an abomination (Isa 44:19), and Jer 16:18 and Ezek 5:11 make it clear that idols are an abomination that pollutes the land.

Idols are *hebel,* "that which is insubstantial or worthless" (Jer 10:14–15); they are *šeqer,* "deception, falsehood" (Jer 10:14; 51:17); they are *šāwʾ,* "emptiness, vanity" (Ps 31:7; Jonah 2:9); and they are *mipleṣet,* "that which causes trembling" (1 Kgs 15:13).

The Bible does not give a clearly articulated basis for the prohibition of images, and in all probability there was not a single basis. From one perspective Israelite religion did not need an explanation for the prohibition: Yahweh had declared his sovereign will as to how he was to be worshipped, and no further justification was required (Faur 1978: 1). Deut 4:12–18 does provide an explanation, though it involves associative logic rather than formal

linear logic. The passage declares that because at Sinai the people saw no shape *(tĕmûnâ)* but only heard a voice, they were not to make an image *(pesel)* in the shape *(tĕmûnat)* of any idol *(kōl samel)*. Since the context has to do with the way God chooses to manifest himself, the point of the passage seems to be that God makes himself known to his people through words rather than through a form. Other passages make it clear that God does sometimes assume a form, and Moses is said to have seen the form *(tĕmûnâ)* of God in Num 12:8; presumably Moses and the elders who looked at Yahweh (Exod 24:10–11) could have made a figure of what they saw. Yahweh, unlike the gods of Egypt, Mesopotamia, and Canaan, did not manifest himself through images. His self-disclosure came through a revelation in words, and the Sinai experience constituted a paradigm of God's self-disclosure to Israel; thus images were prohibited.

At a later time the author of Isa 40:18, 25 argued that Yahweh is incomparable and thus no form would be adequate to represent him. The prophets (e.g., Jer 10:3–5; 51:17; Isa 42:17) deny that idols are alive and thus ridicule the worship of a lifeless and impotent object made by a person. Finally an important pragmatic consequence of the prohibition was that it minimized the danger of assimilating foreign religious values and the resulting syncretism. The context in which the prohibition of images is given in the Ten Commandments suggests that its basic purpose was to prohibit images as a focus of worship rather than to eliminate the possibility of art (Gutmann 1961: 161–74).

Despite the prohibition of images in Israel's official religion and the contempt for images found throughout the prophets, a number of biblical passages make it clear that the problem of idolatry continued through much of Israel's history. It was only after the Babylonian Exile that the problem was effectively eradicated. The exact nature of what is described is often not clear since the authors do not normally distinguish between worshipping other gods (with or without images), the worship of images, and the worship of Yahweh using images. From the standpoint of the official religion described in the Bible all were equally repugnant.

Exodus 32–34 recounts the making of a golden calf by the Israelites in the wilderness as they grew impatient about Moses' delay in returning from the mountain. It is clear that they were attempting to insure god's/God's presence, and the calf was meant to accomplish that. It is not clear whether the calf was meant as an image of Yahweh or of another god (either Egyptian or Canaanite). See also GOLDEN CALF. It is possible that the calf was meant as a pedestal on which Yahweh (perhaps conceived as invisible) was enthroned since various Canaanite deities are often depicted standing on an animal typically associated with them. Uncertainties in understanding the details of Exodus 32–34 are compounded by (1) the similarities between this passage and the account of Jeroboam's dedication of the golden calves in 1 Kgs 12:28, and (2) the failure of scholars to reach a consensus concerning the chronological priority of the passages.

The story of Micah's image in Judges 17–18 describes the use of an idol during the period of the judges. The context does not make it clear how Micah or the Danites viewed the image, or even whether they understood it as an image of Yahweh, though that seems probable. It does seem clear that both the Danites and Micah viewed the use of the image and the private shrine in which it was used as legitimate. The editor of the book of Judges evaluates the incident from the perspective of the official religion, and the point of the story in its present context is that the incident illustrates how bad things were when "there was no king in Israel" and when "every man did that which was right in his own eyes."

The incident about Gideon's ephod (Judg 8:26–27)—whatever exactly the ephod was—may only make the point that an object that was not originally intended as an idol can become an object of worship and thus lead to idolatry, a point also illustrated by the bronze serpent that Moses made in the wilderness (2 Kgs 18:4; cf. Num 21:4–9).

A kind of thinking similar to that associated with the use of images outside Israel is found in 1 Samuel 4–6, but the focus is the ark rather than an idol. The Israelites attributed their defeat at the hands of the Philistines to the fact that the LORD was not with them. They brought the ark into the next battle in order to insure that the LORD would be present so as to assure their victory. It seems likely from vv 6–8 that the Philistines understood the Israelite strategy in terms of bringing a cult statue into battle. The Israelites were defeated and the ark was captured by the Philistines; as was commonly done with cult statues in Babylon and Assyria, the Philistines took the ark (the functional equivalent of an image) and presented it to Dagan (i.e., to his cult statue). The subsequent story of the cult image of Dagan falling broken before the ark and the problems encountered in each city to which the ark was taken made it clear to both Israel and the Philistines that Yahweh, despite the loss of the ark, is sovereign.

Gen 31:30–35 describes Laban's search for his household gods *(tĕrāpîm)*, which were small enough to be hidden under a saddle. Their use reflects the custom in Aram, and perhaps they were similar to the numerous figurines, many of them of deities, found throughout the Near East. Other passages indicate that teraphim were used in divination (Ezek 21:21; Zech 10:2). Their use is condemned in 1 Sam 15:23 and 2 Kgs 23:24, though some have taken Hos 3:4 to imply that the use of teraphim was considered legitimate in some circles. The mention of teraphim in David's house in 1 Sam 19:13 is problematic in that it appears to refer to an object that was the size of a person and thus much larger than both the teraphim described in the other texts or the figures known from archaeological excavations (see Pritchard 1943; Negbi 1976).

Many of the references to the use of images are connected with the court. Solomon permitted his foreign wives to bring the worship of their gods into the areas outside Jerusalem according to 1 Kgs 11:5–8, and this probably involved some physical representations of these deities. These syncretistic tendencies continued. Asa, Solomon's great-grandson, destroyed images made by his father and removed Maacah, the queen mother, because she set up an "object that caused trembling," apparently some sort of image to Asherah. Asa burned the object which was apparently made of wood (1 Kgs 15: 12–13). However, these practices remained in Judah until the fall of Jerusa-

lem to the Babylonians, reaching their height during the time of Manasseh (2 Kgs 21:1–7).

Jeroboam I (1 Kgs 12:28–33) introduced a form of Yahweh worship into Israel that used images of bulls (perhaps as a pedestal for the invisible Yahweh), a form of worship that the prophets and religious leaders of Judah viewed as idolatry (e.g., 1 Kgs 13:33–34). Ahab's marriage to Jezebel brought the religion of Tyre into Samaria and began a period of regular confrontation between the prophets Elijah and Elisha and the devotees of Baal worship. It is probable that there was a statue of Baal along with a representation of Asherah in the Baal temple in Samaria (1 Kgs 16:32–33). Jehoram, son of Ahab "put away the pillar of Baal that his father made" (2 Kgs 3:2) and various representations appear to have been used throughout the history of the northern kingdom.

It is difficult to assess the extent of idolatry among the general population of Judah and Israel because the relevant biblical accounts are generally polemic in nature and make little attempt at statistical analysis; in addition the focus tends to be on the leadership rather than describing the practices of the common people. The texts describing the participation of the people in idolatry give a conflicting impression of its extent. The accounts of Baal worship during the time of Ahab suggest that the worship had a fairly extensive popular following. 1 Kgs 18:19 reports that there were 850 prophets of Baal and Asherah on Mt. Carmel with Elijah. In the midst of Elijah's discouragement, God declares that there were 7,000 who had not bowed down to Baal. If the number is not a figurative one, it would represent a fairly small portion of the population that had remained loyal to Yahweh. At the same time that Jehu killed all the worshippers of Baal—some 10 years after the death of Ahab—he gathered them together in one temple and had 80 soldiers kill the entire group (2 Kgs 10:18–28). The perspective of the prophets is that the people of both Israel and Judah were, at many points in their history, not deeply committed to strict obedience to the covenant; instead, they were involved, at least at a popular and superstitious level, in syncretistic religious practices, often influenced by their Canaanite neighbors whose religion seems to have retained many common features despite significant chronological, cultural, and geographical differences among those who practiced it (Oden 1976: 31–36).

Archaeological data from Israel have contributed significantly to reconstructing religious practices in Israel. Israelite personal names found on seals and inscriptions, most of which date to the 8th century B.C.E., suggest that the great majority of people worshipped Yahweh rather than other gods (Tigay 1986: 41). At the same time, Israelite shrines found at Arad, Kuntillet ʿAjrud, and other sites (Dever 1987: 232–33) make it clear that actual practice in the 8th century and before was much more varied than the Deuteronomic ideal demanded.

The sanctuaries at Arad (Aharoni 1969: 25–39) date between the time of Solomon (10th century B.C.E.) and the end of the First Temple period (ca. 600 B.C.E.), and correspond in a number of respects to the Temple in Jerusalem. Altars were found with evidence that sacrifices were offered at this sanctuary. In addition a stone pillar or *maṣṣēbâ* was found in the sanctuary. Excavations from Kuntillet ʿAjrud, a remote site in the NE Sinai, S of Beersheba, have revealed drawings of human and other figures along with graffiti and inscriptions which include the names Yahweh, Baal, Asherah, and El. The figures appear to be in violation of the commandment against making the likeness of anything in heaven, on earth, or under the earth (Deut 4:8). A large storage jar, dating to about 800 B.C.E., on which human and other figures were painted, includes the words *lyhwh šmrn wlʾšrth*, "to Yahweh of Samaria (or our keeper) and his *ʾšrt*." The inscription has been variously interpreted (see Tigay 1986: 26–29, 93; Emerton 1982:2–20; Dever 1984: 21–37; Holladay 1987: 258–59); some have argued that *ʾšrt* refers to a cult object of some sort while others have taken it as evidence that Yahweh was thought to have a consort (his asherah). Kuntillet ʿAjrud most likely was a border fortress frequented by various ethnic and religious groups, and in addition to the uncertainty in interpreting the meaning of the drawings and inscriptions, it is difficult to determine whether the evidence for practices that differ significantly from the Deuteronomic ideal are typical of practices throughout Israel, and are in any sense illustrative of the kinds of practices condemned by the prophets. The evidence pertaining to the use of idols in Israel is sparse and as Dever (1983: 573) notes, "No monumental Israelite art survives. No Israelite statuary or sculpture, large-scale iconographic representations, or paintings are known to us save two 10th-century cultic stands from Taʿanach, with fantastic representations of what appears to be Asherah as the 'Lion Lady'."

For the most part the numerous figurines of male and female deities come from Late Bronze and earlier levels and thus are earlier than the Israelite presence in Palestine. Many figurines of nude females often pregnant or with large breasts have been found in clearly Israelite contexts. However, the function of these figures is debated (see Tigay 1986: 91–92). As Dever (1983: 574) points out, "Obvious fertility aspects, usually exaggerated sexual characteristics, connect these figurines with the ancient Near Eastern cult of the 'Mother-goddess'." He concludes, "Since these figurines are found almost without exception in domestic or tomb contexts, they are undoubtedly talismans to aid in conception and childbirth rather than idols in the true sense, designed for sanctuary use." The statues probably reflect popular practice and superstition more than formal religion.

C. Images in the NT

Christianity had its origins out of a Judaism that had been purged of idolatry, and there is little mention of idolatry in the Gospels. The NT concerns about idolatry came from penetration into the gentile world where a variety of religions involved ideas and practices similar to those found in the ANE. Fertility cults, emperor worship, and the mystery religions were practiced throughout the Greek and Roman world (see Stambaugh and Balch 1986: 41–46; 138–67) and these involved both the use of images/statues and the worship of other gods, either of which constituted idolatry in the eyes of early church leaders whose roots were in Judaism. Paul found Athens to be a city full of idols (Acts 17:16). He confronted idolatry in Ephesus (Acts 19:24–41) and in keeping with the perspective of Judaism declared that "gods made with hands are

no gods at all" (see Stambaugh and Balch 1986: 149–54). In some instances Paul seems to have argued that the idols have no real existence (1 Cor 8:4), while in others he suggests that there is a demonic reality that underlies the idolatrous practices (1 Cor 10:20). Paul explains the origin of idols as human rejection of God's revelation which replaces the worship of the Creator with the worship of a creature (Rom 1:18–23). The NT exhorts believers to flee idolatry (e.g., 1 Cor 10:14), and the Jerusalem Council advised all believers to avoid things sacrificed to idols (Acts 15:29). The NT also understands idolatry as putting anything in the place that God alone should occupy as the proper focus of obedience and worship (e.g., Col 3:5).

One example of the practical problems faced by believers living in a pluralistic and idolatrous society is addressed by Paul in 1 Corinthians 8 and 10 (see Willis 1985). There a dispute existed over the extent to which a believer could appropriately participate in eating meat that had been offered to idols in the pagan temples in Corinth, a practice condemned in Jewish tradition (see Orr and Walther *1 Corinthians* AB, 228–29). While Paul does not refute those who argued that because idols have no real existence, meat offered to them cannot harm the believer, he does strongly caution them of the danger that participation in these meals presents to both them (1 Cor 10:1–14) and others (1 Cor 8:7–12). The problem for believers was further complicated by the fact that meat offered in the pagan temples could be encountered, not only in communal meals in the temples, but also in various social settings throughout the community as well as in the market (see Stambaugh and Balch 1986: 158–59 and Willis 1985).

EDWARD M. CURTIS

IDRIMI. The son of Ilimilimma who ruled Alalakh (Tell Atchana) in N Syria in the first half of the 15th century B.C. He is known (1) from documents found in level IV (ca. 1460–1400) of that site (although most of his reign should be seen as belonging to level V), and (2) from his 104 line "autobiography" inscribed on a statue found in a pit in the floor of a temple of level I (ca 1200 B.C.). Leonard Woolley, the site's excavator, thought that this statue, an object of veneration, was originally fitted into a throne flanked by lions (sphinxes have also been suggested) and that it had been preserved in a series of temples from the 14th century to the destruction of the site at the end of the LB Age.

The first section of the inscription describes the circumstances by which Idrimi, a younger son, came to power after his family was forced to flee from Aleppo, its original power base, following an unspecified "evil occurrence." He ultimately regained the kingdom with the assistance of his father's displaced supporters (*ḫapiru*) with whom he had

lived for 7 years. His position as ruler of Alalakh was confirmed by an alliance making him a vassal to Barrattarna, a Hurrian king who previously had been his enemy (and who should be equated with a like-named ruler mentioned in the Nuzi documents). The second section notes major events in Idrimi's reign including a campaign through Hittite territory and the capture of 7 cities, the creation of a royal court, and the promotion of the welfare of his subjects. A final section presents curses against those who might efface the monument, and the unusual request of blessings for Sharruwa, the scribe responsible for the text.

This text has been used to shed light on Syria in the mid-2d millennium, a period about which little is known. For example, Barrattarna and his suzerainty over Idrimi have been related to the rise of the kingdom of Mitanni and its expansion into NW Syria. However, dangers exist in using the text uncritically as an historical source. The numerous literary and folkloristic aspects (the questing hero, the use of the number 7—elements which have led scholars to compare Idrimi's story to those of such biblical figures as Joseph and David) suggest a document wherein real events have been recast along traditional literary lines to glorify Idrimi and emphasize his legitimacy. Some scholars have also proposed that the text be seen as fictional or pseudo-historical, possibly based on fact, but created perhaps as late as the 13th century B.C.

IDUEL (PERSON) [Gk *Idouēlos*]. See ARIEL.

IDUMEA (PLACE) [Gk *Idoumaia*]. IDUMEANS. A territory that during the Second Temple period stretched approximately from the S portion of the Judean hill country to the N part of the Negeb. To the N, the borders ran between Beth-Zur and Alouros (Ḥalḥūl), while the S border reached the height of the Arad-Malatha-Beersheba-Aroer line (cf. the so-called Limes of Herod and the Limes Palastinae; Gichon 1967; 1975). To the E, Idumea bordered the Judean desert or the Dead Sea (and perhaps the N tip of the Wadi Arabah), and its territory reached W into the provinces of the port cities Gaza, Ashkelon, and Ashdod. Among the most important Idumean cities mentioned in the literary texts are Hebron, Marisa (Tell Sandaḥanne), Adora (Dūrā), and Betabris (Bēt Gibrīn). Whoever ruled Idumea controlled a share of the profitable E–W trade between the Mediterranean coast and Transjordan as well as the N–S trade routes. They could also protect the hinterland against Nabatean and bedouin raids.

It cannot be unequivocally ascertained if the name "Idumea"—with Aramaic **ʾdwmy* as the link—can be derived from "Edom" (*ʾd[w]m*, Heb *ʾĕdôm*, "red land") or if it ought simply to be derived from *ʾdmh*, "earth/field." At any rate, the presence of the Edomites and their influence in the territories of the Negeb later belonging to Idumea is already verifiable at the end of the 7th and the beginning of the 6th century B.C. The evidence for this is literary (2 Kgs 24:2), epigraphic (Khirbet Ghazze, Tell el-Milḥ, Khirbet ʿArāʿir, Arad) and archaeological (Khirbet Ghazze, Ḥorvat Qitmit, etc.). The Edomites probably began emigrating increasingly into the S portions of the Judean territory following the destruction of Jerusalem by Nebuchadnezzar in 587 B.C. (cf. Jer 13:19; Ezek 25:12–14; 35:5, 10–12, 15; also *3 Esdras* 4:50; *Ant* 11.3.8 §61); even the downfall of Edom at the hands of Nabonidas did not effect this trend (see Myers 1971). At any rate, numerous Arabic personal names are attested in the Persian, Hellenistic, and Roman periods, as are theophoric names containing the name of the Edomite god Qaus (cf. Barkos in Ezra 2:53 = Neh 7:55). These names are also evidenced in the Aramaic ostraca from Tell es-Sebaʿ and Arad (4th century B.C.); the bilingual ostraca from Khirbet el-Qōm; the wall inscriptions from Marisa; and the name Costabaros by which the Herodian governor of Idumea and several Jews were designated (cf. *JW* 2.418, 556; *Ant* 15.7.9 §252).

Around the middle of the 5th century B.C., the whole of S Palestine, including the district that was later designated Idumea, fell under the dominion of the Qedar-Arab Geshem (Gušam b. Sahr; cf. Neh 2:19; 4:1; 6:1–6). Apparently, the Persians did not initially include this area in their administrative system (Herdotus III.4, 7, 9, 88, 97), but did so only toward the end of their sovereignty over Idumea. According to Diodorus (19.98.1), Idumea was included in the satrapy Syria-Phoenicia.

Beginning in the Hellenistic period and stretching into the Roman period, Idumea was firmly incorporated into the administrative system of the Diadochi, Hasmoneans, and Romans (see the Zenon-Papyri). Diodorus (19.95.2) documents Idumea as an "eparchy" in 311 B.C., while Josephus (*JW* 3.55 [see also Strabo 16.2.2 §749, 34 §760 and Ptolemy 5.16.10]) designates it a "toparchy" in the Roman period. A governor (Gk *stratēgos*), first attested during the Seleucid and Hasmonean period and then in the Herodian-Roman period (2 Macc 12:32; *Ant* 14.1.3 §8; 15.7.9 §253; *JW* 2.566), stood at its head. In post-Herodian times it appears that Idumea was divided into 2 smaller administrative units: a W (?) unit, "the so-called upper Idumea" (*JW* 4.552) or "greater Idumea" (*JW* 4.511); and an E unit called "East-Idumea," also attested as the toparchy En-gedi (cf. *JW* 3.55).

The population of Idumea consisted of Edomites/Arabs (cf. Strabo 16.23.34), Jews (Mark 3:8; *JW* 2.43), Sidonians (Marisa graves), Nabateans (Strabo 16.2.34; Marisa graves), and others. These inhabitants lived as farmers (Strabo 16.2.2), tradesmen (Strabo 16.2.2; Marisa graves), veterans (*JW* 2.55, 76–79), as well as soldiers and mercenaries of the ruling power (cf. Zenon-Papyri).

In the first military dispute with the Seleucids, Judas Maccabeus in 165 B.C. (?) defeated Gorgias and persued him into the borders of the hostile territory of Idumea (1 Macc 4:15; 2 Macc 10:15, 17; 12:32; *Ant* 12.7.4 §308). In the battles that followed, Lysias attacked the Hasmoneans from his base in Idumea but was finally defeated by Judas at Beth-Zur (1 Macc 4:29; 2 Macc 11:5–12; *Ant* 12.7.5 § 313). Judas fortified Beth-Zur to withstand attacks from Idumea (1 Macc 4:61). Not long afterwards he successfully renewed his attacks against the Idumeans (1 Macc 5:3; *Ant* 12.8.1 §328) and took Hebron (1 Macc 5:65; *Ant* 12.8.6 §353) as well as Marisa and Azotus (Ashdod) (*Ant* 12.8.6). However, under Lysias in 163 B.C.(?) the Seleucids renewed their attacks against Judea from Idumea (1 Macc 6:31, 50; *Ant* 12.9.4–5 §367), and did so again under Tryphon in 143 B.C.(?) (1 Macc 13:20; *Ant* 13.6.4 §207). (See also Fischer 1980: 62–63, 82, 136, 150, 205, 208.)

John Hyrcanus I conquered Idumea in 129 B.C. and forced the non-Jewish population to be circumcised (1 Macc 4:36–59; 2 Macc 10:1–8; *Ant* 13.9.1 §257; *JW* 1.63; cf. Strabo 16.2.34). This led to the eventual incorporation of Idumea into the Hasmonean empire (*Ant* 13.15.4 §395). Apparently an Idumean named Antipater was appointed to the position of governor of Idumea under Alexander Jannaeus (*Ant* 14.1.3 §8). Antipater's son, who also bore the same name, was probably appointed to the same position. Along with the Nabatean king Aretas III, he supported the Hasmonean Hyrcanus II against Hyrcanus' rival Aristobulus (*Ant* 14.1.3 §8; *JW* 1.123). The graves and burial practices in Marisa (Oren and Rappaport 1984) provide evidence of the increase in the population of Jewish inhabitants during the Hasmonean and Roman periods. A portion of the non-Jewish population seems to have emigrated to Egypt (Rappaport 1969). After the political reorganization of Palestine by Pompey in 63 B.C., Idumea (but without Marisa) remained part of the Roman province of Syria under the dominion of the Hasmoneans (*Ant* 14.4.4 §74–76; *JW* 1.156).

Idumea, homeland of Herod the Great, formed a vital starting point for and buttress of his power (Schalit 1969: 87–91, 142–45, 200–19). He and his troops fled from the Parthians into Idumea (*JW* 1.263–68; *Ant* 14.13.7 §353; 14.13.9 §361–64), which he had militarily secured shortly after he became king (*Ant* 14.15.3–4 §411, §413; *JW* 1.302–3). He gave his sister Salome in marriage to the Idumean Costabar (*Ant* 15.7.9–10 §252–57; *JW* 1.486) and appointed him to the governorship of Idumea (Ant 15.7.9–10 §253–55). He settled 3,000 Idumeans in the Trachonitis after there had been an uprising in that area (*Ant* 16.9.2–3 §285, §292).

When the kingdom of Herod was divided, Idumea fell to the ethnarch Archelaus (*Ant* 17.11.4–5 §319; *JW* 2.93–98). It belonged to the kingdom of Agrippa I from A.D. 41–44 (*Ant* 19.5.1 §275; cf. 18.6.2 §147; *JW* 2.215). Between A.D. 6–41 and after A.D. 44 Judea, as a part of the province of Syria, stood under the Roman administrative system of procurators; Idumea, as one of Judea's toparchies (*JW* 3.55) stood with her.

After the outbreak of the first Judean revolt, the rebels appointed their own commanders (Gk *stratēgoi*) over Idumea (*JW* 2.566; cf. 3.20). In the years A.D. 68 and 69 various Zealot groups, like that of Gischala (*JW* 4.224, 228–354, 566–68; 5.290, etc.), attempted to use Idumean troops to gain advantages for their own cause in Jerusalem. Others, like Simon bar Giora's group, descended into Idumea, plundered it, and forced portions of the population to "flee" to Jerusalem (*JW* 4.511–37, 556, 577; 5.248–49; 6.378–81; 7.267–68, etc.). During his subjugation of the uprising, Vespasian allowed Idumea to be devastated, while its population was decimated and placed under military occupation (*JW* 4.447–48). Following the destruction of Jerusalem in A.D. 70, Idumea was absorbed into the independent province of Judea. Soon after, all contemporary accounts about Idumea cease. Useful summary articles on Idumea are provided in PW 9/1: 913–18 and *TRE* 9: 291–99. ULRICH HÜBNER

IEZER (PERSON) [Heb *ʾîʿezer*]. IEZERITES. A son of Gilead (Num 26:30). The name is probably a variant of ABIEZER.

IGAL (PERSON) [Heb *yigʾāl*]. The name held by 3 persons in the Hebrew Bible, Igal is a hypochoristic, or shortened theophoric name meaning "may El redeem." The name is attested in extrabiblical sources (Myers *Chronicles* AB, 21).

1. One of the 12 spies sent out by Moses to spy out the land with Joshua and Caleb (Num 13:7). He was the son of Joseph from the tribe of Issachar.

2. One of David's "mighty men" (2 Sam 23:36). The Hebrew Bible records them as the "thirty," although there is some inconsistency in the text regarding their number.

The parallel passage in 1 Chr 11:38 records the name as "Joel" as does the LXX for both 2 Sam 23:36 and for 1 Chr 11:38. This may possibly reflect a confusion of the Heb letters *gimel* and *waw* in the course of the text's transmission.

3. In the MT of 1 Chr 3:22, Igal is given as the second son of Shemiah son of Sheconiah, who was the grandson of Zerubbabel, if the genealogies in this section of 1 Chronicles 3 are to be connected to the line of Zerubbabel. There is disagreement among scholars on this question (see Williamson *Chronicles* NCBC, 57–58). A widely accepted emendation deletes the phrase "and the sons of Shemiah . . ." in v 22. This makes sense of the number 6 as the total number of sons given at the end of the verse. It would make Igal the third son of Sheconiah.

RUSSELL FULLER

IGDALIAH (PERSON) [Heb *yigdalyahû*]. In Jeremiah 35:4, when the prophet Jeremiah takes the Rechabites to the temple, they go to the chamber of the sons of Hanan son of Igdaliah. Hanan is called "the man of God"; if this title should also be applied to Igdaliah is not clear. In Israel's earlier history, "man of God" was a prophetic title applied to Samuel (1 Sam 10:6–10), Elijah (2 Sam 1:9–13), Elijah (2 Kings 4:16, 21), and various unnamed prophets (e.g. 1 Sam 9:6; 8:10, 1 Kgs 12:22; 13:1; 17:24; 20:20). The title "man of God" appears in Jeremiah only in Jer 35:4, and it is not known if this is still a prophetic title (late 7th century). Jer 35:4 indicates that Hanan had sons, and it has been proposed these may be "disciples" (Bright *Jeremiah* AB, 189). While it may be that Igdaliah is simply Hanan's biological father (cf. "Ezekiel the Priest, the son of Buzi" [Ezek 1:3]), it is at least possible he is Hanan's prophetic mentor and father to Hanan as Elijah is to Elisha (2 Kgs 3:12). Igdaliah means "great is Yahweh." The name has been found on at least one Hebrew seal (*TPNAH,* 340).

JOHN M. BRACKE

IGNATIUS, EPISTLES OF. Ignatius is known to us from seven letters which he wrote early in the 2d century (traditionally ca. A.D. 110) while en route to Rome as a prisoner destined to be thrown to wild animals in the arena.

A. Ignatius' Journey to Rome
B. The Recensions of Ignatius' Letters
C. The Form and Style of Ignatius' Letters
D. Ignatius' Theology
E. Ignatius, the NT, and Early Christian Literature
F. Ignatius' Conception of Ministry
G. Ignatius, Judaism, and Hellenism

A. Ignatius' Journey to Rome

Ignatius was conducted from Antioch in Syria across Asia Minor and on to Rome by a detachment of 10 Roman soldiers who grudgingly gave him leave to meet with other Christians along the way. He was especially well received in Smyrna by Polycarp, leader of the local church. There too he was visited by representatives from Ephesus, Magnesia, and Tralles and in return wrote a letter to each of these communities. He also took the opportunity to communicate with the Christians in Rome in order to proclaim to them his longing for martyrdom and to forestall any effort on their part to obtain his release.

The next stop was Troas where Ignatius wrote to the Christians in Philadelphia. He had visited Philadelphia before reaching Smyrna and had just received news about the church in that city from two messengers who had passed through it in an effort to catch up with Ignatius. From Troas Ignatius also sent two letters back to Smyrna. One of the letters to Smyrna was addressed to the church as a whole and the other to Polycarp in particular. The second letter, however, was evidently intended to be read publicly and was designed to reinforce the links between Ignatius and the Christians in Smyrna.

We hear about Ignatius for the last time from Polycarp, who in his letter to the Philippians recalls that Ignatius and two other Christians (who presumably had been added to the band of prisoners after the departure from Troas) had been well received by the Philippians (Pol. *Phil.* 1.1; 9.1). In the same letter (or, if Polycarp's letter is composite, in an earlier communication) Polycarp indicates that he was making a collection of Ignatius' letters at the request of the Philippians (Pol. *Phil.* 13.2).

The information about Ignatius contained in later accounts of his martyrdom is historically worthless.

B. The Recensions of Ignatius' Letters

Eusebius (*Hist. Eccl.* 3.36) places Ignatius' martyrdom in the reign of Trajan (A.D. 98–117), and a date in the second half of Trajan's reign or somewhat later seems to fit the picture of the conditions reflected in the letters. Arguments are still advanced (notably by Joly 1979) that call into question the authenticity of these documents, but the researches of Zahn (1873) and Lightfoot (1885, ^{2}1889) and their followers continue to dominate the scholarship. Thus the authenticity of (a) what is now often, though misleadingly, called the "middle recension" is generally accepted. By the same token, (b) the so-called "long recension" is usually regarded as a 4th-century (perhaps Neo-Arian) revision (Hagedorn 1973:xxxvii–lii) consisting of interpolations into the original letters and the addition of 6 spurious letters. This recension is found in numerous Greek and Latin manuscripts and came to be the form in which Ignatius was most often known until Archbishop Ussher, in his *Polycarpi et Ignatii Epistolae* of 1644, brilliantly unearthed an earlier (Latin) form of the text akin to that quoted by Eusebius. Ussher had rediscovered the middle recension. The Greek of that recension (except for the letter to the Romans) became available with the publication of Ignatius' letters from *Codex Mediceo-Laurentianus* 57,7 by Isaak Voss in 1646. The Greek text of Ignatius' letter to the Romans had a separate history as part of an account of Ignatius' martyrdom (*Codex Parisiensis-Colbertinus* 1451), and this too was soon published by Th. Ruinart (1689). Our knowledge of the middle recension has been increased somewhat by the discovery of several important oriental versions: Coptic (fragments), Syriac (fragments), Armenian, Arabic. It should be noted that almost all of the collections of the letters of the middle recension in the manuscripts also include some or all of the spurious letters. Since the interpolations and the spurious letters are

in all likelihood the work of one person, these collections represent a curious mixture of textual traditions. Finally, (c) what some have called the "short recension" proves to be no recension at all but merely an abridgment of a Syriac version of the middle recension. The term-short recension, then, would serve most accurately to describe the so-called middle recension and is often so used.

C. The Form and Style of Ignatius' Letters

Although the epistolography of the authentic letters of Ignatius owes something to Paul, Ignatius is more deeply indebted to the formulae of the Hellenistic letter; and he varies such formulae in ways that are distinctively his own. Thus he works up the greetings at the beginning and end of his communications from a wider range of conventional materials; he developes special forms of common transitional devices at the beginning of the body of the letter (where he avoids the thanksgiving) and elsewhere; and he reflects more directly the Hellenistic idea of the letter as a substitute for face-to-face encounter (Schoedel *Ignatius of Antioch* Hermeneia, 7). Perler (1949) has shown that the colorful, ornate, and sometimes reckless style of the letters has connections with a stream of popular and, in some quarters, suspect rhetoric known as "Asianism." Ignatius is saved from vacuity and bombast, however, by the fire and passion that fuses the elements of his style into a single, if somewhat dense, whole.

D. Ignatius' Theology

Ignatius' self-understanding as a martyr provides the most useful point of departure for appreciating his thought. His experience in this regard may be seen as a heightened form of the experience of all Christians (*Ign. Eph.* 10), and the special difficulties that he faced may be taken as extensions of the difficulties confronted by every bishop (*Pol.* 1–5). Among these was resistance from the bishop's own people and, in Ignatius' own case, a sense of possible unworthiness. More than conventional self-depreciation seems to be involved in the doubts that Ignatius expresses about his spiritual condition. His arrest may well have precipitated the crisis. But there is also a good possibility that he was shaken by a challenge to his authority in Antioch. This possibility depends on taking the "peace" restored in Antioch and reported to Ignatius by the two messengers on their arrival in Troas (*Phld.* 10.1; *Smyrn.* 11.2; *Pol.* 7.1) not as the cessation of persecution in Antioch but as the capitulation of those formerly opposed to their bishop (Harrison 1936: 79–106). In any event, Ignatius is gratified by those who see beyond his bonds and the apparent unworthiness that they symbolize (*Smyrn.* 10.2; *Pol.* 2.3); and it seems fair to suggest that his persistent call for unity in the churches and obedience to the bishop was at the same time a call for recognition and support and a search for the ratification of his own worthiness (Schoedel 1985: 10–14). Certainly the level of activity involved in terms of letters written, messengers sent on ahead, and representatives assembled (or yet to be assembled in Antioch) is extraordinary and suggests that more was involved than simply a spontaneous outpouring of sympathy for a persecuted fellow Christian.

Ignatius links his self-understanding as a martyr and his theology at one crucial point: He asks how his impending death can have any meaning if the Lord did not truly die (*Trall.* 10; *Smyrn.* 4.2). Anti-docetic themes are common in Ignatius and are found concentrated especially in the letters to Tralles and Smyrna. Ignatius probably responds also to a distinct Judaizing form of Christianity in his letters to Magnesia and Philadelphia (*Magn.* 8–10; *Phld.* 5–9). But it is significant that he tends to deal with it in terms drawn from his debate with docetism (*Magn.* 9.1; 11). Any threat to the authority of a bishop is naturally resisted by Ignatius. But at a deeper level he senses a connection between the reality of the incarnation and passion of the Lord (as well as his presence in the elements of the sacred meal) and a genuine commitment to concrete deeds of faith and love (*Smyrn.* 6.2–8.2); such faith and love, as Ignatius sees it, are to be found only in a community united under its bishop and not in an elitist conventicle.

Corollaries of Ignatius' emphasis on the incarnation include the relegation of the doctrine of creation to the periphery of his thought, the attentuation of eschatological themes, and a preoccupation with the worshipping community as the sphere of divine influence in the world. It is characteristic that when Ignatius turns his attention to the cosmos, it is to describe (in mythological terms that are far from clear) the mysterious events that surround the entrance of Christ into the world and his departure from it (*Eph.* 19). In doctrinal terms, Ignatius anticipates orthodox theology in seeing the incarnation as the paradoxical union of flesh and spirit in the God-Man (*Eph.* 7.2; *Smyrn.* 3.2). And this in turn presupposes a definition of the divine nature as timeless and changeless in good Hellenistic terms (*Eph.* 7.2; *Pol.* 3.2). The association of God (and bishops) with silence elsewhere in Ignatius (*Eph.* 6.1; 14.2–15.2; 19.1; *Magn.* 8.2; *Phld.* 1.1) may indicate that his conception of divine transcendence owes something to Gnosticism as well (Paulsen 1978: 110–22); but it is perhaps more likely that his language here has metaphorical significance (*Magn.* 8.2) and that it represents an extension of his insistence on the superiority of the silent deed over empty words (Schoedel, 56–57, 76–78, 91, 170–71).

An important feature of Ignatius' view of the incarnation is his teaching that flesh and spirit complement rather than oppose one another in the God-Man. Flesh and spirit in this context, however, refer to two spheres or two dimensions; and it is significant that Ignatius describes not only Christ but also redeemed humanity in terms of the complementarity of the two spheres (Martin 1971). Thus things fleshly become spiritual when done by those who are spiritual (*Eph.* 8.2). This reinterpretation and reversal of the NT formula opens up the way for a more-open attitude toward the things of this world and probably has something to do with the greater appreciation that Ignatius himself shows for the popular culture of the Greek city. It should be noted that when he speaks of the hatred shown Christians by the "world" (*Rom.* 3.3), he is thinking primarily of the exercise of Roman power. Pagans in the immediate vicinity of Christians, on the other hand, are to be dealt with as "brothers" (*Eph.* 10.2).

E. Ignatius, the NT, and Early Christian Literature

In developing his thought, Ignatius was in a position to draw on many strands of the theology reflected in the NT,

and he absorbed much of the basic religious vocabulary of his sources (with a notable lack of attention to "sin" however). He had been particularly impressed by Paul, not least because he had found in the apostle a model for dealing with his sense of possible unworthiness (Ign. *Rom.* 9.2; cf. 1 Cor 15:8–9). In appropriating the earlier materials, Ignatius' thought seems to have been shaped especially by two somewhat antithetical yet ultimately reconcilable developments: the emergence of more "mystical" strands of Christianity (which the gospel of John and Ephesians also reflect); and a growing emphasis on the need for discipline and order (which Matthew and the Pastorals also reflect). It was a theology of the incarnation, as we have seen, that served to give coherence to these diverse tendencies in Ignatius.

The gospel material in the letters is reminiscent especially of Matthew, and one passage in particular (*Smyrn.* 1.1) suggests that Ignatius may in fact have had the gospel of Matthew before him (Köhler 1987: 73–96). That, however, is not certain (Koester 1957: 24–61). There is no real trace of Mark in Ignatius, and we find only one passage with special affinities with Luke (*Smyrn.* 3.2). And that passage (in which the resurrected Lord "came to those about Peter" and said, "Take, handle me, and see that I am not a bodiless demon") may well depend on tradition independent of the gospel. Some (Maurer 1949) argue that Ignatius knew the Gospel of John (*Rom.* 7.3; *Phld.* 7.1; 9.1), but that seems unlikely (Paulsen 1978: 36–37).

Of Paul's letters only 1 Corinthians can confidently be said to have been read with any care by Ignatius, though echoes of other letters of Paul are probably also discernible from time to time. Points of contact between Ignatius and Paul's (or Deutero-Paul's) Ephesians are sometimes striking, yet probably not sufficient to require a literary relation. That is even more obvious in the case of similarities between Ignatius and the Pastorals.

One striking parallel between Ignatius and 1 John is found (*Eph.* 14.2), but it provides no guarantee that the bishop had read that document. Equally problematic are parallels involving *1 Clement, 2 Clement, Hermas,* the *Preaching of Peter,* and the *Odes of Solomon.*

The numerous echoes in Ignatius of Rom 1:3–4 are likely to go back not to Paul himself but to a development of semi-credal material in the tradition. Other strands of tradition seem to stand behind formulized passages elsewhere in Ignatius, but it is not at all clear what accounts for the shape that they have. The prior crystallization around baptism of statements about the birth, ministry, and passion of Jesus seems possible at times (*Eph.* 18.2). Elsewhere such a listing of events reflects anti-docetic concerns more strongly and may represent in part a response to the immediate situation (*Trall.* 9). Certainly the series of Christological antitheses in one celebrated passage (*Eph.* 7.2; cf. *Pol.* 3.2) looks like a rhetorical elaboration of a few traditional elements created by Ignatius himself (von Campenhausen 1972: 241–53). Contact with apologetic themes in another passage (*Smyrn.* 1–3) suggests yet another context within which collections of statements about the ministry of Jesus once figured (Schoedel, 220–29).

F. Ignatius' Conception of the Ministry

Ignatius' conception of the local ministry consisting of a single bishop (overseer), presbyters (elders), and deacons goes beyond the NT but is close in spirit to the Pastorals. Ignatius apparently found the arrangement in place in the congregations of Asia Minor. He seems, however, to have emphasized the authority of the bishop in ways that appeared unusual to his contemporaries, and he no doubt assumed too readily that monarchic bishops were to be found everywhere in the church (*Eph.* 3.2). The threefold ministry reflected in the letters may represent a fusion of a Jewish-Christian system of elders and a gentile-Christian system of overseers and deacons (cf. Phil 1:1). In any event, there are hints that the arrangement is still somewhat in flux in Ignatius. Also still missing in Ignatius is any convincing evidence of the idea of apostolic succession, for episcopal authority is seen as derived directly from God or Christ. This in turn probably does not mean, as some have suggested, that Ignatius conceives of the bishop as embodying the presence of God or Christ in an extraordinary manner. Ministerial authority has been significantly enhanced by Ignatius, but it is difficult to show that it has been legitimated in a fundamentally new way. The elaborate and quite varied comparisons between the bishop and God or Christ, between the presbyters and the apostles, and between the deacons and divinely approved service seem to remain true comparisons and to express conventional ideas about receiving the one sent as the one who sent him (Schoedel, 112–14). It is also interesting to note in this connection that when Ignatius reflects on the words of inspired prophecy that he delivered in Philadelphia about the need to obey the bishop, he does not link the charisma of prophecy formally with the office of bishop (*Phld.* 7). In principle the Spirit still blows where it wills.

There is also no convincing evidence in Ignatius of an overarching ecclesiastical authority above the level of the local bishop. The preeminence accorded the Roman church in the address of his letter to them (the one letter that fails to draw attention to the bishop of the community) is a spiritual preeminence and is emphasized precisely because the Roman Christians form the last and presumably most important link in a chain of churches to whom Ignatius looks to give his martyrdom significance. It is the approval of the churches that will assure Ignatius of the value of his ministry and thereby confirm his worthiness to "become a disciple" and "to attain God" in martyrdom (*Eph.* 1.2). For the churches are made up of Christians who apparently realize their discipleship here and now (*Magn.* 9.1; 10.1; *Pol.* 2.1) and who walk united in the path marked out for them by the apostles (*Eph.* 11.2–12.2). In this connection Ignatius may well have been thinking of his own presumed failure to unite the church of Antioch until the turn of events announced to him by the messengers in Troas. In any event, Rome is the place where the reality of Ignatius' Christianity is to be decisively demonstrated, and the Roman Christians are the last in a line of well-wishers who will paradoxically show their love for their visitor by urging on the wild beasts.

G. Ignatius, Judaism, and Hellenism

The broader cultural horizons of Ignatius have proved difficult to define. He does little with the OT Scriptures (*Eph.* 5.3; *Magn.* 12; *Trall.* 8.2; cf. *Eph.* 15.1; *Magn.* 10.3; 13.1); and he regards "Judaism" as an entity distinct not only from "Christianity" but also from Scripture and the

prophets (*Magn.* 8.1–2;9.2; 10.3). Important light on some points in Ignatius is shed by parallels from Philo and Josephus, however, and Ignatius met a group of Judaizers in Philadelphia who worked with a Hellenistic-Jewish conception of the Scriptures as "archives" (*Phld.* 8.2). The gnostic affinities of Ignatius were stressed by Schlier (1929) who took the mythological account in *Eph.* 19 as his point of departure. Daniélou (1964: 39–43) accepted Schlier's analysis as a whole but reclassified what emerged as "Jewish Christianity." And the importance of the *Ascension of Isaiah* as an item in the background reconstructed by Schlier lends plausibility to this shift of perspective. Bartsch (1940), on the other hand, chose to take the emphasis on oneness as the main indicator of Ignatius' indebtedness to gnostic and quasi-gnostic thought. But it now seems clear that more relevant parallels to such themes as "unity" and "concord" are to be found in less esoteric realms of Hellenism and Hellenistic Judaism (Schoedel, 51–55; 74; 116–17). As suggested above, this may well be true also for the theme of "silence" in Ignatius. The reflections of these and other features of popular culture in the letters go a long way to account for the literary and theological peculiarities of Ignatius.

WILLIAM R. SCHOEDEL

IIM (PLACE) [Heb *ʿiyyîm*]. A settlement of the tribe of Judah mentioned only once, in Josh 15:29, where it is listed among the settlements occupied by Judah in the aftermath of the conquest. This section of the list parallels passages in Josh 19:3 and 1 Chr 4:29 which record the towns of Simeon. In Josh 15:29 it is inserted between Baalah and Ezem; between Balah/Bihah and Ezem in the Simeonite list Iim is lacking. The tribe of Simeon was assimilated to Judah at an early date, and virtually all the towns in the two Simeonite lists have clear equivalents in the Judahite section. Albright suggested that Iim was a corrupt dittography for Ezem (1924: 160). It is also possible that Iim was dropped accidentally from the Simeonite list, and that the Chronicler worked from that same list. If not a textual corruption, Iim is in the southernmost district of Judah, the Negeb.

The location of Iim is problematic. Its name, "ruins," is of no help in determining its location. On the basis of the LXX reading, Aueim, Abel read it as ʿAwim and identified it with Deir el-Gawi, 19 km NE of Beer-sheba (*GP,* 352; M.R. 142086).

JEFFREY R. ZORN

IJON (PLACE) [Heb *ʿiyyôn*]. A fortified town of Naphtali located at the northernmost end of the Huleh Valley, on the main highway leading from Palestine to Syria. The LXX in Kings renders Ijon as *Ain* or *Nain*; and in Chronicles as *Iōn* or *Aiōn*. Josephus (*Ant* 8.12.4) writes *Aiōn*.

Ijon is mentioned in the Bible as the first Israelite city to be captured by Ben-hadad king of Aram-Damascus at the instigation of Asa (1 Kgs 15:20; 2 Chr 16:4; ca. 885 B.C.E.). Since Ijon is mentioned before Dan and Abel-beth-maacah, the Aramean forces probably came around through the W, rather than the alternative route through the Upper Golan, S of Mt. Hermon (Monson 1983: 67–68). The town was again captured some 150 years later by Tiglath-pileser III during his campaign of 733 B.C.E. (2 Kgs 15:29). Both of these events illustrate the strategic role played by Ijon in helping to secure Israel's N approaches. It is possible that the name Dan-jaan (2 Sam 24:6), a town mentioned on the way to Sidon, is a corruption of Ijon (Abel *GP* 2: 352; Aharoni *EncMiqr* 6: 184). Simons (*GTTOT,* 347), though, considers an emendation of *yaʿan* to *ʿiyyôn* to be unwarranted.

During his travels in the early 19th century, E. Robinson noted how the name of Ijon probably survived in the Arabic name of *Merj ʿAyyûn,* "meadow of springs," a rich oval-shaped plain in modern-day Lebanon, about 12 km N of Metulla (Robinson 1856: 372–75). The valley is bounded on the W by the Līṭânī River and on the E by the Ḥaṣbanî River and Mt. Hermon. At its N end sits the tall mound of Tell ed-Dibbîn (M.R. 205308). Surface surveys have revealed remains of walls and pottery from the Bronze Age to the Arabic period (Aharoni *EncMiqr* 6: 185). A road leading E from Sidon to Damascus passed by

the foot of the mound, placing Ijon at this important juncture of E–W and N–S traffic.

Posener (1940: 74) suggested that Ijon may already be mentioned in the 19th/18th century B.C.E. Execration Texts (No. 18) as *ʿynw* (= *ʿAyyānu*). Subsequent scholarly opinion, however, prefers an equation with Ḥayani in the land of the *GA<ŠU>RI*, mentioned in El Amarna letter 256: 28 (Ahituv *CTAED*, 120). This site has been identified with ʿAyyûn (M.R. 212235), 3 km N of Hammat on the Yarmuk River (Albright 1943). This same Ijon in the S Golan Heights (the biblical land of Geshur) appears during the Second Temple period as a village in the district of Hippos (Susita), E of the Sea of Galilee (*t. Šeb.* 4:10). The earliest mention of Galilean Ijon outside of the Bible is probably during the reign of Thutmose III (15th century B.C.E.) in his roster of 119 Canaanite towns (No. 95; Aharoni *LBHG*, 163; Ahituv *CTAED*, 120).

R. A. MULLINS

IKKESH (PERSON) [Heb *ʿiqqēš*]. The father or ancestor of Ira, one of David's champions, named in the parallel lists of 2 Sam 23:8–39 (v 26) and 1 Chr 11:10–47 (v 28), Ikkesh is said to be "of Tekoa" (lit. "the Tekoite"), that is, from the town of Tekoa in Judah, which lies about five miles south of Bethlehem. Father and son are mentioned again in 1 Chr 27:1–15, where Ira is listed as the commander in charge of the sixth monthly course of 24,000 men in the armed service of the king (v 9). Noth (*IPN* 228–29) supposes that "Ikkesh," probably from the root *ʿqš* ("twist"), is a secular name referring to one's character (i.e., "twisted," "wrong-headed"), although it just as likely might refer to a physical anomaly (see *HALAT*).

RODNEY K. DUKE

ILAI (PERSON) [Heb *ʿîlay*]. An Ahohite who was one of David's warriors (1 Chr 11:29). Since his name parallels that of Zalmon the Ahohite in 2 Sam 23:28, it is possible that Ilai is actually a corruption of the Hebrew *ṣîlay*, which may be a diminutive form of Zalmon. See ZALMON (PERSON). This corruption would have been possible because of the similarity between the Hebrew letters *ʿayin* and *ṣade*, beginning *ʿîlay* and *ṣîlay*, respectively.

D. G. SCHLEY

ILIADUN (PERSON) [Gk *Iliadoun*]. A Levite, the father of Joda, whose descendants helped rebuild the temple under Zerubbabel's leadership (1 Esdr 5:56—Eng 5:58). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear in the list of returning Levites who rebuilt the temple (Ezra 3). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.

MICHAEL DAVID MCGEHEE

ILLYRICUM (PLACE) [Gk *Illyrikon*]. A Roman province where Paul affirms that he had preached the gospel (Rom 15:19). It was in the NW part of the Balkan peninsula along the E coast of the Adriatic Sea. Illyricum was one of four large provinces established by the Romans across the N part of the peninsula. These provinces—Illyricum, Moesia, Dacia, and Pannonia—covered the area from Vienna to the Black Sea and from Macedonia to the Carpathian Mountains. Illyricum was the westernmost and, in the early 1st century A.D., was divided into two sections: Pannonia in the N and DALMATIA in the S. The term Illyricum refers at times to Dalmatia and at other times to a larger area which includes Dalmatia. What is meant by Dalmatia in 2 Tim 4:10 is not clear, but it probably designates the S sector of Illyricum.

The boundaries of Illyricum are not easy to define, because they fluctuated through time. The Roman province seems to have extended from the Drina River (ancient Drilo) in the S to Istria, near the Austrian border, in the N; and from the Adriatic Sea on the W to the Sava River (ancient Savus) in the E. Suetonius stated that after Tiberius suppressed a rebellion in Illyricum (A.D. 6–9), he reduced "the whole of Illyricum," which Suetonius described as "enclosed by Northern Italy, Noricum, the Danube, Thrace, Macedonia, and the Adriatic Sea . . ." (*Tib.* 16). The struggles of Tiberius with Illyricum are recounted by Dio Cassius in his history of Rome (54.34; 55.28–34), written between A.D. 200 and 222.

Octavian had subjugated the Dalmatian tribe in 33 B.C., after a war which lasted several years, but it was not until after A.D. 9 that Dalmatia became a separate province. At that time Pannonia (Austria and W Hungary), which had been attached to the N part of Illyricum, was detached and made a separate province, while the S part of Illyricum (W Yugoslavia) was shortly thereafter renamed Dalmatia.

The Illyrians were probably an Indo-European people who settled in the W half of the Balkan peninsula around 1000 B.C. and consisted of numerous tribes, two of which were the Dalmatae and the Albani. These two tribes settled in the S part of Illyricum, the area now known as S Yugoslavia and Albania. Subsequently, some of the Illyrian tribes of S Albania spilled over into the area further S, where they came into contact with Greek culture and eventually established their own kingdom known as Epirus, which lies today in NW Greece.

When Paul spoke of his ministry as reaching from Jerusalem to Illyricum (Rom 15:19), it is unclear whether he meant the province as a whole, just the S portion of it (Dalmatia, 2 Tim 4:10), or perhaps just the border of it, near the city of Dyrrachium, which lay at the W end of the Ignatian Way.

It is quite possible that Paul himself did not actually preach in Illyricum. Contrary to most modern translations, the word "preach" does not occur in the text of Romans. It rather states that he "fulfilled" or "completed"

the gospel of Christ in a geographical circle which stretched from Jerusalem to Illyricum. He may have viewed his ministry among the gentiles as a completion of the work begun among Jews in Jerusalem by the apostles before him, a work which reached W to Illyricum where some of his companions labored (e.g., Titus in Dalmatia, 2 Tim 4:10).

If Paul meant that he himself had preached all the way to Illyricum, we cannot determine when this occurred because the exact chronology of Paul's journeys is unclear, and Illyricum is not mentioned again in the letters of Paul or in Acts. A likely possibility would be the occasion of his third journey, when Luke describes his travels as taking him "through these parts," referring to Macedonia (Acts 20:2). It could not have been after his Roman imprisonment (Acts 28:16), because the Roman letter in which he refers to Illyricum was written in Corinth *before* this imprisonment.

IMAGE. See IDOL, IDOLATRY; GRAVEN IMAGE.

IMAGE OF GOD (OT). Even though the statement of humanity's creation in the image of God appears to have had less importance in the biblical tradition than it assumed in later theological discussion, this statement clearly constitutes an important and positive affirmation about humanity's place in the created order. Man and woman are said to have been created in the *image/likeness* of God in only three passages in the early chapters of Genesis (Gen 1:26–28; 5:1–3; 9:6), all of which are assigned to the Priestly source of the Pentateuch as proposed by most modern scholars. The positive nature of this description is clear from the contexts in which it occurs, but the contexts are lacking the kind of explicit clues that would remove the ambiguity as to the exact meaning of the terms.

The etymology of the word *ṣelem,* "image," is uncertain. Some have suggested that it is related to a verb *ṣālam,* "to cut off," which does not occur in the Hebrew Bible. Apart from the "image of God" passages, the word is used twelve times. In ten instances the word refers to a physical representation of something (e.g., golden images of mice and tumors in 1 Sam 6:5, 11; images of Baal in 2 Kgs 11:18 and 2 Chr 23:17; molten images of Canaanite deities in Num 33:52; pagan images in Ezek 7:20, 16:17, and Amos 5:26; painted pictures of Babylonians in Ezek 23:14). *Ṣelem* has an abstract meaning in Ps 39:7 (—Eng 39:6), where it refers to the insubstantial nature of human life, and in Ps 73:20, where it refers to a dream image that a person retains upon waking. Westermann (*Genesis 1–11* BKAT, 146) is perhaps correct in suggesting that the basic meaning of *ṣelem* is "representation," a meaning sufficiently broad to include both the concrete and the abstract aspects of the word. The Akkadian cognate of the word (*ṣalmu*) is the common Akkadian word for statue/image, and it also includes an abstract aspect. The Aramaic cognate of *ṣelem* is a common word for image, and the word is used in the Aramaic portions of Daniel for the images/statues described in chapters 2 and 3. The word is also used of the attitude of the king (lit. "the appearance of his face") toward those who refused to bow down to the image that he was dedicating.

The second word used in these passages is *dĕmût,* an abstract noun from the verb *dāmâ,* which means "to be like." It is generally argued that this abstract term suggests approximation and weakens or blurs the meaning of the previous word *ṣelem* (Bird 1981: 139, n. 23), and this does seem to be the effect of the term in the visions of Ezekiel (e.g., 1:5, 26; 8:1; 10:1). The similarity indicated by *dĕmût* is not necessarily physical, as is clear from its use in Isa 13:4 to describe "the sound of a tumult on the mountains like (*dĕmût*) many people." *Dĕmût* clearly refers to a physical likeness in 2 Kgs 16:10, where Ahaz sent a likeness (*dĕmût*) and a model of an altar from Damascus to Jerusalem so that he could have a similar altar constructed for the temple. In 2 Chr 4:3, the figures of oxen that supported the molten sea in front of the temple are called *dĕmût bĕqārîm,* "figures/images of oxen." The Aramaic cognate of the word *dĕmût* is used in a similar way in a bilingual inscription on a statue from Tell Fekheriye (Millard and Bordreuil 1982: 137–38), in which the Akkadian word *ṣalmu,* "image/statue," is rendered into Aramaic as *ṣalma* in lines 12 and 16 and as *dĕmûta* in lines 1 and 15. Thus, while the term *dĕmût* indicates that the human being is in some sense "like God," the word seems to be virtually a synonym for the word *ṣelem.*

Gen 1:26 introduces the account of humanity's creation with God's statement, "Let us make man in our image (*bĕṣalmēnû*) according to our likeness (*kidmûtēnû*)." Gen 5:1 talks about humanity's creation "in the likeness of God" (*bidmût ʾĕlōhîm*), and this suggests that the prepositions used with the nouns "image and likeness" are interchangeable in meaning. It has been suggested by some that the preposition *b* is used as *bet essentiae,* and that it indicates identity. Thus, the meaning is that man and woman were created not "according to" the image of God but rather "as" the image of God. Many have denied that the preposition *k* ever has this meaning, though certain considerations suggest that this may be the meaning intended by the biblical author.

It is clear that a certain ambiguity is associated with the meaning of the terms "image and likeness of God" in these passages in Genesis. It is difficult to know whether the author of the material used expressions from the tradition that his audience would immediately understand in their cultural context, but which we in a vastly different cultural setting lack the contextual clues to understand precisely, or whether the author deliberately presented these ideas in a somewhat ambiguous way.

Because of this ambiguity, interpreters have had to look for clues in the context of these passages that might be decisive for determining the exact meaning of these descriptions of humanity. Unfortunately, commentators have not been able to agree on what the decisive clues are, and the interpretation of the image of God has often reflected

the *Zeitgeist* and has followed whatever emphasis happened to be current in psychology, or philosophy, or sociology, or theology.

The contexts in which the image/likeness of God occur do provide certain clear indications as to the significance of these statements about humanity about which virtually all commentators agree.

The account of creation in Genesis follows a clearly established literary pattern whose general contours are quite evident. Each creative act begins with an announcement ("and God said"), followed by a command ("let there be . . ."), a report ("and it was so"), an evaluation ("God saw that it was good"), and a temporal framework ("the *n*th day"). The account of humanity's creation follows this general pattern, but it also departs from the other accounts in significant ways: It is introduced by the words, "Let us make man," and this rather startling statement, whatever its exact meaning, immediately calls attention to the creation of humanity, presumably the climax of God's creative activity. The greater length of the account of humanity's creation in comparison to descriptions of the other creative acts, the threefold repetition (in 1:27) of the word *bārā'*, "to create" (a word reserved in the Hebrew Bible for God's creative activity), the fact that humanity is given dominion over the rest of creation, and the evaluation "very good" that follows the creation of man and woman make it clear that humanity is the climax of God's creative activity. It is man and woman alone who are said to be created in (or as) God's image, and this appears to account for humanity's preeminent position in the created order. The image of God sets man and woman apart from everything else that God made.

This point is also affirmed in Gen 9:6, which is part of the blessing given to Noah after the flood. Unlike God's instruction in 1:29–30, the human is given permission to kill animals for food. In addition to certain restrictions as to how the meat was to be eaten, it is specified that only animals may be killed. The life of another human being is not to be taken because "in the image of God (*bĕṣelem 'ĕlōhîm*) He made man." Thus, the image of God in man and woman gives dignity and worth to all people; it sets humankind apart from everything else that God made.

Gen 5:1–2 makes it clear that both male and female are included under the designation *'adam* who was made in God's image. Gen 5:3 reports that Adam fathered a son "in his likeness, according to his image," and the verse employs the same nouns used in Gen 1:26–27, though the order of the nouns and the prepositions used with each are reversed in comparison to Gen 1:26. This suggests that the way in which a son resembles his father is in some sense analogous to the way in which the human is like God. Since this passage has made the point that it is both male and female who are in the image of God, it seems clear that the similarity, while not excluding the physical in the broadest sense, focuses on capacities such as personality, self-determination, and rational thought. It is probable that it is the whole person who is in the image of God rather than some specific aspect of that person to the exclusion of others, and this focus on the human being as a whole being is consistent with the way humanity is viewed throughout the Hebrew Bible. Even more fundamental than resemblance between Adam and his son was the relationship between them, and some have suggested that the image of God implies that the human was made with the capacity for relationship with God. It is also possible that the point of this analogy is that the son is the image of his father because he functions both like his father and on behalf of his father.

Apart from the question of what information may have been known to the various sources that underlie the present biblical text, the image of God passages, in their present canonical context, make it clear that humanity even after the Fall is still in the image of God.

The fact that man and woman were created in (or as) the image of God is clearly a positive statement affirming humanity's preeminence over everything else that God created. In view of the strong condemnation of idolatry and the unqualified prohibition of images in the Bible, this positive use of *ṣelem* is most unexpected, and even though this word is not used in the legislation that specifically condemns the use of images, the same negative connotations are almost certainly associated with the word. There seems to be nothing in the biblical understanding of images that would give content to the meaning of the image of God beyond that which the context of the passages suggests, and it appears that the basis for any further understanding of the image of God will have to be found outside the biblical material. This even raises the possibility that this is an idea that Israel borrowed from another culture.

Images were used in both Mesopotamia and Egypt, and the literature of those countries provides a basis for determining how those people understood images. Egyptian texts make it clear that images were not meant to depict what a god looked like, but represented attempts to describe certain qualities or attributes of the deity. The primary purpose of the image, though, was not to describe the god; rather, the image was one of the primary places where the god manifested himself. The presence of the deity in the statue was magically effected through a ceremony called the "Opening of the Mouth," and perhaps there are reflections of this in the description of humanity's creation in Genesis 2, where God forms a figure of the man out of dust from the ground and then animates that figure by breathing life into it. The significance of the image did not lie in the way it described or depicted the god (though that was not totally unimportant); rather, it lay in the fact that the statue was a place where the deity was present and manifested himself. Thus, the presence of the god and the blessing that accompanied that presence were effected through the image. It was the function of the image rather than its form that constituted its significance.

In both Egypt and Mesopotamia, people were sometimes referred to as images of god, and while there are occasional exceptions, it was usually the king who was referred to in this way. The focus for this seems to be Egypt, where, beginning with the New Kingdom, there are numerous examples of the king described as the image of a particular god; in contrast to this, only five examples are known from Mesopotamia (four of which date to the neo-Assyrian period). The pharaoh was described in these terms because he was believed to be the earthly manifestation of the deity, and thus he functioned on earth exactly as the

image functioned in the temple. In Mesopotamia, where the idea of the deified king made a brief appearance in the Ur III period but died out thereafter, there was little basis for referring to the king in such a way. There are indications in Gen 1:26–28 that the "image of God" terminology perhaps had its origins in the royal ideology of the ancient Near East. The idea of dominion and the idea of subduing are most appropriate in the context of kingship. Psalm 8 uses similar royal terminology in its description of humanity's place in the created order, though it does not use the term "image of God."

It seems likely that the image of God idea was introduced into Israel through her contacts with Egypt, and the idea was emptied of content that was incompatible with Israelite theology and used to express the apparently uniquely Israelite idea that all persons, not just the king, occupy a preeminent place in the created order. There are several periods in Israel's history when this influence was possible, though the period of the Egyptian bondage and the Exodus would have provided a context where the Israelites would have taken great delight in affirming that the pharaoh, as magnificent and impressive as he may have been, was not the one who rightly deserved the title "image of god"; rather, all persons as the special creatures of God are made in/as His image. It should be noted that the fact that the "image of God" passages are all a part of what most modern biblical scholars identify as the Priestly source of the Pentateuch, which is normally assumed to date to the period of the Babylonian exile, does not preclude the possibility that the image of God idea had its origins in Egypt at a much earlier time, since scholars are becoming increasingly aware of ancient traditions that are a part of that material.

The image of God terminology clearly affirms the preeminent position of humanity in the created order and declares the dignity and worth of man and woman as the special creations of God. The ANE background that appears to stand behind the biblical idea provides an appropriate base for such a declaration about humankind. It is not as clear whether other elements of the Egyptian understanding of images are implied through the figure as well. Perhaps the image of God idea suggests that humankind is the primary place where God manifests Himself; perhaps the figure implies that it is humanity that stands in a special relationship to God and that should function both like God and on His behalf; it does seem clear, in the light of the Near Eastern parallels, that the term has less to do with form and appearance than with function and position in the created order of things.

This suggestion as to the origin of the image of God terminology suggests that a term that entered Israel's tradition at an early date remained somewhat isolated in that tradition without being developed elsewhere in the preexilic literature. It seems likely that the danger presented to Israel's religion by idolatry precluded that use until after the Exile had eliminated idolatry as a major problem. In the new religious context created by the Exile and return, the "image of God" motif was again taken up and developed both in the intertestamental period and in the NT.

EDWARD M. CURTIS

IMALKUE (PERSON) [Gk *Imalkoue*]. Imalkue is mentioned in 1 Macc 11:39 as an Arab ruler, with whom the Seleucid king Alexander Balas left his child Antiochus VI during his struggle with Demetrius II in 146 B.C.E. (cf. Jos. *Ant* 13.131–32; Diodorus 32.9d, 1.10). The Gk and Lat transcription is customarily written *Iam(b)licus* (e.g., Diodorus 33.4a; Jos. *Ant* 14.129; *JW* 1.129; 4a; Livy *Epit.* 52; *CIL* 13.7040). It is apparently an abbreviation of an ancient theophoric name such as *Ia-am-li-ik-el,* meaning "God will rule." Imalkue was a common name among Syrian Arabs near Palmyra and Emesa, and among Ituraeans in Lebanon (*HJP*^{2}, 183; Goldstein *1 Maccabees* AB, 436). Two Nabatean kings bore the name Malichus (*Ymlkw* in Arabic or Nabatean), which derived from the same root. A similar Hebrew name *Yamlek* is mentioned in the Bible (1 Chr 4:34), and several related Arabic forms date back to the same period (*EncMiqr* 3: 702). Diodorus (32.9d, 1.10) mentions Imalkue by the Gk name of Diocles, meaning "glory of Zeus," which was apparently a rather free equivalent of his Arabic name.

Although 1 Maccabees denotes Imalkue as "the Arab," neither his tribal identity nor the area of his rule can be precisely determined. Some believe that he was the son of Zabdiel, mentioned in 1 Macc 11:16–17 as the killer of Balas (Abel 1949: 212); this, in fact, could explain how Imalkue laid his hand on Antiochus VI (145 B.C.E.). It was Tryphon, one of Balas' chief officers, who persuaded Imalkue to place the young heir in his protection, in order to rule in his name and to foil Demetrius' plans (1 Macc 11:39–40; *Ant* 13.131–32). Imalkue cooperated with him and even permitted him to establish in his country a military base against Demetrius. As Diodorus locates this base near Chalcis, it seems that Imalkue ruled in the Lebanon Valley and probably headed one of the Ituraean tribes there. This impression is supported by the fact that two later Ituraean rulers were called Iamblicus, and that at least one of them "lived on Mount Lebanon" (*Ant* 14.129; Kasher 1988: 38, 120).

ARYEH KASHER

IMITATE, IMITATORS [Gk *mimeomai, mimētēs*]. The term "imitator" is one link between the disciples of Jesus in the Gospels and the believers of the early Church. Although the word "disciple" (*mathētēs*) is curiously absent from the epistles, Michaelis' conclusion is representative of recent scholarship: "The *mathētēs* . . . and the *mimētēs* are one and the same" (*TDNT* 4: 673; cf. Betz 1967: 42–43; Schulz 1962: 332–35).

The nouns *mimētēs* (1 Cor 4:16; 11:1; Eph 5:1; 1 Thess 1:6; 2:14; Heb 6:12) and *summimētēs* ("fellow imitator"; Phil 3:17) are always joined in the NT with the verb *ginomai* ("be, become") and are thus similar in meaning to the simple verb *mimeomai* (2 Thess 3:7, 9; Heb 13:7; 3 John 11). Related concepts are found in the use of *tupos* ("type, example," which occurs in several contexts with "imitation" terms: Phil 3:17; 1 Thess 1:7; 2 Thess 3:9), *hupogrammos* ("example" cf. 1 Pet 1:21), and the adverbial forms *kathōs* ("just as," 2 Cor 1:5) and *hōs* ("like," Luke 6:40).

In classical and Hellenistic Greek, *mimeomai/mimētēs* designates (1) the simple act of mimicking what one sees another doing, (2) the joy of following and emulating another, and (3) the representation of reality in artistic activities (e.g., theater, painting, sculpture, poetry). Used in a derogatory manner, the terms indicate weak and unoriginal copying. In Platonic cosmology the present world is the visible, imperfect copy (*mimēma*) of the invisible archetype in the higher world of Ideas; therefore, "to imitate God" indicates ontological development—not an ethical personal decision (Morrison 1982: 3–31). In the mystery religions, the cultic and magical imitation of God becomes a central focus (Betz 1967: 48–84).

While the word group is absent from the canonical LXX, imitation of exemplary men and women is prominent in Jewish literature (e.g., *4 Macc* 9:32; 13:9; *T. Benj.* 4:1; Sirach 44–50; 1 Macc 2:49 ff., esp. v 61). In the Pseudepigrapha, *mimeomai/mimētēs* also indicates imitation of God (*T. Ash.* 4:3) and his characteristics (*Let. Aris.* 188, 210, 280–81). Philo regularly uses *mimēma* for the Platonic cosmological idea of original and copy (*Op* 3.877), and uses *mimeomai* for imitation of a model, including man (*Vita Mos.* I. 158) and God (e.g., *Dec* 111; *Leg All* I.48; *Op* 26.79). Josephus does not speak of the imitation of God, but does use the terms for conscious imitation of the qualities or acts of others (*mimeomai, Ant* 12.241; *mimētēs, Ant* 8.315).

Mimeomai/mimētēs in NT usage calls believers to imitate other believers, Christ, and God. Human objects are those most numerously given for imitation. Human imitation ranges from simple comparison with the conduct of other believers (1 Thess 2:14) to presentation of examples of conduct to imitate (Phil 3:17; 2 Thess 3:7, 9; Heb 6:12; 13:7). Paul gives himself as an example for imitation (1 Cor 4:16; 11:1; Phil 3:17; 2 Thess 3:7, 9), but he does not hold himself up as the ideal of mature perfection. On one occasion he deliberately confesses his own imperfection before he gives the call for them to imitate him (cf. Phil 3:13, 17). Imitation of Paul's ways (1 Cor 4:16–17) should bring believers to an appropriate understanding of the message of the cross and its implications for their life as a community (Sanders 1981: 363).

Human objects, therefore, ultimately point to Christ. Twice, Paul calls for his readers to imitate himself, but at the same time he names Christ as the final object of their imitation (1 Cor 11:1; 1 Thess 1:6). Only in Eph 5:1 are believers called to be imitators of God, but even here the example given is Christ: his forgiveness, love, and sacrificial service (Eph 4:32; 5:2). Christ is the incarnate example of God for believers to emulate in their daily experience.

Although certain aspects of Christ's earthly life are held up as examples for the believer to follow (e.g., suffering, 1 Thess 1:6; cf. 1 Pet 1:21 *hupogrammos*), this does not imply self-justification through emulation of his works. The NT use of *mimeomai/mimētēs* has a unique ethical dimension which stresses the contrast between the "indicative" and the "imperative" in the Christian life. Participation in Christ's cross and resurrection (the indicative which makes the believer a new creature in Christ [2 Cor 5:17]) is constituted in the life of the believer here and now by obedience to the imperatival call to imitation (Webster 1986: 106).

MICHAEL J. WILKINS

IMLAH (PERSON) [Heb *yimlâ*]. The father of the 9th-century Israelite prophet Micaiah, who prophesied against King Ahab (1 Kgs 22:8–9). See MICAIAH. Nothing more is known of the biblical Imlah. The name is spelled differently in 1 Kgs 22:8–9 (*ymlh*) and in 2 Chr 18:7–8 (*yml*ʾ), where the story of Micaiah's prophecy is repeated. This indicates that the text of Kings on which the Chronicler relied was not identical to the present MT (Coggins *1 and 2 Chronicles* CBC, 215). The Chronicler's form is more likely in Hebrew, and a similarly spelled name appears also in an Aramaic inscription from Palmyra.

JEROME T. WALSH

IMMANUEL (PERSON) [Heb *ʿimmānûʾēl*]. A symbolic name meaning "with us [is] God," found in Isa 7:14 and 8:8; it is alluded to in 8:10. Isaiah 7:14 is cited in Matt 1:23.

The use of the name in Isa 7:14 is the primary one of the four occurrences, but many elements of the interpretation of the passage within which it occurs (7:10–17) are disputed. Neither the etymological meaning of the name nor the historical context in which these words of Isaiah

are spoken is in doubt. The occasion is the same as that of 7:1–9; namely, the invasion of Judah by Syria and Israel (the so-called SYRO-EPHRAIMITE WAR, 735–732 B.C.). Syria and Israel were in the process of revolting against Assyria, of which they were vassals; fearing to have a neutral or possibly hostile Judah to their S at the time of the expected retaliation from Assyria, they were trying to force Judah into their coalition or at least render it harmless by placing someone of their own choice and persuasion on the throne of Judah (7:6). In these circumstances Ahaz, king of Judah, appears to have seen joining the coalition or calling on Assyria for help (thus voluntarily submitting to vassalhood) as the only alternative. Isaiah sought to dissuade him from following either course with the assurance that Syria and Israel did not present a serious threat (v 4; cf. 8:1–4), giving the Lord's own assurance that their plans would not succeed (v 7), and challenging Ahaz to faith in the Lord's promise as a condition to his own continuation (v 9).

It is likely that Ahaz' circle of advisers were urging submission to Assyria as the course to follow. In any case, 7:10–17 opens with Isaiah seeking to dispel whatever doubts Ahaz may have had by telling him to ask for any sign he might choose as assurance that the Lord had spoken through the prophet. Ahaz may already have decided to turn to Assyria for help (which is what he did, according to 2 Kings 16:7–9), but, in any case, he refused to ask for a sign. The prophet responds by asserting that the Lord himself will give a sign; namely, that "the young woman (*hā'almâ*)" will conceive (or: has conceived—the Hebrew does not clearly specify) and bear a son and call his name Immanuel. The child is to live on curds and honey so that he may learn (or: until he learns) to reject the evil and choose the good; before that, however, Syria and Israel will be devastated, but the Lord will bring upon Ahaz' dynasty and his people terrible times (which a gloss identifies, no doubt correctly, as the king of Assyria). The rest of the chapter (vv 18–25) consists of a series of shorter oracles relating to the same context, some of which may cast light upon the interpretation of vv 10–17.

As already indicated, many aspects of these verses are disputed. For example, Immanuel is said to be a royal child (H. Gressmann, E. Hammershaimb, A. S. Herbert, E. J. Kissane, J. Lindblom, J. L. McKenzie, S. Mowinckel, H.-P. Müller, H. Ringgren, J. J. Scullion, B. Vawter, W. Vischer, H. Wildberger, G. E. Wright), specifically Hezekiah (Hammershaimb, Kissane, Lindblom, O. Procksch, Wildberger), or Isaiah's son (R. E. Clements, N. Gottwald, T. Lescow, J. J. Stamm, H. M. Wolf), or any child conceived at this time (B. Duhm, G. Fohrer, G. B. Gray, O. Kaiser, L. Koehler, W. McKane, K. Marti, J. Mauchline), with "the young woman" being explained accordingly; he is the new Israel (L. G. Rignell); and some authors emphasize the difficulty of relating Immanuel to Isaiah's historical context in order to favor a more strictly messianic interpretation (T. E. Bird, J. Coppens, F. Delitzsch, J. Fischer, Gressmann, H. Junker, M. McNamara, F. L. Moriarity). Immanuel is said to be a favorable sign of salvation (S. Blank, Hammershaimb, Marti, Rignell, Scullion); he is purely a sign of disaster (K. Budde, H. W. Hertzberg, R. Kilian, Lescow); he is a double-edged sign (Fischer, Gressmann, Junker, Kaiser, Vischer, H. W. Wolff). Immanuel's food ("curds and honey") is ideal and luxurious food of abundance (Gray, Hammershaimb, Lindblom, Rignell, Scullion, J. Skinner, Wildberger, Wolff); his food is the nomad fare available in a land that has been devastated (Budde, Cheyne, Delitzsch, Duhm, Fischer, Fohrer, Herbert, Hertzberg, Kaiser, Kilian, McNamara, Marti, Mauchline, Stamm). Immanuel's coming to knowledge in v 15 is a temporal expression ("when he learns to reject . . . ," "by the time he learns . . ."—G. W. Buchanan, T. F. Cheyne, Duhm, Fohrer, Herbert, Hertzberg, Kaiser, Lindblom, McNamara, Marti, Mauchline [following LXX], Rignell, Skinner, Stamm); it expresses finality ("so that he may learn to reject . . ."—Budde, F. Dreyfus, P. G. Duncker, Junker, McKane, Mauchline [following MT], Müller, Scullion, Wildberger, Wolff). The age at which a child learns to reject evil and choose good means the age at which he can distinguish pleasant from unpleasant (usually set at 2 or 3 years—Clements, Duhm, Fohrer, Herbert, Kilian, Lescow, Lindblom, McKane, Marti, Mauchline, Skinner, Stamm); it means the age of moral discernment (often set at around 20 years—Budde, Buchanan, Cheyne, Delitzsch, Fischer [at age 3!], Herzberg, Kaiser, McNamara, Rignell, Scullion, Wolff); it means the age of sexual awareness or maturity (around age 13—R. Gordis, L. F. Hartman, B. Reike). Although most commentators agree that v 17 foretells devastation, there are some who take it as a prediction of future blessedness (Lindblom, Hammershaimb, McKane, Scullion). Some authors question the authenticity of certain words, phrases, or even verses of the passage; in fact, some of the positions listed above require the rejection of parts of the text.

In spite of the diversity of views just referred to, the majority of scholars would endorse an interpretation something like the following. The "young woman" referred to is a wife of Ahaz, and the son to be born would be a child of Ahaz; as such he would be a guarantee of the continuation of the Davidic dynasty, to which perpetuity has been promised (2 Samuel 7) and from which great things have been expected. For this reason the symbolic name "with us (is) God" could be given to the child, and, as the Lord had already promised, the threat from Syria and Israel would dissolve. Nevertheless, because Ahaz had refused to believe and to repose his faith in the Lord alone, the trust he had placed in Assyria would occasion terrible devastation for Judah. This interpretation is "messianic" (and sometimes characterized as dynastic messianism) in that the continuation of the dynasty preserves the channel for the promised blessings and leaves open the possibility of a future individual in whom these blessings will be realized in a unique way.

No critical scholar today holds that Isaiah directly foretold the birth of Jesus of a virgin, and this for a number of reasons. First, the sign of Immanuel was given to Ahaz and his contemporaries as part of Isaiah's message, and an event that occurred some seven hundred years later would not be relevant to them. Moreover, by his reference to the fate of "the land before whose two kings you stand in dread" (i.e., Syria and Israel), Isaiah clearly ties Immanuel to the contemporary scene. Second, the Hebrew term for "the young woman" (*hā'almâ*) refers to a young woman of marriageable age, who may normally be supposed to be a virgin, but it is not the technical term for "virgin" (*bĕtûlâ*)—

which would have to have been used if that were the precise point intended. Third, there is also the fact that while a virgin birth may be the object of faith, it is not subject to the kind of observation that would make it a sign in any meaningful sense.

Those who hold that Immanuel is any child conceived at this time obviously do not relate the sign to the dynasty or to the promises to David; the import would be (though the view is proposed with many variations) that any young woman who conceived now could, by the time her child was born, bestow a name expressive of deliverance because the Syria-Israel threat would have evaporated by then (see 2 Kgs 7:2 for a conditional construction which begins with *hinnēh*). The objection often raised, that the definite article in *hāʿalmâ* ("*the* young woman") rules this out, should not be pressed; the use of the definite article in Hebrew is not always all that precise. There are, however, other reasons for rejecting it. An important part of the Syria-Israel threat is their intention of deposing Ahaz and placing their own king on the throne (v 6), so the fate of the dynasty comes prominently into the picture. There are, furthermore, references to "the house of David" in this context that are sufficiently unusual to require explanation (vv 2, 13; cf. v 17). Isaiah's assurance of safety and challenge to effective faith (vv 4, 7, 9) would relate well to the dynastic promises.

Those who see Immanuel as Isaiah's son sometimes identify him with Maher-shalal-hash-baz of 8:1–4 (or even with Shear-jashub—cf. 7:3) or sometimes see him as a separate sign-child. The arguments for this view are drawn partly from the alleged parallelism with 8:1–4, but it is also asserted that only the prospective parent can know what the child will be named; if Isaiah can assert that the child will be named Immanuel, it must be his child. The latter argument would appear to fail to take note of the obviously symbolic nature of the name. It is true that Isaiah imposed actual names of symbolic import on two of his sons (Shear-jashub and Maher-shalal-hash-baz—see above), but he had a particular penchant for consigning his teaching in names; the series of four names ascribed to the ideal king to come in 9:5—Eng 9:6 depict his qualities but are not to be understood as names that are actually bestowed. The naming of Maher-shalal-hash-baz in 8:1–4 occurs in a context which spells out the fate of Syria and Israel within a fairly precise chronological framework, i.e., the brief time between a child's conception and its first simple words; the time involved in Immanuel's coming to know how to reject evil and choose good involves far more (see below).

In many ways v 15 holds the key to the interpretation of the whole passage. It is true that many authors (including Wildberger) reject the verse in whole or in part, but there is no basis in textual criticism for this. The rejection of v 15 is usually dictated by the interpretation adopted for vv 10–17; but an interpretation that relies on emendations that have no warrant in the textual tradition is necessarily suspect. The reference to "curds and honey" as Immanuel's food is taken by a number of commentators to refer to idyllic circumstances (as in the phrase "a land flowing with milk and honey"—Exod 3:8, 17; 13:5; 33:3; Deut 6:3; etc.) or even to ambrosial nourishment provided for a divine infant in some myths. Neither would suit the threatening context of Isaiah's situation, and this is given as reason for the elimination of the verse—though it is sometimes rejected on other grounds, too. However, while a land "flowing with milk and honey"—even if that cliché were used here, instead of the relatively rare "curds and honey"—was an apt manner in which to describe an ideal land in Israel's nomad days, an Israel settled in its own land thought of the ideal in terms of corn and wine and oil. For these and other reasons, the majority of scholars see the expression as indicating a land that has been devastated; no agriculture is possible, and so the only food available is wild honey and the produce of the flocks. (Vv 21–25, separate compositions but probably closely related in historical context to vv 10–17, indicate tiny flocks and difficult times in a land where agriculture has been rendered impossible.) The meaning would thus be that, owing to Ahaz' misguided policy, Immanuel would grow up under difficult circumstances in a devastated land.

The majority of translators and commentators take the expression in v 15 that relates to Immanuel's coming to knowledge (*lĕdaʿtô*—preposition + infinitive + suffix) as temporal, and as referring to a relatively few years, the time needed for an infant to learn to distinguish pleasant from unpleasant (see above). Many are influenced to take this position by 8:1–4, where Isaiah gives the sign of Maher-shalal-hash-baz. There, the prophet speaks of the speedy evaporation of the threat of the Syria-Israel coalition: Before the child whose conception and birth there described is able to speak his first words, those two lands will have been devastated; and in each of the two texts the same expression "before the child knows . . ." occurs (cf. 7:16 and 8:4). However, there are also strong reasons for taking the expression in 7:15 in the causal sense. None of the OT references to the knowledge of "good and evil" can easily be applied to the knowledge that is proper to infants or very young children. Where the reference does indicate the stage of development, adulthood or something close to it seems to be required; for example, the knowledge attributed to David and Solomon for the office of judging is not that of infancy (2 Sam 14:17—cf. v 20; 1 Kgs 3:9). So also when Deut 1:39 designates "your children, who this day have no knowledge of good and evil" as the ones who will one day enter the promised land, it must have in mind approximately the same age as that in Num 14:29–30 (cf. 32:11), which excludes those "from twenty years and upward." The terminology in Isa 7:15 that speaks of Immanuel rejecting evil (*māʾôs bārāʿ*) also indicates adult discernment. For some scholars, such considerations argue for a rejection of a temporal sense for v 15 in favor of a causal sense, the more usual force of *lĕ* + the infinitive. The meaning would thus be "that he may learn to reject the evil and choose the good"; i.e., the difficult circumstances in which Immanuel was to grow up would be the occasion of a moral development that would make him very unlike Ahaz, to whom he seems to be deliberately contrasted. This interpretation goes somewhat beyond dynastic messianism in the importance it attributes to Immanuel in Isaiah's thought and leaves the way open to a connection between this figure and the ideal king depicted in 8:23–9:6—Eng 9:1–7 and 11:1–9.

The meaning of the oracle at 8:5–8 is again disputed. Clearly, Isaiah is saying that because Judah has rejected

the Lord's call to faith by turning to Assyria for help, it will be overwhelmed by that nation; the reference to "outspread wings" may continue that threatening message, but such imagery more usually signals Yahweh's protection (cf. Pss 17:8; 36:7; 57:1). In any case, the address to Immanuel, the fate of whose land is at stake, though rejected by many as inauthentic, can very possibly be original. The same Hebrew expression, *ʿimmānû ʾēl,* though now not a proper name but literally "(for) God is with us," is found as the conclusion of 8:9–10, given as the reason that the hostile plans and behavior of the pagan nations against Judah will come to nought.

The citation of Isa 7:14 in Matt 1:23 follows the Greek of the LXX rather than the Hebrew of the MT; Matthew's citation varies from the LXX on a couple of minor points, either because these differences were already in the text he followed or because he adapted it for his own purposes. The most striking difference between the LXX and the Hebrew is the use of "virgin" (*parthenos* in Gk) instead of "young woman" (*ʿalmâ* in Heb). While the latter is not the normal designation for "virgin" (see above), the Gk *parthenos* does normally mean "virgin" and is the word regularly used to translate *bĕtûlâ,* the Heb term for "virgin." One would have expected *neanis* (the Gk term for "young woman"), which is the term normally used to render *ʿalmâ* in the LXX and which is, in fact, used for this text in the later, more literal, Greek translations of Aquila, Symmachus, and Theodotion. No certain explanation of why the LXX chose to render *ʿalmâ* by *parthenos* can be given. Some have supposed that in the period after Isaiah, his Immanuel oracle occasioned a development which posited a marvelous birth for the one who would fulfill it. However, since Isa 7:14 is not among the passages that later Jewish thought saw as "messianic," the suggestion is unsupported by the evidence. It is more likely that the translator was indicating that Immanuel's mother was a virgin at the time the oracle was spoken and would be until she conceived in the usual manner; unlike the Hebrew, the Greek clearly has the conception as future.

While Matthew was thus not constrained by any OT evidence that the Messiah would be born of a virgin, he clearly uses the Isaiah passage in support of his own presentation of the virginal conception of Jesus, a tradition that must have reached him from a different source. The Isaiah text is cited after Joseph's doubt has been countered by the assurance that Mary's conception is through the action of the Holy Spirit, and in this context the emphasis falls on "virgin," a point the Evangelist can see as foretold in prophecy. The meaning of the Hebrew name "Immanuel" would not have been evident to many of Matthew's readers, and so to the Isaiah citation he adds the explanation, "a name which means 'God with us,' " an interpretation probably taken from Isa 8:10. Thus, Matthew uses the text not only as prophecy, now fulfilled, of the coming of Jesus and of his virginal conception, but also to say something of the divine sonship of Jesus, through whom God is present in a very special way. On both points, Matthew goes well beyond anything envisioned in the OT text.

JOSEPH JENSEN

IMMER (PERSON) [Heb *ʾimmēr*]. The LXX regularly transliterates the name as *emmēr* (1 Chr 9:12; 24:14; Ezra 2:37; 2:59; 10:20; Neh 3:29; 7:40; Jer 20:1; 1 Esdr 9:21) and once as *iemēr* (Neh 7:61). Cf. also 1 Esdr 5:24 LXX *emmērouth;* KJV Meruth; NEB Emmeruth; and 1 Esdr 5:36 LXX *amar; allar;* KJV Aalar; NEB Alar; AB Allar.

1. An Aaronide priest whose family, according to the Chronicler, by lot became the 16th course of priests in the time of David (1 Chr 24:1–6, 14). The name appears at the close of the Exile, when as many as 1,052 priests who claimed descent from Immer were able to return from Babylon to Jerusalem with Zerubbabel (Ezra 2:1–2, 37 = Neh 7:6–7, 40 = 1 Esdr 5:7–8, 24). This same Immer is cited as the ancestor of one of the prominent priestly families residing in Jerusalem, that of Amashsai (= Maasai in 1 Chr 9:12), in Nehemiah's time (Neh 11:13). According to Nehemiah 11, Immer was the progenitor of the line Meshillemoth-Ahzai-Azarel-Amashsai. In 1 Chr 9:12, this genealogy is expanded considerably, stating that Immer was the head of the lineage Meshillemith-Meshullam-Jahzerah-Adiel-Maasai. By comparison it would thus appear that Meshillemoth is the same person as either Meshillemith or Meshullam, and that Ahzai and Azarel are the equivalents of Jahzerah and Adiel in the 1 Chronicles 9 list. It is also known that, in Ezra's day, two of Immer's descendants, Hanani and Zebadiah, were found to have married foreign women and were subsequently moved to make a solemn pledge to divorce their wives (Ezra 10:19–20). What is more, the synoptic parallel, 1 Esdr 9:20–21, adds four additional violators to these two, namely Maaseiah, Shemaiah, Jehiel, and Azariah. In Ezra 10:21, in both the MT and LXX B, the four have become five (Maaseiah, Elijah, Shemaiah, Jehiel, and Uzziah), but these names are all attributed to the line of a man named Harim, not Immer.

2. The father of Pashhur, the priest who was chief officer in the last days of the temple and who as the opponent of the prophet Jeremiah beat him and put him in stocks overnight (Jer 20:1–2). If this person is the same

as #1 above, then the word for "son" [Heb *ben*] would have to be understood in the broader sense of "descendant."

3. The father of Zadok, a person who is said to have repaired the wall of Jerusalem opposite his own house, near the Horse Gate, in the time of Nehemiah (Neh 3:28–29). The Horse Gate (2 Kgs 11:16; 2 Chr 23:15; Jer 31:40) is thought to have been located in the SE corner of the temple-palace complex. Working where he did, Immer was probably a priest. If the Immer intended here is #1 above, again the Hebrew word for "son" (*ben*) would have to be interpreted in the wider sense of "descendant."

4. One of the leaders who brought exiles from Telmelah and Telharsha back home to Judah (1 Esdr 5:36). These exiles were distinguished by their inability to show proof of their Israelite ancestry (1 Esdr 5:37). In the synoptic parallels to 1 Esdr 5:36, namely, Ezra 2:59 and Neh 7:61, it is worth noting that this same "Immer" is treated as a place name, not a personal name. However, "Immer" as a personal name should not be too quickly dismissed in this context, as the 1 Esdras–type text often preserves many older readings (Klein 1969: 107).

IMMER (PLACE) [Heb *ʾimmer*]. Unidentified Babylonian site from which Jewish exiles returned under Zerubbabel (Ezra 2:59; Neh 7:61; see also 1 Esdr 5:36, where the text is uncertain). These returnees were unable to prove their Israelite ancestry, which was needed as a crucial line of continuity between the restoration community and preexilic Israel (Johnson 1969: 42–44; Williamson *Ezra, Nehemiah* WBC, 39). Some scholars have taken "Immer" in the Ezra and Nehemiah references as a personal name, which may find support in 1 Esdr 5:36 (for arguments, see Batten *Ezra and Nehemiah* ICC, 96).

BILL T. ARNOLD

IMNA (PERSON) [Heb *yimnāʿ*] A descendant of Asher, found in the segmented tribal genealogy in 1 Chr 7:30–40. The name occurs in the LXX as Imana, and in LXX^{L} as Iamna. In form, it is a verbal imperfect 3 m.s. *qal* conjugation of the root *mnʿ*, meaning "he will withhold," and may be a hypocoristicon for an original form that contained the name of a deity after the verb.

Imna appears in v 35 as a son of Helem, making him a fourth-generation descendant of the eponymous ancestor Asher. Since other names in the list such as Shual, Zophah, Japhlet, and Shelesh/Shilshah appear elsewhere in the Bible as names of clans and/or geographical regions, and the summary in v 40 indicates that the underlying source for the genealogy was an administrative list used for purposes of army conscription and possibly also taxation, it is likely that Imna is not the name of an individual but that of a clan or a village. All groups named in the Chronicles genealogy for Asher appear to have lived in the Asherite enclave located in southern Mt. Ephraim and not in the Galilean territory of Asher (Edelman 1988). See ASHER (PERSON); ASHURITES.

Imna probably is a variant spelling or textual corruption of Imnah, found in v 30, and of Imrah, found in v 36, of the same genealogy. In the first instance, the final *he* has interchanged with the final *ʿayin*, which would not have affected the name's pronunciation. In the second instance, in addition to the same alteration at the end of the name, a medial *nun* has been mistaken as a *reš*, a mistake that was possible to make in the square script, but not in the older archaic Hebrew script. Such a mistake could easily have occurred through a copyist's error during the centuries of transmission of the text of Chronicles. Imna/Imnah would accordingly represent an Asherite clan located somewhere in S Mt. Ephraim.

The appearance of the name three times within the genealogy has been understood in two ways. In accordance with the view that the genealogy is homogenous and derives from an administrative list of Asherite clans made at a single point in time, Imna in v 35 would be an intergenerational namesake of the Imnah in v 30, and Imrah in v 36 would be a corrupted reference to the Imna of v 35. The two names Beri and Imrah (*bry* and *ymrh*) would not be children of Zophah but rather would represent the corruption of an original reading *bny ymnh*, "sons of Imnah," which introduced Imnah's descendants in the continuing presentation of the fifth generation of descent in the segmented genealogy (Naʾaman fc.).

According to the alternate view, the instances of name repetition within the genealogy, including Beriah/Beri, Zophah, Shelesh/Shilshah, Shua/Shual, and Imnah/Imna/Imrah, are to be taken as indications of the composite nature of the genealogy. Three administrative lists deriving from different eras but naming the members of the Asherite enclave at three separate points in time would have been combined by the Chronicler to produce the final form of the genealogy. Following this understanding, the three Imnahs would represent the same clan at different points in time, or the final two would represent the same clan over time, while the first might represent a distant namesake within the Galilean region, before the splintering off of the enclave group (Edelman 1988).

Regardless of the structural approach taken to the genealogy, Imna can be further linked with the land of Yemini that Saul is reported to have traversed in his search for his father's lost asses in 1 Sam 9:4 (Curtis and Madsen *Chronicles* ICC, 155; Edelman 1989: 53–54). The gentilic of the lesser known Asherite clan of Imnah is so close to the gentilic of the tribe of (Ben)jamin, *ymny* vs. *ymyny*, that the medial *yod* in the MT text could easily have been added as a *mater lectionis* by a scribe or later copyist when the original reference to the Asherite group was no longer understood and one to the well-known Benjaminites was presumed. All four lands traversed by Saul in southern Mt. Ephraim can be identified with Asherite clans in the genealogy in 1 Chronicles 7; and based on Saul's following

a sequential route, the land of the Yemnites can tentatively be situated in the region around Bethel and Ai (Edelman 1989: 53–54).

DIANA V. EDELMAN

IMNAH (PERSON) [Heb *yimnâ*]. Var. IMNA. IMNITES. **1.** The firstborn son of Asher (Gen 46:17; 1 Chr 7:30). In the genealogical list of Jacob's sons, which is listed by family and mother (Gen 48:8–27), Imnah appears as the grandson of Jacob and Leah through Asher. Asher was the second son of Zilpah, Leah's maid (Gen 37:12–13). Imnah was the father of the Imnites (Num 26:44). See also IMNA (PERSON).

2. A Levite, whose son Kore assisted Hezekiah in his religious reform (2 Chr 31:14). Nothing is known about this Imnah, but probably he exercised a prominent position in the temple. His son Kore was the keeper of the East Gate and was in charge of the freewill offerings presented in the temple. Kore also supervised the distribution of the portion to be given to the Levites and to the priests. For this reason, S. A. Cook (*EncBib*, 2688) has said that the name Imnah was probably written mistakenly by a scribe for Heman, a Levite who was associated with the Korahites and with the doorkeeper of the temple.

CLAUDE F. MARIOTTINI

IMPALEMENT. See PUNISHMENTS AND CRIMES (OT AND ANE).

IMPEDIMENT OF SPEECH. See SICKNESS AND DISEASE.

IMPURITY, WATER FOR. See WATER FOR IMPURITY.

IMRAH (PERSON) [Heb *yimrāh*]. The fifth son of Zophah in the genealogy of Asher (1 Chr 7:36). Although this name is similar to others found in the same genealogy (Imnah–7:30; Imna–7:35), it appears neither in parallel lists in Numbers 26 and Genesis 46 nor elsewhere in the Hebrew Bible. See also IMNA (PERSON). Speculation about the meaning of the name varies; if based upon the Hebrew root *mrh*, it may be translated "may he rebel." Such an interpretation of the name may be in keeping with the military character of the Asherite genealogy noted by scholars such as Johnson (1969: 66–68).

JULIA M. O'BRIEN

IMRI (PERSON) [Heb *'imrî*]. **1.** An ancestor of one of the exiles who returned to Jerusalem from exile in Babylon (1 Chr 9:4). Imri was a descendant of Judah through Judah's and Tamar's first-born son Perez. The name Imri is an abbreviation of the name Amariah (Bowman *IB* 3: 684). In Neh 11:4, which is a parallel passage to 1 Chr 9:4, Amariah is listed as one of the ancestors of one from the tribe of Judah who returned to Jerusalem from Babylonian exile. Dahlberg (*IDB* 2: 691) suggested that Amariah might have been the same person listed in 1 Chr 9:4 as Imri. This is a possibility, but none of the names in 1 Chr 9:4 are identical to those in Neh 11:4 with the exceptions of Perez and Judah. It is possible that the author of 1 Chronicles 9 simply employed different traditions than did the author of Nehemiah 11 (Braun *1 Chronicles* WBC, 136). If the two authors did possess and employ different traditions, then Imri and Amariah might well have been two distinct individuals.

2. An ancestor of Zaccur who helped rebuild the walls of Jerusalem during the time of Nehemiah (Neh 3:2). Imri is presented as Zaccur's father, but Imri might have been an earlier, distinguished ancestor rather than Zaccur's biological father.

ROBERT C. DUNSTON

INCARNATION. "Incarnation" means literally "enfleshment" or, slightly more fully, "embodiment in flesh." The question of where the concept of incarnation is to be found in the biblical texts is to a large extent dependent on whether that definition is interpreted in a broader or a narrower sense.

A. Definition

The *Encyclopaedia Britannica* defines "incarnation" as "a central Christian doctrine that the eternal Word of God (Logos), the Son of God, the second Person of the Trinity, became man in Jesus Christ, who was then truly God and truly man." This certainly reflects what has been the dominant meaning of the term itself within Christian thought. But it is doubtful whether the concept in such a developed sense can be found anywhere within the Bible, since clearly

presupposed therein is the full-blown Trinitarian doctrine as that came to expression in the 4th and 5th centuries of the Christian era.

The question then becomes whether the Christian concept is present in a less developed or undeveloped sense in the NT. Alternatively expressed, it becomes a question of defining the beginnings or foundations within the biblical writings of the doctrine as later formulated. To what extent can these early adumbrations or embryonic formulations be described as expressing a belief in "incarnation"?

In turn, this raises the question of how distinctive was that less clearly defined Christian teaching. Is "incarnation" a specifically "Christian doctrine" as such? Or in its earliest form, was the Christian doctrine of incarnation of a piece with a larger and vaguer understanding of incarnation or of incarnational possibilities? Can "incarnation" not be used quite properly for other forms of "embodiment in flesh"? And if so, what were the distinctive features of the early Christian use of this broader category which caused the Christian conception to stand out from that broader usage and in due course to become the dominant technical sense for the word itself?

B. Preliminary Clarifications

"Incarnation" could quite properly be used for any embodiment in any flesh. But we can limit the inquiry to *human* flesh most of the time, since that is the predominant range of reference. The incarnation of *what* is another question. Clearly implied is the assumption that the "what" is something other than flesh and something "higher" than flesh. It would be unwise, however, to limit the discussion to the idea of God or a god incarnate, even though that would give the most promise of finding an antecedent to the Christian doctrine; for the concept can apply quite properly to the incarnation of any spiritual entity or quality. More modern phrases, such as "an incarnate fiend" or "Liberty incarnate," should provide sufficient warning against narrowing the discussion prematurely. And it will soon become apparent that ancient usage was as broad.

It would of course be possible to define all humanity in incarnational terms—as offspring of the gods (cf. Acts 17:28), as sons of God by virtue of sharing the one divine reason, or as possessing a divine spark. But in such cases, the concept of incarnation has become so diluted as to require a quite different inquiry: What is the "divine" in humankind? What is "human"? A similar problem would arise where the embodiment was thought of in corporate terms—a nation or a large group embodying some ideal. Important as it is to bear in mind the continuity of conception among all these usages, this study will have to be limited to the sense of incarnation as denoting one individual or a number of individuals unusual in the degree or kind of their embodiment of the divine.

Can we bring our question to sharper focus by delimiting the concept of incarnation still further? The problems of conceptuality and definition can be highlighted by noting the overlap and difference between "incarnation/embodiment" on the one hand and "indwelling" and "inspiration" on the other. In both cases it is a question of how the gap or difference between the higher form of existence (spiritual, divine) and the lower (flesh) is perceived as capable of being overcome, so that the higher becomes embodied "in" the lower in some sense.

1. Incarnation and Indwelling. In a dualistic system, where spirit and flesh are seen as sharply and irreconcilably distinct and even antithetical, the resulting embodiment is probably more accurately described as indwelling than as incarnation. The point is that Hellenistic religion and philosophy, which determined the dominant worldview in the Mediterranean world during the period before and after the emergence of Christianity, was characteristically dualistic. The consequence was that in Hellenistic conceptuality the divine could manifest itself *in* the flesh but not *as* flesh. The axiomatic structures of thought made it literally unthinkable that the divine should *become* flesh, that the (by definition) eternal and unchanging should *become* that which (by definition) changed, decayed, and perished. Gods might appear *in the guise* of human beings, but they were still gods and not flesh. The divine reason was *part* of the human species, but as "the inner person," quite distinct from the material body.

The extent of the problem here for Hellenistic thought is clearly reflected subsequently in the Christian difficulty in correlating its own emerging doctrine of incarnation with the "given" of divine impassibility. Nor is it surprising that the option of Docetism (the divine Christ only seemed to be a man) proved so attractive to many Christians in the 2d century. And the gnostic systems of the 2d and 3d centuries simply serve to underline the fact that Hellenistic dualism could only cope with the concept of divine indwelling (the splinter of light imprisoned within the mud of matter), and not with incarnation as distinct from indwelling.

2. Incarnation and Inspiration. Here, the problem is more difficult than has usually been realized. What is the difference between these two categories?—incarnation and inspiration—the latter not dependent on Hellenistic dualism and very highly regarded in Jewish thought. After all, the phenomenon of inspiration could be described as "god-possession" (Gk *entheos, enthousiasmos*) or, in Jewish terms, as a being filled or possessed by the Spirit of God (as in Judg 6:34). An inviting distinction might be developed in terms of inspiration as esssentially a temporary phenomenon; a prophet would not be described as an incarnation of the Spirit, nor a demoniac as an incarnation of Satan. The difficulty arises, however, if one wants to speak of inspiration as continuous or unique—as indeed some Christians did (e.g., Acts 6:3, 5; Eph 5:18). John the Baptist was described as "filled with the Holy Spirit from his mother's womb" (Luke 1:15). And Jesus was accused of being possessed by Beelzebul (Mark 3:22 pars.).

The problem here is that incarnation and permanent inspiration would be indistinguishable phenomenologically. This is illustrated by the fact that the early Fathers of the Church did sometimes speak of incarnation in terms of the *Spirit* rather than of the Son (e.g., Hermas *Sim.* V6.5; Tertullian *Prax.* 26; Cyprian *Idol.* 11). Consequently, there is a question as to whether the distinction between the two can be maintained beyond the conceptual level—rather like the distinction between "the eternal generation of the Son" and "the procession of the Holy Spirit," that is, a confession that there is and must be an important difference, but we are not at all sure what it amounts to.

Such reflection serves to emphasize the fact that "incarnation" was neither a clearly conceived category ready to be used in reference to Jesus nor an empty concept ready to be filled with specifically Christian meaning. "Incarnation" evidently emerged within a world of meaning where other concepts lay close to hand but which were not seen as adequate to express the Christian perception regarding Jesus. In other words, if we may already draw a preliminary conclusion, it looks as though it is not the overlap of meaning between "incarnation" and other categories such as "indwelling" and "inspiration" which was important so much as it is the distinction between them: incarnation being developed as a distinctive category in order to express the distinctive way in which the divine and human were seen to have come together in Jesus—incarnation as a particular way of conceiving the embodiment, as the divine *becoming* human, rather than simply indwelling or inspiring the human. This becomes clearer when we look for antecedents to what became the later orthodox Christian concept.

C. Antecedents

A representative range of ideas and idiom, all of which could warrant the description "incarnation" in some sense at least, would include those shown below (fuller details in *TDNT* 8: 335–62; Boslooper 1962: 170–78; Hengel 1976: 21–56; Dunn 1980: 13–22). The categories are in no sense mutually exclusive and indicate overlapping usage along a more or less continuous spectrum of conceptuality:

(a) The gods themselves appearing in the form or guise of men, as recounted classically in Ovid's *Metamorphoses*.

(b) Descent from the gods, particularly legendary heroes like Dionysus and Heracles, sons of Zeus by mortal mothers.

(c) Pharaohs, kings, and then emperors as representatives of God/the gods, whether by descent or by adoption, and thus embodying divine presence/authority.

(d) The broad category often embraced by the phrase "divine men," as indicating individuals specially favored or empowered by God or the gods, who thus warranted the epithet "divine," Apollonius of Tyana being a much cited case in point.

(e) Poetic hyperbole, sometimes used in incarnational categories, as classically in the case of Augustus, represented by Virgil as Apollo come to earth (*Ecl.* IV.6–10) and by Horace as Mercury descended in the guise of a man (Odes I.2.41–52).

(f) Individuals understood as the embodiment of divine wisdom (Sophia), particularly as in Philo's portrayal of Abraham and Moses as archetypes of the wise man (*Leg All* III: 217, 244; *Cher* 10, 18, 31; etc.; *Leg All* II: 87; III: 45, 140–47; *Cher* 41; *Sacr* 9; etc.) and of Sarah as the embodiment of Wisdom herself (*Leg All* II: 82; *Cher* 9–10, 49; *Quod Det* 124; etc.).

In the light of sec. B above, however, we can put a question mark against most of these categories, if it is indeed antecedents to the concept of "incarnation" for which we are looking. Within Hellenistic conceptuality, the dualism which allowed the thought of gods appearing in the guise of men (*a* above) militates against the possibility of translating that into the idea of a god becoming man. And the questionable category of the "divine man" (*d* above) is anyway better set under the heading of "inspiration" (divine empowering).

It is equally doubtful whether the more intellectual circles of the time within the Hellenistic world would have recognized a category of "incarnation" as equivalent to other of the usages just listed. Whatever the popular view of such matters, about which we have only a few hints anyway, those who determined the intellectual climate of the day saw the myths about gods and demigods (*a* and *b*) as just that—myths and not factual truth. Likewise, talk of king or emperor as divine or as son of God (*c*) was largely a matter of political convention, and as such expressive of the symbolical power of the head of state and of an underlying desire for divine legitimation for the social and political structure; and as such regularly manipulated in bloody power struggles. And the poetic hyperbole of a Virgil lauding Augustus' success (*e*) was presumably seen as such—the exaggerated description quite proper in the eulogy of a remarkable man. Certainly, important attitudes and claims were embodied in all this language, but to use the word "incarnation" to describe them is at best of doubtful value and probably serves more to confuse than to help forward the discussion.

All this seems to indicate that while the "in"-put of the divine to the human was variously conceived within the wider Greco-Roman world, the idea of incarnation in the sense of the divine actually becoming human was nowhere formulated prior to Christianity. Whatever language might be proper within myth and poetic eulogy, the inherent dualism of the Hellenistic worldview was probably a decisive barrier which prevented such a narrower concept of incarnation from emerging.

Within the more specifically Jewish milieu, there is a similar range of usage:

(1) The anthropomorphism of early Hebrew thought facilitated the idea that God could appear in human form (cf. the appearance of "the angel of the Lord" in human form, as in Genesis 18; 32:24–30; Josh 5:13–15).

(2) Equivalent to Heracles (descent from the gods) are the "giants" of Gen 6:4.

(3) The king of Israel was occasionally called "son of God" or "god," particularly in the Psalms (Pss 2:7; 45:6; 82:6; 89:26–27).

(4) Fully equivalent to any "divine men" in wider Hellenistic thought were the charismatic leaders in the period of the Judges and the later prophets (e.g., Judg 14:19; 1 Kgs 18:46; Jer 20:9; Ezek 2:2), not to mention the righteous individual and charismatic rabbi (Wis 2:13–18; *m. Taʿan.* 3:8).

(5) As classic an example of Virgil's eulogy of Augustus would be the Wisdom of Solomon's description of the plagues of Egypt (Wis 18:15–16).

If parallels to or precursors of the subsequent Christian doctrine of incarnation are sought, similar qualifications would have to be made. Although later Christian thought took some of the anthropomorphisms as manifestations of the Son of God (already in the 2d century in Justin Martyr's *Dialogue with Trypho*), there is nothing of this in the NT itself; there is some christological use of angelomorphic language, particularly in the vision of Rev 1:13–16, but not as a description of Jesus on earth or of incarnation. In Jewish circles, the episode of Gen 6:1–4

was taken as one of the major sources to account for human sin (*Jub.* 5:1–10; *1 Enoch* 6:10; *T. Reu.* 5). Use of the language of deity to speak of the king was the idiom of representation and legitimation as much within Israel as beyond. Charismatic leadership or prophecy likewise belongs more to the category of inspiration than to that of incarnation. And the imagery of Hebrew poetry was as vivid and as vigorous as any of its Greek equivalents. There is nothing in all this which leads us to conclude that by a process of natural evolution any of these usages would have given rise to the more specifically Christian idea of incarnation.

The one exception, or nearest thing to an exception, would seem to be the talk of Wisdom noted previously under (f). Here, we cannot go into the question of whether Wisdom was understood as a divine being other than God, or as a hypostasis, or as a way of speaking (personification) of divine action and immanence within creation; in the framework of Jewish monotheism, the last of these seems most likely, with the concept of "hypostasis" a category which only emerged later in Christian theology, in large part at least as a *consequence* rather than as a *precursor* of the idea of "incarnation" (see Dunn 1980: 168–76). The point here, however, is that Wisdom certainly denotes the divine as over against the human, so that a concept of divine "in"-put or of incarnation in at least a broader sense is involved. Even so, Philo's portrayal of such a figure as Moses or Sarah as an embodiment of divine wisdom does not actually bring us much further forward, for it is an example of Philo's characteristic use of allegorizing in his handling of scriptural texts, and so remains within the broader range of poetic symbolism and hyperbole. Philo, himself, was too much influenced by Hellenistic philosophy for the antithesis between divine and human, rational and material, to be overcome so easily. Juxtaposed they were in the human mind, and identified in allegory they might be, but for the one to become the other or be identified with the other in actual fact was probably a step beyond what was yet thinkable.

If anything, the closer antecedent to the concept of "incarnation" is to be found in the idea of divine wisdom as given to Israel, embodied in the Torah, for in this case the language of actual identification seems to be used. The clearest examples are Sir 24:23 and Bar 4:1. In the former, the hymn where Wisdom praises herself in the first person is immediately followed by the comment: "All this is the book of the covenant of the Most High God, the law which Moses commanded us." And in the latter, a description of Wisdom is followed in just the same way by a similar comment: "She is the book of the commandments of God, and the law that endures for ever." Of course, we are still some way from a concept of incarnation, especially since we have restricted the definition of the term to embodiment in *human flesh.* Nonetheless, such usage of a word which so clearly betokens the divine, a usage which includes both the description of the unique inspiration of Moses and its identification with something as tangible as the law, is clearly not far from the idea of incarnation in the more specifically Christian sense. All it needed was for the two to come together, unique inspiration and identification, in reference to a single individual for the distinctive concept of "incarnation" to be born.

And this is what seems to have happened with regard to Jesus. But in what way, and why, and how soon? Despite the well-known difficulties of stratifying and dating the material, and although other ways of structuring the examination are of course quite possible, we shall seek to maintain a chronological approach as the one most appropriate to an attempt to trace a conceptuality in process of evolution.

D. Jesus

Is the word "incarnation" appropriate to describe Jesus' self-consciousness or claims he made regarding himself? Did Jesus think or speak of himself in terms of the divine embodied in human flesh, whether as a divine being or as God himself become man? The question, of course, is complicated by the usual problem of distinguishing what in the Jesus tradition goes back to Jesus himself and what expresses the later perspective of the earliest Christians or of the Evangelists themselves. The Johannine portrayal of Jesus is the most supportive of an affirmative answer, inviting the evangelistic-apologetic challenge: "He who so speaks of himself is either mad, bad, or God." But it is precisely at this point, Jesus' explicit claims to have preexisted with the Father, at which the Fourth Gospel differs consistently and strikingly from the other Gospels, so that it is precisely the overt incarnationalism of that gospel which is most likely to indicate a later perspective. As we shall also see later, there are some features of Matthew's portrayal which likewise seem to indicate a developed christology, but for the most part the words of Jesus in the Synoptic Gospels probably bring us closer to Jesus' own self-assertions.

Almost all of that material, however, fits most naturally under the heading of "possession" (whether indwelling or inspiration) rather than of "incarnation." This is certainly the case with the relatively strong use of prophet categories, as in Mark 6:4 and Luke 4:18–19; and the implication that Jesus saw himself as spokesman for God and emissary of divine Wisdom, as in Mark 9:37 and Luke 7:31–35. Even if Jesus occasionally spoke of himself as "the son (of God)" or God's "beloved son" (Matt 11:27; Mark 13:32), though the point is disputed, there would have been no implication in the category itself of any claim to preexistence, since divine and intimate sonship was already attributed to a messianic king and the righteous person within Israel (Ps 2:7; Isa 42:1; Wis 2:16–18). And Jesus' talk of himself as "the son of man," even where an allusion to Dan 7:13 is given, would not be understood as a claim to preexistence, since Dan 7:13 was evidently not yet interpreted as speaking of a divine individual. See CHRISTOLOGY.

Does the authority expressed by Jesus not carry with it an implicit claim to incarnation? The "But I say to you" of Matthew 5 seems to go beyond the prophets' "Thus says the Lord" and to set Jesus over, against, or above Moses. Even so, however, it is some way from the absolute claim of the Johannine "I am" formula, and it does not seem to have moved beyond the category of inspiration. The most striking expression of divine authority on the part of Jesus would seem to be his claim to forgive sins in Mark 2:5, 10, especially as in the narrative itself it prompts the response, "Who can forgive sins but God alone?" The issue here,

however, seems to be that of authorization. After all, the priest was entitled to pronounce sins forgiven in the context of the cult, on the authority of Leviticus 5. The provocative feature of Jesus' pronouncement was that he spoke neither as priest nor in the context of the cult. To pronounce sins forgiven or even to forgive sins is not of itself an indication of incarnation, since according to John 20:22 Jesus' disciples can do the same (Matt 16:19; 18:18). Here again, we do not seem to have moved beyond the category of inspiration, or authorization.

It has been suggested that in Jesus' parables he applied OT imagery which depicted God to himself, indicating that Jesus thought of himself as in some sense God (Payne 1981). The flaw in this reasoning is the twofold non sequitur that Jesus consistently intended his parables to be understood allegorically and that he consistently intended to portray himself in them. For example, is the sower of Mark 4:3–8 a specific person or anyone who preaches the good news? And the farmer of Mark 4:26–29, who sleeps and rises night and day, is hardly to be understood as a portrayal of God. If any identification is intended by the figure of the father (as in Luke 15:11–32) or of the king (as in Luke 19:12–27), it is obviously God. The imagery of the shepherd (as in Luke 15:4–7) is certainly that of God, but in the same passages it is also that of those set over Israel by God (Jer 23:1–6; Ezek 34:10–16, 20–24). Most striking here is the use of wedding imagery (Mark 2:19; Matt 25:1–13), but even here it is by no means clear if Jesus intended to refer to himself as the bridegroom, as distinct from simply using the symbolism of the wedding to denote the new age of the kingdom (Isa 49:18; 62:5); and the parable of the king giving a marriage feast for his son (Matt 22:1–10) hardly suggests an identification between the bridegroom and God.

In short, within the earlier strata of the Jesus tradition there is substantive evidence that Jesus laid claim to speak with divine inspiration and authorization as in some sense the representative of God. But there is nothing of consequence to support the thesis that Jesus saw himself in some sense as God, as the incarnation of deity.

E. Earliest Christianity

Here, the issue resolves itself down to the significance implied or understood in the claim that Jesus had been raised from the dead and exalted to heaven. The claim was clearly fundamental from the beginning of Christianity proper. What were the incarnational corollaries of this claim?

It is quite often assumed that any affirmation of Jesus as exalted to heavenly status would inevitably have carried with it the implication that he had thereby been restored to or had resumed a status already previously enjoyed (e.g., Knox 1967: 11; Moule 1977: 138–40). Thus, it is argued that the assertion of Jesus' postexistence, after his life on earth, would have been seen to include as a corollary the assertion of his preexistence, before his life on earth. The more exalted the claims made regarding the risen Christ, or the more divine the functions attributed to the exalted Christ, the more unavoidable that corollary would have been. Consequently, even though the concept of incarnation as such was not yet formulated, its conceptualization must have been simply the outworking of that earliest belief in Jesus as raised from the dead. In which case, incarnation could be said to have been an integral part of Christian belief from the very first. So the argument runs.

The argument has power, and since the belief in Jesus as incarnate deity did emerge sooner or later within early Christianity, it can hardly be disputed that the doctrine of incarnation was in some sense a consequence of the Easter faith. But if our concern is to trace the emergence of the Christian idea of incarnation, the question to be asked is how soon that consequence was perceived and affirmed. The argument just stated sees it as an almost immediate consequence. But stated like that, it takes too little account of the range of belief and conceptuality at the time. In particular, 1st-century Judaism knew a good deal of speculation about hero figures who had been exalted to heaven and given some participation in God's judgment, e.g., Enoch, Abel, and the mysterious Melchizedek (*Jub.* 4:22–23; *T. Abr.* 13:1–6; 11QMelch 10). According to Matt 19:28 and 1 Cor 6:2–3, Christians themselves were to take part in the final judgment. None of this would have been understood to imply the deity or preexistence of the individuals named. The bestowal of the Spirit (as in Acts 2:33) may seem to take a step beyond anything affirmed of a human figure in pre-Christian Judaism (Turner, in Rowdon 1982: 183), but John the Baptist attributed some sort of bestowal of the Spirit to the "coming one" (Mark 1:8). Even the confession of Jesus as "Lord," which is certainly very early, did not carry with it a necessary implication that the one so confessed was thereby identified with God, since there were many "lords" (1 Cor 8:5), and since in Paul at least the confession of Jesus as Lord was bound up with the confession of God as one (1 Cor 8:6; Phil 2:9–11). See also CHRISTOLOGY.

It is unlikely, therefore, that the thought of incarnation was part of earliest Christian faith, or that the conviction regarding Jesus' exaltation to God's right hand would have been seen more or less from the first to carry that corollary within it.

F. Paul

The issue of whether Paul's christology included the thought of incarnation has been obscured for most of the 20th century by the debate regarding a pre-Christian gnostic redeemer myth. Bultmann especially had argued that there was already in existence before the emergence of Christianity the myth of a heavenly redeemer figure sent from on high to awaken to their true nature the sparks of light imprisoned within matter (1948: 1.175). According to Bultmann, early christology, including that of Paul, was indebted to this concept of a cosmic figure, a preexistent Son of the Father, who came down from heaven and assumed human form.

The fatal flaw in this whole thesis was that it read the fully developed form of the myth, first clearly attested in the 2d century A.D., back into the period before Christ. Elements of pre-Christian and early Christian thought, which are better seen as the building blocks from which the gnostic redeemer myth was later constructed, were assumed to be the broken fragments of an already existing myth whose fuller expressions have been lost to us—a highly questionable argument from silence. In particular,

the Christian belief about Jesus probably provided one of the most important of these building blocks, since the actual redeemer figures of the 2d- and 3d-century gnostic systems seem to be modeled on this Christian belief rather than vice versa. The thesis is also basically unsatisfactory since the postulated myth is fundamentally dualistic in character; that is to say, it would have led if anything to a docetic rather than an incarnational christology; whereas, in the event, Docetism seems to have emerged as an attempt to translate a newly evolved concept of incarnation into the more characteristically dualistic categories of Hellenistic thought.

The passages in Paul on which the debate mostly focused are the Christ-hymns of Phil 2:6–11 and Col 1:15–20. And even when the pre-Christian redeemer myth has been dismissed from the debate, these passages seem to offer the clearest examples of a preexistence and so incarnational christology in Paul.

1. Phil 2:6–11. Here, the issue is largely reduced to the question of the christological imagery being used and its significance. More specifically, to what extent is the imagery that of Adam christology? The talk of being in God's form (or image), and of a grasping at equality with God (Phil 2:6), certainly seems to be intended as a portrayal of Jesus in Adamic terms (Gen 1:26–27 and 3:5 are clearly alluded to). But if that is the case, is it the preexistent Jesus who is in view (the heavenly Christ chose to humble himself to become a man), or is it the epochal significance of Jesus' ministry expressed in Adamic terms (Jesus refused the path of individual self-advancement and chose rather to identify himself completely with humankind in its enslavement to sin and to the death which is the consequence of that enslavement)?

Most commentators find the former more convincing. In which case, the talk of "taking the form of a slave, being/becoming in the likeness of men, and being found/having proved himself to be like man" (Phil 2:7) is probably to be reckoned the earliest expression of incarnation christology. On the other hand, Adam christology elsewhere in Paul focuses on Christ's death and resurrection, not on his birth, as the decisive moments of epochal significance (Rom 2:15–19; 1 Cor 15:20–22, 45–50). And the distinctiveness of Adam christology from gnostic redeemer myth lies precisely in the fact that the life, and death, of a historic individual (Jesus) is perceived as imbued with suprahistorical significance for humankind as a whole, rather than that a preexistent divine being entered the alien territory of the human form. (Adam, properly speaking, was prehistoric rather than preexistent.) Moreover, the regular link between Ps 110:1 and Ps 8:6 elsewhere in earliest christology (1 Cor 15:25–27; Eph 1:20–22; Heb 1:13–2:8; 1 Pet 3:22; cf. Phil 3:21) suggests that Christ's exaltation to lordship following his Adamic death was also seen in Adamic terms; that is, not as a restoration to a heavenly status previously enjoyed, but as the fulfillment of God's purpose in creating man in the first place ("to put all things under his feet"), "to the glory of God the Father" (Phil 2:11). So, perhaps the issue is not so clear-cut as is usually assumed to be the case.

The debate is the same in other expressions of Adam christology. In 1 Cor 15:47, "the second man, from heaven" is almost certainly the exalted Christ. Although some have argued along the lines of the gnostic redeemer myth that "the man from heaven" is the spiritual, preexistent prototype of Adam (the Primal Man), Paul explicitly denies this: the spiritual comes *after* the natural; it is the risen Christ who is the prototype of resurrected humankind (15:46–49). In 2 Cor 8:9, on the other hand, there is an ambivalence similar to that in Philippians 2. Is Christ's richness his preexistent state, and is Christ's becoming poor his incarnation? Or is the richness that of unbroken fellowship with God (such as Adam had enjoyed before the fall) and the poverty the state of separation from God, particularly in his death (cf. Mark 15:34)? The parallel with 2 Cor 5:21, if anything, suggests the latter.

In Gal 4:4 and Rom 8:3, the issue is again more open and depends on how the talk of God sending his Son is to be correlated with his description of the Son as "born of woman, born under the law," and as being sent "in the likeness of sinful flesh." Again, the emphasis seems to be on describing Christ's complete oneness with the human condition ("under the law," "sinful flesh"), which made redemption necessary so that the redemption achieved (on the cross) might be effective for that condition ("to redeem those under the law," "condemned sin in the flesh"). The language of "sending" may have been drawn from the idea of commissioning a prophet (e.g., Jer 1:7; Ezek 2:3; Mark 12:2–6), as in the case of Isaiah, conscious of his solidarity with the sinfulness of his people (Isa 6:5–8), or indeed of the Servant to bear the iniquity of his people (Isa 49:1–7; 53:4–6). Had Paul intended to evoke the thought of a sending from heaven, it is questionable whether he would have used the word "likeness" in Rom 8:3, since within Hellenistic thought the word could lend itself too readily to a docetic-type interpretation—not a genuine solidarity with human sinfulness, and so not an actual redemption.

2. Col 1:15–20. Here, the matter seems to be more straightforward. Christ is described as "the image of God, the first-born of all creation," as the one in, through, and for whom all things were created, the one who is "before all things" and in whom all things hold together (1:15–17). There is no reference to incarnation (a descent from heaven, or becoming man), but the language is clearly that of preexistence; and since the preexistence is predicated of Christ himself, the idea of incarnation, rather than that of indwelling or inspiration, must be implicit. Much the same could be said of 1 Cor 8:6: "one Lord, Jesus Christ, through whom all things . . ."

There are some difficulties even in this case, however: (1) The language is generally recognized to be that used of Wisdom in the Jewish wisdom literature (Prov 3:19; 8:22, 25; Sir 24:9; Wis 7:26). In the same passages, Wisdom is spoken of as God's first creation, which, if the language of personal preexistence is pressed, leaves us with a rather Arian understanding of "first-born of creation." (2) Equally awkward for subsequent classic credal christology would be the assertion of the personal preexistence of Christ, since in subsequent orthodoxy it is clear that Jesus Christ is the man whom preexistent Wisdom became. The preexistence is attributed to Wisdom; Jesus is the incarnation of preexistent Wisdom. (3) Within the Colossian hymn itself, there is the problem of the second half, often ignored in such discussions. There Christ's exalted preeminence is described as the result of his res-

urrection (1:18) and as the consequence of God having been pleased to dwell in him in all his fulness (1:19; cf. 2:9)—language more appropriate to the concept of indwelling, or of adoption, than to that of incarnation.

Once again, therefore, the thought does not appear to be so clear-cut as it first appeared. The hymn writer does not seem to have been attempting to achieve a consistent christological statement. If by reading the text as straightforward factual affirmation, we find ourselves with unlooked-for corollaries and contradictory assertions, that may be sign enough that we are reading the text with a different meaning than that the author intended, that the author was simply drawing on diverse theological imagery and language to describe the significance of Christ rather than to make a dogmatically coherent claim of incarnation. Even so, the use of Wisdom imagery and language for Christ in both 1 Corinthians 8 and Colossians 1 is striking. Never before, so far as we can tell, had such affirmations been made of a man who had lived and died within living memory. More is being said here of Jesus than Philo said of Moses or the wisdom writers said of the law; more than Virgil said of Augustus. At the very least, we have to say that Jesus' life, death, and resurrection were being seen to possess a divine significance, a revelation of the divine wisdom, a self-disclosure of God himself, so that it was taken as wholly proper to speak of him as that Wisdom, as the manifestation of the one God, with the death of Jesus in particular serving as a definitive expression of that Wisdom (1 Cor 1:22–25). The explicit concept of incarnation lies very close at hand in such language; and in the way that language is used here we may indeed even be able to observe the concept of "incarnation" on the point of emerging into conscious thought.

G. Between Paul and John

In the period following Paul, the conceptuality is more varied, but the same question as that posed by Paul's Wisdom christology remains of uncertain answer. Has the Christian understanding of Jesus begun to break through the older catgories, images, and hyperboles? The focus of such language on Jesus certainly indicates that he was seen as the focus of divine revelation for the first Christians. But has the conceptuality of indwelling and inspiration been stretched to express a new category, that of incarnation? Here again, the answer is more open than many have assumed to be the case.

For example, if the Pauline talk of the sending of the Son (Rom 8:3; Gal 4:4) is read as an expression of Wisdom christology, on the parallel of Wis 9:10, then it should also be read in parallel with Philo's description of Moses, sent by God "as a loan to the earthly sphere and suffered to dwell therein" (*Sacr* 9). If the latter is an expression of Philo's allegorical hyperbole (Moses as the archetype of the wise man; cf. above), what does that say of the former? Similarly, the talk of the appearing of the one predestined from the beginning of time, in passages such as 2 Tim 1:9–10, Heb 9:26, and 1 Pet 1:20, seems to be a fairly clear expression of preexistence and incarnation, until we remember that similar language is used of Moses in *T. Mos.* 1:14: "chosen and appointed, and prepared from the foundation of the world, to be the mediator of the covenant." The christology of Heb 1:1–3 is also dependent on Jewish wisdom language (e.g., Wis 7:26; Philo *Plant* 8–9, 18) and shares the same difficulty with Col 1:15–20 as to how its reference to Christ should be interpreted, particularly as later on (2:6–9; 5:7–10) we find one of the most fully developed expressions of Adam christology in the NT. The language of Heb 7:3 seems to envisage Melchizedek as an ideal type on the Platonic model, while 10:5 assumes that the Jewish idiom, "those who come into the world," is a circumlocution for human beings.

Even the idea of virginal conception (and birth?), which may be thought to have broken new ground, does not seem to have gone beyond Philo's talk of Zipporah as "pregnant through no mortal agency," and of Sarah as "ranked as a pure virgin" even after giving birth (*Cher* 47, 50). Of course, the birth narratives of Matthew 1–2 and Luke 1–2 are not allegories such as those that characterize Philo's exposition of the Pentateuch. But the problem of discerning where midrash and poetic imagery end and where literal claims begin in the birth narratives permits of no easy resolution. To be sure, the imagery of birth (the coming into existence of a new human being) does not immediately mesh with the idea of incarnation (the enfleshment of one already preexistent). But that is less of a problem if we recognize the metaphorical and midrashic character which such descriptions would be assumed to have within a 1st-century Jewish context. Whether fresh ground had in fact been broken would only become evident when the idea of virginal conception was subsequently integrated into the more powerful concept of incarnation.

Matthew, in fact, is not far off from doing just that. For not only does he make good use of the virginal conception tradition (Matthew 1–2), but he also goes beyond the earlier portrayal of Jesus as the emissary of Wisdom to a portrayal of Jesus as Wisdom herself (Matt 11:19, 25–30; 23:34–36; 37–39). Not only so, but he also takes up the language of divine presence and depicts Jesus as "God with us" (1:23; 18:20; 28:18, 20). Here is confirmation that Wisdom was not thought of as a divine being other than God (not even the Son of God in that sense), but as God himself in his active concern for and outreach to his creation and people. It is because Jesus was seen as the complete embodiment of that concern and outreach that he could be spoken of in such terms, with the function of the birth narratives used as much to underscore the point that he embodied this divine presence from the first. In this sense, at least, we can speak of a concept of incarnation in Matthew, even if it does not come to explicit expression as such.

H. John

In the Fourth Gospel, there is an extraordinary concentration of christological claims. Individually, they might be understood as still caught within the earlier categories and structure of thought; but together, they may well be judged to express a breakthrough into a different conceptuality and a bolder claim.

The claim is posed at once in the prologue. The subject is God's Word—another way of speaking of God's self-revelation, action upon, and communication with the world of humankind, along with Wisdom and Spirit (e.g., Pss 33:6; 107:20; Wis 9:1–2, 17; Philo *Somn* 1:65–69; Luke

1:2; Acts 10:36–38). So in John 1, the Word was in the beginning, was with God, and was God; all things were made through this Word (John 1:1–3). It was this Word which "became flesh" in Jesus Christ (1:14). The juxtaposing in this way of the two concepts, "Word" and "flesh," is very striking. For just as John is clear that the Word belongs wholly to the realm of the divine, is *theos* (God/god), so is he clear that flesh belongs wholly to this world, transient and corruptible and antithetical to the other (1:13; 3:6; 6:63). The choice of verb, therefore, is hardly accidental, and it cannot easily be diminished in significance or rendered unwarrantably as "appear" (despite Berger 1974). John evidently wanted to say "the Word *became* flesh." The concept of incarnation, as distinct from indwelling or inspiration, has come to explicit expression. Jesus is being presented as the incarnation of the divine Word.

In the light of this, John's other christological emphases gain a clearer perspective. The characteristic talk of Jesus as the Son sent from the Father is there to emphasize primarily that Jesus is the self-revelation of God, the only one who can make God fully known (1:18; 6:46; 14:9). The less prominent but equally striking talk of Jesus as the Son of Man descended from heaven is used to emphasize that Jesus is the authoritative spokesman of the mystery of God (1:47–51; 3:12–13; 6:60–62). The "I am" statements no doubt deliberately echo the "I am" of Exod 3:14 and Isa 43:10 (particularly John 8:58); Jesus is the glory of God visible to man (12:41, referring to Isa 6:1). Most striking of all is the uninhibited use of the title "God/god" to describe *Jesus* (1:18; 20:28). That the title was provocative to his fellow Jews was well known to the author (5:18; 10:33) and probably resulted within a few years in the rabbinic charge that the Christians had abandoned belief in the unity of God (early 2d century). This is probably sufficient evidence to confirm that the fourth Evangelist was aware that in pushing such a developed portrayal of Jesus, he was going beyond what had previously been acceptable or at least retainable within the hitherto accepted conventions of Jewish talk of God and his self-revelation. To speak of God's wisdom dwelling in Israel or embodied in the Torah was one thing; to portray the man Jesus as God's word incarnate was something else.

The matter seems to be put beyond doubt by the way in which John ties the thought of incarnation tightly to the cross. The whole gospel moves toward the climax of Christ's death. The glory of the Son is manifested particularly in his death (12:23–24; 13:31; cf. 21:19). The lifting up, which corresponds to his descent from heaven, is a lifting up on the cross (3:14; 12:32–33). Most striking of all is the emphasis in 6:53–58 that the flesh of the Son of Man must be chewed if it is to result in eternal life. The point of the incarnation is the death of the incarnate one (6:51). Here, too, John was probably aware that he was pushing into uncharted territory (6:60). A claim that God had revealed himself in king, prophet, sage, or righteous man could be expressed in a variety of hyperbolic language without breaching philosophic or theological conventions. But to claim that the Eternal had *become man* in order to *die* was a step beyond.

I. Conclusions

(1) It is difficult to draw a sharp line between a before and after in the emergence of the concept of incarnation. All we can say with some confidence is that before Christians began to express the significance of Jesus, the concept of incarnation as such is not yet attested; whereas at the end of the 1st century the concept has been deliberately and provocatively put forward. Arguably, the thought is implicit already in formulations used by Paul. But whatever we make of these formulations, it does look rather as though the concept of incarnation was the outcome of what seems with hindsight to have been an inevitable and logical evolution, as the first Christians found that previous ways of speaking of the revelation of God were inadequate to express the full significance of the divine revelation which was Jesus.

(2) The focal point of this being sent, coming under the law, as man, becoming flesh, in all cases seems to be the death and resurrection of Jesus. Within the NT there is no evidence of a concept of incarnation as itself the decisive act of salvation—flesh redeemed by being assumed. The moment of salvation remains decisively centered on the cross. At this point, incarnation and Adam christologies readily blend into each other.

(3) The recognition that Wisdom christology is the most obvious root of incarnation christology also has an important corollary, particularly when it is recalled that in Jewish thought Wisdom is not a being independent of God but is God's self-manifestation. The point is that Christ is the *incarnation* of this Wisdom/Word. To speak of *Christ* as himself preexistent, coming down from heaven, and so forth, has to be seen as metaphorical, otherwise it leads inevitably to some kind of polytheism—the Father as a person, just like Jesus was a person (Lampe 1977). Whereas, what a Wisdom/Word christology claims is that Jesus is the person/individual whom God's word *became*. Even to speak of the incarnation of the Son of God can be misleading, unless the Son christology of John is seen, as it was probably intended, as an expression of the same Wisdom/Word christology; otherwise, there is the danger of a too literal translation of Father-Son language once again into a form of polytheism—that very abandoning of the oneness of God of which Jew and Muslim accuse Christians. The incarnation doctrine which comes to expression in the NT is properly understood only if it is understood as the incarnation of God's self-revelation, in that sense as the incarnation of God himself. The issue which caused the breach with Jewish thought and with Judaism is the charge against the Johannine Jesus, that "you being a man, make yourself God" (John 10:33).

JAMES D. G. DUNN

INCENSE. A Greek legend tells the story of the birth of the god Adonis, whose mother, Myrrha, fell in love with her own father, King Cinyras of Cyprus. Disguised, she succeeded in making love to him, but when he discovered that it was his own daughter he wanted to kill her. Myrrha fled, asking the gods for protection. They transformed her into a myrrh tree. Nine months later, the bark of the tree cracked and Adonis appeared. The naiads took care of him and anointed him with his mother's tears. Her tears

are the incense myrrh (Ovid *Metamorphoses* LCL, 10.298–518).

This legend connects Greece with the Orient. Adonis is ultimately the dying and rising Semitic god Tammuz. And Myrrha is the personification of one of the most beloved incense substances, namely myrrh, which is a product of S Arabia.

The basic idea of the legend relates the origin of myrrh. Myrrh belongs to the divine world; it is the result of a divine creation. Thus, the legend legitimates the use of myrrh in divine worship, in which the deity just receives what already belongs to him. This belief is in harmony with the ethereal or "divine" qualities of the incense material, be it the sap, wood, bark, roots, or fruit of the special odoriferous plants, which became associated with the various incense rituals.

Burnt on charcoal, on special altars or burners, the smoke and odor of incense would please, elevate, mystify, and stupefy the mind of the user, and simultaneously have an effect on the divine sphere. Incense was a holy substance. Incense was powerful. Incense had "mana."

The ritual use of incense is an expression of man in an emotional state. It is a call upon the gods expressing helplessness, happiness, or gratitude. The basic role of incense is to persuade, to threaten, to remedy, to cure, to reveal, to defend, to please, to seduce. In other words, incense is always used with a purpose, be it the substance, its odor, or its smoke. The use of incense is a symbolic expression of man's yearning to understand himself in a dramatic world where odoriferous ritual is an indispensable part of the drama.

This article will partly focus on a phenomenological survey of the various functions and uses of incense in the ancient Near East, and partly describe the impact of incense trade on the trade routes.

A. Uses of Incense in the Nonbiblical World

1. Incense at Funerals. In Egypt, incense was an indispensable part of ritual life. In connection with funerals, the basic idea of the ritual use of incense was to preserve the dead, to prolong life, and to aid the passage beyond death. The Egyptians believed that incense possessed certain qualities which could be released in the performance of the rituals and which were a prerequisite for obtaining the purpose.

The Pyramid texts from the 3d millennium B.C. reveal an elaborate arrangement for the use of incense at the funeral or cult of the dead king. The texts inform us of the qualities of incense, which were necessary to obtain the noble purpose. Incense purifies. Physically, it removes the evil odor of putrefaction. And cultically and spiritually, it prepares the king for the entrance into eternal life as a god. Incense is an offering to the divine king. This offering also protects the king against evil. Purification and protection are two closely connected ideas in the use of incense all over the Near East. It is the burning of incense, the fumigation, which purifies and protects. During the fumigation, the good odor of incense is transferred from the burning material to the king. However, the burning of incense is also responsible for a third idea associated with incense rituals present in the Pyramid texts: the belief that the smoke of incense establishes communication between man and god. A Pyramid text, utterance 267, reads: "A stairway to the sky is set up for me that I may ascend on it to the sky, and I ascend on the smoke of the great censing . . ." (Faulkner 1969: 76). The use of incense at funerals was also commonplace for the man in the street. He hoped that incense could do the same for him as it was believed to do for the king.

Aromatic incense was also used in the embalmment of the dead body. This use of the substance without burning presupposes a belief in a continued corporeal existence, in which incense materially changes the dead body from a human body of decay and death into a divine body of everlasting life and endurance. Incense functions as a preservative for the body, keeping its identity in a new state of being.

At the root of this use of incense lies the belief that the incense material quite concretely represents the divine (consider the possible etymology of the frequent Egyptian word for incense, *sntr,* which may be a contraction of *sty ntr* = divine fragrance). The presence of the incense is the presence of the divine. The enchanting odor belongs to the gods. Its presence on earth is proof of the presence of the gods.

In Phoenicia, we find the same habit of embalmment, or at least the preparation of the dead body for future life by using myrrh and bdellium. On an inscription on a sarcophagus from Byblos, the dead person describes himself as lying in these two substances (Röllig 1974: 1–15).

In Ugarit, incense seems to be present in a ritual connected with the cult of the dead in *Aqhat* 17.1.28–29. In Mesopotamia, the dead were provided with food and drink at their funeral, and the same kind of offerings took place in the regular cult of the dead. There is reason to believe that aromata of various kinds were used at the time of the funeral, although it is difficult to determine their exact nature. An Assyrian king remembers the funeral of his father: "In royal oil I caused (him) to rest . . ." (Heidel 1967: 153). This oil was undoubtedly fragrant, and its purpose was to facilitate the entrance of the dead person into the afterlife.

2. Incense in Divine Worship. In Egypt, the daily cult of the gods varied from temple to temple. However, the cultic ritual at Medinet Habu, the temple of Ramesses III, may be symptomatic in its lavish use of incense. The day began with an incense offering to the Uraeus goddess, followed by the ritual of the opening of the door. After various incense rituals performed to purify the image of the god Amon-Re, the god finally received his meal. The incense rituals are enacted in order to persuade the god to enter the image. In other words, incense burning makes

the deity descend from heaven and enter the temple and the image man has created to his honor.

At the great festivals, incense was burnt from the beginning to the end. At both the cultic festivals and the funerals, we find that incense burning and processions belong together. The fumigation of the participants of a procession purifies them, consecrates them for the special occasion, and protects them from evil. The association of incense and processions reappears much later in the early Christian Church.

In Mesopotamia, incense was part of the daily cult in various temples. A golden incense altar was erected in Marduk's temple Esagila in Babylon during Assurbanipal's reign. A copy of the original dedicatory inscription on the altar tells that the altar was going to be used for propitiatory incense offerings, i.e., to ask Marduk for forgiveness. Assurbanipal hoped that Marduk would hear his prayers, illustrating the belief that incense smoke carries man's prayer to heaven. Furthermore, the text tells that the incense burning took place for the sake of purification (*LAR* 2: 385–86).

The basic reason for using incense in Mesopotamia is clearly expressed in one of Assurbanipal's prayers to Shamash, which explicitly states that the gods inhale incense (*ANET,* 387) This belief is also illustrated in the Gilgamesh epic, where Utnapishtim after his rescue offers incense to the gods, who "smelled the sweet savor. The gods gathered like flies over the sacrificer" (Heidel 1967: 87).

Incense was also used at the great annual festivals. The New Year Festival in Babylon was celebrated with an elaborated incense ritual that embodied purificatory, apotropaic, and propitiatory ideas.

At the beginning of this article, the Greek god Adonis was mentioned as a counterpart of the Semitic god Tammuz. It is no surprise that incense was used in the annual festival to the latter's honor. When Ishtar returns from the Nether World with Tammuz, the lover of her youth, and the wailing company that has mourned Tammuz' disappearance, they are greeted on earth with the sweet smell of incense (*ANET,* 109).

3. Incense in Rituals of Magic. In the magic of both Egypt and Assyria-Babylonia, incense was used in ways similar to its function in divine worship. Magical rituals were used in various situations involving emotional, psychological, and medical problems believed to be caused by evil spirits. The function of incense in rituals aimed at exorcising evil spirits was to call upon the gods for help, to please the gods, and to protect the suppliant against the potential wrath of the gods. In particular, it seems to be the supposed purificatory quality of incense that was effective in magic rituals performed to restore human beings or even geographical places to their normal condition. At the same time, however, the fragrant smell or smoke protected the client from further attacks of the evil spirits.

In Assyria-Babylonia, we find a special idea connected with the use of incense smoke, namely libanomancy: i.e., omens read from the movement of the incense smoke.

4. Incense as a Cosmetic. All over the Near East, aromata of various kinds have been used to beautify men and women, their clothes, and the rooms of a house. Queen Hatshepsut adorned herself with what seems to have been myrrh oil or stacte (*ARE* 2: 113). Others used the incense as a kind of chewing gum to do away with bad breath. Incense was burnt at parties and banquets, and it beautified the union of man and woman. The use of incense as a cosmetic is intended first of all to impress, to please, and to seduce, be it the gods or a fellow person.

B. Uses of Incense in the Old Testament

Based on the Near Eastern background, one would expect incense to play an equally important role in the ritual life of ancient Israel. The archaeological evidence seems to support that expectation. Altars and burners of various forms that have been unearthed give the impression of the frequent use of incense in public worship, as well as in private homes.

However, the problem attached to these finds is the question, To whom did these vessels really belong—to "Israelites" or to "non-Israelites"? Another problem connected with the use of incense in ancient Israel is the relationship of these archaeological finds to the biblical text. Do the finds reflect the rituals which are described in the Hebrew Bible? Or does the Bible express theological reflections belonging to the clergy of Jerusalem, which are not in harmony with the vessels and practices found around the country? Was the use of incense introduced into the Israelite cult in early or late monarchical times? These questions are hard to answer, but are eagerly discussed in the scholarly literature on the subject.

1. Incense in Divine Worship. The OT makes a distinction between lawful and unlawful worship, the unlawful worship being either a wrong execution of Israelite tradition or a pagan cult. The lawful worship, in which incense is employed, prescribes Aaron to burn incense (*qĕṭōret,* based on the root *qṭr,* the meaning of which is discussed in Edelman 1985 and Nielsen 1986: 54–59) regularly on the golden incense altar in front of the holy of holies in the morning and in the evening according to the priestly tradition in Exod 30:7–8. It is emphasized that it is unlawful to burn unauthorized incense, i.e., an incense material different from the one prescribed for lawful use in Exod 30:34–35.

To understand this regular incense offering on the incense altar, it may be profitable to glance at the ritual which belongs to the Day of Atonement described in Leviticus 16. At this occasion (Lev 16:12–13), the high priest takes in one hand a shovel with charcoal and in the other hand some of the ritually correct incense. He enters the holy of holies, where he puts the incense onto the charcoal in the shovel to produce an incense cloud which prevents him from being killed while performing certain rites of expiation. This incense cloud provides the high priest with cover against the divine wrath or the divine "radiation." The incense smoke gives protection. In Lev 16:2, however, it seems that the incense being burnt produces a cloud, in which the deity appears; the incense cloud in v 2 is a symbol of the call upon the deity, a call which the deity answers favorably.

It is hardly a coincidence that the place of the incense altar in the Tent of Meeting, or the temple in Jerusalem, corresponds to the position of the incense altar or burner, which is used in the Assyro-Babylonian incantation rituals. It is always situated between the priest and the image of the deity. The Hebrew incense altar is likewise placed as

close to the deity as possible so that it stands between the priest and Yahweh. Only on the Day of Atonement does the high priest dare to transgress this borderline between the human and the divine. The purpose of the regular morning and evening incense offerings at this altar is to secure the presence of God and his attention to man's prayer. The incense smoke carries the prayer to God, who is hopefully appeased when he smells the fragrant odor of the delicious incense.

The special incense called *lĕbōnâ,* "frankincense," is mentioned as an addition to certain meal offerings in Leviticus 2. The part of the flour that is burnt on the altar of burnt offerings together with the frankincense is called an *ʾazkārâ.* This expression may be based on the Heb root *zkr* in Hipʿil, which can mean to call upon the name of a deity; cf. the Akk *zakāru,* which also can refer to invoking the name of a deity. The frankincense of the *ʾazkārâ* facilitates the contact between the suppliant and God.

Several stories in the Torah may reflect a ritual use of incense which is no longer identifiable. In Leviticus 10, Nadab and Abihu appear to be performing a ritual with censers and *qĕṭōret.* The fire they use, however, presumably was not prescribed. The fire is called an *ʾeš zārâ,* i.e., an unconsecrated fire. Consequently, they are struck dead, "devoured" by the fire. The Korah incident in Numbers 16 is depicted as a rebellion against the Aaronite privilege to serve in general and to burn incense in particular in front of the Lord. The consequences are grave for the Korah group. These stories may indicate that there once were rituals with censers which the present Torah does not prescribe.

Num 17:11–13 (—Eng 16:46–48) relates the story of an apotropaic censer ritual, in which Aaron stops the plague from the Lord by placing himself with burning incense between the dead and the living. The text itself explains the purpose of this ritual as an expiation or atonement (v 11), both propitiating the deity and protecting the people. The Torah does not contain a law prescribing this ritual.

In the nonprescriptive literature, the use of incense in worship may be hinted at in 1 Sam 2:28, although its exact use is obscure. Isa 1:13 may be interpreted as describing the incense smoke of the *ʾazkārâ* (cf. Isa 40:23; Jer 27:26; 41:5).

In Ps 141:2, *qĕṭōret* may indicate the regular incense burning in the temple. The cloud which is present at the call of Isaiah (Isa 6:4) may be due to the daily incense offering as well. The reed and frankincense in Jer 6:20, however, show that there once were more incense offerings and rituals in the temple than those which the Torah mentions.

In connection with the polemic against unlawful cults (e.g., Jer 19:13; Isa 65:3; 1 Kgs 22:44), the root *qṭr* is often used to describe the specific worship. The meaning of this root, however, is unclear. Consequently, it is impossible to identify the activity with any certainty.

The use of incense at funerals (or its use in rituals of magic, which is so common in the nonbiblical Near East) is hardly mentioned in the OT as part of Israelite-Jewish culture. The medical doctors, who embalmed the bodies of Jacob and Joseph (Gen 50:2–3, 26), may have used incense material for their purpose (in Phoenician the root *ḥnṭ,* which in Hebrew designates the act of embalmment, is found in a term for "incense altar," *HAL,* 320). The embalmment of Jacob and Joseph is Egyptian in origin.

The OT does not reflect much upon the origin of the use of incense. Its use is simply based on the divine commandment in Exodus 30. Unlike the mythological literature of the surrounding peoples, the Hebrew Bible has no such speculation as to why God wants incense to be used.

2. Incense as Cosmetic and Medicine. The use of aromatic incense as a perfume and its use in medicine are closely connected. Some personal names such as *qĕṭûrâ* (Gen 25:1), *ṣĕrûyâ* (2 Sam 2:18), *bāśĕmat* (Gen 36:3), and *qĕṣîʿâ* (Job 42:3) all may refer to substances used for incense (*qĕṭōret, ṣōrî, beśem,* and *qĕṣîʿâ*). A name like *qĕṭûrâ,* therefore, may refer to a girl that has been perfumed and purified by means of *qĕṭōret,* which brings joy to the heart (cf. Prov 27:9). The idea behind the fumigation may be exorcistic or apotropaic in nature. However, the names of the children may just express the joy and happiness of their parents.

The use of incense and other aromata for cosmetics is first of all to please, to seduce, and to stupefy. In Ruth 3:3, Ruth is asked to anoint herself for the meeting with Boaz. The perfume she uses is probably olive oil mixed with aromatic substances. In Prov 7:17, the adulteress sprinkles her bed with myrrh, aloe, and cinnamon to make it attractive. The king does the same to his clothes with myrrh, aloe, and cassia at the royal wedding (Ps 45:9); and in Esth 2:12, we are told that women who joined the Persian king's harem had to perfume themselves for twelve months.

This picture continues in the Song of Songs, where references to incense are both metaphors for the beauty of the beloved (4:6) and the result of a lavish use of incense materials as perfume (5:5).

The use of incense as a cosmetic may be a desire to elevate the relationship between man and woman into a sphere as close to the "divine" as possible. Incense and love belong together in the relationship between man and woman, just like incense and the worship of the divine belong together in the relationship betwen humans and God.

From Jer 8:22; 46:11; and 51:8, it appears that *ṣōrî,* probably storax, was used as a medicine believed to be able to cure diseases and heal wounds.

3. Incense Trade and Trade Routes. The very names of biblical aromata and their possible identification with substances known today suggest a quite intensive traffic in these goods. To compound the holy incense of Exod 30:34–35 for temple use in Jerusalem, galbanum had to be imported from Syria and frankincense from S Arabia. To compound the anointing oil of Exod 30:23, Israel had to import cinnamon from China, myrrh from S Arabia, and sweet-smelling cane from Syria or N Mesopotamia. These biblical texts may date from the exilic or early postexilic period and presuppose an international trade in aromata, which can be further substantiated by the archaeological finds of, for example, the small originally S Arabian cubic incense altars found in Lachish, Gezer, Tell Jemmeh, Tell es-Saidiyeh, and Samaria, dating from the exilic period to Hellenistic times (Nielsen 1986: 47), and

by the literary evidence of Theophrastus' *Historia Plantarum.*

Trade has always created riches. It is only to be expected that nations had a political and economic interest in controlling the trade that affected their geographical areas. Control of trade and trade routes meant income in the form of toll and taxes. This may have contributed to David and Solomon's interest in the districts E of the Jordan river through which the King's Highway passed and in the important land bridge of the Sinai desert.

South Arabia, itself, produced frankincense and myrrh. But it was also a bridge for goods from India and China. Some of these aromata along with other goods traveled N along the W mountain ridge of Arabia. Others traveled by sea northwards toward Egypt, as recorded in the beautiful reliefs on the walls of the temple at Deir al-Bahri, which depict the expedition that Queen Hatshepsut (mid-2d millennium B.C.) sent to Punt to collect incense. However, most of the goods from S Arabia that were destined for Palestine traveled by land. From the frankincense-producing areas like Dhufar, the incense route traveled through Wadi Hadhramaut to the myrrh-producing areas around Shabwah. From there, the incense road ran via Najrān to Tathlīth, where the road divided into two: the main road going N toward Medina (Yathrib), and a secondary road going E across the desert to ancient Gerrha on the coast of the Arabian Gulf (Groom 1981: 192). At Medina, the incense road split into three routes: one going E through the S part of the Nafūd desert via Hā'il toward the S part of Babylonia, and another going more NE toward the oases of Tayma' (cf. Isa 21:14) and Al Jawf (Dumah; cf. Gen 25:14) and from there toward Babylon. The main road following the mountain ridge continued toward Al ʿUlā (Dedan; cf. Gen 25:3), Tabūk, Maʿān, Petra, Amman, and Damascus. From Damascus the route went E toward the oasis of Palmyra and on to the N part of Mesopotamia. At Maʿān or Petra, the route diverged toward Gaza and Elat. From these destinations, the commodities went to Egypt. From Amman there was a connection to Mesopotamia through Wadi Sirhān to Dumah and from there to Babylon (Eph'al 1982: 241). Naturally, these routes were used in both directions. From Syria the incense was carried to Palestine and Egypt, and the produce of Syria-Palestine was carried toward Arabia.

These routes seem to have been active in the first half of the 1st millennium B.C. In the 9th century the Arabs first appear in Assyrian inscriptions, and subsequently they occur frequently in Assyro-Babylonian records. It is quite obvious that the Assyrians and the Babylonians wanted to integrate the Arabs into their political structure to control them and their trade in incense and other commodities. The inscriptions mention ethnic groups which are well known from the Bible, for instance Sheba, Ephah, Kedar, Dedan, Dumah, and others which occur in the list of the sons of Keturah (Gen 25:1 ff.) and the list of the sons of Ishmael (Gen 25:13 ff.). These names designate various Arab tribal groups in the N part of the Arabian peninsula and the Sinai desert. As for Sheba, which from S Arabian sources is known to be the name of a kingdom in the S, its presence among ethnic groups living in N Arabia may be due to the fact that the S Arabian kingdom established trading stations in the N. The sons of Keturah and Ishmael designate Arabs in the N who traded in incense.

There are several biblical texts that record trade in incense and other aromata, such as the Joseph story (Gen 37:25), the visit to Solomon of the Queen of Sheba (1 Kgs 10:11), the oracle of Isaiah mentioning the Arab caravans from Dedan (Isa 21:13), and the mention of the camels and dromedaries from Midian and Ephah (Isa 60:6). The list of trade connections in Ezek 27:2ff. seems to indicate a growing Israelite involvement in international trade.

Finally, the various forms of incense altars and burners testify to the international incense trade. The small cubic altar or burner referred to earlier is S Arabian in origin and belongs especially to the Persian period. The ladle-shaped incense burner adorned with the relief of a hand seems to be of Egyptian origin and belongs to the monarchical period (Nielsen 1986: 38–42), whereas the so-called pottery shrine is of Mesopotamian origin and belongs to the early monarchical period (Nielsen 1986: 48–49).

To what extent Jews established themselves as international merchants in incense is difficult to assess. The longer trips through the desert probably continued to be dominated by Arab caravaners, who established themselves in Petra around 300 B.C. They dominated the traffic to Palestine throughout the Hellenistic period.

C. Uses of Incense in the New Testament

The few references to incense and fragrant odor in the NT conform to the general Jewish culture known from the OT.

Even though the texts of Matt 2:11 and Rev 18:13 are legendary and imaginative in nature, they indirectly testify to the existence of the traditional trade routes in incense in the time of the NT, whereas more direct literary evidence is found in Pliny's *Historia Naturalis,* in *Periplus Maris Erythraei,* and in Strabo's *Geographus.*

It is no accident that the priest Zechariah sees an angel of God at the time of the regular incense offering in the temple, since incense brings about the presence or appearance of the divine being or his messenger (Luke 1:8–13). In this passage, incense also brings the prayer of the people to heaven (v 10), as it does in Rev 8:3–4. The gifts of the wise men or astrologers in Matt 2:11 are those fit for a king (cf. 1 Kgs 10:2, 10).

In Mark 14:3–9, we are told about the anointing of Jesus by a woman in Bethany. This act is described as a preparation for his burial. The aromatic she uses is nard (cf. Matt 26:6–13; Luke 7:37–38; and John 12:1–8). In John 19:38–42, the burial of Jesus is performed by Joseph of Arimathaea and Nicodemus. They anoint Jesus' body with nearly a hundred pounds of myrrh and aloe (cf. Mark 16:1 and Luke 24:1).

As was the case in the OT, people in the NT anointed themselves on a regular daily basis (Matt 6:17). Unguents, probably mixed with aromatic substances, were used to cure diseases (Mark 6:13; Jas 5:14; Luke 10:34).

In the epistles and Revelation, incense and fragrance are used as metaphors. In 2 Cor 2:14–16, the knowledge of God or Christ is described as a fragrant odor; and the apostles themselves are compared to incense or fragrance offered to God by Christ (esp. NEB). The sacrifice of Christ himself is called a fragrant odor pleasing to God in

Eph 5:2 (cf. Gen 8:21). In Rev 5:8, incense is used to describe the prayers of the believers.

Finally the very title of Jesus, *ho christos,* which means "the anointed one," may have had an atmosphere of fragrant odor about it in the Greek-speaking world, even though the title was also used as a metaphor for the possession of the Holy Spirit (Luke 4:18; Acts 10:38).

INCENSE ALTARS. There can be no doubt that incense was featured prominently in Israelite ritual. Two words attested in biblical Hebrew may be rendered "incense": *lĕbōnâ* (actually translated "frankincense") and *qĕṭōret.* The extensive use of *qĕṭōret* as an element in Israelite ritual is attested in Exod 25:6; 35:8; and 37:29. In Exod 30:34–38, *lĕbōnâ* is named as one of the four ingredients of *qĕṭōret,* which was burned in the tabernacle.

Understandably, perhaps, the discovery of what is thought to have once been an incense burner often generates great excitement among archaeologists, for this is sometimes taken to be evidence of a cultic site. However, it is as well to remember that incense also had multifarious secular uses in ancient Israel. Throughout the ANE, disagreeable smells and pestilential insects abounded. The strong olfactory appeal derived from the combustion of incense and other aromatics would have encouraged their use as deodorants and insecticides. The application of incense and other aromatics to funeral pyres for fumigation is still evident in certain parts of the world today. The unnamed "various kinds of spices prepared by the perfumer's art" which filled the bier at Asa's funeral (2 Chr 16:14) may well have included *lĕbōnâ* and *qĕṭōret.* Nor was it unknown for blends of incense and other ingredients to be used as perfume (Exod 30:34–38): semantically, the words "incense" and "perfume" are the same. See also INCENSE.

A. Excavated "Incense Burners"

At Arad, two incense altars of stone 0.4 and 0.5 m high were found on the steps leading up to the holy of holies of the Israelite sanctuary. In these altars, the tops of which are concave, archaeology has been provided with material evidence of objects that played a part in ancient Israelite ritual. It is extremely doubtful, however, that every so-called incense burner was similarly employed.

The artifacts in question include round stands cut out of limestone, sometimes accompanied by a pottery bowl; similarly crowned tubular pottery stands; and pottery models, supposedly of shrines. The earliest examples are from the EB III sanctuary at et-Tell. They are in the form of rectangular clay stands with side openings (for air circulation or as a means of carrying the pot stand?) and a bowl on top. Together with a so-called clay incense altar from Iron Age Taanach and a bronze openwork stand of uncertain provenance from Megiddo, these have been identified as "cultic objects." It is just as likely that at least some may have been no more than braziers used for heating in the winter months (cf. Jer 36:22–23). Although incense could be dropped on any fire in a brazier, the discovery of one such object does not justify the classification "incense burner."

Many so-called "incense burners" show no signs of combustion whatsoever; this was particularly the case of the one found at Taanach. Indeed, the term "incense stand," common in archaeological literature, has no warrant, since their function was by no means confined to the burning of incense; among numerous possible alternatives are their use as plant holders, libation stands, and devices for keeping warm food and drink.

So-called pottery shrines, which may have featured in ANE cults, have also been identified as incense altars (the terra-cotta shrine from Achzib is one example), but it is as well to remember that not every pottery model of an edifice from ancient Palestine is evidence of a cultic object. Unlike the examples from Beth-shan, the pottery models from Megiddo, for instance, had no necessary cultic significance whatsoever.

B. Horned Altars

At Tell Arad and Tell Beer-sheba, large altars of burnt offerings from the First Temple period have been uncovered. Much smaller horned altars were also found in Iron Age Palestine, several in private houses, which have been identified as altars of incense.

In OT literature, "horns" symbolize strength and denote political power, imagery drawn from the force exerted by the bull's forward thrust (Deut 33:17). In prophetic symbolism, "horns" signify kings or military powers (Dan 7:8; 8:21). The reference in 1 Kgs 1:50; 2:28 attests that fugitives seeking asylum clung to "the horns of the altar." These were horn-shaped protuberances on the four corners of the altars, the original purpose of which is now lost to us.

The common assumption that the design was handed down to the altar of incense, where the horns served as a means of supporting the incense bowl, remains conjecture. There are no pictorial representations of horned altars supporting a bowl; no bowls have been uncovered in this position, nor has it been proved that bowls found nearby were used in this manner.

C. Later Altars

From the Babylonian and Persian periods, excavators in Palestine have recovered numerous so-called incense altars

at, among other places, Lachish, Gezer, and Samaria. Many of these are small and cuboid in shape. They have four legs and are decorated with geometric or conventional designs. Some bear naturalistic representations of palm trees and animals. Despite their lateness and decoration, however, the problem of identification remains, and both Glueck (1970) and Albright (1974) expressed grave doubts over the cultic associations of several such objects.

On the above evidence, it is clear that many artifacts identified in scholarly literature as "incense burners" were probably nothing of the kind. Although there can be no doubt that incense featured prominently in Israelite ritual, in ancient Israel the burning of incense had different uses in different places, and the precise function of any particular object is seldom apparent.

INCENSE DISH [Heb *kap*]. The common word for the hollow part of the hand is used to indicate a shallow bowl used as a censer, for burning incense. The RSV renders this term "incense dish." Archaeological discovery of shallow stone bowls, with a hand carved on the bottom so that the vessel appears to be a cupped palm, provides artifactual evidence for these cultic objects. Incense dishes are mentioned in various priestly texts in the Pentateuch (e.g., Exod 25:29; Num 4:7) dealing with the tabernacle, and they appear in other parts of the Bible in relationship to temple equipment (see 1 Kgs 7:50; 2 Kgs 25:14). The incense dishes were made of gold and weighed ten shekels (Num 7:14). In the tabernacle, they were placed on the small golden table which held various other receptacles for food as well as the bread of the Presence; there were twelve such dishes according to Num 7:84, 86. Various other English versions render this term as "spoons" or "pans." See also CENSERS.

CAROL MEYERS

INCEST. See PUNISHMENTS AND CRIMES (OT AND ANE).

INDIA (PLACE) [Heb *hôddû;* Gk *Indikēs*]. The Hebrew word may be derived from the Old Persian *hidav* or the Avestan *hindav*. Both are derivations of the Sanskrit word *sindhu,* which has two meanings: the common usage of "stream" and the proper noun designated for the name of the ancient Indus river. The Indus river is approximately 1,900 miles long, flowing NW from its head in Tibet and eventually proceeding SW across what now is Pakistan. It finally empties out in the Arabian Sea. The area crossed by the Indus river may mark the boundary or main contact point for the large subcontinent of India, situated in S Asia. India is mentioned twice in Esther (1:1; 8:9) to describe the extent of the E boundary of King Ahasuerus' territory. In 1 Esdr 3:2 and Add Esth 13:1; 16:1, it is also used to state the geographical expanse of the Persian domain. There seems to have been no integral historical connection between ancient Israel and ancient India, although many desirable Indian products found their way into Palestinian markets, including ivory, ebony, sandalwood, assorted exotic animals, and other precious materials. These items were usually delivered by either the Arabian and Syrian trade routes or shipped by means of the Red Sea. Elephants, intended for use in warfare, and their drivers, were also traded, as referred to in 1 Macc 6:37.

INFANCY GOSPELS. See THOMAS, INFANCY GOSPEL OF.

INFANCY NARRATIVES IN THE NT GOSPELS. While Mark's gospel starts with the baptism where God's voice identifies Jesus as His Son and stops with the empty tomb proclamation, the other three canonical Gospels have additions at the end (resurrection appearances) and at the beginning. A christological aim dominates the three beginnings: John's introductory hymn (Prologue) identifies Jesus as the Word of God spoken before creation who has become flesh and dwelt among us as God's Only Son; Matthew and Luke associate the identity of Jesus as Savior and God's Son with his conception in Mary's womb by the Holy Spirit. Thus all three gospel beginnings prevent the interpretation (which was theoretically possible for Mark) that Jesus' identity stems from the baptism seen as adoption.

 1. Pre-Matthean Sources/Traditions
 2. Pre-Lucan Sources/Traditions

A. Evaluation of Contents

If we leave until later the story of Jesus at age 12 (Luke 2:41–52), the following features of the infancy narratives that constitute the gospel beginnings of Matthew and Luke (first two chapters in each) are important.

(1) They *agree* on these points: Chap. 1 deals with the prebirth situation; chap. 2 with the birth or postbirth situation. The parents of Jesus are Mary and Joseph, who are legally engaged or married but have not yet come to live together or have sexual relations. Joseph is of Davidic descent. There is an angelic announcement of the forthcoming birth of the child. The conception of the child by Mary is not through intercourse with her husband but through the Holy Spirit. There is a directive from the angel that the child is to be named Jesus. The roles of Savior (Matt 1:21; Luke 2:11) and Son of God (Matt 2:15; Luke 1:35) are given to Jesus. The birth of the child takes place at Bethlehem after the parents have come to live together. The birth is chronologically related to the reign of Herod the Great (Matt 2:1; Luke 1:5). Eventually, the child is reared at Nazareth.

(2) Matthew and Luke *disagree* on the following significant points. In chap. 1, the Lucan story of John the Baptist (annunciation to Zechariah by Gabriel, birth, naming, growth) is absent from Matthew. According to Matthew, Jesus' family live at Bethlehem at the time of the conception and have a house there (2:11); in Luke, they live at Nazareth. In Matthew, Joseph is the chief figure receiving the annunciation, while in Luke, Mary is the chief figure throughout. The Lucan visitation of Mary to Elizabeth and the Magnificat and Benedictus canticles are absent from Matthew. At the time of the annunciation, Mary is detectably pregnant in Matthew, while the annunciation takes place before conception in Luke. In chap. 2 in each gospel, the basic birth and postbirth stories are totally different to the point that the two are not plausibly reconcilable. Matthew describes the star, the magi coming to Herod at Jerusalem and to the family house at Bethlehem, the magi's avoidance of Herod's plot, the flight to Egypt, Herod's slaughter of Bethlehem children, the return from Egypt, and the going to Nazareth for fear of Archelaus. Luke describes the census, birth at a stable(?) in Bethlehem because there was no room at the inn, angels revealing the birth to shepherds, the purification of Mary and the presentation of Jesus in the temple, the roles of Simeon and Anna, and a peaceful return of the family to Nazareth.

(3) None of the significant information found in the infancy narrative of either gospel is attested clearly elsewhere in the NT. In particular, the following items are found only in the infancy narratives. (a) The virginal conception of Jesus, although a minority of scholars have sought to find it implicitly in Gal 4:4 (which lacks reference to a male role), or in Mark 6:3 (son of Mary, not of Joseph), or in John 1:13 ("*He* who was born . . . not of the will of man"—a very minor textual reading attested in no Gk ms). (b) Jesus' birth at Bethlehem, although some scholars find it implicitly in John 7:42 by irony. (c) Herodian knowledge of Jesus' birth and the claim that he was a king. Rather, in Matt 14:1–2, Herod's son seems to know nothing of Jesus. (d) Wide knowledge of Jesus' birth, since all Jerusalem was startled (Matt 2:3), and the children of Bethlehem were killed in search of him. Rather, in Matt 13:54–55, no one seems to know of marvelous origins for Jesus. (e) John the Baptist was a relative of Jesus and recognized him before birth (Luke 1:41, 44). Rather, later John the Baptist seems to have no previous knowledge of Jesus and to be puzzled by him (Luke 7:19; John 1:33).

(4) None of the events that might have been "public" find attestation in contemporary history. (a) There is no convincing astronomical evidence identifiable with a star that rose in the East, moved westward, and came to rest over Bethlehem. In Matthew's story this would have happened before the death of Herod the Great (4 B.C. or [Martin 1980] 1 B.C.). There have been attempts to identify the star with the supernova recorded by the Chinese records in March/April 5 B.C., or with a comet (Halley's in 12–11 B.C.), or with a planetary conjunction (Jupiter and Saturn in 7 B.C.; Jupiter and Venus in 3 B.C. [Martin 1980]). (b) Even though the Jewish historian Josephus amply documents the brutality in the final years of Herod the Great, neither he nor any other record mentions a massacre of children at Bethlehem. Macrobius' frequently cited pun (*Sat.* 2.4.11) on Herod's ferocity toward his sons is not applicable to the Bethlehem massacre. (c) A census of the whole world (Roman provinces?) under Caesar Augustus never happened, although there were three Augustan censuses of Roman citizens. It is not unlikely that Luke 2:1 should be taken as a free description of Augustus' empire-cataloguing tendencies. (d) Luke's implication that Quirinius was governor of Syria and conducted a "first census" (2:2) before Herod's death (1:5) has no confirmation. Quirinius became legate of Syria in A.D. 6 and at that time conducted a census of Judea, which was coming under direct Roman administration because Archelaus had been deposed (Brown 1977: 547–56; Benoit *DBSup* 9: 704–15). (e) Although this item differs somewhat from the immediately preceding one, Luke's idea that the *two* parents were purified ("their purification according to the Law of Moses": 2:22) is not supported by a study of Jewish law, whence the attempts of early textual copyists and of modern scholars to substitute "her" for "their" or to interpret the "their" to refer to other than the parents.

A review of the implication of nos. 1–4 explains why the historicity of the infancy narratives has been questioned by so many scholars, even by those who do not *a priori* rule out the miraculous. Despite efforts stemming from preconceptions of biblical inerrancy or of Marian piety, it is exceedingly doubtful that both accounts can be considered historical. If only one is thought to be historical, the choice usually falls on Luke, sometimes with the contention that "Those who were from the beginning eyewitnesses and ministers of the word" (Luke 1:2) includes Mary who was present at the beginning of Jesus' life. See Fitzmyer *Luke I–IX* AB, 294, 298, for the more plausible interpretation that it refers to the disciples-apostles who were eyewitnesses from the beginning of Jesus' public life (Acts 1:21–22) and were engaged in a preaching ministry of the Word. There is no NT or early Christian claim that Mary was the source of the infancy material, and inaccuracies about the census and purification may mean that Luke's infancy account cannot be judged *globally* as more historical than that of Matthew.

Such a general judgment, however, need not imply that there are not some historical elements in either or both

accounts. The mutual agreement have an importance, for they probably represent points that were in a tradition antedating both Matthew and Luke. For instance, an intelligent case can be made that Jesus was truly descended from David and born at Bethlehem in the reign of Herod the Great. Arguments to the contrary are far from probative (Brown 1977: 505–16). In particular, the virginal conception (popularly but confusingly called the Virgin Birth) should be evaluated cautiously. Despite extremely limited attestation and inherent difficulties, no satisfactory nonhistorical explanation which could dispense with the virginal conception has been brought forward. The frequent approach to the virginal conception as a theologoumenon, whereby the common "Son of God" title of Jesus would have been translated into a (fictional) narrative in which he had no human father, could acquire plausibility only if there were a good antecedent or parallel for the idea of virginal conception. There is no good antecedent or parallel. While there were Greco-Roman and other examples of male gods impregnating earth women to produce a divine child, the NT contains no hint of such a sexual union. Within Judaism there was no expectation that the messiah would be born of a virgin. (The MT of Isa 7:14 does not clearly refer to a virgin, and even the LXX need mean no more than that one who is now a virgin will conceive through future intercourse. Matthew has not derived Jesus' conception from Isa 7:14, but interpreted the OT passage through Christian data.) A claimed Hellenistic-Jewish tradition that the patriarchal wives conceived from God without male intervention (Philonic allegory; Gal 4:23, 29) is far from certain. (On all this, see Boslooper 1962; Brown 1977: 517–33). In terms of historical catalysts behind the concept of a virginal conception, those worth noting are: (a) the agreement of Luke (implicit) and Matthew that Jesus was conceived before Joseph and Mary came to live together and hence that the birth might be noticeably early after cohabitation; (2) the 2nd-century Jewish charge that Jesus was illegitimate (Or. *Cels* 1.28, 32, 69), possibly reflected earlier in John 8:41. If there was a family tradition of a virginal conception, the pre-Gospel shaping of it into a narrative may reflect Christian pastoral needs in face of Jewish polemics.

B. Theological Motifs

The question of historical elements in the infancy narratives should not distract from the clearer theological intent to Matthew and Luke. The following major theological emphases are to be noted:

1. Christology. By referring to Jesus from his conception as descended from David through Joseph and as the Savior/Son of God through the Holy Spirit, the two Evangelists are adapting to this first stage of Jesus' life language that elsewhere in the NT is related to the resurrection or the baptism Rom 1:3–4, for instance, refers to ". . . the gospel concerning God's Son who was born of the seed of David according to the flesh; designated Son of God in power according to a Spirit of Holiness [= Holy Spirit] as of *resurrection* from the dead." A combination of Holy Spirit, designation as Son of God, and divine power is found in relation to the *baptism* in Luke 3:22; 4:1, 14. The angelic annunciation at the time of conception in Luke combines Davidic descent in 1:32–33 with 1:35, where the Holy Spirit comes on Mary and the power of the Most High overshadows her so that the child is called Son of God. Thus, the conception and infancy of Jesus become the vehicle of the basic gospel message of Jesus' fundamental identity.

2. Imagery from Jewish Scriptures. Matthew begins his narrative with the genealogy of Jesus that includes the Hebrew patriarchs and the Judean kings. Matthew's story of Joseph, who receives revelation in dreams and goes to Egypt, clearly recalls the story of the OT Joseph, the dreamer or master of dreams (Gen 37:19) who went to Egypt. The wicked king Herod who kills the male children at Bethlehem evokes the pharaoh who killed the male children of the Hebrews in Egypt. Jesus, the one child who escapes to become the Savior of his people, offers a parallel to Moses. The words spoken to Joseph by the angel after Herod's death, "Go back to Israel, for those who were seeking the child's life are dead" (Matt 2:20) are almost verbatim the words to Moses in Midian, "Go back to Egypt, for all those who were seeking your life are dead" (Exod 4:19). When ultimately Moses went from Egypt through the desert toward the land of Canaan, he encountered another wicked king with homicidal tendencies. Balak of Moab summoned Balaam, a visionary or magus (Philo, *Vita Mos* 1.50 §276) who came from the East (LXX Num 23:7) with two servants (22:22). Balaam foiled the hostile plans of the king by delivering oracles seen in a vision (as of one who sees God in his sleep; LXX 24:4, 16). These predictions concerned a star coming forth from Jacob (24:17) and a king who would rule many nations (24:7). The Matthean magi echo this story. Indeed, the blending of the pharaoh and Balak into Herod may have been facilitated by developments of the Moses story attested in Josephus (*Ant* 2.9 §205–37) and in early midrashim, whereby the pharaoh was forewarned by his sacred scribes (or in a dream which had to be interpreted by magi) that a Hebrew child who would deliver his people was about to be born. At this news, the Egyptians were filled with dread (cf. Matt 2:3: "When King Herod heard this, he was startled and so was all Jerusalem with him."). The pharaoh's plan to forestall the work of the promised child by executing all the male Hebrew children was frustrated because God appeared in a dream to Amram (Moses' father), a Hebrew whose wife was already pregnant. Obviously, Matthew's infancy account is quite close to these midrashic developments of the Moses story.

To the genealogy of patriarchs and kings, and to this narrative evocative of Joseph, Moses, and the Exodus, Matthew has added five citations from the Hebrew prophets which are fulfilled by the infancy happenings. These citations echo the LXX (Isa 7:14 in Matt 1:22–23), the MT (Hos 11:1 in Matt 2:15), or other texts and combinations (Mic 5:1 [—Eng 5:2] and 2 Sam 5:2 in Matt 2:5–6; Jer 31:5 in Matt 2:18, 23). The fifth "prophetic citation" appears in Matt 2:23, but the source from which Matthew took that quotation is unknown: it may be from Isa 4:3 and Judg 16:7 (for extended discussion, see Brown 1977). Such eclecticism and combining of different prophets and versions have led some to describe Matthean composition as a school-like exercise, carefully comparing texts to find the most suitable way of interpreting Jesus (Stendahl 1968; see also Soares Prabhu 1976). The geographical motif that

appears in the four citations of Matthew 2 may be a key to the development of the Matthean infancy message. If the genealogy and the annunciation plus Isa 7:14 in chap. 1 help to tell us *who* Jesus is (Son of David and Savior sent by God), *how* he is that (legal acknowledgment by the Davidide Joseph, and conception from a virgin through the Holy Spirit), then the magi/Herod/flight-to-Egypt story in chap. 2 commented on by four citations tells us *where* Jesus was born (Bethlehem) and *whence* he went subsequently (Egypt, Nazareth). The quotation in Matt 2:23 may be from Isa 4:3 and Judg 16:17 (Brown 1977; see Stendahl 1964).

Luke also makes good use of imagery drawn from the Jewish Scriptures but with a technique less obvious than Matthew's. (Luke's Davidic genealogy for Jesus [3:23–38—some names different from Matthew's] is placed after Jesus has been addressed by God from heaven and before he begins his mission, even as the genealogy of the tribes and of Moses in Exod 6:14–25 is given after Moses has been addressed by God but before he begins his mission of leading the tribes out of Egypt.) If Matthew's infancy narrative begins with Abraham begetting Isaac, Luke's narrative begins with Zechariah and Elizabeth, parents of John the Baptist, who resemble closely Abraham and Sarah (for these are the only two biblical couples whose childlessness is traced to both old age and barrenness; cf. Gen 18:11; Luke 1:7). The birth announcement only to the father, the response of Zechariah ("How am I to know this?" which is a verbatim quotation from Abraham in Gen 15:8), the rejoicing with Elizabeth of those who hear about the conception/birth (Luke 1:58, echoing Gen 21:6)—all these features show the extent to which for Luke too, the Abraham story is the gospel beginning.

The angel who speaks to Zechariah at the hour of incense is Gabriel, who appeared in Dan 9:20–21 at the time of liturgical prayer—his only other appearance in biblical literature. A comparison of Dan 10:7–15 with Luke's infancy account shows a number of similarities, including the visionary being struck mute. If the Abraham story of Genesis stands near the beginning of the collected Law and Prophets in the Hebrew Scriptures, Daniel would have had a place at or near the end of "the other Books" which terminated the collection (even if this last category was a fluid grouping in NT times). Gabriel interpreted for Daniel (9:24–27) the seventy weeks of years, including the end when "everlasting justice will be introduced, vision and prophecy will be ratified, and a Holy of Holies [a place or person?] will be anointed." (See Legrand 1981 for a strong apocalyptic motif in Luke's annunciation.) Thus, Luke's infancy opening has motifs ranging from the beginning to the end of the sacred story of God's people.

From the midst of that sacred story comes another parallel that helped to fashion a major part of the Lucan infancy narrative: conception by Hannah of the child Samuel. Luke's words, "Zechariah went back to his home; afterwards, Elizabeth his wife conceived," resemble strongly 1 Sam 1:19–20; Mary's Magnificat resembles Hannah's song of praise after she conceived and bore a son (1 Sam 2:1–10); the presentation of Jesus in the temple and his reception by the aged Simeon (Luke 2:22–40) echoes the presentation of Samuel at the central shrine in the presence of the aged Eli (1 Sam 1:21–2:11); the two descriptions of Jesus' growth in Luke 2:40, 52 resemble the two descriptions of Samuel's growth in 1 Sam 2:21, 26. Thus, while the Matthean infancy narrative was heavily influenced by the Joseph/Moses epic, the Lucan infancy narrative is heavily influenced by the Samuel epic, perhaps because of the liturgical setting of the Samuel story in the central shrine. For Luke, the Gospel of Jesus begins and ends (24:53) in the temple, and the continuity of Jesus with the cult as well as with the Law (2:22–24, 27, 39) is important. The Lucan narrative has minor reminiscences from the David story, e.g., the shepherds and the "City of David" (2:1–20).

The prophetic books of the OT are not neglected either, for a context of prophetic oracle and inspiration (1:67; 2:27) surrounds the Lucan canticles: the Magnificat (1:46–55), the Benedictus (1:68–79), the Gloria in Excelsis (2:14), and the Nunc Dimittis (2:29–32). Almost every line in these hymns echoes OT psalms or prophets, in the manner of Jewish psalmody attested in the last two centuries B.C. (Maccabean hymns; DSS Thanksgiving Hymns). In particular, the Benedictus is a paean of continuity, citing "our fathers, Abraham, the covenant, the House of David, and God's holy prophets." Luke's two-volume work culminates with the proclamation of Paul that God has sent this salvation to the gentiles and they will listen (Acts 28:29); the two-volume work opens with the insistence that this salvation stands in continuity with Israel.

In summary reflection on the two principal theological points common to Matthew and Luke, we see a strong affirmation of the identity of Jesus in common Christian terms (Son of David, Son of God) combined with a remarkable compendium of scriptural narratives and motifs. Thus, the infancy narratives become a bridge summarizing the story of Israel and anticipating the gospel of Jesus Christ.

3. Relation to Gospel of Jesus Christ. The reaction to that gospel is anticipated in the two infancy narratives, but in different ways. In Matt 1:19, Joseph is described as a just man in a context which implies that his justice consists in the observance of the Law of Moses. He accepts the divine revelation about Jesus' identity; and by being obedient to God's direction given by an angel, he protects Jesus and brings him ultimately to Nazareth. The magi are gentiles who receive revelation through a star and come eagerly to Jerusalem seeking the newborn King of the Jews; yet they cannot find him without the precise revelation in the Scriptures. When the prophet Micah is explained to them, they hasten to Bethlehem to worship. A third reaction is exemplified by Herod, the chief priests, and the scribes: they have and can read clearly the message of the Scriptures about the messiah. However, not only do they not come and worship, but they also seek to end Jesus' life (2:20: note the plural). Matthew's community has encountered or embodies all three reactions. The gentiles who eagerly become disciples are clearly part of Matthew's world (28:19). Joseph, who is just in his observance of the Law, and yet open to new divine revelation about Jesus, is the hero of the story because for Matthew he exemplifies the ideal reaction of Jews to Jesus. Elsewhere, the author praises a scribe who can combine the new with the old (13:52). Herod the king, the chief priests, and the scribes who would destroy the infant Jesus foreshadow Pilate the governor, the chief priests, and the elders who put Jesus

to death (chap. 27). Almost surely, Matthew relates them to the Pharisees whom Jesus criticizes fiercely (chap. 23) and who find a conflict between Jewish traditions and Jesus. From the beginning, then, in Matthew's portrayal there has been a divided reaction to Jesus in Judaism—a just Joseph versus priests, scribes, and rulers.

Turning to Luke, we find a passing reference to a similar set of ideas in 2:32–34, where Jesus is a light to the gentiles, and a glory for the people of Israel—but not for all in Israel, since he is set for the fall and rise of many. This one Lucan infancy suggestion that many in Israel will not accept Jesus is overshadowed by the dramatic examples of Law-observant Jews who eagerly accept the new revelation given by God concerning Jesus, namely, Zechariah, the shepherds, Simeon, and Anna. The shadow of rejection is, therefore, not nearly so dark in Luke as it is in Matthew. A special emphasis is given to Mary's reaction to the proclamation of Jesus. The first one to hear about Jesus, Mary is a model disciple according to the criteria of Luke 8:21 and 11:28, namely, being willing to hear the word of God and keep or do it. This is exemplified in her response to the angel's annunciation: "Be it done to me according to your word" (1:38), a reaction praised by Elizabeth (1:45). Her interpretation of the significance of Jesus expressed in the Magnificat (scattering the proud; putting down the mighty; exalting the lowly; filling the hungry) is an anticipation of Jesus' own interpretation of his basic message in Luke 6:20–26 ("Blessed are you who are hungry. . . . Woe to you who are full now"). In the reiterated motif that "Mary kept with concern all these events, interpreting them in her heart" (2:19, 51), Luke is portraying Mary as one to whom God communicated gradually the interpretation of the mysterious revelatory events of Jesus' infancy in which she participated, and as one who was a receptacle of God-given wisdom (Brown 1986: 672).

C. Pre-Gospel Sources and Traditions

It is extremely difficult to determine the extent to which Matthew and Luke (1) composed freely through reflection on the Scriptures and on Jesus; (2) composed freely by combining such reflection with traditions they received about Jesus' infancy; and/or (3) reused verbatim already-existing narratives or sources (in Greek or Semitic). There is a particular problem in the instance of Luke/Acts, a work which employs different compositional styles, illustrating either the use of fixed sources or the skill of the author who employed a style most appropriate to the narrative at hand, e.g., a highly Semitized style in the infancy narrative, where all the characters are Jews and many of them clearly parallel to OT figures. Brown (1977: 246) stated that he abandoned 'the thesis that by style and language one can decide the question of sources; the linguistic opponents have fought one another to a draw." Farris (1981) thinks it probable, however, that Luke used Hebrew sources. Two facts seem relatively clear: (1) both Matthew and Luke used earlier material, and (2) both authors reworked considerably the material they took over. The following treatment does not attempt to settle the question whether that material was freely used tradition (oral or written) or from already fixed sources.

1. Pre-Matthean Sources/Traditions. a. Matt 1:17 insists on a 3 × 14 pattern of the generations in the genealogy. (There are actually only 13 generations [14 male names] in the first part; 14 generations [14 new male names, but 4 royal generations and 6 ruling kings omitted] in the second part; and only 13 generations [13 new male names, with no other biblical attestation of any figure between Zerubbabel and Joseph] in the third part.) The Evangelist's air of discovering the marvelous in this design makes it difficult to think that he completely invented the genealogy. Yet, it is equally difficult to think that he has given us an exact copy of a family record. For the patriarchal period, Matthew may have drawn on a genealogy similar to that in Ruth 4:18–22 and 1 Chr 1:28, 34; 2:1–15. For the monarchical period, he may have drawn on a popular genealogy of the royal House of David—one in which there were accidental omissions because of similar sounding names. For the last part of the genealogy, Matthew himself may have added the names of Joseph, Mary, and Jesus to a list of uncertain derivation pertaining to putative descendants of Zerubbabel. The addition of the four OT women (all appearing in stories colored by the apparently scandalous or irregular, and yet women who showed initiative or played an important role in God's plan, three of them outsiders to Israel and the fourth married to an outsider) was Matthew's attempt to prepare for Mary's role (apparently scandalous but a unique vehicle of God's plan) and for the spread of the gospel to gentile outsiders.

b. A narrative centered on three stylized angelic dream appearances of Joseph, with Joseph's response to each (see Brown 1977: 109 for reconstruction). The basic-story theme would have been the forthcoming birth of a savior, Herod's jealous suspicions, the flight to protect the newborn child, and the ultimate return after Herod's death—a narrative based on the Moses story.

c. A narrative of magi from the East who saw the star of the King of the Jews at its rising and came to worship—a narrative based on the Balaam story.

d. An annunciation of birth that involved Jesus' identity as Son of David and Son of God, with conception through the Holy Spirit (rather than through a male parent) as part of that identity. This followed an OT pattern of birth annunciations with stereotyped features (Brown 1977: 156), including the appearance of an angel, fear by the visionary, a divine message, an objection by the visionary, and the giving of a sign. In the infancy narrative, the message was shaped in part by the christology of the early preaching now being applied to Jesus' conception.

2. Pre-Lucan Sources/Traditions. a. An annunciation similar to pre-Matthean *d*. The similarities between the two gospels on this item (amidst great dissimilarities on other items) is a reason for positing this as a once-separate element. Luke's annunciation pattern is even fuller than Matthew's, involving some elements of OT annunciations that commission divinely chosen figures like Moses (Exod 3:2–12) and Gideon (Judg 6:11–32). The added features reflect the Lucan use of the scene as also a call of Mary to be the first Christian disciple (see discussion in Legrand 1981: 90–96; Muñoz Iglesias 1984).

b. Tradition about John the Baptist, involving his priestly origins. (Luke is noteworthily accurate in his description of the temple courses of priestly service.) Some (like Fitzmyer *Luke I–IX* AB, 316, 320) posit a relatively fixed birth source from Baptist circles behind Luke 1:5–

25, 57–66. Indeed, this posited John the Baptist infancy narrative is often considered the pattern on which Luke constructed the story of Jesus' infancy, granted the clear parallelism between the two annunciations and the two accounts of birth. Others (Brown 1977: 266–69) think of some tradition about John the Baptist's family plus retroversion of John the Baptist material from the ministry (e.g., 1:15 compared with 7:28, 33; 1:42–45 compared with 11.27, 28), rather than a fixed source. The shaping of the annunciation of John the Baptist's birth may have been influenced by the already-circulating story of the annunciation of Jesus' birth.

c. The infancy narrative canticles discussed above, stemming from a Jewish-Christian group, perhaps from the Jerusalem community of temple-observant poor (*ʿanawîm*), described with enthusiastic idealism in Acts 2:43–47. Scholars debate whether these canticles were originally composed in Semitic or in Greek (Brown 1986: 660–62).

d. Some traditions from Jesus' family about his birthplace, circumcision, and presentation. The extent and detail of such traditions are debated, depending in part on whether one thinks Mary was the ultimate source of Lucan information. The present writer judges that this cannot be shown and remains quite dubious, especially because of apparent inaccuracies about the census and Jewish customs.

e. A story of Jesus at age 12. Having the air of an appendage after the conclusion of 2:40, the narrative in 2:41–51 was probably once independent of the conception and infancy tradition. Read by itself, 2:47–50 gives no indication of what has preceded in Luke by way of the revelation of Jesus' divine identity. Probably this story is an example of a wider collection of boyhood-christology stories (see *Infancy Gospel of Thomas*), where the knowledge and power evident in the public ministry of Jesus appear in contexts of his youth as he worked miracles (on the Sabbath) and speaks with divine knowledge. This type of story was another way of demonstrating that Jesus did not become divine at the baptism; he was divine throughout his whole life, as could be seen in the first times he acted and spoke.

The infancy narratives of Matthew and Luke, once written, contributed to a wider efflorescence of infancy gospels, e.g., the *Protevangelium of James* and the *Arabic Gospel of the Infancy*. It is not always easy to determine the extent to which these subsequent infancy gospels draw only from the canonical narratives or from other oral traditions (however imaginative). See THOMAS, INFANCY GOSPEL OF.

INHERITANCE (OT). See FAMILY.

INHERITANCE (NT). The Gk terms are *klēronomia,* "inheritance"; *klēronomein,* "to inherit"; *klēronomôs,* "heir"; *sugklēronomos,* "joint heir." In the NT the content of the terms can move all the way from a simple judicial concern for personal property (Luke 12:13) to a heavenly and imperishable inheritance beyond history (1 Pet 1:4). What is distinctive is the way NT writers relate their varied uses of inheritance language to Jesus Christ and to his followers.

A. Background

The uses of inheritance language in the OT vary widely within the context of the history of Israel. These contexts move from a concern for personal property to theological affirmations of Canaan as Israel's inheritance, of Israel as Yahweh's inheritance, and of Yahweh as Israel's inheritance.

Some later Jewish writings can view the Law as Israel's inheritance (e.g., Sir 24:23; *1 En.* 99:14). Some speak of inheriting life or eternal life (e.g., *Pss. Sol.* 14:7; *1 En.* 40:9; cf. *2 En.* 50:2; *2 Bar.* 44:13). Philo can see inheritance as a mystical unity with God (in *Heres*). This variety shows how different historical contexts produce a rich diversity in understandings of inheritance in the historical background to the NT.

B. Paul

Turning to the oldest NT writings, we find that Paul relates inheritance language to the covenant promise to Abraham (Gal 3:18; 4:30; Rom 4:13–14) and sees that promise fulfilled in Jesus Christ. However, unlike the OT, he never refers to the land of Canaan as Abraham's inheritance. For Paul, those with faith in Jesus Christ are Abraham's true heirs (Gal 3:29). Through God's gift, the gift of a new relationship in Christ, they are adopted (cf. Gal 4:5; Rom 8:15) as God's sons and heirs (Gal 4:7) and "fellow heirs with Christ" (Rom 8:17). Though Paul uses a legal understanding of inheritance that sees minor children as heirs (Gal 4:1), it is with Christ's coming that they enter into their inheritance. As the offspring of Abraham (Gal 3:16), Christ is the heir, but as the fulfilled promise of blessing to Abraham (Gal 3:14), he also is the inheritance.

Thus as heir and inheritance, he becomes both the means to and the content of the new life and of new relationships which believers have through their baptism into Christ (Gal 3:26–29).

Paul also can use the verb "inherit" futuristically regarding those who will not inherit the kingdom (1 Cor 6:9–10; Gal 5:21; cf. also the future use of inheritance language in the probable Paulinists: Col 3:24; Eph 5:5; Titus 3:7), as well as concerning the resurrection in which "flesh and blood cannot inherit the kingdom of God" (1 Cor 15:50). Thus, God's reign or kingdom is the final realization of that inheritance already inaugurated with the historical coming of Christ.

C. Ephesians

This author emphasizes a future-oriented inheritance (Eph 1:14, 18; cf. 5:5), which is the cosmic unity of all things in Christ (cf. Eph 1:9–10). Already however, the Holy Spirit is the "down payment" (*arrabōn;* cf. 2 Cor 1:22; 5:5) that anticipates the future. As in Paul, Christ is indeed the means to that inheritance; but unlike Paul, the emphasis does not fall on Christ as already its promised fulfillment. Given the writer's concern for Church unity, Ephesians refers to the gentiles as "fellow heirs" (Eph 3:6) and understands the unity of Jews and gentiles in the Church as already showing (cf. 3:4–6) and pointing to (cf. 3:10) the ultimate inheritance of cosmic unity through God's saving deed in Christ.

D. The Synoptic Gospels and Acts

In the story of the rich man who comes to Jesus, Matthew, Mark, and Luke all refer at some point to inheriting eternal life (Matt 19:29; Mark 10:17; Luke 18:18). Matthew, however, gives "inherit" a pronounced futuristic emphasis. Unlike Mark and Luke, he uses the term only after the story itself, relating it to the "new world" and the coming of the Son of man (Matt 19:28; cf. Dan 7:13; *1 En* 71:14–17). Matthew gives this future emphasis further support by using such phrases as "shall inherit the earth" (Matt 5:5; cf. Ps 37:11; *1 En.* 5:7b) and "inherit the kingdom" (Matt 25:34; cf. *2 En.* 9:1; Jas 2:5 strikes a similar note).

All three writers use "heir" and "inheritance" with special christological significance in the allegorized parable of the wicked tenants (Matt 21:38; Mark 12:7; Luke 20:14). The early Church Fathers understood Jesus as Son and heir, and with his death they viewed the inheritance (i.e., the vineyard; cf. Isaiah 5) as passing to them. Matthew sees the vineyard as God's kingdom (Matt 21:43), and with the death of God's Son and heir this inheritance now becomes the trust of those "producing the fruits of it."

In Acts, Luke denies any "inheritance" of land to Abraham, though it is promised to him and his descendants (Acts 7:5) and its historic connection to Canaan affirmed (13:19). Luke finally interprets the inheritance as given to "all those who are sanctified" (20:32), i.e., to the Church.

E. Hebrews

This writer depicts Christ as the Son and heir of all things (Heb 1:2; cf. 1:4 where *keklēronomēken* should be translated "inherited"). As high priest and mediator of a new covenant, Christ is the means to "the promised eternal inheritance" (9:15; cf. Syr. Enoch 10:6; 55:2; in Heb 1:14 *klēronomein* should be translated "inherit") for those who (6:12) through faith and patience "inherit the promises." The content of this promised inheritance is the heavenly city (11:8–10).

Hebrews relates inheritance language to Abraham (6:12, 17; 11:9; note also references to Noah and Esau in 11:7; 12:17), but his inheritance is not the land of Canaan; it is the city "whose builder and maker is God" (11:10).

Hebrews also includes a judicial perspective. Only through the death of the eschatological (cf. 1:2) Son and heir does the will or covenant *(diathēkē)* take effect (9:15–17). Thus, the death of Jesus becomes the covenantal means for persons to receive the promised eternal inheritance of the heavenly city.

F. 1 Peter

This writer also gives to inheritance a content that is beyond human history, "an inheritance which is imperishable, undefiled, and unfading, kept in heaven for you" (1 Pet 1:4). The crucial means to this "living hope" is the resurrection of Jesus Christ from the dead (1:3). Thus, the event of Jesus' resurrection makes the hope of future resurrection a present reality and becomes the basis for the future imperishable inheritance (cf. other uses of inheritance language in 3:7, 9; in the latter, *klēronomēsēte* should be translated "may inherit").

G. Conclusion

The theological use of inheritance language in the NT exhibits a tension between the present and the future. For Paul, Jesus Christ already fulfills the inheritance promised to Abraham and makes persons of faith heirs of God and joint heirs with Christ, even though there remains a kingdom to inherit in the future. Ephesians points to a future inheritance that is the cosmic unity of all things in Christ, while simultaneously Jews and gentiles already are joint heirs in the Church, and their unity witnesses already to that ultimate unity. The Synoptics speak futuristically of inheriting eternal life, with Matthew especially giving inheritance language a strong eschatological emphasis. For all synoptic writers, Jesus is the heir of the vineyard inheritance, now understood as the reign or kingdom of God. The reign of God is both present and future; it calls for present faithfulness, but its full realization is in the future. Unlike the other synoptic writers, Luke sees this realization as occurring already within the Church. For Hebrews, the content of the inheritance is the future heavenly city of God, and it is by the covenantal death of Jesus, the heir of all things, that this inheritance will be effected. In 1 Peter, the content also is future, "an inheritance . . . kept in heaven for you," a "living hope" made effective by the resurrection of Jesus Christ from the dead (cf. Rev 21:7 for an additional future reference to inheritance).

INK. See WRITING AND WRITING MATERIALS.

INQUIRE OF GOD. The process of consulting the deity on some matter of individual and/or communal importance, generally through the offices of an intermediary. The Hebrew Scriptures use, with varying frequencies, three distinct verbs to designate the process, each referring to a somewhat different inquiry procedure. Least frequent in this connection is the term *biqqēš.* In Exod 33:7, it denotes the Israelites' asking for Yahweh's guidance through the mediation of Moses at a particular site, i.e., the "Tent of Meeting" outside the camp during the desert period. The subject matter of their inquiries is not specified. The context does, however, allude to the communication process between Yahweh and the mediator Moses: Yahweh, present in the "pillar of cloud" at the tent door, speaks "face to face" with Moses (Exod 33:9, 11).

Far more common as a designation for the inquiry process is the verb *šā'al* (Num 27:21; 1 Sam 10:22; 14:37; 22:10, 13, 15; 23:2, 4; 28:6; 30:8; 2 Sam 2:1; 5:19 [= 1 Chr 14:10], 5:23 [= 1 Chr 14:14]; cf. Exod 28:30; 1 Sam 14:41). All but the first of these passages concern events of the early monarchical period, under Saul and David. From a piecing together of the indications provided by the texts, an approximate, composite picture of the particular sort of "inquiry" they envisage emerges: An Israelite politico-military leader—or on occasion the people as a whole (1 Sam 10:22)—put one or more *yes* or *no* questions to Yahweh. The mediator of Yahweh's response thereto is a priest, whose role is to manipulate—in some unspecified way—the sacred dice known as the Urim and the Thummim (1 Sam 14:41), one of which represented a positive answer, the other a negative one. The officiating priest carried these dice in a sort of pouch called the ephod (Exod 28:30). The inquiry might take place at a sanctuary (e.g., 1 Sam 22:10), but more often it transpired in the open air, e.g., in a military camp. Questions posed concerned significant projected political or military measures about whose outcome the inquirer especially felt the need of divine assurances. Omission of the procedure prior to such initiatives is denounced as culpable presumption (Josh 9:14; Isa 30:2). Yahweh remains free, however, presumably by causing the repeated rolls of the dice to produce inconsistent results, not to answer the inquiry in a particular case (1 Sam 14:37; 28:6). In any event, there is no mention of this particular form of inquiry being carried out subsequent to David's definitive triumph over the Philistines (2 Sam 5:17–25). This fact likely reflects the demand of later times for something more in the say of divine guidance/assurance than a simple *yes* or *no* answer could provide. There is, however, a NT echo of the practice in the account of Matthias' being selected to succeed Judas as apostle by means of lot-casting in Acts 1:26. Finally, the OT uses the verb *šā'al* also in reference to an inquiry of some deity, whether by Israelites or non-Israelites, involving other (and illegitimate) intermediaries and/or devices (Deut 18:11; 1 Chr 10:13; Ezek 21:23; Hos 4:12).

The most frequent of the OT's three verbs for designating an inquiring of God is *dāraš* (Gen 25:22; Exod 18:15; 1 Sam 9:9; 1 Kgs 14:5; 22:5 [= 2 Chr 18:4], 7 [= 2 Chr 18:6]; 2 Kgs 3:11; 8:8; 22:13 [= 2 Chr 34:21]; Jer 21:2; 37:7; Ezek 14:3; 20:1–3). The inquirer is usually the Israelite king who, however, often puts his question indirectly, through a delegation dispatched by him. On occasion, the inquiry proceeds from other categories of persons: Rebekah (Gen 25:22), Moses (Exod 18:15), the (pagan) Syrian king Benhadad (2 Kgs 8:8), and the Jewish elders (Ezek 14:3; 20:1–3). The intermediary figure in these texts is, typically, not a priest but a prophet/seer (1 Sam 9:9), e.g., Ahijah (1 Kgs 14:5), Micaiah (1 Kgs 22:7), Elisha (2 Kgs 3:11; 8:8), Huldah (2 Kgs 22:13), Jeremiah, and Ezekiel. The inquiry takes place in a battlefield setting (e.g., 1 Kings 22; 2 Kings 3) or at the prophet's place of residence (e.g., 1 Kings 14; 2 Kings 22); it is never explicitly said to occur at a sanctuary. The questions addressed to Yahweh through the prophets cover a somewhat wider range than is the case in the *šā'al*-type inquiry: legal disputes (Exod 18:15), lost property (1 Sam 9:6–9), outcome of a pregnancy (Gen 25:22) or sickness (1 Kgs 14:5; 2 Kgs 8:8), the upshot of a military crisis (1 Kgs 22:5, 7; 2 Kgs 3:11; Jer 21:2; 37:7), and the significance of a newly discovered book (2 Kgs 22:13). Unlike the priest in the foregoing texts, the prophetic intermediary in these passages is cited as being offered remuneration for his services on several occasions (1 Sam 9:7; 1 Kgs 14:3; 2 Kgs 8:9). Very little is recounted concerning the actual process by which the prophet relays the inquirer's question to Yahweh and receives the latter's reply—although see 2 Kgs 3:15, where Elisha prepares himself for a divine communication by having a minstrel play. In any case, Yahweh's answer as mediated by the prophet takes the form of a longer or shorter first-person divine speech which, depending on its content, constitutes an oracle of either salvation or doom. The latter type predominates. In terms of their historical referents, those passages cover an extended period, from patriarchal times down to shortly before the Exile. The greater expansiveness of the divine response which it allowed helps explain the perdurableness of the *dāraš* inquiry and its supplanting of the *šā'al* type. Eventually, however, this form of inquiry also disappeared with the gradual tapering off of its prophetic practitioners in the postexilic period. Finally, two further similarities between the *dāraš* and *šā'al* inquiries can be noted. Like the latter, the former term can also designate an illegitimate "inquiry," i.e., one directed to a divinity other than Yahweh (2 Kgs 1:2ff.: Ahaziah inquires of Baalzebub), or utilizing a reprobate mantic figure (1 Sam 28:7: Saul inquires of a medium). Similarly, Yahweh is free in both forms of inquiry to withhold an answer to the questions posed (see Ezek 14:3; 20:1–3—*dāraš*).

By way of conclusion to this discussion, it should be pointed out that in the OT two of the above terms, i.e., *biqqēš* and *dāraš,* undergo an evaluation in which they

progress from signifying a one-time "consulting" of Yahweh about a particular matter to designating a habitual stance of "seeking" God in fidelity and obedience. This development is observable in the prophetic writings (see e.g., Isa 65:1, 10; Hos 10:12; Amos 5:4, 6; Zeph 1:6; 2:3), and especially in Chronicles (see e.g., 1 Chr 22:19, etc.). It can likewise be noted in the NT's use of the term *zēteō*, "seek" (see e.g., Matt 6:32f.; 7:7ff.; Rom 10:20 = Isa 65:1; Gal 2:17; Col 3:1).

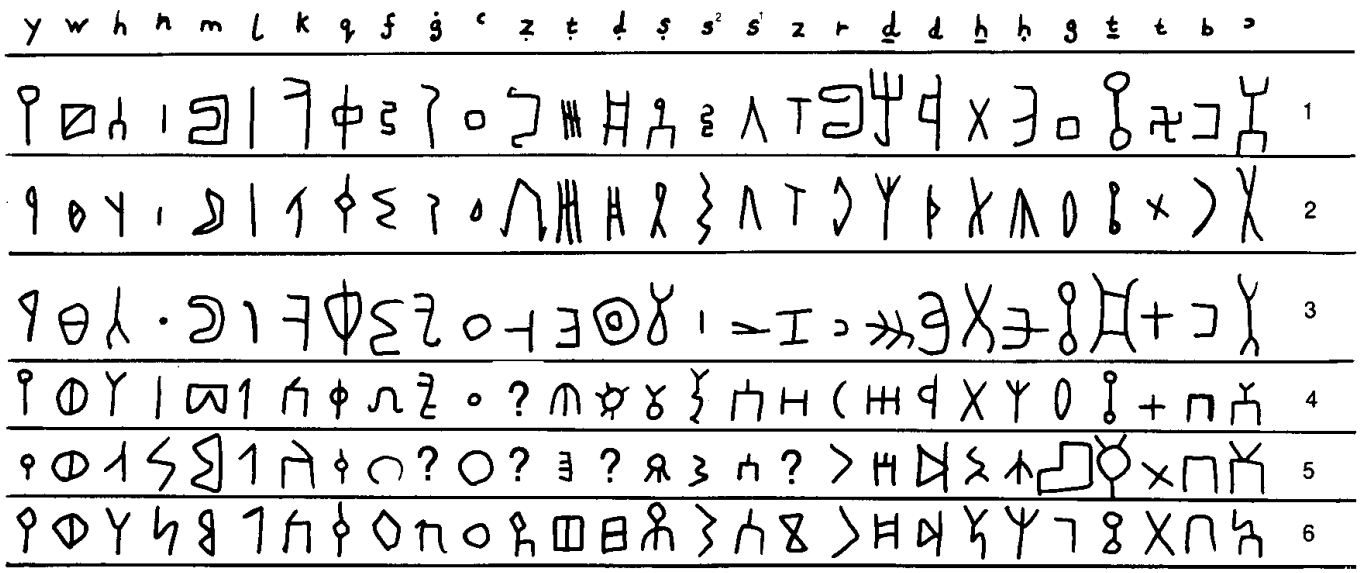
CHRISTOPHER T. BEGG

INSCRIPTIONS, SAFAITIC. The name "Safaitic" is conventionally given to a group of inscriptions in an ancient N Arabian language, expressed in a variety of the S Semitic script, written by the ancient bedouin and seminomads of the Syro-Arabian desert. The name is derived from the *Ṣafâ*, an area of basalt desert SE of Damascus, near which they were first discovered in 1857. The inscriptions have since been found over a wide area of S Syria, Jordan, and N Saudi Arabia, with isolated examples as far afield as Palmyra, Hâ'il, the Wadi Ḥaurân in W Iraq, and the Lebanon. However, the largest concentration appears to be in the *ḥarra*, or basalt desert, stretching S and E from the Jebal Druze. Some 14,000 have been published so far, but these represent the fruits of relatively few expeditions, and there are clearly scores of thousands of texts still awaiting discovery. With the exception of one large (Littmann 1943) and several small collections, all the Safaitic inscriptions found before 1950 were brought together in that year in Part 5 of the *Corpus Inscriptionum Semiticarum* (CIS), edited by G. Ryckmans. However, several major collections have appeared since (see the bibliography at the end of this article).

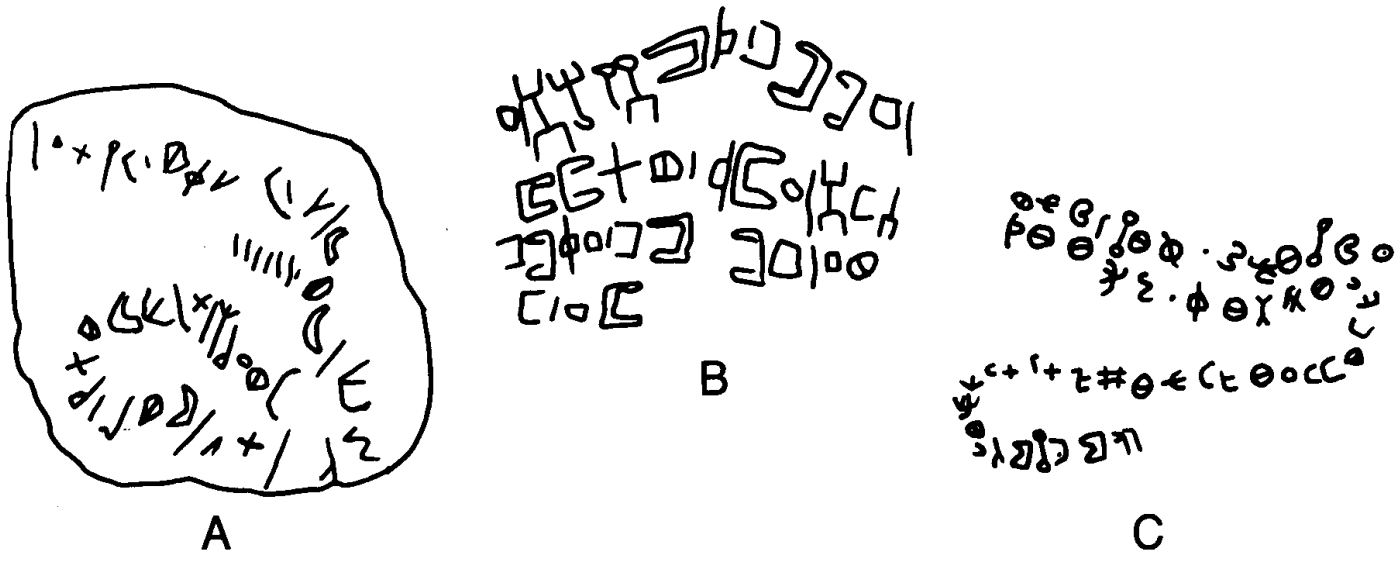
Work on the definitive decipherment of the script was begun by J. Halévy in 1877, refined by F. Praetorius in 1882–83, and completed in 1901 by E. Littmann, who was the first to recognize that the alphabet consisted of 28 letters, rather than 23 (the equivalents of the 22 letters of the Phoenician alphabet, plus *ḫ*), as had previously been thought.

A. Script



While it was clear from the beginning that the script was in some way related to that of the S Arabian and other N Arabian (Dedanite, Lihyanite, Thamudic) inscriptions (see Fig. INS.01), the exact details of this relationship have remained in dispute. The reasons for this are as follows. First, there is virtually no secure dating evidence for any of the types of N Arabian inscriptions, and it is therefore impossible to establish either an internal chronology for these texts or their chronological relationship to the S Arabian inscriptions. Second, the vast majority of N Arabian inscriptions are known only from hand-copies, in almost all of which scant attention has been paid to the exact shape of the letters. Thus, features taken as indicating development may in fact be merely copyists' errors. Finally, the letter-forms of monumental S Arabian and those of the Safaitic and Thamudic graffiti are in no way comparable, since the shapes in each have developed under completely different pressures and for quite distinct purposes. Thus, the view, which is implicit in many discussions of these texts, that there was an evolution from S Arabian, via Dedanite and the various script-types classed as "Thamudic," ending with Safaitic, in which each script developed out of its predecessor, can only be highly speculative and, on present evidence, seems unlikely to represent the true picture.

This view lies behind the term "Thamudic-Safaitic" used by H. Grimme (1929: 12; 17; 55) and E. Littmann (1940: 97) to describe two different types of text, which they thought contained a mixture of Thamudic and Safaitic letter-forms, and therefore considered early. However, some of Littmann's examples are in fact pure Thamudic B (see Fig. INS.01:4), and the letter-forms in the rest, and in Grimme's texts, are no different from those occurring in inscriptions which both scholars considered pure Safaitic.



The most striking variety of Safaitic is the so-called "square script" (see Fig. INS.01:1; Fig. INS.02:B) in which the letters are given a neat angular appearance. This has led a number of scholars to regard these letter-forms as more "monumental" than other types and, by a curious series of nonsequiturs, as therefore closer to S Arabian, and hence "the older type of Safaitic." In fact, it will be clear from Fig. INS.01 that it is merely the elegant appearance that invites comparison with monumental S Arabian, not the letter-forms themselves, which are in all important features identical to the common Safaitic shapes. There is also no evidence that it was a "monumental script," since virtually all the texts in which it is used are graffiti, and hardly any of the handful of inscriptions which could be called "monumental" employ it. It would appear to be contemporary with other Safaitic letter-forms, since there are square script and common script texts by the same authors.

B. South Safaitic

E. A. Knauf has argued that the style and onomastic content of many of the most northerly Thamudic texts (known as "Thamudic E" or "Tabuki Thamudic" [see Fig. INS.02:C]) have more in common with Safaitic than with other forms of Thamudic. He therefore suggested reclas-

INS.01. Comparative chart of South Semitic alphabetic scripts. *1*, Safaitic "square script"; *2*, Safaitic; *3*, South Safaitic/Thamudic E; *4*, Thamudic B; *5*, Dedanite; *6*, Northern Minaic. All letters have been placed as if in a text reading right to left. The stance and shape of many letters in Safaitic and Thamudic may vary considerably. *(Courtesy of M. C. A. Macdonald)*

INS.02. Safaitic and Thamudic Inscriptions. *A*, a Safaitic inscription: starting in the top lefthand corner, it curves down and round upon itself. It reads: *l ʿty bn wqsʾ bn sʾlm w mlḥ f h lt sʾlm w gnyt w mḥlt l d yʿwr.* "By ʿty son of Wqsʾ son of Sʾlm. And he traded in salt. And so, O Lt, [grant] security and riches, and misfortune to whoever obliterates [the inscription]" (WH 24). Note the typical sequence of name–genealogy–statement–invocation–curse. The magic sign of 7 lines (see Littmann 1940: 120) is very common as is the cartouche enclosing the text.

B, a text in the Safaitic "square script": starting in the top right-hand corner and running boustrophedon, it reads: *l grm bn dmṣy dʾl ʿmrt w ndm ʿl ʾbh w ʿl grm bn ʿqrb bn ʿm*, "By Grm son of Dmṣy of the tribe of ʿmrt. And he grieved for his father and for Grm son of ʿqrb son of ʿm" (Macdonald 1980: no. 36).

C, a South Safaitic/Thamudic E inscription: starting at the bottom and running upward boustrophedon. Note the variant forms of *ṯ*, *d*, and *ḏ*. It reads: *l km bn gmhr w dkrt lt gt w ḫbk wʿrb w bkr w hlʾ w qnfd w wd w ḥmlg w qnfd w gmʿ*, "By Km son of Gmhr. And may Lt remember . . ." followed by a list of names (Harding and Littmann 1952: no. 58). The expression *dkrt lt* is characteristic of this type of text. *(Redrawn by M. C. A. Macdonald, A, from Winnett and Harding 1978: 659, pl. 1, no. 24; B, from Macdonald 1980: 337, pl. CXI, no. 36; C, from Harding and Littmann 1952: pl. IV, no. 58)*

sifying these inscriptions as "South Safaitic," while retaining the term "Tabuki Thamudic" for those texts in the same script but with a "non-Safaitic" content (1983: 589). At the same time, he demonstrated that South Safaitic and Tabuki Thamudic shared marked peculiarities of script and orthography which clearly distinguish them from other forms of Safaitic and Thamudic. Most notable among these was the use of the Safaitic *ṯ*-sign to represent etymological /g/. Following this, G. M. H. King (1988) showed that two other signs in this script had unexpected values; viz. the Safaitic *ḏ*-sign represented /ṯ/ and a sign consisting of two concentric circles /ḏ/ (see Fig. INS.01:3).

The majority of inscriptions of this type are to be found in S Jordan and N Saudi Arabia (e.g., most of those in Harding and Littmann 1952).

C. Abecedaries

Two ABCs have been found so far, one for South Safaitic arranged, with some exceptions, in the Phoenician order, and the other, in the common Safaitic script, arranged in a hitherto unknown order, apparently based on similarities of letter-shape (see Macdonald 1986).

D. Language

The most thorough survey of the Safaitic language is still that of Littmann (1943: 12–24), though for additions and corrections see Winnett and Harding (1978: 12–15) and Clark (1979: 112–24); and for an excellent brief account, Müller (1980). Safaitic is a branch of the language group known as early North Arabian (Frühnordarabisch) and is thus closely related to Arabic. Within this group, it is one of a number of dialects (along with Dedanite, Lihyanite, "Thamudic," and Hasaitic) distinguished by their use of *h-*, rather than *ʾal-*, for the definite article. The alphabet consists of 28 letters which, ethymologically at least, represent the same phonemes as those of Standard Arabic. The orthography is severely consonantal, leaving all vowels, diphthongs, and doubled letters unmarked (on possible exceptions, see Müller 1980: 68–69). Writing is continuous, with neither word-dividers nor spaces between words, and the direction depends solely on the whim of the author and the nature of the surface he is inscribing. See Fig. INS.02. The following are some of the more notable points in which Safaitic differs from Standard Arabic.

1. s^1 and s^2 are clearly still in Beeston's (1962) Phase II, representing [ʃ] and a lateralized sibilant respectively, and have not yet reached their Standard Arabic values of [s] and [ʃ].
2. Vowelless *n* is sporadically assimilated in many words (e.g., *bt/bnt*, "daughter," *m/mn*, "from") but always in the VIII form of *nẓr*, which thus appears as *ṭẓr*: "he was on the look-out, he waited."
3. No examples of the X form have yet been identified.
4. The endings represented by *tâʾ marbûṭa* in later Arabic appear as *-t* in all positions, but see Müller (1980: 69) for a possible indication of the transition from *-at* to *-ah*.
5. Etymological *-y* is found in such words as *my*, "water," and *sʾmy*, "sky," where Standard Arabic has *-âʾ*.
6. The third radical is usually represented in verbs tertiae *w* and *y* suggesting that they were formed on the pattern of the strong verb, though there are apparent expectations (e.g., s^2t as against s^2ty, "to winter").
7. The relative pronoun is *d̲* and the vocative particle *h-*.
8. Many of the words which lie at the heart of the Safaitic authors' way of life are better explained from NW Semitic cognates than from later Arabic. Thus *mdbr* (Heb *midbār*, Aram *madbĕrāʾ*), "open steppe, desert," as opposed to *ḥrt* (Ar *ḥarra*), the "basalt desert"; ms^1rt (Aram *mašrîtāʾ*), "encampment"; *nh̲l* (Heb *naḥal*, Aram *naḥălāʾ*), "valley," as against Ar *naḫl*, "palm," *dd* (Heb *dôd*, Aram *dôdāʾ*), "paternal uncle," rather than Ar *ʿamm*, which in Safaitic is used for "grandfather." It is unlikely that these are words loaned into Safaitic; rather, they must represent part of an early lexical stock which has been displaced in later Arabic by words from other dialects.

E. Names

No complete study has been made of the names in these texts, though Littmann (1943: xxiv–xxviii) and Müller (1980: 72–73) have provided very useful discussions, and Harding (1971) gives an indispensable index with comparative material. There are numerous theophoric names, usually compounded with the common Semitic deity *ʾIl* (*ʿbdʾl*, *ʿbdl*) or *Lh* (*tmlh*, s^1*ʿdlh*), though these deities are seldom found in prayers. On the other hand, those deities most frequently invoked appear much more rarely in names (e.g., *Lt*, *Ds*^{2}*r*, and *Ḥdw/y*); and some, apparently not at all (e.g., *S*^{2}*ʿhqm*). In common with the Nabatean texts of Sinai, Safaitic has a number of names prefixed by *bn-* (in Nabatean, *ʾbn*), where the name is never that of the father, when that can be established, e.g., *bnkbr bn mḥnn* (Winnett and Harding 1978: No. 1194). A number of names have the *-w* ending characteristic of Nabatean (e.g., *ḥyw*, *ʿbdw*), though all of them also occur without the *-w*. Müller (1980: 73) has suggested that the Aramaic emphatic ending *-ʾ* may occur on some names, parallel to the Safaitic prefixed article *h-* (e.g., *ʿbdʾ* beside *hʿbd*). The Latin names *Titus* (*tts*^{1}) and *Claudius* (*ʾqlds*^{1}) have also been found, and Müller (1980: 73) has identified *ʾftnyʾ* as Greek *Aphthonios*. *Tlmy* could represent either *Ptolemy* or a Semitic name similar to that of *Talmay*, king of *Gĕšûr* (2 Sam 3:3), an area which has been placed in or near the Ḥaurân (on Safaitic names in Greek transcription, see Sartre 1985: 161–276). At the same time as he was recording Safaitic inscriptions, Littmann also collected the names of the bedouin and Druze of the Ḥaurân, and noted that many Safaitic names, which are rare or unknown in the Classical Arabic onomasticon, were in use among the modern inhabitants of the area. However, far more work is needed before conclusions can be drawn from this apparently significant correlation.

F. Content and Structure

The vast majority of Safaitic inscriptions are graffiti. They are thus a form of self-expression rather than communication. They record the author's name and what he was doing or what he felt. There are *cris de coeur*, boasts and prayers, but no memoranda, messages, history, or literature. It seems probable that most were written as a way of passing the time while the authors were pasturing their herds or on the lookout either for enemies or for game, because their drawings show them to have been keen hunters.

Almost all the texts are expressed in a series of formulaic constructions (Petráček 1973, Voigt 1980). All but a handful of short prayers are introduced by the preposition *l* (the *lâm auctoris*), followed by the author's name and usually that of his father, with very often, a more or less lengthy genealogy. Many authors also indicate the social group to which they belong, most commonly by placing *d̲ʾl*

plus the name of the group at the end of the genealogy. *D²l* is commonly translated "of the tribe of," but *²l* (Ar *²âl*) appears to have been used for all social groups from the family to the tribal confederation. Alternatively, the *nisba* form can be used, e.g., *h-ḍf-y*, "the Ḍaifite" (the vocalization is purely conventional), or the genealogy may be taken back to the eponymous ancestor of the group (Harding 1969: 13, No. 4). Many texts then continue with descriptions of the author's activities. Thus, they speak of seasonal migrations (*²s²rq*) E to the open steppe beyond the basalt, and of returning, often to the same spot (*h dr*) year after year (*ᶜm f ᶜm*) to spend the winter (*s²ty*) or the spring (*dṯ²*). They mention encampments (*ms¹rt*) and watering places (*wrd, brkt*), of pasturing their herds of camels (*²bl*), goats (*mᶜzy*), and sheep (*ḍ²n*) and of shearing them (*qṣṣ*). They go on raids (*ġzz*, a dialectical form of Ar *ġazâ*) and pray for booty (*ġnmt*). The texts also abound with words of longing (*ts²wq*) and grief (*wgm, wlh, ndm, b²s¹mẓll*, etc.), the distinct nuances of which are much disputed. Some follow the discovery of a relative's inscription (e.g., *w wgd ²ṯr ²bh f ngᶜ*, "and he found his father's inscription [literally "traces"] and so he was sad"), a sequence reminiscent of the conventional opening passage of the pre-Islamic Arabic odes. Above all, however, these words occur in texts connected with the burial of the dead. Most corpses were probably buried, as they are today, in a simple grave covered with stones to keep off wild animals. However, over the graves of some men and women, presumably those of status, large cairns were erected. To such a cairn (*rgm*), the mourners brought stones inscribed with their names, their relationship to the deceased, and the fact that they were mourning (*wgm*) and/or building (*bny*) the cairn for him or her (Harding 1953).

The statement is often followed by a prayer of the form *f h lt . . .* ("and so, O Lt . . .") with a request, e.g., *s¹lm*, "security," *ġnmt*, "booty"; *rwḥ*, "relief"; *ṯ²r*, "revenge," etc.; and the text may be completed with curses on those who would deface the inscription and blessings on those who leave it intact. Thus, the typical Safaitic inscriptions would consist of some, or all, of these elements, usually, but not always, in this order: *1 N ± genealogy ± tribal marker ± statement ± invocation ± curse/blessing*. See Fig. INS.02: A–B.

We catch only fragmentary glimpses of the relations of the Safaitic authors with their neighbors. Several say that they were escaping from the Romans, or Byzantines (*nfr mn rm*); others seem to have been aware of, and some involved in, a war of the Nabateans (*ḥrb nbṭ*) and a rebellion by them against the Romans (*mrd nbṭ ᶜl ²l rm*). Winnett (1973) has suggested that some Safaitic tribes were caught up in an unsuccessful revolt by a son of the Nabatean governor of Ḥegra (Medâ²in Ṣâliḥ) in ca. A.D. 71, but this is by no means certain. One or more Persian (*mḏy*) invasions of the Ḥaurân are mentioned, and there are enigmatic references to the Jews (*yhd*). There are also some less easily identifiable peoples, e.g., those of *Rhy* (variously identified as Edessa, Ḥâ²il, and a subtribe of *Maḏḥiğ*), the *²hl khl* (possibly Qariyat al-Faw in central Arabia, the ancient name of which was *Qariyat Dât Kahl*) and *Ḥwlt* (possibly one of the places called *Ḥăwîlâ* in the OT).

G. Dating

The Safaitic texts are conventionally dated between the 1st century B.C. and the 4th century A.D., but the grounds for this are extremely insecure. A handful of texts can be assigned to precise dates in the 1st, 2d, and 3d centuries A.D., and several others which mention the Nabateans and Romans must fall within this period, but there is no clue as to the date of the vast majority. A number of them are dated by events of local importance (e.g., *snt ḥl ḏ²l ḍf lg*, "the year members of the tribe of Ḍf camped in the Leğâ, Winnett and Harding 1978: 1025), but unfortunately none of these can be reconciled with the known historical record. Even such references as *snt mrdt nbṭ ᶜl ²l rm*, "the year the Nabateans rebelled against the people of Rome" (Winnett and Harding 1978: 2815) are difficult to relate to known events and are the source of much disagreement. There is no indication as to when the art of writing first reached these tribes, or when it disappeared. However, there is no trace of either Christianity or Islam in these texts, and the early Islamic historians have no recollection of these tribes or their script; nor the grammarians of their dialect. Thus, it would seem probable that the use of Safaitic must have ceased some considerable time before the rise of Islam for the memory of it to have been so effectively erased.

H. Religion

Grimme (1929: 24–30) believed that all Safaitic texts were of a religious nature. However, this position was based on such strained interpretations of the evidence that it has attracted no support (see Littmann 1940: 103–4). In fact, we know frustratingly little of Safaitic religion. Although there are some apparent references to religious practices (*ḏbḥ*, "sacrifice"; *ḥg*, "pilgrimage"; and possibly *ᶜd*, "festival" (see Winnett and Harding 1978: 31–32), and a great many prayers addressed to a number of deities, they are all expressed in a limited range of formulae and are generally uninformative. Most of the deities invoked in Safaitic are also known from the texts of the settled peoples (see NABATEANS; PALMYRA) and some from classical writers. However, the information derived from these different sources is not always reconcilable. The two deities most often invoked in Safaitic are *Rḍw* (or *Rḍy*) and *Lt* (or *²lt*). *Rḍw/y* has been identified with Herodotus' *Orotal(t)* and the Jawfian deity *Ruldaiu* mentioned in the annals of Esarhaddon, as well as the Palmyrene *²Arṣû* (Milik 1972: 49). The Safaitic texts give no clue as to the nature of this, or any other, deity since identical requests are made of all of them. The variation in spelling has suggested to some a pair of deities, male and female, representing the morning and evening star (Littmann 1940: 107). However, even this cannot be demonstrated from the texts, because the prayers are all in the form either of nouns (with a verb understood) or verbs in the imperative, in which the vowels marking masculine and feminine are not shown. Others (e.g., Dussaud 1955: 142–43) base a claim that both forms refer to the same, feminine, deity on a number of Safaitic drawings of a female figure with arms raised to her flowing hair. However, there is no reason to connect these drawings with *Rḍw/y*, and when they are identified in accompanying texts it is as *ġlmt*, "girl," or *qnt*, "female singer." On the other hand, Starcky (*DBSup* 6: 990–91) has argued strongly that *Rḍw/y* is male and is the deity behind the Nabatean divine epithet *Dushara*. A male *Rḍw/y* would certainly fit better with the known sex of *Orotal(t)* and

ʾArṣû, though variations in the sex of Semitic deities are, of course, well known.

The deity most frequently invoked in Safaitic is *Lt* or *ʾlt*. A third form, *hʾlt*, is also found, but so far only in theophoric names (*tmhʾlt*), where it parallels *hnʾlt* in Lihyanite and Hasaitic names. The exact relationship between the three Safaitic forms has yet to be satisfactorily clarified. Certainly *Lt* occurs over six times more often than *ʾlt;* and in texts such as CIS V 97 both forms are used, though in successive invocations. It is thus by no means certain that the three forms represented the same deity in the minds of the Safaitic authors. Again, the texts give no clue as to her nature. Whereas *Rḍwly* is rarely found in multiple invocations, *Lt/ʾlt* is commonly associated with other deities in prayers.

The worship of the two other "Daughters of Allâh" (Qurʾân 53:19–21; 16:57), *Manât* and *al-ʿUzzâ* (in Safaitic *h-ʿzy*), is attested only in occasional theophoric names. The divine name represented in later Arabic by *Allâh* is also found in Safaitic in three forms, parallel to those of *Lt;* thus *Lh*, *ʾlh*, and *hʾlh*. All three forms occur both in theophoric names, where they are very common, and in prayers, where they are much rarer. The reasons for this uneven distribution are not entirely clear, but it is possible that while *Lt/ʾlt* had become a divine *name*, *Lh/ʾlh* (and possibly *ʿl/lʿ*) was still regarded as the common name for "god" and could therefore be used with reference to any divinity in a theophoric compound. The situation is paralleled in Nabatean, where *-ʾl* and *-ʾlhy* are common elements in names, although there are no prayers or other references to them. The prayers to *Lh/ʾlh/hʾlh* in Safaitic are no different from those addressed to other deities, and he is often "associated with" other divinities in multiple invocations. Thus, the use of this divine name or epithet cannot be taken as an indication of monotheism.

The principal deity of the Nabateans, *Dushara*, also receives a considerable number of prayers from Safaitic devotees, most often in association with *Lt*. In the N, the name is usually spelled *ds²r*, suggesting that it reached these authors via Aramaic. But in the texts from S Jordan, the etymologically correct form *ḏs²ry* (equivalent to Ar *ḏû-Šarâ*) is more common. Another deity whose name occurs in Safaitic in its Aramaic form is *Bʿlsʾmn*, *Baʿal Šāmîn*, to whom a great temple was dedicated at Sîʿ. Indeed, one Safaitic text (Clark 1979: No. 424) calls him "the god of Sîʿ." The name is occasionally found in an arabized form *Bʿlsʾmy*. By contrast, the name of the third god shared by the Nabatean and Safaitic peoples is entirely Arabic in form. It appears as *Šyʿ-ʾl-qwm* among the former and *S²ʿ-h-qm* among the latter. The name is generally interpreted as "Helper or leader of the people," and from this it has been assumed that he was a tutelary god of caravans (Sourdel 1952: 81–84; Teixidor 1977: 88–89). A famous Palmyrene inscription (by two Nabateans) calls him the "good and rewarding god who does not drink wine." From this he has been identified with Lycurgus and assumed both to be in conflict with Dushara-Dionysus and to be a deity considered by the nomads as their special god (Starcky *DBSup* 6: 996). However, Sourdel (1952: 84) and Dussaud (1955: 145–46) have questioned both the identification and the supposed conflict with Dushara. Certainly there is no evidence for such hostilities in Safaitic, where *Ds²r* and *S²ʿhqm* are invoked together. Nor is there any evidence that he was the particular god of the nomads. He receives relatively few prayers in Safaitic, certainly fewer than *Ds²r*, the supposed god of the sedentaries, and in multiple invocations he stands sometimes with the ancient Arabian divinities (*Lt* and *Rḍwly*), sometimes with the tutelary gods of the Safaitic tribes, sometimes with *Bʿlsʾmn* or *Ds²r*, and sometimes with a selection from all three groups.

There are frequent invocations to *Yṯʿ* (also *ʾṯʿ*, with no apparent distinction between the forms), a deity found in theophoric names throughout North and South Arabian and in Nabatean, though rarely invoked outside Safaitic. Traditionally, *yṯʿ*, a root not found in later Arabic, has been held to be cognate with the Hebrew root *yšʿ* and so glossed *Sōtēr* "Savior." It has even been suggested (Winnett 1941) that *Yṯʿ* in North and South Arabian represented Heb *Yēšûaʿ*, Syr *Yešûʿ*, "Jesus," and that texts mentioning this deity were therefore Christian. However, the Christian South Arabian inscriptions do not use the name Jesus in any form, referring to him instead as *Ms¹h* "Messiah" or *Krs³ts³* "Christ," while *Yṯʿ* in both North and South Arabian is frequently invoked in the company of other deities. Moreover, a divine name adopted by the Safaitic or South Arabian writers from a different language group (Hebrew or Aramaic) would appear as a loan-form (**ys¹ʿ*) not a cognate (*yṯʿ*), particularly since the root *yṯʿ* appears to have no independent existence in North Arabian, South Arabian, or later Arabic, outside the onomastic stock (see Müller 1979 for discussion).

Gd (probably *Gad*), equated with *Tychē* in Greek texts (Sourdel 1952: 49–52), and particularly common at Palmyra (Teixidor 1979: 88–100), is also found in Safaitic. Among the sedentaries of the Ḥaurân and at Palmyra, *Gad* appears to have "personified the especial providence reserved by a god or a goddess for an individual, a group of individuals, or a town" (Teixidor 1979: 89), a tutelary role which any deity could assume. It is probable, though alas unprovable, that this conception was shared by the nomads. Certainly *Gd* in Safaitic usually appears as *Gd-Ḍf* or *Gd-ʿwḏ*, i.e., the *Gd* of one or another of the two great tribal confederations (Knauf 1985), and they are most often found in multiple invocations where, in one text or another, they stand beside all the known Safaitic divinities.

For general surveys of the field, see Littmann 1943: vii–xxviii; Eissfeldt 1954; Dussaud 1955: 135–47; Oxtoby 1968: 1–30; and Müller 1980. Major collections of inscriptions are *Corpus Inscriptionum Semiticarum, Pars 5;* Littmann 1943; Winnett and Reed 1957; Winnett and Harding 1978; and Clark 1979. See also the smaller collections in Jamme 1971 (some of the most southerly texts), Harding 1953, and Oxtoby 1968.

INTEREST AND USURY IN THE GRECO-ROMAN PERIOD.

"Interest" (Gk *tokos*) is a charge for the use of invested capital, most typically money. From an economic perspective, interest is composed of four principal factors: the real cost of using the capital; a premium compensating the investor for the risk of not getting his capital back; an estimate of the likely inflation rate during the period of the investment; and the lender's expenses in negotiating and administering the investment. The interest rate of an investment should ultimately derive from these four factors, but in the ancient world it was also heavily affected by custom and convention.

"Usury," for which there is no exact equivalent in Greek and Latin, is the lending of money, especially at what society considers an exorbitant interest rate. Particularly under the Romans, usury laws often limited the form that interest could take and fixed a maximum interest rate, and law also often imposed other restrictions on interest-bearing loans.

The basic concept of interest is almost as old as organized societies; interest; interest-bearing loans of precious metals or commodities are found already in Hammurabi's Babylon (early 2d millennium B.C.E.). But the introduction of coined money in the Aegean (7th century B.C.E.) led to the practice becoming much more common. Greek interest-bearing loans are attested already in the early 6th century, and by the 4th century the charging of interest had become quite normal at Athens, as we know from many Greek private orations.

However, interest on money loans aroused disquiet, especially among Greek philosophers such as Plato (*Leg.* 11.921 c–d) and Aristotle (*Pol.* 1.10). As Aristotle reasoned, coined money had originated as a store of value and a medium of exchange; although coins struck in precious metals had an intrinsic worth, they served chiefly as a standard to make other goods commensurable. It therefore seemed "unnatural," contrary to the immanent characteristics of civilized society, that money could generate more money through payment of interest. This philosophical bias against interest, which later writers shared (e.g., Seneca *Ben.* 7.10.3), was to have a long history in cultures influenced by Greco-Roman civilization, especially after early Christian writers merged it with religious prohibitions against the taking of interest (e.g., Clement of Alexandria *Str.* 2.18; Tertullian *Adv. Marc.* 4.17).

Notwithstanding such philosophical doubts, Greek city-states, as also the Hellenistic states of the 3d to 1st centuries B.C.E., did not intervene to prohibit interest, and even statutory restraints on interest only became common slowly. Customary interest rates remained high; the prevailing annual interest rate was 12 to 18 percent in 4th-century Athens and 25 percent (the legal limit) in Ptolemaic Egypt of the 3d century. These rates prematurely reflected both continuing instability in the Levantine credit market and a relative scarcity of capital. Interest rates generally fell below 10 percent after 200 B.C.E., but unusually risky loans were sometimes made at much higher rates.

The picture changed in the 2d and 1st centuries B.C.E.,

as Rome became the master of the Mediterranean. Rome had, for internal political reasons, a long-standing tradition of attempting to limit or even prohibit interest; and the influx of capital that imperial Rome attracted made it possible to sustain lower interest rates than had prevailed in the Greek world. A Decree of the Senate in 51 B.C.E. (Cicero *Att.* 5.21.13) forbade interest higher than 12 percent per year, as well as compound interest and the accrual of unpaid interest above the amount of the initial capital. But market-determined interest rates at Rome had by that date already fallen to a level much lower than the legal maximum, with 6 percent being the most common rate for sound loans during peacetime. In general, this regime persisted into the early Roman Empire.

Although transfer of money over long distances was not easy in the ancient world, Rome's central government interposed no effective legal barriers to the flow of capital within the empire. As interest rates in Roman Italy dropped, capital was attracted to portions of the empire where higher rates persisted; provincial governors responded (with how much success is uncertain) by imposing usury laws reflecting accepted interest rates at Rome. Cicero, as proconsul of Cilicia in 51–50 B.C.E., had to deal with a virtually extortionate loan by Marcus Brutus to the city council of Salamis on Cyprus; Cicero's letters on this loan (*Att.* 5.21, 6.1–3) vividly illustrate the dynamics of credit in the later Roman Republic.

After the battle of Actium in 31 B.C.E., prevailing annual interest rates at Rome fell from 12 to 4 percent (Cassius Dio 51.21.3), demonstrating clearly the effect of domestic tranquility on credit. The ensuing centuries of imperial peace resulted in interest rates that throughout the empire normally fluctuated between 4 and 6 percent, approximately equivalent to the return that landowners could anticipate from farming. The charitable alimentary endowments instituted in Italy and elsewhere, especially during the 2d century C.E., usually envisaged an annual return on conservatively invested capital of 5 to 6 percent. Although higher rates were charged for delay in paying debt and for short-term or risky loans, the legal annual limit of 12 percent was only occasionally evaded and apparently caused slight inconvenience. Inflation did not significantly affect interest rates until the currency debasements of the 3d century C.E. and after.

Apart from occasional literary complaints, moneylending and interest-bearing loans were not visited with pronounced social or legal opprobrium during the early Empire. Roman law, building on previous Greek institutions, was particularly ingenious in developing ways to secure debts through personal suretyship or the pledge of property, thus further reducing the creditor's risk; the jurists showed no aversion to interest.

Distinct from the normal credit pattern was the interest on bottomry loans *(faenus nauticum);* these "loans," repayable only if the ship reached its destination, were actually a means of insuring ships or their cargoes against the dangers of long voyages, and the interest rates charged on them could be as high as the parties wished, depending on the timing and duration of the voyage. Loans of farm products were normally repaid with interest of up to 50 percent of kind (*Cod. Theod.* 2.33.1 pr.).

The economic difficulties of the later Empire evidently caused prevailing interest rates to edge upward against the limits set by usury laws, which the emperors then attempted to strengthen and enforce with greater vigor. In the 4th century, these largely economic measures merged with Christian attacks on interest as such.

Ancient authors, starting with Aristotle (*Pol.* 1.10), showed good intuitive understanding of the nature of interest. The Roman jurists distinguished interest on money from ordinary "fruits," such as the produce of farms, in that interest derived from a purely legal relationship (e.g., Pompon. *Dig.* 50.16.121).

Although attested interest rates suggested that capital was generally available and secure, especially in the early Empire, the primitiveness and fragility of the ancient credit market required stress. With but few exceptions, the Greco-Roman world did not know large-scale professional lenders; banks, in particular, did not serve as important financial institutions, but instead operated locally and with poor capital funding. At least in the private sector, large loans were typically provided (with or without interest) by wealthy individuals functioning as patrons, not as professional bankers or moneylenders. Correspondingly, loans were often not "productive," in the sense of being used to create new sources of wealth; instead, they were frequently used to sustain consumption among the upper classes. For discussion of the various types of interest mentioned in the Bible, see DEBTS.

INTERPRETATION OF KNOWLEDGE (NHC XI,*1*). See KNOWLEDGE, INTERPRETATION OF (NHC XI,*1*).

INTERPRETATION, HISTORY OF. Two articles appear under this heading. The first surveys the history of interpreting specifically the Hebrew Bible/OT, with a special emphasis on how this has been practiced within Christian circles. The second article surveys the history of biblical interpretation by focusing more on underlying philosophical issues associated with hermeneutic theory. See also HERMENEUTICS; HERMENEUTICS, EARLY RABBINIC; THEOLOGY (BIBLICAL), HISTORY OF.

A. OT Interpretation in the NT

Whatever else it may be, Christianity is a unique interpretation of the OT. A surface reading of the OT suggests that its writers did not expect God to become incarnate and did not envisage that a future servant of God would rise from the dead three days after his public execution, nor that he would combine in his life and death the roles of high priest and sacrificial victim. It is true that hints of some of these ideas may be found in the OT, and that these hints had begun to become trends in intertestamental Judaism. For example, a Qumran fragment from Cave 11 develops the idea of Melchizedek as a heavenly figure, the Wisdom of Solomon sees Wisdom as a preexistent "person" who was with God before the creation, and the "sacrifice" of Isaac in Genesis 22 gave rise to ideas about the atoning blood of Isaac; but the NT interpretation of the life and death of Jesus combined these and other ideas in a new way. This fact was to have profound significance for the way that the OT was interpreted until the 17th and 18th centuries.

In the NT, the most spectacular use of the OT is to be found in the letter to the Hebrews. It begins with a series of OT quotations designed to show that Jesus is the son of God and superior to the angels. The writer assumes that God was addressing Jesus when he said, in Ps 2:7, "Thou art my son, today I have begotten thee," or in Ps 45:6, "Thy throne, O God, is for ever and ever" (Heb 1:5, 8). The words of Ps 102:25, "Thou Lord, didst found the earth in the beginning," are also seen as addressed to Jesus, thus claiming that he was, in some sense, the creator of the universe (Heb 1:10). Later in the letter (7:17), the words of Ps 110:4 are understood in terms of Jesus: "Thou art a priest for ever, after the order of Melchizedek," and this enables the writer to present Jesus as a high priest, whose death once and for all fulfilled and rendered obsolete the sacrificial system given by God to Moses in the wilderness. In chap. 11 of Hebrews, the great OT figures are dealt with: Abel, Enoch, Noah, Abraham, Moses, the Judges, David, Samuel, and the prophets. These people all lived by faith—faith that they were journeying to a heavenly city whose God was the God who had spoken finally and decisively in Jesus.

The book of Hebrews is the most spectacular because it is the most daring and explicit attempt in the NT to interpret the OT in the light of the early Church's understanding of Jesus; but implicit throughout the whole of the NT is the conviction that the life, death, and resurrection of Jesus were in fulfillment of the Scriptures. The Gospels, and especially Matthew, make frequent reference to OT passages that the life of Jesus fulfilled (e.g., the Virgin Birth, the flight to Egypt of his parents, his growing up in Nazareth, the removal of his home to Capernaum during his public ministry, and the rejection of his message by the people). The account of the passion of Jesus contains many allusions to the OT, from his entry into Jerusalem upon an ass, through his betrayal, to the division of his garments by Roman soldiers and his cry from the cross: I thirst.

The Pauline writings struggled with the antithesis of faith and law, and did so by identifying figures such as Abraham as men of faith, and therefore as ancestors of a divine promise that would be fulfilled in Christ and would also be made available to non-Jews. Paul added two important features to the use of the OT, both of which subsequently influenced its interpretation. In Gal 4:21–31, he used the method of allegory to prove that Hagar, the mother of Ishmael, represented Mt. Sinai, the earthly Jerusalem, and (by implication) Christians who wanted to observe the Jewish law. He urged his readers to "cast out the slave and her son" (cf. Gen 21:10–12) as Abraham had done. This piece of exegesis became the main NT sanction for spiritualizing the OT (Paul did not, of course, invent allegorical interpretation), that is, not interpreting it at its surface level, but reading into it a deeper, spiritual, or moral or mystical meaning, In 1 Cor 10:1–4, Paul claimed that Christ was present in the OT in that he had been a Rock which followed the Israelites through the wilderness, from which Moses had struck water for the thirsty people. This exegesis, too, encouraged later interpreters to look for Christ in the OT.

B. Apostolic Fathers and Apologists

In the Apostolic Fathers (*1 Clement*, the *Didache*, the *Shepherd of Hermas*, and the *Epistle of Barnabas*), we find three main uses of the OT. The first involves the renunciation of Judaism, and thus of the legal parts of the OT. The latter are conspicuously absent from works such as the *Didache* and the *Shepherd*, both of which purport to show how the Christian life should be lived. Instead, and this is the second main use, the OT law is spiritualized in order to show that it points to Christ. The type of exegesis is especially prominent in *Barnabas*. The 310 men of Abraham's household indicate the name Jesus, and the cross (*Barnabas* 9:7–8); the red heifer (Numbers 19) and the scapegoat (Leviticus 16) are types of Christ, while the cross is foreshadowed when Moses crossed his hands during Israel's battle against Amalek (Exod 17:8–13). The third main type of interpretation was the appeal to OT heroes as examples of faith: Enoch, Noah, Abraham, Lot, Rahab, David, the prophets, Judith, and Esther are all cited.

It was the Apologists, Justin Martyr (ca. A.D. 114–165), Irenaeus (ca. A.D. 130–200), and Tertullian (ca. A.D. 160–225) who took OT interpretation to deeper levels, mainly because they found themselves in conflict with pagans, Jews, and sectarian Christians. In Justin's dialogue with the Jew Trypho, use is made of passages such as Genesis 18; 32:22–32, and Exod 3:1–16 to show that the OT speaks of a Lord who is not the Father above, yet who acts fully in accord with the will and purpose of the Father (*Dialogue with Trypho*, chaps. 56ff.) In each case, Justin exploits an ambiguity in the text. In Genesis 18, the mysterious visitors to Abraham are both human and angelic; in Gen 32:22–32, Jacob is told that he had wrestled with God, while in

Exod 3:12–16, the Lord both appears in the burning bush and speaks from heaven. Justin's interpretations are not the crude allegorizings of *Barnabas*. They depend as much upon a close reading of the text as upon an overtly christological hermeneutic.

Tertullian and Irenaeus were confronted not only with Jewish opponents, but also by Marcion, the founder of a type of Christianity which completely rejected the OT. Marcion read the OT mostly in a literal manner, and found there a God who was ignorant (e.g., he said to Adam, "Where are you?"), who changed his mind (e.g., Gen 6:1–5), and who made cruel and immoral demands upon Israel. Such a God could not be the God of Jesus. Therefore, Jesus was the son of a God who was different from the creator of the visible universe. He belonged to an unseen world, took human form (to be born as a man would have involved assuming what belonged to the God of the visible world), and died to free mankind from obligation to the God of the visible world.

The defense of Irenaeus against Marcion was an orthodox restatement of the Christian view of the unity of the OT and NT. Christ was foretold in the OT, and God's promise of salvation to Abraham was for all humanity. The OT law in its essence agreed with the "first and great commandment" affirmed by Jesus. Tertullian's defense was far more successful. He tackled head-on Marcion's literal reading of the text, and he argued that when the OT used the language of human passions and sensations regarding God, the language could not be taken literally. God had neither a "right hand" nor "eyes" in a human sense; similarly, his supposed ignorance or changes of mind were not to be evaluated as though he were human. Tertullian thus sought to undermine Marcion's accusation that the OT God was incompetent and immoral, and he turned the attack back against Marcion by pointing out that the latter had found it necessary not only to dispense with the OT but also to delete large parts of the NT from his Bible—all those passages that referred back to the OT.

C. The Exgetical Schools of Alexandria and Antioch

Alexandria and Antioch were two of the greatest centers of influence and learning in the Church of the late 2d to the 5th centuries. In Alexandria, a catechetical school was founded in the 2d century, and in Clement of Alexandria (ca. A.D. 180–215) and Origen (A.D. 185–253) it reached the height of its achievements. Clement was concerned to address the pagans of his day, arguing that Christ was the supreme source of knowledge who had spoken in the OT as well as in the NT, and was also the source for all that was best in Greek philosophy. Clement stressed the harmony of the OT and NT; but in order to do this he had to divide the Mosaic law into the historical, the legislative, and the sacrificial. Where possible, he used the literal method of interpretation, e.g., in historical sections relating to the history of Israel. Where laws could be taken at their face value, he also avoided spiritualizing them. For example, the humane laws in Deuteronomy 24 which make provision for the poor could be taken literally. But some laws were spiritualized: the division between clean and unclean animals was taken to refer to avoiding the company of certain types of people (this is already found in *Barnabas*) and to the distinction between the Church on the one hand and Jews and heretics on the other.

Origen went to much greater lengths to champion the spiritual senses of the OT. Although laws such as "honor thy father and mother" were obviously to be taken literally, this was not true of the many parts of the law that seemed to be impracticable. Origen was also worried about contradictions in the OT, such as the creation of the light before the sun in Genesis 1. Since a book whose author was God could not be contrary to common sense, Origen concluded that Genesis 1 was not intended to be read literally. The same was true of passages in which God appeared to make immoral demands on his people, and of those which ascribed to him human passions and activities.

A remarkable side to Origen's work concerned his interest in textual criticism. Jews and Christians disagreed about the text of the OT. The Greek versions used by Christians contained passages such as "from the wood" in Ps 96:10, which clearly pointed to the crucifixion. The Hebrew lacked these phrases, and the Jews were accused of deliberately omitting them. Origen set out to establish the truth. In so doing, he became aware of the great differences between the Greek and Hebrew versions of Job and Jeremiah; and he caused to be compiled the *Hexapla,* which set out the Hebrew text together with four or more Greek versions.

The tendency of the Alexandrian scholars to allegorize the OT no doubt owed something to the influence of Greek and Jewish scholarship there, of which a notable example would be Philo (30 B.C.–A.D. 40). In Antioch, an opposite influence existed, that of literal and historical exegesis. The school of Antioch was represented from A.D. 169 by its bishop Theophilus. His *To Autolychus* marked out a chronology from the creation of the world to his own day, and Theophilus stressed that the OT was an authentic history of God's dealings with the Jewish nation. However, Theophilus believed that the Logos of John 1 had spoken through Moses and was the source of the light created in Genesis 1 before the sun. He also used parts of the OT law as guidance for Christian life.

A second phase of the school of Antioch produced Diodore of Tarsus (A.D. 378) and Theodore of Mopsuestia (ca. A.D. 350–428). Diodore's commentary on the Psalms interpreted Psalm 2 of Jesus and how the Jews handed him over to Herod and Pilate. Diodore rejected, however, the view that Psalm 22 referred to Christ's passion, because the sufferings described in the psalm did not correspond to those of Christ. Theodore seems to have excluded from the category of inspired books the Wisdom Literature and Chronicles, Ezra, and Nehemiah. In his commentary on the minor prophets, he interpreted prophecies in terms of Christ only if this had also been done in the NT; otherwise, he sought a historical reference for the prophecies. Thus, while Theodore accepted that Joel 2:28–32 predicted the outpouring of the Holy Spirit because it was quoted in Acts 2:17–21, he rejected the view that the words of Mic 4:2 ("for out of Zion shall go the law, and the word of the Lord from Jerusalem") referred to Christ. Christ taught (John 4:21) that God did not require to be worshiped in a special place, while Mic 4:2 clearly referred to the reestablishment of Jewish law and worship in Jerusalem.

D. Jerome and Augustine

With Jerome (A.D. 331–420) and Augustine (A.D. 354–430), OT interpretation reached a high point that was not to be surpassed for the next 600 years. Jerome was a great linguist. Educated in Rome, he lived in a Greek-speaking household in Antioch until about A.D. 373, and he began to learn Hebrew around A.D. 374/5. From 386 to his death, he lived in Bethlehem, where he translated the OT from Hebrew into Latin and wrote philological works on the OT which remained standard works for centuries and became the main source of knowledge of OT Hebrew for many later interpreters. His commentaries, as opposed to his philological works, were influenced by Didymus the Blind, whom Jerome visited in Alexandria in A.D. 385. Didymus was a great exponent of spiritual meanings of the text, and this certainly affected Jerome. In his work on the Psalms, for example, he referred many details to Christ, such as the "holy hill" in Ps 3:4 from which God answers the psalmist. This could only mean the Son of God and the Church.

Augustine was no linguist; nor did he lead the life of a scholar-monk. He was a hard-pressed bishop; yet his works such as *On Christian Culture (de doctrina Christiana)* and the *City of God* made a profound contribution to OT hermeneutics. The *City of God* is notable for the way in which it handles the history contained in the OT. This history is the story of the two cities—the heavenly and the earthly, or the city of God and that of the devil—which exist in the present world and affect a person's ultimate destiny. The distinction is worked out with great skill. The city of God does not simply equal Israel and the Church; in both Israel and the Church, good and bad and members of both cities are mingled. On the other hand, the difference between the cities can be seen clearly in the story. Cain and Abel, for example, show the cities of earth and God, respectively, with the former persecuting the latter. The idea of seeing the Bible as the struggle between two cities gives it a unity which cuts across the two Testaments, and minimizes the way in which the OT becomes subordinate to the NT. The OT becomes revelatory history, that is, a story from the past which gives a clue to the meaning of the present and the future.

Along with this grand design, Augustine wrestled with many problems presented by the text: for example, the creation of light before the sun, the extremely long lives of the heroes prior to the Flood, the existence of giants before the Flood, and the apparent immorality of Abraham and others (e.g., Abraham's fathering a child through his wife's servant). Augustine did not try to spiritualize these difficulties. The light created before the sun was the angels; the years lived before the Flood were normal years, as a close reading of the text indicated; the existence of giants could be proved from colossal ancient monuments; Abraham's extramarital activities were performed without lust, and could be excused but were not to be imitated. It is true that Augustine spiritualized from time to time; e.g., the door in the side of the ark is the wound made in the side of Christ. But what is impressive about Augustine is his positive reading of OT history. It is not simply information about the past; nor is it a set of veiled allusions to the future coming of Christ. It contains a dialectic which provides the clue for the understanding of the present in terms of the divine purpose.

E. The 5th to the 15th Centuries

During this millennium the Church suffered great losses which had their effect upon biblical scholarship. Christian North Africa was lost soon after the death of Augustine, while the triumph of Islam in the 7th century meant the loss of large parts of the eastern Roman Empire. Origen's *Hexapla,* which was kept at Caesarea, was lost when Palestine became Muslim. In Europe there were many upheavals. Learning was kept alive in the monasteries and, from the 12th century, in the cathedral schools, the forerunners of the universities.

An important preoccupation in this period was with the status of the Mosaic law. The *Apostolical Constitutions* (possibly earlier than this period) drew upon the OT priestly orders to justify the hierarchy of bishops, priests, and deacons. This text also distinguished between the laws given after the incident of the Golden Calf (Exodus 32) and those given before, e.g., the Ten Commandments and those in Exodus 21:1–23:19. The post–Exodus 32 laws were held to have been given to Israel following its apostacy in making the Golden Calf: they dealt with sacrifices and were not binding on Christians. However, laws made prior to Exodus 32 were binding if they were not ceremonial laws. A type of "dispensationalism" can also be found in the work of Cyril of Alexandria (bishop from A.D. 412 to 444), who divided the OT into five periods. The first three, those of Moses, Joshua, and the Judges, are "impure" for Christians. In the fourth period, that of the prophets, the law is "purified," as the need for mercy and not sacrifice is stressed. The fifth period is that of Christ, who completes the work of purifying and spiritualizing the law.

The issue of the Mosaic law again came to the fore in the 12th–13th centuries. The revival of interest in Hebrew, especially in the school of St. Victor in Paris, resulted in greater sympathy among interpreters for the literal and historical sense of the law. Also, the translation into Latin of Maimonides' *Guide of the Perplexed* (about A.D. 1220) made available a powerful and rational defense of the literal sense of the OT. William of Auverne's *De legibus* (about A.D. 1230) defended the literal sense on the ground that if this was impracticable or absurd (as Origen had maintained), then Moses had deceived his people. In fact, the laws, while abolished by the coming of Christ, were well suited to a simple people such as the Israelites. This was seen by some as an extreme position. In the *Tractatus* of John of La Rochelle (written sometime between 1228 and 1249), the spiritual and allegorical interpretation of the law was reasserted.

Aquinas (ca. 1225–1274) reconciled the literal and spiritual approaches to the Mosaic law in a masterly fashion. Like many commentators before him, he divided the laws into three categories: moral, ceremonial, and judicial. The moral laws (e.g., the Ten Commandments) contained the obligations of natural law and were thus binding upon all people. The ceremonial and judicial laws of the OT were particular applications of the natural law to the specific circumstances of ancient Israel. They were therefore not binding upon all people.

Aquinas defended the rationality of the very compli-

cated details of the sacrificial laws. The animals specified were not used by other people for idolatry. They were also the cleanest available for providing food. Although God did not in Himself need the sacrifices, as the OT made clear (Ps 50:13), the sacrifices served to focus the minds of the Israelites upon God, and to prevent idolatry. However, Aquinas also allowed that the sacrifices had a spiritual sense that pointed to Christ (*Summa Theologiae* vol. 29, pp. 114–5). Furthermore, the OT ceremonies enabled the faithful Israelites to benefit from the saving work of Christ. Of course, they knew nothing of Christ, but their faith in God, which the Mosaic law made possible, linked them to the work of Christ.

Mention has already been made of the revival of interest in the study of Hebrew, especially in the school of St. Victor. This school was founded in Paris in 1100, and was famous for Hugh (died 1141) and Andrew (who taught there until 1147 and from 1155 to 1163). Their concern was with the literal and historical sense of the text. Thus, we find them reluctant to refer prophecies to the coming of Christ unless this had already been done in the NT. Andrew, for example, understood Isaiah 53 not in terms of Christ, but as referring to the Babylonian exile of the Jews. Also, he explored the possibility that God had not directly revealed the past to Moses, but that Moses had used traditions handed down orally and in writing from the time of Adam.

Another feature of OT interpretation in this period was the dispensationalism and apocalypticism of Joachim of Fiore (ca. 1135–1204). This approach embodied the complete triumph of the spiritual interpretation of the OT over the literal and historical interpretation. Joachim posited three ages, those of the Father (the OT), the Son (the NT), and the Spirit, and he saw many links between the two Testaments, in persons and institutions. Thus Abraham, Isaac, and Jacob corresponded to Zechariah, John the Baptist, and Christ. Also, these trios referred to the Trinity and to the three ages. Joachim's writings were to influence many generations of apocalyptists.

Another feature of this period was the use made of philosophy in OT interpretation. Aquinas was, of course, deeply influenced by the rediscovery of Aristotle and by the use of Aristotle in Maimonides' *Guide of the Perplexed* (which Aquinas had studied). Abelard (1079–1142), on the other hand, had studied works such as Plato's *Timaeu,* from which he derived a framework within which he interpreted the Genesis account of creation. Thus, God had already ordered the world as an archetype through his reason before he created it. Also, the six days of creation represented six stages in the salvation history of mankind. Thus, the creation of light on day four signified the prophets who came after the law and who looked for the coming of Christ, while the creation of water creatures on day five looked forward to the renewal of those who received Christian baptism.

A quite different use of philosophy is apparent in the approach of Wycliffe. As a student of philosophy, he had been converted from nominalism to realism. Thus, he believed that the text of the Bible corresponded to what was true in the world and should be entirely in agreement with philosophical reasoning. If there were apparent contradictions in the OT, this was due to the ignorance of the interpreters. The names of things in the Bible, especially when studied via Greek and Hebrew, corresponded to metaphysical realities. In this way, Wycliffe developed his belief in the all-sufficiency of the Bible, and he then turned this belief against many aspects of the teaching of the Church of his day. However, Wycliffe's position was very different from that of Luther, even though both emphasized the all-sufficiency of Scripture.

During this period there developed the practice of copying the books of the OT together with glosses or *postilla.* The former were either in between the lines or in the margins, and the latter were blocks of commentary alternating with the text. The glosses and *postilla* were mainly citations from earlier commentators, with Jerome, Augustine, Bede, and Gregory the Great prominent among them. Thus, the text was not read except in conjunction with these annotations drawn from the great interpreters. A famous compiler of *postilla* was Nicholas of Lyre (1270–1349). He was notable in that he drew upon Jewish as well as Christian commentators, and in particular upon the work of Rashi (Rabbi Solomon ben Isaac of Troyes, died 1105). The latter's commentaries are among the most highly regarded within Judaism, and were made available to Christian interpreters via the collection of Nicholas.

F. The Reformation

At the end of the 15th century there was a revival of learning in Europe, accompanied by the dissemination of books thanks to the invention of the printing press. In 1506 there appeared the first Hebrew grammar written by a Christian, that of J. Reuchlin. This revival of learning paved the way for the Reformation, as did the commentary on the Psalms by Faber Stapulensis (ca. 1455–1536). The latter abandoned the medieval practice of dividing the meaning of Scripture into four senses—historical, christological, ethical, and mystical—and substituted two senses, a literal historical sense and a literal prophetic sense.

These developments form the background to the work of Martin Luther (1485–1546), the founder of the Reformation. His approach to the OT was complex. At one level, he championed the literal prophetic sense, and regarded as the key to the OT that which "leads to Christ." This did not mean that he necessarily read Christ arbitrarily into OT's pages; rather, where he saw God active on behalf of the people, or men and women responding in faith, or the nations being called upon to acknowledge God (as in the Psalms), there he saw the Gospel—and thus, implicitly, Christ. At the same time, Luther was not interested in parts of the OT where the Gospel was not apparent, i.e., in books such as Esther and in Joshua, Samuel, Kings, and Chronicles. Other schemes that Luther used as hermeneutical tools were those of Gospel and Law and of promise and fulfillment. The purpose of Law was to show the utter hopelessness of humankind without God, while Gospel was the total undeserved word of forgiveness and acceptance addressed to all people by God. Both Gospel and Law could be found in the OT where people were forgiven and responded to God in faith and hope. The dialectic of promise and fulfillment depended upon an analogy between Israel and the Church. The former looked forward to the coming of Christ, the latter to his coming again. Both communities therefore lived in the hope that God's

promises would be fulfilled, and consequently the Church could learn much from the example of ancient Israel. Thus Luther found himself very much at home in the OT, and saw similarities between the situation of his own times and those of the OT. A favorite character of his was Samson, who had stood single-handedly against his enemies, and who, at the end of his life, had been granted abundant forgiveness by God in spite of his unfaithfulness. This was demonstrated by the return of his strength, with which he killed many enemies along with himself.

Luther's approach to the OT was intensely practical, and he had little time for abstract speculation. While he did not despise the study of the humanities and sciences as a means for attaining a better understanding of the world, he rejected metaphysical theological speculation. Commenting on Genesis, he maintained that all that was needed was to accept the existence of angels and the devil, and not to speculate about how their creation could be fitted into Genesis 1. He also refused to speculate about the metaphysical sense of humankind being created in the image of God: all that we needed to know was that, before the fall, the relationship of Adam and Eve with God was one that had no shame or sin. Since this was no longer the case, it was pointless to speculate about something beyond our experience. Luther believed that the fall had fundamentally altered the world from its original ideal to its present condition. Only the former had been considered "good" by God.

On the Mosaic law, Luther took a radical position. This law was not binding upon Christians. Even the Ten Commandments were not binding in their existing form, as indicated by the fact that the Church did not observe the Jewish Sabbath. Insofar as they were an expression of natural law they were binding, but not because they had been given by God to Moses. Luther's view of other moral or judicial laws of the OT was that they could be observed voluntarily if desired, but could not be demanded of Christians.

The greatest systematic commentator of the Reformation was John Calvin (1509–1564), who (except for a brief exile) worked in Geneva from 1536 until his death. His lectures and sermons were derived from his weekday and Sunday expositions of the Bible. His approach to the OT derived from his opposition to radical groups, such as Anabaptists on the one hand and Roman Catholics on the other. The former wanted to dispense with the OT altogether, while the latter, in Calvin's view, wanted to impose the ecclesiology of the OT upon the Church and its interpretation of Scripture. Calvin opposed both groups by insisting that the OT should be read in its historical and literal sense, but in the light of a hermeneutic that was supplied by the Reformation's understanding of Christianity. The Gospel was to be found in both Testaments; it was differently administered in the OT and not so apparent as in the NT; nevertheless, Christ was implicitly to be found in the OT because only through his saving work was reconciliation possible between God and humanity.

Calvin's commentaries lack the enormous profundity of Luther's ideas, but they are masterpieces of skillful exposition based upon secular and theological learning. In his commentary on Genesis, Calvin recognized the importance of the astronomy and physics of his day, and that the findings of those disciplines were at variance with Genesis 1. His view was that Genesis 1 was not a scientific account of the origin of the universe, but a description of it as visible to the naked eye of an Israelite: thus, according to Genesis 1, the moon was regarded as one of the two great lights, while astronomy showed that several of the planets were actually much larger than the moon.

Calvin's view of the OT law was more favorable toward its use by Christians than was the case with Luther. Indeed, this was generally true of the Reformed wing of the Reformation as a whole. In some writers this resulted in the almost wholesale reintroduction of the OT judicial law as binding upon Christians, while in Puritan circles the Christian Sunday was made to resemble the Jewish Sabbath.

An example of the rehabilitation of the OT judicial law can be found in the *De regno Christi* of the Strasbourg reformer Martin Bucer (1491–1551). This work was addressed to Edward VI of England. It took as its justification the reforming kings of the OT (such as Hezekiah and Josiah) and stressed the duty of the Christian monarch to order the life of the realm. The OT judicial laws, as the laws of God, were better than the laws of men; and although Bucer accepted that the circumstances of ancient Israel were different from those of 16th-century Europe, he nonetheless urged the following of OT precepts as strongly as he could. The king was to appoint magistrates, as Moses had done (Exod 18:21), and the death penalty was to be enforced for blasphemy, violating the Sabbath, adultery, rape, and giving false evidence.

Another Reformed approach to the OT was in terms of covenant theology, and can be found in the writings of the Zurich reformer Heinrich Bullinger (1504–1575). According to this view, Christianity is not a new covenant so much as a renewal of the original covenant made by God with Adam, and renewed with Noah and Abraham. This covenant was in abeyance from the time of Moses to John the Baptist, although many worthwhile institutions and practices were established during this interregnum, such as the appointment of magistrates and judges. The conversion of Constantine enabled the "new" (i.e., original) covenant to be administered under the conditions intended by God, while the Reformation allowed a return to the Constantinian situation following the apostasy of the pre-Reformation Church. The Christian monarch, through the magistrates, was to effect a reform of schools, courts, and economic matters, according to God's law.

Another type of Reformed covenant theology envisaged two covenants: a covenant of works, which God made with Adam at creation, and a covenant of grace, made with Adam after the fall. The covenant of works was required by God of all people even though sin made it impossible to fulfill. This defect was coped with by the covenant of grace; it both removed believers from the condemning power of the law and gave grace to enable the law to be observed. Under this type of covenant theology, OT laws came into their own indicating how God wished human society and daily life to be ordered.

The Lutheran wing of the Reformation was gradually forced to adopt a more practical attitude to the OT law than was implied in Luther's position; yet the Lutherans continued to stress their fear of falling back into what they saw as the legalism of both Judaism and the Roman Cath-

olics. Melanchthon's *Loci communes*, first published in 1521, divided the Mosaic laws into the categories of moral, judicial, and ceremonial, and asserted that Christians were freed from obligation even to the moral laws. The OT laws remained, however, as guidelines to be adopted voluntarily by Christians; and Melanchthon did not conceal his preference for these laws over the laws of pagans or Roman Catholics. J. Gerhard (1582–1637) identified the Ten Commandments with the moral law, and in some areas under Lutheran influence the Commandments became the basis of civil legislation. Where the judicial law was concerned, some areas of Lutheranism preferred to adopt Roman law rather than OT judicial laws.

G. Beginnings of Biblical Criticism

Between 1640 and 1750 the bond between the OT and the NT was loosened to the point where the OT was no longer being interpreted according to hermeneutical schemes derived from the NT. This resulted in what is known as the "historical critical method." Its advent did not mean that scholars began for the first time to ask critical questions; they had been doing this for over a thousand years. The difference between the so-called "precritical" and "critical" eras lay in the way the critical questions were answered. For an Origen, critical questions were answered by recourse to allegorical interpretation, on the assumption that the OT in fact contained no errors or absurdities. An Augustine, who made the same basic assumption, would look for answers of a more rational and historical kind. But from the 1640s, scholars were more ready to say that the OT could be wrong or inconsistent, and that this did not matter since Christianity was based on the NT, of which the OT was mainly the background. Also in this period, traditional beliefs about the authorship of the books of the OT were challenged.

Much impetus for these new moves came from Holland, especially from circles loyal to Arminius. The *Annotata and Vetus Testamentum* of Hugo Grotius (1583–1645), published in Paris in 1644, advocated literal and historical interpretation solely in terms of the circumstances of the writers. Thus, the servant figure of Isaiah 53 was not Jesus, but Jeremiah. The OT law was set aside on the pragmatic grounds that it was archaic and incomplete (Grotius was a lawyer). Another important writer from Holland was the Jewish scholar Benedict Spinoza (1634–1677). His *Tractatus Theologico-Politicus* (1679) argued that the author of the Pentateuch was not Moses but Ezra. Ezra was also the probable writer of Joshua, Judges, Samuel, and Kings. Even so, the twelve books, Genesis to 2 Kings, were left incomplete by Ezra and were completed by later revisers, Chronicles had been written some time after 164 B.C. Spinoza pointed out many inconsistencies in the OT, and excused himself on the grounds that he wanted to focus attention on the many clear and uncorrupted passages, whose value was not at all affected by the fact that there were apparently faults in the OT.

An unexpected contribution to critical scholarship came from Catholic France, in the form of Richard Simon's *Histoire critique du Vieux Testament* (1678). This work argued strongly for a new translation of the OT based upon a critical edition of the Hebrew text; it was also an attack on Protestants, who were accused of basing their faith on a book whose text was in some parts lost or corrupted. Simon rejected many traditional views of the authorship of OT books. They had not been written by inspired individuals such as Moses, Joshua, Samuel, or David, but had been compiled by scribal schools. Simon's belief that a scholar could have freedom to investigate such matters critically so long as he accepted the teaching authority of the Catholic Church was not shared by his ecclesiastical superiors.

In England, the move toward critical scholarship came partly as a reaction against the Reformed view that a Christian king had the duty to order the affairs of the nation. For those who disliked such things as the Anglican attempt to make it compulsory to worship God according to the rites of the Book of Common Prayer, one method of opposition was to attack the OT model which sustained this view of the duty of the Christian king. This could be done by pointing out the immorality of David and the failings of Solomon. Further, the complex phenomenon of Deism went a long way toward diminishing the authority of the OT. Deism accepted the primacy of reason in matters of truth and faith, and believed in a universal religion of one God, the importance of good works, and immortality for the upright. Such a view found many parts of the OT to be barbaric and immature.

In Lutheran Germany, critical scholarship arose out of pietism, a religious movement that stressed individual experience at the expense of Reformation doctrine. At the University of Halle, itself a pietist foundation, the philosopher Christian Wolff stressed Leibniz' distinction between the necessary truths of reason and the contingent truths of history. This distinction had unpromising implications for the OT, given that so much of its witness was expressed via historical narratives. A scholar who was profoundly influenced by Wolff was S. J. Baumgarten (1706–1757). Although he believed that the OT was free from historical and other errors, he maintained that this conclusion had to be justified by scholarly research, not by appeal to inspiration. His pupil, J. S. Semler (1725–1791), took a different view. Basing his ideas upon what he believed to be Luther's position—that the purpose of the Bible was to assure believers that God had graciously accepted them—Semler felt able to handle matters of authorship freely and critically. Theologically, he valued only those parts of the OT that mirrored the spirit of the NT.

H. From 1750 to 1890

As critical and free inquiry into the authorship of OT books gathered momentum, there was established in Protestant Germany a body of critical scholars whose findings laid the foundation for modern scholarship. J. D. Michaelis (1717–1791) was, like Semler, a student of Baumgarten. He published many papers on the social world of ancient Israel and was especially well known for his *Commentaries on the Law of Moses* (1770–1775). J. C. Döderlein (1746–1792) is usually credited with the suggestion that Isaiah chaps. 40–55 were written not by the 8th-century Jerusalem prophet but by a 6th-century prophet-in-exile in Babylon. J. G. Eichhorn (1752–1827) studied under Michaelis and developed the Documentary Hypothesis of the composition of the Pentateuch along lines already indicated in

1753 by J. Astruc. Eichhorn published the first modern *Introduction to the Old Testament* in 1780–1785.

J. P. Gabler (1753–1826) delivered an inaugural lecture in Altdorf in 1785, which is usually held to mark the emergence of biblical theology as a discipline freed from the shackles of dogmatic theology. The task of biblical theology, according to Gabler, was to describe the history and development of theological ideas in the Bible, selecting those ideas that could command acceptance. This was a far cry from seeing the OT as providing proof texts for already-established dogmatic positions, and reflects the growing interest in the study of the development of OT religion.

In the 19th century, Protestant Germany greatly extended the lead that it had built up over other countries in the matter of critical scholarship. Britain and America were to accept critical scholarship only reluctantly from Germany. In both countries the Unitarians would be in the vanguard of critical scholarship, and in both countries critical OT scholars would face heresy trials before the century was out.

A turning point was reached in OT interpretation with the publication in 1806–1807 of the *Contributions to Old Testament Introduction,* by W. M. L. de Wette (1780–1849). De Wette was the first scholar to use criticism to put forward a view of the history of Israelite religion that was radically at variance with the picture presented in the OT itself. De Wette demonstrated that the books of Chronicles were dependent upon Samuel and Kings, and that the picture of Israelite religion contained in these latter books was at variance with the view that Moses had instituted a fully fledged sacrificial and priestly system. De Wette argued that Moses had instituted very little, that religion in the early monarchy lacked a centralized cult and priesthood, and that the fully developed Mosaic system owed much to the impetus of Josiah's cultic centralization and to his enforcement of the newly discovered Book of the Law (622 B.C.).

The position advocated by de Wette was taken up by scholars such as W. Gesenius (1786–1842), the father of the modern study of Hebrew grammar and lexicography, and it was further developed by C. P. W. Gramberg (1797–1830), J. F. L. George (1811–1873), and W. Vatke (1806–1882). Vatke's *Biblical Theology* of 1835 acknowledged its debt to the philosophy of Hegel, but it was nevertheless a deeply critical work which drew attention to problems raised by the OT text. Like de Wette, Vatke found little to attribute to Moses. Unlike him, however, Vatke saw the development of Israelite religion continuing through the Persian period. For de Wette, the postexilic religion of Israel was a falling away into "Judaism."

The triumph of the de Wettian view was prevented by a resurgence of Lutheran orthodoxy and neoconservativism that came to the fore from the 1830s, and was spearheaded by E. W. Hengstenberg (1802–1869). Hengstenberg worked in Berlin and was increasingly able to ensure that anticritical scholars were appointed in universities under the control of Prussia. De Wette's views were also opposed by H. Ewald (1803–1875), who was himself a critical scholar but who believed that much more of Israel's earliest history could be recovered than de Wette had supposed. Ewald produced, in 1843–1848, the first modern history of Israel, and he interpreted the patriarchal narratives as evidence for the movements of the tribes and subtribes that later constituted Israel. De Wette's criticism was also opposed by the Erlangen scholar J. C. K. Hofmann (1810–1877). He believed that biblical history was *Heilsgeschichte,* that is, the privileged account of God's direct interventions into human affairs via Israel. As such, biblical history was not open for critical study and could only be understood by those who had experienced new birth through the Church's proclamation of the Gospel.

From the late 1860s, the tide began to run in favor of the de Wettian position. His work on Chronicles was more or less reproduced in K. H. Graf's *The Historical Books of the Old Testament* (1866), while B. Duhm's *The Theology of the Prophets* (1875) stressed the importance of the prophets in the development of Israelite religion. It was left to J. Wellhausen (1844–1918) to bring together the various threads to produce a brilliant synthesis in his *Prolegomena to the History of Israel* (1883, 1st edition 1878). He drew upon the results of the Documentary Hypothesis in its newer form to correlate the presumed sources with differing eras of Israel's religious history. Thus, the J (Jahwist) and E (Elohist) documents of the early monarchy reflected the period of freedom in Israel's religion, when there was no centralized cult or priesthood. D (Deuteronomy) was the law book discovered in Josiah's reign that was written in the 7th century and became the basis for Josiah's centralization. P (Priestly Code) was written after the Exile, when Israel's religion had become the levitical and sacrificial system ascribed (wrongly) to Moses. From then on, OT interpretation could not avoid the Wellhausen synthesis, whether it accepted it or not.

In Britain, the Wellhausen position was accepted cautiously in the 1880s. The ground for its acceptance had been prepared by *Essays and Reviews* in 1860, in which seven essays by prominent members of the Church of England had welcomed critical scholarship of the Ewald type. From 1862 to 1879, J. W. Colenso, bishop of Natal, published a series of volumes on OT criticism that became increasingly competent, and which advocated a late (postexilic) date for the composition of the levitical and sacrificial material. The most brilliant advocate of German criticism, and of the Wellhausen position, was the Scot W. Robertson Smith. He was a fervent evangelical and believed that critical scholarship was the true product and continuation of the Reformation. His superiors in the Free Church of Scotland disagreed, and, after a heresy trial, Smith was dismissed in 1881 from his post in Aberdeen. His *Old Testament in the Jewish Church* (1881), written to justify his position in the face of the heresy charge, remains a classic. The Wellhausen position triumphed in Britain in 1891 with the publication of S. R. Driver's *Introduction to the Literature of the Old Testament.*

In the United States, German critical works were made known by Moses Stuart, a professor at Andover Seminary, in Massachusetts, from 1812, and by Theodore Parker, who translated de Wette's Old Testament introduction in 1843. Two prominent scholars, C. A. Briggs of Union Seminary, New York, and H. P. Smith of Lane Seminary, Cincinnati, were subjected to heresy trials in the 1890s. However, from the 1890s critical scholars on both sides of the Atlantic were joined together in two important proj-

ects: the Hebrew lexicon of Brown, Driver, and Briggs and the *International Critical Commentary,* to which Driver, Briggs, and Smith were contributors.

I. From 1890 to the Present

Opposition to the Wellhausen synthesis took two main forms that can be loosely described as "outflanking" and "confrontation." The "outflanking" drew upon the Assyriological materials that became ever more abundant from the 1870s. These not only brought to life at first hand the great empires of Assyria and Babylon, but they also settled once and for all the dispute between scientists and conservative biblical scholars about the scientific accuracy of the opening chapters of Genesis. This dispute had begun in the 1820s when geologists claimed that the world was much older than the 6,000 years implied by Archbishop Ussher's chronology, and it had received new life following publication of Darwin's *The Origin of Species* in 1859. Assyriological discoveries in the 1870s indicated that the OT account of creation and the flood had much in common with the traditions of neighboring peoples. The possibility of interpreting the OT in the light of Babylonian and Assyrian texts, combined with the form critical studies pioneered by H. Gunkel (which went behind the sources J and E to the individual units of narrative and their presumed social setting), produced a new synthesis which was championed by Scandinavian scholarship and accepted warmly by some British scholars.

A landmark in this new synthesis was the publication of S. Mowinckel's Psalm studies from 1921 to 1924. The synthesis concentrated upon the role of the king in the Jerusalem cult, in the light of the Babylonian New Year Festival. It stressed the importance of this festival for Israelite belief in the universal kingship of the God of Israel, his power as creator, and his ultimate victory over evil. Whereas the Wellhausen synthesis regarded the prophets as the creators of Israelite religion at its best, the cultic approach looked to the worship of the Jerusalem temple during the monarchy as the fountainhead, and even sought to subordinate the prophets to the Jerusalem cult. Wellhausen was accused of having ignored or overlooked the importance of the Assyriological material.

A similar charge was brought against Wellhausen by those who "confronted" him. Here, the protagonists were the American scholars who, under the leadership of W. F. Albright, believed that Palestinian archaeology together with Assyriology vindicated many of the details of the patriarchal traditions, as well as the biblical accounts of the Exodus and the conquest of Canaan. Their charge against the Wellhausen synthesis was that it was based purely on the literary criticism of the OT, and ignored the findings of Assyriology and archaeology.

The 20th century saw new developments in the study of OT theology. In the 19th century this had been undertaken either by the imposition of the categories of Systematic Theology upon the OT, or in terms of the history of Israelite religion. For a time in the 20th century, it seemed impossible to write more than a history of Israelite religion, given the evident similarities not only between the OT and the religion of Israel's neighbors but also between the OT and the religion of "primitive" peoples studied by anthropologists. However, the theological climate following World War I was that of a new orthodoxy that challenged the liberalism of the preceding decades. Further, the attempt of Nazi "Christians" in Germany to dispense with the OT called for a passionate defense of its distinctiveness.

In American scholarship, a new type of biblical theology developed from the Albright school. Convinced that archaeology vindicated the substantial historical accuracy of the OT, this approach saw in the acts of God, especially in the Exodus, a direct intervention of God into the affairs of Israel. This intervention had stamped upon the OT witness to the acts of God a uniqueness which biblical theology was supposed to elucidate. This uniqueness even extended to the grammatical and linguistic features of biblical Hebrew, so that the study of key OT concepts gave access to God's revelation to his people. G. E. Wright's *God Who Acts: Biblical Theology as Recital* (1952) is a fine statement of some of the points made in this paragraph.

In German-speaking scholarship, two approaches emerged. The Swiss scholar W. Eichrodt adopted in his *Old Testament Theology* (1933–1939) the simple idea that the organizing principle of the OT was the covenant between God and Israel. This covenant was the practical expression of the "irruption of the Kingship of God into this world and its establishment here," and it became the interpretative principle in terms of which Israel understood and expressed its history. The other approach in German-speaking scholarship was that of G. von Rad, whose *Old Testament Theology* of 1957–1960 was influenced by M. Noth's studies of the growth of tradition. Von Rad shared some of Noth's historical skepticism about the possibility of reconstructing the foundational events of Israel's faith, such as the Exodus. Instead, he focused upon OT traditions as confessions of faith in God, arising from communal celebrations of that faith. Israel's confession of faith took several different forms, and had to adapt to changing historical circumstances; thus, von Rad's *Theology* was a historical study of the rise and development of Israel's witness to faith as embodied in the Yahwistic, Deuteronomic, Priestly, and prophetic traditions.

Von Rad's was essentially a descriptive, historical, and genetic way of reading the OT. In the 1960s there arose a synchronic way of reading it. This was indebted to structuralism, a movement which had been slowly influencing linguistics, and which began to shape OT studies as scholars turned to these disciplines for new insights.

In 1961, James Barr's *Semantics of Biblical Language* attacked, among other things, one of the central ideas of the Biblical Theology Movement: that Hebrew linguistic structures were privileged vehicles for communicating divine reality. Barr showed that it was a mistake to understand Hebrew words always in terms of their supposed etymological "roots," that usage in context had to be studied, and that the basic unit of meaning was not words but sentences and larger aggregates of text.

At about the same time, the social anthropologist E. R. Leach was applying to the OT the structuralist reading of myths pioneered by the French anthropologist C. Levi Strauss. This involved denying to biblical texts any historical value, and reading them as "codes" whose meanings were expressed by the structural opposition within them. So understood, biblical texts were explorations of the

problem of Israel's unique status versus its need to participate in cultural, economic, and social relationships with surrounding nations. In itself, structural anthropology made only a short-lived impact upon OT studies; but it prepared the ground for the arrival of literary structuralism, and for the study of the Bible in the light of literary theory.

This movement, which is in essence ahistorical, is concerned not with the world *behind* the text but with the world *within* the text. It is sometimes hostile to the attempt to discover the original intentions of the biblical writers, or to interpret biblical literature in its original historical and social setting. At its worst, it can result in totally subjective and idiosyncratic readings of OT texts. At its best, it can discover features in texts which, whether or not intended by the biblical writers, greatly illumine the encounter between text and readers.

A movement which, on the face of it, has totally conflicting aims with literary readings is that which employs modern social and anthropological theory to rediscover the social world of ancient Israel. This is, in effect, a renewal of long-established goals in OT studies with the help of more powerful and sophisticated methods. These include ethnoarchaeology, which investigates the settlement patterns, ecosystems, and economic geography of earliest Israel, and comparative studies of social and political systems of the ancient and modern worlds with a view to the better understanding of Israel's social organization and development. A massive, although controversial, contribution to this discussion has been Norman Gottwald's *The Tribes of Yahweh* (1979). There have also been valuable studies of the social dimensions of Israelite prophecy.

The apparent contradictory aims of literary and sociological approaches to the OT are indications of a methodological pluralism that has come to dominate the discipline in the past two decades, although in some cases special interests have brought an uneasy uniting of these divergent approaches. For example, women's studies have become a burgeoning field within OT study. In some instances, these have been sociological investigations of, for example, the role of women in the economy of ancient Israel. In other cases they have been purely literary, involving the reading of narratives from a feminist or female standpoint. The use of the OT by the liberation theologians of Latin America and southern Africa has put another set of ideas into the agenda. The very assumption that academics living in secure positions in the wealthy countries of the world can be authentic interpreters of the OT has been challenged; only the poor and the oppressed, it has been claimed, can hear in the OT the authentic voice of the God who liberated his people from actual physical slavery.

While the literary and sociological movements have engaged the energies of their proponents, there has also emerged a new attempt to see the OT theologically. This is the canonical approach expressed in B. S. Childs' *Introduction to the Old Testament as Scripture*. In some ways, this is almost the negation of von Rad's descriptive account of the history of Israel's narrative witness to faith. Instead of tracing how the traditions, as witnesses to faith, changed and developed over the centuries, the canonical approach as advocated by Childs is concerned with the canonical form of the text. And this is more than simply a literary final-form reading of the text. There is a "canonical intentionality" which can be discerned from the final form and which then provides guidance for a theological interpretation of texts. For example, whatever may have been the use made of the psalms in the preexilic cult in Israel, the book of Psalms in its canonical form knows little or nothing of those situations. The canonical intentionality of the collection as a whole is indicated by psalms such as Psalms 1 and 119, which imply that the psalms are to be used for meditation, and that what were originally words of worshippers addressed to God have become the word of God to worshippers. Although Childs has been heavily criticized, his approach has gained many adherents, and attempts have begun to anchor it in contemporary hermeneutical theory.

Childs' approach indicates clearly what has happened to OT interpretation since the link that bound it to the NT was snapped in the 17th and 18th centuries. If it is to be interpreted theologically, then the OT itself must provide the categories for such interpretation; but the "discovery" of these categories will be guided and shaped by concerns and movements in the arts and humanities in general.

J. W. ROGERSON

HISTORY OF BIBLICAL HERMENEUTICS

The discipline that considers the theory of interpretation is usually called "hermeneutics." The concern of this article is to outline the principles of biblical interpretation and their historical development, thus to provide a systematic and historical discussion of biblical hermeneutics.

E. Conclusion

A. The Need for Biblical Hermeneutics

Every act of text understanding operates, consciously or unconsciously, with a number of presuppositions. Text hermeneutics reflects not only on these general presuppositions of reading but also on more specific reader orientations, such as expectations of the text content,

attitudes toward the communicative perspective of the text, attribution of authority to the text (e.g., the "sacredness" of a biblical text), and suspicion over against the text's claims. Hermeneutical reflection is conscious of the fact that every act of text understanding is characterized by a twofold "hermeneutical circle": the whole of a text can only be understood by understanding its parts, and vice versa, and every reader approaches a text with a certain preunderstanding which will be either confirmed or challenged in the act of reading.

It is the sign of *critical* text understanding that in every group or institution the general methodological presuppositions and the specific orientations of readers are discussed in a public theoretical discourse. In view of the particular hermeneutical implications of biblical interpretation, such a critical discourse (in which the modes and motivations of text understanding are reflected and which aims at improving human text understanding) has been developed and promoted by both Jewish and Christian thinkers. Here we refer to theoretical statements on biblical interpretation from both traditions, to their interrelatedness, to their historical development, and to their significance for the religious and academic communities involved.

B. Development of Biblical Hermeneutics until Schleiermacher

1. Greek Influence on Jewish and Christian Hermeneutics. There was, of course, a rich Jewish interpretive praxis long before Israelite hermeneutics met with the emerging Greek interpretation theory. The texts of the Hebrew Scriptures themselves witness to a number of ways of appropriating ancient texts in new contexts (liturgical, personal, social, political, etc.). In Israel, the appropriation of ancient religious writings was generally linked with particular religious persons or institutions, such as Moses, the Levites, the prophets, and the kings. These authorities were charged with the development of an authoritative interpretation of the texts of the Hebrew Scriptures in changing historical circumstances. Especially the texts proclaiming God's law (the Torah) needed to be understood and explained in order to be able to function as instructions for the people of God. The records of such appropriations point to the urgency of questions such as these: How can one arrive at a proper understanding of a text? How can one use a biblical text in order to solve nonbiblical questions? How many meanings does a text have, and how can we locate the proper one? In response to these questions, sets of hermeneutical principles have emerged which were meant to facilitate the exegetical task of the individual interpreter within the community. These principles always comprised both a philological approach to the text and the broader existential-theological interpretation of the text's sense in particular historical circumstances. See also PESHARIM, QUMRAN; TARGUM, TARGUMIM.

Similarly, the emerging Christian movement had to come to terms with the problem of biblical understanding. Respecting the same texts as authoritative as the Jews did, the Christians were faced with the question of whether their particular set of religious experiences concerning the life, death, and resurrection of Jesus Christ necessitated a new interpretive praxis. The Torah, for instance, continued to be a sacred text for the early Christians, but it was now understood in the light of Jesus of Nazareth's proclamation of God's reign, and thus was somewhat relativized in its authority. Some NT texts display a pneumatic approach toward the texts of the Hebrew Scriptures, spirited by the belief that in Jesus Christ the prophecies given to Israel and recorded in the Hebrew Scriptures were fulfilled (see Matt 1:22–23); other texts make use of such a prophecy-fulfillment scheme by identifying types in the OT which correspond to Jesus Christ (e.g., the Adam-Christ correlation in Romans 5). Apart from these new hermeneutical moves which resulted from the particular experiences of the people who gave rise to the NT texts, the NT not surprisingly attests to the fact that its originally Jewish authors worked within the tradition of rabbinic text understanding (see below).

The critical and systematic reflection on the process of biblical understanding as such began to develop in Hellenistic Judaism, particularly in such centers of learning as Alexandria, Antioch, and Jerusalem, where Greek thought and the needs of Jewish (and later Christian) interpretive praxis had met. Greek reflection on interpretation theory resulted in the development of proper modes of reading the foundational texts of Greek society, i.e., Homer's epics. Two schools had emerged in Hellenistic literary criticism: the grammatical-literal and the allegorical reading of texts. The first hermeneutical program, adopted by the theological school of Antioch, aimed at retrieving the "literal" meaning of the Homeric texts. "Literal" referred to the sense of the words which the interpreters understood as obviously intended by the text's author. The second hermeneutical program, defended by the Alexandrian School of theology, aimed at disclosing the meaning behind the text, namely, the deeper sense to which the words refer. This method emerged in response to the contradiction which existed between the authority of the Homeric texts and the ethos of a later generation of interpreters. Where the literal sense appeared to open such gaps, the search for a deeper or a hidden sense could bridge these gaps and thus rehabilitate the classical author from any suspicion of immorality, etc.

The allegorical method was applied to biblical interpretation and further developed by the Jewish scholar Philo of Alexandria. Philo argued for the necessity of an extratextual key through which the hidden sense of the biblical text could be unlocked. Moreover, the allegorical method proved to be the best way of preserving the sacredness and integrity of the biblical text against any critique of the Bible's crude or apparently nonsensical passages (esp. those which spoke of God in an anthropomorphic manner). Thus, the allegorical method must be seen as serving a particular set of theological convictions.

2. Principles of Rabbinic Interpretation. While it is not possible to measure precisely the amount of Greek influence on rabbinic interpretation theory before and after the destruction of the temple, it is more essential to note that both Greek and Jewish interpreters were united by a similar goal, namely, to understand and apply their classical but ancient texts in new cultural, linguistic, ethical, political, social, and economic contexts. Thus, hermeneutical similarities may have emerged not only because of

geographical and cultural affinities, but also because of the similar necessities of interpretive practice.

The destruction of the temple generated a new hermeneutical challenge in Judaism: when this unique means of mediating the past and the present of Israelite religion was annihilated, the now canonical Scriptures came to represent more than ever before the spiritual essence of Jewish identity. Now, rabbinic interpreters were faced with a religious, linguistic, and social situation which required a sophisticated process of appropriating the Torah (i.e., the legal parts of the Hebrew Scriptures) in an alien world. The written law, however, did not provide all the answers required by the changing external and internal circumstances of Jewish religious existence. In this context, the Midrashim (the oral derivations and applications of the written Torah) developed. Different sets of principles, normally referred to as Heb *middôt*, emerged which guided the Midrashic interpreter in his difficult task. The best known among these hermeneutical principles are the seven rules associated with Rabbi HILLEL THE ELDER (ca. 20 B.C.–15 C.E.) and the thirteen rules of Rabbi ISHMAEL (see below). These rules themselves became the object of much hermeneutical discussion and were then amended accordingly. They concerned the possibility of deriving certain "oral" laws from one or more biblical passages with the help of logical procedures. It was necessary to demonstrate the biblical origins of any such "oral" law. Thus, the canonical, i.e., closed, written law was opened to new and unforeseen applications. The measure of "adequacy" in such applications, however, was not what we today would name historical accuracy; rather, it related to particular interpretive expectations and convictions which often had only some literal connection in the actual text. The differences in interpretative method can be seen from a look at the debate between two rabbis in the 2d century C.E., when the foundations for the new rabbinic praxis of biblical interpretation were laid. While Rabbi AKIBA favored a more creative approach to the biblical texts, Rabbi Ishmael insisted that the texts of the Torah must be interpreted according to traditional rules, i.e., an amended version of Rabbi Hillel's compendium. The difference between both approaches has been also interpreted as a reflection of the rabbis' different concepts of philological and theological thinking: Akiba was more mystically oriented, and Ishmael was more philologically oriented.

As far as the nonlegal texts in the Bible, the Haggadah, were concerned, rabbinic hermeneutics was much more open to a diversity of creative readings. Any aspect of the text could provide the foundation for a sophisticated interpretive treatment and application on a new context in the life of the faithful. The various interpretations of a passage were then collected in authoritative sources such as the Talmud and used not only in liturgical contexts but also as information for future interpreters. See also HERMENEUTICS, EARLY RABBINIC.

3. Early Christian Hermeneutics. In the early Church, the debate on the proper method of biblical interpretation resembled the outlined divisions in Greek and Jewish hermeneutics: Alexandrian Christian theologians such as Origen (d. 254) defended the allegorical method, whereas Antiochene theologians such as Diodorus of Tharsus (d. 394), Theoderet of Cyrrhus (d. 460), Theodore of Mopsuestia (d. 428), and Chrysostom (d. 407) protested against the allegorical "misuse" of the biblical texts and declared the literal reading to be the only proper method of biblical appropriation.

It is important for us today to appreciate the foundational nature of this hermeneutical debate. The rather philological orientation of Antiochene theology implied a basic openness toward a critical assessment of the content of each biblical text within the emerging biblical canon. The Song of Songs, for instance, was classified as an ancient wedding song without any theological significance. Hence, the Antiochene exegetes approached each text as a meaningful whole, while their Alexandrian colleagues viewed each biblical text as part of the overall body of sacred writings, i.e., the canon. The allegorical method made it easy for them to raise every text passage above philological suspicion and theological critique. However, both hermeneutical camps agreed that the Hebrew Scriptures ought to be approached typologically. That means, many of the biblical texts were assumed to contain already a *typus* of Christ (e.g., texts such as Amos 9:11–12 were interpreted typologically as pointing to the coming Christ). Thus, even the anti-allegorical theologians allow to some extent for the existence of a double meaning in the biblical text. Eventually, the allegorical method developed into the leading approach to the Bible in the early Church, both East (Greek) and West (Latin), while the Antiochene approaches which promoted a literal or historical reading of the Bible (such as Theodore's five books *Adversus Allegoricos*) disappeared altogether. But the influence of Antiochene hermeneutics would eventually re-emerge, especially in the Protestant Reformation (see B.6 below).

The leading allegorist in the early Church was ORIGEN. In the fourth and final book of his theological work *Peri Archon (On First Principles)*, he addressed the problems of interpretation theory. *Theoria* meant for him allegory (for the Antiochenes *theoria* referred to the literal approach). Since the Scriptures contained the ultimate mystery of divine-human relationship, Origen considered the allegorical method to be the only adequate approach to these texts. It alone could provide the key to unlock the hidden sense of the texts so far as this was possible at all. Although in his theory, Origen distinguished between three dimensions of the textual sense (literal, moral, and spiritual), in his exegetical praxis he distinguished only between two levels of meaning (the "letter" and the "spirit"). It is also interesting to note that in spite of his allegorical orientation in exegesis, Origen must be counted among the most influential philologists in the early Church. He was thoroughly involved in text criticism and in the comparison of different traditions of textual variants (as evidenced by his *Hexapla*). This shows that the search for the most trustworthy textual traditions and a wholly allegorical approach to the text, thus critically retrieved, did not exclude each other.

Allegorical interpretation also proved useful in the fight against the gnostic heresy. Many gnostics employed a method of allegorical exegesis, or allegoresis. Church fathers, such as Irenaeus of Lyons (d. ca. 202), fought against this gnostic allegoresis while using their own allegorical "keys" in order to expose the gnostic "keys" as false or heretical. The fight against gnostic hermeneutics also led

to the formation of ecclesiastical criteria which were to determine the adequacy of any particular exegesis: only those theologians who interpret the Bible from within the Church could hope to do justice to the texts.

The further development of Christian hermeneutical thought was mainly the work of Jerome and Augustine of Hippo. Jerome (ca. A.D. 347–420), generally known for his revision of the Latin text of the Bible (later called the Vulgate), favored the literal exegesis as practiced in the School of Antioch, where he once had been a student. Although in principle he recognized the legitimacy of spiritual interpretation of the Scriptures, he insisted that such spiritual reading must be firmly based on the literal understanding of the text. His own biblical commentaries displayed fewer and fewer allegorical moves as he grew older. He, too, used Origen's philological contributions, especially the *Hexapla,* in his own efforts to work out a proper textual basis for the literal interpretation of the Bible. Jerome's strong emphasis on literal interpretation makes him one of the forerunners of the growing interest in literal understanding of the Scriptures in later medieval hermeneutics.

While Jerome's contribution to the development of biblical hermeneutics has always been well appraised, the significance of the hermeneutical thought of Augustine of Hippo (354–430) and his influence on medieval theology have not always received adequate attention. In his work *De Doctrina Christiana* (427), we can see the mature development of Augustine's theological hermeneutics. Augustine's great achievement in the hermeneutical field lay, first, in his effort to combine both Antiochene and Alexandrian concerns for the benefit of the Christian community, and, second, in his semiotic reflections on which his own hermeneutics was based. For Augustine, the Bible fulfilled a communicative function: it enlightened the reader about God's salvific activity in the world. Thus, the biblical texts themselves are only significant for the Christian reader because of the realities to which they refer. The insight that signs are not what they refer to but rather operate as signifiers motivated Augustine to study the best ways of decoding what the signs constituting the biblical texts wish to say. So far one can see Antiochene influence. But unlike the Antiochene interpreters, Augustine in his own hermeneutics presupposed the christological content and the canonical integrity of the biblical texts as well as the ecclesial rootedness of their interpreter. Moreover, he concluded from his own biblical reading that the Bible is about faith, hope, and love: "A person who bases his life firmly on faith, hope and love, thus, needs the Scriptures only in order to teach others. Therefore we may find many people who live on this basis even without sacred texts" (*De Doc. Christ.* 1, 43). Hence, the need for intense philological study of these texts and for the interpretive effort was somewhat relativized, and a theological framework for allegorical, and especially for typological, reading was established. However, Augustine repeatedly warned against the excesses of allegorical text interpretation. Therefore, it would be wrong to count Augustine among the propagators of an uncritical allegorical method in biblical interpretation. As Bonner (*CHB* 1: 561) observes, the influence of Augustine on the later biblical exegesis of the Latin Middle Ages was enormous. With Jerome, Gregory the Great, and the Venerable Bede, he was one of the four great authorities, and would probably have been reckoned the greatest of the four.

In spite of Augustine's warnings against an uncontrolled allegorical reading of the Bible, the particular form of allegorical interpretation which was originally advanced by John Cassianus in the 5th century became very prominent in medieval theology. Cassianus had proposed a fourfold theory of interpretation. Following Origen, he distinguished between literal and spiritual interpretation, but then subdivided spiritual interpretation more sharply into (1) tropological (= moral), (2) allegorical, and (3) anagogical (= future-oriented) interpretation. However, occasionally this fourfold scheme was reduced to a triad, and in actual exegetical praxis we still often observe only the classical twofold distinction between literal and spiritual interpretation.

4. Medieval Jewish Hermeneutics. There was no one single center of Jewish hermeneutics after the destruction of the temple. By the medieval period, Jewish hermeneutics was characterized by local and theoretical diversity. In some parts of the world, especially in the Orient and in Spain, many Jewish thinkers adopted Arabic as their language (note the translation of the Bible into Arabic by Saadiah Gaon [882–942]) and also Arabic concerns of text interpretation; in other parts, such as France, Jewish teachers employed Hebrew as their language and were much more involved in an exchange with Christian approaches to the Scriptures.

The influence of the more Arabic strand within medieval Jewish hermeneutics can be seen in the very strong rejection of allegorical interpretation and the cultivation of literal reading and its philological presuppositions. The encounter with Arabic philosophy and the Arabic retrieval of Aristotelian thinking have also promoted an attempt to explain the Torah in more rational terms. Moreover, Arabic interest in poetry strengthened the sensitivity of Jewish interpreters for the respective passages of their own Scriptures. Philological studies, including grammar, lexicography, etymology, and accentuation, blossomed, particularly in Spain; while in France, a more traditional rabbinic hermeneutics was employed in text interpretation.

Among the outstanding representatives of medieval Jewish hermeneutics in Spain were Abraham ibn Ezra (1092–1167) and Moses ben Maimon, called Maimonides (1135–1204). Ibn Ezra approached the biblical texts through a combination of sophisticated philological methods and traditional rabbinic rules; while Maimonides interpreted the Bible through categories of Aristotelian metaphysics, stressing the human (linguistic) mode of Bible transmission, and thus arrived at some form of "demythologization." In France, Solomon ben Isaac, called Rashi (1040–1105), favored a literal reading of the biblical texts, claiming that the biblical text does not depart from its plain meaning. Rashi's very popular biblical commentary became the first Hebrew book printed in Italy (1475). His work had a profound influence on the School of St. Victor in Paris and thus on the whole of medieval Christian hermeneutics.

The struggles of medieval Jewish exegetes resembled those of their Christian counterparts. Both groups attempted to come to terms on the one hand with the

problems of literal and allegorical understanding of their sacred texts, and with the relationship between philological and philosophical methods, and on the other with traditional forms of sacred or mystical reading.

5. Medieval Christian Hermeneutics. In the early medieval period, i.e., from the 6th to the 8th centuries, the development of biblical interpretation was the work mainly of monks. At that time, the exegetical praxis in the medieval Christian church was dominated by allegorical methods. Gregory the Great (ca. 540–604) was a master of this approach to the Bible and one of the chief illustrators of the advantage of allegoresis. Like other medieval interpreters, he compared the act of reading the Bible with the building of a house: upon the historical foundation we erect the walls with the help of our spiritual reading, and then we color the whole structure by the grace of moral teaching (Brinkmann 1980: 231–34). Thus, for Gregory, biblical interpretation reached a state of perfection when it led to a disclosure of the deeper sense of the text, because only in that disclosure do we gain insight into God's act of revelation in Christ. Like Augustine's, Gregory's hermeneutics was firmly rooted in a set of theological and ecclesial convictions.

While the popular piety in the later medieval period remained strongly influenced by allegorical interpretation, the development of interpretation theory followed a somewhat different path. In order to understand the increasing interest in the literal sense of the Bible, one must appreciate not only the influence of both Jerome and Augustine (which can be observed throughout the hermeneutical discussion in the Middle Ages) but also the impact of Jewish scholars such as Rashi and his followers. Although not explicitly acknowledged by Christian thinkers, this Jewish hermeneutical influence was significant, especially on the two major representatives of Christian hermeneutical thinking of the time, namely Hugh of St. Victor (d. 1141) and Nicholas of Lyra (d. 1349). Hugh was a master at the famous monastic school of the Victorines in Paris; Nicholas was a Franciscan teacher at the University of Paris. Thus, the place where Christian hermeneutics was discussed was now no longer the community of believers as such, but the academy. This change of framework also helps to explain the widening gap between popular biblical interpretation, which continued to be allegorical, and the academic treatment of the Bible, which now attended to the philological study of the text in order to retrieve its literal meaning. This academic interest in the literal meaning of the text did, however, not exclude the subsequent use of allegorical methods even in academic circles. With these qualifications in mind, one can say that the following verses are characteristic of the medieval method of biblical interpretation:

> *Littera gesta docet, quid credas allegoria,*
> *Moralis quid agas, quo tendas anagogia.*

("The letter shows us what God and our fathers did; the allegory shows us where our faith is hid; the moral meaning gives us rules of daily life; the anagogy shows us where we end our strife"; see Grant and Tracy 1984: 85.)

As a result of the rediscovery of Aristotle in Christian theology since the 12th century and the related growth of scholastic theology, biblical hermeneutics became very critical of allegorical interpretation and paid even more attention to the retrieval of the literal sense of the biblical text. The greatest scholastic theologian, Thomas Aquinas (1225–1274), upheld in principle the fourfold sense of Scripture, but at the same time he did not hesitate to question the scientific nature of allegorical interpretation and of theological thinking based on its results. Thomas demanded that proper theological thinking ought to be firmly based on the literal sense of the biblical text. "Nothing necessary for faith is contained under the spiritual sense which is not elsewhere put forward clearly by the Scripture in its literal sense" (*Summa Theologiae* 1a. 1, 10). However, Thomas' critique of allegorical interpretation and his promotion of a new academic ideal in biblical hermeneutics did not succeed in reforming the love for allegorical reading in the preaching of the Church and in the popular religious realm. In fact, here allegorical readings increased even further and continued to challenge theologians to fight back. Already since the 14th century—i.e., long before the Protestant Reformation—theologians such as Marsilius of Padua, William Ockham, John Wycliff, John Hus, Gabriel Biel, Wendelin Steinbach, and John Major attacked (though not with any immediate result) the widespread uncritical use of the Bible and tried to formulate new and more critical principles of biblical interpretation.

6. Biblical Hermeneutics in the Age of the Reformation. The Reformers' contribution to biblical hermeneutics (i.e., the *theory* of biblical interpretation) has at times been assessed in isolation from the overall development of biblical hermeneutics and thus has been perceived to be more original than it really was. Although Martin Luther (1483–1546), John Calvin (1509–1564), and Ulrich Zwingli (1484–1531) applied the interpretive methods which were prepared both by the critical academic tradition referred to above and by the great humanist thinkers (such as Reuchlin and Erasmus of Rotterdam), the Reformers' actual *praxis* of reading the biblical texts, in particular their fresh theological reading perspectives, differed greatly from their predecessors and led to the development of a new attitude in biblical reading. In that sense, one may be justified in describing the Reformation as a hermeneutical event. Its new interpretive praxis was also promoted by the translation of the Bible into the vernacular, facilitating a fresher look at the text itself. While the philological emphasis in humanist interpretation must be seen in the long tradition of interest in the literal meaning of the texts—which comprises the Antiochene concerns and those of Augustine, Aquinas, and their followers as well as those of the medieval Jewish thinkers—the most decisive differences between these interpretation theories and the humanists' approach to the Scriptures lay both in the new understanding of the authority and the function of the Scriptures and in the radically transformed self-understanding of the biblical interpreter. By contrasting the ecclesial status quo with the newly interpreted meaning of the Scriptures, the Reformers saw an urgent need to work for the necessary changes in the Christian community. For the Reformers, the ultimate criterion for such a reform of the Church was the Word of God as communicated in the Bible. They all agreed that the Bible alone *(sola scriptura)*

represented the foundation of the Christian faith, and its content was perceived to be fully clear, or self-interpreting *(scriptura sui ipsis interpretes)*. But each of the Reformers added his own theological reading perspective to these formal criteria for biblical interpretation.

For Luther, this reading perspective consisted both in his belief in the justification by faith alone and in his corresponding negative view of human nature. Only through faith in God's salvific action in Jesus Christ can the biblical interpreter sharpen his perspective for the content of the text. However, unlike the later "Lutheran Orthodoxy," Luther himself never considered the Bible as a text system free of problems and contradictions. Rather, he applied philological means of critique in unison with his theological considerations. Even the occasional allegorical interpretation was accommodated. Like Augustine, whom he much admired, Luther felt free to apply his exegetical genius to the text even when his own hermeneutical maxims in fact did not sanction such a move. Thus, he did not refrain from a typological reading of the Hebrew Scriptures, either. But unlike Augustine, Luther's exegesis was not limited by a total acceptance of the canonical status of the whole Bible. Rather, the Reformer treated every text according to its own christological merits, thus reaching a negative verdict about the theological legitimacy of including the Epistle of James in the NT.

Other Reformers, such as Melanchton, Calvin, and Zwingli, contributed to the development of hermeneutics by offering their particular combination of humanist philological methodology and their specific theological approach to the overall content of the Scriptures.

Following the Reformers' hermeneutical concerns, Matthias Flacius Illyricus (1520–1575) attempted to provide a synthesis of reformational thinking on biblical interpretation. In his work *Clavis scripturae sacrae* (1567), Flacius particularly stressed the need of a grammatical interpretation, and he advanced the theory of the unity of the Scriptures as the necessary foundation of biblical hermeneutics.

Assessing the Reformers' hermeneutical initiatives, G. Ebeling (1967: 26) concludes that they were not sufficiently conscious of the distance between them and the time of early Christianity, and thus not sufficiently aware of the philosophical implications of text interpretation as such. In particular, "It remained unclear what the principle of *sola scriptura* meant for the theological method as such" (Ebeling 1967: 73). Hence, without further elaboration on the hermeneutical principles operative in the theology promoted by the Reformers, this theology remained uncritical and therefore open to misuse. However, before the hermeneutical discussion in Protestantism was advanced eventually by theologians such as Semler and Schleiermacher, the time of the Reformation was followed first by a period of uncritical biblicism—the so-called Lutheran Orthodoxy.

7. Biblical Hermeneutics in the Period of "Orthodoxy." None of the Reformers had ever defended the verbal inerrancy of Scripture. However, their theological successors, among them Johannes Andreas Quenstedt (1617–1688) and Abraham Calovius (1612–1686), defended the verbal inspiration of the entire Bible and developed the principle of biblical infallibility. For these thinkers, the Bible was identical with the Word of God and thus as text the infallible foundation of a set of dogmatic convictions. Although all these theologians reached dogmatic statements by using the same rationalistic method, these statements of "orthodoxy" often differed significantly.

For Roman Catholicism, the Council of Trent (1545–1563) formulated the "orthodox" conditions for biblical interpretation by confirming the two-source theory. That theory decreed that both the Bible and Christian tradition together represent the sources for authentic Christian faith and theology. This differed sharply from the Protestant theory that the Bible was a clear and sufficient source. In the ensuing controversy between both "orthodoxies," the Roman Catholic challenge of the Protestant principle of *sola scriptura* and the Protestant challenge of the Roman Catholic two-source theory were each met by the opposite side with an even stronger ideological defense. However, when the traditional biblical worldview which supported both "orthodoxies" was challenged by the emerging new worldview, Lutheran, Reformed, and Roman Catholic "orthodoxies" fought with the same kind of argument against this new and common enemy which opposed not only their hermeneutical foundations but also their particular methods of reading the Scriptures.

The discoveries of new parts of the world, the new insights into the laws of nature, and the emerging technological progress challenged the ancient set of convictions, (i.e., the traditional paradigm of biblical interpretation). The Western discovery of China and Chinese culture, for instance, challenged the belief in the biblical chronology of the world and the still widely cherished belief that Adam was the father of humankind. Moreover, the rationalistic demands by philosophers such as Spinoza and Descartes that reason should become the criterion of faith upset all "orthodoxies" alike. Their representatives now felt called to defend the Christian heritage against the new movements which were based on rational thought and experiment. While a few theologians working in Holland, among them Balthasar Bekker (1643–1698) and Christoph Wittich (1625–1687), accepted the challenge of the biblical worldview and tried to find ways of bridging the traditional faith and the new reason, their German Protestant colleagues in particular felt the need to harden their "orthodox" standpoint even further. Hence, biblical hermeneutics was reduced to the development of a set of rules which read the texts in such a literal way that the dogmatic preunderstandings of the "orthodox" theologians were confirmed. But this negative attitude toward the new philosophical and scientific challenges could not last forever.

Interestingly, a first critique of the "orthodox" literalism came from the Pietiest movement, which deplored the dogmatic and formalistic way of reading the Scriptures and demanded now a new hermeneutical emphasis on the personal experience of the biblical interpreter. Thus, the problem of the relationship between private and public understanding of the biblical texts was now added to the already existing problem of the relationship between faith and reason in biblical hermeneutics. It took a new generation of interpreters to attend to these questions with a fresh and critical mind.

8. Biblical Hermeneutics in the Age of Enlightenment.

The attitude of the Protestant Orthodoxy toward the revolutionary changes in the early modern period and its attempt to stick to its hermeneutical principles and horizons could not remain successful for long. Neither could the mere repetition of the doctrines of verbal inspiration and of the identity between Scripture and the Word of God stop the hermeneutical reflection in theology; nor did it impress the now independent disciplines of scientific research and of critical philosophical thinking. Moreover, in Roman Catholic theology a new interest in biblical interpretation arose which, in response to the Protestant claim of *sola scriptura,* tried to show the wider hermeneutical basis of Christian faith and the need for a thorough critique of the biblical text (cf. the work of Richard Simon). The combination of these challenges led to a new beginning in Protestant hermeneutics in the 18th century. This new movement in biblical interpretation was strengthened further by the now universal interest in philological methodology.

Among the centers of enlightened scholarship, the University of Halle (Germany) played a very significant role. Here Johann Salomo Semler (1725–1791), influenced by the philosopher Christian Wolff and the theologian Siegmund Jakob Baumgarten, developed a new biblical hermeneutics. This new approach was characterized more by its effort to prepare a new general foundation for biblical hermeneutics than by a set of detailed rules for the interpretation of biblical texts. Semler demanded both a critical reading of the Scriptures free from dogmatic presuppositions, and a multidisciplined approach to the text which included attention to questions of grammar, rhetoric, logic, history of the text, translations, criticism of editions, and exegesis proper. Although Semler did not yet penetrate deeply into the problem of historicity, he did help prepare such an insight by demanding both a critical study of the history of the text and a strong attention to the meaning intended by the biblical authors, that is, to the *sensus litteralis historicus* of the biblical text. Unlike either the Reformers or the representatives of Protestant Orthodoxy, Semler cultivated a sense of historical distance between modern reader and ancient text and understood the resulting need for hermeneutical procedures. He also questioned the legitimacy of typological interpretation of the OT.

A great admirer of Richard Simon, Semler began to develop a critical understanding of the traditions behind the biblical texts and to question the single authorship of certain biblical books. Moreover, he promoted a theory of "accommodation," which stated that the authors of biblical texts had to "accommodate" their literary style, etc., to the communicative capacity of their audience. With the help of this theory, Semler could explain both the linguistic differences and the doctrinal particularities in the Bible. Semler and his fellow theologians who propagated a critical study of the biblical texts, among them especially Johann August Ernesti and Gotthold Ephraim Lessing, helped to ensure that biblical hermeneutics again entered into a critical dialogue with the demands of reason, and thus participated in the universal search for principles of critical text understanding.

9. Schleiermacher's Hermeneutics. The enormous contribution of Friedrich Schleiermacher (1768–1834) to the development of hermeneutics can be assessed more adequately now since the critical edition and publication of some of his manuscripts on the subject (Schleiermacher 1977). Unlike his theological predecessors, Schleiermacher rejected all theological claims to a privileged access to the Bible and all demands for a prerogative of a special hermeneutics. Instead, he called for a general hermeneutics, because understanding was for him a universal process requiring the critical attention of all disciplines concerned with it. Theology, therefore, must abandon any hermeneutical prerogative, and, like any other effort to understand ancient texts, follow the general principles of hermeneutics in its attempt to understand the biblical texts. For instance, the belief that the Scriptures were divinely inspired must not guide biblical interpretation, but might be a possible result from actual interpretation itself. Thus, the theologian Schleiermacher was the first to promote the development of philosophical hermeneutics.

Developing such a philosophical hermeneutics, Schleiermacher distinguished between a general aspect of communicative performance, that is, the presence of conventional or grammatical patterns of discourse, and an individual aspect, that is, the particular application of such general patterns, in every act of expression. Accordingly, he demanded a twofold reconstruction of the sense of a text in the act of interpretation: grammatical and psychological (sometimes also called "technical") interpretation. In order to grasp the overall sense of the text through the combination of these two moves, Schleiermacher called for an act of "divination." Because of the necessary presence of the interpreter in this act of divination, no act of interpretation can ever be considered to be complete. Therefore, Schleiermacher described the aim of understanding as "approximation." Like Semler, Schleiermacher attempted ultimately to understand the author of a text, and because he knew that even authors are not always conscious of their creativity, he defined the goal of understanding accordingly as the effort of understanding a text first as well and then even better than its author had done.

Schleiermacher himself did not develop a special theory of biblical interpretation, though he pointed to some of its dimensions in his other theological writings. The full impact of his hermeneutical thinking on the development of interpretation theory is only felt today. His immediate influence was limited; and in the course of the 19th century interest in hermeneutics declined.

In the later 19th century, philological and historical concerns dominated biblical interpretation. Freed from dogmatic impositions on the texts, the quickly developing historical-critical study of the Bible achieved major insights into the nature and history of the biblical texts, but failed to appreciate the limits of its own capabilities. Moreover, in spite of all the insights into the philological nature and the historical character of the biblical texts, the reductionist view which treated the biblical texts as mere historical documents could not adequately grasp the theological intentions of these texts. Thus, both the deepening philosophical insight into the nature of understanding and the theological protest against such a historicist reading of the Bible had to lead to a radical challenge of a purely historical-critical approach to the Scriptures.

C. Philosophical Hermeneutics and Modern Biblical Interpretation

After Schleiermacher's death, interest in hermeneutical questions was minimal until the philosopher Wilhelm Dilthey (1833–1911) appropriated Schleiermacher's hermeneutical concerns for his own project of establishing a foundational theory for all the human sciences. Over against the natural sciences, whose primary task Dilthey identified as "explanation," he defined the aim of the human sciences as "understanding" different life expressions. Thus, at a time when biblical interpreters defined their task purely in historical-critical terms, Dilthey resumed Schleiermacher's project of a general hermeneutics, without however, completing it. Nevertheless, he reemphasized the hermeneutical focus in the humanities. Moreover, his interest in understanding "life" through its expressions helped prepare the way for Edmund Husserl and the phenomenological movement, and thus also for the hermeneutical philosophy of Martin Heidegger (1889–1976).

Heidegger's work, especially his book *Being and Time* (1962; first published in 1927), has had a great impact on 20th-century theology and biblical interpretation. While some theologians, such as Karl Barth, rejected the imposition of philosophical thinking on theology, Rudolf Bultmann, Gerhard Ebeling, Ernst Fuchs, and other theologians have welcomed Heidegger's hermeneutical theory and applied it to biblical interpretation.

In particular, Heidegger's analysis of the hermeneutical circle, of the impossibility of an interpretation without presuppositions, and his criteria for authentic human existence have influenced biblical hermeneutics ever since. But also Heidegger's later move toward a philosophy based on the understanding of language (the language of the artist in particular) as a call to being has stimulated biblical interpretation.

More recently, the development of philosophical hermeneutics was promoted further by the philosophers Hans-Georg Gadamer (b. 1900), Jürgen Habermas (b. 1929), and Paul Ricoeur (b. 1913). All three philosophers are having a significant impact on biblical interpretation and contemporary theological thinking.

Continuing Heidegger's project of developing a universal theory of understanding (and in a sense also Schleiermacher's hermeneutical enterprise), Gadamer has investigated especially the conditions of aesthetic understanding. In his major work *Truth and Method* (1960), he advocates a theory of understanding in which "Understanding is not to be thought of so much as an action of subjectivity, but as the placing of oneself within a process of tradition, in which past and present are constantly fused. This is what must be expressed in hermeneutical theory, which is far too dominated by the idea of a process, a method" (1975: 258–89). Thus, instead of developing a method of interpretation, Gadamer wishes to describe what happens when we get involved in text interpretation. He emphasizes that we always approach a text through a set of questions which shape our preunderstanding. This preunderstanding, however, is always already conditioned in some way by the text's own history of effects. Therefore, Gadamer speaks of the "historically operative consciousness" [*Wirkungsgeschichte*] of a text and identifies the structure of that consciousness as language: "Being that can be understood is language" (1975: 432). Language, then, is the place of our disclosure of truth. And this disclosure is the aim of the hermeneutical experience and the characteristic of its universality.

Habermas (1971) protests against what he sees as the uncritical nature of Gadamer's universal hermeneutics, especially its trust in the undistorted flow of communication. Ricoeur criticizes Gadamer's total rejection of methodological moves in text interpretation and proposes a twofold program of interpretation which includes acts of understanding and explanation. Thus, he can incorporate formalist and structuralist methods of text explication without subscribing to structuralist and formalist ideologies. Unlike Gadamer and Habermas, Ricoeur also has contributed directly to the discussion on adequate biblical interpretation (Ricoeur 1980). Today, Ricoeur must be seen as the philosopher who exerts the greatest influence on the development of biblical interpretation. Thus, he has brought Schleiermacher's program of a general hermeneutics to a new height, while at the same time also contributing directly to the appropriation of such a general theory in applied biblical interpretation.

D. Theories of Biblical Hermeneutics in the 20th Century

1. The Barth-Bultmann Controversy. Karl Barth (1886–1968), Rudolf Bultmann (1884–1976), and the other representatives of the "dialectical theology" movement in German-speaking theology after World War I agreed that a mere historical-critical study of the biblical texts did not do justice to these texts' theological character and particular existential claims. They all wanted to overcome the historicism which had dominated biblical interpretation for almost a century. But these theologians could not agree on a new method of biblical interpretation. While Bultmann appropriated Heidegger's ontological hermeneutics for his own program of biblical interpretation, Barth advocated an interpretation of the Bible without the interference of philosophical methodology.

a. Barth. The question which shaped Barth's hermeneutical perspective with regard to the biblical texts was, What is the Word of God and who am I in relationship to God's Word? Barth never identified the Word of God with the biblical texts, but neither did he explain how an attentive reading of the Bible would arrive at a disclosure of God's Word. God must not become an object of our interpretation theory: "Revelation is not a predicate of history, but history is a predicate of revelation" (1956: 58). Thus, Barth's interpretation of the Bible was motivated by his theological insight into the nature of God's revelation. On the basis of this theological preunderstanding, he approached the biblical texts. In the famous second edition of his commentary on the Epistle to the Romans (1922—ET 1968), he challenged the historical-critical exegetes to become "more critical." By that he meant they should listen more carefully to the specific content of the Scriptures and become open to God's act of self-communication in the process of reading.

In his *Church Dogmatics,* Barth suggests three practical steps for an adequate interpretation of the Scriptures: (1) observation: to attend to the literary and historical presen-

tation of the text; (2) reflection: to think along with the text without imposing one's own modes of thought on it; and (3) appropriation: applying the text to one's own situation, which meant for Barth that interpreters ought to subject themselves to God's purposes which are witnessed to by the biblical texts (1956: 722–38). Hence, Barth's hermeneutics is totally theological by nature.

b. Bultmann. Unlike Barth, Bultmann accepted and defended the necessity of a philosophical reflection on the contemporary existential condition and on the principles of biblical interpretation. His particular reflection was located within the Schleiermacher tradition of philosophical hermeneutics and was greatly influenced by Heidegger's existential philosophy. Like Schleiermacher, Bultmann insisted that biblical interpretation must follow the same principles as the reading of any other literary text; following Heidegger, Bultmann stated that there cannot be any "presuppositionless" understanding of the biblical texts, and he demanded therefore that biblical interpreters ought to become conscious of their preunderstandings. Distinguishing between prejudice and preunderstanding, Bultmann demanded that the first must be abandoned and the latter be made conscious. Moreover, there has to be a life relationship between the exegete and the text which produces the particular preunderstandings that in turn will be transformed by the existential encounter between the reader and the text. Given the subjective aspect of this encounter, no interpretation of a biblical text can ever claim to be the definitive one (cf. Schleiermacher above).

Bultmann's own hermeneutical framework was shaped by Heidegger's call for an existential understanding; thus, Bultmann attempted to interpret the biblical texts with the aim of disclosing authentic modes of existence in the world. However, because of the historical distance between text and reader and in view of the particular "mythological" nature of some NT texts, Bultmann suggested a program of "demythologization." This somewhat misleading concept did not imply that the modern interpreter was to get rid of the mythological parts of the NT; rather, Bultmann intended to offer a method of interpretation which was aware of the difference between the rather mythological worldview of the Bible and the rather scientific worldview of the contemporary biblical reader. He did not aim to replace the mythological worldview with the modern scientific one; instead, he wanted to highlight the fact "that faith itself demands to be freed from any worldview produced by man's thought, whether mythological or scientific" (Bultmann 1958: 83).

c. The Debate. The debate between Barth and Bultmann, which has both promoted and polarized the further discussion on biblical hermeneutics, concerned once again the role of philosophical thinking in biblical interpretation. While Barth rejected any dependence of biblical interpretation on philosophical hermeneutics, Bultmann not only accepted the need for philosophical hermeneutics in biblical interpretation but also adopted a particular philosophical system and terminology, namely, that of the early Heidegger, in order to facilitate appropriations of the biblical texts today. In the meantime, both poles in biblical interpretation have received much criticism: Barth's hermeneutics has been criticized for its positivistic nature, Bultmann's for its sometimes ahistorical character, especially of his existential appropriation (see Bartsch 1953: 62). Nevertheless, the fact that in spite of all its shortcomings Bultmann's hermeneutical program was open for a dialogue with philosophy and other hermeneutical disciplines made it a springboard for subsequent approaches to biblical interpretation.

2. The "New Hermeneutic." This is the name of a movement which comprised both American and European exegetes who responded positively, though not without critical reflection, to Bultmann's hermeneutical program (see Robinson and Cobb 1964). Its main protagonists, Ernst Fuchs (1903–1983) and Gerhard Ebeling (b. 1912), understood faith as speech event and thus committed their theological attention to the hermeneutical problem present both in biblical interpretation and in the related theological discourse. Influenced not only by the concerns of "dialectical theology" (especially by Barth, Bultmann, and Gogarten), but also by Heidegger's philosophical reflection on language, Fuchs developed a hermeneutics which emphasized first the hermeneutical condition of all biblical interpretation and then suggested some concrete moves in NT interpretation (Fuchs 1954; 1968). Over against Barth, he stressed the need to reflect on the process of the mediation of God's Word in the Bible. Modern man has to ask who he is and approach the biblical texts through such an existential question. The proper approach to the NT is characterized then by a neutrality with regard to faith (Fuchs 1954: 116). Thus, through his hermeneutical reflection, Fuchs reintroduced the problem of natural theology into theology. However, his commitment to and his use of philosophical hermeneutics were ultimately defined by their service to the particular retrieval of biblical thinking or more precisely NT thinking. (The OT was not an object of hermeneutical reflection for either Bultmann or Fuchs.) Viewed from this perspective, Fuchs' theological connection to Barth is stronger than his hermeneutical thinking, taken in isolation, would suggest.

Like no other contemporary theologian before, Gerhard Ebeling has devoted a great deal of energy to hermeneutical reflection. Recognizing the limits of methodological rigor in traditional reformational theology, Ebeling, too, has appropriated Heidegger's understanding of language in order to develop a new foundation of biblical interpretation whose ultimate goal is to free the way for the Word of God in the act of text interpretation (*RGG* 3: 242–62). For Ebeling, the context of adequate biblical interpretation is the faithful approach to the Scriptures. The only real correspondence in biblical interpretation is the one between Word and faith. Thus, Ebeling's hermeneutical thinking remains strictly bound to the Protestant tradition of the Word.

Thus, up to the 1960s, Protestant thinkers dominated the discussion on biblical hermeneutics. But since then, a new interconfessional climate of hermeneutical thinking has been established in which Jewish, Roman Catholic, and Protestant thinkers contribute to the discussion of both the universal aspects of hermeneutics and the particular application of such philosophical theories on biblical interpretation.

3. Contemporary Biblical Hermeneutics. Since the period of the Enlightenment, Jewish and Christian interpre-

ters have been struggling to come to terms both with the demands of reason in biblical interpretation and with the changing horizon of biblical interpretation. In spite of the particularities of the different movements within either Judaism or Christianity, it can be said that the hermeneutical discussion in both religions has received an attention that is increasingly transconfessional. This development was, of course, strongly promoted by a hermeneutical program such as the one offered by Schleiermacher, but it has also been facilitated by the organization of biblical research in modern academic institutions. Thus, modes and theories of biblical interpretation emerging from either religious tradition have been discussed beyond the boundaries of these traditions and were allowed to influence one another (see Loretz and Strolz 1968). For example, approaching the Hebrew Scriptures through the horizon of modernity, 20th-century Jewish thinkers such as Franz Rosenzweig, Martin Buber, and Gershom Scholem have influenced new approaches to the Hebrew Bible within the Christian tradition. The question of whether or not the Hebrew Scriptures can be adequately understood only in a particular Jewish religious context has found as many and as diverse answers as the parallel question of whether or not an adequate interpretation of the Christian Bible requires the interpreter's active participation in a Christian ecclesial context.

The long hostility in the Roman Catholic teaching authority, the Magisterium, against any form of modern critical interpretation theory also has come to an end in the course of the 20th century. Even though the Magisterium continues to reserve for itself the ultimate right of judging the orthodoxy of a particular reading of the Scriptures, the previous ban on modern exegetical techniques has been lifted more and more, especially in Pius XII's encyclicals *Divino afflante Spiritu* (1943) and *Humani Generis* (1962). The documents of the Second Vatican Council (see in particular *Dei Verbum*) confirmed this development toward a more critical biblical hermeneutics and thus, *de facto,* abolished any formal difference in exegetical method between Roman Catholic, Protestant, and Jewish scholars.

4. Current Developments in Biblical Hermeneutics. The more recent discussion of hermeneutics in biblical studies has concentrated on several themes. We intend to survey these main topics by way of a brief overview.

a. Biblical Theology. Ever since positivistic and historicist approaches began to dominate biblical interpretation, a reaction against these methods could be witnessed from those scholars who defended either the religious importance of the biblical canon as a whole or the thematic unity of the Bible. Already in the 19th century, such attempts to develop a biblical theology were visible. Also, in a sense, all the representatives of dialectical theology were engaged in developing a biblical theology. Today, scholars such as Gerd Theissen (1978; 1985) and Brevard Childs (*NTC*; 1986) propagate a renewed interest in the Bible as a theological and canonical unity. See THEOLOGY (BIBLICAL), HISTORY OF.

b. The Bible as Literature. The recent application of literary critical methods in biblical interpretation may be seen as a natural consequence of Schleiermacher's and Bultmann's demands that the Bible be treated like any other piece of literature. While in the past, the historical-critical method originated in biblical scholarship itself, the spectrum of literary methods used in contemporary biblical interpretation has been developed mainly by literary theorists (e.g., structuralist and poststructuralist theory). Two strands in that movement may be distinguished: (a) those biblical interpreters who, in their search for a theological interpretation of the biblical texts, either apply literary methods themselves in order to do better justice to the particular genres of biblical writing or are at least open to such an interpretation; and (b) those who treat the biblical texts solely as literary documents without any consideration of a possible faith context. The recent attention to reader-response criticism and other theories of reading has allowed interesting insights into the phenomenon of reading and into the potential of the biblical texts themselves to direct their readers. At the same time, a deepening awareness of the textuality of the biblical texts suggests that the often atomistic treatment of textual passages ought to be overcome or at least balanced by a consideration of the text as a whole (Jeanrond 1988).

c. Historical, Sociological, and Psychological Approaches. In the current interdisciplinary climate of biblical research, the traditional historical-critical approaches to the Bible have been amended by sociological and psychological perspectives of reading. This interdisciplinary approach has already yielded some interesting insights into the very complex relationship between religious and nonreligious dimensions in the biblical texts (see, e.g., Theissen 1985; Drewermann 1985; Gottwald 1985).

d. Feminist Criticism. The continuing development of a feminist perspective in biblical interpretation has not only rediscovered forgotten dimensions within the biblical texts themselves but has also raised awareness in biblical interpretation of the traditionally male characteristics of the perspectives through which the biblical texts have been read until now (see Schüssler Fiorenza 1984).

e. Theory and Praxis. Johann Baptist Metz (1980), Matthew Lamb, Dermot Lane (1984), and other theologians have repeatedly questioned the overemphasis on theory in biblical interpretation and the accompanying neglect of the praxis of Christian experience in the light of which the texts should be read. In view of this deficit, Metz calls for a practical hermeneutics of Christian liberation. The impact which this debate on the emancipatory nature of praxis has had in biblical interpretation can be seen in the biblical readings offered by leading representatives of the liberation theology movement (e.g., Gustavo Gutiérrez 1988).

f. Ethics. Fuchs (1954), Jeanrond (1988), and Berger (1988) have called for a renewed ethical consciousness in biblical interpretation. Fuchs (1954: 155) demanded a moral seriousness *(sittlicher Ernst)* from every biblical interpreter; Jeanrond (1988: 123–28) has emphasized the ethical demand of attending and responding to the theological nature of the communicative perspectives and claims of the biblical texts; and Berger (1988: 17–28) has advocated an approach to the biblical texts based on an awareness of actual human experience.

g. Interreligious and Cultural Criticism. David Tracy (1981; 1987) has stressed the cultural role of the Bible by calling it a "classic" text which bears an excess and perma-

nence of meaning, yet always resists definitive interpretation. As such, it can function as a means of "interruption" in the cultural process, provided its interpreters are open to disclosing the instances of truth contained in it. Paul Knitter (1985) and Hans Küng (1986) have advocated the perspective of the interreligious dialogue as a necessary complement to any inner-religious approach to understanding these texts. Such a wider approach to the Scriptures moved by questions of the history and the comparative study of religion will also be able to point out such ideological dimensions within the biblical texts as, for instance, anti-feminist and anti-semitic attitudes (see Sandmel 1978).

E. Conclusion

The theoretical reflection on the conditions, methods, and motivations of biblical interpretation may be helpful both for a reading of the Bible within a context of religious faith and for a critical examination of the Bible as a religious and historical document within the academy. In either case, hermeneutical reflection promotes a critical and self-critical consciousness of the interpreter, but also encourages critical attitudes toward the biblical texts themselves. Whatever method may be applied in biblical interpretation, the hermeneutical reflection will point to its particular opportunities and limitations, and thus encourage an open-ended and critical attitude to all possible approaches which promise to support an adequate disclosure of the biblical texts' sense. Moreover, hermeneutical thinking will provide a critical view of all forms of power, individual and institutional, which aim at controlling the process of biblical interpretations within the different communities of interpreters.

IOB (PERSON) [Heb *yôb*]. The third son of Issachar (Gen 46:13). In the list of the people who went down to Egypt (Gen 46:8–27), Jacob's sons and grandsons are listed by families, according to their mothers. Iob was the grandson of Jacob and Leah by their fifth son, Issachar. In the genealogical list of Issachar in 1 Chr 7:1, the Ketib lists his name as *yāsîb*, Jashib, but the Qere has *yāsûb*, Jashub. This latter reading is supported by the Samaritan Pentateuch, by the LXX, and by all the versions. Jashub is also listed in Num 26:24 as the eponymous leader of the clan of the Jashubites. Speiser (*Genesis* AB, 345) explains this textual

error in Genesis by saying that the scribe dropped the *šin* from the name. According to Speiser, it is easier to explain the dropping of the consonant in Genesis than to explain its addition in the parallel passage. Westermann (1986: 153) believes that Iob is an abbreviation of the theophoric name Yahshub, in which case it means "May Yahweh return" (*TPNAH,* 168).

CLAUDE F. MARIOTTINI

IOTA. The ninth letter of the Greek alphabet.

IOTAPE (PERSON) [Gk *Iōtapē*]. This name designates no fewer than seven princesses or queens active in the late 1st century B.C. and for most of the 1st century A.D. It also refers to two towns. See IOTAPE (PLACE).

1. Iotape I. The young daughter of Artavasdes, king of Media Atropatene (modern Azerbaijan, lying between the Upper Tigris river and the Caspian Sea), who was betrothed to Alexander Helios, son of Marc Antony and Cleopatra (Dio Cass. 49.40; 49.44; Plut. *Ant.* 53.6). The marriage ended when Antony died. The girl had been taken to Alexandria, where Octavian discovered her in 30 B.C., and reunited her with her father (Dio 51.16.2).

She next appears in the record about 20 B.C., when King Mithradates III of Commagene acquired her as his wife, though he was "still a little boy" and she was at least in her late teens. Because she was queen of Commagene, her children were considered valuable intermarriage partners by the heads of neighboring states. Iotape I and Mithradates II became the ancestors of the remaining royal women named Iotape, and grandparents of two kings of Emesa.

2. Iotape II. The daughter of Iotape I and Mithradates II who married her own brother, King Antiochus III of Commagene, in a philadelphic marriage typical of that dynasty. She presumably ruled with him up to his death in A.D. 17. A crisis in Commagenian affairs occurred then, and Tacitus records disturbances (*Ann.* 2.42). The royal family was presumably taken to Rome, and the kingdom itself became a Roman province from A.D. 18 to 38 (see Sullivan *ANRW* 2/8: 783–85).

3. Iotape III. Another daughter of Iotape I and Mithradates II who married Sampsigeramus II of Emesa (a Syrian kingdom located between Commagene and Judea). This marriage may have occurred as early as 5 B.C. Inscriptions honor her husband widely, sometimes as "Great King" (Baalbek) or *"roi suprême"* (Palmyra), but Iotape III went largely unmentioned. She became the mother of two kings of Emesa: Sohaemus and Azizus (see Sullivan *ANRW* 2/8: 212–14).

4. Iotape IV. The daughter of Iotape III and Sampsigeramus II of Emesa, who married Aristobulus of Judea, grandson of Herod the Great. This marriage placed her close to the Judean throne, since her husband's brothers included Herod of Chalcis and King Agrippa I. But they and others (not Aristobulus) ruled instead, and Aristobulus died "a private citizen" (Jos. *JW* 2 §221; cf. *Ant.* 18 §135; Sullivan *ANRW* 2/8: 319).

5. Iotape V. The "mute" *(kophe)* daughter of Iotape IV and Aristobulus. Her father's death occurred while she was still alive, but nothing further is known of her. No children in the Judean or other dynasties can be traced to her. Her handicap might have prevented her from assuming the high position otherwise expected from her royal descent.

6. Iotape VI "Philadelphos." She presumably appeared along with her husband-brother, King Antiochus IV of Commagene, when Caligula restored the kingdom's royal family in A.D. 38. The marriage must have occurred during the twenty years when Commagene was a province, because by A.D. 44 their son, Epiphanes, was old enough for betrothal to the Jewish princess Drusilla, niece of Iotape IV. Besides the city named for her in Cilicia, we have other traces of her activity. For instance, an inscription from Chios honors "Great King Antiochus Philocaesar; Iotape, wife of King Antiochus." Her head appears on coins of the dynasty and its cities, especially in Tracheiam where Antiochus joined other kings in a considerable effort at pacification. Antiochus also participated in the wars of Nero for control of Parthia, and their sons engaged in the Jewish War.

Iotape reigned with Antiochus until A.D. 72, when after the "Commagenian War" of Vespasian, Antiochus decided to give up the struggle, departing his kingdom "in a chariot with his wife and children." The two sons escaped to Parthia, but eventually joined the family in Rome (Sullivan *ANRW* 2/8: 783–94).

7. Iotape VII. The daughter of Iotape VI and Antiochus IV. She became the last queen of Cilicia (or some part thereof) when her husband, the Judean king Alexander (great-grandson of Glaphyra of Cappadocia), went there. In the joint coinage they issued, her portrait takes the place of honor on the obverse. Eventually both apparently journeyed to Rome, where Alexander became a consul, as did Iotape's nephew, Philoppapus. Two of their sons and two grandsons are known, highly placed in Roman society (Sullivan *ANRW* 2/8: 794f.; 1978: 935–37).

RICHARD D. SULLIVAN

IOTAPE (PLACE) [Gk *Iōtape*]. Var. IOTABE; JOTAPATA. Although not mentioned in biblical sources, several towns in antiquity were named after the popular royal name Iotape. See IOTAPE (PERSON).

1. A town in Cilicia Tracheia, named after Iotape VI and situated at the end of a spectacular promontory on the S coast of modern Turkey. The harbor and well-cut sarcophagi nearby hint at the vitality it had in the 1st century and for some time afterward. Coins bearing its name from as late as the reign of Valerian (A.D. 253–260)

attest its survival. It appeared for centuries longer in the ecclesiastical records of Isauria (Jones 1971: Appendix 4, Table xxx).

2. An episcopal see in Syria during Byzantine times was named Iotabe, a name possibly related linguistically to the royal name Iotape. A connection stemming from the period of dynastic rule (late 1st century A.D.) seems possible, though it cannot be demonstrated (Jones 1971: 293, 469, n. 91). An "Iotabe" in Palestine III is listed as a participant at the Council of Jerusalem in A.D. 536 (Jones 1971: 547, Appendix 4, Table xli).

3. On the strength of its name, the town of Jotapata (Gk *Iōtapata*) deserves brief mention here since it may be connected with the royal name Iotape. The city was situated in lower Galilee and should probably be identified with Kh. Jifat (M.R. 176248), about 20 km inland from the Bay of Acre, E of modern Haifa. It is not mentioned in the OT, but it was well known to Josephus, who in fact claims to have been instrumental in its defense during the Jewish War (*JW* 3 §141–339). Vespasian had laid siege to it, and it fell in July, A.D. 67. See also JOTBAH (PLACE).

RICHARD D. SULLIVAN

IPHDEIAH (PERSON) [Heb *yipdĕyāh*]. One of eleven sons of Shashak, a Benjaminite (1 Chr 8:25), a portion of the extended genealogy of Benjamin (1 Chr 8:1–40). This is the only occurrence of the name in the MT, and it does not appear in the Apocrypha or the deuterocanonical literature. The name means "Yah will liberate" or "May Yah set free." Braun (*1 Chronicles* WBC, 124) and Coggins (*Chronicles* CBC, 54) both point to the scarcity of material associated with the names found in 8:6–27. However, the text does state that Iphdeiah was a *roʾšē ʾābôt*, and one of the *tōlĕdôtām roʾšîm* living in Jerusalem. This points to a probable mixing of tribal groups which intensified after the divided monarchy. Myers (*1 Chronicles* AB, 61) cites pressures exerted on boundary cities and an emphasis on administrative continuity on the district level as reasons for this mixing. One might infer a high status for Iphdeiah politically, socially, and perhaps to an extent militarily because of his identification as the head of a family and head of a genealogy. In early Israel (Harmon 1983: 153), the *bêt ʾāb* would have been the primary social unit which further comprised the *mišpāḥâ*, the clan or protective association of families (Gottwald 1979: 258), and then the *maṭṭeh/šēbeṭ* or tribe. The *bêt ʾāb* housed the extended family which was patriarchal, polygynous, patrilocal, and endogamous at the level of the *mišpāḥâ*. This social pattern would have held without great change to the time of Iphdeiah.

G. EDWIN HARMON

IPHTAH (PLACE) [Heb *yiptāḥ*]. Town situated in the Shephelah, or lowlands, of Judah (Josh 15:43), within the same district as Libnah and Maresha. This settlement, whose name perhaps means "he opens" (from *pṯḥ*, "to open"), is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). The ancient town is most often identified with modern Terqumiyeh, located approximately 10 km NW of Hebron and 11 km SE of Beit Jibrin (Simons *GTTOT* 148; M.R. 151109). Given the lack of similarity between the ancient and modern names, and the absence of archaeological substantiation, this identification should be regarded as tentative.

WADE R. KOTTER

IPHTAHEL (PLACE) [Heb *yiptaḥ-ʾēl*]. A valley in lower Galilee that is mentioned in concluding the description of the border of the territory of Zebulun after it "passed north of Hannathon" (Josh 19:14); it is also listed in the description of the territory of Asher at the point where Asher's border touches that of Zebulun (v 27). Dalman (1923: 35) suggested that the valley be identified with Nahal Sippori (Wadi el-Malik) that drains the Beth Netofa valley and opens out into the coastal plain in a deep and imposing gorge. Gal (1985), however, has suggested that the valley of Iphtahel be identified with Nahal ʾEvlayim (Wadi ʾAbbelin) that is connected at its NW corner by a pass to the Beth Netofa valley. He based this on the settlement pattern, the geological structure, and the fact that the ancient route from Acco that crossed through lower Galilee entered the Beth Netofa valley through Nahal ʾEvlayim. See also YIFTAHEL (M.R. 171240).

RAFAEL FRANKEL

IR (PERSON) [Heb *ʿîr*]. Descendant of Benjamin appearing in an unusual genealogy in 1 Chr 7:6–12. The name means "city" or "town." This is the only occurrence of this form as a proper name in the MT, and it does not appear in the Apocrypha or the deuterocanonical literature. Some scholars have equated Ir with the Iri, son of Bela, seen in 1 Chr 7:7 (*ISBE*[1], 1490; Odelain and Séguineau 1981: 170); however, this is not certain. Ir is said to be the father of Shuppim and Huppim. At this point, the Chroniclers may be following the Benjaminite genealogy from Numbers 26 since v 39 mentions sons Shephupham and Hupham as opposed to the occurrence of Muppim and Huppim in Gen 46:21 (Myers *1 Chronicles* AB, 53). Scholars are quite divided over the origin of 1 Chr 7:12, and which Israelite tribal head is actually the ancestor of the individuals mentioned. Myers (AB, 53) states that 12b is a Danite fragment. Curtis and Madsen (*Chronicles* ICC, 147) and Brunet (1953: 485f.) feel that the genealogy belongs to the tradition of Zebulun. Coggins (*Chronicles* CBC, 50) is quite adamant in saying that there is no Danite reference in v 12. He suggests that the additional Benjaminite names

shown at this point are both surprising and without explanation. It seems difficult to recover Danite or Zebulunite material without doing violence to the text. So perhaps those are additional Benjaminite names added to a post-exilic military census list.

IR-SHEMESH (PLACE) [Heb *ʿîr šemeš*]. A town in the territory of Dan (Josh 19:41), which is also known as BETH-SHEMESH (M.R. 147128). The name of the site means "city of the sun."

Raphael Greenberg

IRA (PERSON) [Heb *ʿîrāʾ*]. **1.** Ira the Jairite, a priest *(kōhēn)* to David mentioned in a list of officials of David (2 Sam 20:23–26; v 26). If a Jairite, Ira is probably to be associated with Havvoth-Jair, a group of villages in Gilead, which were taken by Jair, the son of Manasseh (Num 32:41; Deut 3:14). However, instead of "Jairite," some versions apparently read either "of Jattir," a levitical city of Judah (Josh 21:14), or "Ithrite," which would probably identify this person with the Ira in #3 below (Lucianic and Symmachus [?], *no Iether;* Syriac, *yt(y)r*). Because Ira is not called a Levite, question is raised as to whether he was actually a nonlevitical priest or some sort of secular official, a situation analogous to that of the sons of David who are also designated "priests" in 2 Sam 8:18, but "chief officials" *(rîʾšōnîm)* in 1 Chr 18:17 (see Cody 1969: 103–5; Mettinger 1971: 8–9).

2. One of David's champions, a select class of warriors directly attached to the king for special assignments, named in the parallel lists of 2 Sam 23:8–39 (v 26) and 1 Chr 11:10–47 (v 28). He is called the son of Ikkesh of Tekoa (lit. "the Tekoite"); that is, from the town of Tekoa in Judah, which lies about 5 miles S of Bethlehem. Although of high repute, he is distinguished from the more elite warriors (vv 8–23 and 11–25, respectively) listed before his grouping. The same Ira appears to be mentioned in a list of commanders found in 1 Chr 27:1–15 (v 9), since this list draws on eleven other mighty men found in 1 Chr 11:10–47. These commanders were each in charge of a monthly course of 24,000 men in the armed service of the king; Ira being in charge of the sixth month. This list of commanders and their functions is possibly a construct of its composer, since (a) no such monthly, conscripted, civilian army is mentioned elsewhere during David's reign; (b) the large figure of 288,000 men seems improbable; and (c) one of the commanders, Asahel (v 7), was dead before David had rule over all Israel (Williamson *Chronicles* NCBC, 174–75). However, the author/redactor's thesis, that David made preparations for the proper ongoing cultic and national life of Israel, as illustrated throughout chaps. 23–27, draws on the fact that David took a census (cf. vv 23–24; chap. 21) which could have been utilized for designing a monthly plan of conscription, a plan which would have been analogous to Solomon's monthly courses for his provision (1 Kgs 4:7–19).

3. Another of David's champions (see #2 above), Ira the Ithrite (2 Sam 23:38; 1 Chr 11:40), is probably to be associated with the people of Kiriath-jearim (1 Chr 2:53). Other versions of 1 Chr 11:40 in the Gk mss Vaticanus and Sinaiticus as well as in the Syriac and Arabic apparently read "of Jattir," which would identify this person with the Ira in #1 above. "Ira" is possibly a secular name taken from the animal realm: *ʿayir* "a young male donkey" (*IPN,* 230).

ʿIRA, TEL (M.R. 148071). A site in the N Negeb with occupation levels ranging from the EB III through the Arab period.

A. Location and Identification

Tel ʿIra (Kh. Gharra in Arabic) is located on a high, flat-topped hill in the Beer-sheba valley on one of the southernmost ridges of the Hebron Hills that juts deep into the heart of the valley. As the site is cut off from the ridge by a ravine and surrounded by steep scarps, the ascent to the top of the tell is extremely difficult. At approximate 100 m above the surrounding terrain (514 m above sea level), it commands a sweeping view over the wide expanses and road network in the valley below. The site (ca. 25 dunams) covers the entire chalky hilltop. Remnants of the thick stone wall around the upper perimeter, contoured like the sole of a shoe, were visible on the surface even prior to excavation. See Fig. IRA.01.

The site was first reported by D. Alon in the early 1950s. In 1956, Y. Aharoni surveyed it intensively, and the results were published in the same year. Aharoni, who was impressed by the size and strategic potential of the site in comparison to other settlements in the region, suggested that the capital of the Negeb was transferred there in the 7th century B.C.E. following the final destruction of Beer-sheba by Sennacherib in 701.

The biblical name of the town is uncertain. Aharoni, with some reservations, proposed identifying it with Kabzeel, which heads the list of Judean towns in the Negeb (Josh 16:21). Others (A. Lemaire, N. Naʾaman, A. F. Rainey) believe that it is "Ramah of the Negeb" (or "of the South"), listed in the inheritance of the sons of Simeon (Josh 19:8), a name that reflects its lofty topographical position. It should be noted, however, that the archaeological excavations did not encounter any settlement level that could be attributed to the 10th–9th centuries B.C.E., which should be present if it is indeed the Ramoth-negeb to which David sent part of the plunder taken in his wars with the Amalekites (1 Sam 30:27). But neither were remains of this period discovered at Tel Aroer, which casts some doubts on the authenticity of this list of towns in a Negeb context. Nevertheless, some evidence of early Israelite occupation was found in a number of places on the

IRA.01. Site plan of Tel ʿIra—7th century B.C.E. *(Courtesy of I. Beit-Arieh)*

tell: sherds that date to the 10th–9th centuries were collected on the E escarpment, and there was also an earlier Iron Age burial in one of the graves belonging to the later Israelite settlement. Hence, it is possible that there was a small open village on the tell during this period. If so, the proposal to identify the site with Ramoth-negeb is worth consideration, although confirmation would require further excavation and discovery of the town itself.

Identification of the later settlements established on the tell (from the Hellenistic to Byzantine periods) is so far also unknown.

B. History of the Excavations

The excavations were directed by I. Beit-Arieh during six seasons, between 1979 and 1984. An additional season was conducted in 1979 in another sector of the site under the direction of A. Biran.

Nine strata, dating from the EB III to the Early Arab period, were exposed. The excavations unveiled a long history of settlement, showing that in certain periods (namely the Israelite, Hellenistic, and Byzantine periods) it was a city of major importance.

Chronological-Stratigraphical Chart

Strata/Period		Nature of Settlement
I	Early Arab (7th–8th centuries C.E.)	Small-scale occupation of Hellenistic structures.
II	Byzantine (5th–7th centuries C.E.)	City and monastery; reuse of Israelite city wall.
III	Early Roman (1st century C.E.)	City; reuse of Israelite city wall.
IV	Hellenistic (4th–2d centuries B.C.E.)	City; reuse of Israelite city wall.
V	Early Persian (5th–4th centuries B.C.E.)	Reoccupation of Israelite period buildings.
VI	Israelite II (second half of 7th century B.C.E.)	Fortified city.
VII	Israelite II (first half of 7th century B.C.E.)	Fortified city.
VIII	Israelite II (10th–9th centuries B.C.E.)	Pottery in fill of Stratum VII; burial in town's cemetery. Unwalled settlement (?)
IX	Early Bronze Age III (27th–23rd centuries B.C.E.)	Unwalled settlement; pottery scattered throughout site.

C. Results of the Excavations

1. Early Bronze Age. The tell was first occupied in the EB III and seems to have been a rural settlement of sporadic nature, the duration and reason for existence of which are unknown. Tel ʿIra is the southernmost known site to yield traces of EB III habitation, which in general was concentrated in the Shephelah; the closest EB III neighbor to Tel ʿIra was at Tel Halif.

2. Iron Age. Following a gap of some 1,500 years, the site was apparently resettled at the beginning of the second phase of the Israelite period, but because of the lack of architectural remains, it is impossible to determine the nature of this first occupation. However, the archaeological evidence implies an unwalled and materially poor village or hamlet.

However, in the 7th century B.C.E., Tel ʿIra was a large, fortified city of royal character that extended over the

entire site. A massive, solid city wall (1.6-m thick), supported from the outside by retaining walls built against the steep scarps, surrounded the site almost completely. Large public buildings and a six-chambered gate passage with two towers of the type known from Megiddo, Hazor, and Gezer were erected in the E sector. A large tower that projected some 9 m from the N wall controlled the steep path to the city gate, and this strategically vulnerable area was defended by a casemate wall. The public buildings included a storehouse which contained a large number of pithoi. Remains of two superimposed occupational phases, both of the 7th century B.C.E. (Strata VII–VI), were uncovered inside the casemates.

The cemetery of the Israelite city was located at the bottom of the E slope, where more than twenty burial chambers hewn into the soft cretaceous limestone were discovered. Some of these were cleared by the excavators, who found dozens of skeletons accompanied by pottery vessels and jewelry. In one of these tombs there were at least thirty skeletons, a number that may indicate a large population.

The Israelite city was destroyed at the end of the First Temple period, either by the Babylonians in their campaign against Judah or perhaps somewhat earlier by the Edomites, who had been waiting for the chance to move in and take over these Negeb regions.

In view of the aridity of the area, a permanent water source was crucial for the existence of the city. Rock-hewn cisterns were the solution. Five large plastered cisterns for collection of runoff water from flash winter floods were discovered inside the settlement, one in the W sector, two in the center, and two in the E sector, creating a reservoir system that would have had sufficient capacity even in years of drought. Considering the location of the cisterns in relation to the buildings of the various periods, it is likely that the two cisterns in the E sector were hewn by the Byzantine population and the other three by the Israelites. Due to the topographical location of the settlement and its distance from any known springs or wells, such reservoirs were obviously the only means of ensuring a water supply.

Although the central government may have contributed to the subsistence of the city to a certain extent, the excavations have shown that the town had its own independent economic resources. The livelihood of the population was at least partially based on cultivation of field crops, and herding of cattle, sheep, and goats. Three agricultural terraces from the Israelite period can be distinguished in the small ravine N of the site. The only pottery from two probes near these terrace walls belongs to the 7th century B.C.E. Pollen samples taken from various depths of the soil showed that the principal crops were cereals. The fields of this large city undoubtedly extended over a large area, as testified by a small 7th-century B.C.E. farmstead that was discovered nearby. A ploughshare point and an iron sickle in one of the rooms of the settlement are further evidence of agricultural activity. Three silos were also found in the center of the town.

From the statistical study of the animal bones retrieved from the excavations, the livestock consisted mainly of sheep and goats (85 percent of the total faunal remains). These results are similar to those from other Israelite settlements in the Beer-sheba valley and the animal husbandry practices of the modern-day bedouin.

3. Persian Period (Stratum V). Following the destruction of the Israelite city, the site, like many others in the Negeb, was resettled by exiles returning from Babylon. Some of the houses of the Israelite city were reused, and silos were dug. Apparently the postexilic settlement was much smaller than that of the Israelite period.

4. Hellenistic Period (Stratum IV). During this period, the tell was the site of a populous city, probably one of the fortresses of the Seleucid defense line along the Edomite front. Remains of this city were unearthed in most of the excavated areas. Some new houses were built over the Israelite buildings that abutted the city wall, following the same orientation as their predecessors.

5. Early Roman Period (Stratum III). During the 1st century C.E., the site was sparsely settled. Most of the structures were concentrated in the E sector, where they abutted the city wall, which continued in use. This settlement was evidently a small outpost of the Herodian *limes* defense system.

6. Byzantine Period (Stratum II). Tel ʿIra became a densely populated city once again during the Byzantine period, equaling the size of the earlier Israelite city. A large number of dwellings were built against the S segment of the Israelite city wall, which continued its defensive function. A monastery was erected in the E sector, superimposed over the Israelite gate and adjacent area, while a chapel with a decorated mosaic floor was built just E of it. Various small structures were crowded around the monastery. Tel ʿIra seems to have served as the Byzantine administrative center of the E and central Negeb at this time.

7. Early Arab Period (Stratum I). Following the Muslim conquest of the country in the 7th century C.E., the Byzantine city became an Arab settlement. New rooms were built against the ancient city wall, and the monastery underwent extensive alterations, but the population seems to have been very small.

There is no doubt that Tel ʿIra's largest populations were during the Israelite and Byzantine periods. Both were periods when the central authority invested the cities with regional administrative functions in addition to their primary defensive roles, guarding the S borders of the kingdom. Archaeological surveys indicate that these cities had an economic basis (reflected by the numerous small farmsteads and rural settlements scattered throughout the Negeb) that contributed to the security and economic viability of the cities.

ITZHAQ BEIT-ARIEH

IRAD (PERSON) [Heb *ʿîrād*]. Son of Enoch and father of Mehujael, in the line of Cain (Gen 4:18). The LXX

substitution of the *"r"* with a *"d,"* rendering *Gaidad* (possibly reflecting the similarity of *rēš* and *dālet* in later Heb script), is not followed by the other versions. Various etymological explanations have been conjectured for the name (Gabriel 1959: 412–13). From the standpoint of comparative Semitics, *ʿrd* has been related variously to the (Ar, Akk, Heb, Ug) words for "wild ass, onager" (CAD 9: 88; *DISO,* 221; Huffmon *APNM,* 204; Dahood 1975), and to the (Ar) word for "cane huts" (where the initial *ʿayin* is read as a *ghayin;* Cassuto 1961: 231–32). Another approach, without textual evidence, has been to eliminate the final reference to Enoch in Gen 4:17, thereby relating the statement about the naming of the first city to Enoch's son, Irad. If separated from the rest of the name, the initial *îr* in Irad is the Hebrew word for city (cf. Jacob 1934: 148). Attempts have been made to identify Irad with the city of Eridu (Hallo 1970: 64; Sasson 1978: 174; Miller 1985: 241–42 n. 9; Wenham *Genesis 1–15* WBC, 111). The similarity of names in the genealogies of Genesis 4 and 5 has also led to comparison of Irad with Jared (Gen 5: 18–20).

RICHARD S. HESS

IRAM (PERSON) [Heb *ʿîrām*]. One of the eleven Edomite "tribal chiefs" (Heb *ʾallūpīm*) listed in Gen 36:40–43, a later appendix to the Edomite materials in Genesis 36 (probably originating with the Priestly source), and also listed in 1 Chr 1:51b–54, an abbreviated form of the Gen 36:40–43 list. This is the only place where Iram occurs, and therefore it is impossible to view the name as an authentic historical part of the Edomite tribal system. In Gen 36:43 the LXX reads *Zaphōim/Zaphōein,* while in 1 Chr 1:54 it reads *Eram/Zaphoein.* The interpretation of the name is uncertain; perhaps it can be understood as an animal name **ʿair-*, "donkey foal" (cf. Heb **ʿîr*) with the suffix *-ām.*

ULRICH HÜBNER

IRAM (29°34′N; 35°24′E). An ancient settlement of the Nabatean and Roman era located in Wadi Ramm, 40 km E of ʿAqaba. The ruins include a Nabatean temple dedicated to the goddess Allat, surrounded by a large settlement of the Nabatean-Roman era. A hydrological system is also constructed from the nearby spring and shrine of Allat at ʿAin Shellaly, which is nestled in the lofty heights of Jabal Ramm about 1 km S of the temple site. It consists of an aqueduct leading from the spring to a reservoir in the valley floor about 500 m from the settlement; the remains of another branch which led toward the settlement are also visible. More than a dozen other springs which exist in Wadi Ramm have undoubtedly been an attraction for visitors in various periods. Prehistoric remains are particularly abundant in the region, but only a few scattered Iron Age (II) sherds have been found in the valley. Although several Minean (S Arabian) graffiti in the vicinity of the settlement reflect activities in the Hellenistic period (G. Ryckmans in Savignac 1934: 590–91), most of the extant remains emanate from the Roman era.

The site was first discovered by G. Horsfield in 1930. The temple was later excavated by Savignac and Horsfield (1935), and more recently by D. Kirkbride (1960). The surrounding settlement was cleared in 1963 by Rida al-Rawwad. Hundreds of pre-Islamic Thamudic graffiti lining the bays of the adjacent mountains in the wadi have been collected (Harding 1952), and hundreds more await publication (D. F. Graf, W. L. Jobling, and G. King are currently preparing additional texts from the region). A number of these laconic texts include petitions to the goddess Allat. Nabatean texts from nearby ʿAin Shellaly and Umm al-Quseir about 7 km SE of the temple indicate that Allat was "the goddess who (dwells) at Iram" (Savignac 1932: 593). Other deities, namely Dushara, Baʿal-samin, al-ʿUzza (Savignac 1934: 576; 586–89), and al-Kutba' (Strugnell 1959), are also mentioned in Nabatean texts from the site.

The temple has been the focus of attention at the site. It consists of a columned hall (11 m × 13 m) with an E entrance; chambers also align the exterior walls. The initial date and possible phases of its construction remain controversial. The original excavaters postulated a date in the early 2d century A.D. for the entire complex, but Kirkbride (1960) argued for an evolutionary development of three stages for the construction of the temple: (1) under Rabbel II, the initial peripteral temple was erected; (2) in the 2d century, partitions were built between the columns to form an enclosed hall, and a rectangular cella was constructed in the interior of the court; and (3) during the 3d century, the walls of the temple were buttressed and annexes built, and the columns and walls were stuccoed and then painted in red, yellow, and blue. More recently, an earlier date for the initial construction of the temple has been advocated, either in the 1st century B.C. (Hammond 1973: 63) or in the time of Aretas IV (9 B.C.–A.D. 40). Nabatean temples from the time of Aretas IV at Petra ("the Winged Lion sanctuary") and at Kh. al-Dharih in N Edom offer close parallels to the temple at Iram. A fragmentary Nabatean text from the temple area ambiguously dated to the year of 41 or 45 (Savignac and Horsfield 1935: 268) also has been associated with the reign of Aretas IV based on the architectural and ceramic remains of the temple (Negev *ANRW* 2/8: 587). However, the paleography of the text implies a date of the Roman provincial era (cf. Starcky *DBSup* 7: 980), i.e., A.D. 147 or 151, rather than A.D. 31 or 36. The only other clearly dated inscription in the area is a Nabatean text from nearby ʿAin Shellaly from the time of Rabbel II, i.e., A.D. 71–106 (Savignac 1933: 408). Other datable materials are from the later period: a coin of

Marcus Aurelius, some Roman and Byzantine sherds, and a Latin inscription on a small altar discovered at the entrance to the temple, which probably is to be assigned to the 3d century A.D. (Sartre 1982: 24). Greek inscriptions to the goddess, which are also found at the spring of ʿAin Shellaly, are probably the product of local inhabitants and indigenous troops assigned to this corner of the Roman imperial frontier.

The ancient settlers at the oasis have been identified with the Arreni, an Arab tribe involved in the caravan trade (Pliny *HN* 6.32.157). In Ptolemy's 2d-century A.D. list of the inland villages of the Arabian peninsula, Aramaua is listed first, followed by Ostama and Thapaua (*Geog.* 6.7.27), which have been identified with the modern villages of Qurayya and Tabuk (cf. Graf 1983: 655). The village complex at Ramm has also been associated with the "many columned city of Iram" mentioned in the Quran (89:5–7). A tribe named Iram is also known in ancient pre-Islamic Arabic poems and mentioned with the tribes of ʿAd and the Thamud. The former is known from pre-Islamic texts from the region of Ramm (Harding 1952: no. 4) and the latter was centered in the adjacent land of Midian (Graf 1978). Ramm is also the location of one of the earliest pre-Islamic Arabic inscriptions known, a brief text that recently has been assigned to the 4th century A.D. (Bellamy 1988: 372). Arabic genealogies of the Islamic period identified Iram with Aram, the son of Shem (Gen 10:22 and 1 Chr 1:17), and interpreted other Arab tribes as the descendants of Iram (Watt 1971).

DAVID F. GRAF

IRAN, PREHISTORY OF. The prehistoric period in Iran covers the period from the beginnings of human occupation in the Pleistocene to the beginning of the historic period, traditionally set on the plateau at 550 B.C. with the accession of Cyrus the Great. In the Khuzistan lowlands of SW Iran, however, writing developed at the end of the 4th millennium B.C. As a result, in this one corner of Iran the historical period begins in the 3d millennium B.C. when the sporadic local records are augmented by the ED texts of Mesopotamia (Carter and Stolper 1984).

The Pleistocene occupation of Iran by simple hunters and gatherers is documented by scattered finds of stone tools and by limited excavations in a number of caves, many of which contain Middle Palaeolithic Mousterian remains (Smith 1985).

With the end of the Ice Age and the amelioration of cold steppe conditions on the Iranian plateau, an environment conducive to the adoption of sedentary life was established between 9000 and 6500 B.C. This change is partly visible at a number of aceramic sites located around the lowland fringes of the plateau and in the lower valleys of the central W Zagros. These sites include Tepe Ali Kosh in the Deh Luran plain of NW Khuzistan (Hole et al. 1969), Tepes Guran and Ganj Dareh in nearby Luristan (Meldgaard et al. 1964; Smith 1976), Hotu and Belt Caves at the SE corner of the Caspian Sea (Coon 1957), pre-Jeitun sites in neighboring Soviet Central Asia (Kohl 1984), and Mehrgarh on the border of the Indus valley in SE Baluchistan (Lechavallier 1985). While differing in details, these aceramic occupations share various aspects of the transition to a sedentism based on a growing exploitation of domesticated plants and animals as a subsistence base. The hunting of wild animals was gradually superceded by the keeping of domesticated goats, sheep, and, later, cattle; while the collecting of wild seeds was replaced by the growing of wheat, barley, and legumes. Grinding stones for food preparation and the crushing of red ochre were common, while geometric microliths were mounted with bitumen as sickle blades and as transverse arrowheads, as shown at Mehrgarh. All of these settlements lack properly fired ceramics but show an early association with the use of clay as a plastic material for the making of quadruped animal and stylized human female figurines, sundried brick, and plaster for walls, floors, and storage silos. Houses with small rooms and blocks of storage bins were built—associated with hearths, small cooking ovens, and storage pits. Bricks were often long slabs of finger-impressed clay, and floor plaster was sometimes colored. Vessels of unbaked clay occur at Ganj Dareh. Horns of wild sheep attached to walls and elaborate human figures of clay at Ganj Dareh suggest religious practices. Other religious practices are suggested by the inclusion of red ochre in graves along with matting and simple offerings such as personal ornaments in the form of shell and stone bead necklaces and bracelets. In Deh Luran and at Mehrgarh, seashells (*Olivia* and *Conus*) suggest an early trade with the Persian Gulf–Indian Ocean area. At Ali Kosh, obsidian from Anatolia occurs in the earliest aceramic levels, while at Mehrgarh the use of turquoise, lapis lazuli (from the Chagai mountains near the frontier of Pakistan and Afghanistan), steatite, and calcite show the existence of an indirect long-distance exchange trade in exotic materials. These same materials remained popular luxury items throughout the Bronze Age. Rare stone vessels and bitumen-lined baskets provided containers before the appear-

ance of pottery. The aceramic period was already one of extensive experimentation and innovation in technology and cultural practice.

Between 6500 and 5500 B.C. the population increased, so that by the end of this period settled villages are in evidence in nearly every part of the plateau (Hole fc.). Only a few have been sampled by excavation, and almost none have been excavated horizontally to provide complete building plans or settlement information. The most complete information comes from Hajji Firuz in Azerbaijan (Voigt 1983), Zagheh in central Iran (Malek Shahmirzadi 1979), Jeitun in Soviet Turkmenia (Kohl 1984), and, slightly later, Jaffarabad in Khuzistan (Dollfus 1983). Other important information comes from Ali Kosh, Chogha Sefid, and Chogha Mish (Khuzistan); Late Guran (Luristan); Sarab (Kirmanshah); Zagheh and Sialk (Central Iran); Sang-i Chakhmaq East (Gurgan); Tal-i Mushki and Tal-i Jari (Fars); Yahya (Kerman); and Mehrgarh (Baluchistan) (Voigt and Dyson fc.; Hole, fc.).

In addition to relying on a mixed economy of hunting, gathering, farming, and herding, these villages contained houses and other small structures of mud brick, sometimes built on mud-brick platforms or rows of stone. In the case of Hajji Firuz and Jeitun, houses were usually one- or two-room rectangular structures with outside alleys and open areas devoted to hearths, pottery kilns, and debris from stone, bone, and shell manufacturing processes. Occasional structures appear to have been used for special purposes; for example, the "Painted Building" at Zagheh (Negahban 1979), with red-, white-, and black-painted walls, which were further enhanced by the addition of animal skulls and horns. Human female figurines of clay were found inside this structure, which was equipped with benches. The purpose of the building thus appears to have been religious in nature. Its complexity suggests a development toward more formal religious practices in the community, perhaps under the direction of part-time specialists.

The ceramic technology now practiced in these villages was based on the firing of chaff-tempered clay at low temperatures. The handmade bowls and jars produced were often slipped red or buff, sometimes burnished, and often painted in red, brown, or black geometric designs derived from local decorative traditions (Mellaart 1975). Experiments with ceramics were continuous, and in Deh Luran and the nearby Zagros valleys, Black-on-Cream and Black-on-Red slipped ware appears, while at Zagheh a sand-encrusted ware was produced by covering the wet clay vessel with sand before firing.

Other widely distributed artifacts indicate intersite contact and shared customs across the plateau. These include grooved stone polishers, miniature cosmetic mortars and pestles, stone labrets, geometric microliths, and carved-bone sickle handles with animal (Mushki, Chakhmaq) or human (Sialk) motifs (Voigt and Dyson fc.). The dead were buried beneath the floors of houses or, in the case of Hajji Firuz, in bins or on platforms in the house. Simple gifts of pottery bowls, rare polished stone axes, or pieces of meat were placed in the graves. Red ochre continued to be scattered over the remains. While such practices were widespread, indicating perhaps shared concepts of life after death, the distinctiveness of the local decorative traditions shows that for the most part these settlements were largely independent of one another.

During the following millennium (5500–4500 B.C.), this independence began to break down due to two developments: one, the growing complexity of town life in neighboring Mesopotamia, which produced an increasing interest in foreign sources of raw materials for luxury consumption; and, second, the continuing development of craft activity in Iran itself, which gave rise to an increasing exchange between the source areas of raw materials and market centers. In the first half of this period, a very specialized form of pottery, Cheshmi Ali ware, appeared along the N trade route from Sialk and Zagheh in the W to the border of Khorasan and the SE Caspian shore in the E (Voigt and Dyson fc.). The pottery is brittle, thin, and orange colored and is decorated with birds, boars, and leaping ibex painted in thin black lines. Whether this distribution represents trade, the movement of potters or people, or some combination of these is not currently known. A probable movement of people is suggested in the middle of this period by the distribution of Dalma Monochrome, Painted and Impressed Ware from Azerbaijan S to the Kurdistan-Luristan border at Godin Tepe and smaller surrounding sites (Young and Levine fc.). This distribution follows the natural line of march along the parallel Zagros valleys. Toward the end of the period, an intensification of contacts between Khuzistan and Fars is seen in the painted pottery which shares geometric and naturalistic patterns. This pottery is highly developed in the Middle Bakun period of Fars (Langsdorf and McCowan 1942) with the appearance of stylized human beings, caprines, insects (ticks), flying birds, fish, and plants—all elements which reappear subsequently in Iranian art at frequent intervals (Porada 1965).

Combined with these regional spreads of ceramics is the appearance of evidence for the existence of locally specialized craft production. For example, at Chogha Mish, which was already a sizable town at this time, a burned structure yielded pots, flint nodules, and flint working debris in the main room. The flint materials were far in excess of local needs, indicating a production intended for export (Kantor 1976). At the village of Jaffarabad near the later urban center of Susa, the entire site was a potter's workshop in this period (Dollfus 1983). On the plateau, the site of Iblis in Kerman province was heavily engaged in copper working, as indicated by masses of crucible and copper ore fragments and a number of copper objects (Caldwell 1967).

Equally important at this time is the evidence for trade contacts in the S: numerous Persian Gulf and Indian Ocean shells, obsidian from Anatolia, and carnelian, turquoise, steatite, and ivory from other areas. At Yahya these occur in a major architectural complex of more than fifty rooms. Tools, ornaments, chisels, and pins and an ingot of copper show the importance of metallurgy. Clay and stone stamp seals, like those in Fars, show the gradual spread of the use of this device for the identification of ownership eastward from Mesopotamia by way of Khuzistan and Fars to Kerman. Similar indications of extended exchange occur at Sialk in Central Iran, where carnelian, turquoise, and copper all occur. It is probably not an accident that

the evidence for the growth of this trade parallels the wider spread of ceramic traditions.

Beginning around 4000 B.C., the cultural dynamics of the lowland area underwent a significant change. Although in contact with the piedmont zone of E Mesopotamia since the aceramic period, Khuzistan became gradually more exposed to direct S Mesopotamian contact as Sumerian civilization developed. From 4000 B.C., the influence from Mesopotamia grew steadily stronger, leading at first to the introduction of Uruk pottery and glyptic to Deh Luran and then Susa (Rencontre 1979), and later, in the 3d millennium, to the direct military and political confrontations of the historic period (Carter and Stolper 1984). Probably in part from the stimulus of the growing complexity of Sumerian social and urban organization, the Susians, shortly after 4000 B.C., constructed a massive temple platform of mud brick decorated along the sides with rows of votive clay cones (Rencontre 1979). This temple apparently functioned as a cult center along the lines of similar centers in S Mesopotamia and, like these, attracted to itself a large cemetery. Burials were accompanied by stone vessels, copper celts, mirrors, and other objects and by extremely thin and elaborately painted pottery decorated with stylized animals, human figures, and geometric symbols. The labor and capital investment represented by this cult center indicates the rise of a religious and political hierarchy capable of carrying out such a monumental project. This cult function continued to develop and led to Susa's emergence as the chief administrative and religious center of Elam. As part of the process, perhaps under the influence of S Mesopotamia, a system of ownership identification using stamp and cylinder seals developed; and, in the middle of the 4th millennium B.C., a system for the notation of numbers and products by marking clay tablets was invented. The system of stamp seals spread eastward onto the plateau, where it is found in Fars at Tal-i Bakun in the Late Bakun period (Langsdorf and McCown 1942). Jar, packet, and door sealings show the existence of formal administrative control over goods being moved and stored (Langsdorf and McCown 1942). The basic agricultural wealth of Susiana combined with its unique geographical position between the Iranian plateau and its access to raw materials and the urban markets of the Mesopotamian plain undoubtedly explain the influential role it came to play in both areas.

Toward the end of the 4th millennium B.C., these various trends led to the first full-scale interregional intrusions through the establishment of extensive trade enclaves, intensive exchange, and actual migration. In the SW of Iran for the first time there is a virtual identity of ceramics associated with a pictographic "Proto-Elamite" script at Susa in Khuzistan and at Malyan (ancient Anshan) in Fars (Rencontre 1979). Malyan at this time was five times the size of contemporary Susa and was the largest known Proto-Elamite center. Since it is likely that the script records an early form of Elamite, these two sites may already represent two of the incipient polities of the later Elamite state (Carter and Stolper 1984). The third Elamite polity, Simashki, was probably located in Luristan, but has yet to be firmly located. Further E of Fars, in Kerman province, a late 4th millennium trading enclave was established at Tepe Yayha (Potts 1977). At this site a large structure containing impressions of Proto-Elamite cylinder seals, tablets inscribed in Proto-Elamite pictographic script, and monochrome and polychrome pottery of Sumerian type appear to indicate the establishment of a Proto-Elamite administrative center or trading enclave (Lamberg-Karlovsky and Tosi 1973). The purpose of this center seems to have been to exploit the sources of chlorite found around the site for the production of stone bowls, plaques, and other objects. The excavated area of the mound does not permit a firm conclusion as to whether the structure is simply an enclave or whether it represents a complete occupation of the site at this time. What it does indicate, however, is the direct presence in Kerman of individuals from Anshan or Susa. Whether this was a military or political presence or simply a trading arrangement on the order of the later Assyrian trading colonies in Cappadocia remains to be seen. Further E, the appearance of seal impressions and a single Proto-Elamite tablet in the earliest period at Shahr-i Sokhta in Sistan shows a remote extension of the contacts more strongly evidenced at Yahya (Lamberg-Karlovsky and Tosi 1973).

In W central Iran, a similar manifestation of Proto-Elamite interests is evidenced at Godin Tepe near Kangavar and at Tepe Sialk near Kashan on the edge of the central desert (Weiss and Young 1975). At Godin, it is very clear that a multi-roomed structure and compound in the center of the site, containing Proto-Elamite tablets, cylinder seals, and imported pottery (including beveled rim bowls, sometimes thought in Mesopotamia to have been used for measuring out grain rations), formed a self-contained enclave in the midst of an otherwise local community. Further E at Sialk, similar painted pottery, seals and sealings, and tablets also indicate direct contact with Susa (Ghirshman 1938). Unfortunately, the excavated area at Sialk is too limited to tell whether the material also occurs in an enclave or is more generally distributed. Whether these various enclaves of slightly differing dates represent peaceful trading arrangements or were forcefully imposed on these localities cannot yet be determined. If forceful occupation is the case, we may have the first evidence for the existence and expansion of an early state structure centered on Malyan (Anshan) and Susa in the Proto-Elamite period.

In this same period in NE Iran, the making of burnished gray pottery became widespread at the end of the 4th millennium. It is especially well known from Shah Tepe and Tureng Tepe just E of the Caspian Sea and at Tepe Hissar immediately S on the plateau (Schmidt 1937). The technique of reduced firing was developed well back in the painted-pottery period of the 4th millennium at these sites. By the end of the 4th millennium, gray pottery became the common ware, although at Tepe Hissar painted pottery continued to be made in small quantities into the early 2d millennium (Schmidt 1937). The development of decorative techniques and vessel shapes in gray pottery is largely distinct as seen between the Gurgan plain and the plateau, although trade contacts are clearly indicated. At Hissar, painted bowls on low hollow stems were gradually replaced by bowls on tall hollow or solid stems, beaker forms, and low-necked jars. By 3000 B.C., the town was full of craftsmen working lapis lazuli with an elaborate tool kit of flint drills and cutting blades. Extensive working

of copper ore is also in evidence (Dyson and Howard fc.). Numerous stamp seals and small pottery "tokens" indicate linkages to the W, but few actual imports can be documented. One of these, however, is half a burned chlorite cylinder seal of a type known from Proto-Elamite contexts at Shahr-i Sokhta, Yahya, Malyan, and Susa. East of Hissar in this period, the first significant southward expansion of the Namazga painted-pottery culture of Soviet Turkmenia occurred, as shown by its presence in the earliest settlement at Shahr-i Sokhta in Sistan (Tosi 1979). By the late 3d millennium, a N–S cultural relationship extended from Mehrgarh on the edge of the Indus valley in Baluchistan to an Indus emporium at Shortugai on the S edge of the Bactrian plain in N Afghanistan (Jarriage 1985). The emergence of a knowledge of this N–S pattern and its strength is one of the major changes in our knowledge of Iranian prehistory in recent years.

Beginning around 3000 B.C., for the first time we can see the expansion of cultures originating beyond the N borders of Iran onto the plateau. In NW Iran, the N half of Azerbaijan province was occupied by the Early Bronze Age Transcaucasian Culture, also called the Yanik Culture in Iran after the site where it is best known (*CAH* 2/1: 686–715). This culture was characterized by round mud-brick buildings with a central pole supporting a roof of wattle and daub. Twenty-three structures have been excavated at Yanik Tepe (Burney and Lang 1972). Toward the end of the Early Bronze I period, a stone-based defensive wall 4-m to 6-m thick was built. In the following Early Bronze II period, the round structures were replaced by rectangular one- and two-room houses. The pottery of both periods was handmade and colored in black to gray with a high burnish (but of a different type from that in the NE). The Early Bronze I period pottery was decorated with incised and excised geometric and bird patterns. This cultural group appears to have spread southward through E Azerbaijan, arriving sometime in the second quarter of the 3d millennium at Godin Tepe in the Kangavar valley, where it makes up period IV (Young and Levine fc.). Further to the S only trade sherds are known to occur.

The latter half of the 3d millennium was a time of prosperity for all of the widespread trading towns. In the W, the painted pottery of Godin III and its analogues spread through the Zagros with the disappearance of the Transcaucasian intrusion (Young and Levine fc.); in the south an elaborate painted pottery characterized by rows of fat birds (Kaftari ware) spread over Fars and even reached Yahya in Kerman in small quantities; the gray burnished pottery of the NE continued in Gurgan, while the Namazga-derived pottery of Shahr-i Sokhta continued to be made at that site (Voigt and Dyson fc.). The towns continued as specialized manufacturing centers. Especially notable is the continuing production of chlorite objects and vessels at Yahya, but in the absence of evidence for any enclave from the W (Kohl 1979). The level of wealth of the period is seen in the richly furnished graves of Hissar and Shahdad, which contain a wide variety of copper, bronze, lead, gold, silver ornaments, tools, and vessels along with beads of agate, carnelian, lapis, and alabaster and pottery vessels (Schmidt 1937). At Shahdad a number of extraordinary painted clay busts have been recovered (Hakemi 1973). Many of the pots from the Shahdad graves, as well as those from Yahya, bear symbols originally incised or impressed into the wet clay. At least one inscription shows that a post–Proto-Elamite script existed in the area. Cylinder seals showing a vegetation goddess provide a glimpse of religious iconography (Hakemi 1973).

The long-range trade in raw materials that presumably provided much of this prosperity came to an unexpected halt at the end of the first quarter of the 2d millennium when most of the sites in E and S Iran were mysteriously abandoned. The cause of this abandonment provides the basis for much speculation, but the explanation remains unknown. In Turkmenia the population shifted eastward toward Bactria (Kohl 1984). Other elements from Turkmenia and perhaps NE Iran appear to have moved S toward the upper Indus valley. Yahya and Malyan appear to have been abandoned as well.

In central W Iran, on the other hand, the occupation of Godin and related sites in the early 2d millennium continued, while in N and W Azerbaijan painted pottery related to adjacent areas evidences a local occupation. After 1500 B.C., a change begins to occur in the NW with the appearance of a new cultural pattern marked by extramural cemeteries, distinctive architectural forms, and an entirely new assemblage of burnished gray pottery, many forms of which appear to copy metal prototypes. The origins of this new cultural pattern are unclear. It has been suggested that it represents the displaced gray-ware-using peoples of NE Iran arriving finally in the W (Young 1967). It has also been suggested that the source was the Turkish or Caucasian area in view of many similarities to objects in these areas and to Iron Age Europe. Perhaps both movements occurred (Ghirshman 1977) at the same time.

This cultural pattern, seen best in the burned settlement at Hasanlu, at the S end of Lake Urmia, and in the cemetery of Marlik on the Sefid Rud in Gilan province, contains the cultural inventory which characterizes NW Iran down almost to the historic period (Burney and Lang 1972). This gray-pottery period is commonly referred to as the "Iron Age," although very little iron existed prior to the 9th century B.C. The tombs at Marlik were built of stone and contained large quantities of bronze weapons, pottery animal effigy vases, and elaborate gold vessels decorated in repoussé (Negahban 1964). The style of these vessels suggests a temporal spread from the 2d into the 1st millennium B.C. A bronze fibula in one tomb should indicate that many of these items were hierlooms, since the fibula cannot be dated to before the 8th century B.C. on present evidence.

At Hasanlu, a complex of columned halls and auxiliary buildings was burned around 800 B.C. (Dyson 1972). It is believed on the basis of the occurrence of Urartian inscriptions in the area that this event took place when the kingdom of Urartu expanded southward under kings Menua and Ishpuini at a time when Hasanlu was probably allied with the Assyrians (Levine fc.). The ruins of this period yielded over 7,000 objects of copper, bronze, iron, lead, antimony, silver, gold, amber, glass, carnelian, alabaster, Egyptian blue, wood, ivory, and pottery. Some items, particularly cylinder seals and wall tiles, show a close relationship to Assyria and may even be imports, while others appear to be heirlooms several hundreds of years

old. The site appears to have been an administrative and religious center, apparently defended by mounted horsemen, to judge by the equipment recovered. The building plans evolved from a simple plan involving an entry, a small stair, a main room with two center columns and raised fireplace, a raised platform at the rear, and a side storage room to large-scale structures, each with an open portico, an entry room and adjacent stair, a large columned hall (the largest being 18 m × 24 m) with raised central hearth and rear platform, and additional storerooms. This architectural development clearly ties into the background of the Median columned halls seen in the 8th–7th century buildings at Godin, Baba Jan, and Nushijan in central W Iran (Levine fc.). These settlements—a fortified palace at Godin, a fortified manor house and shrine at Babajan, and a fort, temple, and palace at Nushijan—represent the protohistoric occupation of the W Zagros by the Iranian Iron Age Median population. In the S, the buildings of Cyrus the Great at Pasargadae (Stronach 1979) remain the initial evidence of the Iranians at Fars, although some enigmatic remains at Susa in the so-called Ville Archaemenide-Perse may be earlier (Stronach 1974).

ʿIRAQ EL-EMIR (M.R. 221147). A little village, 20 km W of Amman. In this area, the well-watered and green valley of the Wadi es-Sir takes a last turn before falling

into the Wadi Kefrein, which was in antiquity one of the roads leading to Jericho. A towering cliff to the N, steep heights to the W, and on the E, a sheer descent to the wadi bound a large piece of land descending in terraces to the S. In this area are remains of an enclosure which delimits an estate of about 150 acres, within which are several ruins: two stories of caves carved out of the cliff, various remains on a nearby mound (where the modern village rests), and, 600 m to the S, the stately ruins of the Qasr el-ʿAbd near a mighty dam.

A. Identification and History

The first European visitors were C. L. Irby, J. Mangles, and their companion Bankes (in 1817), who identified the site with the Tyros described by Josephus (*Ant* 12.4.1 §229–35). Josephus narrated that the Tobiad Hyrcanus built in the vicinity of Amman a castle or palace, decorated with large animal figures and surrounded by an artificial lake. It is fairly certain that the Qasr, with its lion friezes and its dam, was the area described by Josephus as Hyrcanus' last place of refuge.

The historian credits Hyrcanus with all the installations in ʿIraq el-Emir; but the first-known Tobiah is mentioned by Ezra (2:60) and Nehemiah (2:10ff.) in the 5th century B.C. as the "Ammonite servant," i.e., servant of the Great King of Persia, which means he was the governor of the land of Ammon. According to the Zenon papyri, another Tobiah was still in Ammon in the 3d century, at that time in the service of the Lagid kings of Egypt. Moreover, it has been argued that ʿIraq el-Emir is mentioned in those papyri (cf. Mittmann 1970). The name Tobiah has been found carved twice in Aramaic letters, each time next to the doorway of a cave; these are dated to the 4th or 5th century B.C. Finally, the name Tyros, which survives in Wadi es-Sir, is the Greek transliteration of the Aramaic *ṣour,* meaning "rock," a word by which the site may have been known long before Hyrcanus.

Thus, we may reasonably assume that by the 5th century, ʿIraq el-Emir was one of the estates of the Tobiads, a Jewish family that settled in the land of Ammon and became locally powerful. The livelihood of the estate was derived from farming on a large scale, which relied on the diverted waters of the wadi for irrigation.

However, quarrels with his brothers, his Arab (= Nabatean) neighbors, and the Seleucid kings who had been masters of Syria and Palestine since 200 B.C., prompted Hyrcanus to take refuge in ʿIraq el-Emir, where he intended to erect a residence of princely standing.

Excavations in the village (which is not mentioned by Josephus) have revealed remains from the time of Hyrcanus—a beautiful house with painted stuccos (the "plaster building" of P. W. Lapp 1976), and columns, capitals, and entablature which are very similar to those retrieved in the Qasr. A segment of a fortification wall in which is set a doorway dates at least to Persian times, but, after several modifications, the wall fell into disuse in the 1st century A.D. The village was permanently inhabited and was the center of the site from very ancient times. Indeed, the site has yielded archaeological material from the EB through the Ummayads.

Hyrcanus was compelled by Antiochus IV (175–164 B.C.) to take his own life, after which the estate was confiscated. The Qasr was unfinished at that time and stood vacant for five centuries. In the first half of the 4th century A.D., it was remodeled and occupied. Although seriously damaged by a violent earthquake (probably in 365), it remained inhabited. The lions of the friezes were eventually, with one exception, savagely mutilated, probably the result of the iconoclastic edict in 723 by the Sultan Al Yazid.

B. Exploration

The site was first explored by M. de Vogüe and F. de Saulcy in 1863 and 1864; both were primarily interested in the Qasr. The same is true of the American, H. C. Butler, who visited the Qasr for six days in 1906. In 1962 and 1963, P. W. Lapp carried out the first systematic excavations in the "plaster building" of the village, in the "square building" (a water-supply regulator) outside the village, and in the Qasr itself. From 1977 to 1987, a team directed by E. Will cleared the entire Qasr, which has permitted a partial reconstruction. In 1977, the monumental gateway to the estate, near the Qasr, was studied by J. M. Dentzer and F. Villeneuve; the latter also conducted soundings in the village and in the caves in 1980 and 1981.

1. The Qasr el-ʿAbd. The Qasr has been the subject of a long dispute, since most scholars are inclined to identify it as a temple. However, since the owner of the building was a Jew, these scholars must assume that this owner violated Jewish orthodoxy, since there was no legitimate temple outside Jerusalem; if this were a temple, it would therefore be a "rival sanctuary." An event of such significance hardly would have been ignored by Josephus, who otherwise mentions the existence of a schismatic temple in Leontopolis in Egypt, which was built by the discharged high priest, Onias IV. The recent French excavations, however, have completely vindicated Josephus' descriptions: the Qasr was indeed a castle or palace—the *baris* of Hyrcanus.

The building, a rectangular block of 18.5 m × 37 m, stood with two stories to a height of 14 m. The N and S facades each had a broad, two-columned porch leading into an entrance hall flanked by two square rooms. A staircase still occupies the NE corner; another staircase was intended for the SE corner, but it was never built. The N hall leads through a monumental doorway to a second broad room flanked by two cisterns. The central part of the building, obviously altered in Byzantine times, is unfortunately in very bad condition and only the ground floor is partially preserved. A U-shaped corridor, lit on the E and W sides by seven large windows, surrounds a complex of four identical rooms. In the upper story, a two-columned, but unroofed, loggia rose above the N entrance hall. The S loggia looked out on the valley through seven bays framed by Corinthian half-columns. Various architectural blocks, bases, capitals, and half-columns point to the existence of several decorated rooms, one of which was probably a large reception room.

A two-storied building, with each story divided into a number of rooms and corridors, should not be identified as a temple, since no such temple is known elsewhere in the Near East. This was clearly a palatial dwelling and, according to an ancient and still extant Oriental custom, the ground floor was used for practical purposes (servants'

quarters, storerooms, etc.), and the upper story was reserved for residence and reception areas.

The outer walls are made of huge slabs set on edge, according to traditional Phoenician and Syrian construction techniques which continued into Hellenistic and Roman times. The architectural ornamentation, however, is Hellenistic, in particular the combination of Corinthian columns and capitals with Doric entablatures. Both the N and the S facades have counterparts in the Greece and Macedonia of the 4th and 3d centuries B.C.

Greek-style sculptures also graced the building: the two panthers at the base of the E and W walls (which served as outlets for the internal cisterns), the lions and the lionesses with their cubs (from the lower course of the upper story), and the eagles whose wings partly concealed the Corinthian corner capitals at the top of the building. Clearly a Greek-schooled architect used an Oriental prototype in a new spirit and was assisted by a Greek-schooled sculptor. The exact origin of these masters cannot be determined, but some of the evidence points to ties with Alexandria.

Josephus called the Qasr a *baris,* a term of unknown origin used to refer to fortified residences in towns, as well as to large estates in the Hellenistic world. Qasr el-ʿAbd, cut off from the village and the caves, surrounded by its lake, and superbly decorated, is indeed a princely residence. The eagles and the lions, in addition to their possible magical protection, could have a political significance: they are symbols of royal power. Perhaps Hyrcanus dreamed of gaining some form of independence from the Seleucid king—a dream expressed in the Qasr. In any case, the Qasr stands as the only known, though much less splendid, preview of Herod's extravagant palaces.

ERNEST WILL

IRBID, TELL (M.R. 229218). A site in Jordan, perhaps to be identified with BETH-ARBEL (Hos 10:14).

A. Name and Identification

Mostly hidden from the S by the buildings of modern Irbid, the tell is one of the largest in the region, approximately 350 m × 400 m. Recent economic development has removed portions of the site. Tell Irbid (597 m above sea level) dominates the surrounding plateau, which is one of the most fertile in Jordan. There is one spring in the vicinity of the tell, located in the modern city.

The name "Irbid" is attested since the 14th century A.D. In the 8th century A.D., the town was known as "Arbad," which might be a hypercorrection and presuppose the present name of the site. Irbid was the site of the Roman town or village of Arbela, mentioned by Eusebius of Caesarea in the early 4th century A.D. The east bank Irbid was not the only Arbela that changed to Irbid via Irbil (Knauf and Lenzen fc.). It is likely that Irbid/Arbela is identical with the Beth-arbel mentioned in Hos 10:14. This reference is enigmatic and does not allow clear conclusions concerning the history of the site in the Iron Age, except to provide its name for this period. The name of the site in the LB was possibly *gintôt,* "the place of winepresses," mentioned by Thutmose III and in the Amarna letters (Lenzen and Knauf 1987).

B. History of Research

Early travelers and explorers noted mainly the remnants of classical antiquity in the vicinity of the modern city and of Bârha, W of the city (Seetzen 1854: 360–61; Burckhardt 1822: 268–69; Buckingham 1827: 350–52; Merrill 1881: 293–96; Oliphant 1880: 103–14; Schumacher 1890: 149–54). The significance of the tell was first noted by Albright (1929: 10) and Glueck (1951: 153–54), who associated the tell with the LB. Salvage excavations have been conducted at the site since the 1960s, and research excavations have been conducted since 1984 (Lenzen 1986; Lenzen, Gordon, and McQuitty 1985; Lenzen and Gordon fc.).

C. History of Settlement

Stratified occupational deposits have been dated from ca. 3500 B.C. to ca. 800 B.C. During the MB, the tell was enclosed by a city wall built of basalt boulders, many of which measured well over 4 m × 4 m. These boulders were indigenous to the region, probably having been scattered throughout the Irbid plateau from the E during the Late Pleistocene period. The LB II city incorporated the earlier city wall, while at the same time expanding the interior of the city by building a wall outside the first. An excavated architectural complex—consisting of an outside perimeter wall, four to five separate rooms, a tower, and a sanctuary—has provided cultic objects and ceramics which date to the LB/Iron Age transition. Above the structures were 4 m of destruction debris which extended to the SW for over 100 m. Since only two arrowheads were found in the destruction debris, a military destruction seems unlikely. Occupation of the area resumed following the destruction of the public buildings, but the nature of the occupation changed from a public sector to one of domestic and light industrial use. The top of the tell has been completely obliterated by the construction of modern buildings; hence, essentially no archaeological data exist for the site after ca. 800 B.C. Later occupational periods, however, are represented in wash. Although it is likely that the tell was always occupied to some degree, probably in the 1st century A.D. the main settlement shifted from the summit to its immediate surroundings.

The later history of Irbid is derived primarily from textual sources. Prior to the establishment of the DECAPOLIS city of Capitolias (BEIT RAS, 5 km N of Irbid), Arbela belonged to the territory of Pella. According to a Greek inscription from the town, Arbela belonged to Provincia Arabia in 239 A.D. (assuming this inscription was not imported from elsewhere).

IRENAEUS. Irenaeus (ca. 140–ca. 202) was bishop of Lyons in Gaul in the late 2d century. His exposition of Christian theology developed out of his critique of the gnostic systems. He is considered by many to be the first systematic theologian.

A. The Man and His Work
B. Irenaeus and the Gnostics
C. Unity of *Adversus Haereses* and Biblical Methodology
D. Irenaeus and Canon
E. Irenaeus' Exegesis
F. Summary of Argument of *Haer.* 3–5

A. The Man and His Work

As is the case with most ancient writers, Irenaeus is known from his work and, indirectly, from the personality revealed in that work rather than from an abundance of biographical detail. Irenaeus does tell of spending his early years in Smyrna, during the bishopric of Polycarp, his teacher (Iren. *Haer.* 3.3.4; Eus. *Hist. Eccl.* 5.20.4–8). The date of Polycarp's martyrdom, between A.D. 161 and 168, helps fix the date of Irenaeus' birth at ca. A.D. 140. The few other known details depend on Eusebius, who compiled his Church history in the first decades of the 4th century. It is certain that Irenaeus, having become a presbyter, was the emissary of the church of Lyons to the bishop of Rome in 177 (Eus. *Hist. Eccl.* 5.4.1–2). When Pothinus, bishop of Lyons, died in prison that same year, Irenaeus succeeded him (Eus. *Hist. Eccl.* 5.5.8). Irenaeus' activity as bishop continued through the Paschal controversy of the late 2d century. His intervention took the form of a letter to Victor, bishop of Rome, ca. 188 to ca. 198, urging that Victor tolerate diversity of practice in fixing the date of Easter and in keeping the pre-Easter fast (Eus. *Hist. Eccl.* 5.24.11–18). The date of Irenaeus' death is unknown, although convention places it ca. 202 to correspond with the renewed persecution under Septimus Severus. However, the texts which mention Irenaeus' martyrdom are late and uncertain: Jerome, writing ca. 397 (*Commentary on Is,* 64 [*PL* 24, 623 A]); Theodoret(?), writing between 430 and 450 (*Quaestiones et responsiones* [*PG* 6, 1363]); Gregory of Tours, writing ca. 575 (*Historia Francorum I,* 27 [*PL* 71, 174 C–175 A]) and again in 590 (*De gloria martyrum* 50 [*PL* 71, 752 A]).

Irenaeus' major extant writing is the *Adversus Haereses* (the full title of which is the *Refutation and Overthrow of Knowledge falsely so-called*). Its composition is dated ca. 180 from the succession lists in which the author names Eleutherus (ca.174–ca.189) as current bishop of Rome (*Haer.* 3.3.3), although it seems from remarks Irenaeus makes in the prefaces to *Haer.* 3 and 4 that he followed the practice of sending on the separate books of the work as they were completed. The other complete extant work is the *Demonstration [or Proof] of the Apostolic Preaching.* It was written after at least the earlier books of *Adversus Haereses,* to which reference is made in chap. 99. An Armenian version of this long-lost work was discovered in 1904, and Smith (1952: 4–11) discusses its textual history. Eusebius (ca. 263–ca. 339) is the principal source for our knowledge of the lost works of Irenaeus. These include at least the treatises "On the Ogdoad" and "Concerning Knowledge" and letters "On Schism" and "On the Monarchy [of God]" (Eus. *Hist. Eccl.* 5.20.1), as well as the full text of the letter to Victor already mentioned.

Irenaeus wrote in Greek, but his Greek text has survived only in material quoted by others. For both the *Demonstration* and *Adversus Haereses,* our direct knowledge of Irenaeus' text depends on translations. *Adversus Haereses* survived in a Latin version made before A.D. 422, when Augustine cites it in the *Contra Julianum* (*PL* 44, 644). In addition, a 6th-century Armenian version of Books 4 and 5 was discovered with the *Demonstration* in 1904, and fragments exist in Armenian and Syriac as well as in Greek. Full discussion of the manuscript tradition of the Latin version with its editions, as well as of the Armenian version and of the fragments, appears in the critical edition completed under the direction of Rousseau in 1982, and published by Sources chrétiennes between 1965 and 1982. This edition includes a partial Greek retroversion as well as a French translation. The only English translation remains that in ANF vol. 1 (1885: 9–567), although the editors of ACW have announced the forthcoming publication of Unger's new English translation (Burghardt 1984: 293).

B. Irenaeus and the Gnostics

A major context of Irenaeus' contribution is his response to the threat of Gnosticism. In the last quarter of the 2d century, Valentinian Gnosticism posed a serious challenge to mainline Christianity in the Rhone valley. Anti-gnostic polemic shapes both *Adversus Haereses* and the *Demonstration*. The latter is concerned with demonstrating that the preaching received from the apostles is true; its emphasis throughout is soundness of doctrine. The former, larger work derives form, method, and content from the purpose, set forth in its title, that was "the refutation and overthrow of so-called gnosis" (Eus. *Hist. Eccl.* 5.7).

In a body of work so keyed to polemical response, the question of the writer's reliability as a witness to his opponents' positions must be raised. The question is all the more acute because Irenaeus has long been a principal source for knowledge of Gnosticism. Nineteenth-century historical-critical scholarship recognized the polemical character of heresiological reports of opponents and so treated this material, including that of Irenaeus, as suspect. Schmidt (1907) and DeFaye (1925) recognized the corroborative value of gnostic material like that in the then newly discovered Codex Berolinensis 8502. Sagnard (1947: 100) was cautious about all but firsthand accounts; in his view Irenaeus can be trusted when writing about those of whom he has personal knowledge. What remained problematic was the use of secondary sources by Irenaeus as well as by others.

Discovery of the Nag Hammadi library changed the situation. Wisse (1971: 205–23) has compared the writings of the heresiologists with the Nag Hammadi library. He finds two major discrepancies that must be accounted for. The first is lack of significant overlapping in material and detail. One might expect in so large a collection to find some of the sources used by the heresiologists. In fact, there are only five cases of clear agreement. Of these, three certainly and one possibly are with Irenaeus (Wisse 1971: 217–18). A second discrepancy is that the heresiologists name various sects, describing them in terms of characteristic traits and teachings as if each had developed its own distinct doctrines. The collection as a whole, as well as individual writings within it, contains ideas that according to the heresiologists are appropriate to different sects. This raises the question whether the sects were indeed as differentiated by doctrine as the ancient Church writers indicated.

In Wisse's own view, the sections in which Irenaeus discusses Ptolemy (*Haer.* 1.1–8) and the Marcosians (*Haer.* 1.13–21), as well as *Haer.* 1.9–10 and 1.31.3–4, are of the bishop's own composition and draw on his direct knowledge of the disciples of Ptolemy and Marcus. Wisse thinks the remaining passages describing gnostic sects derive from an earlier catalogue of heresies (1971: 212–15). To such a source Wisse attaches the blame for describing gnostics as "pathological systems builders" comprising numerous sects; this differs from what we read in the Nag Hammadi library (1971: 218–19).

Perkins (1976: 193–200) attacks Wisse's position, maintaining that considerations of style and literary genre raise problems. Drawing on studies by Schoedel (1959: 22–32) and Grant (1949: 41–51), she recalls that oral and rhetorical models greatly influenced ancient writers and shows how, in *Haer.* 1, Irenaeus follows the model of a rhetorical refutation. (In 1981, Vallée developed this insight but without giving attention to the reliability of Irenaeus' presentation of gnostic thought.) What of Wisse's theory of an earlier heresiological source? In Perkins' judgment, *Haer.* 1.11 and 12 are rightly ascribed to Irenaeus since each contains elements proper to the refutation. *Haer.* 1.29 and 30 are also ascribed to Irenaeus, in this case as a result of comparison of style and method between clear Irenaean materials and clear source material.

Pagels (1974: 35–53) has challenged the dependability of Irenaeus' accounts of gnostic teaching in another passage, contending that in *Haer.* 1.7.1 Irenaeus distorts the correct account preserved in Clement of Alexandria. In a review of Pagels' publications through 1977, Grant (1977: 30–34) finds minimal differences between the texts. He notes that this aspect of Pagels' position has been questioned by Schoedel and rejected by Mühlenberg. McCue (1980) also questions the attack on Irenaeus' reliability. The issue remains controversial.

Study of this Irenaean material in the context of available gnostic writings is now expedited by Layton (1987), who translates the Valentinian material from Irenaeus together with the Valentinian fragments, and performs a similar service for the other types of gnostic sources.

C. Unity of *Adversus Haereses* and Biblical Methodology

Study of the unity of *Adversus Haereses* is directly connected with study of its author's role as a biblical theologian. This role has long been recognized, notably by Lawson (1948) and Wingren (1959). Equally, Irenaeus has long been criticized for an incoherent, rambling, and unsystematic style. Both the formal and theological unity of *Adversus Haereses* were severely attacked by source critics beginning with Harnack (1907: 1–38), followed by Bousset (1915) and Loofs (1930), and more recently by the scholars Widmann (1957: 156–73) and Benoit (1960). However, Bacq's careful study (1978) of Irenaeus' biblical methodology has uncovered the tightly structured unity of *Haer.* 4, a unity at once theological and literary. The basic unit of structure is a "word of the Lord" or scriptural text announced, cited, and commented upon, with various allusions to that word linking one structural unit to another. Understanding and application of this principle of organization may well permit the unity of the entire work to be uncovered.

D. Irenaeus and Canon

Because the last three books of *Adversus Haereses* offer proof from the Scriptures, it is particularly important to know what Irenaeus considers to be the Scriptures. As Schneemelcher (*NTApocr* 1: 28–59) indicates, Irenaeus affirmed the number of Gospels to be fixed at four (*Haer.* 3.11.8); in addition, Acts and twelve epistles of Paul belong to the canon, and 1 Peter and 1 and 2 John are on a par with Paul (Schneemelcher *NTApocr* 1: 34). In 1960, Benoit pointed out that Irenaeus reserves the phrases *ait Scriptura* ("Scripture has") and *dicit Scriptura* ("Scripture says") for OT citations. At the same time, phrases such as *scriptum est* ("it is written") and *quod scriptum est* ("which is written") are used to introduce both NT and OT passages (Benoit 1960:

76). More recently, Sesbouë (1981) has reviewed the meanings of *scriptura* and *scripturae* in Irenaeus. He concludes that undoubtedly Irenaeus did treat the NT as Scripture. But in Irenaeus' day a current usage, held over from the NT identified Scripture with the OT; Irenaeus also continued to share in that perspective. Specifically, his proof from the Scriptures involved proof from the prophets and consisted of the systematic elaboration of the agreements between the two testaments. In proceeding thus, he simply developed the pattern set by the NT writers. But Sesbouë has shown that Irenaeus adds a dimension to the argument. Against his opponents, he wants to show that both Testaments are the work of the one God. So for the bishop, not only is prophecy a proof of the event but the event in turn is also a proof of prophecy.

Peretto, in his investigation (1971) of Romans 1–8 in *Adversus Haereses,* finds Irenaeus reluctant to apply the term "Scripture" to the Pauline letters. Unlike Sesbouë, Peretto does not discuss Irenaeus' use of the term as applied to the whole complex of the OT and the NT, but he does enter the ongoing discussion of the relation of the Latin version of *Adversus Haereses* to the Latin version of the NT. Specifically, he demonstrates that the text of Roman 1–8 in the Latin *Adversus Haereses* is simply the translation of the Greek text; it does not enter into the line of development of the VL. In his section on the Irenaean use of the Romans material, Peretto finds selection and interpretation clearly adapted to the polemical situation. He holds that Irenaeus does respect the literal meaning of the texts. Finally, his work includes a complete and helpful review of the study of Irenaeus and Sacred Scripture (1971: 41–45).

E. Irenaeus' Exegesis

Herrera (1920) studied Irenaeus as exegete. He indicated that Irenaeus employs both the literal and the spiritual sense, although Herrera judged his use of the literal sense to be sometimes less happy than one might desire (1920: 98–118). According to Herrera, Irenaeus adopts four rules of exegesis: (1) By the rule of clarity, the obscure should be explained by the clear (1920: 120–23). (2) According to the rule of truth, a text should be read within the context of the creed delivered at baptism, and within the context of the whole of the Scriptures (1920: 124–26). (3) Holding to the rule of tradition, a text should be read within the context of the truth handed on by the living tradition through the succession (1920: 127–39). (4) According to the rule of mystery, the student of the Scriptures should admit that the Scriptures contain mysteries beyond human understanding (1920: 139–46). Later developments in Scripture studies are reflected in Bacq's 1978 work (*C* above), which adds considerable sophistication to the understanding of Irenaeus' exegetical method.

Orbe (1981) focuses on *Haer.* 5.23.1–2, where Irenaeus, in typical 2d-century style, offers five exegeses of Gen 2:17b. Marcion and the gnostics made capital of the apparently unfulfilled divine threat of death to be inflicted "in the day that you eat." Orbe's service here is, first, to point out Irenaeus' great concern for the literal meaning of the passage (a concern Peretto also notes). Second, Orbe makes clear the bishop's familiarity with a variety of interpretations, ranging from that of Philo through the *Book of Jubilees* and Justin's. Third, Orbe analyzes the various interpretations Irenaeus offers, in light of the rest of his teaching, in order to suggest which of the five are most likely to have been Irenaeus' own.

This familiarity with a broad spectrum of relevant material is apparent in Orbe's comprehensive work (1972) on the gospel parables in Irenaeus. There, he treats one by one the parables to which Irenaeus refers, and for each he examines all occurrences in the literature, both heterodox and orthodox, prior and immediately posterior to Irenaeus. Parables that receive only marginal mention in Irenaeus are also noted and located in the literature. The consequence of this immense labor is to place Irenaeus solidly within the literary milieu to which his work belongs. A particularly helpful result is Orbe's clarification of the distinction between Valentinian exegesis, Alexandrian exegesis, and Irenaeus' Asiatic exegesis. The diagram illustrates his comparison of the three exegeses of the parable of the Good Samaritan.

	VALENTINIAN	ALEXANDRIAN	ASIATIC
WOUNDED MAN	Spiritual man,	*Homo (nous)*	Man of clay, the human race,
	lost on earth,	descended from noetic world,	
	because of fall of Sophia.	because of sin.	transgressor in Adam.
SAMARITAN	Gnostic Savior made man "in his own way."	Savior made man, even flesh.	Son of God incarnate, dead and risen.
HELPER	For soteriological efficacy needs help of angels		Efficacy is in His glorified flesh;
	= gnostic leaders.	= apostles.	uses Holy Spirit to cure the man during interval between 2 comings.

(Adapted from A. Orbe [1972: 2.488]. First published Donovan [1984: 229].)

All three approaches respect the letter of the parable. All follow the pattern: the situation of the human person in a state of mortal danger from which the Son of Man redeems him, assisted by another (or others). As Orbe points out, we have here a generic synthesis of the *historia salutis.* Further, he reminds us that in these models, originating fairly close to one another in time and place, there already appear three distinct thought patterns, each of which constitutes a tradition.

The Irenaean interpretation of parables is key to Schoedel's exploration of the theological method in *Haer.* 2.25–28 (1984: 31–49). Schoedel identifies the methodological point made by Irenaeus at the theological climax of *Haer.* 2.25–28, where he distinguishes between "knowing *that*" and "knowing *how.*" Scriptures often teach us *that* God has done thus and so without explaining *how* or *why.* This must be so as God transcends ordinary ways of thought. Gnostics err by not recognizing this aspect of transcendence and proffering explanations of the humanly inexplicable. Schoedel points out that Irenaeus is especially concerned about the way in which gnostics were using the NT parables. Irenaeus' distinction is not simply between difficult and easy problems either in the study of nature or in

Scriptural exegesis; rather, it is in the study of nature that we know *that* natural things are; knowledge of *how* they come to exist is left to God. With respect to things in Scripture, the contrast is between the assertions (as, There is one God who created matter) and *speculation* about such assertions (as, when or how God created matter). As Schoedel remarks: "The important point, then, is that when Irenaeus worries about the gnostic interpretation of parables, it is because such exegesis reflects dissatisfaction with knowing 'that' and an unhealthy desire to know 'why' " (1984: 35). The parables must be read in harmony with the rest of Scriptures.

Schoedel locates parallels to the distinction between "knowing *that*" and "knowing *how*" in Empiric medical writings and in philosophical Skepticism. As Irenaeus' sound "art of discovery" rests on interpretation of the parables in light of the clarity of the prophets and Gospels, so Schoedel notes the Empiricists' "way of discovery" took as point of departure things that were certain. Irenaeus uses the question of what God was doing before creation of the world as an illustration of the futility of speculation on questions beyond our capacity to know. Schoedel situates this question in the debates of the philosophy of Irenaeus' day, showing that "in both Empirical and Skeptical circles Irenaeus could find a measure of sympathy for his view that it was enough to affirm divine providence without attempting to solve the metaphysical issues involved" (1984: 44).

While Irenaeus' adherence to what is obvious may have some connection with popular distrust of philosophy, Schoedel says that distrust "has been focused more precisely under the influence of more highly developed intellectual tools" (1984: 48). Thus, Schoedel concludes that the very use Irenaeus makes of such tools shows (contrary to van Unnik 1979: 33–43) that it is possible to read Irenaeus in the light of Skepticism without reducing him to a precursor of "God of the gaps" theology. Rather, Irenaeus' very debt to Empiric method and Skepticism in challenging speculation betrays his impressive achievement in the development of sound theological method.

F. Summary of Argument of *Haer.* 3–5

After the discussion of method which concludes *Haer.* 2, Irenaeus devotes the next three books to presenting the true gnosis of Christ's teachings. By way of prologue he develops an understanding of true doctrine, tradition, and succession destined to be extremely influential in the Western Church (*Haer.* 3, pref.–5). He agrees with the gnostics that Jesus gave true teaching (which he calls the "rule of truth") to his apostles, directing them to pass it on to their successors. Thus, in both the gnostic and Irenaean versions, the truth is given into the keeping of the succession of teachers in the Church. It is their task to "pass it on," i.e., to perform the work of tradition. However, Irenaeus introduces one sharp and major difference. In his view, there is no secret succession or tradition; the tradition is guarded by a public, known succession to the apostles: hence, the importance he attaches to the episcopal succession lists.

Equally in response to gnostic positions, Irenaeus stresses the unity of God who made all through his hands the Word and Wisdom, and the oneness of being of Jesus Christ who is only-begotten son, savior, word, truly divine, and truly human (*Haer.* 3.5–25). Here, as elsewhere in the Irenaean corpus, the God who is one—yet is Father, Son, and Spirit—is known as such through the divine economy or plan of salvation. Thus, Irenaeus' position is a form of economic trinitarianism.

The theme of *Haer.* 4 is the unity of the old and new covenants summed up in the person of Jesus Christ, who recapitulates all of salvation history in his person and through his life, death, and resurrection in order to join the end to the beginning, so humankind to God. "Recapitulation" is an important subtheme in Irenaeus, a development of Pauline theology (Romans 5 and 6; Col 1:15–20; Eph 1:9–10). In Irenaeus' view, the entire life and work of the Son was both a fulfillment of prophecy (see *Dem.* 53–85) and a recapitulation or summing up of all that has been since Adam (see *Haer.* 3.22.3; *Dem.* 37). This summing up pertains to the circumstances of his birth by Mary (*Haer.* 3.21.10 and 22.1–2) and even to the ages he passed through (*Haer.* 2.22.4). It includes his passion-resurrection and the saving significance of his life (see *Haer.* 5.19.1; 5.21.1–2; 5.18.1–3; 3.16.6; 3.18.7).

In *Haer.* 5, Irenaeus emphasizes the reality of Jesus' body, before and after the resurrection. Repeatedly in these last three books, Irenaeus stresses the value in God's eyes of human physicality, and the importance of free human choice in the working out of salvation by permitting the Spirit to penetrate one's life, so that ultimately one might enter into the glory-filled vision of God. The Irenaean picture of the human person adopts the biblical notion of a threefold organization of flesh, soul, and spirit (1 Thess 5:23). The image imprinted from creation is in the flesh (*Haer.* 5.6.1), the dynamism leading toward holiness involves a distinction between image and likeness (Fantino 1986), and growth in the likeness is through the work of the Holy Spirit, freely welcomed by the individual (see especially *Haer.* 4.37–9). The result will be progress toward the life-giving vision of God as expressed in the often-quoted Irenaean text: "The glory of God is a human person fully alive, and the life of the human person is the vision of God" (*Haer.* 4.20.7).

MARY ANN DONOVAN

IRI (PERSON) [Heb *ʿîrî*]. A descendant of Benjamin who appears in a curious Benjaminite genealogy in 1 Chr 7:6–12a. The name means something like "my city" or "my town." This is the only appearance of the name in the MT, and it does not appear in the Apocrypha or the deuterocanonical literature. Iri is mentioned as one of the five sons of Bela, along with Ezbon, Uzzi, Uzziel, and Jerimoth. The tradition is strong at this point, since Bela is the only one of the three sons of Benjamin mentioned in 1 Chr 7:6 who appears in all genealogical lists of the tribe of Benjamin (Coggins *Chronicles* CBC, 50). This genealogy represents the simplest form, numberwise, of any genealogical listing, with only three sons of Benjamin named (*1 Chronicles* WBC, 108). The five sons of Bela are called *roʾšê hāʾābôt,* or "heads of families." There may be some reflection of political and social organization in this designation, as well as military status. Harmon (1983: 150) has suggested that perhaps the head man of a *bēt ʾāb* functioned along the lines of the "big men" of anthropological terminology. Orme (1981: 139) points out that big men are successful, involved in community affairs, associated with feasts, and involved in arbitration in local disputes.

G. EDWIN HARMON

IRIJAH (PERSON) [Heb *yirʾîyāh*]. The sentry at the Benjamin Gate who arrested Jeremiah and accused him of deserting to the Chaldeans (Jer 37:13–14). Certainly, Irijah had cause to suspect Jeremiah of desertion since Jeremiah had urged others to do so (Jer 21:9). Jeremiah denies the charge of Irijah, but the text indicates that "Irijah would not listen to him, and seized Jeremiah, and brought him to the princes" (Jer 37:14). It was the failure of Judah and its leaders to listen to the prophet that the Jeremiah tradition believes is responsible for the Exile. This theme is expressed twice (Jer 36:21 and Jer 37:2), immediately preceding the account of Jeremiah's arrest by Irijah in Jer 37:13–14. Thus, in the context of the book of Jeremiah, Irijah typifies the problem that leads to God's judgment of Judah and Jerusalem. The LXX has a different account of Jeremiah's arrest that does not mention Irijah, but a "Sauria with whom Jeremiah dwelt." The Syr gives the name as *nērîyāh*. Irijah is identified as the son of Shelemiah and the grandson of Hananiah. Shelemiah, son of Hananiah, is apparently a different person from Shelemiah, son of Cushi (Jer 36:14), or Shelemiah, son of Abdeel (Jer 36:26). It is not possible to determine if Irijah's grandfather, Hananiah, is the same person identified as the father of one of the princes mentioned in Jer 36:12. Irijah means "Yahweh sees" (*TPNAH* 102), though this meaning plays no evident role in Jeremiah 37.

JOHN M. BRACKE

IRNAHASH (PLACE) [Heb *ʿîr nāḥāš*]. A city in Judah of unknown location (1 Chr 4:12). The name is found listed in the genealogy of the sons of Caleb as "Tehinnah the father of Irnahash." Although it is found in a genealogical list, references in the same passage to other place names and their founders, such as "Ephrathah, the father of Bethlehem" (1 Chr 4:4) and "Joab the father of Geharashim" (Valley of the Craftsmen; 1 Chr 4:14), make a place identification probable. Noth suggested and Aharoni concurred that many of the clansmen are listed in the genealogies as the "father" of the settlement they either founded or adopted as their own (*LBHG*, 245–48). The LXX supports this view, translating Irnahash as the "City of Naas" (Gk *poleōs naas*) rather than as the name of an individual.

Three possible locations have been suggested. The two with modern place names are Deir Nakhkhas (M.R. 142113) near Beit Gibrin, following Abel (*GP* 2: 351), and Kh. en-Nahas (M.R. 191010) located S of the Dead Sea in the Arabah near Punan, preferred by Glueck (1959: 156) and Kallai (*HGB*, 117). The nearby mining areas make the latter suggestion attractive since Heb *nāḥāš*, "serpent," is cognate with *nĕḥōšet*, "copper," and since Glueck suggested that the name Ge-harashim was used interchangeably in biblical times for Arabah (1959: 156). Aharoni (*LBHG*, 282 n. 164) connected Ir-Nahash with the Kenites of the "house of Rechab," following LXX "Rechab" instead of MT "Recah" in 1 Chr 4:12. Since the Kenites were associated with the Arabah, this would support the location of Kh. en-Nahas. At the same time, Aharoni (*LBHG*, 248) proposed a third location in the hill country between Bethlehem and Hebron somewhere in the area of Tekoa, basing this on a reconstruction of the clansmen and their settlements in 1 Chronicles 4.

JO ANN H. SEELY

IRPEEL (PLACE) [Heb *yirpĕʾēl*]. A town located in the tribal territory of Benjamin (Josh 18:27). It is listed with other towns mostly N and W of Jerusalem, and it has been suggested (*IDB* 2: 728) that Kh. Rafat (M.R. 170142), about 1.5 miles E of the Jerusalem airport, might be associated with Irpeel, although others prefer to identify Kh. Rafat with biblical Ataroth.

GARY A. HERION

IRU (PERSON) [Heb *ʿîrû*]. A son of Caleb ben Jephunneh, listed in the genealogy of the tribe of Judah (1 Chr 4:15). His brothers were Elah and Naam. Iru is named first, probably because he was the eldest brother. Possibly the name should be read Ir *[ʿîr]*, with the final *û* actually being the conjunction "and," connected to the next name, i.e., "Ir and Elah" (cf. KB 702; Vg and LXX). If Myers' suggestion (*1 Chronicles* AB, 26) that "Elah" and "sons" are transposed is correct, Iru would also be described at the end of the list as one of the sons of Kenaz (*ʾēlleh* as demonstrative pronoun "these" and not the proper name "Elah" *[ʾēlâ]*: "and these were the sons of Kenaz;" cf. Rudolph *Chronikbücher* HAT, 32). The Syr codex Ambrosianus completely eliminates Iru from the list, beginning the list "the name of his first-born Elah. . . ." *(šēm bĕkōrô)*.

Iru has been linked with the word *ʿîr*, meaning "ass's foal" (*HALAT* 3: 777–78). Note also the names found in the list for the tribe of Benjamin: IRI (1 Chr 7:7) and IR (1 Chr 7:12).

KENNETH H. CUFFEY

ISAAC (PERSON) [Heb *yiṣḥāq*]. The second of the patriarchs in whom Israel recognized a father figure; he is traditionally associated with Abraham and Jacob. Genesis presents him as the son of Abraham (17:18; 21:3) and the father of Jacob (25:26). Isaac is mentioned by name more than seventy times in the book of Genesis. Outside Genesis, Isaac finds limited mention in the canonical text of the OT: only thirty-three mentions, and in four of these instances (Jer 33:26; Amos 7:9, 16; Ps 105:9) in the orthographic variant *yiṣḥaq*. Generally, except where the context demands otherwise, he is part of the "patriarchal triad" of Abraham, Isaac, and Jacob. One can note the importance of this phraseology for Deut (1:8; 6:10; 9:5, 27; 29:12; 30:20; 34:4), and also of the expression "the God of Abraham, Isaac, and Jacob (Israel)" (Exod 3:16; 1 Kgs 18:36) and that of "the God of Abraham, the God of Isaac, the God of Jacob" (Exod 3:6, 15; 4:5 [for specific details, see Diebner 1974: 38–50; Gispen 1982: 123–29]).

It seems that Isaac plays a role of little importance in the OT tradition; even in Genesis he appears as a secondary personality alongside Abraham and Jacob. The majority of commentators, accordingly, speak of an Abraham cycle

and one of Jacob, which together share the bulk of Genesis 12–36. They seem to pass over unawares an "Isaac cycle" that is limited to chap. 26.

It is no less true, however, that the patriarch Isaac is, in the biblical narrative, the indispensable link that connects the history of Abraham to that of Jacob, the father of the tribes of Israel. This is the function that gives him his primary significance, independently of the Jewish and Christian traditions about his presence on Mt. Moriah (Genesis 22).

A. The Name Isaac
1. Etymology
2. Significance
B. Biography of Isaac
C. A Secondary Character
D. Literary Problems
E. Historical Approaches
F. Religious Problems
G. Jewish and Christian Traditions

A. The Name Isaac

1. Etymology. The second patriarch's name, Isaac (Heb *yiṣḥāq*), derives from the common Semitic root *ṣḥq;* it implies laughter, a smile, benevolence, gaiety, pleasantness, scoffing, fondling, cajolery (*HALAT,* 955). The Hebrew form of the name Isaac, *yiṣḥāq,* is an imperfect, meaning either "he laughs" or "he is favorable." Speiser (*Genesis* AB, 125) refers the subject of the verb to the father who smiles at his new-born son and receives him with joy. A symbolic gesture such as this could be the origin of the name Isaac. Others have argued that the name evokes the baby's first smile or expresses the good wishes that his parents express in his regard.

Generally, scholars accept another explanation, presented by M. Noth (*IPN,* 210–12) and vigorously defended by J. J. Stamm (1950; one finds it also handed on by R. de Vaux [*EHI,* 198–99], as well as by C. Westermann [1985: 269; cf. *HALAT,* 408]).

Isaac is an abbreviated form of a name composed of a prefixing verb and a divine name—in technical terms, a hypocoristic name (see NAMES, HYPOCORISTIC)—as is the case with the name Jacob. Isaac would then be a short form of **yiṣḥāq-ʾēl,* (or an equivalent form with some other divine name), analogous to the name Ishmael (*yišmaʿ-ʾēl,* that is, "El hears" or "may El hear"; note Gen 16:11). The subject of the verb *ṣḥq* is the deity, not some human being (the father or the child); thus, Isaac(el) would mean "El smiles" or "El is favorable" (or "may El smile/be favorable"). This explanation perhaps finds support from Ugaritic mythological texts, in which are several examples where the god El is said to smile in expressing his satisfaction or favor (Stamm 1950: 35). Unlike the names of the other patriarchs, the name Isaac has thus far not been found attested as a NW Semitic proper name.

2. Significance. Genesis highlights the joyful or amused aura that surrounds Isaac from before his birth and then explains his name in a more or less allusive way through the several episodes in which the son of Abraham and Sarah is featured. According to the present order of the biblical narrative, Gen 17:7 tells of the probably wonder-struck laughter *(wayyiṣḥāq)* of Abraham when he heard the unbelievable news that to him, a hundred-year-old man whose wife was in her nineties, would be born a son. According to Gen 18:12–15, Sarah, when she heard the divine promise, expressed particularly by her laughter (Heb *wattiṣḥaq* [Gen 18:12]) a doubt that she vainly tried to deny (18:15). In another reference to Isaac's name (21:6), his mother seems to be torn between joy *(ṣēḥōq)* and a fear of being the object of mocking remarks from her attendants *(yiṣḥaq).* Other allusions to laughter coupled with the name of Isaac are found as well in 21:9 and 26:8, but there we find them depicted in a different perspective. In the first case, the attitude of Ishmael who is amusing himself (Heb *měṣaḥēq* [*Piʿel;* 21:9]) with Isaac seems suspicious to Sarah (cf. Gen 39:14, 17), and this provokes the expulsion of Hagar and her son; in the second case, Isaac, who had passed off his wife Rebekah as his sister, is given away by his conniving about her, for Abimelech guesses the truth of the matter when he sees him fondling *(měṣaḥēq)* his wife. The biblical account thus plays on what is suggested by the name of the child of Abraham and Sarah.

B. Biography of Isaac

Genesis offers a certain amount of information on the patriarch that allows us to reconstruct a "life of Isaac" (cf. *EncJud* 9:1–7). According to Gen 12:5, Abram left his native land by divine command at the age of seventy-five; afterwards, when he was ninety-nine, the Lord appeared to him and promised him a son that he would have by Sarai (17:1–22). Thus, Isaac would be born of a hundred-year-old father (Abram is called Abraham from now on) and of a ninety-year-old mother (Sarai becomes Sarah; Gen 17:15–21). According to 21:3–5, Isaac was circumcised in conformity with the divine ordinance eight days after his birth; at the time of his being weaned from his mother, his father gave a banquet (21:8), and the child grew up among his kinfolk, playing with his half-brother Ishmael up to the very day that Sarah drove this latter out of the family unit along with his mother Hagar (21:9–21).

We reencounter Isaac in Genesis 22, in the episode that took place on Mt. Moriah, an event often designated—though this designation may be contested—"the sacrifice of Isaac," when it really deals with the "testing of Abraham"; with better reason, Jewish tradition calls this the *Aqedah* of Isaac; that is, "the binding of Isaac" (Gen 22:9). Spared at the last possible moment, Isaac next appears with his father at Beer-sheba (22:19).

Abraham then decides to marry off his son and asks his servant to find him a wife among his relations in the home country (Gen 24:1–61). Abraham's plan has a positive outcome; his envoy comes back with Rebekah, who meets her future husband at Beer-lahai-roi. Then, Rebekah consoles Isaac after the death of his mother (24:62–67).

Isaac was forty years old at the time of his marriage and his wife would long remain barren (Gen 25:19–20), for it would only be twenty years later—once Isaac had inherited his father's goods after he and Ishmael had buried their father in the cave of Machpelah, and Isaac had settled near Beer-lahai-roi (?) (25:5–11)—that Rebekah would present him with two sons at once (25:21–28), Esau and Jacob; by trickery, the latter would come to obtain Isaac's paternal blessing (according to 27:1–29).

Chapter 26, sometimes called, with some exaggeration,

the "Isaac cycle," recounts several episodes from Isaac's life. A famine obliges the patriarch, with the blessing of his God, to move on to Gerar, where he has dealings with Abimelech, designated "king of the Philistines" (Gen 26:1–5). Then takes place the incident of Rebekah's seizure, which recalls similar scenes recounted about Abraham and Sarah (12:10–20; 20:1–18): Isaac passes off Rebekah as his sister, but his deceit is discovered by the king; afterwards, everything gets settled between Abimelech and Isaac, whose prosperity, due to divine protection, comes to surpass every measure (26:6–13). There is no mention of the reaction of the Philistines; however, they launch a kind of "war of the wells," which leads the patriarch to go up again to Beer-sheba, where Isaac receives confirmation of the promise made to his father (26:19–25). Abimelech, understanding that Isaac enjoys the favor of his God, concludes a nonaggression pact with him (26:26–33).

Esau, Isaac's favorite (Gen 25:28), later on enters into a marriage that displeases his parents (26:34–35); he sees himself dispossessed of his father's blessing through a heinous stratagem, concocted by Rebekah and carried out by Jacob (27:1–40). Out of fear of Esau's wrath, Jacob goes into exile (27:41–45). Isaac (later on) sends him to look, in his turn, for a wife in the household at Bethuel, in the territory where the paternal clan originated; he gives him the blessing he had received from his father (27:46–28:9). According to Genesis, this is the last intervention by Isaac.

Following a long absence, Jacob, with his wives, his servants, and his children, returns to his country to be present at the death of his father—who is now situated at Mamre, near Hebron—and, with Esau, to oversee the burial of Isaac in the family burial place. At the time of his death, the patriarch was 180 years old (Gen 35:27–29).

C. A Secondary Character

In relation to the rather extensive information furnished by Genesis about Abraham and Jacob, we know very few things about the second patriarch, Isaac. We find, scattered through chaps. 17 to 35, several bits of very precise but succinct information: his birth is foretold (chap. 17) and takes place; his childhood (Genesis 21), his marriage to Rebekah when he was forty years old (Genesis 24); the arrival in the world of his sons, Esau and Jacob, twenty years later (Genesis 25); and his death 120 years after that (Genesis 35). Most of these facts were borrowed from the P source, whose date scholars consider to be late and whose preoccupations reflect a priestly milieu. See PRIESTLY ("P") SOURCE. The principal concern of this version is that of giving outline and shape to the patriarch's life.

The other elements of the history of Isaac pick up again—prescinding, for the moment, from chap. 26—the cycles of Abraham and Jacob. All that has to do with his birth, both its promise and its final accomplishment, belongs to the story of the first of the patriarchs: he is born a son of Abraham, and on him will come to rest the blessing granted to his father. The story of the "testing of Abraham" makes up part of the narratives dedicated to the latter; Isaac, moreover, plays, in Genesis 22, an astonishingly passive role, which Jewish tradition would afterwards seek to amplify. According to the biblical account, he was content to walk along in silence at his father's side; the only time he spoke gave Abraham an opportunity to utter an ambiguous response (an expression of faith that, in another context, the apostle Paul would write, "hoped against hope" [Rom 4:18]). At the time of his marriage, it was again the father who intervened in order to secure a legitimate offspring for his family; Isaac restricted himself to welcoming the woman that was sought out for him (Genesis 24).

Once Abraham died, Isaac inherited his possessions (chap. 25) and, in particular, the promise made to his father (chap. 26), but, for all that, he did not take any noteworthy initiatives—if we exclude chap. 26 from consideration. The biblical narrative shows him grown old, infirm and the victim of intrigue devised by his wife and one of his sons. He passes on to the latter, without really wanting to, one of the most precious things he had inherited, the divine blessing (Genesis 27). Once Abraham has disappeared from the scene, Isaac, in effect, belongs to the Jacob cycle; above all, his role consists in his transmitting to his son a benefit that had come to him from his father: "the promise" made to Abraham and which accompanied the first patriarch his whole life long.

Even Genesis 26, though it is consecrated entirely to him, does not correct, except moderately, the conclusion to which our reading of Genesis has brought us. The various episodes of this chapter are not, properly speaking, original; they almost all have parallels in the lot of the first of the patriarchs. When Isaac is threatened with famine, he goes into exile as Abraham had done before him (according to Gen 12:10–20) and as, later on, the sons of Jacob would do (Genesis 42). Abraham had dealings with Abimelech, "king of Gerar," in the Negeb (Genesis 20), as would his son (according to chap. 26). The history of the seizure of the patriarch's wife is attested three times in Genesis (chaps. 12; 20; 26); in two of these episodes Abraham is the protagonist. Abraham concluded a peace treaty with Abimelech, as his son would do after him (chaps. 21 and 26).

Following these observations, we might ask ourselves how we should characterize Genesis 26. This chapter, far from exposing—even if to a very limited extent—an "Isaac cycle," might not be anything more than a composite—or better, a redactional—work reporting, in summary fashion, several samples taken from a life of Isaac, conceived on the model of those stories narrated about Jacob and, above all, about Abraham. (For a contrary view, see Lutz 1969.)

Finally, a careful reading of Genesis sets in relief the slender nature of the information we have on the destiny of Isaac and the reduced importance of the biblical tradition devoted to him. Nonetheless, this somewhat shadowy figure, who is more or less the plaything of others' interests, by handing on the blessing of the God of Abraham to Jacob in conformity with the divine plan fulfills in this a decisive action and completes the mission that had devolved upon him.

D. Literary Problems

An examination of the literary data about Isaac confirms the impression formed about him from a first reading of Genesis (chaps. 17–35); it also contributes to making even

more tenuous the information that the biblical texts communicate about the second patriarch.

Since the time of J. Wellhausen (1844–1918), scholars have reckoned that the Pentateuch is the result of a slow process carried out over several centuries, and thus is a composite work. See TORAH (PENTATEUCH). According to the generally accepted view, there are four principal "layers" of different eras, styles, and perspectives: two of these, called the Yahwist (J) and the Elohist (E), are preexilic; the third shares Deuteronomistic (D) concerns; and the last (P) belongs to the postexilic era. This way of envisaging the Pentateuch's history as the successive combination of literary sources, while long accepted—though with qualifications—by the majority of critics, has been seriously called into question today, and the problem of the composition of the "Five Books of Moses" seems to be more tangled than ever.

Currently, researchers tend to substitute for the synthetic views of the formation of the Pentateuch (such as those found, for example, in the writings of G. von Rad) rather detailed analyses—often voluntarily restricted ones—which recall the so-called "fragment" hypothesis that was defended some time ago. According to these analyses, the Pentateuch would be made up of many pieces more or less successfully joined together at the end of a complex redactional process. Even the existence of the Yahwistic (J) framework as a unity—the basis of the whole reconstruction process—would be contested today.

Moreover, modern-day studies of the OT often insist on the *late* elaboration and completion of biblical texts. If one were to believe some scholars, the essential aspect of Israel's literary productivity took place in the 7th, 6th, and 5th centuries B.C., with and around the time of Deuteronomy. Some claim to be able to recover almost everywhere, including in the Pentateuch, traces of a "Deuteronomistic School," which appeared at the end of the Kingdom of Judah and whose influence extended well beyond the Exile; OT witnesses from the preexilic period would be, as a consequence, few in number and of secondary importance.

As a result of this, the documents relating to the patriarchs today are considered not as the constituent parts of the three or four large "sources" which branch throughout the Pentateuch and sometimes extend even as far as into the book of Joshua, but rather as more or less disparate collections, worked over by redactors, whose role was preponderant during the particularly troubled time that saw the end of the Judean state, the destruction of the Jerusalem temple, and the reconstitution of a Yahwistic community around the reconstructed sanctuary. Hence, the biblical narratives concerning the patriarchs appear to be rather more recent than the ancient events they are thought to report.

Specialists in earlier days were generally in agreement in assigning Genesis 17–35 to the various sources (J, E, D, P) of the biblical narrative found in the Pentateuch; in many cases, scholars were in agreement on the essential points of this source analysis and differed with one another only on specific details.

According to J. Skinner (*Genesis* ICC [1910]), Genesis 17 points to the concerns of P, as its vocabulary, expressions, and aim testify; while the account in Gen 18:1–16, from its style and content, belongs to the J source. Gen 21:1–7 is a composite piece, shared by J (vv 1a, 2a, 7, 6b), E (only v 6a, but this source is rejoined with vv 8 and following), and P (vv 1b, 2b–5).

In Genesis 22, the narrative of the "sacrifice of Isaac" has the characteristic traits of E in vv 1–14 and v 19; vv 15–18 constitute a complementary note by a redactor (R) who has combined the conceptions of E with a Yahwistic phraseology (R^{JE}). With regard to chap. 24, devoted to the steps taken for Isaac's marriage, this is Yahwistic (J); the presence of several doublets or contradictions (such as vv 29–30; 23b, 28; 50, 53, 55; 59, 61; etc.) may be explained by the presence of an Elohist version.

The pericope in Gen 25:7–11a continues the thought of 23:20 and belongs to P, while v 11b is Yahwistic, as is 25:5, whose original location must have been chap. 24, and which the final redactor of the Pentateuch (R^{JEP}) has displaced. From P we also have vv 19, 20, and 26b, while the text on the birth of the twins (25:21–26a and 27, 28) is mainly from J, with Elohistic traits in vv 25, 27.

Chap. 26 is reserved to Isaac, but the bulk of the episodes recounted there—with the exception of vv 12–16—have their parallels in the Abraham cycle: thus, Gen 26:1–6 recalls 20:1–2; 26:7–11 corresponds to 12:10–20 and to 20:2–18; 26:17–22 evokes 21:25–26; and 26:23–33 evokes 21:22–34 (26:34–35, a notice which concerns Esau, is from P). For Skinner, the tradition in Genesis 26 is Yahwistic (J); it derives from an account connected with Hebron—more recent than another, which was connected with the Negeb. The ensemble of the chapter constitutes a specific unit, which breaks the narrative thread between the end of chap. 25 and the beginning of chap. 27.

In Genesis 27, the presence of repetitions testifies in favor of a double association, that of J and E (cf., for example, vv 33, 34, and 35–38; 21–23 and 24–27a; 11–13 and 16); it is sometimes difficult to establish in detail divisions between the Yahwist, whose terminology predominates, and the Elohist. Gen 35:27–29 (the death of Isaac) belongs to P.

For O. Eissfeldt (1922; 1965), the division of the sources of Genesis with regard to what concerns Isaac is apparently the same, except that he admits the existence of a version prior to J, containing ancient materials, which he designates as L (*Laienquelle* or "Lay source"). This leads him to the following conclusions:

L Source: Gen 18:1–9 (the essential aspects of the pericope, completed with several amplifications of J: the most ancient account foretold the birth of Isaac); Gen 25: 11b (the notice of Isaac's settlement at Beer-lahai-roi) and vv 21–26a (the birth of the twins, Esau and Jacob); Gen 26:1–2a, 3a, 6–23, 25b–33 (Isaac goes to Gerar, the seizure of Rebekah, the covenant with Abimelech at Beer-sheba). One should note that, for Eissfeldt, the key chapter on Isaac, chap. 26, goes back to the old layer L.

J Source: Gen 18: 1a, 3, 10–15 (details complementary to the foretelling of Isaac's birth and his being placed under Yahweh's "patronage"; allusions to the name Isaac); Gen 21: 1a, 2a, 7 (the birth of Sarah's son); Gen 24:1–67 (the essential core of the chapter is Yahwistic, with some Elohistic fragments); Gen 25; 27–28 (the introduction to chap. 27); Gen 26:2b, 3b, 24, 25 (the transfer of Abraham's blessing onto Isaac, according to J); Gen 27:1–46 (the

essential core of the chapter belongs to J, with several elements from E, especially from vv 37–39 and 41–45). One might draw attention to the fact that the two large narratives in chaps. 24 and 27 are considered Yahwistic; according to J, moreover, Yahweh promises Abraham a son and keeps his word (chaps. 18 and 21).

E Source: Gen 21:1b, 6, 8–13 (allusions to the name of Isaac at his birth, the sending away of Hagar); Gen 22:1–19 (the essential aspects of the Aqedah of Isaac, reworked here and there); Genesis 24 (the elements of an Elohistic version, such as vv 5, 6, 8, 10b, 11b, 22b, 23b, 25, 29a, 30, etc.); Gen 25:11a (Isaac blessed by God); Gen 26:3c, 4, 5 (the transfer of the blessing of Abraham to Isaac, according to E); Genesis 27 (Elohistic complements to the narrative of the deception of Isaac by Jacob, as well as vv 1b, 15, 18b, 24–28, 29b, etc., and, notably, vv 41a, 42–44, 45b, on Jacob's flight after his heinous crime). One should note that Eissfeldt finds traces of an Elohistic version in the bulk of chaps. 20–22 and attributes to E the account of the testing of Abraham (chap. 22).

P Source: Gen 17:1–27 (the chapter in its entirety: the announcement of a posterity for Abraham; circumcision, the sign of the covenant; reference to the name of Isaac); Gen 21:2b–5 (the birth and circumcision of Isaac; Abraham's age); Gen 25:7–10 (Abraham's death, his burial by his sons) and vv 19, 20, 26b (Isaac's posterity; Isaac's age at his marriage and the birth of his sons); Gen 26:34, 35 (notice of Esau's marriages) followed by Gen 27:46–28:5 (Jacob's departure blessed by his father); Gen 35:27–29 (Isaac's death at Hebron at the age of 180). Apart from the great "theological" chapter (Genesis 17), P is content with very brief notices which mark out the stages in the life of the second patriarch.

H. Cazelles states that "the Isaac cycle belongs to the Yahwistic tradition (for the most part) and to the priestly tradition, in the case of the latter beginning with the birth of Isaac (21:1–7)" (*DBSup* 7: 130). He notes, as well, the presence of an Elohistic tradition. Thus, he attributes to the J source Gen 18:1ff.; Gen 21:1, 2a, 7, 8; Gen 22:15–18 (the residue of a Yahwistic narrative that "has even contaminated v 11" [*DBSup* 7: 773]); Genesis 24; Gen 25:5 (which derives from the source used by J in Genesis 24); 11b, 18, 21–26a (the settlement at Beer-lahai-roi, where Isaac was born); Genesis 27 (according to Cazelles, the difficulties in the narrative come, as in chap. 24, from J's use of an earlier source and not from an Elohistic version). With regard to Genesis 26, devoted to Isaac, which everyone says is Yahwistic, we should note in it an ancient substratum that has been reworked by J; v 5 would be not a "Deuteronomism" but a trace of P (*DBSup* 7: 744). E finds little place in the narratives given over to Isaac, except for chap. 22 (vv 1–13, 19, with the reworkings in vv 11–12), perhaps Gen 21:1, 2a, 6b–8 (doubtful), and 9–21 (Isaac's birth; the expulsion of Hagar). In Gen 25 we may uncover "an Elohistic base . . . perhaps vv 25–26a, 27a . . . and 29–34" (*DBSup* 7: 804). With regard to the "Sacerdotal History," according to P, it connects Isaac with the second covenant, whose sign is circumcision, between God (El Shaddai) and Abram (chap. 17). "Isaac constitutes precisely the first fruits of it" (Gen 21:2b–6 [*DBSup* 7: 831]); along with Ishmael, he buries his father in the cave of Machpelah (Gen 25:7–10). Then, Isaac is associated with the destiny of his son (cf. his posterity, Gen 25:19, 20, 26b; the text is incomplete); the marriages of Esau and Jacob (Gen 26:34–35; 27:46; 28:1–9); Isaac's death and burial (Gen 35:27–29). Henceforth, Jacob is the principal personality of the patriarchal tradition and "does not participate in Abraham's blessing except by avoiding marriages with the Canaanites" (*DBSup* 7: 831).

Here we could terminate our quick survey of the works of previous generations concerning the composition of the Pentateuch; for in continuing this line of inquiry, we would, in general, come up with the essential data of theses issuing from the school of Wellhausen.

C. Westermann, in his massive commentary on Genesis, while admitting the existence of the Yahwistic (J) and Priestly (P) strata in chaps. 12–36, contests the presence of an Elohistic source parallel to J in these chapters (see his conclusion [1985: 571–741]). Westermann, with other specialists, insists on the role of oral tradition in the history of the Pentateuch, and on the fact that the Yahwist presents a narrative that is not uniform but rich and varied, issuing from what had been put together in the course of time out of many elements. Westermann nonetheless stresses the redactional activity that is at the origin of the actual biblical text. It is a redactor (R), in fact, that undertook the joining together of the J and P sources and the quasi-definitive deposition of the traditions relative to the patriarchs. For example, R is responsible, in the Abraham cycle (chaps. 12–25), for the introduction (Gen 11:27–32, with the notice of Sarai's barrenness), the conclusion (Gen 21:1–7, with its mention of Isaac's birth) that matches it, and, in the Jacob cycle, for Gen 25:19–28, which inaugurates the story of Jacob and Esau (with its account of the twins' rivalry), as well as for Gen 35:1–29, which brings it to an end (the newly reunited Esau and Jacob bury their father). This redactional activity would get followed up on after R; as witness he cites the addition of several units or even chapters (e.g., chap. 26) which break the link between Genesis 25 and 27. This does not consist of the mere juxtaposition of different versions but rather of the elaboration of pericopes constructed with care to give direction to an understanding of the patriarchal traditions.

In the case of the texts where Isaac is the topic, Westermann admires the artistry with which Genesis 17 (P) has been composed, even to its most minute details; he thinks that in Gen 18:1–16a, currently situated within the totality of chaps. 18–19, two themes are mixed together that originally were independent of one another (the visit of the divine beings, the announcement of the birth). In his commentary, there is no explicit statement that this pericope derives from the Yahwistic (J) stratum.

Regarding Gen 21:1–17 (Isaac's birth), far from seeing in it an amalgam of J, E, and P, as many critics before him did, Westermann discovers in it the work of a redactor (R), who recounts the sequence of events within a passage that matches the introductory piece (Gen 11:27–32). In place of sources more or less carefully joined together, these verses thus testify to a reflective redactional exercise.

Genesis 22, a theological narrative in which Abraham is put to the test, must belong to a more recent period (the end of the kingdom of Judah), but it may reuse an earlier and different version. Westermann does not make any special mention of E here, for he considers its foundation

to be almost negligible (1985: 353–57). Genesis 24 goes back to an ancient family tradition, but its redaction within Genesis is later than J (if this source is to be dated in the 10th or the 9th century (1985: 383–84).

According to Westermann, with Gen 25:7–18 (P), the history of Abraham reaches its conclusion; consequently, 25:1–6 derives neither from J nor P and appears to be a late addition. Gen 25:19–28 is a redactional work that introduces the history of Jacob and Esau and makes use of elements from both J and P; its continuation is found in chap. 27, after the paragraph (25:29–34) placed there by R (1985: 406–9). Genesis 27 itself presupposes a long development from the oral stage, and may date from the patriarchal era in its Yahwistic redaction, but it is without an Elohistic parallel, despite the presence of doublets (such as 33–34 and 35–38) and the late addition of blessings (27b–29; 39–40).

Genesis 26, totally devoted to Isaac, does not appear to be a mosaic of units relating to the second patriarch (combined at a late date into a more or less homogenous whole), as G. von Rad, among others, thinks, but a composition cleverly constructed to treat, above all else, the relationships between Isaac and Abimelech (vv 12–17 [not counting v 15] and 26–31). The narrative, which presupposes Gen 21:22–34, is associated with a series of notices concerning wells (26:15, 18, 19–25, 32–33; an ancient element) and a fragment concerning an itinerary (26:17, 22a, 23, 25b; equally ancient), and introduced by vv 1–11 (taken up again in vv 12 and 20). The author of the chapter intends to show how Isaac, behind whom Israel itself is profiled, entered into contact with the Philistines: Isaac appears as the heir of the promise made to Abraham (26:2a, 3a, 24; 2b, 3b, and 4–5 form a complementary addition), which became notably manifest in an abundance of harvests (26:12–14) and in the successful outcome of his negotiations with the Philistine king (26:26–31; there is a double use of *šālōm* in vv 29, 31). The chapter is located after a break in the narrative about the two brothers, Esau and Jacob: Gen 25:19–28 (29–34 is an addition), followed by Gen 27:4; it cannot go back to J. Thus, the principal witness to an "Isaac cycle," according to Westermann's analysis, is a redactional work, elaborated at a late date and associated with the unit formed out of J and P.

Here again, the commentary of Westermann insists not on Genesis' division into classical Pentateuchal sources but on the presence, within the patriarchal texts, of skillful constructions which addressed a thought-out theological and historical purpose; where other exegetes saw only disorder, one may uncover a carefully constructed whole.

The work of E. Blum, dedicated to the composition of the patriarchal history (1984), is typical of the tendencies that today dominate some of the research activity into the origin and development of the Pentateuch. As R. Rendtorff has argued in a volume dealing with a study of this same ensemble (1976), the principle task is not grappling with the classical hypothesis of the sources J, E, D, and P, but instead examining the "large units" out of which the Pentateuch is built (the history of the fathers; the narratives about Moses; the Sinai pericope, etc.) that have their own proper theological meanings, were bound together only at a quite late date, and afterwards were completed and corrected within a point of view that is close to that of Deuteronomy (here people sometimes speak of a Deuteronomistic or a pre- or proto-Deuteronomistic edition), and, much later still, by P, whom strictly speaking, one must think of more as a reviser than an author.

So it is that for Blum, one of the important units of the Pentateuch, Genesis 12–50, is the result of a succession of redactions at relatively late dates. In these redactions, a Deuteronomistic current is especially in evidence, rather than an assemblage of the J, E, and P sources, whose very existence seems more or less problematical.

According to Blum, we should note the following with regard to the notices in Genesis about Isaac: Gen 18:1ff., which recount the extraordinary continuity of the Abrahamic lineage, are a kind of etiology of Israel (1984: 279); Genesis 22, which highlights the testing of Abraham's obedience, must date—at the earliest—from the late royal period (328ff.); Genesis 24 belongs to a Deuteronomistic perspective of the postexilic period when there was a great deal of questioning about marriages with foreigners, as the interventions of Ezra and Nehemiah testify (383ff.). As regards chap. 26, it constitutes, with the exception of vv 2–5—or, more exactly, of vv 3b–5 (D; 362ff.), which develop v 24—a remarkable unity, despite the various elements out of which it is composed; it supposes a period that is neither prior to the formation of the kingdom of Israel nor later than 587, and reflects a relatively balanced political situation between the state of Judah and her Philistine neighbors (301ff.). Moreover, Genesis 26 was reworked and completed at the time of the Exile from the Deuteronomistic perspective (cf. particularly, the promises in Gen 26:2b–5). The calling into question of the hypothesis concerning literary sources—particularly those of the preexilic strata (J, E)—and the tendency to date texts relating to the patriarchs to generally later periods lead to a still greater reduction of the strength of OT testimony regarding the second of the patriarchs: Isaac appears as a secondary character, whose mention appears in passages that are secondary, often marginal and edited late.

It may well be, however, that the Isaac cycle is more ancient and more important than is generally imagined. A. de Pury (1975: 1.189–201) thinks he has uncovered in the "promises" made to the patriarchs, more precisely in 26:2b, 3a; 26:24 (and 46:3, 4), a tradition that is common to these passages and independent of their present context: according to this tradition, Isaac would have been constrained by the threat of a famine to go down into Egypt. Before his departure he would have received an oracle of salvation guaranteeing him the protection of his God and his return to the region of Beer-sheba, where he could then settle. Of this narrative, there remain today but a few fragments more or less connected to a theophany seemingly situated at Beer-sheba, but, in its original form—as reconstructed by de Pury—it presents a startling, even if original, resemblance to the cycle of Jacob, relative to the latter and to his group's seasonal migration pattern. Thus, Genesis would indirectly furnish more numerous data on Isaac than would be supposed from a first reading of the passages concerning him, the antiquity of which would be undeniable, no matter what certain recent commentators of the patriarchal texts would say about them.

A position further removed from the above was defended by D. A. Lutz (1969). He maintains that a careful

reading of Gen 26:1–33, many elements of which are found again in the Abrahamic tradition, permits us to affirm that the figure of Isaac was originally more important than Genesis suggests today. The traditions about Isaac would be earlier than those about Abraham, but were eclipsed by the Abraham traditions, probably because the latter's clan, with its cultic center at Hebron, assumed the preponderant place at the heart of the "southern" confederation. But Isaac, Lutz reckons, played a sufficiently important role that he did not completely disappear from the tradition reported in Genesis.

While this hypothesis is interesting (note also Diebner 1974), it remains true, finally, that exegetes are dealing with a biblical text that leaves little room to the second of the patriarchs.

E. Historical Approaches

The problem of the "historicity" of Isaac, or rather of the relationship between history and the traditions concerning him, is evidently the same issue that is posed with regard to Abraham or to Jacob, even though the information regarding these two is clearly more amply supplied than the indications from Genesis on Abraham's son. See also ABRAHAM (PERSON); JACOB NARRATIVE.

Here, we limit ourselves to making two final observations. First, archaeological evidence ought not to be accorded too much nor too little importance. See ARCHAEOLOGY, SYRO-PALESTINIAN. Two diametrically opposite attitudes are often manifest among scholars. Some base themselves on archaeology in order to insist on the exactitude of the biblical facts concerning Israel's origins—that is to prove the truthfulness of the patriarchal tradition—while neglecting the fact, on the one hand, that the "bare facts" brought to light by archaeologists are necessarily the object of an interpretation which remains always subject to revision and, on the other hand, that the biblical documents have come down to us by means of a historical process whose complexity appears ever greater—a situation that invites us, here as well, to exercise prudence in our reconstruction of the facts. Others commit themselves precisely to unraveling the many threads of the traditions that form the Pentateuch in general and Genesis in particular; they never stop inquiring about the importance—that is, about the existence—of the very sources which might lie at the base of the first biblical books. These waver between contradictory theses without ever arriving at solutions satisfactory for the whole gamut of researchers; often beclouded by the examination of the variants, doublets, and hiatuses which they establish and sometimes exaggeratedly highlight, they forget that information on the world to which the authors of Genesis belonged does not stop expanding, with the result that every step forward in its regard enriches a reading of the patriarchal texts, adds greater clarity to the milieu from which they derived, and eventually verifies or completes any given fact about one or another of the Fathers of Israel. Although it is not possible for us to write a "historical biography" about each (so also maintained R. de Vaux, who devoted many years of his life to writing a history of early Israel *[EHI]*), knowledge of Israel's remotest past, acquired through a study of the texts and the contribution of archaeological documentation, is not without consequence.

Our second remark concerns the tradition about Isaac, whose antiquity is hard to estimate, since it seemingly goes back to the oral traditions, of which there remain only snippets, but which may be more easily situated on the geographical level. In fact, the texts of Genesis associate the second patriarch with the reign of S Palestine, principally mentioning three places: Beer-lahai-roi (Gen 24:62; 25:11), Gerar (Gen 26:1, 6, 17, 20, 26), and Beer-sheba (Gen 22:19; 26:25 [21:33; 46:1]; 26:26–31; 26:32–33). Beer-sheba was without doubt the most important place and constituted, according to de Pury (1975: 189–91), the cultic center (the "point of attachment") of the "Isaacite" tradition.

It seems that this tradition was also known in the N of Israel. In the time of Amos, the sanctuary of Beer-sheba was visited—with the same status as Bethel and Gilgal—by pilgrims who had come from that region (Amos 5:5–6; 8:14). Amos denounced the "high places of Isaac" (among which Beer-sheba might have been reckoned, 7:9) and went so far as to qualify Israel as the "house of Isaac" (7:16). For Diebner (1974), Isaac would here be the personification of the kingdom of the S, and Israel would have represented the kingdom of the N. (Note that in these last two texts, the orthography of Isaac differs from its usual form: as in Jer 33:26 and Ps 105:9, the *śin* replaces a *ṣādê;* this is generally considered to be a dialectical variation.)

This reference to Isaac has led certain exegetes to suppose that a displacement of the Isaac clan (the tribe of Simeon?) took place toward the N (Zimmerli 1932) or that it settled in the territory of Penuel-Mahanaim in Transjordan (van Selms 1966) or that there was some contact between the "Moses group" (the origin of the Joseph tribe) and that of "Isaac" (Seebass 1966; cf. de Pury 1975: 191ff.). This could have been intentional, with Amos, a person from the S, recalling to the people of the N the ties that united them to his country and, at the same time, of the right they had to call upon them. In any case, the geographic area where Isaac wandered, according to the explicit tradition of Genesis, was relatively well restricted.

F. Religious Problems

The question about the nature of the religion of the patriarchs is particularly complex; to verify this, one need only consult the numerous works of the specialists (*IJH,* 135–37; *BHI,* 96–103; bibliography in Westermann 1985: 114–16). The patriarchs, including Isaac, are often located in relationship to a divinity called "the god of the father" (or "God of my/your/his/father"), an expression to which A. Alt drew attention some time ago in an article that was greatly appreciated and discussed (1966; cf., for example, Gen 31:5, 29 [according to the Greek text], 42, 53; or, in addition, Gen 43:23; 46:1, 3, etc.). "The god of the father" (whether this latter remains anonymous or not) appears as the protector of the family or clan, which appeals to its ancestor.

Genesis at times gives a specific name to this deity; in two instances, the term is *paḥad yiṣḥāq,* whom Jacob acknowledges or whose presence he invokes (Gen 31:42, 53), a formula that for a long time has been translated, following the lead of the ancients, as the "Terror of Isaac" (see FEAR OF ISAAC).

There is another meaning of Heb *phd* attested in Job

40:17, where the noun is dual, designating the "thighs" of the hippopotamus (a euphemism for its testicles); the word *paḥad* could evoke, in addition to its primitive signification, the *clan, lineage,* or *descent.* Several authors explain *paḥad yiṣḥāq* from this second root (see FEAR OF ISAAC on this and additional interpretations).

Discussion of the precise meaning of the phrase *paḥad yiṣḥāq* is certainly not finished, but it seems that this second meaning, which associates it with divine power, the life force that is connected with sexuality and the fate of human grouping, is preferable to one that has recourse to the holy "tremendum" to elucidate the mysterious expression used in Genesis 31 (*HALAT,* 872). The *paḥad yiṣḥāq,* from which all ambiguity had not yet been removed, appears as the specific contribution of the second of the patriarchs to the religion of the Fathers.

G. Jewish and Christian Traditions

If Genesis in particular and the OT in general reserve a somewhat limited place for Isaac, later tradition attributed to him a much more important role, notably in the scene located on Mt. Moriah, in which the passive child of chap. 22 has become a responsible adult who voluntarily takes an active part in his "sacrifice." For Judaism and the Church, Isaac is in the fullest sense one of the three patriarchs of Israel.

The deuterocanonical texts restrict themselves to briefly taking up again the indications of the Hebrew Bible concerning Isaac: Sir 44:22; Dan (LXX) 3:35; Jdt 8:26. In contrast, the rabbinical texts which comment on Scripture abound in details concerning his destiny and recognize the decisive significance that he had for his descendants. Thus it is that a midrash situates his birth on first day of the feast of Passover and recounts that it was accompanied by numerous miracles, so much so that Isaac's coming into the world bears messianic traits. His naming is related to the gift of the Law ("the coming out of the commandment"), a pledge of liberty, and each of the letters making up his name leaves room for speculations relating generally to the patriarch. The marriage of the son of Abraham to Rebekah unfolded in a marvelous manner, and the contacts of Abraham and Isaac with the Philistines allowed the rabbis scope to insist on the identical lot of the two patriarchs. If the happiness that Isaac knew here below was due to the merits of his father, his own proper merits will assure him of a recompense in the hereafter, and his descendants will be the beneficiaries. Isaac will, in fact, plead for them and will snatch them away from Gehenna; also, he will be greeted by his sons and daughters with this exclamation, "This man is truly our father. . . !"

It is particularly with regard to the Aqedah that, in the Jewish texts, the role of Isaac and his "virtues" are shown to advantage. Josephus (*Ant* 1.13.1–4 §222–36) gives Isaac's age as 25 when he ascended Mt. Moriah; he describes him as throwing himself joyfully toward the altar, even though he escaped the fate awaiting him. Isaac conducted himself there as the worthy son of Abraham, and the Aqedah was as much his affair as it was his father's.

Philo of Alexandria, in his treatise on Abraham (the one on Isaac has been lost), devoted several paragraphs to Isaac (*Abr* 32–36, §167–207). He insisted on the perfect accord between the father and the son who journeyed to the place of sacrifice, and he retained of the traditions concerning the name of Isaac only the note of laughter, which he mentioned to designate his joy (and that he had to learn to sacrifice in favor of a higher joy). Also, he considered the Aqedah as a veritable sacrifice, even though Abraham did not have to carry out the deed to its end.

Already in the first century prior to the Christian era, the Jewish book of *Jubilees* related the "binding" of Isaac to the paschal sacrifice (17:15): Isaac was to have been immolated at the very hour that the ritual of the feast foresaw for the putting to death of the lamb (49:1) and on the very spot where the temple would be erected, that is on Mt. Zion (18:7–13). A later text, the *Biblical Antiquities* (of Pseudo-Philo, 1st century C.E.), equally considered that the sacrifice of Isaac had been accomplished and saw in this the reason for the election of the Israelites (18:5): the blood of Isaac thus sealed God's covenant with his people (*L. A. B.* 18:5; cf. 32:1–4; 40:2).

The sacrificial character of Abraham's gesture is found as well in various Targums (the Aramaic translations of the Pentateuch), which call attention to the benefits that Israel ought to draw from the Aqedah. Codex Neofiti, identified in 1956, in its expansion of Lev 22:27, associates Isaac with the lamb bound as a holocaust and foretells the day on which the Israelites will say, "Recall in our favor the Aqedah of Isaac, our father." The same manuscript, in the "poem of the four nights" at Exod 12:42, relates the celestial vision of Isaac (which explains his quasi-blindness; cf. chap. 27) to the moment of his immolation and, in Gen 22:10, evokes Isaac's prayer to his father on the occasion of the Aqedah in this way: "My father, bind me well so that I do not kick you in a way that your offering might be invalid" (following the translation of R. Le Déaut 1978). Among other elements, the Targum mentions the intercession of Abraham at the hour of sacrifice in favor of generations to come: "And now, when his sons find themselves in a time of distress, remember the Aqedah of their father Isaac and hear the voice of their supplication. Hear and answer them and deliver them from all tribulation" (*T. Neof.* Gen 22:14).

Other targumic traditions imply that Israel's lot has repeatedly been determined by the "binding" of Isaac: thus, thanks to the merits of the Aqedah, the sin of the golden calf was pardoned (*Tg. Cant.* 1:13), the Jordan was crossed (*Tg. Cant.* 3:6), Jerusalem was delivered (*Tg. 1 Chr.* 21:15). According to another *midrash,* the (expiatory?) sacrifice of the son of Abraham was associated with the *tāmîd* (perpetual sacrifice; *Lev. Rab.* on 1:5) as it also was with the ritual of the New Year (*Lev. Rab.* on 23:24). Theologians have even found in texts dealing with the Aqedah a theology of redemption antedating the Pauline doctrine of salvation in Christ.

This issue remains a controverted one, especially since specialists in the NT are far from being in agreement on the place that Isaac and notably his "sacrifice" occupy in the NT writings. At first sight, references to Genesis 22 appear rarely, except for explicit mentions such as those in Heb 11:17–19 and in Jas 2:21–24. The following texts are generally cited: Rom 8:32; John 1:29 (?); John 3:16 (?); Mark 1:11 and parallels. For G. Vermes (1973), for example, the theme of the Aqedah points to one of the oldest strata of the Christian kerygma; by contrast, P. R. Davies

and B. D. Chilton (1978) think the Gospel proclamation has influenced Jewish interpretation of Genesis 22, obliging the rabbis to make of the "binding" of Isaac a vicarious expiatory sacrifice. The problem remains as it has been articulated; it has not yet been freed of apologetical, ulterior motive, and its resolution depends in part on the dating of the texts that are called on to support one thesis or another. It is probable that, over time, the Aqedah underwent a change in signification, and one cannot exclude the possibility that it had acquired a redemptive import prior to the Christian era.

For patristic theology, Isaac was not only an example of the perfect sacrifice (*Ep. Barn.* 7:3), but he was also one of the anticipatory figures of the crucified Christ. For Melito of Sardis (in a 2d-century work, *On the Passover*) Isaac, who did not suffer death, was a "type" of the coming suffering of Christ, who was bound (like Isaac) to unbind us and was put to death (like the ram) to redeem us (so Gribomont 1971: 1993). Irenaeus of Lyons also refers back to Genesis 22 when he writes, "We, too, holding to the same faith as Abraham, carrying our cross as Isaac the wood, we follow behind him. . . . Abraham followed the Commandment of the Word of God, delivering up with a great heart his only and beloved Son as a sacrifice . . . for our redemption" (*Haer.* 4.5.4; [according to Gribomont 1971: 1993]). One can find a typological interpretation in the writings of the majority of the Fathers of the Church, as for example in Tertullian, for whom the death of Christ on the cross was at once prefigured in Genesis 22 by Isaac, brought to the place of sacrifice by his father and bearing himself the wood, and by the ram who redeems him while hung by his horns, as Christ was hung on the "horns" of the cross and was crowned with thorns (*Adv. Marcionem* 3.18; *Adv. Jud.* 10.5–6; 13.20–21; Gribomont 1971: 1994). These themes would get taken up and developed in the tradition of the Church.

Genesis 22 has never ceased to inspire not only the commentaries of the theologians but also the works of poets, artists, and playwrights; from the mystery plays of the Middle Ages to the words of Elie Wiesel after Auschwitz; from Theodore of Beza, author of "Abraham Sacrificing" (1549), to the song writer Leonard Cohen (1970); from Rembrandt (in 1635) to Marc Chagall (in the 20th century), and from Kierkegaard in *Fear and Trembling* (1843) to George Steiner in *A Conversation Piece* (1985). The immolation of the son of Abraham—which is, let us recall, the origin of the Feast of the Sheep in Muslim tradition, in which the victim is Ishmael, not Isaac (but, cf. *Quran* Sura 37.97ff.)—continues to summon all readers of Genesis to give an account of themselves by sending them back to a child whose name means "laughter" and to the cruelest story of human destinies.

ISAIAH SCROLL, THE (1QIsa[a]). Nineteen copies of the book of Isaiah have been found among the Qumran

biblical mss. Most of these are very fragmentary. The most important among them are two scrolls coming from cave 1, in particular the scroll 1QIsa[a]. The second, 1QIsa[b], only preserves a part of the text of Isaiah, because the scroll has been badly damaged.

1QIsa[a] was among the first mss first discovered by the bedouin at the end of 1946 or the beginning of 1947. It was also the first to be identified. Physically, the scroll is made up of seventeen sheepskin sheets, sewn together by a linen thread. Its average height is 26.2 cm, and it is 7.34 m long. Apart from some minor lacunae at the beginning and in the lower part of the scroll, 1QIsa[a] contains the complete text of the book of Isaiah, arranged in 54 columns. A facsimile of this scroll is now in the Shrine of the Book at Jerusalem.

1QIsa[a] was written by a single hand in the latter half of the 2d century B.C., probably between 125 and 100. Omissions were filled in and corrections were made for about a century afterwards. 1QIsa[a], like the other Isaiah manuscripts found at Qumran, precedes by about a thousand years the most ancient manuscripts of the book of Isaiah previously known.

Although 1QIsa[a] and the consonantal basis of the MT are basically identical, there are a few hundred textual variants. Drawing his conclusions from an analysis of the spelling, pronunciation, morphology, vocabulary, and syntax, Kutscher (1974) has shown that 1QIsa[a] presents an example of the Hebrew of the Second Temple period. This is distinct from classical Hebrew and is representative of a more recent stage of the language than that attested by the MT. A great number of the textual variants between 1QIsa[a] and the MT are purely linguistic. These are due to the influence of late 2d-century B.C. Hebrew on the text of the book of Isaiah. More precisely, 1QIsa[a] contains a deliberate linguistic updating of the text, carried out at a time when Aramaic and Greek were spoken alongside Hebrew in Palestine. This updating is most strikingly obvious in the modernization of the spelling; full forms are found consistently in chaps. 34–66 and somewhat less so in chaps. 1–33. Every instance of the vowels *o* and *u*, whether long or short, is rendered by *waw;* the pronominal suffixes and the verbal endings are followed by *he.* *ʾAlep* follows the endings of words normally ending in *-î*, *-ô*, or *-û*. The act of reading is thus made easier for people whose first language is Hebrew, but who are not very literate, as well as for those for whom Aramaic was the first language. In fact, the fuller forms are intended in some cases to distinguish the Hebrew pronunciation from that of Aramaic.

The updating of the language is shown equally in the replacement of certain terms which had fallen into disuse or become rare at the end of the 2d century B.C. by others in more common use. For example, in 13:10 1QIsa[a] uses the synonym *yʾyrw,* very common in the Bible and in rabbinic Hebrew, to replace the verb *yhlw* ("cause to shine"), rare in the Bible in this sense (Isa 13:10; Job 29:3; 31:26; 41:10) and not found in rabbinic Hebrew. Likewise in 33:7; 42:2; 46:7, 1QIsa[a] replaces *ṣʿq* ("to cry out") with its synonym *zʿq*, which was more common after the Exile.

In most instances where variants are not simply linguistic, the 1QIsa[a] readings are secondary, and show characteristics similar to those of the ancient versions. Thus 1QIsa[a] often changes terms and expressions under the influence of either the immediate context, a more remote parallel passage in Isaiah, or another biblical book. For example, in 43:19, instead of the word *nhrwt* ("rivers"), 1QIsa[a] has *ntybwt* ("tracks"), a term probably suggested by the context. This term is found in the singular in 43:16, where it is likewise associated with *drk* ("path"), for which it provides a better parallel. In 51:2, 1QIsa[a] replaces *wʾbrkhw wʾrbhw* ("I have blessed him and made him multiply") with *wʾprhw wʾrbhw* ("I have made him fruitful and made him multiply") because of the frequency with which the latter pair of verbs is found, especially in Genesis (Gen 1:22, 28; 8:17; 9:1, 7; 17:20; 28:3; 35:11; 47:27; 48:4; Lev 26:9; Jer 3:16; 23:3; Ezek 36:11). Sometimes 1QIsa[a] amplifies the text. For example, in 30:6a it inserts the word *wṣyh* ("and aridity") between the terms *ṣrh wṣwqh* ("anguish and distress"). The term added is probably taken from 35:1, 41:18, and 53:2.

Finally, one may mention a particularly interesting category of textual variant resulting from exegesis. Occasionally the author of 1QIsa[a] has altered the text, normally very slightly, in such a way as to make it conform to his interpretation. One may cite 8:11 as a simple but significant example. In place of the word *wysrny,* 1QIsa[a] has *ysyrnw/y* (the final letter is uncertain). So, whereas the Masoretes derive the verb from the root *ysr* ("*he corrected me* so that I would not follow the path of this people . . ."), 1QIsa[a] sees there the *Hipʿil* of the root *swr* ("*he turned me away* from following the path of this people . . ."). This text is applied in 4QFlor 1,14–15 to the community of Qumran, seen as the community of those whom God has separated from the remainder of the people. So this explains the variant of 1QIsa[a]: it is the fruit of the updating process, which sees in the community of Qumran the accomplishment of the oracle of the prophet.

In conclusion, one can say that the specific contribution of 1QIsa[a], as of the other Isaian mss from Qumran, is related to the history of the textual tradition of the book of Isaiah. When one adds to that the witness of the LXX, the mss of Qumran have confirmed that, unlike other biblical books, there was only one text of the book of Isaiah from the 3d century B.C.

That being said, the mss from Qumran show at the same time a considerable fluidity of this text. 1QIsa[a] represents, in a general way, a secondary text with reference to the MT. It is to some extent a revised updated edition of the book of Isaiah. It occasionally comes close to a commentary *(Pesher).* The author of 1QIsa[a] modernizes the language of the book and introduces different kinds of harmonizations and expansions. On occasion, influenced by his exegesis, the author does not hesitate to change the text. He exhibits a fairly broad liberty with regard to the text, a liberty he shares with the Gk translators, who were roughly his contemporaries. It is this liberty that is perhaps the most important common trait between 1QIsa[a] and the LXX of Isaiah, two texts which have often been compared. This innovative approach did not serve as a precedent in the Hebrew textual tradition of the bock of Isaiah.

The Qumran mss also witness to a conservative tradition in regard to the book of Isaiah. This conservatism is represented by 1QIsa[a] and by the majority of the other examples of the text of Isaiah found at Qumran, all of

which are closer to the MT than is 1QIsa[a]. This tendency will be accentuated and strengthened. In the end, it will dominate and will have as its consequence the definitive stabilization of the text of Isaiah.

FRANCOLINO J. GONÇALVES

ISAIAH, BOOK OF. The sixty-six chapters of the book of Isaiah form a whole in the canon of the Hebrew Bible and in all of the versions, but internal indications of diversity have led critical scholarship to distinguish three major works of literature in the book. First Isaiah (chaps. 1–39), Second Isaiah (chaps. 40–55), and Third Isaiah (chaps. 56–66) are now generally treated as separate writings or collections with distinct authors. The "Little Apocalypse" (chaps. 24–27) is also viewed by many as a separate work within the larger unit called First Isaiah. In view of the current critical consensus, the works composing the biblical book associated with the prophet Isaiah are treated separately in individual articles in the order First Isaiah, The Little Apocalypse, Second Isaiah, Third Isaiah.

FIRST ISAIAH

The widest possible range of positions is represented in the scholarly literature concerning First Isaiah. First Isaiah is viewed by some as a rhetorical unity accurately depicting historical and political events during the lifetime and from the perspective of the 8th-century prophet Isaiah. Others view only sections of chaps. 1–39 as emerging from the context of 8th-century Judah and understand the present form of First Isaiah to be under major redactional influence. Still others reject the view altogether that First Isaiah is about the prophet Isaiah and events in his day, preferring to see chaps. 1–39 as a pseudepigraphical magnet attracting various postexilic concerns and aspirations.

As a consequence of this radical divergence of views, an accounting of the present state of the inquiry—its history, limitations, and future—will open the treatment. This will be followed by a general introduction to First Isaiah sensitive to its many literary, historical, and theological complexities, yet receptive to the possibility of significant efforts at coherence in all three areas in the final form of the Isaiah presentation. In this manner we hope successfully to introduce Isaiah 1–39 without minimizing the many exegetical complexities which confront even the general reader of this rich prophetic collection.

A. Critical Orientation: The Literary Composition of Isaiah 1–39
 1. First Isaiah: Terminological Background
 2. First Isaiah in the 20th Century
B. Isaiah and History: Preliminary Considerations
C. The Canonical Presentation of the Book of Isaiah

 5. Isaiah 28–33
 6. Isaiah 34–35
 7. Isaiah 13–23 and 24–27
D. Conclusions

A. Critical Orientation: The Literary Composition of Isaiah 1–39

A general introduction to First Isaiah can be given in part through a discussion of terminology. What exactly is meant by the term "First Isaiah"? Is this a literary, sociological, or historical classification—or some admixture of all three? A discussion of this issue also serves as an introduction to the background of modern critical exegesis of the book of Isaiah. The section concludes with an examination of the variety of methods used to interpret the literary composition of Isaiah 1–39.

1. First Isaiah: Terminological Background. Early critical treatments of the prophets stressed their poetic and creative capacities. Bishop Robert Lowth's 18th-century study of Hebrew poetry (*De sacra poesi Hebraeorum,* 1753) and his translation of and notes on the book of Isaiah are cases in point (Lowth 1778; 10th ed. 1834). What in Lowth's hands were essentially aesthetic and appreciative observations about the genius of the prophetic consciousness quickly became a warrant for seeing the prophets as men of like nature with ourselves, in virtually all respects. Only their higher moral and natural sensibility set them apart.

Lowth was still able to stretch this sensibility to its limit in the case of Isaiah, a book which would prove an unusually demanding arena in which to fight for enlightened approaches while at the same time defending so-called traditional views of prophecy. In Isaiah's case the problem was one of strained temporal reference, most specifically concerning the ability of an 8th-century Isaiah to speak of 6th-century events, nations, and rulers (e.g., Cyrus), with at times remarkable attention to detail, especially in chaps. 40–66. To applaud prophetic genius in respect of ethical insight was one thing; but to claim for this same genius the ability to foresee events centuries in advance went beyond

enlightened logic. Here the book of Isaiah presented a set of challenges for the early critical reader without real analogy in Jeremiah or Ezekiel, although an even tougher problem was admitted to exist in the case of Daniel. Lowth's position that Isaiah delivered the prophecies of chaps. 40–66 "in the latter part of the reign of Hezekiah" (Lowth 1834: 309) is a good example of an alliance between traditional and enlightened views which would very soon collapse. *Fore*teller and *forth*-teller would begin to look like incompatible conceptions of Isaiah the prophet.

In an interesting bit of intellectual history, the German edition of Lowth's Isaiah commentary included marginal additions and amplifications by the Göttingen professor and chief translator J. B. Koppe, who suggested that chap. 50 was written by Ezekiel or "another prophet living in Babylon" (Koppe 1780: 43). Eventually, "Pseudo-Isaiah" or "Deutero-Isaiah" would emerge as appropriate terms of reference for chaps. 40–66 in their entirety, on analogy with such usage in classics (Pseudo-Philo) or NT studies (Deutero-Pauline). The book of the prophet Isaiah was thus viewed as including an appendix, "Deutero-Isaiah," comprising twenty-seven chapters.

Many attribute the proposal for a Deutero-Isaiah comprising chaps. 40–66 to J. C. Döderlein (1775), or even to the Jewish scholars Moses ben Samuel Gikatilla and Ibn Ezra (Friedlander 1873) long before him (the former active in the 11th century). There is some debate about the correct evaluation of Ibn Ezra, whose translation notes are often cryptic and open to interpretation; it is never entirely clear if his allusions to "the prophet" in chaps. 40–66 refer to an incipient "Deutero-Isaiah" or to a figure spoken about by the original Isaiah. His frequent counsel to the wise interpreter to exercise restraint may imply he is aware of difficulties which would arise from an overly historicist reading; chaps. 40–66 refer for Ibn Ezra to his own day! In a somewhat similar vein, traditional Christian interpretation of chaps. 40–66 was not concerned so much with linking these chapters back in history to an 8th-century prophet as with linking them forward in time to Christ, a reading urged by the NT. In this spirit, the Church Fathers refer to Isaiah not just as the greatest prophet but also as apostle and evangelist (e.g., Eusebius, Theodoret, Jerome, Augustine). Much of the appeal for single Isaiah authorship against emerging critical positions looks in retrospect like defense of a view of Isaiah that never really functioned with primary exegetical or theological significance in the precritical period (see Levenson's remarks on Mosaic authorship of the Pentateuch, 1988: 205–13). Oddly enough, the Talmudic reference used as a source for traditional positions attributes Isaiah's authorship to the "assembly of Hezekiah" (*B. Bat.* 15a).

Eichhorn's analysis of Isaiah in his *Einleitung* (1803), originally published in 1783, foreshadowed the method of procedure and many of the critical conclusions which were to emerge in Isaiah scholarship in the following two centuries. Eichhorn begins to use language like "inauthentic" and "secondary" in his analysis of Isaiah oracles, in a manner which logically proceeds from prior assumptions regarding "authenticity" and "primacy" (Eichhorn 1803: 50–55). Authentic oracles can be traced with confidence to the historical prophet Isaiah. It is Eichhorn who inaugurates the modern critical subsection "Life of Isaiah" (*Jesaias Leben* §523), where he tells the reader who Isaiah really is and when he was active, having successfully extracted him from the literature's own construal.

Significantly, Eichhorn does not use the term "Second Isaiah" in reference to chaps. 40–66; neither does the term "First Isaiah" have relevance for him. "Isaiah" refers to the historical man critically reconstructed. But the book of Isaiah itself, in literary terms, is an anthology from many diverse periods. Secondary additions are made in chaps. 40–52 in a sustained manner; but similar additions can be found in chaps. 1–39, including many brief glosses, as well as the oracle against Moab (chap. 17), chaps. 24–27, and chap. 21 (where reference to "riders on camels" at v 7 sends Eichhorn to Xenophon's reports of later, Persian warfare). In an intriguing conclusion, Eichhorn argues that the order of the major prophets given in the Talmud (*B. Bat.* 14a) is correct, with Isaiah following Jeremiah and Ezekiel. He reasons that Jeremiah and Ezekiel stand first because there is an assumed identity between author and book. Isaiah, by distinction, contains many different prophecies from many different authors and periods and so is an anthology like the Book of the Twelve, which it resembles and next to which it has been placed (Eichhorn 1803: 101–4).

Eichhorn's theory, as peculiar as it may sound, reveals important problems of dating in Isaiah that frustrate easy adoption of the terms "First," "Second," and "Third" Isaiah as referring to simple, historically evolving additions to an original Isaiah core. As for actual historical "authors" of the material, Eichhorn treats only "Isaiah" as a prophetic figure, alongside the many other anonymous contributors. Not until the later chapters (40–66) take on sharper literary and historical definition does the profile of a prophet ("Second Isaiah") emerge, with a fixed sociological and historical provenance to be contrasted with that of an Isaiah located in "First Isaiah" chapters.

The beginning of this process can be detected in Gesenius' Isaiah commentary of 1821. Gesenius expands the list of texts in chaps. 1–39 from later periods to include chaps. 13, 14, 34, and 35. He then speaks of a distinct author *(Verfasser)* of 40–66, whom he calls "Pseudo-Isaiah" (Gesenius 1821: 17). But above all, the decision to treat chaps. 40–66 in a formally separate volume, with its own introduction, helped drive home the independent nature of "Second Isaiah"—to be contrasted not only with authentic Isaiah oracles but also with the other editorial additions to the Isaiah anthology (as he continued to call it). Gradually "Second Isaiah" became more than a literary designation. As these final chapters took on their own theological profile, a prophetic individual began to emerge from behind their cover.

Gesenius also initiated a form of inquiry that had not been of much interest to Eichhorn. Despite the anthological nature chaps. 1–39 shared with the book as a whole, Gesenius was convinced that significant internal organization and structure could be detected in these chapters. Anticipating modern internal divisions in First Isaiah, he spoke of three books within these chapters: 1–12, 13–23, and 24–35. A collector was responsible for their shaping and (often curious) internal organization (the call of the prophet should be at the beginning, not in chap. 6). A fourth book was Pseudo-Isaiah (40–66). Isaiah chaps. 36–

39 were drafted from 2 Kings 18–20 to serve as a conclusion for the originally separate book of Isaiah, on analogy with Jeremiah 52's function as historical appendix to the book of Jeremiah (cf. 2 Kings 25). Since the original book of Isaiah reached a logical conclusion thereby, explanations were required for the addition of the fourth book ("Second Isaiah"), and these ranged from the accidental, to the expedient (scroll size), to the coincidence of name (both prophets had the name Isaiah), to the pseudepigraphic (anonymous oracles required the imprimatur of a former, recognized prophet). Gesenius inclines toward the later view (Gesenius 1821: 17–18).

It was the inquiry into internal organization that led Gesenius to conclude that Isaiah once had a concluded form, assisted by chaps. 36–39, which was independent of Pseudo-Isaiah and yet prior to the final anthological arrangement of the whole sixty-six-chapter book of Isaiah. In many respects, this important observation would begin to allow a certain logic to obtain in the use of what are now practically conventional terms: "First Isaiah" and "Second Isaiah." "First Isaiah" would eventually refer to the literary corpus found in chaps. 1–39, regardless of whether its individual sections were historically anterior. "Second Isaiah" would come to refer to chaps. 40–66. Gesenius' work anticipates the mature theory that behind both literary complexes stand prophetic figures, for whom these names also apply. In sum, use of the term "First Isaiah" would emerge as the consequence of (1) a growing recognition of the literary integrity and independence of "Second Isaiah" and (2) arguments for the structural logic and "closing off" of the Isaiah book with chaps. 36–39. That much of "First Isaiah" was historically contemporaneous with or later than "Second Isaiah" was a paradox the terminology would have to bear.

Bernhard Duhm's influential commentary on Isaiah drives this point home. Duhm maintained that the four-book theory of Gesenius, in somewhat modified form, was a helpful explanation for clear internal collections within Isaiah. Duhm is quite clear, however, that the final collecting and arranging of books in Isaiah takes us practically into the Common Era. And much of the material in Isaiah 1–39 postdates Isaiah 40–66; the *Buchlein* "little book" of chaps. 24–27, for example, Duhm dates to ca. 128 B.C.E. (Duhm *Jesaia* HKAT, xii). Although much in chaps. 1–39 postdates Second Isaiah, Duhm is convinced that these chapters developed internally independent of chaps. 40–66. Consequently, there is a certain propriety in treating Isaiah 1–39 on their own. Like Gesenius, Duhm prefers to talk about Isaiah and the Isaiah Book *(Jesajabuch)*, rather than "First Isaiah" in distinction from "Second Isaiah." Duhm also introduces "Third Isaiah" as the prophetic figure responsible for chaps. 56–66. It would be fair to say that once "Second Isaiah" took on sharper profile as an exilic prophet (cf. Eichhorn's "Pseudo-Isaiah"), a new prophet was demanded for chaps. 56–66, given their distinct tone and seemingly different historical backdrop. In summary, with Duhm's Isaiah commentary three prophetic personalities emerge: Isaiah, Deutero-Isaiah, and Trito-Isaiah. Ironically, greater identity is presumed to exist between prophet and literature in the latter sections (chaps. 40–55 and 56–66) than in the *Jesajabuch* itself (chaps. 1–39).

From a very different angle, this fact has led one recent scholar to conclude that the middle section (chaps. 40–55) is indeed the most stable and has in fact given rise to the other two (Rendtorff 1984). Though overstated, Rendtorff's position has at least pointed out problems inherent in the terms "First Isaiah" and "Second Isaiah." Not all of First Isaiah is historically prior to Second Isaiah; the author of Second Isaiah is more responsible for chaps. 40–55 than Isaiah for 1–39; First Isaiah is a far more complex redactional product, with far greater historical range, than either Second or Third Isaiah. Such was the recognition of Isaiah scholarship by the end of the 19th century. A century later, the situation has changed little.

In conclusion, the term "First Isaiah" is helpful as a literary classification for chaps. 1–39 because they appear first in the book of Isaiah. As a historical or sociological term, however, it must be used with caution, lest one presume an identity of author and literature, with both historically prior to Second and Third Isaiah.

2. First Isaiah in the 20th Century. Even if resistance to Duhm's three-Isaiah model was quickly registered, this century has seen widespread acceptance of his basic critical presuppositions. Conservative exegetes continued to produce commentaries on the whole book and inveigh against a model which impugned the prophet's inspirational capacities, especially in the realm of historical foresight. But Gesenius' treatment of Isaiah in two separate volumes was clearly a harbinger of the future. Considerations of historical reference proved more weighty than those respecting the book's present literary unity—however one accounted for it. Second Isaiah emerged into the full light of day, breathing promise and good will, in literature both coherent and historically uniform. First Isaiah, by ironic contrast, required critical extraction from a literature mixed in form, diverse in historical background, and unparalleled in redactional and organizational complexity. In no small measure, Second Isaiah's gain in critical stature was First Isaiah's loss.

One basic problem confronting interpreters of First Isaiah is its baffling internal movement and structure. Luther probably had First Isaiah in mind when he spoke of the prophets' "queer way of talking, like people who, instead of proceeding in an orderly manner, ramble off from one thing to the next, so that you cannot make head or tail of them or see what they are getting at" (*ROTT*, 33). Here, precritical and modern interpreters are in agreement.

Jerome, Michaelis, and Rosenmüller had argued the arrangement was chronological (1–6: Uzziah to Jotham; 7–14: Ahaz; 15ff.: Hezekiah), though on this score Isaiah offers far fewer clues than the explicitly dated Jeremiah and Ezekiel. A similar position was taken by the conservative Hengstenberg in the 19th century, who spoke of a special "prophetic gift" conferred upon the prophet in the reign of Hezekiah (36–39) which enabled him to see chaps. 40–66; the "vision" presumably had its own internal chronological movement as well (Hengstenberg 1872: 2.2–3). Rationalist attempts to use Assyrian history as a clue to the chronology of Isaiah were popular in the late 19th century; a revised version of this sort of inquiry can be seen in the recent study by Hayes and Irvine (1987). On this logic, the movement of the literature—even through

sections of text formally quite diverse (compare chaps. 6–8 with chaps. 9–11)—reflects the temporally unfolding activity of Isaiah as his preaching addresses peoples, nations, and events in chronological order. Chronological order is not editorially imposed, but is the direct consequence of the prophet's own historical activity.

Others, with Vitringae, Jahn, and Bauer among the early critical proponents, have argued that the internal organization is thematic. Modern interpreters have spoken about a general tripartite scheme in the major prophetic collections, with indigenous judgment oracles followed by oracles against nations, themselves followed by oracles of promise and salvation (Kaiser 1984: 232). The scheme may work best in Ezekiel; it could only work with LXX Jeremiah; it would work better in Isaiah if chaps. 28–39 did not intervene before oracles of salvation (40–66). In the final analysis, the scheme is artificial and creates more problems than it solves: clear elements of promise are found in 1–12 and 13–27; chaps. 40–66 contain much sharp judgment material (50:10–11; 57:1–13; 58:1–7; 59:1–8; 65:1–16; 66:17, 24).

Introduction of a category like "thematic" moves one's conception of the literature in a different direction than chronological explanations advocate, since "thematic" arrangement requires some form of conscious reflection on the shape the literature will take, whether by the prophet himself or, more likely, by others (editors, disciples, arrangers). Direct access to the historical prophet is more complicated in this model. In many respects, thematic explanations foreshadow more mature critical views, which require editorial decisions and the shaping of Isaiah's once-oral speech into literary presentation. One cannot so easily follow Isaiah as he chronologically addresses events of his day.

Just what the thematic structure of Isaiah is, is quite another question—as is the extent and nature of editorial intervention. Both Gesenius and Duhm argued for internal collections in First Isaiah, seen in most recent treatments as consisting of 1–12; 13–23; 24–27; 28–32(33); 34–35; and 36–39. Whether this structure is thematically significant is another question altogether. It is probably safer to say that the position of these 19th-century interpreters foreshadows recent redactional arguments for structural organization in First Isaiah. On this view, the consecution of Isaiah oracles may be incomprehensible as it stands, but it is capable of explanation as due to editorial factors and the addition of new levels of text from later periods, quite randomly and without regard for overall literary organization. The roughness of the final form of the text is the result of secondary filling in and elaboration, without regard for literary coherence as a final *desideratum*. From time to time, major structural seams can be detected, as in the collections noted above; but the internal movement within these collections is haphazard, diachronically erratic, and explicable only through complex redactional theories. Here we have a view of the literature and its genesis diametrically opposed to the chronological model, where temporal logic is grounded in the historical activity of the man Isaiah. More recent forms of redactional argumentation may urge far greater appreciation of the present structure of the text, even as chronologically significant (Ackroyd 1974: 330–32; Seitz 1988: 112–16; Smelik 1986: 74–76). But this chronology is by no means connected to the actions in time of the man Isaiah; rather, it is the consequence of editorial decisions concerning the presentation of Isaiah's activity in the literature—an activity whose chronology forms only one part of a larger view of time and the movement of the Word of God in history, as understood by final shapers of the text. (More on "redactional chronology" is presented below.)

Approaches to First Isaiah in this century can be grouped in three categories: (a) direct referential; (b) form and tradition-critical; (c) redactional.

a. Direct Referential. The direct referential approach tends to maximize the extent of the present literature attributable to the prophet Isaiah on a variety of grounds (historical, biographical, rhetorical). The text refers directly to events in the lifetime of Isaiah and also reveals much about the prophet's internal state. A good example of this approach is George Adam Smith's study on Isaiah, written at the turn of the century (Smith *Isaiah* ExB). Smith sees the book unfolding chronologically, so that a sequential reading of chaps. 1–39 traces events in Israelite history from 740 to just after 701. Some sections cannot be dated with certainty (e.g., Oracle against Tyre—chap. 23; Hezekiah on his sick-bed—chap. 38); certain prophecies are not related to Isaiah's time (chaps. 13, 24–27). Smith acknowledges some dislocations (chap. 1; chap. 6), but he usually explains these as due to psychological factors (Isaiah's "call" in chap. 6 is also his reflection back on a difficult career) or matters of priority involving the prophet's own editorial principles.

Hayes and Irvine offer a recent version of this approach, based on a more sophisticated historical investigation and a more rigid commitment to the principle of chronological order. The judgment presupposed in chap. 1 involves the great earthquake reported at Amos 1:1 and Zech 14:5, making the oracle Isaiah's earliest (Hayes and Irvine 1987: 70). Chap. 13 belongs to the period of Tiglath-pileser's efforts to subdue rebellion in the city of Babylon, thus firmly placed in the lifetime of Isaiah and next in order of delivery after chap. 12 and before chap. 14 (Hayes and Irvine 1987: 222). Not even Smith held to his chronological approach in chap. 13, dated by most after 587, presupposing later Neo-Babylonian resurgence under Nebuchadnezzar (Clements *Isaiah 1–39* NCBC, 132), if not the rise of Persia under Cyrus (Wildberger *Jesaja* BKAT, 511). The view of Isaiah that emerges from this portrayal is, not surprisingly, one of a shrewd political observer. Isaiah's interest in world events, particularly in the Nation Oracles section (chaps. 13–23), make him the theological equivalent of modern global-political analysts.

b. Form and Tradition Criticism. Form and tradition criticism disagree in the first instance with the literary presuppositions of direct referential approaches. The book of Isaiah is composed of a wide variety of material, whose principle agenda is not direct cameralike access to political events in the days of Isaiah, nor biographical revelations of the prophet's inner life. Rather, much of the present book began as oral speech of the prophet, delivered on different occasions and for different purposes, the present arrangement of which is a matter for separate inquiry. Moreover, much of the speech of Isaiah already conforms to typical forms of expression, whose history

and social location are themselves a helpful index of the theology of the prophet. In Gerhard von Rad's treatment of Isaiah (*ROTT,* 147–75), it was important to place Isaiah within Israel's traditional theological confessions if one was to understand his "genius"—a view which cut against overly individualistic readings of Isaiah as rhapsodic poet, ethical loner, political pundit, or unparalleled *homo religio.* Isaiah's genius lay in his powerful transformation of Israel's traditions.

Von Rad's best example is Isaiah's use of Zion traditions. Von Rad sketches out a coherent Zion theology at home in certain psalms (46, 48, 76), rooted in Israel's historical memory, distinct from Exodus and Conquest traditions. This Zion theology describes Yahweh's choice of Zion for a dwelling place, and his protection of Zion against all foes, frequently spoken of in mythological language. Von Rad notes that this traditional complex of ideas, with its attendant language and forms, is to be seen at numerous points in Isaiah (see esp. chaps. 28–32), together with royal traditions (chaps. 7, 9, 11) ultimately from a similar background. Isaiah uses Zion traditions, however, in a modified form as follows: (1) to express the possibility of God's turning the judgment for the nations back against Israel (29:1–8); (2) therefore demanding a stance of faith (7:1–9), in that sense reflecting a merger of Zion motifs with those of Holy War, where belief was a prerequisite for deliverance (Judges 7); and (3) this modification finally giving way to trust in the mysterious plan of Yahweh (5:12, 19; 14:24–27; 28:21), revealed in an act of grace shown to the prophet. The final transformation strained Zion tradition to its limit and is therefore seen by von Rad as Isaiah's own unique contribution, permitted only when the original Zion form had been faithfully applied and finally found wanting, due to the loss of faith of those around the prophet. Only then does von Rad believe access is granted to the inner life of Isaiah (*ROTT,* 160–66).

The tradition-critical approach of von Rad operates with broader form-critical assumptions about the role of the prophet vis à vis the literature. Isaiah's adaptations of Israel's tradition come in the form of public address, akin to preaching. First Isaiah (1–39) contains this preaching, but it cannot everywhere be simply identified with this preaching, either in neat chronological order, or thematic presentation, or even haphazard arrangement. Von Rad does see some rough chronological movement in the present book, and one might well assume that early chapters are related to events in the days of Ahaz (5–12), later chapters to the days of Hezekiah (28–39). Still, critical judgments are required about the historical events of Isaiah's day, and canons of literary analysis help to determine consistent patterns in Isaiah's own speech. What falls outside either of these areas is clearly secondary and editorially supplied. It would be fair to conclude that von Rad's primary area of interest lay in interpreting the theological significance of those portions of First Isaiah which could reasonably be traced to the historical prophet, using the methods of form- and tradition-criticism. Von Rad remained vitally interested in the prophet Isaiah, as a man of history theologically actualizing Israel's traditions. But this Isaiah could not be simply read off the top of the text; it required highly sophisticated literary and historical tools to lay him bare.

c. Redactional Approaches. Much recent work on Isaiah has a primary redactional interest (Kaiser 1983; Vermeylen 1977–78; Clements *Isaiah 1–39* NCBC; Sweeney 1988b). With increased awareness of the major role editorial and supplemental material plays in the present book of Isaiah, the focus on the man Isaiah has moved to the background, thus inverting the task of interpretation as understood by both referential and form-critical readings. To the foreground has moved concern for (1) separating out by literary means various redactional levels, (2) locating them with historical and sociological analysis, and (3) describing their theological burden or *tendenz.* Once the levels are repristinated apart from their present literary context, there may follow an attempt to reintegrate them and describe their present function in the final form of the text (Ackroyd 1974; 1978; 1982; Anderson 1988). But generally the process is reversed (Sweeney 1988b) or the integrative function of redactional additions is not a source of interest.

One can see the shift of critical focus in the work of Kaiser. The first editions of his (First) Isaiah commentary retained the form-critical emphasis of von Rad, with attendant concern for theological reflection on the preaching of the man Isaiah. The recent fifth edition (German 1981; English 1983) has been completely rewritten, and now what with confidence can be traced back to Isaiah is to be found in a scattering of verses in chaps. 1, 28–31 (Kaiser 1983: 1–2). The book largely reflects the theological concerns of historicizing, eschatologizing, and deuteronomizing forces in the postexilic period. This is a return to Duhm with subtle vengeance. The net effect is a curious open literature which serves as a collecting tank for various forms of theological reflection from later periods, presumably requiring the pseudepigraphical imprimatur of an Isaiah who has in the meantime vanished from view. The kind of subtle balance, effected by von Rad between form-critical circumspection regarding the nature of the literature on the one side and the claims of the historical Isaiah on the other, is gone. It is probably the case that von Rad's reading was too selective and did not take into sufficient account the extent of redactional *relecture* in the final form of the book. Redactional analysis has recognized just how complex is the First Isaiah material before us, having given rise to such extensive reinterpretation of the prophetic word that the original preaching of the man Isaiah does at times recede from view.

To its credit, redactional analysis is more than the reading of erasures and the arbitrary assigning of verses to obscure groups of later interpreters. In the case of Isaiah, there has come the honest recognition that the original proclamation of the prophet has undergone major reinterpretation in the light of subsequent historical events. The final literary movement of the book is difficult to follow, as Luther recognized, in no small part because of redactional influence. To isolate the preaching of the man Isaiah, even in the compelling manner of von Rad, is to ignore a significant portion of the literature and lose the theological force of the final form of the text, extending even beyond chaps. 1–39.

Redactional analysis has given rise to a form of observation about First Isaiah that strikes to the heart of the critical consensus regarding division of the whole book

into three independent collections (1–39; 40–55; 56–66). By recognizing the later reappropriation of First Isaiah traditions and the literary effect this has had on chaps. 1–39, features of literary, theological, and thematic commonality have been spotted that span critical divisions of the book going back to Gesenius. Much of chaps. 1–39 appears to reflect a conscious post-587 B.C.E. redactional shaping meant to foreshadow themes which emerge in full force in chaps. 40–55 and 56–66 (Clements 1980; Sweeney 1988b). The Assyrian foe of Isaiah's day (10:5–11) is viewed as a type for which the later Babylonian destroyer serves as antitype (23:13). The assault of 701 B.C.E. (1:1–9) foreshadows the destruction of 587 B.C.E. (6:13), just as the return of the destroyed N kingdom (721 B.C.E.) anticipates the full restoration of Israel following the Exile (11:10–16).

Some of these linkages are redactionally reinforced, while others trade on a reader competence "outside" the text—but in both cases an intentionality is assumed regarding the present "merger" of First, Second, and Third Isaiah (or Isaiah and Pseudo-Isaiah, to use the older terminology). The reader of the first half of the book knows about the fuller effect of Isaiah's word, beyond the days of Assyrian threat to those of Babylonian destruction and longed-for restoration. On occasions, the linkages are explicit: chap. 39 speaks of the coming days of Babylonian assault; chaps. 13–14 "merge" the Babylonian and the Assyrian foe and then describe restoration to come following Babylon's fall (14:1–3); the "death" of king and city is postponed by Hezekiah's piety (chap. 38), only to have later effect. At other points, the events of 701 B.C.E. are simply allowed to resonate for a reader cognizant of later, more serious judgment: "The daughter of Zion is left like a booth in a vineyard . . . if the Lord had not left us a few survivors, we should have been like Sodom" (1:8–9). Seen in the light of 587 B.C.E., these words have a decided penitential effect.

The direction of influence runs backward as well as foward. The frequent reference to the "former things" in Second Isaiah (esp. chaps. 40–48) is cued to the preaching of First Isaiah, as this has taken a certain redactional form in chaps. 1–39 (*IOTS,* 328–30). The "former things" consist of God's word of judgment spoken through Isaiah (viz. 6:9–10), which was to culminate in destruction and exile (6:11–13). Second Isaiah chapters look back on this word as fulfilled in the Babylonian assault of 587 B.C.E. (43:18). The former things are divinely linked, however, to new, latter things, involving restoration and new creation following destruction (43:18). Much of chaps. 1–39 looks forward to this day as well (2:1–5; 12:1–6), ultimately fulfilled in Second Isaiah (55:1–13). The reciprocal relationships between First and Second Isaiah are on occasion redactionally assisted in 40–55, just as in 1–39 (Clements 1985). At other times the simple juxtaposition of "First" and "Second" Isaiah is the major force encouraging coordinated reading. Indeed, recent redactional examinations of the book of Isaiah call into question the propriety of the terminology now employed (viz. First, Second, and Third Isaiah), especially when an emphasis on the independence of these "three Isaiahs" is the consequence. The day may come when commentaries and dictionary articles treat the book of Isaiah in two major sections under the rubrics "Former Things" (1–39) and "New Things" (40–66). From a certain redaction-critical perspective, this shift in terminology would more accurately reflect editorial efforts at unity within the larger book of Isaiah, while at the same time recognizing an important historical, literary, and theological break at chaps. 39 and 40.

d. Summary and Prospective. The strength of certain referential and form-critical readings was the ability to keep Isaiah the prophet historically and theologically vibrant. The shift toward redactional analysis has made this perspective more difficult to unlock, as the book's message overshadows the one-time proclamation of an 8th-century prophet. Moreover, a host of questions now hovers over the nature of prophetic activity, when it is acknowledged that the word of Isaiah does not stand alone as a prophetic word in the final form of the book.

These questions are literary, historical, sociological, and theological. What was the literary form and scope of the Isaiah tradition available to later interpreters? In what historical period did it first take shape and then subsequently develop? What sociological forces were at work in its formation, along with and apart from the prophet Isaiah? On what theological basis are redactional additions made to the original word of Isaiah? Are additions made only to respond to later existential needs, or are they the consequence of the ongoing effect of the word of God, somewhat independent of the prophet Isaiah (Meade 1986: 22–26)? Does the book take a final literary shape that is coherent and theologically normative, itself relativizing the theological force of earlier redactional levels?

As redactional analysis brings important hermeneutical issues to the fore, a reasonable accounting of basic historical and sociological factors will still have to be made. To take one example, a sizable historical gap separates the man Isaiah and his preaching from a Babylonian redaction and the proclamation of chaps. 40–66. Why was that gap overcome and the message of Isaiah extended into later periods—a fact without real analogy in other prophetic books? Ultimately, the answer to that question is dependent upon one's prior view of "First Isaiah." For important heuristic reasons, interpretation of the "Former Things" in the book of Isaiah cannot proceed without a clear sense of "First Isaiah," man and literature. Future work on the composition of Isaiah 1–39 will have to continue to address fundamental historical, sociological, and literary problems if the theological message of the book of Isaiah is to be heard.

B. Isaiah and History: Preliminary Considerations

The previous section focused on the history of research and the problems of method regarding the literary composition of the book of Isaiah. The book of Isaiah undeniably goes back to the oral proclamation of the man Isaiah, however one reconstructs the development of the literature. Isaiah was a prophet whose message had primary relevance for Judah and Jerusalem (1:1; 2:1), a fact verified by the two large narrative sections of the book which depict the prophet as close to, and with remarkable authority vis à vis, the royal house and affairs of state in the capital (6:1–8:23 and 36:1–39:8). As the tradition has remembered him, Isaiah plays a role in political affairs without real analogy for contemporaries Amos, Hosea,

Micah, and Zephaniah. Isaiah's closest counterpart is probably the prophet Nathan, who likewise had access to the royal house, wielding direct authority over the Davidic line (2 Sam 7; 12:1–15).

As von Rad rightly saw, Isaiah also operates out of a distinct theological framework involving God's establishment of Zion (chaps. 28–32; 37:35). Zion, Judah/Jerusalem, and the Davidic house together form the center of attention for both prophet and book; this fact likewise distinguishes Isaiah from prophetic contemporaries. The fate of all three (Zion/Judah/David) is inextricably bound up with the movements of history, involving affairs in the immediate N kingdom (7:1–17b; 8:1–13; 9:8–21; 11:12–16; 17:1–14; 28:1–6), in the more distant Syria (7:1–9; 8:5–8; 17:1–14), and especially in the Assyrian empire (5:26–30; 7:17c–25; 8:1–4; 10:5–11, 13:19, 27c–34; 14:24–27). Even the Babylon of Marduk-apla-iddinna (ca. 721/20–700 B.C.E.) puts in a brief and ominous appearance (39:1–8). Isaiah's distinctive Judah/Jerusalem perspective functions within a broader conception of God's sovereignty over Israel and the nations.

With Isaiah we stand firmly in the 8th century, at the period in history which witnessed the full emergence of the Assyrian empire as a force to reckon with in Israel (2 Kgs 15:19, 29). It can be no accident that classical prophecy also emerged at this period, taking on a certain distinctive profile but sharing a belief that the God of Israel was also the God of the nations and the cosmos (Amos 1–2; Hosea 11–13; Micah 7; Zeph 2:5–15).

Given the significant roles exercised by Assyria and the nations within God's sovereignty over Israel, it is important to reconstruct events of the day in as clear a manner as possible. Put in another way, the actual historical sharpness of descriptions of the nations has not yet been blurred or relativized, such as we see in apocalyptic and later literature, where the nations are ciphers that can be used almost interchangeably and indiscriminantly to represent forces of general evil. Even where Babylon and Assyria seem to function as "types" of destructive arrogance (chaps. 13–14), the literature also keeps them functionally distinct (e.g., 23:13) and registers as significant specific historical events from distinct periods (compare Isa 7:1–9 [Syria-Ephraim], 36–37 [Assyria], 13:1–16 [Babylon], and 13:17–22 [Persia]). The final shaping of the book of Isaiah works with certain incipient apocalyptic literary techniques, especially in its appraisal of history in broad scope. But the original sharpness of historical events and figures from the 8th century remains. For this reason it is important to gain as clear a focus on events as possible and to pursue questions regarding the historical Isaiah. But the task of historical analysis cannot be considered successfully completed until one is able to see how these events and this man have been construed in the final textualization of the tradition.

That this line of historical inquiry is distinct from the direct referential reading should be briefly illustrated. We possess substantial records regarding ANE history during the 8th century, from Assyrian and Babylonian annals, to material finds, scattered papyri and correspondence, and the various biblical sources themselves (esp. Isaiah, Kings, and Chronicles). These various sources of information are frequently thought to reflect one systematic temporal network, internally consistent and capable of rational reconstruction. The task of the historian is to reconstruct this interlocking network of "meaning" with the help of the various literary and material sources, and then interpret the book of Isaiah in light of it. Even more radical redactional approaches, with skepticism about the 8th-century setting of Isaiah, simply substitute a later period (postexilic Israel), which also functions as the appropriate control and guide for exegesis.

An optimism about historical analysis animates the quest of direct referential readings, namely, that all records, regardless of their form and intention, are ultimately reflections of one overarching temporal reality which *is itself* the final arbiter of interpretation. Contradictions which arise in the sources are therefore thought to be departures from this canonical reality, demanding rejection or decoding and reintegration. Classic examples of the latter are the various clever reconstructions of chronology in Israel which attempt to square the divergent sources through recourse to plausible but abstruse theories of coregencies, different calendrics, accession-year adjustments, and the like (see esp. Thiele 1965; Hayes and Hooker 1988). The assumptions are that (1) the sources are indeed capable of such coordination, and (2) coordination must be carried out as the necessary prerequisite for proper interpretation of the book of Isaiah.

Another interpretation of Isaiah and history is possible and will be adopted in the historical treatment to follow. We assume that ancient historical writing is self-consciously interpretive and always stands at one remove from the *bruta facta* themselves or schemes for their temporal coordination—including even theoretically "objective" records (annals citations and the like). Tied to this is the view that chronological logic and consistency in ancient "historiography" is frequently overshadowed by other subjective and interpretive considerations. We are able to set forth major movements in Assyrian and Babylonian history, often with a precision that would have baffled those who experienced them directly. But what the prophet Isaiah made of these same events, and what the later shapers of the book of Isaiah perceived of their significance—whether they or he were informed about them in the way we are millennia hence—are far more relevant questions for modern historical analysis. On occasion the various sources operate from such radically different perspectives that their reciprocal coordination would result in a highly artificial presentation. Moreover, the final structure of the book of Isaiah presents views of history which are frequently illogical, given modern historiographical data and assumptions regarding events in linear time consecution. What is most important in reconstructing movements in ANE history is not to coordinate Isaiah with them and then translate them both into some network of external temporal reference, but to discover the temporal logic appropriate to each. In this fashion, the modern fiction of independent "history" will not emerge as the interpretive arbiter of the book of Isaiah; the reverse will be true.

In sum, the book of Isaiah is like history in its presentation (Frei 1974) and for this reason demands an assessment of its field of historical referentiality. But the two should be kept distinct, and the latter should not be allowed to eclipse the former. The book of Isaiah is more than a set of clues from which to reconstruct a network of "real"

historical meaning. Isaiah draws from the world of external reference in order to produce its own chronological "scale" and internal perspective.

C. The Canonical Presentation of the Book of Isaiah

In what follows, the content of the book of Isaiah will be surveyed with particular attention to the literary presentation of chaps. 1–39 in their present form. This presentation is the work of redactional hands concerned with setting forth the man Isaiah, his message in the 8th century, and the deeper significance of that message for God's dealings with Israel up to and through the exilic crisis of 587 B.C.E. (All subsequent dates are B.C.E. unless noted.)

1. Isaiah and the Emergence of Assyria. By the most generous estimate, Isaiah's prophetic activity extended from the latter years of King Uzziah (1:1; 6:1) to the 14th year of King Hezekiah (36:1) and the aftermath of Sennacherib's invasion (701). Even allowing for problems of chronology (see below), this would plausibly grant to Isaiah a career of approximately forty years (742–700), analogous to that assumed by the book of Jeremiah (1:1–3) for the prophet Jeremiah (627–587). A forty-year career for two of Israel's major prophets is consistent with the status they are eventually accorded in the canon (Seitz 1989).

Problems exist at either end of this reckoning, making assignment of exact dates for Isaiah's career difficult. On the one hand, Isaiah shares with other canonical literature a general confusion over chronology. The broader problem lies outside of this treatment, involving regnal year accounting in the books of Kings and Chronicles. The following table illustrates the latitude that is possible in reckoning, depending upon one's assessment of coregencies, accession-year tally, synchronisms, and competing calendric systems—not to mention coordination with ANE records (see *IJH*, 683; Hayes and Hooker 1988).

	Begrich/Jepsen	Albright	Hayes/Hooker
Uzziah	787–736	783–742	785–734
Jotham	756–741	750–735	759–744
Ahaz	741–725	735–715	743–728
Hezekiah	725–697	715–687	727–699

For the purpose of this treatment, we adopt the Albright reckoning and assume a career for Isaiah from roughly 742 to 700; that is, from the final years of Uzziah until the aftermath of the Assyrian invasion reported in chaps. 36–37, in the 14th year of King Hezekiah (701). We take seriously the intent of the superscription of the book (1:1) to locate the beginning of Isaiah's career in the reign of Uzziah.

Many have contested the possibility of Uzziah-period preaching for Isaiah. The chief objection is said to exist in chap. 6, which is taken as a call narrative of the prophet (Clements *Isaiah 1–39* NCBC, 8–9). Following this logic, Isaiah's "call" came in "the year that King Uzziah died" (6:1); there can be no preaching before this period, therefore, and chaps. 1–5 must postdate chap. 6. Various explanations are given for the placement of a call narrative six chapters into the book (cf. Jeremiah and Ezekiel). On purely historical and literary-critical grounds, others deny the possibility of Uzziah-period preaching.

The problem remains why redactors would have invented a Uzziah reference in the superscription if this was so clearly at odds with the "call narrative" interpretation of chap. 6. Chap. 6 also presents a thorny theological problem felt by interpreters from early on. Isaiah is "called" to "make hearts fat" (6:10), thus making impossible acceptance of the divine word from the very beginning. Again, there is also the question of why a "call narrative" inaugurating Isaiah should appear six chapters into the book.

It appears that the redactors of the book wish chap. 6 to be interpreted along different lines, and herein lies the solution to the chronological problem and the curious literary arrangement of the opening chapters. Chap. 6 is not an inaugural call, but a commission for a specific task from the heavenly council, given in the year King Uzziah died (6:1; see also Hayes and Irvine 1987: 108–13). The woes of the preceding chapter (5:8, 11, 18, 21–22) potentially implicate Isaiah as well, so he cries: "Woe is me—I am lost" (6:5). Isaiah is truly a man of unclean lips dwelling in the midst of a people of unclean lips (6:5). In the final shape of the tradition, Isaiah is presented as having preached warning and exhortation prior to the death of King Uzziah, and prior to his commission to "make hearts fat" (6:10)—a decree rendered in the heavenly council and shared with an Isaiah who must still go forth and preach repentance (see chap. 7), not smug announcements of sure doom. The main function of chap. 6 is to set the prophet apart from the people in clear fashion (6:7) and reveal to the reader the content of his commission, in all its historical breadth and theological force (6:11–13). Isaiah's inaugural "call" is not registered as significant in the final form of the book; from the divine perspective it reaches back before his consciousness of it, like Jeremiah's "call" before he was formed in his mother's womb (Jer 1:5). The precise end of the prophet's career is likewise not a matter for attention; Isaiah disappears with the same mystery as when he began his preaching "in the days of Uzziah" (1:1).

There is another dimension to the chronological presentation of Isaiah which locates his initial activity in the reign of Uzziah. This feature Isaiah shares with the prophets Amos and Hosea, who likewise are seen as preaching during the reign of Uzziah (Amos 1:1; Hos 1:1). It appears that these prophetic books, apart from their claim to actual historical memory of Uzziah-period preaching, are coordinated with a temporal perspective operative in 2 Kings, which places the emergence of the Assyrian threat as far back as the reign of Uzziah (2 Kgs 15:17–19). The superscriptions of these three prophetic books do not specify the precise year of the respective prophet's inauguration; a general reference to Uzziah suffices. Far too great an emphasis has been placed upon the psychologically alluring notion of a specific "call," to the exclusion of other important considerations at work in the final presentation of the book. Among these is the signal awareness that with the rise of the Assyrian empire, God was beginning a strange work in Israel—something the prophet Isaiah saw and proclaimed. Tiglath-pileser (Pul) is thus depicted as the king of Assyria who "came against the land" as far back as the reign of Menachem (2 Kgs 15:19), who began to reign in the 39th year of his Judahite counterpart

Uzziah (2 Kgs 15:17). From a modern historiographic perspective, the reigns of Uzziah and Tiglath-pileser can be roughly coordinated. This conforms with the literature's general reference to Isaiah's preaching "in the days of Uzziah" at 1:1, and the equally general reference to the "king of Assyria" at 2 Kgs 15:19. Here is an instance where more precise chronological synthesis might overlook the very general explanations at work in the literature, which have a significance all their own.

The following table indicates important dates in ANE history that are relevant for the book of Isaiah.

Tiglath-pileser	744–727
Syro-Ephraimite Debacle	734–732
Shalmaneser V	726–722
Sargon II	721–705
Fall of Northern Kingdom	721
Sennacherib	704–681
Assault on Judah	701

It should prove no surprise that the final shapers of the prophetic canon came to associate the rise of Assyria, instrument of Yahweh (Isa 10:5), with the final days of Uzziah.

Here we also find an explanation for the seemingly broken cycle of woes (5:8–23 and 10:1–4) and "outstretched hand" passages (5:25–30 and 9:8–10:4), now separated by the narrative "memoir" section of 6:1–8:22 and the messianic oracle at 9:1–7 (see recently Anderson 1988: 230–40; Clements *Isaiah 1–39* NCBC, 60–70; Sheppard 1985: 195–8). Warning and woe precede the stark commissioning of Isaiah in 6:9–13. Utilizing its own temporal logic, the book of Isaiah also depicts God's hand stretched out against Israel through the agency of the "nation afar off" (5:26) even before the death of Uzziah (6:1), consistent with the portrayal of 2 Kings and general staging in ANE history at large. God's hand "remains stretched out still" after the death of Uzziah, beyond the reign of Jotham to that of Ahaz (7:1), in the events of the Syro-Ephraimite debacle (734–732), and beyond to the fall of Samaria/Ephraim itself in 721 (9:8–10, 13–14; 10:3–4). Repetition of the motif "his anger is not turned away" (9:12, 17, 21; 10:4) serves to drive home the incremental and yet relentless way in which God's judgment is effected through the agency of Assyria, "the rod of my anger, the staff of my fury" (10:5). The rhetorical piece, the Song of the Vineyard, opens this temporal depiction by predicting the gradual but sure assault on "the vineyard of the Lord of Hosts" (5:7). God has removed its hedge and broken down its wall (5:5); it is left to be devoured and trampled, becoming a waste, full of briers and thorns (5:5–6). In what follows, all this gradually comes about (see especially the briers/thorns motif [5:6; 7:23–25; 9:18]) until Assyria is herself judged, turning "the glory of his forest" into "thorns and briers in one day" (10:17).

These key chapters (5–11), representing a variety of historical preaching and secondary redaction, have been editorially shaped to underscore (1) the widespread and chronic sinfulness of Judah/Jerusalem; (2) the commissioning of Assyria as God's instrument of purging judgment; (3) the commissioning of Isaiah as proclaimer of God's word of judgment; (4) the assault, in stages, on God's vineyard; and (5) the final judgment of Assyria for arrogance. Within this major movement of the Isaiah presentation, one sees other themes emerging as well. These include (1) the Syro-Ephraimite debacle (chaps. 7–8); (2) royal disobedience contrasted with future promise (9:1–7 and 11:1–9); and (3) a vision of future restoration (11:10–16). The beginning of Isaiah's career is set in the "days of Uzziah," when the Assyrian threat began to take form. Judah's unwillingness to be the pleasant planting and choice vine God intends (5:2, 7) means death and destruction for the vineyard (Israel). The special responsibility of Judah/Jerusalem in God's vineyard (1:8; 2:1; 3:14; 5:7) is balanced by interest in the royal house, which has also been set apart for special service (Yee 1981: 37–40). At the center of the Isaiah memoir (6–8) stands a prose narrative focusing on God's word to the royal house, in the person of Ahaz, at a key moment in history.

2. The Syro-Ephraimite Debacle and Isaiah 1–12. The depiction of the gradual assault by the Assyrian instrument of judgment now frames a special episode in Israel's history (referred to as the Syro-Ephraimite War), described in the literarily complex chaps. 7–8. With the gradual ascendency of Assyria in the ANE, neighboring and more distant nations were taxed and placed under state control, with various degrees of severity (*IJH*, 415–21). Revolts were frequent, and if successfully put down, the consequences could be (1) renewed vassalage; (2) puppet rule; or (3) population deportation and exchange.

In an act of defiance most date to the year 734, presumably calculated for some strategic advantage, Israel and her northern neighbor Syria decided to revolt against Assyrian rule. This seems the most likely explanation for the notice of Isa 7:1, which says without elaboration that "in the days of Ahaz," Rezin and Pekah, kings of Syria and Israel, respectively, "came up to Jerusalem to wage war against it." Interestingly, the action is described as though it were a purely hostile, almost wanton act of violence: "Let us go up against Judah and terrify it" (7:6a). Most assume that Syria and Israel, in league together (7:2), sought to gain Judah's support in alliance against Assyria—hence the specific reference to the deposing of Ahaz and his replacement with one "son of Tabeel" (7:6b).

Isaiah's response to all this is quite direct. His words are addressed to the Davidic house, and he stands firm on traditions which speak of God's choice of David and his line (2 Sam 7; Ps 2; see Mays 1988: 39–48). Ahaz is to "take heed, be quiet, fear not" (7:4). God will see to the eventual fall of the alliance against Judah, the implication being that God stands at Judah's head, while Ephraim and Syria are ruled by men alone (7:7–9).

Together with the word of God, Ahaz is confronted by three sign-children, whose names are significant carriers of God's message. All three names are unambiguously positive for Judah: Remnant Restored (Shear-jashub), God with Us (Immanuel), and Spoil Speeds, Prey Hastes (Maher-shalal-hash-baz). The positive force of the names is driven home by the language which immediately follows in each instance (7:4; 7:15–16; 8:4). The first child is already born. The second and third are about to be born, and the message of deliverance is keyed to certain temporal indicators associated with their maturation. Clearly, the period of weal is just around the corner, no matter what

the circumstances look like to Ahaz (8:4). At their earliest literary stage, chaps. 7–8 are frequently termed a Book of Signs because of the motif of the sign-children (all three Isaiah's) that unifies them (Gottwald 1958; Roberts 1985).

But the original literary tradition has clearly been expanded (Clements *Isaiah 1–39* NCBC, 78–103). The motif of conditionality integral to the original tradition (7:9b) has opened up one dimension of so-called Zion and Royal Theology. God provides concrete and repeated signs of his special care for Zion and David, in spite of the pious intransigence of Ahaz (cf. Hezekiah in 36–38). But lack of belief can turn God's protection to nought. Those who shaped these chapters clearly look back on King Ahaz as the one who refused to believe and was therefore not established. The juxtaposition of the oracle at 9:1–7, which speaks of a glorious new king, helps drive this home. Ahaz' lack of belief has caused certain distinct editorial moves within chaps. 7–8 as well.

On the one hand, a new level of tradition has been introduced which speaks of the coming assault—not of the Syro-Ephraimite coalition (their future is decidedly inauspicious)—but of Assyria (7:17c–25). Syro-Ephraim is replaced by a divinely appointed Assyria, who will judge the unfaithful royal house and Judah "in that day" (7:18, 20–21, 23). As a consequence of Ahaz' unbelief, the positive signs become more restrictedly positive, if not negative, reminders of lack of faith. "God is with us"—as a judged remnant confident God will halt the future Assyrian assault (8:10), but only after much destruction ("even to the neck," 8:8). "Spoil speeds"—not just against the Syro-Ephraimite coalition (8:4), but ultimately against Judah as well (8:6–7). "Remnant restored"—not Judah vis *à* vis Israel in the Syro-Ephraimite debacle, but as a later purged remnant vis *à* vis the unfaithful generation of Ahaz, who rightly perceive the judgment of God and the promise of a righteous future in the teaching of Isaiah (8:16–20).

As von Rad correctly noted, Zion theology is transformed in the book of Isaiah, as God himself through the agency of Assyria turns against his own people in order to purge them and set apart a righteous remnant. But the nations cannot rage (Ps 2:1) without restraint (so Isa 8:9–10). God remains with Zion to cleanse her for a new future. What von Rad wished to locate in the prophetic consciousness, one can see at work at the editorial level, as witnessed in the final redaction of the Book of Signs. This same theological perspective is exhibited at other points in the tradition as well. The form-critical insight of von Rad, especially focused on chaps. 28–31 and the prophet Isaiah's own consciousness, has broader relevance for a distinct editorial perspective operative throughout the First Isaiah chapters.

In the complex tapestry of the Book of Signs, positive signs were to function positively in the events of the Syro-Ephraimite debacle of 734; but they also stand in judgment over lack of faith in the royal house and point to a new day. It can be no coincidence that immediately juxtaposed with this Book of Signs is an oracle describing a just and faithful ruler (8:23b–9:6 = Eng. 9:1–7). Whether this is a typical figure supplied by accession liturgy of preexilic Israel (von Rad *PHOE,* 222–31; Becker 1980: 45–47), or an eschatological (messianic) figure from the postexilic period (Kaiser (1983: 203–18), or Isaiah's (private) hope for a king at the time of Sennacherib (Duhm *Jesaia* HKAT, 66–69), or Ahaz's actual successor Hezekiah (Alt *KlSchr* 2: 206–25; Clements *Isaiah 1–39* NCBC, 103–9) is not made explicit in the text (and therefore occasions much debate). The latter interpretation is highly suggestive, though much of the reference to Assyrian assault in the final form of chaps. 7–8 seems geared to events of 701, thus postdating Hezekiah's accession. For this reason, Josiah has also been considered a likely candidate (Vermeylen 1977–78: 231–49; Barth 1977: 176–77). It cannot be ruled out that a certain obscurity has been intended in the final redaction of this oracle, as well as in its more idealized counterpart at 11:1–9. What is clear is that a new ruler will emerge in a new day and stand in utter contrast to the faithless Ahaz, a depiction consistent with the force of chaps. 36–38, where Hezekiah forms a distinct counterpoint to Ahaz (Ackroyd 1974: 350–2; 1981: 219–22).

In the Book of Signs and in the broader literary context surrounding it (esp. chaps. 5–11), historical events with significance in the days of Uzziah and Ahaz have taken on new meaning. The Syro-Ephraimite assault fails in 734, only to foreshadow later Assyrian success as the instrument of Yahweh. Faithless Ahaz is replaced by a new king. The Assyrian assault, hinted at in Isaiah's early days (5:26–30), seems especially related to events in 701, during the reign of Hezekiah, at which time Judah was completely overrun by Sennacherib's forces (36:1), and Jerusalem was left "like a booth in a vineyard" (1:8). The imagery of near-total destruction persists throughout these chapters (6:13; 8:8; 10:32), with the clear suggestion that only Jerusalem will be spared ("he will shake his fist at the mount of the daughter of Zion"). At this key moment, a new act will begin, whereby Assyria will be judged for arrogance and the overstepping of her divine commission; this theme likewise finds persistent articulation in chaps. 5–11 (see 8:9–10; 10:12–19; 10:33–34). Apart from sporadic and incidental editorial work focused on even later events (esp. 587; Clements 1980), the major redactional work on these chapters is keyed toward the events of 701 and their aftermath. This is consistent with the way the Assyrian assault is depicted in chaps. 5–11, namely, as involving widespread assault on Judah and the near destruction of Jerusalem, which in turn gave rise to sober hopes for restoration following this cleansing.

Chaps. 2–4 contain a diverse assortment of material, some of it pre-Ahaz and consistent with the depiction of chap. 5 in seeing Judah/Jerusalem as chronically sinful. Other material in these chapters reflects the post-701 concern with future restoration. Still other sections appear to see the assault of 701 as but a foreshadowing of a yet future judgment in 587, resulting in the fall of Jerusalem. It is extremely difficult to sort out the various redactional strata (Sweeney 1988b), due to a lack of explicit literary and historical indexing at work in the literature. Whatever one concedes about a Babylonian period redaction (Clements 1980), the final presentation of chaps. 1–12 has not lifted the events of 587 and their theological significance into such prominence that original 8th-century rooting has been completely loosened. In fact, strong arguments can be mounted in defense of a general 701 backdrop for all of chap. 1, on literary, historical, and redactional grounds. The opening superscription interprets chap. 1 as

a summary vision from the prophet, presenting major themes of the prophet's message culminating in the reign of Hezekiah (Fohrer 1967: 148–66). The deliverance in 701 (see 1:8) is not taken as a matter of rejoicing nor as the validation of a Zion theology requiring no faith, but rather as a matter for penitence and exhortation (1:10–20). Afterwards, Zion can be reclaimed by God (1:24–31). This in turn gives way to a new vision of the future, not yet realized in time (see 2:1–4 and 12:1–6).

Ackroyd (1978) and others have correctly noted the existence of a major subsection in Isaiah 1–12. Here, something of the whole history of God with his people during the career of Isaiah is set forth, from the days of Uzziah to the days of Hezekiah and the deliverance of 701. The actual account of the 701 deliverance is found in a narrative section not unlike the Book of Signs, in terms of form and thematic shape, at the end of the First Isaiah material (chaps. 36–37). In chaps. 1–12 Isaiah is presented as a prophet of judgment for whom Zion theology took on transformed significance. Within the cleansing judgments of 734 and 701 lie the seeds for future hope and restoration. Against the faithlessness of Ahaz and his generation is to be viewed the trust of a righteous king and a faithful remnant. The final doxology rounds off this section as a new day is envisioned (12:1–6).

That these events from the days of Isaiah were capable of occasioning yet further reflection after 587, when Jerusalem became a new kind of booth in the vineyard of God, is testimony to the power of the prophetic word (Meade 1986: 17–26). But evidence for widespread literary supplementation keyed to this later episode demands greater precision than redactional analysis has yet put forward (cf. Clements *Isaiah 1–39* NCBC; Sweeney 1988b; Kaiser 1983). At most one sees only occasional glossing (e.g., 4:2–6) keyed to the events of 587 and their aftermath, expanding the depiction of judgment as well as the vision of restoration. The post-701 redaction of chaps. 1–12 was capable of reappropriation in light of events in 587, with very little need of explicit literary intervention. There was a "fit" to the word of God already structured into the final shape of the material that made it an appropriate lens through which to understand the later events of 587 and the fall of Jerusalem.

The editorial decision to present the fuller implications of Isaiah's message from the days of Uzziah to those of Hezekiah in a major opening section (chaps. 1–12), ending with a hymn of praise, has meant that kindred material has now been set into different literary contexts. More specifically, it is clear that much of the focus on Assyria and her ultimate judgment carries over into the next major section of the book (chaps. 13–27), where Assyria becomes just one of many nations who rage against Jerusalem. Barth (1977: 103–18) is probably correct to speak of a uniform Assyrian redaction that includes 14:24–27. However, that this redaction is related to the figure of Josiah seems unlikely in view of the absolute silence of the text regarding this later 7th-century king. A recension of Hezekiah composed after the deliverance of 701 is far more likely and is consistent with the references to reapplication and future interpretation of the prophetic word suggested by 8:16–20 and 30:8 (cf. 29:11–12). Such a recension would have been composed by Isaiah's disciples after his death, focusing on Isaiah's past message and its implications for future deliverance. Support for this thesis requires correct interpretation of chaps. 36–39 and the events of 701 (see the following section).

Gesenius and Duhm were correct to point out major internal divisions within First Isaiah. A set of superscriptions (13:1; 15:1; 17:1; 19:1; 21:1; 22:1; 23:1) indicates an independent collection within chaps. 13–23 focused on the nations and culminating in God's judgment on the cosmos itself (24–27). From beginning to end, this section evidences significant redactional coordination in light of the events of 587 ("Behold the land of the Chaldeans! This is the people; it was not Assyria," 23:13). Original oracles against nations from Isaiah's day (14:24–27; 14:28–32; 17:1–14; 18:1–7; 19:1–15) have been filled out to depict a massive assault against Jerusalem from all quarters, on form-critical analogy with the depiction of the nations' assembling in the Psalms of Zion.

As with 1–12, these chapters have developed with their own internal logic, independently of surrounding collections. The Nation Oracle section (13–27) is formally analogous to nation sections in Jeremiah and Ezekiel, though its function in Isaiah is differently conceived. The historical judgment of the Assyrians against Judah and Jerusalem in the 8th century (1–12) is seen to foreshadow a far more decisive, global assault (13–27). In order to develop this depiction fully; keyed to the historical events of 587, chaps. 13–27 speak of events well beyond the lifetime of the prophet Isaiah (noted by interpreters since Eichhorn). A series of six longer poetic compositions, introduced with the Heb interjection *hôy*, then follow in 28–33 (cf. 32:1, Heb *hēn*). A small final collection (34–35) reiterating the themes of 24–27 rounds off the First Isaiah material. In their final presentation, chaps. 1–39 reflect a complex interweaving of Assyrian period (post-701) and Babylonian period (post-587) redaction (1–12 + 13–27 + 28–33 + 34–35). A fuller discussion of these sections will follow after an analysis of the next key historical event in the book of Isaiah: the 701 invasion.

3. The 701 Assault: Isaiah 36–39 and Kings Presentations. In formal terms, chaps. 36–37 are quite similar to chaps. 7–8. They both focus on the encounter between prophet and king, utilizing narrative and poetic forms of expression. Moreover, the depiction of King Hezekiah appears to have been shaped as a direct counterpoise to that of Ahaz during the Syro-Ephraimite debacle. Hezekiah is the man of faith par excellence: he is the famous reformer whose deeds of faith are thrown into his teeth by foreigners (36:4–10). He rends his garments and asks for the prophet Isaiah's prayer (37:1–2); he offers his own prayer, which turns God's verdict against Sennacherib (37:21); signs are provided and not scorned (37:30–32). That a common editorial hand and purpose is at work in these two narrative sections seems beyond doubt. At these two key moments in history, the faith of the royal house was put to the test. While Ahaz failed, Hezekiah emerged as the paradigmatic king—described in 2 Kgs 18:5 as without peer: "He trusted in the Lord the God of Israel; so that there was none like him among all the kings of Judah after him, nor among those who were before him."

Because of their close relationship with 2 Kgs 18:13–20:21, chaps. 36–39 present a literary problem without

analogy in chaps. 7–8. Going back to Gesenius (1821: 932–36), most assume that the synoptic relationship is to be explained by seeing the book of Kings report as having priority over that of Isaiah (Wildberger 1979: 35–47). It is argued that the Kings account has been brought over into the Isaiah corpus on analogy with the function of 2 Kings 25 (= Jeremiah 52) in the book of Jeremiah, namely, as bringing to a close the First Isaiah material (Gesenius 1821: 22). But problems with this theory are obvious: (1) the independence of First Isaiah chapters as a distinct collection is overstated (Seitz 1988: 109–16); (2) one can explain the chronological disorder in the movement from 36–37 to 38 and 39 in the book of Isaiah is due to editorial factors, whereby the chronologically earlier Merodach-Baladan episode is placed last to evoke the Babylonian setting and judgment presupposed in 40–66 (Ackroyd 1974), but the temporal illogic makes no sense in Kings, where the next chapter (2 Kings 21) continues with the reign of Manasseh (Smelik 1986: 73–74); (3) problems of a literary and historical nature have been introduced into the Kings narrative because of broader concerns that can be detected in the Deuteronomistic History, especially involving the relative evaluations of Judah's monarchs, but the absence of these problems in Isaiah suggests an earlier consistency of presentation in Isaiah.

Most pointed in this regard is the brief insert regarding Hezekiah's capitulation to the Assyrians (2 Kgs 18:14–16), frequently termed Account A and regarded as historically objective, in contrast to the surrounding narrative (see Childs 1967: 69–103). Historians have tended to grant a degree of reliability to this three-verse account that is denied to the longer "legendary" report, itself an interweaving of two separate episodes in history (Account B1 and B2). Yet, clearly, this unit interrupts the flow of logic from v 13 to v 17, forcing scholars to wonder why, if Hezekiah in fact capitulated (18:14), the Assyrians went on a siege campaign against Judah (18:17). The answer to this question is given by speculation about hidden material regarding gaps in time, more than one campaign, changes in foreign policy by Hezekiah, and the like—all matters about which the biblical text is silent (see Smelik 1986: 76–85).

The simplest explanation is that—the boasting tone of the Assyrian annals notwithstanding—Hezekiah did not capitulate to any major degree. At a minimum, it must be conceded that this is the perspective of the Isaiah presentation, which knows nothing of Hezekiah's disobedience and in fact underscores the piety of this king in contrast to his predecessor Ahaz. One wonders if the whole point of the account in chap. 38 of Hezekiah's sickness is to stress the ability of the royal house to divert a merited sentence of judgment. Hezekiah's sickness mirrors Jerusalem's sickness—his faithful prayer postpones a sentence of judgment spoken by the prophet Isaiah (38:1). The key verse in this regard (38:6) links Hezekiah's recovery to the recovery of the city, even though this upsets the narrative depiction of chaps. 36–37, where the deliverance of the city had already been concluded (37:36–38).

Ambiguity regarding Hezekiah's demeanor exists only in the book of Kings narrative, where the insert at 18:14–16 frustrates the logic of the depiction. Why has Kings supplied this admittedly intrusive note? The answer involves the larger scheme of royal evaluation in Kings, whereby Hezekiah's unparalleled role (2 Kgs 18:5) was revised in light of Josiah's subsequent career and the later judgment that he was Judah's finest king (2 Kgs 23:25). Failure to accomplish absolute deliverance in 701 was traced by the Dtr Historian to the sin of Hezekiah in Assyrian capitulation, while Josiah became a reformer whose zeal outstripped all before him, the notice of 2 Kgs 18:5 notwithstanding.

A far more subtle version of this is to be seen in Isaiah 39 (2 Kgs 20:12–19), where the coming destruction of the Babylonians is somehow vaguely related to Hezekiah's action in showing the Babylonian envoy treasures in the capital (which, if 2 Kgs 18:15 were taken literally, had already been given to the Assyrians). But this is far from the direct (and literarily intrusive) charge of 2 Kgs 18:14–16. Moreover, the near testimony of Chronicles has chosen to view Hezekiah's action vis à vis the Merodach-Baladan envoy *positively* (Ackroyd 1974: 337–38; 1982: 222–25); he was tested and found worthy (2 Chr 32:31), presumably because he avoided the greater sin of paying tribute to foreigners and depleting the temple treasury, only *showing* the emissaries his riches (Isa 39:2). The final remark of Hezekiah (39:8), as noted by Ackroyd (1974: 335–36), is not to be taken as a private *"après moi le déluge,"* but as an acknowledgment from a pious king that God had postponed a massive judgment and so provided "peace and security" in his day. A similar technique is employed with Josiah in 2 Kgs 22:20, where the prophetic word from Huldah is linked to days ahead, after Josiah will have been gathered to his grave in peace. In sum, this final narrative account (chap. 39) does not focus on the disobedience, even inadvertent, of King Hezekiah; it simply explains that the Babylonians will eventually replace the Assyrians (39:7), without assigning blame to the royal house. Only in this way can one understand the positive face Hezekiah is able to put on the dark words of Isaiah. In allowing the Babylonians access to the capital, without paying them tribute, Hezekiah could even be viewed as doing the will of God. In the final perspective of the Isaiah presentation, the Babylonians are the consecrated ones designated by God for judgment (13:3; Clements *Isaiah 1–39* NCBC, 132–36). Hezekiah did not turn them away; neither did he seek to make agreements with them—not the Babylonians of Merodach-Baladan's day (8th century), but of a later day (6th century) accomplish the massive judgment depicted in chap. 13.

There is every reason to believe that the Isaiah narrative in 36–37 has priority over the Kings account. At a minimum, it can be said that the Hezekiah depiction in Isaiah is finally independent of that which develops in Kings (Ackroyd 1982: 15). The book of Isaiah understands Hezekiah as the obedient counterpart to his predecessor Ahaz; but ultimately, even this royal paradigm could only postpone God's judgment and present a model of obedient trust for future generations under siege. Deeds of disobedience and mistrust from the days of Uzziah and Ahaz had set into motion a process of cleansing that would not be completed until after Hezekiah's lifetime.

4. The 701 Assault: General ANE Perspective. The picture of Hezekiah's paradigmatic obedience developed in Isaiah 36–39 finds confirmation at other points in the

biblical and extrabiblical records. The books of Kings and, especially, Chronicles, present Hezekiah as a bold reformer who purified the cult of pagan practices (2 Chronicles 29–31; see also Isa 36:7). Hezekiah is also remembered as one who accomplished significant Judean expansion into the region of Philistia (2 Kgs 18:8). The memory of Hezekiah as one who attempted to restore the kingdom of David to its former glory, shortly after the fall of Samaria, is not lost on the biblical record; neither was it lost on his Assyrian overlords.

Sargon died on the battlefield in 705 and was replaced by Sennacherib. But upheavals were registered across the ANE: (1) the Egyptians recovered strength under the 25th Nubian dynasty; (2) the Chaldean Merodach-Baladan came out of hiding and gathered support from Elamite and Arab tribes; and (3) Luli, king of Tyre and Sidon, revolted. Hezekiah's aggressive activity is probably to be measured against this broader maneuvering within the Assyrian empire (*IJH*, 446–48).

Reaction from Sennacherib was not long in coming. In 701 he succeeded in putting down the Tyrian revolt, and Luli was replaced by a puppet king. Similar action was taken against the Philistine city-states, and Egyptian military assistance in support of Ekron was sent packing. Sennacherib then turned his attention to Judah/Jerusalem.

The Assyrian annals acknowledge the nonsubmission of Hezekiah. They report that Sennacherib then laid siege to 46 strong cities in Judah and "counted and considered as booty" 200,150 of her citizenry. Doubtless only a certain percentage of these were actually deported (Stohlmann 1983: 147–75). A massive formal siege of Jerusalem is not described, though the Assyrian king boasts of reducing Hezekiah to a virtual prisoner "like a bird in a cage" and of setting up earthwork "in order to molest those who were leaving the city" (*ANET*, 288). But there is no mention of actual victory in the "siege." The annals proudly note that Sennacherib "reduced his country" and increased the annual tribute, but it must be admitted that all this is fairly light treatment when compared with actions taken against Tyre, Ashkelon, and Ekron.

Where the biblical and Assyrian records agree is over the assault of Judah. Isaiah reports as bluntly as possible that in 701 Sennacherib "came up against all the fortified cities of Judah and took them" (36:1; 2 Kgs 18:13). It is no surprise that the records disagree over the interpretation of 701 events more narrowly involving Jerusalem. The annals emphasize the restriction of Hezekiah to the capital and conclude with a notice about the broader success of the campaign against Judah at large. The biblical record, in stark contrast, emphasizes the utter failure of Assyrian attempts to take Jerusalem (Isa 37:36–38), being particularly mindful of the boastful arrogance of siege troops in the region (36:4–20). Not surprisingly, it attributes the defeat to divine intervention, occasioned by the prayer of Jerusalem's faithful king (37:15–20). Especially in view of the treatment of Judah and of neighboring nations, the failure of Sennacherib to take Jerusalem was a matter of no small theological significance. But the biblical sources do not relate the Assyrian "defeat" to some iron-clad commitment on God's part to Zion—in many respects, just the opposite is true. The cleansing judgment was accomplished by God himself, as spoken beforehand by his prophet Isaiah (chaps. 28–32). Isaiah spoke of a "decree of destruction from the Lord of hosts upon the whole land" (28:22) and upon the city and its rulers (29:1–10). Deliverance is solely the consequence of the grace of God and the prayerful obedience of his servant Hezekiah: "I will defend this city for my own sake and for the sake of my servant David" (37:35). Measured against the widespread assault on Judah and her citizenry, the deliverance is held up as a graceful warning against the very citizenry that is spared: this note is particularly sounded in the opening chapter of Isaiah (1:2–31). The deliverance becomes an occasion for exhortation and penitence. Seen from the perspective of 587 and the fall of Jerusalem, the warning was not heeded. Hezekiah could only postpone a yet greater judgment. On this note, the First Isaiah chapters conclude (39:5–7).

Attempts to precisely coordinate the Isaiah, Kings, and Assyrian accounts will fail, if by coordination it is meant that there is synthesis and final agreement among the various sources. Isaiah focuses on the exemplary action of Hezekiah vis à vis Ahaz and other arrogant leaders in Judah/Jerusalem (28:7, 14; 29:20; 30:1, 8; 31:1—cf. 32:1–20) and the deliverance of the capital vis à vis the countryside. Kings adjusts this picture in light of other theological and interpretive concerns within the broader Dtr History, tugging the depiction of Hezekiah in the direction of the Assyrian reports by (awkwardly) mentioning his capitulation. Not surprisingly, the Assyrian annals emphasize the successes that were achieved in the 701 campaign against Judah/Jerusalem: a massive assault against Judah's cities and citizenry, increased tribute, and the shutting up of Hezekiah in the capital. Why Assyrian forces were forced to withdraw and give up the siege against Jerusalem (cf. Askelon, Ekron) is not clear, nor is it possible to trust the Greek historian Herodotus report (learned in Egypt), which speaks of a signal defeat of Assyrian forces, whose weapons were devoured by a horde of field mice. Whatever the rational explanation, the Isaiah (and Kings) account sees the ultimate cause as divine intervention. Not only were the forces of Sennacherib done in, but the Assyrian king was slain by his own sons (37:38) while worshipping "Nisroch his god." On this note, the report clearly concludes that there is a limit to which the God of Israel can be mocked: "A blasphemer is nowhere safe from the power of the omnipotent God" (Smelik 1986: 84).

5. Isaiah 28–33. We have had occasion to note already that these chapters are formally linked by repetition of the Hebrew interjection *hôy* (28:1; 29:1; 30:1; 31:1; 33:1). They focus on the arrogance and misplaced trust of the people, from all quarters (Judah, Ephraim, Ariel) and from every area of society (priest and prophet, rulers in Jerusalem, military forces), in their blind disregard for the coming judgment of Yahweh. They trust wrongly in military alliances with Egypt (30:1–14; 31:1–5), in covenants with death (28:15), and in perversions of Zion theology whereby God blindly protects Jerusalem regardless of the faith of her people. To counter this false trust, the prophet speaks of a Zion theology in which God fights against his own people (29:1–8) and engages in strange action against Judah/Jerusalem (28:21). In the fighting of the nations against Zion, God is himself active (29:3). But paradoxically, God will also fight upon Mt. Zion to "protect and

deliver it, spare and rescue it" (31:5). There is a dimension of his work that is simply described as "marvelous" (29:14), whereby the "wisdom of their wise shall perish" (29:14) while the deaf shall hear, the blind see, and the meek obtain fresh joy (29:18). Zion theology is a defense only for those who place their trust in Yahweh, as he comes to judge his own people; for others, he will prove to be a "stone of offense" and a "rock of stumbling" (8:14), not a "cornerstone valuable for a foundation" (28:16; Roberts 1987: 37). In the cleansing action of God's judgment, the goal is not obliteration but transformation, as the message of the prophet is truly perceived and finally vindicated as the word of God (29:24; 30:8). The Assyrian will ultimately be judged for arrogance (31:8), in similar fashion as in chaps. 1–12.

There is an attitude of faith and trust that will sustain those during the coming crisis (28:16; 30:15), relinquished only at one's peril. It is precisely this attitude that is exhibited by Hezekiah during the Assyrian assault. Not surprisingly, chap. 32 speaks of the king who reigns in righteousness (32:1), as an age of peace and security is envisioned (32:14–20). The final liturgy (chap. 33) looks ahead to the vindication of God against the Assyrians and against the sinners within Israel, as all eyes turn toward a just king and a forgiven people (33:17, 24).

It cannot be determined precisely if this material is keyed toward the narrative denouement of chaps. 36–37 and the specific figure of Hezekiah, toward his successor, or toward an eschatological figure from the postexilic period. Clearly, Hezekiah acts with a righteousness and faith in the events of 701 in such a way as to embody the Davidic ideal, and the hopes of chaps. 32–33 may be modeled on him. It is beguiling to consider that significant hopes may have been attached to Hezekiah's successor Manasseh, whose very name seems to signal hopes for the reunification of Israel (note the contrast between 9:21 and 11:13). Did the redactors of First Isaiah at one point believe that following the Assyrian defeat in 701 and the death of Sennacherib there would be a period of peace and prosperity and a restoration of Israel (11:12–16) and the Davidic house (11:1–9; 32:1–8)? If so, that hope has now been shifted to the future and to the expectation of restoration following not the Assyrian destruction but the Babylonian one of 587.

6. Isaiah 34–35. A similar question can be raised about chaps. 34–35, both with regard to setting, date, and general purpose within the Isaiah corpus. Chap. 34 describes a massive scene of destruction. Throughout the chapter, the language and imagery employed resemble that found in 24–27, leading some to refer to 34–35 as a "little apocalypse" depicting a great cosmic judgment. Like the "great apocalypse," it is dated to the late postexilic period and broader apocalyptic thought (Vermeylen 1977: 440–46). The specific reference to Edom (vv 8–12) is taken as a symbol for God's enemies in general.

In 1928, C. C. Torrey argued that chaps. 34 and 35 were a unity ("two sides of one coin"), depicting the doom of the wicked on the one hand and the blessing of the righteous on the other (Torrey 1928: 279). Noting the similarity with chap. 63, Torrey argued that these chapters were of a piece with Second Isaiah and should be interpreted as such. Torrey placed this Second Isaiah in Judah in the late postexilic period. Modifications of his position would view chaps. 34–35 as based upon the prophecies of 40–55 and dated at the same period as 56–66, the so-called Third Isaiah (Clements *Isaiah 1–39* NCBC, 271–72).

In a recent monograph (1985), Steck argues that chaps. 34–35 were composed precisely to serve the function of providing a bridge *(eine redaktionelle Brücke)* between relatively closed First and Second Isaiah sections, thus representing the latest stratum of the book. Admittedly, the language of chap. 35 in particular resembles that found in chaps. 40–55, as a highway of return is depicted (35:8–10) and nature is rejuvenated (35:1–7). Steck reasons that these chapters were composed to anticipate 40–62 and ease the transition from First to Second Isaiah. However, their primary purpose is not to provide literary integration but to offer an isolated redactional word regarding Israel's restoration and purification beyond what existed in other sections of the developing Isaiah corpus (a *Sinnveränderung* of other Isaiah tradition; Steck 1985: 94–96). God would work more subtly and indirectly to effect the final eschatological conclusion of his work with Israel and Zion, with a different understanding of the role of the nations and the return of Diaspora Israel.

At a minimum, it appears that the function of these two chapters is to describe a future world judgment over nations and nature, and then to report the transformation of creation and the return of the dispersed. Steck overstates the unique and isolated nature of these themes. In the present form of the book, the chapters do not bridge First and Second Isaiah as closed literary collections; rather, they amplify and extend the message of the preceding chapters (32–33) regarding the future judgment and the ensuing reign of peace and forgiveness, at the same time reminding the reader of 36–39 that the deliverance of 701 is temporary and that the cleansing judgment will continue beyond Hezekiah's day. In so doing, they ease the transition (temporal and literary) between the former and the latter things—or between the judgments of the Assyrian period and of the Babylonian period and the dawn of a new day in God's dealings with Israel, such as this takes form in Isaiah 40–66.

7. Isaiah 13–23 and 24–27. Similar redactional and compositional concerns can be detected in the major sections running from chap. 13 through chap. 27. Material arguably Isaianic, reflecting 8th-century proclamations against Assyria (14:24–27), Philistia (14:28–31), Syro-Ephraim (17:1–14), Egypt (chaps. 18–19), and Judah (chap. 22) has been filled out to present a massive Nation Oracle section involving Babylon (13:1–16; 14:3–23; chap. 21), Persia (13:17–22), Moab (chaps. 15–16), and Tyre (chap. 23) as well. The section culminates in a scene of cosmic judgment (chaps. 24–27).

Though this latter judgment has often been dated to the latest period of postexilic Israel (Duhm *Jesaia* HKAT, xii), a more recent interpretation that focuses on the events of 587 and the destruction of Jerusalem has been put forward (Johnson 1988). This is certainly consistent with the broader parameters of a Babylonian redaction notable elsewhere in the book, and one with the general historical range of 13–23 in its present form (namely, the focus on Babylon, Persia, Moab, and Tyre as 6th-century entities). The description of judgment found in chaps. 24–27 is

correlated with the commissioning of Babylon at the opening of the Nation Oracle section (13:1–16; Clements *Isaiah 1–39* NCBC. 132–36). Through the agency of the Babylonians, Yahweh determines to "lay waste the whole earth" (13:5–24:1), returning it to a state of near chaos, as it was at the time of Noah (note the reference to "the everlasting covenant" at 24:5). All this comes about as a consequence not just of Israel's disobedience (as reported in 1–12), but because of the massive bloodletting of the nations as a whole (13–23), so that the earth "lies polluted" (24:5) and threatens to fall back into chaos and total disorder. This is clearly reminiscent of God's decision to "make an end of all flesh" because "God saw the earth, and behold, it was corrupt, for all flesh had corrupted their way upon earth" in the days of Noah (Gen 6:12–13; cf. Isa 24:20). The "everlasting covenant" has been broken. Just as in the days of Noah, "the windows of heaven are opened, and the foundations of the earth tremble" (Isa 24:18; cf. Gen 7:11: ". . . all the fountains of the great deep burst forth, and the windows of heaven were opened"). It is as though God has demanded a reckoning for the lifeblood of humans and animals, as he had warned Noah (Gen 9:5).

Readings of Duhm and others (Plöger 1968: 53–78; Hanson 1975), which seek to interpret 24–27 as a late apocalyptic insert, fail to deal with the integrative function of these chapters viewed with an eye toward their surrounding literary context. There is significant evidence of a form of inner-biblical exegesis at work in these chapters (Sweeney 1988a), suggesting far greater integration in the final level of composition than is recognized when the independence of 24–27 is stressed. Moreover, the eschatological time frame of the chapters has been overstated and depends on certain views of evolution in Hebrew thought and cognate movements in other so-called apocalyptic literature (Daniel, Joel, Zechariah 12–14) whose relationship to Isaiah 24–27 is highly speculative. Interestingly, the future references within these chapters are *not* keyed toward global judgment but toward final restoration (25:6–12; 26:1–6; 27:2–6; 27:12–13). The depiction of judgment is not conceived of as an end-time event but as a near-future or imminent affair. The frequent general references to the "city" and the "earth" suggest an all-encompassing judgment, not one simply focused on Judah/Jerusalem, though Zion is the ultimate pivot in God's dealings with the cosmos (24:23).

In the final form of the Isaiah presentation, this judgment comes about in the Babylonian assault of 587, creating utter desolation of nature and the whole earth. In fact, chaps. 24–27 form the only real account of the destruction of 587 in the whole book, there being no explicit report of this otherwise central historical episode in the Isaiah presentation beyond the cryptic note at 39:5–8 (cf. Jer 39:1–10; 52:4–30). The crucial event of 587 is handled in Isaiah in poetic and near-mythical terms, as the language of creation and chaos—familiar from the Songs of Zion—is evoked (Psalm 29; 46; 47; 93; 99); but the historical moorings of this language have not been completely severed, just as the threat of the nations is never fully detached from history in the Zion hymns.

When Second Isaiah chapters speak of nature's restoration, they speak from the other side of a judgment envisioned in chaps. 13–27. Not until the Persians are sent forth (14:17–22) to bring down the Babylonian instrument of destruction (on analogy with Assyria's demise in 1–12) can the reign of peace be ushered in; this is the same "bird of prey" commissioned for God's purpose in 18:6 which carries out the commission in Second Isaiah (46:11). It is clear that the Nation Oracle section, with its culmination in 24–27, has been redactionally shaped to anticipate Second Isaiah material, especially the frequent reference to the assembling of the nations for trial (esp. 40–48). There, the reader learns that all this was planned by God long ago (40:21; 41:4, 21–29; 42:9; 43:9; 44:7). The nations did not act on their own and therefore are not in a position to have known what the outcome would be (41:26; 43:9; 44:7). God was at work through them to effect not only Israel's judgment but also her restoration. He has called Cyrus to begin this work of restoration (41:25), just as was promised long ago also (13:17–22; 18:3–6).

The explicit mention of the rise of Persia belongs to a redactional stage of development within the book of Isaiah that is meant to draw out the significance of God's actions in history spanning the age of Isaiah and events centuries later. Redactors working seriously with the word of God, as it was preserved from the prophet Isaiah, saw in his message a significance that transcended its own narrower field of historical reference. Analogies were seen to be apposite. Assyria would ultimately be judged by God for arrogance, after she had fulfilled God's bidding vis à vis Israel and Judah/Jerusalem. This was a prominent theme in the 1–12 collection. Chaps. 13–14, which open the Nation Section, clearly indicate that Babylon is then to be likewise consecrated for service (13:2–5). It is quite likely that the seeds for this redactional perspective were to be found in the report of chap. 39, or in its broader frame of reference, whereby the 8th-century Babylonians were seen as embodying a significance in God's plan of judgment that they themselves did not comprehend. By placing 14:24–27, an oracle of judgment against Assyria similar to material in 1–12 (e.g., 10:5–19), in the context of chaps. 13–14, the "breaking of Assyria" (14:25) is to be understood as part of God's broader work with Israel and the nations, now including Babylon and Persia (13:17–22). Assyria's breakdown is analogous to Babylon's centuries later, after both serve their respective purpose in God's larger work with Israel.

Secondary redactional interpretation has drawn out the deeper significance of Isaiah's proclamation regarding the role of Assyria, by seeing Babylon as functionally analogous at a later period in time. Moreover, hopes associated with the fall of Assyria for the restoration of Israel, perhaps from the reign of Hezekiah or Manasseh (9:1–7; 11:1–9; 11:12–16; 32:1–20), are now fully interwoven with a vision of restoration which follows a much more pervasive, cleansing judgment (14:1–2; 19:16–24; 25:6–12; 26:1–19; 27:2–6; 27:12–13; 35:1–10). The faithful remnant headed by Hezekiah in 701 gives way to a yet smaller remnant in 587—"a tenth burned again," to use the language of 6:13. This purged remnant will experience the new Jerusalem and a fully restored Zion in a transformed creation. Here, the reciprocal relationships between First Isaiah and Second Isaiah could not be clearer, as both sections of the present book of Isaiah are shaped to span

several centuries in time, in order that the abiding and persistent hand of God at work with Zion and his people might be laid bare. Second Isaiah chapters address a remnant spoken of as far back as Isaiah's commission in the year that King Uzziah died (6:13). The comfort spoken to Zion/Jerusalem (40:2) is comfort for a people whose warfare is at last ended, whose iniquity is finally pardoned. At this point in the Isaiah presentation, it is clear that the vision of restoration prepared for in Isaiah's day is about to take shape. The hymn praising God's comforting of Zion (12:1–6) is now to be sung.

Sections of the book under major Assyrian-period (1–12; 28–33; 36–37) and Babylonian-period (13–27; 34–35; 38–39) redactional influence have been fused and coordinated precisely so that First Isaiah might function as a coherent prelude to Second Isaiah, and so that Second Isaiah might look back on First Isaiah for its own literary, historical, and theological bearings. In this way, the former things of Isaiah are coordinated with the latter things, as the age of judgment is brought to a close and a new day of transformation begins to dawn.

In the final presentation of First Isaiah, the vision of restoration remains a vision without complete fulfillment. Second Isaiah attests to the close of an old age and the beginning of the fulfillment of an earlier vision and hope, rooted in the period of Hezekiah and the final days of the historical Isaiah. As the vision is filled out and enriched in First Isaiah, in light of the events of 587, it nevertheless remains a vision lacking complete fulfillment in the final form of the completed book of Isaiah. As the rabbis once remarked, the book of Isaiah is a vision of future promise ("all consolation," *b. Bat.* 14b), following a book full of doom (Jeremiah) and one of doom and promise mixed (Ezekiel). In the confession of the Christian Church over the ages, the Church's messianic hope has been "filled full" in Jesus of Nazareth. The King of Peace has, however, only inaugurated the age of weal proclaimed by this great prophet. The final fulfillment of God's word proclaimed in the vision of Isaiah forms the centerpiece of Jewish and Christian hope for the future and God's ultimate reign on earth. In a very real sense, the book of Isaiah presents a prophet who is both forth-teller and fore-teller, and it would be wrong to focus on one dimension of that portrayal to the exclusion of the other. The historical dimension gives rise to the eschatological, and they must be allowed to illuminate and enrich one another.

D. Conclusions

First Isaiah is a rich and complex tapestry of prophetic proclamation and secondary interpretation. Form criticism is right to locate the origin of that proclamation in the oral speech of the man Isaiah addressing events in his day. Direct referential readings appropriately search for signs of larger structure and purpose in the present literary organization of these chapters. However, the logic of that structure is not to be sought in the chronological movements of the historical Isaiah but in certain understandings of how Isaiah, time, and God's work with Israel will operate for generations of new interpreters.

Against more radical redactional approaches, the final structure of First Isaiah is not thoroughly haphazard, resulting from the sporadic accretion of modifying interpretations from hands uninterested in mutual coordination. Redactors of chapters 1–39 have worked with certain recognizable principles which honor the original proclamation of the man Isaiah on the one hand, but also seek to hear in his word something of God's larger purpose for Israel, the nations, and the cosmos on the other. The result is more than an erratic literary potpourri, demanding complex reshuffling and explanation; rather, redaction has been carried out *synthetically*, in such a way that new levels of interpretation are allowed to function integrally with sections of text that gave rise to them. That the process is not everywhere uniform and without seam is testimony to the fact that the book of Isaiah is more than the prophet's personal diary or memoir. Here, redactional analysis has simply pointed out a truth about prophetic literature difficult for direct referential readings to parry. In its zeal for spotting disjuncture and modification, though, redactional analysis frequently stops too short, failing to recognize attempts at synthesis and coordination in the final form of the literature.

Larger structural principles can be detected in First Isaiah. As in Second Isaiah (see below), one can speak of these as polarities. The two major prose sections of Isaiah are cases in point (6–8 and 36–39). These offer a studied contrast between proper and improper patterns of behavior and response to God's word under pressure, especially true for the royal house but by no means restricted to Israel's kings Ahaz and Hezekiah. In First Isaiah, Hezekiah presents a model for obedience and prayerful trust in stark contrast to his predecessor Ahaz.

Related to this, First Isaiah holds up two key moments in history as particularly illustrative of God's work with Judah/Jerusalem and Israel: the Syro-Ephraimite threat of 734 B.C.E. and the 701 Assyrian assault. Within a much broader range of historical events, involving Babylon and Persia and a host of nations (13–27), these two events are especially noteworthy. Lack of trust in the royal house and in Judah at large, before, during, and after this first crisis, sets in motion a much broader series of events in Israel's history, involving the fall of Samaria, increased Assyrian hostility, and finally the 701 invasion itself. Hezekiah's proper response in the crisis retards an even larger design for cleansing judgment revealed in chaps. 13–27/34–35 and repeals the immediate word of judgment of chaps. 28–33. But the final word of First Isaiah chapters indicates that very shortly the Babylonians will arise to replace the Assyrians thwarted by Israel's faithful king and God. Here, a third polarity, or pairing, is to be seen as Assyria and Babylon function as successive instruments of judgment in God's dealing with Israel and the cosmos.

Finally, one must also speak of the polarity of judgment and promise woven into these chapters. Judgment comes at numerous points, and for countless reasons, in the relentless "here a little, there a little" (28:13) of God's dealings with an unjust people, through events of ANE history, and through events more mundane. For First Isaiah, the judgment is always a cleansing one with a broader goal and final purpose. This has everything to do with the prophet's conception of Zion and what Zion means from God's standpoint. Zion is not an inviolable fortress offering sure defense against all foes. Zion is God's own abode, and the nations frequently do God's explicit

bidding. This combination means that God fights both for and against Zion, depending on its internal state and the state of its king and people. Lack of faith and justice within Zion means inevitable judgment.

First Isaiah is not willing to let this be the final word, for God's ultimate purpose revealed to the prophet indicates a day of proper rule, peace among nations who worship Israel's one Lord at Zion, and the full restoration of a creation wracked by bloodshed and the forces of chaos themselves. This day may live beyond the horizon of Isaiah's own time, but sufficient is the vision and clear are the signs of near fulfillment granted to him.

Ahaz and Hezekiah, the Syro-Ephraimite and Assyrian assaults, Assyria and Babylon, and judgment and promise represent four pairings in the final structure of First Isaiah. These pairings function within a temporal design spanning several centuries, set forth not by means of linear consecution, beginning with chapter 1 and concluding in chapter 39. Nevertheless, the temporal scheme is recognizable and functions clearly in the final literary presentation of First Isaiah chapters.

CHRISTOPHER R. SEITZ

ISAIAH 24–27 (LITTLE APOCALYPSE)

At one extreme, Isaiah 24–27 has been identified as a late postexilic apocalyptic work (Duhm *Jesaja* HKAT, 172–94). At another, it has been read as preexilic prophetic judgment literature thoroughly at home in the work of First Isaiah (Kissane 1941: 276, 303). Between these posi-

tions, it has been understood as prophetic eschatology (Lindblom 1938) or early apocalyptic (Hanson 1979: 313–14). Isaiah chaps. 24–27 are important 6th-century passages that offer insights into the origins of apocalyptic; hence our label, proto-apocalyptic.

If we assume that First Isaiah was the founder of a school of prophecy, perhaps with royal support, given First Isaiah's easy access to kings Ahaz and Hezekiah and Isaiah's belief that Zion would not fall to the Assyrian threat (37:34–35), and if we assume that chaps. 24–27 owe their current location in the canon of Isaiah to the reference to Moab (25:10) so that these chapters were editorially grouped with other oracles against foreign nations, it becomes possible to reconstruct a context for the interpretation of these chapters. Given their belief in the inviolability of Zion, Jerusalem's fall would have presented the members of the school of Isaiah with a major theological problem demanding a solution. Our suggestion is that the writer of Isaiah chaps. 24–27 was a member of the school of Isaiah who used material from an older oracle against Moab, inspired by but moving beyond Second Isaiah, to seek a solution to the destruction of Jerusalem, our identification of the destroyed city. Note a similar use of an oracle against Edom in chap. 34, producing what can be labeled proto-apocalyptic writing.

The secondary literature interpreting Isaiah 24–27 has centered on three interrelated issues: (1) the problems presented by the text and its structure; (2) the problem of literary genre; and (3) the difficulty in establishing the historical setting. Using the relatively objective controls of prosodic and thematic analyses of the text, it is possible to offer the following interpretation of these chapters.

A. Text and Structure

There is a stratum of poetry in Isaiah 24–27 that can be compared with the best in Second Isaiah. These poetic units are Isaiah 24:1–16a, 24:16b–25:9, and 26:1–8 (Millar 1976: 23–49). The most common prosodic pattern in these units is the alternation between bicola and tricola. Within a tight syllabic symmetry are couched many examples of paronomasia, alliteration, assonance, chiasm, *inclusio,* and climactic and repetitive parallelism. We would argue on the basis of the similarities in prosodic style to Second Isaiah that these units form the earliest material of Isaiah 24–27 and can be dated close to the time of Second Isaiah.

Typologically, the prosodic style of Isaiah 26:11–27:6 is different (Millar 1976: 49–58). The meter is mixed. The poetry is not as good as that encountered in the former units. We would conclude on prosodic grounds that the passages of 26:11–27:6 were composed later.

The prose of 27:12–13 would appear to be later still (Millar 1976: 58–59). We have deleted 24:5, 24:20b, and 26:9d–10 as editorial expansion. In each case they interpret what can be read as an earlier text. As yet, Isaiah 27:9–11 does not yield to our prosodic analysis, so it is not included in this summary.

Regarding structure, our study of the themes of Isaiah 24–27 (Millar 1976: 65–70) has revealed the frequent use of portions or all of the following thematic pattern: threat, war, victory, and feast (a Divine Warrior hymn). In what we have identified on prosodic grounds as the earliest layer—24:1–16a, 24:16b–25:9, and 26:1–8—this thematic pattern conforms to the poem's own content; that is, the poems themselves seem to have been created with these themes in mind. This, again, would place them typologically prior to what we find in 26:11–27:6.

In Isaiah 26:11–27:6, the forms are more mixed. There appear to be traces of a lament of the people (26:16–20), a salvation oracle (26:21), an ancient Divine Warrior hymn (27:1), and a modified Song of the Vineyard (27:2–6). They have been arranged, however, according to the basic thematic pattern we have discerned in the earlier material. We suggest, then, that the author or editor was readapting other relevant materials he had, according to the pattern suggested above. These materials probably circulated independently prior to their current use in Isaiah 24–27.

The prose passage of Isaiah 27:12–13 and editorial expansions at 24:5, 24:20b, and 26:9d–10 could have been added at that time when Isaiah 24–27 was joined to the collection of oracles against the nations found in the larger context of Isaiah.

B. Genre and Date

The prosodic style of Isaiah chaps. 24–27 and their themes, both separately and in pattern, do establish a literary context for us to understand these chapters. The author emerges as one very much influenced by the work of Second Isaiah; one who shared in Second Isaiah's visions for the reconstruction of Israel. For that reason, we label the genre of Isaiah 24–27 proto-apocalyptic. A 6th-century date is not unreasonable. We would place the earlier portions of the chapters closer to 587 B.C.E., the fall of Jerusalem, than to 520 B.C.E., the temple controversy.

C. Historical Setting

Identification of the destroyed city as Jerusalem would make sense with the textual and thematic data gathered above. The fall of Jerusalem touched off a profound search for meaning and explanation. Why would Yahweh allow his own city to be destroyed? The language appropriate to such a search for meaning was myth. One witnesses in the literature of the period a ground swell in the use of mythic patterns and images to interpret the tragic events of the day. Second Isaiah was particularly instrumental in reusing mythic materials to interpret God's action in the events.

The pattern of the Divine Warrior hymn reemerged with its full power. It provided an explanation for the destruction. Chaos was reasserting its destructive power. The fall of Jerusalem was part of the collapse of creation and return to chaos (24:10). The Divine Warrior hymn also provided hope in that one day Yahweh, the Warrior Deity, would reaffirm his position as king on his mount (24:23); hence, shouts of victory and hymns of praise (25:1–4c). Hope for victory was held even within a description of the devastated city of Jerusalem and a shuddering earth. From his mountain, Yahweh would prepare a feast for all peoples, a feast at which the power of death and chaos would be consumed forever (25:6–8).

Isaiah 24:1–16a, 24:16b–25:9, and 26:1–8 shared the visions of a restored Israel with Second Isaiah, though the author did move beyond the vision of the events taking place within plain history. The power of myth to see

beyond the limits imposed by historical events was beginning to take hold. Yahweh was preparing his feast for *all* people. *All* the kings of the earth were being caught up in this return to chaos that was to be a prelude to a new creation (24:21).

Isaiah 26:11–27:6 was added to the earlier materials as the delay of Yahweh's victory became apparent to some of Isaiah's disciples. The reference to the destroyed city trampled by the faithful (26:6) could have been introduced into the earlier poems as the tensions between the contending parties in postexilic Israel increased (see Hanson 1979). For the Isaianic visionaries, the Jerusalem of reality and the Zion of faith remained separate. As Jerusalem was defiled by oppressive leaders (possibly Aaronid Zadokites), Mushite Levites pushed to peripheral status may have believed that the city deserved Yahweh's continued wrath. The hope was strong, however, that one day Israel would truly be restored along the lines envisioned in Isaiah 60–61.

It was in the years of exile and shortly thereafter that the apocalyptic movement was born. Isaiah chaps. 24–27 constitute one of those important passages that offers us insight into the dynamics of that birth.

SECOND ISAIAH

The designation Second Isaiah for chaps. 40–55 of the book of Isaiah has gained currency in the last century. The conclusion that these chapters form a unit of separate origin from the preceding thirty-nine chapters is compelled by their language and by numerous details of their content.

A. Designation, Contents, and Text

1. Designation. Chaps. 40–55 are a distinct segment within the sixty-six chapters of the scroll, or book, of Isaiah. Chaps. 36–39 (except for 38:9–20) were taken from 2 Kgs 18:13–20:19 at one stage in the compilation of the scroll in order to serve as an appendix to the works and writings of Isaiah of Jerusalem, who lived from the mid-8th to the early-7th centuries B.C. To be sure, not all of chaps. 1–35 are from Isaiah, yet the appendix closes off that part of the work.

The historical context of chaps. 40–55 differs entirely from that of chaps. 1–39. The enemy of Israel is the Neo-Babylonian Empire (626–539 B.C.; cf. chaps. 46; 47; 48:20–21), not the Neo-Assyrian Empire of Isaiah (935–612 B.C.; cf. chaps. 10; 14:24–27), which collapsed with the destruction of Nineveh in 612 B.C. The gentile king in chaps. 40–55 is Cyrus of Persia (fl. 560–530 B.C.; cf. 41:2–3, 25; 44:24–45:13; 48:14), not the Assyrian king of Isaiah (10:5–19). The people are in Babylon, not in Isaiah's 8th-century Jerusalem; the message is to leave Babylon, cross the desert, and return to Zion.

The difference in locale and themes must have been apparent to careful readers of the book in every age; indeed, the medieval Jewish scholar Ibn Ezra constantly noted them in his 12th-century commentary. He subtly raised the question of non-Isaian authorship for the chapters. However, such observations had little effect. A major reason that the unity of Isaiah went unchallenged for so long was a centuries-old unexamined theory of verbal inspiration: the sacred author wrote at the dictation of God or the Holy Spirit. This theory allowed readers to assume unity of authorship despite obviously different historical contexts; events later than Isaiah were considered to have been shown to him in vision. Inevitably, post-Renaissance critical scrutiny of ancient documents, rising historical awareness, and the skepticism of the Enlightenment challenged the unexamined tradition that Isaiah of Jerusalem wrote all sixty-six chapters in the 8th century.

Challenges to the unity of authorship are recorded as early as 1775, when J. C. Doderlein used the name Deutero-Isaiah for chaps. 40–66 in his *Esaias. Ex recensione textus Hebraei.* In 1780, J. B. Koppe, a Göttingen professor, argued in his preface to the German edition of Robert Lowth's translation of Isaiah that chaps. 40–66 had been written in the Babylonian Exile. In the 1793, E. F. K. Rosenmüller (anticipating Duhm a hundred years later) suggested in his *Scholia* that 42:1–7; 49:1–5; 50:4–10, and 52:13–53:12 were added to the book, and that 53:2–12 were the work of a postexilic poet (Rogerson 1984: 23). J. G. Eichhorn (1752–1827) in his widely used *Einleitung in das alte Testament* (1st ed. 1780–83) energetically championed the view that the book was not written by one person, but was rather an anthology of material from the 8th century to postexilic times. Of chaps. 40–52 he wrote: "In the series of oracles just mentioned the Babylonian exile is the general setting; the poet speaks as if he lived in exile, as if he spoke to the exiles who, in the delay of their return to the homeland, doubt whether the promise of their old prophets will be fulfilled. Must not the author of the consoling tradition contained in them have lived in the exile?" (Eichhorn 1803: 69). Nearly a century later, Bernhard Duhm's influential commentary on Isaiah (HKAT,

1892), succeeded in persuading most critical scholars that chaps. 56–66 were from a postexilic Third Isaiah. In contrast to Second Isaiah, he noted, the Jewish community is founded, Jerusalem is inhabited, and the temple is rebuilt. The people are unhappy, the rulers are ineffective, the rich oppress the poor; Yahweh has no instrument like Cyrus but promises to act alone to uphold the righteous, rebuild the city, and bring back the remaining exiles (*Jesaia* HKAT, 418).

That a 6th-century author, name unknown, wrote chaps. 40–55, and another author or authors, also anonymous, wrote chaps. 56–66, is now accepted by all but a scholarly minority, who hold out for the unity of Isaiah. Some scholars believe that chaps. 34–35 and 60–62 are also from Second Isaiah because of their themes and elevated style. In any case, two or more prophets who stood in the tradition of Isaiah of Jerusalem addressed Israel in the 6th century. Their speeches were added to the Isaiah collection some time between the 540s (the date of Second Isaiah) and the 3d or 2d century B.C., when the Greek translation (LXX), which witnesses to the present order of chaps. 1–66, was made. It is usually assumed that chaps. 40–55 were appended very early in that time span.

2. Contents. Second Isaiah urges his fellow exiles to regard Babylon as their ancestors had regarded Egypt and to depart with him on a new Exodus and entry into Zion, by which acts they will become Israel once again. His program is clear and pervades all the speeches. The speeches, by their nature occasional and responsive to audience moods and changing circumstances of which we are not well informed, do not appear to be arranged according to an overarching design. There is, however, some indication of arrangement. The opening commission of the prophet to announce God's new act of restoring Israel to Zion (40:1–11) is echoed by the last scene, the invitation to banquet in Zion. Cyrus, the instrument of return, is mentioned only in chaps. 41–48; Zion is in the forefront from the speech of 44:24–45:13 to the climactic chap. 55. The first trial scenes about the nations in 41:1–42:9 are described in detail; later trial scenes (43:9–44:5; 44:6–23; 45:20–25) seem to presuppose that the reader is familiar with the first detailed scene. Passage 48:20–21, the short, urgent call to leave Babylon, seems to close off chaps. 40–48, the first section. The other striking exhortation to depart, 52:11–12, may end another section; at any rate the immediately following section (52:13–53:13) abruptly rises to a new level.

Descriptions of the contents of Second Isaiah will differ according to whether scholars assume there were originally a few speeches of extended length, or originally dozens of brief, even fragmentary, pieces. Some commentators who posit originally short units for the prophets grant that redactors made kerygmatic units from the original short utterances (Melugin 1976). The description of the contents below describes the larger units, leaving open the question of whether the units are the work of Second Isaiah or later redactors.

The prophet is commissioned in 40:1–11 in a heavenly ceremony, reminiscent of Isaiah's commission (chap. 6). The major difference between the two commissions is that in chap. 40 God announces not destruction but salvation: a new Exodus-Conquest, a triumphant procession through the wilderness interposing itself between Babylon and Zion, the true homeland. The book then attacks the causes of the popular discouragement preventing the new Exodus (40:12–31) in a disputation, a series of Joban questions (cf. Job 38–41) designed to show that nothing can hinder Yahweh's saving purpose; neither the nations (vv 12–17), nor the gods represented by statues and kings (vv 18–24), nor any member of the heavenly court (vv 25–31). A great trial between Yahweh and the gods, Israel and the nations, takes place in 41:1–42:9; Yahweh, in two parallel scenes (41:1–20 = 41:21–42:9) judges the nations and their gods (in their cultic images) to be in the wrong, and upholds Israel as his image and servant. Chaps. 42:10–43:8, though usually subdivided into small units on the basis of diverse genres, form a single celebration of Yahweh's victory over chaotic waters and primordial night (vv 10–16); Israel, blind because of that night, will have light for the journey (vv 18–20). Israel's punishment is deserved, as inflicted by Yahweh (vv 21–25). Now, however, the people are to return to Zion (43:1–8).

The next major section, 43:9–44:5, reminds Israel it is to be God's witness to the nations of Yahweh's supremacy by its reenactment of the Exodus-Conquest; up to now it has refused to live up to its vocation. In 44:6–23, Israel is called to be a living witness to the living and victorious Yahweh, in contrast to the inert witnesses, the manufactured statues of the gods that represent powerless deities. In the poem, 44:24–45:13, Cyrus is central. Though he has been referred to in 41:2–3, 25, as Yahweh's instrument, he is mentioned by name for the first time in 45:1 and is given the task befitting the anointed (messiah) of the victorious deity. He is the king appointed by Yahweh to carry out his plan for Israel, as the Assyrian king had carried out the divine will regarding Israel in the days of Isaiah. The next large unit, 45:14–25, is closely connected to Cyrus' commission from the preceding section; in the ANE, rebuilding the temple city was the task of the regent of the victorious deity. Zion, the goal of the return, will not be left in ruins in the new event.

Chaps. 46 and 47 contrast dramatically with the two preceding sections. The holy city of Babylon will be destroyed as its inhabitants carry out the statues of its powerless gods; Yahweh always carries Israel (chap. 46). Dame Babylon's disgrace is the polar opposite of Dame Zion's: reunion with her husband and children. Chap. 48 powerfully urges the people to be ready to act in the new creative event. The past creative event was accompanied by a word, which both interpreted it and invited the people to take part. Second Isaiah's word now interprets Cyrus as the agent of the new event and invites the people to leave Babylon in a new Exodus. Chapters 40–48 form a section, discernible in its focus on Cyrus as Yahweh's agent.

In the second great section, chaps. 49–55, Zion, Babylon's counterpart, exerts an increasingly powerful hold on the prophet's imagination. In chap. 49, the servant is gently persuaded, as Moses was, to lead the people in a new Exodus-Conquest; correspondingly, Zion is gently persuaded to believe her children will return. Chaps. 50:1–51:8, again often subdivided into several discrete units, explain how God was present to authentic believers in the night of Exile and will be even more present in restored Zion. Chaps. 51:9–52:12 adapt the elements of a national

lament to pray that Yahweh defeat the foe and bring the people to Zion. As Yahweh once defeated the sea to bring his people to Zion, so may he again defeat the historic and suprahistoric oppressors of Zion. The fourth servant song in 52:13–53:12, unparalleled in the OT, vindicates the servant who risked everything to obey God's word. The people are amazed to see the despised servant bearing their sins and receiving his reward. Chap. 54 extols Zion, the goal of the Exile, now restored with husband, children, and buildings. Chap. 55 invites all to come to Zion to the banquet, and from that holy shrine, to witness to Yahweh's victory that brought them there.

3. Text. The Hebrew text of Isaiah is comparatively well preserved. The modern printed Hebrew text is based upon relatively late manuscripts, of the 10th and 11th centuries A.D., products of the Masoretic copying and vocalizing of the several preceding centuries. The essential reliability of the printed text is amply demonstrated by the Qumran scrolls of a millennium earlier, the oldest extant Hebrew manuscripts of Isaiah; the most important are the virtually complete 1QIsa^a, written about 140 B.C., a vulgar text, with plene spelling, and 1QIsa^b, of a century and a half later, with sparer vocalization. The latter, preserving portions of chaps. 7–66, stands somewhat outside the other seventeen Qumran manuscripts and fragments of Isaiah, which show that the book's textual tradition was already standardized by the 2d century B.C. 1QIsa^b is variously assessed, but its readings seem secondary to the MT in most instances where the two diverge, and it has no real kinship to the Hebrew prototype of LXX Isaiah. The Qumran manuscripts of Isaiah, therefore, witness to a full, even expansionistic, textual tradition. The same tradition, sometimes called "proto-rabbinic," will show up in the standardized MT of several centuries later. There is no evidence of variant textual families for Isaiah, in contrast, say, to the textual tradition of Jeremiah.

The Old Greek translation (OG) was made some time between the late 3d and mid-2d centuries B.C. The best witness to OG is the group of manuscripts represented chiefly by the uncials A and Q, frequently S and S^c, with important confirmation from the fragmentary Chester Beatty papyrus 965. This is J. Ziegler's Alexandrian group. Ziegler's second recensional group, the Hexaplaric, is theoretically the result of Origen's editorial activity of the second quarter of the 3d century A.D. and is of less value in reconstructing the OG; chief witnesses are the Hexaplaric uncials BV, with the minuscule 88, and the Syrohexapla. The OG for Isaiah is free, bordering on paraphrastic, rendering meaning for meaning, not word for word; it frequently misunderstands the Hebrew and smooths over difficult passages.

The Syriac, as frequently, is very close to the Hebrew. So also is the Aramaic Targum, which was given its final form in Babylonia in the 5th century C.E., though it was preceded by earlier Targums.

The evidence from the extant witnesses, therefore, is that the text of Isaiah was clearly established at least by the 2d century B.C.

B. Second Isaiah and His Times

1. The Prophet in Chaps. 40–55. Unlike other prophetic books, Isaiah chaps. 40–55 have no introductory heading like "The vision of Isaiah the son of Amoz, which he saw concerning Judah and Jerusalem in the time of Uzziah, Jotham, Ahaz, and Hezekiah, kings of Judah" (Isa 1:1); nor are there narratives of his life and ministry, like Isaiah 6–3; 20; 21:15–25; 36–39 and the biographical sections of Jeremiah and Ezekiel. We have only the speeches.

Though they provide little biographical information, the speeches do permit fairly precise dating. They assume that the readers or hearers know that Cyrus, king of Persia, will soon conquer the Babylonian Empire. Such an assumption was only possible after Cyrus deposed his sovereign Astyages in 550 B.C., incorporating Media into the Persian Empire, and conquered Lydia in 546 B.C. That conquest, along with the palpable decline of the Babylonian Empire, signaled one of those great changes of fortune that every so often reshaped the ancient Near East. The speeches do not mention the entry of Cyrus' army into Babylon in 539 B.C. The speeches were therefore given in the 540s B.C.

It is reasonably assumed, because of the immediacy of his preaching, that the prophet lived in Babylon, in one of several exiled Jewish communities of the time. His message consistently is addressed to the Babylonian community (cf. esp. 48:20; 52:11–12; chaps. 46; 47), inviting them to join him in a new Exodus-Conquest (esp. 49:1–12).

The prophet's references to himself are few and in conventional terms, making it difficult to reconstruct even a biographical sketch. He announces that his divine commission (customary in prophetic books to establish the prophet's authority) took place as he attended a session of the heavenly court. There he overheard Yahweh announce that the time of salvation was replacing the time of punishment (40:1–11). The prophet's report of attending the divine assembly and hearing its decrees is a traditional component, attested for the 9th-century prophet Micaiah ben Imlah (1 Kgs 22:19–23) and for Isaiah in the 8th century (chap. 6). In 40:6, the prophet is told: "Announce!" He immediately asks how he can do so, since the people whom he represents are like withered grass. His lament for the people, (like Isaiah's of 6:11) is part of the process that makes him into the extraordinarily confident proclaimer of Yahweh's saving plan. No other prophet speaks from such a coherent and grand vision.

Other references to the prophet are in the "servant songs" (Duhm's term): 42:1–4; 49:1–6; 50:4–6; 52:13–53:12, already noted by E. F. K. Rosenmüller in his *Scholia* of 1793 as witnessing to the prophet and his office (Rogerson 1984: 23). Again, it is difficult to ferret out biographical details because the passages are conventional and because the people's vocation is intertwined with the prophet's. Moreover, many scholars, following Duhm, regard the passages as later insertions either from Second Isaiah or from another hand. In 49:1–7, the prophet's call is narrated in imitation of the calls of Moses (Exodus 3–4) and of Jeremiah (Jer 1:4–10). Chap. 50:4–6 suggests that the prophet saw his own exilic suffering as part of the divine plan of punishment, and faithfully submitted to it, like the author of Lamentations 3. If, as seems likely, chaps. 52:13–53:12 are to be attributed to Second Isaiah, the prophet was rejected by his fellow Israelites, undergoing even a deathlike experience, if not death, before being

given the great prize, a share in the holy land. A single verse, 48:16, states that "now the Lord Yahweh has sent me, endowed with his spirit." The prophet here sees himself as the one who provides the interpretive word accompanying the new creation and new Exodus-Conquest.

The very position of chaps. 40–55 after chaps. 1–39, and the anonymity of the author, argue that the prophet, or the disciple who appended the passage, understood his preaching to be continuous with Isaiah, perhaps even revealing the contents of the scroll of 8:16–20 and 30:8 and of the secret of the darkness-light sequence of 8:22–9:1. Quite possibly, the absence of biographical detail was deliberate, to show that the speeches actualize the ancient Isaian tradition for the exiles (Childs *IOTS*, 325–33).

2. History of the Period. That chaps. 40–55 were written in Babylon in the 540s B.C. is the position of the vast majority of scholars today. Chaps. 56–66 are apparently addressed to a community that has returned to Jerusalem to rebuild the community and the temple; allusions to Second Isaiah show that the speeches of that prophet were still alive in the period from 538 to 515 B.C., the time of the rebuilding of the community and the temple.

The exile of segments of the population of Judah to Babylon, Nippur, and other areas of Mesopotamia has its beginnings in the last two decades of the preceding century. The Josianic renaissance and attempted restoration of the boundaries of the old Davidic empire beginning in 621, permitted by the decline of the Neo-Assyrian Empire (935–612), collapsed with Josiah's death in battle in 609. The Neo-Babylonian Empire (626–539) quickly took over Assyria's rule of the Levant.

Babylonia, or S Mesopotamia, had become dominantly Chaldean during the last years of the Neo-Assyrian Empire. A Chaldean sheikh, Nabopolassar (fl. 626–605), organized this power politically into a dynasty. In 605, his son Nebuchadnezzar led the victory at Carchemish and in the same year inherited Assyria's western empire. Governing the W states from Babylonia was no easy matter. Egypt consistently enticed the states to rebel but retreated whenever the Babylonians came west to retaliate, leaving her allies to bear the brunt of punishment and taxation. Josiah's successor, Jehoahaz, reigned but three months in 609 before the Egyptians replaced him with Jehoiakim (609–598). At first pro-Egypt, Jehoiakim shifted to Babylon after the victory at Carchemish, then shifted back to Egypt in 601. In 598 he died, leaving his son Jehoiachin to face the avenging Babylonian army. After three months, Jehoiachin and many other Judahites were deported to Babylon (2 Kgs 24:15–16), the first of three such deportations recorded in the Bible, the others taking place in 586 (2 Kgs 25:11) and 582 (Jer 52:30). Jehoiachin was replaced by Zedekiah (597–587), who again wavered between Babylon and Egypt, provoking Nebuchadnezzar's destruction of Jerusalem in 586.

With the deportations, the creative center of Jewish life shifted from Jerusalem to Babylon. Judah and Jerusalem were left desolate; we are not well informed about life there. The most important historical sources for Jewish life in the Exile are the 650 cuneiform tablets from the business house of Murashu in Nippur, written between 445 and 403 B.C., over a hundred years after Second Isaiah. Jewish names occur in about 8 percent of the published documents; in the absence of ethnic designations, scholars must rely on the Yahwistic elements in the names, an uncertain guide. From the names, Jews appear to inhabit 28 of the approximately 200 settlements in the whole region of Nippur. There seems to have been no exclusively Jewish corporations *(ḫatru);* individual Jews belong to various organized groups, e.g., carpenters, settlers on certain lands. Some held military fiefs, being liable for conscription in time of war. They appear to have been integrated into the agricultural system; men with Jewish names work side by side with native Babylonians. It is probable, however, that Jews were able to maintain their own institutions alongside civil institutions, like the separate groups, Gk *politeumata,* which in Hellenistic times coexisted with the civic body within the same city. Fathers with Yahwistic names have sons named after Babylonian gods, and sons of fathers with Babylonian names bear Yahwistic names. Such naming indicates the willingness of many to follow the syncretistic custom of the ANE: to worship the local gods along with their ancestral god (*CHJ* 1: 342–58). In spite of pressures to conform, the Jewish community in Babylonia managed to maintain its identity and, among other achievements, produced literature such as the prophecies of Ezekiel and Second Isaiah and edited the Pentateuch and the Deuteronomistic History.

The literature produced in the Exile pointed toward the holy land as the people's rightful place. The Pentateuch ended with Israel in the plains of Moab, poised for entry, listening to the words of Moses—ready, it seems, to enter the land. Second Isaiah's preaching was similarly addressed to the immediate situation and points to Zion as the people's true home; Cyrus' defeat of Babylon was the sign to return, the "appointed time of favor" (49:8). The people must "go forth from Babylon, flee from Chaldea" (48:20).

Second Isaiah's interpretation of 6th-century national and international events draws heavily on First Isaiah's interpretation of the nation and the great empires. An understanding of the 8th century and of First Isaiah's interpretation is therefore essential. When Isaiah was a young man, the Neo-Assyrian Empire began to intrude into the territory of Israel and Judah. Tiglath-pileser III (745–728) made his first great western campaign in 743–738. A coalition of W states under Uzziah of Judah was defeated, leading to the payment of tribute. A second campaign in 734–732 resulted in Gilead, Galilee, and Damascus becoming Assyrian provinces. Pro- and anti-Assyrian parties thereafter entangled the politics of Israel. Menahem of Israel paid tribute to Tiglath-pileser in 738. The anti-Assyrian Pekah (736–732) assassinated Pekahiah and then, in 734, joined with Rezin, king of Aram, in an unsuccessful attempt to force neutral Judah to join their anti-Assyrian coalition. Consequently, Hosea (732–723) was appointed king of Samaria by the Assyrians. Relying on Egyptian aid, he rebelled in 725, which precipitated the destruction of Samaria in 722 by Sargon II, and the deportation of 27,290 Israelites (*ANET,* 284). In the south, Judah managed to carry out a religious reform under the strong Hezekiah. Like the renaissance under Josiah a century later, it sought a revival of national life and a restoration of the boundaries of the ancient Davidic empire. Hezekiah's own coalition against Assyria, however, did not

prove long-lasting. In 701, he found himself besieged in Jerusalem, "like a bird in a cage," according to Assyrian annals (*ANET,* 288). Though Jerusalem was not destroyed, Hezekiah had to capitulate, his heavy tribute ending dreams of a return to the glorious days of old.

First Isaiah's interpretation of 8th-century events, the role of the Assyrian king as Yahweh's instrument in punishing, Zion as the privileged site of a renewed people, and the ultimate punishment of the nations for exceeding their mandate to punish Judah, all deeply influenced Second Isaiah's interpretation of the Babylonian Empire, of Cyrus the Persian, and of the renewal of the people.

First Isaiah's interpretive framework for 8th-century history proved useful for Second Isaiah's interpretation of mid–6th-century national and international history. The masterful Nebuchadnezzar died in 562 and was replaced by his son Amel-Marduk (biblical Evil-merodach), who released the long-imprisoned Davidic scion, Jehoiachin (2 Kgs 25:27–30; Jer 52:31–34). The release of the king did not apparently stir messianic hopes in Second Isaiah as it did in other exiles; his vision has no place for a Davidic messiah.

Nergal-sharezer (biblical Neriglissar; 539–536) was succeeded by Labashi-Marduk, after whose brief reign Nabonidus (555–539) came to the Babylonian throne; he was to preside over the decline of the empire. Nabonidus' administrative and religious reforms were unpopular in Babylonia; chief among the latter were his championing of the cult of the moon god Sin at the temple he rebuilt in Harran. Not yet satisfactorily explained is his ten-year stay at the desert oasis of Teima in NW Arabia; during that time his son Belshazzar ruled in Babylon. In the king's absence, the new year festival could not be held, increasing the king's unpopularity.

As Babylon declined, a new figure came to the fore, Cyrus the Persian. The Persians were an Indo-European tribe who settled in the ancient territory of Elam. Their name is derived from Persua (modern Fars), one of their first strongholds. The Persian prince Cambyses had married the daughter of the Median king Astyages, from which union Cyrus was born. The Median army revolted against Astyages and handed him over to Cyrus around 550 B.C. Having consolidated his position in the east, Cyrus then led a campaign into Asia Minor against Croesus of Lydia, taking Sardis and making Lydia a Persian province in 546. His propaganda made him out to be liberal toward those whom he defeated. He treated Croesus well and won over the Greek colonies in Asia Minor. Nabonidus' unpopularity contrasted with Cyrus' popularity. Nabonidus' return to Babylon in 539 made possible the celebration of the New Year Festival, apparently for the first time since he had left for Teima ten years before, but the king's sacrilegious behavior in the ceremonies alienated the priests. The famous "Cyrus Cylinder" shows how their allegiance had shifted to Cyrus. In language akin to Second Isaiah's about Cyrus (cf. 41:2–4, 25; 44:24–45:13), it declares, "[Marduk] pronounced the name Cyrus, king of Anshan, declared him [lit. pronounced (his) name] to be (come) the ruler of the world. . . . Marduk beheld with pleasure his good deeds and upright mind (lit. heart) (and therefore) ordered him to march against his city Babylon" (*ANET,* 315–16). Second Isaiah shared this view of Cyrus as liberator and respecter of native religions, declaring him to be the anointed of Yahweh (45:1). In the fall of 539, Nabonidus fled and Cyrus' army entered Babylon without a battle. Cyrus himself later entered, forbade looting, and appointed a Persian governor, leaving native institutions and traditions undisturbed.

Soon after, Cyrus issued a decree, preserved in Ezra 6:3–5, allowing the temple of Jerusalem to be rebuilt, the cost to be paid from the royal treasury. Judah became the province of Abr Nahara in the Persian Empire, under a Persian satrap, or governor.

We are not well informed as to how many of the Babylonian Jews, by now seemingly well established in their new land, elected to return to their devastated homeland, where preexilic claims on the land were likely to be contested by new inhabitants. Some did, however, and most scholars are persuaded that chaps. 56–66 were delivered to those returnees, who struggled to rebuild their temple and community in the spirit of Second Isaiah's grandiose prophecies.

C. The Prophetic Tradition

1. The Literary Tradition. When Second Isaiah wrote, the prophetic tradition from which he spoke was already half a millennium old. According to 1 Sam 9:9, the designation "prophet" was first applied to Samuel of the late 11th century. The Deuteronomistic History (DH) saw Samuel as the last of the judges and the first of the prophets. In the account of the rise of kingship in 1 Samuel 1–15, Samuel speaks and acts as the first of a line of prophets; in the biblical conception, the first person in a line often exercised on a grand scale the office later exercised by successors. Samuel does three major tasks in 1 Samuel: he anoints kings and rejects them, thereby foreshadowing later prophets' authority vis à vis the king; he declares holy war, thereby foreshadowing later oracles regarding the nations and their relation to Yahweh; and he interprets the ancient Mosaic tradition for a new situation (kingship), thereby foreshadowing prophets' preaching of the law and of their reinterpretation of tradition. The last task, the prophetic right to interpret the tradition, has sometimes been neglected through scholarly overemphasis on the prophets as sent by God to speak the law in all its denunciatory force to a disobedient Israel. In 1 Samuel 12, however, Samuel is presented as carefully reinterpreting the new institution of monarchy within the Mosaic covenant; a similar interpretive task is done by later prophets.

Prophets subsequently included in the DH carry out routinely the prophetic tasks of the heroic original, Samuel. Nathan legitimates David and his project of building a temple (2 Samuel 7); he rebukes David (2 Samuel 12) and takes part in the anointing of Solomon (1 Kgs 1:38–40, 45). In the "writing prophets," the same general assignment of prophetic functions holds true, though with nuance for each.

The new emphasis in the 8th-century prophets is the conviction that Yahweh has found his people guilty of fundamental disloyalty and will punish them; the people have broken the covenant by worshiping other deities and by oppressing the poor. The task of each prophet is to announce the punishment and to ready the people for it. Later, prophets—Jeremiah, Ezekiel, and Second Isaiah—

who live through the destruction of the Jerusalem temple in 586 and the several deportations of thousands of its citizens consider that destruction and the deportations to be the long-awaited punishment of God. These prophets begin to ready the exiles to prepare for a return. From the prophets of the 8th to the 6th centuries, a three-stage scenario of Yahweh's dealing with the people can therefore be abstracted: the period of Israel's sins, the punishment, and the restoration. Though the emphases differ, and for some prophets the period of restoration is but dimly seen (e.g., as in Amos' "maybe" in 5:15), there is nonetheless a common outline to their preaching.

Second Isaiah's mentor, First Isaiah, and to some extent Micah, call upon a different tradition than the other writing prophets. The other prophets generally allude to the Exodus-Conquest and the traditions that surround it as the great act of Yahweh on behalf of the people. Isaiah draws on the Zion and Davidic traditions. According to the Zion tradition, Yahweh's domain is a holy mountain, towering over all else, impregnable to enemies, the residence of Yahweh and his client people. Outside of Isaiah, the tradition appears in the "Zion Songs" of the Psalter (e.g., Psalms 46, 48, 76). First Isaiah turns the tradition into preaching; Yahweh, not the enemy kings, will attack the city to purify it of sinners and vindicate the just within its walls (1:21–28). The tradition occurs frequently, e.g., 2:1–5; 4:2–6; 8:5–8; 14:24–27; 29:1–8; 30:15–26; chap. 33; 37:21–35. The Davidic tradition that Yahweh has placed his son on the throne to be a conduit of blessings for the people is also prominent in Isaiah (chap. 7; 9:1–7; 11:1–10; 29:1–8; 32:1–8). Scholars sometimes separate the Davidic tradition from the Zion tradition, but king and mountain are closely connected; Psalm 2 places "my king on Zion, my holy mountain" (v 6), and Psalm 89 speaks of the procession to the shrine (vv 13–18) where the installation of David takes place (vv 19–37).

By Second Isaiah's time, the prophetic literary tradition was well established. The prophetic corpus may even have been edited by his time. Previous prophets had reinterpreted the old Exodus-Conquest tradition according to which Israel had been installed in the land, and the Isaian tradition that Israel dwelt securely in Zion under a Davidic king. Instead of being secure in the land, the sinful people had to encounter God anew in a punishing act, after which there was to be a restoration.

2. The Social Role of the Prophet. The role of the prophets in Israelite society must be distinguished from the literary tradition of the prophetic scrolls. In the Deuteronomistic Historian's portrait of Samuel, the first prophet, Samuel's role is defined in relation to the king's traditional roles. The story of David, and of subsequent kings, describes the prophets similarly in relation to the royal office and also in relation to the priesthood and to other prophets. The prophetic books of the 8th to the 6th centuries show the prophet within the same configuration. Jer 18:18 associates Torah with priests, counsel with the wise, and the word with prophets. The verse shows a variety of related figures in the authority structure of Israelite society, in addition to the omnipresent royal authority.

As a group, prophets had a recognized role in society, which can be described as an "office." The role need not have been precisely defined nor official (even though some prophets seem to have been employed by royally sponsored shrines). The writing prophets' emphasis upon their commission by Yahweh, in the face of opposition, suggests they were outside the circle of cult prophets, whose authority was established by their sanctuary position.

If the social fabric of preexilic Israel included the prophet, cultic or otherwise, what happened to the prophet after the exilic destruction of kingship, temple, and priesthood, the institutions that "defined" the prophetic "office"? Paucity of sources makes a clear answer impossible. Ezekiel occasionally teaches the elders (14:1), and Jeremiah deals with kings and important officials. But the old configuration of authority—royal, priestly, prophetic—disappeared with the Exile, or at least was seriously eroded; and it is not clear how a prophet like Second Isaiah made his appeal. It is noteworthy that his preaching is treatiselike, as if its authority lay, not in its author's role, but in the speeches' power to persuade. In other words, since the prophet's role in the exilic social fabric was no longer clear, prophetic authority was transferred to the persuasive power of written speech.

D. Rhetoric and Genres

Second Isaiah is a skilled rhetorician, who presents his argument effectively. Limited space allows examination of only one element of his rhetoric: large-scale parallelism. For other techniques of exposition—chiasm, wordplay, rhyme, alliteration, and assonance—see *IB* 5:381–773.

Rhetoric organizes the tradition to persuade. The tradition that Second Isaiah uses is couched in the language and patterns of his people's daily life.

1. Parallelism. The speeches are poems, part of a rich and sophisticated tradition of poetry that predated the Israelites. The tradition made only slight use of rhyme, relying instead on alliteration, assonance, wordplays on triliteral roots, and especially parallelism of two (bicola), three (tricola), or more lines. Parallelism is the development of an idea by its repetition. Second Isaiah utilizes this virtually universal technique in Hebrew poetry in striking ways. Not only lines, but actors, scenes, and whole passages are repeated for emphasis or contrast.

Large-scale parallelism is not unique to Second Isaiah. In Exodus 7–12, Yahweh and his servants Moses and Aaron are deliberately paralleled with Pharaoh and his servants, the magicians. In Proverbs 9, Dame Wisdom and Dame Folly are artfully paralleled. In the ancient poem in Exodus 15, vv 1–12 and vv 13–18 form two matching panels. Second Isaiah, however, makes special use of the technique. Several of his speeches can be divided into two parts, the second part repeating with variations the first. The part 41:21–42:9 repeats with variations the pattern of 41:1–20, the sequence of summons to trial (41:1, 5–7 = 21–22b), legal questioning of the nations/their gods (41:2–4 = 22c–24), and the divine verdict on the nations and Israel (41:8–20 = 42:1–9). Chap. 48 can be divided into vv 1–11 (38 cola) and vv 12–21 (37 cola); in the first section, the Hebrew root *qr'*, "to call," is used three times in mentions of humans calling or naming themselves, and in the second section, three times of Yahweh calling Israel. Chap. 49 divides into vv 1–13 (55 cola) and vv 14–26 (52 cola), the former concerned with readying the servant for

a new Exodus-Entry into Zion, and the latter, with readying Lady Zion for her children's return. Verses 1–5 and 6–11 of chap. 55 are parallel exhortations to put aside profane conduct and enter the sanctuary for life-giving divine sustenance.

The five great polarities that structure Second Isaiah's message (discussed in E.2 below) are instances of large-scale antithetic parallelism. Zion, the residence of the true God, is portrayed with an eye to Babylon, the residence of false gods; the one is built up for her numerous children (40:9–11; 45; 49:14–26; 54; 55); the other is destroyed while her divine husband and children flee (chaps. 46 and 47). Yahweh is contrasted with the gods, Israel with the nations, the servant with the people, all in service of one overarching parallel: the first Exodus-Conquest/cosmogony and the new Exodus-Conquest/cosmogony.

Parallelism is particularly important for the prophet-orator's plan of action: leave Babylon and return to Zion (48:20–21; 52:11–12). It provides the redundancy necessary for effective oratory. Good oratory generally has a limited fund of ideas but develops them in a great variety of ways; parallelism of scenes, actors, and ideas make possible repetition without boredom.

2. Genres. The prophetic tradition was expressed by individual prophets in a variety of genres or forms. The ANE speaker or writer stood consciously within an ancestral tradition, defined in content and expression. Hermann Gunkel (1862–1932), from his work on Psalms and Genesis, correctly affirmed "that types in the literature of an ancient people play a much greater role than today and that the individual personalities of authors, which in modern literature are, or appear to be, everything, in antiquity step back in a manner quite bewildering to us" (*apud* Kraus 1982: 361). Prior to form criticism, Bernhard Duhm's watershed commentary had applied to the chapters the then-dominant *Literaturkritik* (derived from analysis of the Pentateuch) with important results. Among his literary-critical decisions was the separation of his "servant songs" (42:1–4; 49:1–6; 50:4–9; 52:13–53:12) and the idol passages (41:5–7; 46:6–8; 44:9–20), attributing them to distinct "sources." Duhm often appealed to the logic of the passages to reach his decisions about the extent of the individual speeches, and he aggressively emended and transposed verses.

Duhm's reliance on literary criticism and Western ideas of oriental logic did not suffice for analyzing the speeches; new criteria were needed. The criteria were partly supplied by a method developed shortly after Duhm's commentary appeared: form criticism, brilliantly worked out by Gunkel in his commentary on Genesis (*Genesis* HKAT) and later in his work on Psalms. Gunkel placed the study of Genesis on new and solid ground with his recognition of the traditional and even folkloric origin and transmission of the stories in Genesis. Analysis of genres such as *Sagen,* genealogies, and lists of peoples yielded a rich interpretive harvest in Genesis. In 1914, Hugo Gressmann applied the approach to Second Isaiah in an important article (1914). Ludwig Kohler borrowed some of the concerns of form criticism in his *Deuterojesaja stilkritisch untersucht* (1923). Most influential upon the modern generation was Joachim Begrich's concise and well-argued *Studien* (1938). Begrich advanced the form critical analysis, especially regarding the oracle of salvation. His synthesis has influenced modern interpreters, among them Claus Westermann, author of the most widely used modern commentary (*Isaiah 40–66* OTL).

Form criticism was applied to Second Isaiah at a time when the question of unit length was very much in need of a solution and when methods for analyzing the formal rhetoric of the speeches had not been clearly worked out. In the absence of the ordinary criteria for judging unit length in the prophets—superscriptions, third-person accounts, episodes—scholars tended to rely heavily on genre to provide clues to the length of passages. They sometimes failed to realize that an original author like Second Isaiah might incorporate several genres within one speech. Form criticism, nonetheless, has proved to be an indispensable tool in understanding the world of Second Isaiah, particularly in showing how innovative the prophet was regarding the tradition. Apart from isolated voices, the method remained dominant until James Muilenburg's 1956 commentary (*IB* 5: 381–773) introduced rhetorical criticism as a consistent approach. Even now it is the most common approach. Muilenburg successfully showed in general, if not in every case convincingly, that the prophet used several forms in one speech as he used several meters, and that to assume the extent of the form is the extent of the unit is faulty methodology.

The chief source of Second Isaiah's genres was the liturgical poetry of Israel: laments and the attendant oracles of salvation, thanksgivings, hymns, Zion, and victory songs.

Individual laments are the most frequent of the Psalter genres. They typically portray a drama with three actors. The speaker, oppressed by the "workers of evil," cries out to God for redress of the situation. In communal laments, the speaker recites before Yahweh the event that founded Israel in order to persuade Yahweh not to let the original event be annulled; the version of the event varies according to the nature of the event. In 51:9–52:12 Second Isaiah adapts the communal lament in preaching to lead the community to pray for the restoration.

Second Isaiah made extensive use of one element of the psalmic lament, the *Heilsorakel,* or assurance of salvation, delivered to the individual or community during the lament liturgy. Good evidence exists that laments were answered by a cultic official promising that God had heard the appeal and would help. This hypothesis explains the sudden change of mood in laments, e.g., "I will give thanks to Yahweh according to his vindication. I will sing of the name of the Most High," in Ps 7:18. Some laments seem to contain the actual oracle, e.g., " 'Because the poor are despoiled, because the needy groan, now I will arise,' says Yahweh" (Ps 12:5, an individual lament; cf. Ps 60:6–8 for an oracle of salvation to a group lament). Usually, however, the Psalter does not transmit the assuring responses, since it was the priest's part. Several extrapsalmic passages also suggest official responses to laments, e.g., 1 Sam 1:17, the priest Eli to the weeping Hannah; Judg 20:23, 27; Josh 7:7–15; 2 Chr 20:3–17.

Begrich synthesized earlier suggestions in his *Studien* of 1938, in which he found twenty-four such oracles in Second Isaiah, prophetic imitations of priestly oracles. To the prophet, Yahweh was formally answering the exile's la-

ments. An ideal structure can be abstracted: (1) the assurance of Yahweh's intervention (usually the subject is Yahweh and the verb is perfect); (2) clauses expressing the consequences of divine intervention and the reversal of the situation; and (3) the aim (the glory or acknowledgment of Yahweh). Westermann modified Begrich's conclusions, suggesting a distinction between oracles of salvation, given in response to individual laments, and proclamations of salvation, given in response to communal laments (*Isaiah 40–66* OTL, 13–15). Westermann proposed an ideal structure for his proclamation of salvation: (1) an allusion to the collective lament (e.g., "the poor and the needy are seeking water, there is none" [42:17]); (2) the proclamation of salvation: (a) God turns toward Israel; (b) God's intervention (specific, not general); and (3) the final goal. For Westermann, the proclamation of salvation is found only in Second Isaiah; unlike the oracle of salvation, which had a concrete *Sitz im Leben,* it is Second Isaiah's creation, born of his conviction that now God was responding to the communal lament of Israel. Antoon Schoors, who accepts the refinement of Westermann, proposes the following oracles of salvation: 42:8–13, 14–16; 43:1–4, 5–7; 44:1–5; 54:4–6, and the following proclamations of salvation: 41:17–20; 42:14–17; 43:16–21; 46:12–13; 49:7–12, 14:26; 53:1–6, 7–8, 9–14, 17–23; 54:7–10, 11–17; 55:1–5 (Schoors 1973: 38–45, 167–71). H. E. von Waldow's suggestion that the Deutero-Isaiah salvation oracles are real cultic oracles and not prophetic imitations of such oracles has not been widely accepted.

That Second Isaiah saw his prophecy responding to exilic laments is an extremely valuable insight, as is the noting of salvation and its goal. To many scholars, however, Westermann's distinction is too refined, and may grant the status of form to simple variations within a genre. Isa 55:1–5, for example, is not a proclamation of salvation but an invitation to a banquet, an amply attested genre in Ugaritic and in the Bible.

Moreover, the citation of Neo-Assyrian oracles to support the distinction between oracle and proclamation of salvation is perilous. Previous comparisons of Neo-Assyrian oracles have been excessively dependent on questionable translations of fragmentary and difficult texts; they cannot be used to provide OT parallels. In addition, prophecy is not attested in Babylonia. Extant texts are all northern, the products of the Neo-Assyrian religious world, which was quite different from the Neo-Babylonian world.

Other psalmic genres utilized by the prophet are less problematic. The thanksgiving, essentially a report of divine rescue, has been adapted in the fourth servant song (52:13–53:12). In the Psalms, the rescued and vindicated person tells the assembly, "the many," what God has done for him, in order that they too might praise God's mercy. In the song, "the many" speak of the rescue, whereas the rescued and vindicated person is silent. Hymns are also used by Second Isaiah. In 42:10–43:8 is an adapted song of victory, comparable to Psalms 93, 96, 97, 98, and 99; Psalms 96 and 98 are especially relevant, because of the nearly identical invitatory, of the role of Israel as witness, and of the call to the world, animate and inanimate, to ascribe the glory of victory to Yahweh alone. The victory is narrated by Yahweh in Second Isaiah. The most striking evidence of the genre in Second Isaiah is the hymnic participles, e.g., 42:5; 44:23, 28; 45:18–19; 46:10–11. Another category of Psalms drawn on in chaps. 40–55 is the Zion songs, e.g., Psalms 46, 48, and 76, which hail Zion as the impregnable divine dwelling, the site of Yahweh's self-disclosure, and the only proper gathering place of Israel. Zion songs are distinguished by their subject matter rather than their formal structure; their themes appear in 45:14–25; 49:14–26; 51:1–8; 51:9–52:12; 54; and 55.

A major genre in Second Isaiah from the secular world is the trial speech: 41:1–42:9; 43:9–44:5; 44:6–23; 45:21. Rebukes against Israel are sometimes included in the concept of the trial scene (*Isaiah 40–66* OTL, 15–17; Schoors 1973: 197–203), but such rebukes are without the specific call to judicial assembly. 41:1–42:9 is the most detailed account of the trial.

	A. 41:1–20	B. 41:21–42:9
Summons to trial	41:1, 5–7	41:21–22b
Legal questions to the nations/their gods	41:2–4	41:22c–29
Verdict on the nations and Israel	41:8–20	42:1–9

The whole world is summoned to a judicial proceeding, in which Yahweh is both judge and questioner. The Deutero-Isaiah polarities, Yahweh and the gods, Israel and the nations, are central. To the question of which deities are powering Cyrus' changing of the course of history, the other deities (in the person of their images carried by the nations) are silent. In contrast to the nations and the gods who rule them stands Israel and its God Yahweh. Israel is the witness to Yahweh's sole sovereignty by its reemergence as a people through its return to its homeland Zion.

The origin of the trial scene is not clear. Is it based upon the actual practice of "justice in the gate," i.e., daily legal practice, or is it a purely literary creation to give a cosmic dimension to the trial? The question cannot be answered with certainty. The genre may be an elaboration of a judgment such as that in Psalm 7, where the appeal of the afflicted one (the king?) includes the wish that the peoples assemble to see the vindication of God's favorite.

Second Isaiah often takes issue with opponents whose ideas are refuted point by point. These disputations are in 40:12–31; 45:9–13; 46:5–11; 48; and 49:14–26, among other places. Isaiah 40:12–31, a series of questions about who has created and now maintains the world, has its nearest parallel in Job 38–41. In Job, the questions are designed to sweep Job from his self-confidence and make him bow before the divine freedom and power. Second Isaiah has a number of affinities with Job; 40:12–31 is especially Joban.

There are other genres in Second Isaiah: a taunt song (chap. 47), an invitation to a holy place (chap. 55; cf. Psalms 15 and 24), the prophetic commission (40:1–11; cf. 1 Kgs 22:19–22; Isaiah 6). Chaps. 40–55, for all their originality, are grounded in the ancestral traditions.

E. The Message of Second Isaiah

1. Overview. Second Isaiah intends to persuade his fellow exiles that the time has come to leave Babylon and

return to Jerusalem (Zion). His is a program, not a theology; ideas are arranged to persuade, not to make a system.

As an orator he gives his audience reasons to change their attitudes and to act. He must show that the ancestral traditions, to which all prophets appealed, contain an imperative for his day. For him, the tradition tells the people that Babylon with its false gods is doomed and Zion is about to be rebuilt and repopulated. Israel's journey to Zion will be a new Exodus-Conquest, a new participation in the defeat of chaos (= cosmogony).

Two problems make synthesizing his message difficult: the lack of scholarly consensus on the boundaries of Second Isaiah's speeches, and the vary nature of oratory. Scholars relying on form criticism usually find between 45 and 70 discrete units; the resultant units are generally too short to develop serious ideas. Moreover, form criticism as a method is disposed to concentrate on the typical and the recurrent rather than on the new and creative, and thus may underrate new syntheses. Rhetorical criticism, with its focus on texture and rhetorical development, is disposed to discern units of sufficient length for the development of ideas. J. Muilenburg, for example, isolates 21 lengthy compositions (*IB* 5: 381–773).

Beside the lack of scholarly consensus regarding the boundaries of the speeches, the nature of oratory itself, occasional and nonsystematic, makes it difficult to synthesize the prophet's message by simply summarizing each speech.

The prophet's own oratorical method offers the best way of systematizing his thought. It makes use of five major contrasts, or polarities, which are so pervasive that they can serve as a sketch of his message. They are: the two related polarities, the first and the last things, and Babylon and Zion; the two related polarities, Yahweh and the gods, and Israel and the nations; and finally, the servant and Israel. They are at once the substance of much of the oratory and the chief mode of development. They bear on both form and content. Using them as a guide to Second Isaiah's thought overcomes to some extent the divorce between content and expression.

2. The Five Polarities. a. First and Last Things. The polarity "first" and "last" has more than one meaning in Second Isaiah; it is a merism for eternity ("I, Yahweh, the first, with the last, I am he," 41:4); it can also be the words that predict the subsequent divine deed (41:22–23; 42:9; 43:9–13; 44:6–8; 45:21; chap. 48). A third meaning, "the first (deeds)," "the last (deeds)," expresses succinctly the central analogy of Second Isaiah: the first and the second Exodus-Conquest, the old and the new cosmogony. The clearest statement of the analogy is 43:16–21:

16Thus says Yahweh,
the one who makes a way in Sea
a path in the Mighty Waters.
17the One who musters chariot and horse,
all the mighty army.
They lie prostrate, no more to rise,
they are extinguished, quenched like a wick.
18Recall no more the former things,
the ancient events bring no longer to mind.
19I am now doing something new,
now it springs forth, do you not recognize it?
I am making a way in the wilderness,
paths (*ntybwt* with 1QIsa[a]) in the desert.
20The wild beasts will honor me,
jackals and ostriches.
For I have placed waters in the wilderness,
rivers in the desert,
to give drink to my chosen people,
21The people whom I have formed for myself,
to narrate my praiseworthy deeds.

Two statements are made: (1) historical events (the defeat of pharaoh, crossing the wilderness) are paralleled with suprahistoric, or mythic, events (making a path through the Waters by defeating the Sea, v 16; making a path through the desert by defeating sterility, vv 19–20); (2) the crossing of the desert replaces the crossing of the Red Sea and the defeat of pharaoh as the national story.

Though clearest in this text, the same historical analogy pervades Second Isaiah. In chap. 46, Yahweh is the one who carries Israel (the word "carry" echoes old texts like Exod 19:4 and Deut 32:11) of old from Egypt and now from Babylon. Isa 41:14–20 and 42:13–16 similarly allude to the old and the new Exodus. The passages 48:20–21 and 52:11–12 explicitly call upon Jews to leave Babylon, as their ancestors left Egypt. Chapter 49 puts the commission of the servant in the categories of Moses, imitating in vv 1–7 Moses' commission in Exodus 3–4, and in vv 8–12 Moses' leading the people and apportioning their land. The communal lament beginning in 51:9 recites the defeat of Rahab and the crossing of the sea (mixing historic and suprahistoric language) to persuade God to renew that founding event of defeating chaos and leading the Exodus. Isa 55:12–13 equates the trees that line the road through the wilderness with the twelve stones of the path through the Jordan in Josh 4:6–7; both commemorate Israel's crossing of territories belonging to hostile powers.

The analogy between the event that brought Israel into existence in days of old and the event that brings them into existence now is the central idea in Second Isaiah. It accounts for much of the drama in the chapters.

b. Babylon and Zion. Related to the great analogy between old and new founding events is the contrast between Babylon and Zion and Egypt and Canaan in the old tradition. Isa 48:20–21 and 52:11–12 exhort the Jews to leave Babylon in the words of the first Exodus, "Go forth from Babylon. . . . Water from the rock he made flow for them"; "Go out from her midst. . . . Do not go forth in haste" (reversing Exod 12:11). The seemingly odd picture of Zion rising in 40:9 makes sense as the antithesis of Babylon's descent in 47:1: "Get down, sit in the dust, Fair Maiden Babylon." From 44:24 to chap. 55, Zion is in the foreground; Babylon as mirror image provides depth to the portrait of Zion. Isa 45:14–25 speaks of the rebuilding of Zion, in contrast to the ruin of Babylon in chap. 47. In chap. 46 the gods are carried away from a doomed Babylon, whereas Yahweh carries Israel to safety. Zion receives back her husband Yahweh and her children in 49:14–26 and in 50:1–3; Babylon loses both in chap. 47. The concluding chaps. 54 and 55 are exclusively about Zion, a reminder of the centrality of place in the worship of Yahweh. Dominion is conceived spatially; Babylon is the land of servitude to non-gods, and Zion is the land of

servitude to Yahweh. Israel must therefore leave Babylon and go to Zion. The polarity is designed to support Second Isaiah's program of action—leave doomed Babylon and go to renewed Zion.

c. Yahweh and the Gods. Like the previous two polarities, first event/last event and Babylon/Zion, the next two are closely related: Yahweh and the gods, and Israel and the nations. The contest between Yahweh and the gods occurs chiefly in the trial scenes, contained in the following sections: 41:1–42:9; 43:9–44:5; 44:6–23; 45:20–25. Also relevant are 40:12–31 and chap. 48. To be decided in the trial is not the mere existence of deities, but the question about which deity is the true patron of Cyrus, the Persian king, enabling him to change the shape of the world. Yahweh presides at the trial; he questions and renders the verdict.

The proof that Yahweh, not the other gods, empowers Cyrus is not simply that he predicts events before they happen, but that his word alone overcomes the chaotic forces threatening the populated world, enabling Cyrus to triumph. Such was the understanding of creation in Second Isaiah's world. Yahweh is the sole deity because he alone creates, he alone leads the Exodus.

Cyrus, the instrument of Yahweh's creation, is always mentioned in connection with cosmogony. He embodies the storm wind of Yahweh, "He makes [kings] like dust with his sword, like driven chaff with his bow. He chases them, he blows on unscathed, by road on foot he does not go" (41:3). He does the work of the divine molder, "he has trampled rulers like clay, like a potter kneading clay" (41:25). He builds the temple that celebrates creation (44:28) and is appointed as regent of the new order (45:1–6).

Yahweh's unhindered word alone has effected all this; the other gods are silent (41:21–23, 25–26; 44:7). "Whatever Yahweh pleases, he does, in the heavens and on the earth, in the waters and on the deeps" (Ps 135:6).

d. Israel and the Nations. In the ANE, the ordinary means through which the god became present to human worshipers were images. The image represented the god on earth. Israelite law forbade statues as a means of encounter (e.g., Exod 20:4), a prohibition echoed in Second Isaiah, "I am Yahweh, that is my name; my glory I shall not give to another, my renown to carved images" (42:8). Unlike Israel, the nations ordinarily use images to represent their patron deities. In the two parallel trial scenes of 41:1–20 = 41:21–42:9, the statues that the nations bring to the trial represent their patron deities (41:5–7, 21–29). To Second Isaiah, the immobile and mute statues in fact represent the powerless deities only too well; the workers who made and carry them move and speak, but their deities/statues do not. In striking contrast to the mute deities and their frenetic worshipers is silent Israel and its active deity, Yahweh. In both scenes, Yahweh addresses Israel after questioning the nations (41:8–20 and 42:1–9) and commissions Israel to a new Exodus-Conquest. Israel by its action will embody Yahweh's glory. In both addresses the nations view Yahweh's action (41:20; 42:1, 4, 6).

The conception of Israel as the icon of God is most succinctly expressed in the term witness (Heb *ʿēd*), which is used three times of Israel witnessing to Yahweh's supreme power. In 43:9, the nations are challenged to bring forth witnesses to prove that they and their gods predicted the success of Cyrus, i.e., brought about his epochal victories by their word. "You are my witnesses," says Yahweh in vv 10 and 12; only Yahweh speaks words that effect action. The same scene is repeated in 44:6–9 and in 55:4–5. The preexilic kings' task of demonstrating Yahweh's power to the nations (cf. Pss 18:43–44; 89:9–27) is here assigned to all the people.

Israel is to witness by its act of participating in the Exodus-Conquest, the defeat of the desert. By its coming to life in the act, it will demonstrate to the nations that its God, Yahweh, lives and triumphs.

e. The Servant and Israel. The polarity between Israel and the servant is traditional in the OT; Second Isaiah exploits a familiar theme. The servants whom Yahweh chose often exemplified in their own lives the divine intent for all the people. Abraham and Jacob anticipated the people's adventures in the land; Jacob is even called Israel. Moses' flight from pharaoh and his encounter with Yahweh at Sinai anticipate the people's flight and divine encounter. Jeremiah in his "confessions" experienced in advance the divine punishment that was later to engulf the people. Isaiah and Ezekiel mimed the punishment that was to overtake the people. These servants represented what all Israel was called to be and do. All Israel becomes a servant when it embraces the divine will and plan as shown by the individual servants. When the people do not obey God's word, then the servant stands over against the people as a rebuke and as an invitation to conversion.

The servant in Second Isaiah is therefore at once a chosen individual and what all Israel is called to be and do. It is significant that Mosaic traits characterize the servant in 49:1–21; like Moses he is reluctant to accept the call, and he leads the people through the desert and apportions the land. Most scholars, following Duhm, distinguish the servant in the four servant songs from the servant in the rest of Second Isaiah; the servant in the songs is an individual, not Israel (though elsewhere the servant is Israel). Such a disjunction, in the light of the traditional relation of servant and people, sketched above, is questionable. The Duhm analysis nonetheless remains influential today.

3. The Servant. The word servant occurs twenty times in chaps. 40–55 (once in the plural). There is agreement that thirteen of the occurrences refer to Israel as the servant. The remaining seven occur in 42:1–4; 49:1–6; 50:4–9; 52:13–53:12, and the verses connected to them (45:5–7; 50:10, 11), the "servant songs" of B. Duhm. In these passages, according to Duhm, the servant is an individual, not Israel: "On the contrary, the hero of these poems is set over against the people, is innocent, Yahweh's disciple clearly enlightened by him, called to a mission to the people and to the gentiles and attending to his call in complete calm." The poems are probably from an author different from Second Isaiah and were inserted awkwardly in their present context (Duhm *Jesaia* HKAT, 311).

Scholars who see the servant of the songs as an individual distinct from Israel are not agreed on his or her identity. Virtually every important figure in the Bible—Moses, one of the prophets, or the kings, even Cyrus, or Second Isaiah himself—has been identified as the servant

(*IDB* 4: 292–94 and C. G. Kruse 1978: 3–27). For scholars who judge the poems to be integral to their contexts, the servant is the servant-prophet and Israel.

The servant exercises a role like that of the preexilic kings and especially prophets; royal and prophetic language is used of him. The role of the servant of Yahweh in the OT is a religio-political office; the servant is privy to the divine plan which he carries out and persuades the people to obey. The call of the servant in 49:1–6 imitates the call of Moses (Exodus 3–4 and Jer 1:4–10, itself modeled on Moses' call) and the related vv 8–12 describe the servant's Moses-like task of leading the people in the wilderness and apportioning to them the land. The reference to the servant as Moses is not surprising in view of the prominence of the new Exodus in chaps. 40–55. Servants, such as Moses, Joshua, the king of the Deuteronomic ideal (Deut 17:14–20), and the preexilic prophets, are models of obedience for Israel. In this sense, the servant can be at the same time an obedient friend of Yahweh and the nation. The obedient servant is what Israel is called to be. The servant can therefore be the witness to Yahweh's supremacy (42:1–4), called like Moses to embark on a new Exodus-Conquest (49:1–6), and submissive to the exilic punishment (50:4–11). In this view, the servant is the prophet himself and those who join him in his task. The question however is not settled.

Isa 52:13–53:12, the fourth servant song, remains especially controverted. Who is the servant, ideal Israel or a historical individual? Whose sins has he borne—the nations' or Israel's? What is meant by is vicarious suffering, otherwise unattested in the OT? The boundaries of the poem, and the genres that have influenced it—thanksgiving and confession—are generally agreed on, but consensus regarding the other questions has not been achieved.

Some observations can be made regarding the passage. Elsewhere in Second Isaiah, the nations are onlookers, the chorus rather than the protagonist. Hence, those whose sins are borne are likely the Israelites, not the nations. Secondly, the sins the servant has borne are not only the sinful acts of others but their consequences; Hebrew words for sin can designate both the act and its unhappy consequences. The ancestors have sinned, and the exiles are bearing the consequences. Now, however, Israel is invited back into existence through the new Exodus from Babylon to Zion. Many exiles were unwilling to undertake the journey. But as long as some of the people make the journey, the servant (and those allied with him), Israel comes into existence. "The many" who did not make the journey exist as Israel once more because of the servant's obedient act. When they see what the servant has done for them, they cry out that he has borne their sins, i.e., taken away the evil consequences of their refusal to go in the new Exodus. It is noteworthy that the servant's reward is life in the holy land (53:11–12; cf. 9:3). As long as the servant does the act, the whole people live again. The above interpretation is tentative, but it does have the merit of staying within OT categories.

Daniel 11:33–12:10 has been called the earliest interpretation of the fourth servant song. It interprets the Jewish loyalists of the Antiochene period in the 2d century B.C. as the servant of 52:13–53:12 (Ginsberg 1953: 100–4). The NT interpreted Jesus Christ as the Isaianic servant.

4. Creation. Second Isaiah differs from other prophets in his use of creation terminology. Verbs of creation abound: *bara'*, "to create" (16x); *yāṣar*, "to mold, shape" (14x); *ʿāśâ*, "to make" (24x); *pāʿal*, "to make" (5x); *nāṭâ šāmayim*, "stretch out the heavens" (6x); *rāqaʿ hā'āreṣ*, "to spread out the earth" (2x); *kûn*, "to found" (1x); and *yāsad*, "to found" (1x). The objects of the verbs of creation are, variously: Israel, the physical world, the servant of Yahweh, "the new things," Cyrus, and Zion.

Scholarly interpretation of the meaning of creation in Second Isaiah varies according to scholars' definitions of creation and its relation to redemption (primarily the Exodus). All recent discussion has been influenced by Gerhard von Rad's 1936 article insisting that creation in the OT is joined closely to historical redemption and is subordinated to it. Consequently, the Exodus tradition can be enriched by references to Yahweh's creation of the world, but the two concepts are not on the same level; creation is subordinate to redemption. Westermann insists that the two are closely connected but do not merge; the polarity between the two is used to show that God's saving of his people "was, as it were, an island within the mighty universe of God's work as creator" (*Isaiah 40–66* OTL, 25). Other scholars distinguish in Second Isaiah creation of the world from creation of humans, finding the former in disputations (40:12–31; 45:18–19) and the self-prediction of 48:12–16, and the latter in the adapted oracles of salvation in 43:1–7, 14–15, 16–21; 44:1–5; 54:4–6, and in the warning in 44:21–22. The two themes are combined in several passages: 44:24–28; 45:9–13; 51:12–16 (Haag 1976: 193–203; Albertz 1974: 173–75).

To understand creation in Second Isaiah, one must recognize the important differences between ancient Near Eastern and modern Western conceptions of creation, or cosmogony. There are at least four important differences: the process, the product, the description, and the criteria for truth.

Ancient Near Eastern cosmogonies often involved personal wills in conflict. Typically, creation is portrayed as a series of acts in a drama: chaos or the threat of it, a battle between the gods and the forces of chaos resulting in the gods' victory, and celebration of the victory with kingship and temple. Both in the Ugaritic texts of late 2d-millennium Syria and in the Bible, the storm god (or Yahweh) tames the destructive power of sea or death-dealing desert. In contrast, moderns see creation as impersonal, evolutionary, and proceeding according to physical "laws."

A second major difference is the product, or emergent. For the modern, it is the physical world, usually the earth in the planetary system. Living organisms, if they figure in creation at all, are usually the most primitive forms of life; human culture is outside the purview of modern creation theories. In the ANE, on the other hand, what was produced was a *peopled* universe. The 2d-millennium Akkadian text *Enuma eliš*, often cited as the standard ANE cosmogony, is essentially the exaltation of Marduk, the founder of Babylonian society. Marduk defeats Tiamat and establishes his temple Esagila in Babylon so that he might receive the praise of his people. Another Akkadian account, *Atraḫasis*, tells of the balances that make human society possible. Genesis 1 tells how man and woman

(= society) are constituted by God's command to fill the earth and propagate their kind. Isa 42:5 puts it nicely:

Thus says the God Yahweh,
(who) creates the heavens and stretches them out,
who spreads out the earth and what it brings forth;
(who) gives breath to the people upon it,
spirit to those who walk upon it.

In the light of the above remarks, the scholarly distinction between creation of the world and the creation of man is artificial. The ancients were interested in the creation of the physical world primarily as an explanation for the human race or a particular people.

A third difference is a corollary of the first: cosmogony, being a conflict of wills, is naturally told as a drama. Modern creation accounts are impersonal and scientific.

Lastly, the criterion of truth differs according to the account used. For ancients, it is the dramatic plausibility of the story; the ancients had a tolerance for various versions of the same event. In Akkadian, different deities create, though it is usually Anu and Ea, occasionally Anu, Enlil, and Ea. In the Ugaritic texts, Baal or his consort Anat, combat Sea or Death. In the Psalms and in Second Isaiah, Yahweh's combat with Sea is told with varying details (cf. Pss 77:11–20; 89:9–14; 93; Isa 42:13–16; 50:23; 51:9–11). Modern accounts, being scientific, are subject as far as possible to verification and must be consistent and compatible with other likely hypotheses (Clifford 1985).

Ancient Near Eastern creation accounts tell how a structured society arose; biblical writers use them to describe the making or remaking of Israel. In Isa 43:16–21 is the clearest instance of a Deutero-Isaiah account of the creation of Israel. According to the passage, in the "former event," Yahweh defeated pharaoh's armies and Sea, which prevented Israel from coming into its divinely appointed territory. In the "something new," Yahweh destroys Desert's power to keep the people from Zion by making roads through it and by overturning its infertility. The new creation is the people, "the people whom I have formed for myself," enabled to give praise (vv 20–21). Creation and redemption language describe the same event—the movement from Babylon to Zion. The same mix of redemption and creation language is found in 51:9–11: "Was it not you who hacked Rahab [the primordial sea monster] in pieces . . . that the redeemed might cross?" Isa 41:14–20 commissions Israel itself to destroy the desert's obstructive power by crushing the mountains to powder, so that the divine wind may blow it away (vv 14–16); Yahweh then changes the desert's sterility to fertility that supports human life (vv 17–20).

The king's building of the temple to celebrate the god's world-creating victory is a theme in *Enuma elish* and in the Ugaritic texts. It is also prominent in Second Isaiah. Zion is to be rebuilt by Cyrus (44:24–45:13) and is to be a place of the festive banquet (chap. 55).

The word of God that predicts these things is a proof of divinity, not simply because it predicts the future accurately but because it is unhindered and effective; there are no deities to oppose it. It not only predicts but also invites participation (chap. 48). By participating in the cosmogony, Israel vanquishes the desert's sterility, proclaiming to the nations Yahweh's sole divinity.

Second Isaiah, therefore, does not refer to the "first creation" in Genesis as an argument that God can do today what he did then. He formulates creation differently. For him, it is one way of describing the act of remaking the people, the other being the redemption. Redemption, the Exodus-Entry into the land, and creation, the participation in the defeat of the desert and the rebuilding of the temple, are simply two modes of expressing the same event, the one suprahistoric (or mythic), the other historic.

RICHARD J. CLIFFORD

THIRD ISAIAH

Third Isaiah (TI) is the name given by scholars to the last eleven chapters of the book of Isaiah (56–66). The term is therefore primarily a literary one, analogous to the use of First Isaiah and Second Isaiah to designate chaps. 1–39 and 40–55, respectively. For those who argue that an essential unity exists within this final section of the book of Isaiah (Duhm *Jesaia* HKAT; Elliger 1928; Kessler 1960), Third Isaiah also refers to the prophet who authored the dozen or so separate pericopes within chaps. 56–66. A very rough consensus exists over the delimitation of these pericopes, going back to Duhm and Elliger; it is also shared in broad view by those who are unconvinced of the

unity of Third Isaiah (Westermann *Isaiah 40–66* OTL; Pauritsch 1971; Hanson 1975; Sekine 1989): (1) 56:1–8; (2) 56:9–57:13; (3) 57:14–21; (4) 58:1–14; (5) 59:1–21; (6) 60:1–22; (7) 61:1–11; (8) 62:1–12; (9) 63:1–6; (10) 63:7–64:11; (11) 65:1–25; (12) 66:1–4; (13) 66:5–16.

E. The Future of Third Isaiah

A. Third Isaiah in Modern Scholarship

Karl Elliger, the early and by recent judgment methodologically sound proponent of the unity of TI (Sekine 1989: 8), used a careful literary and stylistic investigation to isolate these 13 pericopes and demonstrate TI's essential uniqueness vis à vis Second Isaiah. The latter argument was advanced by Elliger against those who wished to see no special break between Second and Third Isaiah chapters (all pre-Duhm interpreters; Sellin 1901; Cobb 1908), and it depended upon (by his own admission) a tedious isolation of linguistic terms and phrases reputed to be unique to TI (Elliger 1928: 57). The argument for unity was advanced against those who viewed 56–66 as coming from diverse prophetic hands and widely divergent periods, a much more broadly represented position at the time (Cheyne 1895; Cramer 1905; Kennet 1910; Budde *Jesaia* HSAT; Abramowski 1925). Elliger allowed a secondary hand in TI only at isolated intervals (56:3–8; 57:13c, 20; 58:13; 59:5–8, 21; 60:12, 17b; 65:20b; 66:17, 18–22, 23).

Partly because Third Isaiah is so bereft of concrete historical indicators, it has given rise to wide-ranging and speculative proposals as to historical and social location, from the preexilic period (for 56:9–57:13) to the late Hellenistic period (for 65; 66:3–24*), as being representative of theocratic ideals (Duhm), to their opponent in the name of inclusivity and apocalyptic fervor (Pauritsch 1971; Wallis 1971; Hanson 1975). Volz's 1932 commentary (*Jesaja* KAT) is a good example of the chronological approach at full throttle (oracles dated from the 7th to 3d centuries B.C.E.), though less extreme vestiges of the diachronic inquiry are to be seen in virtually all modern studies, which tend to place the bulk of TI in the late 6th or early 5th century. Westermann and Hanson are good popular representatives of the diachronic approach, despite their insistence that literary observations have fundamental priority over historical considerations.

Cobb pointed out quite early that the problems of specifically dating oracles in TI, where so little indication is provided of temporal location at the level of plain literary expression (Cobb 1908: 48–52). Beyond this, one wonders if a diachronic approach misunderstands its limits in TI when the literature does not emphasize new or radically altered historical circumstances, as is held to be the case when one moves from chaps. 40–55 to 56–66. Put in another way, the book of Isaiah consciously reacts to the temporal move accomplished when Assyrian period proclamation from Isaiah is stretched into a new Babylonian, post–587 B.C.E. framework, so that a formal break at chap. 40 can be seen in the literature's own portrayal (see article on "First Isaiah" above). It is difficult to note the same conscious move at work in the transition from 40–55 to 56–66. Factors other than altered temporal reference probably account for the changes encountered in these final eleven chapters, which make them distinctive from the preceding material in chaps. 40–55.

Elliger's 1928 monograph paid more meticulous attention to the literary side of the heavily religio-historical approach of Duhm, the creator of Third Isaiah. Duhm's TI functioned within his own special reconstruction of the postexilic period, as a figure absolutely distinct (*Jesaia* HKAT, 390) from Second Isaiah (SI), the theocratic forerunner of Ezra, for whom "sacrifice, the law, the sabbath, etc., were of highest concern" (*Jesaia* HKAT, 390). Compared with the poetry of SI, TI's proclamation has sunk into "versified prose." The popular modern view, which sees the TI chapters as attempting to extend the visionary message of a Babylonian Second Isaiah against theocratic opposition into the postexilic period (Hanson 1975; Pauritsch 1971), was not shared by Duhm. For Duhm (and the scholars of his day, including Ewald, Bunsen, Mowinckel, Hölscher, Marty, and Torrey), Second Isaiah was not active in Babylon; TI was, moreover, temporally quite distant from SI, working at a period long after the return from Exile.

Challenging Duhm on this latter front, Elliger moved TI to the period just before and after the restoration of the temple (ca. 515 B.C.E.), thereby allowing for a more intimate relationship to develop between TI and SI (1928: 111). A disciple or school relationship is reputed by many to exist between these two anonymous figures (Elliger 1933; Zimmerli 1950; Westermann *Isaiah 40–66* OTL). This is, by and large, the modern consensus, even when allowances are made for the internal inconsistencies found within chaps. 56–66 (especially over the treatment of foreigners, compare 56:3 and 60:10; 61:5–6). Passages which extend the message of SI are thought to be from the individual TI (Westermann *Isaiah 40–66* OTL); passages inconsistent with SI's thinking are the consequence of developments within the postexilic community toward a more apocalyptic orientation (Hanson 1975).

Hanson summarily rejects the search for authorship, opting for what he terms a contextual-typological approach, which plots increasing oppression and aligns portions of the text accordingly (1975: 41–46). Basic sociological questions remain. How "communities" compose texts, and in what conrete (i.e., other than ideological) setting, is not clarified. Moreover, the evolution from "classic prophecy" toward apocalyptic is not structured into the text, in its present form; rather, Hanson imposes the theory from outside the text's final arrangement and then extracts oracles and places them in their proper ideological and diachronic alignment. Why TI exhibits a certain final literary organization is not of particular importance to Hanson, since the final arrangement of the material nowhere supports his ideological theory.

B. Historical Location

The difficulty of dating oracles in TI has already been mentioned and is usually admitted by scholars at the start of their labors. Almost all feel that chaps. 56–66 are, in their entirety, later than 40–55. The exceptions are those

who challenge the distinction between SI and TI altogether (Torrey 1928; Smart 1965); one scholar dated 56–66 earlier than 40–55 (McCollough 1948); Haran (1963) argued that chaps. 40–48 were composed by a prophet in Babylon and that chaps. 49–66 were composed by the same prophet upon his return to Palestine; Glahn's view (1934) is similar, but he maintains the traditional break at 40–55 and 56–66, while viewing both sections as oracles from the same prophet in different geographic settings. For those who regard unity within 56–66 as a fiction, the oracles are free to be placed at various points in the preexilic and postexilic periods, depending on one's view of postexilic ideology and poetic typology (Hanson), form- and tradition-critical development (Westermann), or larger thematic patterns within the book of Isaiah as a whole (Vermeylen 1978).

A forceful challenger of the TI hypothesis, Fritz Maass (1967), pointed to two chief facts in defense of TI's existence: the sense of extreme break one has immediately, in chap. 56 (and not nearly so extreme elsewhere), and the references to the temple, which pop up from time to time. Smart had already noted that 56:1–6 "is as alien in content to the author of 56:8 to 66 as to the author of 55–66" (Smart 1965: 230). In addition, it is difficult to know how to use the obscure references to the temple to date TI more specifically (compare 56:7; 60:13; 62:7; 63:18; 64:11). Westermann (p. 296) uses the reference at 60:13 to argue that the temple has not yet been built (see also his treatment of 63:15–64:11). Others see the argument over inclusion in chap. 56 as evidence that the temple is already standing and community life well under way, a view that is made possible in Westermann's model by his theory of levels of text development, ultimately carrying us into the period of the reforms of Ezra and Nehemiah (455 B.C.E.).

References to a completed temple, however, cannot resolve the problem of more specific dating in the postexilic community, as the disagreement between Duhm and Elliger, for example, highlights. Are we in the 5th-century world of Ezra-Nehemiah (Duhm), or the 6th-century world of Haggai-Zechariah (Elliger), or both (Westermann)? In every case, recourse must be made to a larger reconstruction of postexilic life, utilizing the internally contradictory and by no means perspicuous historical sources of Chronicles, Ezra-Nehemiah, Malachi, Haggai, and Zechariah. Ezra gives the closest thing to a straightforward account of the restoration of the temple; nonetheless, the difficulty of its use as a historical source is everywhere admitted. Malachi provides, at best, oblique assistance in reconstructing postexilic life. The date provided by Haggai and Zechariah for the consecration of the temple (2d year of Darius) is not consistent with that given by Ezra (Darius' 6th year, Ezra 6:15); nor is there a complete and consistent depiction in our sources of the return of exiles from Babylon.

Perhaps the most obscure area of knowledge concerns life within the Israelite community not deported—surely the largest population group, and one we know to have existed as a worshipping community during the exilic period from various incidental references (Zech 7:5; Jer 41:5; book of Lamentations). It is one of the ironies of historical analysis in biblical studies that while skepticism over historical veracity rules in one part of the canon, other literary witnesses are accorded absolute historical reliability; the nature and dosage of selectivity is what produces different results. Barstad (1982) has recently reminded us just how fragile is the picture of massive deportation to Babylon and total evacuation from Palestine—a picture given us by Chronicles and Ezra-Nehemiah and one which is absolutely necessary for most Second Isaiah in Babylon and Third Isaiah in Palestine theories.

It must be determined whether the theory of TI turns exclusively on too tidy a view of the destruction of the temple and its subsequent restoration. In this light it should be remembered that if chaps. 56–66 are read more narrowly in the context of the book of Isaiah, as against their putative diachronic neighbors Haggai, Zechariah, Malachi, and Ezra-Nehemiah, a very different picture of the role of the temple emerges; for nowhere in Isaiah is the destruction of the temple explicitly related. Rather, what we have is a depiction of God's judgment over the cosmos and the nations (Isaiah 13–27), and the proclamation of a thorough cleansing of Zion, resulting in a completely new state of affairs (2:1–5; 12:1–6; cf. 65:17–25). In other words, the fall of the temple and its restoration, as such, are not meaningful literary, historical, or theological indexes in Isaiah.

What is important is God's cleansing of Zion and its reestablishment (1:24–31; 2:1–5; 11:6–9; 27:12–13; 35:1–10)—matters that are depicted independently of the fate of the temple, which was more narrowly conceived (receiving virtually no discussion in chaps. 1–39). Along this axis, the decisive break in the book of Isaiah is located at chap. 40—not at chap. 56—following the clear hint in chap. 39 that the Babylonians are God's agents of cleansing judgment. The full restoration of Zion is nowhere identified in Isaiah—in any of its sections—with the literal restoration of the temple. Consequently, one wonders if undue stress has been laid upon the restoration of the temple as an important historical datum in differentiating Second from Third Isaiah. It is quite possible that chaps. 40–55 treat different *aspects* of the restoration of Zion than do chaps. 56–66, which demonstrate special interest in the requirements for membership in God's Zion. But then the sharp distinction drawn between these sections on historical grounds falls away. The distinction becomes thematic and theological, and it does not necessitate separation along Babylonian/Palestinian, exilic/postexilic, or visionary prophet/disillusioned community lines (Hanson 1986: 153–59). If one adds to these considerations the possibility that SI was not a Babylonian prophet (Barstad 1982; Duhm; Torrey 1928; Smart 1965), then any significant break at chap. 56 is completely unwarranted.

That this type of objection has not been registered is witness to the hegemony of a fixed form of diachronic analysis which refuses to take the literary context of the book of Isaiah as a meaningful guide to exegesis, preferring instead to line up these (historically) obscure chapters with equally obscure references in other biblical literature judged to be contemporaneous. That disagreement continues to exist among scholars over key features in the historical background of TI is testimony to the level of speculation required when historical analysis is forced to work in such shallow waters. The plausibility that the biblical sources are in fact capable of integration for thorough historical reconstruction is also never challenged.

What if the books of Isaiah and Ezra-Nehemiah present different, even historically incompatible, pictures of restoration? On the other hand, what if the differences are aspectual and not substantive, resulting from different emphases within the literary presentation of each given witness, to be read independently of each other? In scholars' zeal for reconstructing historical circumstances as the necessary prerequisite for proper exegesis, these sorts of considerations have not been popular.

In sum, the possibility exists that factors other than changed historical circumstances may account for the different literary and theological emphases at work in TI, compared with SI. This would also raise questions about the propriety of language comparisons and theories of master (SI) and disciple (TI) which attempt to explain the balance of distinctiveness and borrowing often noted in chaps. 56–66 (Zimmerli 1950). If the differences in language are the consequence of differences in content and the subject matter handled, then a sharp break at chap. 56, on grounds of a new prophetic voice or clearly changed historical circumstances, is unfounded.

C. Social Location

Most have seen behind at least a portion of the chapters of TI an actual prophet at work, analogous to SI and, like him, also anonymous. Form and tradition critics have tended to draw a picture of the prophet as oral speaker, and the prophet TI generally is accepted into this category. Duhm, adamant in his insistence that Israel's prophets were primarily speakers, not writers (1875: 203–4), spoke of TI as a *Schriftsteller* whose proclamation was best described as "versified prose" (HKAT, 390–91). Duhm felt that prophecy underwent certain fundamental changes (not improperly categorized as decadent) in the later years of the postexilic period. TI was a representative of these changes.

Duhm was not more specific about the social location of TI's activities. A similar vagueness marks most form- and tradition-critical investigations. If the prophet is considered an oral speaker, then he presumably exercises the same freedom of movement as did his preexilic forebears, and no further social location is stipulated. Westermann has rightly noted the existence in chaps. 56–66 of fixed tradition, utilized at a redactional stage in the final literary development of TI chapters, thus holding in appropriate tension form- and redactional-critical observations. So, for example, chaps. 59 and 63, which surround the core TI proclamation (chaps. 60–62), are for Westermann "genuine community laments," not compositions of TI, and "their birth-place was Israel's worship" (OTL, 300). Similarly, the long unit 56:9–57:13 is comprised of three oracles of judgment, borrowed from the preexilic period, drafted to serve a redactional purpose in TI.

Westermann's TI is a prophet analogous to the classical prophets of the preexilic period; TI as a literary product, however, includes fixed forms of literature from a variety of social contexts, most notable among them being contexts of worship. This accords well with the generally accepted view that another piece of literature of the period, the book of Lamentations, finds its home as well in the worship life of the exilic period. It would be no surprise if TI as prophetic figure was to be sought within the cultic life of the exilic or immediate postexilic period. As we have noted, there are several references to the worship life of Israel during the exilic period in the biblical sources; prophets are increasingly active within Israel's cult in the postexilic period (Petersen 1977); cult prophecy would explain the use of traditional material within TI. Prophecy in such a social context would involve both exegesis of existing prophetic material and independent prophetic proclamation modeled on Israel's early prophets Amos, Hosea, Jeremiah, or Isaiah, all set within the context of Israel's worship life. This would explain (1) the present inclusion of TI material within the larger book of Isaiah, (2) the rightly noted presence in TI of themes and language not just from SI (Zimmerli 1950) but from First Isaiah as well (Vermeylen 1978: 504–5), and (3) the clear similarity between SI and TI chapters and the Psalter. It is by no means clear that SI (and TI) ought to be sought, apart from the cultic proclamation of the exilic period, in Judah proper; if this (minority) view proved true, then the separation of SI from TI on other than thematic grounds would be even less warranted.

Hanson has not sought a more specific social location for a prophet TI, since the authorship/individual prophet question is set to the side in his reconstruction. The oracles are seen simply as representative of ideological positions becoming increasingly apocalyptic. This ideational emphasis gives the TI material a certain weightlessness, in terms of precise social location.

The work of Pauritsch (1971) should be mentioned at this juncture, since the classic search for *Sitz im Leben* is one of his chief concerns. He develops the intriguing theory that TI is a collection of traditions originating in the immediate postexilic period. In its present (redacted) form, it was meant to serve as a response to the question of a delegation from Babylon, put to community leaders in Judah, as to whether eunuchs and foreigners should be included in the congregation (56:3–8). Using the oracles of TI, and new tradition, the prophetic redactor answers affirmatively and emphasizes that God is on the side of the poor and those who tremble at his word (66:2). The passage in Isa 56:1–6 serves as a kind of motto for the whole collection and is its interpretive key; the final chapter (66) reiterates the main themes of the opening unit in such a way that chaps. 56 and 66 act as bookends, now enclosing two sections with roughly the same number of verses (56–60; 62–66) and a central core (chap. 61). Pauritsch finds diverse elements of tradition, from various backgrounds (wisdom, cultic, prophetic) in TI, and therefore rejects a single *Sitz im Leben* and a single prophetic voice; nevertheless, in Pauritsch's reading there is one fairly consistent message from TI in its present literary form. A refinement of his position, with similar emphasis on TI as anti-cult, can be seen in the work of Wallis (1971).

Several objections come to mind with this type of analysis. First, the specification of the occasion and the use to which TI is put weigh against the theory as too speculative and overdrawn. Second, the presence of wisdom elements in TI should not seriously call into question a possible cultic setting for the material in its entirety (cf. wisdom psalms, priestly instruction). Third, the complexity of TI's overall message is flattened by too tightly linking it to a program for inclusion that theoretically is aimed at setting

aside the legislation of Deut 23:2–9 (the same criticism applies to Westermann, *Isaiah 40–66* OTL, 311–16; Sekine 1989: 31–42). To be sure, TI does envision new participants in the assembly, but this is in full accord with statements found elsewhere in the book of Isaiah; it is not aimed exclusively at countermanding the Deuteronomic legislation. Note (1) the different terminology used in TI (Heb *ben-hannēkār; hassārîs*) and Deuteronomy (Heb *pĕṣûaʿ-dakkāʾ ûkĕrût šopkâ;* "the Ammonite and Moabite"), (2) the complexities within the respective contexts (Deuteronomy's favorable inclusion of the Edomite [23:6] and TI's use of Edom as paradigm for Yahweh's foes [63:1–6]), and (3) the heavy emphasis on allegiance to Yahweh found in TI ("the foreigner *who joins himself to the Lord*"; "the eunuchs *who keep my sabbaths, choose what delights me, and hold fast my covenant*"). All this suggests something less than the attempt to cancel previously binding legal injunctions as the chief agenda of TI. The differences between TI and Deuteronomy over this issue are contextual and are not as substantive as those zealous for spotting tension would have us believe (Donner 1983).

Moreover, foreigners continue to exercise a role, developed in both First (2:3; 18:7; 19:19–22; 23:17–18) and Second Isaiah (45:14–17, 20–25; 49:22–26), that involves the vindication of Israel and the nations' acknowledgment of the authority of Yahweh as the one God (60:3–14; 61:5–6; 62:2–3; 63:6; 64:2; 66:18–21), if not their humiliation and debasement. The consistent interest in proper attention to cultic requirements and the sanctuary, or punishment for their abrogation, lack of care for Zion, uncleanness, iniquity, and idolotry, spans all chapters (56:2, 4, 7; 57:3–10; 58:13; 59:2; 60:7, 13; 61:6; 62:9; 63:18; 64:6, 11; 65:2–7; 66:3–4, 24) and suggests that attempts to interpret TI as a universalist or fierce inclusion advocate against cultic leaders (Hanson; Pauritsch; Wallis) overstate the literary evidence. In this instance, the picture of TI's originator, B. Duhm, seems more accurate, whereby TI is one concerned with cultic purity, the proper restoration of Zion, the Sabbath, and proper sacrifice. For these reasons, it would be more appropriate to locate TI in a cultic setting, exegetically extending the vision of First and Second Isaiah regarding the nations, while at the same time defending the holiness of Zion and the requirements of proper worship, first for Israel and then by extension for the nations who come to worship Yahweh (see also Sekine 1989: 236–37).

D. Literary Analysis

We have had occasion to note above the various literary methods that have been used to analyze TI chapters. Following Duhm's initial efforts, which are best characterized as a combination of literary-poetical, historical, and crude sociological investigation, scholars developed either the historical (Budde, Kennett, Volz) or the literary (Elliger) sides of his project. Even in a primarily literary and stylistic work like that of Elliger, questions of social and temporal location were not forgotten. It was the order of inquiry that determined the priorities of the interpreter.

Form-critical work occupied itself with the proper delimitation of oral units in TI. Alongside this went the determination of secondary and later glosses and the plotting of levels of the text as they found their place in TI. Westermann's study is a model of form and tradition-critical analysis. A TI nucleus is to be found in chaps. 60–62, set in the framework of two community laments located in chaps. 59 and 63. Other material original to TI is to be found in 57:14–20; 65:15b–25; and 66:1–16. The message of TI is "salvation and nothing but salvation" (*Isaiah 40–66* OTL, 296), in Westermann's view, thus linking him closely with a SI for whom such proclamation was standard fare. The prophet TI reveals something of himself in chaps. 61 and 62, in first-person speech reminiscent of 49:1–6 and 50:4–9.

Editorial work is most evident in the beginning and ending units (56:1–8 and 66:18–24). Independent utterances and additions are made at various points, emphasizing the "cleavage between the devout and the faithful" (*Isaiah 40–66* OTL, 307). Westermann claims that TI's altogether friendly attitude toward foreign nations has been altered by judgment additions in 60:12; 63:1–6; 66:6, 15–20*. Apocalyptic material has also been added to the salvation oracles in 60–66.

Though Hanson's analysis differs over details and larger conceptual perspective, a similar view of levels within the literature, moving toward the apocalyptic away from the visions of SI, is to be found in Hanson's work. To his credit, Westermann still operates within a traditional picture of prophecy in which questions of authorship, redaction, and situation-in-life are handled systematically. Moreover, in Westermann's work one begins to see an attempt to come to grips with the text in its present literary organization, as he wrestles with trying to explain why TI chapters are arranged as they are. Nothing of this kind of literary inquiry animates the work of Hanson. In this sense, it is fair to say that Westermann's form-critical analysis clearly anticipates redactional and rhetorical studies produced in the last two decades (Pauritsch 1971; Sehmsdorf 1972; Polan 1986; Sekine 1989).

The most recent redaction-critical investigation is that of Sekine (1989), who seeks to challenge Elliger's argument for literary and authorial unity in TI, a position Sekine respects and feels has never been sufficiently set aside on primarily literary grounds. Sekine establishes through minute analysis a clear redactional hand at work in TI, particularly in opening and closing chapters. He avoids the tendency to reduce the complexity of TI by seeing the message of the book as predominantly anti-cultic, though in individual sections this is the reading he isolates for the final redactional hand. While Sekine's primary interest is in separating out redactional layers and establishing their distinctive theological viewpoints, he concludes his labors with an analysis of TI in its present literary organization (1989: 228–33). In so doing, he puts forth the implicit argument that the final form of the material presents a message that, while redactionally complex, is nevertheless coherent on literary and theological grounds.

E. The Future of Third Isaiah

Sekine's modest efforts in the direction of post-redactional synthesis may represent the future of TI analysis. Rhetorical studies (Polan 1986) likewise seek to identify indications of final structure and larger literary shape, though frequently without prior inquiry into the text's

depth-dimension, redactional analysis, or a serious probe into the historical and social worlds that spawned the material.

The remarks above have been sufficient to indicate that one fruitful area of future TI research will include an analysis of the exegetical relationship between chaps. 56–66 and First and Second Isaiah sections, as well as a determination of the role TI plays in the final redactional shape of the book of Isaiah as a whole. Have the indications of historical, literary, and sociological cleavage between chapters 40--55 and 56–66 been overplayed in the interest of pursuing one type of diachronic analysis? Are the differences between Isaiah 40–55 and 56–66 explicable on other grounds? Are there indications of clear linkage between these two sections which do not depend upon a Babylonian prophet and Palestinian disciple model of interpretation but are rather the consequence of a far greater common purpose in authorial, redactional, and theological intention?

To take one example, to what extent is the first-person (nondivine) voice in SI distinct from that found in TI, and what would prevent one from seeing essentially the same prophetic voice at work in both sections (e.g., 48:16c; 49:1–6; 50:4–9; 61:1–4)? Second, Westermann has overplayed the notion that SI and nuclear TI sections are predominantly salvation oracles. SI contains material that reflects internal community debate (42:18–20; 43:22–24; 44:25; 45:9–13; 46:12–13; 48:22; 50:10–11; 54:15–17), especially when one includes the persistent exhortation that marks SI; it is difficult to see how distinct the TI material is on this score. Israel's flirting with idolotry is condemned in both sections, (see 41:5–7; 44:9–20; 45:20; 48:3–5), although the tendency has been to see that most of the idolotry condemned in SI is that of Babylon or foreign nations.

Finally, and most importantly, it is by no means clear that SI should be distinguished from TI on the basis of the state of the temple. Trying to link references to the walls of Jerusalem in TI to similar references in Ezra-Nehemiah for historical purposes is a highly speculative enterprise, especially when the historical value of biblical sources from this period is itself a thorny problem (see the most recent attempts of Sekine [1989] to fix the *Wirkungszeit* of individual passages in TI). The same is true of references to the temple, which at times seem to suggest a finished structure (56:7) but at other points clearly state that something is yet unfinished (61:4) and that the condition of the temple is quite desperate (64:10–11). The issue is complicated because we do not know the exact state of the temple in the exilic period, whether that state prevented its usage, or whether such matters are specifically of concern to TI. What we do know is that both SI and TI see the restoration of Zion as involving God's full presence, and that the community stands just before the full enactment of that event. In that sense, it is wrong to think of the full restoration of the temple as some clear and significant past event in the background of TI.

The burning question for TI, and one which the final chapter continues to pose, is whether the community and the nations that join them are worthy to stand when God appears and Zion is restored. Can Zion be fully restored, as earlier chapters in Isaiah had promised, given the state in which Israel as a community stands? Can Israel's people be fully the servants of God? The answer the final chapter gives is, *Yes* (66:12–14). At the same time it refuses to relax the judgment that accompanies God's holy presence (66:15–16). The final warning of 66:24 indicates the seriousness with which God punishes rebellion, and on that note the Isaiah collection is drawn to a close. Now the nations are to share with Israel the mercy—and the holy judgment—that comes with the knowledge and presence of Israel's God.

CHRISTOPHER R. SEITZ

ISAIAH, MARTYRDOM AND ASCENSION OF.

A pseudepigraphic work containing both Jewish and Christian elements. It divides naturally into two sections: chaps. 1–5, generally called the *Martyrdom of Isaiah,* and chaps. 6–11, known as the *Vision of Isaiah.* The *Mart. Is.* contains further a distinct unit, 3:13–4:22, which is often called the *Testament of Hezekiah.*

The work is extant in its entirety only in Ethiopic. There exist also Greek and Latin fragments of the textual tradition represented by the Ethiopic version. A second textual tradition, containing only chaps. 6–11, is represented by a second Latin translation and a Slavonic version. There are also Coptic fragments, as well as a Greek legend, which is based on a Greek text of the first type, but in which the story has been rewritten significantly. Most scholars agree that the *Martyrdom* was composed in Hebrew. It was then translated into Greek, which served as the basis for the extant versions. The Christian sections (*Vis. Is.* and *T. Hez.*) were probably composed in Greek.

Most scholars agree that the *Mart. Is.* was composed by a Jew in Palestine no later than the 1st century C.E. The legend behind the book, if not the book itself, may be considerably older.

The composite nature of the work is confirmed both on internal and external grounds. First, chaps. 1–5 and 6–11 are each a self-contained unit. Chaps. 1–5 provide a legendary account of Isaiah's martyrdom at the hands of Manasseh. Chaps. 6–11 describe a visionary journey of Isaiah during the reign of Hezekiah. Not only are the sections out of chronological order, but, as noted above, one major textual tradition contains only chaps. 6–11. Furthermore, chaps. 1–5 are strongly Jewish, and chaps. 6–11 are clearly Christian. Second, 3:13–4:22 also seems to be a self-contained unit. It disrupts the narrative with a Christian section which seems out of character with the rest of the story. Debate on this section has centered on the question of whether it existed at one time independently, and specifically whether it was part of a now-lost *Testament of Hezekiah.* Although the issue has not been settled, the "Testament of Hezekiah" has become a convenient title for this section. The presence of smaller Christian interpolations in chaps. 1–5 indicates that although the composite character of the *Martyrdom and Ascension of Isaiah* can be seen in a broad sense, the precise nature of the final Christian redaction is not clear. A few scholars have even suggested that the entire work is, in fact, a unified Christian composition, but their arguments have not been persuasive.

The *Martyrdom* begins with King Hezekiah summoning his son Manasseh in the presence of the prophet Isaiah and Josab the son of Isaiah. As Hezekiah instructs his son, Isaiah predicts Manasseh's apostasy and his own death at Manasseh's hands. When Manasseh becomes king, Isaiah's prophecy begins to be fulfilled. Isaiah withdraws to a mountain in the company of some other prophets. The false prophet Belkira learns of this and accuses Isaiah before Manasseh, who arrests Isaiah and has him sawn in half. The narrative, based loosely on several OT books, is striking in its affirmation that Isaiah was martyred by being sawn asunder. This tradition is not found in the OT, but it is recorded (with different details) in the Babylonian and the Jerusalem Talmuds. It is also reflected in the *Lives of the Prophets* (1st century C.E.) and in several patristic writers, and apparently stands behind Heb 11:37.

Also noteworthy is the demonology of the *Mart. Is.* The leader of the evil host is given several different names, most frequently Sammael, Beliar, and Satan. The strong dualism of this section has suggested to some scholars that the *Mart. Is.* is a product of the Qumran community, which shared a dualistic outlook (Flusser 1953, Philonenko 1967). Indeed, a few have even argued that the narrative reflects the early history of the community and its founder, the Teacher of Righteousness. But such arguments are highly speculative, and it should be noted that not only are the distinctive theological emphases of the Qumran community absent from the *Mart. Is.*, but there have been no fragments of the Martyrdom found among the Qumran scrolls.

Between Isaiah's arrest and martyrdom comes the *Testament of Hezekiah* (3:13–4:22). This section describes a previous vision of Isaiah, which consists of four parts. The first part concerns the coming of the Beloved and the establishment of the church. Although some of the details are similar to the NT gospel accounts, especially Matthew, others—e.g., the Beloved's descent from/ascent to the seventh heaven (cf. *Ap. Jas.* 8–9); his transformation into the form of a man; the descent of the angel of the church; the role of the Holy Spirit and Michael in the resurrection, hoisting the Beloved onto their shoulders (cf. *Gos. Pet.* 10); the call to believe in the cross (cf. *Ap. Jas.* 6)—are different.

The second part of the *T. Hez.* describes the corruption of the church at the end of time. The key focus here is on the leaders of the church, the "elders" and the "shepherds," who are castigated for their worldliness and contentiousness and who will become so influential as to render ineffective the few remaining prophets.

The third part of the *T. Hez.* deals with the end-time reign of Beliar. He bears a strong resemblance to the Beast of Revelation 13, but the Neronic characterization is made more explicit here. Beliar's royal and miracle-working roles are emphasized, as well as his claim to deity. He will rule for 1335 days (cf. Dan 12:12), during which time he will persecute the "plant" (i.e., church). The few who remain faithful will flee as they await the coming of Jesus.

The final part of the *T. Hez.* depicts the coming of the Lord and the Final Judgment. Although there are strong parallels to Revelation 19–20, again there are significant differences. The most striking is the description of what happens to the saints. Those saints who have been reclothed with robes from the seventh heaven (i.e., those who have died) will descend with the Lord to strengthen those who are still alive and to serve in the world for an indefinite time. Afterwards, the rest of the saints will receive robes from above and will leave their bodies in this world. The *T. Hez.* concludes with a relatively lengthy section (added by the final redactor?) linking this vision with the canonical book of Isaiah, the OT Psalms and Proverbs, the Minor

Prophets, Daniel, and, apparently, the Jewish pseudepigraphon known as the *Prayer of Joseph*.

The Christian perspective behind the *Testament of Hezekiah* is a fascinating blend of traditions both "canonical" (especially Matthew and Revelation) and "extracanonical" (e.g., *Gospel of Peter, Apocryphon of James*). The freedom with which the traditions are handled and mixed, coupled with matters such as the relatively primitive portrait of the church hierarchy and the strong Nero *redivivus* emphasis, suggest a late 1st century or early 2d century C.E. date. The distinctive Christology, along with the strong criticism of ecclesiastical leaders, might point to a "heterodox" community as that which produced the Testament.

The *Vision of Isaiah* narrates Isaiah's ascent through the seven heavens (cf., e.g., *Testament of Levi, 2 Enoch, 3 Baruch*). Like the *Mart. Is.*, the *Vis. Is.* begins with Isaiah and his son Josab in the presence of King Hezekiah. Many other dignitaries are present, along with a number of prophets. In the midst of this assembly, Isaiah receives a vision, which he then recounts to Hezekiah, Josab, and the prophets. First, an angel appears to Isaiah in order to take him on a journey. As he ascends, Isaiah views the struggle, led by Sammael, on earth. As he passes through the first five heavens, he sees and hears angels singing praises to the One who sits in the seventh heaven, with the glory increasing at each level. For the last two heavens, Isaiah is first taken into the "air" of the heaven before entering the heaven itself. In the air of the sixth heaven, the angel prepares him for his final ascent and what he is about to see. In the sixth heaven, which is significantly more glorious than the first five, Isaiah and his guide join the angels in praising the Father, his Beloved, and the Holy Spirit. In the air of the seventh heaven, the head angel of the sixth heaven attempts to prevent Isaiah from ascending any higher, but the voice of Christ permits him to proceed.

Isaiah then ascends to the seventh heaven, where he sees a wonderful light, innumerable angels, and all the righteous from Adam onwards, stripped of their flesh and clothed in robes from above. The angel predicts for Isaiah the descent of the Beloved into the world, his crucifixion and resurrection, and his remaining in the world for 545 days before his ascent back to the seventh heaven. Central to the prediction is the emphasis that the Beloved's true identity is concealed even from "the god of that world" who puts him to death (cf. Ign. *Eph.* 19). Isaiah next sees the books which record the deeds of the children of Israel, and many robes, thrones, and crowns, which are reserved for those who will believe in the words of the Beloved and in his cross. Isaiah then sees and worships the Lord (i.e., Christ), the Holy Spirit, and the Great Glory (i.e., the Father). After hearing the Father commission Christ to descend *incognito* into the world, there to destroy "the princes and the angels and gods of that world" and to ascend again to his rightful place, Isaiah observes the descent and transformation of the Lord, his Virgin Birth, his crucifixion and resurrection, his commissioning of the twelve disciples, and his ascension. Again the concealment of his identity is emphasized, at least until his ascension, when he is recognized by all, much to their surprise. Also noteworthy is the Virgin Birth account, which is an amalgam of traditions, including some found in Matthew and others found in the *Protevangelium of James*. At this point Isaiah's vision ends. He tells Hezekiah to tell no one about the vision. A concluding postscript explains that it is because of these visions and prophecies that Sammael had Isaiah sawn in half by Manasseh.

The *Vision of Isaiah* contains some striking parallels to certain strands of Gnosticism, especially the Ophites, who, according to Irenaeus (*Haer.* 1.30), affirmed Christ's descent through the seven heavens and his stay in the world for 545 days after his resurrection (cf. *Ap. Jas.* 2). As a result, some scholars have viewed the *Vis. Is.* as gnostic (Helmbold 1972). But there is no full-blown gnostic myth, Ophite or otherwise, in the *Vis. Is.* Thus, the precise relationship between the Vision and Gnosticism, or perhaps some primitive form of it, remains unclear.

In addition to its descent/transformation Christology, two theological motifs in the *Vis. Is.* stand out. First, there is a strong emphasis on the miraculous nature of Jesus' birth, almost to the point of denying the actual birth process altogether (cf. *Odes Sol.* 19). Second, there is a distinctive Trinitarian concern. On the one hand, worship in the seventh heaven is directed toward "the Lord" (i.e., Christ), the Holy Spirit (frequently called an "angel"), and the Father. On the other hand, both "the Lord" and the Holy Spirit worship and praise the Father, giving him a superior status.

The apparent quotation of 11:14 in the *Acts of Peter* 24 (ca. 190 C.E.) fixes the date of the Vision prior to the end of the 2d century C.E. Parallels with Ignatius (ca. 115 C.E.) and the *Protevangelium of James* (ca. 150 C.E.) might suggest a date in the first half of the 2d century. The clear reference to the *Vis. Is.* in 3:13 might even indicate that it was composed prior to the *T. Hez.*, thus pushing its date back to the end of the 1st century. But it is also possible that the *T. Hez.* was composed first, and that 3:13 was part of the final redaction, being an attempt to link the three strata together. A third possibility, given other parallels between the *T. Hez.* and the *Vis. Is.* (e.g., the descent of Christ from the seventh heaven, the appellation "the Beloved," the angel of the Holy Spirit, belief in the cross), is that the *T. Hez.* and the *Vis. Is.* were composed together and jointly redacted into the *Mart. Is.* In any event, the *Vis. Is.*, like the *T. Hez.*, is an intriguing blend of "canonical" and "extracanonical" traditions and was probably composed within a "heterodox" community.

The dating of the Coptic fragments to the mid-4th century C.E., points to a final redaction of the composite document prior to ca. 350, and probably considerably earlier. The final editor apparently added several other passages (e.g., 1:2b–6a, 7, 13; 2:9; 5:15–16) as well.

The *Martyrdom and Ascension of Isaiah*, then, is an important document both as a witness to an ancient Jewish legend concerning Isaiah's martyrdom and as evidence for an early form of Christianity which set forth its distinctive understanding of its faith at a time before there was a fixed NT canon and before "orthodoxy" was clearly defined. For text see *APOT* 2: 155–62, *NTApocr* 2: 454–68, and *OTP* 2: 143–55.

JOSEPH L. TRAFTON

ISCAH (PERSON) [Heb *yiskâ*]. Daughter of Haran and sister of Milcah (Gen 11:29). Later associations of Iscah with Sarah are not based on any clear evidence in the biblical text. The name itself appears to be a prefixed form of a weak verb, either *nsk*, "to pour" (referring to perfume; cf. Cassuto 1964: 277), or *skh*, "to see" (referring to divine favor at the birth of the child; cf. *EncMiqr* 3: 707). The former suggestion does not have onomastic parallels in Semitic personal names; the latter option does have such parallels, although the root *skh* is not attested in biblical Hebrew.

RICHARD S. HESS

ISCARIOT. See JUDAS ISCARIOT.

ISH-BOSHETH (PERSON) [Heb *ʾîš bōšet*]. An alternative, perhaps artificially created name for Saul's youngest son by Ahinoam bat Ahimaaz, Eshbaal. The present form is found consistently in the MT text of 2 Samuel and is reflected in LXX's *Iebosthe* (cf. *Memphibosthe,* 3:8; 2:8, 10, 12, 15; 3:8, 14, 15; 4:5, 8, 12), while the form Eshbaal is found exclusively in both textual traditions of the Saulide genealogy quoted in 1 Chr 8:33 (LXX *Asabal*); 9:39 (LXX *Isbaal*). It is generally thought that the form of the name in Chronicles with *baʿal* "master, possessor" is authentic, and that the term *bōšet,* "shame," was later substituted for the former divine epithet *baʿal* when it became commonly associated with the fertility god Baal (Geiger 1857: 301; Gray 1896: 121; *IPN* 118–19). "Baal" appears to have been an accepted epithet for Yahweh until the early monarchic period, but after this time, it seems to have become restricted to use for Yahweh's main rival, the Canaanite storm god.

Other examples commonly cited to illustrate the substitution of *bōšet* for *baʿal* in personal names all derive from 2 Samuel: Saul's grandson Meribaal/Mephibosheth (1 Chr 8:34; 2 Sam 4:4); Jerubbaal/Jerubbesheth (Judg 6:32; 1 Sam 12:11; 2 Sam 11:21); and Josheb-basshebeth (2 Sam 23:8), which is thought to be a corruption of Ishbosheth, and presumably derived from an original Ishbaal, although the form Jashobeam occurs in 1 Chr 11:11 (Geiger 1857: 301; Tsevat 1975: 80–85). None of the three examples is airtight; the first involves a change in the first element of the name as well as the second; the second one was not vocalized by the Massoretes as *bōšet,* and may not have represented this element historically; and the third name never appears with the *baʿal* element. On the other hand, there are additional textual examples, (e.g., 1 Kgs 18:9, 25; Hos 9:10; Jer 11:13) where the title *baʿal* has been interchanged with the term *bōšet* in the LXX text (Dillmann 1881: 614–15; McCarter *II Samuel* AB, 86).

Additional names containing the element *baʿal* occur very infrequently in the Bible (Baal-hanan, Beeliada, Baanah, and Baasha), perhaps confirming the developing aversion to the term. In the case of Beeliada, an alternate form Eliada is found, possibly providing a variant solution to the elimination of the offensive *baʿal* element (Noth *IPN,* 119).

A small minority has suggested that the name form be accepted as genuine, arguing that the "bosheth" element represents the divine feature "dignity, pride," which became a divine epithet and type of guardian angel. It is attested in this sense in extrabiblical texts. According to this view, Ish-bohseth would have been either the person's original name, or possibly an additional throne name given to him when he succeeded Saul as king over Israel (Tsevat 1975).

Some have argued that a third form of the name of the same individual, Ishvi, occurs in 1 Sam 14:49 in the list of Saul's family members (e.g., *NHT* 92; Gray 1896: 121). The Lucianic LXX reading *Iessou* could preserve an original Hebrew reading **ʾîšyô,* "man of Yahweh." However, the appearance of Ishvi as the second-born son in this list, together with the absence of Abinadab and Eshbaal, who are named in the Chronicles genealogy as the two youngest sons of Ahinoam, tend to suggest that he is not identical with Eshbaal. He would seem to be an older son who died in his childhood (see AHINOAM; for the career of Ishbosheth, see ESHBAAL).

DIANA V. EDELMAN

ISH-HAI (PERSON) [Heb *ʾîš-ḥayi*]. According to the *Kĕtîb*, Ish-hai is the father of Jehoiada, the father of Benaiah, but the *Qĕrê*, "Benaiah, the son of Jehoiada, was a valiant man" is the more commonly accepted reading (2 Sam 23:20). The *Qĕrê*, which substitutes *ḥayil* for *ḥayi*, causes less problems grammatically and is found in the parallel text in 1 Chr 11:22.

PAULINE A. VIVIANO

ISHBAH (PERSON) [Heb *yišbāḥ*]. The father of Eshtemoa, mentioned in the genealogical list of the tribe of Judah (1 Chr 4:17). His siblings included Miriam and Shammai. Though there are problems with the Heb text, it appears that Ishbah is the son of Mered and Bithiah, the daughter of pharaoh. Bithiah is not mentioned until v 18 in the Heb, after the children of a Judean wife of Mered are listed. RSV placed the clause that refers to Bithiah in v 17 to clarify the apparent connection of Bithiah with the list (in v 17b) preceding that of the Judean wife's children (v 18a). As this seems the best way to make sense of the text, Ishbah then would not have been a pure-blooded Judahite. Note that there is no attempt in the text to exclude the descendants of foreign marriages (cf. Ackroyd *Chronicles Ezra Nehemiah* TBC, 36; and Myers *I Chronicles* AB, 29, who believes that this list is preexilic).

In discussing a class of Heb personal names that have to do with guilt and petitioning for forgiveness, Noth (*IPN* 211; cf. *IDB* 2: 746) links the name with the Heb root *šbḥ* to mean "may [God's wrath] subside."

KENNETH H. CUFFEY

ISHBAK (PERSON) [Heb *yišbāq*]. The fifth son of Abraham and Keturah (Gen 25:2; 1 Chr 1:32). Abraham, in order to remove rivals to Isaac's claim to his inheritance, provided gifts to Ishbak and his brothers and sent them to eastern areas (Gen 25:6). No descendants of Ishbak are mentioned in either list of Abraham and Keturah's offspring, making it impossible to trace his genealogical relationship to other groups (in contrast to Jokshan and Midian whose lines are traced through further generations).

RICHARD W. NYSSE

ISHBI-BENOB (PERSON) [Heb *yišbî bĕnōb*]. A Philistine champion descended from, or a votary of (McCarter *II Samuel* AB, 449–50) Raphah. Ishbi-Benob sought to kill David (2 Sam 21:16), but he was himself killed by Abishai, one of David's heroes (v 17). This episode appears as the first in a series of four episodes recounting the defeat of Philistine champions by David's warriors (2 Sam 21:15–22). Although variant versions of the latter three episodes are to be found in 1 Chr 20:4–8, Ishbi-Benob's threat to David's life, which took place at a time of the latter's weariness (2 Sam 21:15) and led to David's being barred by his troops from further battles (v 17), is not recounted in Chronicles (about which see Curtis and Madsen *Chronicles* ICC, 243; Myers *I Chronicles* AB, 142). The first element of the name Ishbi-Benob is derived from the marginal MT *Qere* to 2 Sam 21:16, *wyšby*. The consonantal text, however, reads *wyšbw*. Most modern scholars have followed the *Kethib* and read the putative name as *wayyēšēbû bĕgōb* "and they dwelt at Gob." This is achieved through the vocalization of the MT *Kethib* and the emendation of Nob to Gob on the basis of vv 18 and 19 (*NHT* 270–71; but see Ehrlich 1910: 331). Recently McCarter (p. 448) has restored the text of vv 15 and 16 on the basis of an originally marginal note which has crept into the LXX traditions in the vicinity of v 11, and on the basis of the Lucianic tradition in which the name Dadou son of Ioas appears in place of Ishbi-Benob. McCarter's suggestion is to restore the beginning of v 16 from the MT *wyšbw bnbʾšr* "and Jishbo of Nob, who" to *wyšbw (wayyišbēw) ddw bn ywʾš* "and Dodo son of Joash captured him [David]." The conjectured corruption of the MT would have been occasioned by the dropping of *ddw* by homoioteleuton and the change of *bn ywʾš* to *bnb ʾšr* under the influence of *bgwb* "in Gob" in vv 18 and 19, for which some manuscripts read *bnwb* "in Nob."

CARL S. EHRLICH

ISHHOD (PERSON) [Heb *ʾîšhôd*]. Manassite son of Hammolecheth (1 Chr 7:18). His name, suggesting (parental wishes for his) physical strength, probably meant "man of vitality" (*îš* + *hôd*) (Noth IPN, 225). His brothers were Abiezer and Mahlah, although the latter name may be feminine in form and so designate a sister (cf. Josh 17:3). In addition, Curtis and Madsen (*Chronicles* ICC, 152) have proposed that Shemida (1 Chr 7:19), whose relation to the rest of the tribe of Manasseh in the chapter is uncertain, was Hammolecheth's fourth son. Few interpreters, however, have found this suggestion convincing. See SHEMIDA.

Although it is clear that Ishhod's mother was Hammolecheth, his father is not identified, and it is unclear why the name of his mother, rather than that of his father, is given in the genealogy. In addition, the relationship of Hammolecheth (and so Ishhod) to the rest of Manasseh is unclear. It seems most likely that she was the sister of Gilead (vv 17–18), although this is by no means certain. In this case, Ishhod's grandfather and great-grandfather would have been Gilead and Machir, respectively. See HAMMOLECHETH.

M. PATRICK GRAHAM

ISHI (DEITY) [Heb *ʾîšî*]. KJV rendering (actually, transliteration) of Heb *ʾîšî* in Hos 2:18—Eng 2:16. Most versions now translate *ʾîšî* as "my husband" (lit. "my man"). The context of the verse, Hosea 2 (in a broader sense, Hosea 1–3), likens the covenant relationship of God (Yahweh) with Israel (here, specifically, the N kingdom) to a marriage, in which Yahweh is the husband and Israel the wife. Israel at present (during the reign of Jeroboam II), accord-

ing to Hos 2:4–15—Eng 2:2–13, is the unfaithful spouse, but, as vv 16–25—Eng 14–23 announce, she will be led to repentance and a return to Yahweh. In that future day of renewed, restored fellowship with Yahweh, Israel (according to the imagery of the marriage metaphor) will call Yahweh *ʾîšî*, "my husband" (cf. v 4—Eng 2), no longer calling him *baʿlî*, "my lord" (v 18—Eng 16). This change in terms of address for Yahweh signifies the change that will take place in the nation. The old term, *baʿal*, which can also be translated "husband," comes from a verbal root meaning "to rule over," "to possess." When *baʿal* is used in the sense of "husband," there often is an implied emphasis on the formal, contractual relationship between the man and woman, on the legal rights of the man as husband ("lord") of the woman (Gen 20:3; Exod 21:3, 22; Deut 22:22; 24:4; cf. 2 Sam 11:26). On the other hand, *ʾîš* ("man"), used in the sense of "husband," can carry connotations of the man as counterpart, companion of the woman, of his being in a close relationship with the woman (Gen 2:23–24; 3:6; cf. Gen 3:16; 29:32, 34; 30:15, 20; 2 Sam 14:5; 2 Kgs 4:1). In the context of Hosea 2, *ʾîšî* is a more personal, intimate term than *baʿlî*. When Israel at some future date is brought to repentance and renewal, she will no longer call Yahweh her "lord," someone she grudgingly has to acknowledge as her husband simply because she is bound to him by legal contract. Rather, she will sincerely, affectionately call Yahweh *ʾîšî*, "my man," "my husband," genuinely loving him and willingly remaining faithful to him.

However, Hos 2:18—Eng 2:16 has further meaning. Because the word translated "(my) lord" is also the name of the great Canaanite deity Baal, *baʿal*, and because of the context (see 2:10, 15, and especially 19—Eng 2:8, 13, 17), this verse should also be seen as a polemic against Baal worship. Such an understanding assumes that the Israelites referred to Yahweh as *baʿal*, "lord," which, according to onomastic data, was the case. In some instances, at least during earlier times, this was done apparently in an innocent, uncompromising fashion. By the 8th century, though, any use of *baʿal* in a religious connection would be dangerous. If mentioned in reference to Yahweh, *baʿal* could still have the generic sense "lord," yet nevertheless would be suggestive of the Canaanite deity; worse, it could indicate a syncretism, in which Yahweh was venerated as Baal. Thus, according to the marriage metaphor of Hosea 2, when Israel in the future will no longer call Yahweh *baʿlî*, "my lord," but *ʾîšî*, "my husband," the underlying message is twofold. Israel will be lovingly devoted to Yahweh and—what goes hand in hand with this—there will be no problem with, not even any reminder of, Baal worship. There will only be pure worship of Yahweh.

WALTER A. MAIER III

ISHI (PERSON) [Heb *yišʿî*]. **1.** The son of Appaim and descendant of Jerahmeel (1 Chr 2:31). He was the father of Sheshan. This verse occurs as part of a general chiastic structure within the genealogy of Judah, with the descendants of Jerahmeel forming the central unit of the chiasm (Williamson 1979). LXX^{B} reads *Isemiēl* for the MT *yišʿî*. The MT of 1 Chr 2:31 is puzzling since it introduces Ishi as the son of Appaim and Sheshan as the son of Ishi with the plural, *bĕnê*, even though only one son is mentioned each time. It may be that this is simply a scribal error since the plural is regularly used throughout 1 Chronicles 2 for the introduction of groups of sons. However, the possibility exists that such a genealogical list does not refer to individuals but to families or clans designated by their ancestor. It is well known that such lists often reflect important social and political relationships between different groups at the time of their composition (Wilson 1980). Although it is impossible to date this list, the importance of Judah in the work of the Chronicler meant that groups attached to this genealogy were accorded a privileged position. It might well be that the purpose was to legitimate the position of various clans or groups during the time of the Chronicler (Braun *1 Chronicles* WBC, 38–47).

2. The father of Zoheth and Betzoheth of the tribe of Judah (1 Chr 4:20). The name occurs in what appears to be a disconnected list of the members of the tribe of Judah (Braun *1 Chronicles* WBC, 57). The connection of Ishi to the tribe of Judah means that it attains a privileged position in the work and time of the Chronicler. Williamson (1979) understands vv 20–23 as the conclusion of the intricate chiasm which comprises the genealogy of Judah.

3. A Simeonite whose sons are said to have destroyed the remnant of the Amalekites at Mount Seir and to have settled in the area (1 Chr 4:42). The Syriac reads "these four men sons of Ishi came" for MT "sons of Ishi." 1 Chr 4:34–43 contains traditions of the movements of various groups and their acquisition of territory. This information is peculiar to the Chronicler which makes it difficult to assess its historical value. It is reported that four sons of Ishi led five hundred Simeonites to Mount Seir where they destroyed "the remnant of the Amalekites" and occupied their territory. It is not known if the phrase "the remnant of the Amalekites" refers to those who escaped David's pursuit and massacre of the Amalekites following their looting of Ziklag (1 Sam 30:17). This tradition seems to reflect a claim to land but it is difficult to date or to be precise about its social location.

4. A member of the tribe of Manasseh and head of a clan (1 Chr 5:24). Ishi is mentioned with six others as a warrior and famous man. Braun (*1 Chronicles* WBC, 78) believes that these phrases, which are common in Chronicles, have military associations and may indicate that the information is derived from an old military source. The explanation that their exile was due to apostasy reflects one of the major themes of the Deuteronomistic History (1 Chr 5:25–26; cf. 2 Kgs 17:7–23). However, it is not entirely clear whether 5:25–26 applies to all the groups mentioned throughout the chapter or simply the seven clans referred to in 5:24.

KEITH W. WHITELAM

ISHMA (PERSON) [Heb *yišmāʾ*]. A Judahite, the brother of Jezreel, Idbash, and Hazzelelponi (1 Chr 4:3). LXX identifies Ishma (Gk *ragma*) as a son of Etam (RSV adopts

this reading), while MT refers to him as a father of Etam. In the latter case, Etam would probably denote a group of people at a particular location (the Etam near Bethlehem, modern Kh. el-Khokh?; *LBHG* 272, 434). Or possibly something has dropped out of the text "and these were the father of Etam" *(wᵉʾēlleh ʾābî ʿêṭām)* between "these" and "father." See discussion of the text at HAZZELELPONI. The name Ishma is a shortened form of Ishmael *(yišmāʿēʾl,* "God hears," Gen 16:11; HALAT 2, 426; cf. *IPN,* 28, 39, 198).

KENNETH H. CUFFEY

ISHMAEL (PERSON) [Heb *yišmāʿēʾl*]. The name of six persons in the OT.

1. The son of Hagar and Abraham (Gen 16; 17:18–26; 21:8–21; 25:9, 12–17; 28:9; 36:3; 1 Chr 1:28–31) and the eponymous ancestor of the Ishmaelites. See ISHMAELITES; HAGAR.

2. Son of Nethaniah. One of the Judean troop commanders who, following the destruction of Jerusalem in 587/586 B.C.E., chose to join Gedaliah, the ruler of Judah, at his administrative center at Mizpah (Jer 40:7–8; 2 Kgs 25:23). Ishmael was a member of the royal house (Jer 41:11; 2 Kgs 25:25) and "one of the chief officers of the king" (Jer 41:1).

Apparently incited by Baalis (an Ammonite seal impression discovered in 1984 reveals that the correct spelling of this name is *Baʿalyišʿa*), king of the Ammonites (cf. Jer 40:14), Ishmael and ten of his men assassinated Gedaliah during a meal shared with Gedaliah on their arrival in Mizpah. (According to Jer 40:13–16, Gedaliah did not believe a warning issued by Johanan, and rejected Johanan's offer to kill Ishmael secretly.) Ishmael also murdered some of Gedaliah's supporters and a number of Babylonians, possibly men attached to a Babylonian garrison stationed at Mizpah (Jer 41:1–3; 2 Kgs 25:25). Although the Hebrew Bible does not give the year of the assassination, the fact that the text states only that it took place "in the seventh month" (Jer 41:1; 2 Kgs 25:25) implies that the assassination occurred in the same year as the fall of Jerusalem ("in the fourth month," Jer 39:2). But it is also possible that Gedaliah remained in power for a few years, and that it was his assassination which led to the deportation which, according to Jer 52:30 (cf. Josephus, *Ant* 10.9.7), took place in Nebuchadnezzar's 23d year (582/581 B.C.E.).

On the day following Gedaliah's assassination, Ishmael treacherously slaughtered a number of pilgrims en route from N Israel to Jerusalem. Their bodies were cast into a cistern built by King Asa of Judah (Jer 41:4–9). Ishmael then set out for Ammon, taking as hostages the daughters of the king who had been entrusted to Gedaliah, and "the rest of the people who were in Mizpah" (Jer 41:10). Ishmael's plans were foiled when he and his band were intercepted at Gibeon by Johanan and other troop commanders and their men. With only eight of his supporters, Ishmael was able to escape to Ammon (Jer 41:15). Fearing Babylonian reprisals for the assassination of Gedaliah (Jer 41:18; 2 Kgs 25:26), Johanan and "all the remnant of Judah" rejected Yahweh's word as spoken by the prophet Jeremiah and fled to Egypt (Jer 41:16–43:7). These events are related in some detail in Jer 40:7–43:7. 2 Kgs 25:22–26 contains only a brief account of the appointment and assassination of Gedaliah, and the flight to Egypt. There is no reference to this material in either Chronicles or Jeremiah 52.

The Hebrew Bible does not say what motivated Ishmael to assassinate Gedaliah. It can be assumed, however, that Ishmael was a staunch nationalist who would have viewed Gedaliah not only as a traitor who had collaborated with the Babylonians but also as the usurper of a role which rightfully belonged to the house of David. (No title is given for the office to which Gedaliah, a member of the prominent family of Shaphan, was appointed by the Babylonians; while it is usually assumed that Gedaliah's appointment was to the office of "governor," one must also reckon with the possibility that he was appointed "king" [see *IJH,* 421–23].) Although Ishmael may have been motivated by nothing more than an intense hatred for both Gedaliah and the Babylonians, it is also possible that as a member of the house of David he also entertained the hope of laying claim to the throne of Judah (cf. Josephus, *Ant* 10.9.3), perhaps with the support of the Ammonites (cf. Jer 40:14).

Ishmael's assassination of Gedaliah is of pivotal importance in the chain of events leading from Gedaliah's appointment to the flight to Egypt. Both Jer 40:7–43:7 and 2 Kgs 25:22–26 underscore the view that hope for the future lies not with those who remained in the land (and who later left for Egypt), but rather with the exiles in Babylon.

JOHN M. BERRIDGE

3. A Benjaminite, and descendant of Saul in the thirteenth generation (1 Chr 8:38; 9:44). Accordingly, he should have lived in the 7th century B.C.

4. The father of Zebadiah, "chief" (Heb *nāgîd*) of Judah at the time of Jehoshaphat (2 Chr 19:11). The historicity of Jehoshaphat's juridical reform (2 Chr 19:4–11) is difficult to defend (Welten 1973: 142, 184–85); so is the assumption of a Judean "chief" in the preexilic period; the constellation king—high priest—secular leader of Judah recalls the political structure of the Persian province Yehud.

5. A captain (literally "officer of hundred") operative in the revolt against Athaliah in the version of the Chronicler, 2 Chr 23:1. The officers are nameless in the Chronicler's source, 2 Kgs 11:4; calling them by names follows the same line as the other "improvements" introduced by the Chronicler into the account of 2 Kings 11.

6. A priest found guilty of marrying a foreign woman, and who subsequently agreed to divorce her (Esra 10:22).

The name Ishmael means "God listened (namely, to the parents' prayer)" and is attested throughout W Semitic, from Amorite to Safaitic (Knauf 1989: 38, n. 170). In Hebrew, it was a very popular name in the 7th (#3) and 6th (#2) centuries, and in the postexilic period (#4–6). Epigraphical attestations of the name show the same distribution; there may be up to nine Ishmaels in Avigad's bullae from the time of Jeremiah (1986).

ERNST AXEL KNAUF

ISHMAEL, RABBI. Leading rabbinic authority of the first third of the 2d century B.C.E. (contemporary with but in the long run overshadowed by Akiba ben Joseph); Ishmael's father was named Elisha, but in recognition of his importance he is often named in ancient sources without his patronymic. It has long been taken as established that Ishmael and Akiba were the founders of two rival schools of exegesis, of which Ishmael's was characterized by a tendency to treat biblical language as ordinary language while Akiba treated it as a special discourse in which every particle and every letter had specific meaning (so, e.g., Heschel 1962–65), but recent scholarship has cast doubt on the idea that two so clearly distinct hermeneutical systems can be isolated from the extant texts (see Porton 1976–82 4: 159–211). In any event, several of the most important early midrashic elaborations of the Pentateuch (chiefly *Mek. de-Rabbi Ishmael* and *Sipre Num.*) are widely attributed to his school, as the traditional title of the first clearly indicates; elsewhere in rabbinic literature many additional exegetical traditions are ascribed to those of the house/school of *R. Ishmael.* The introductory section of *Sipra* contains a list of thirteen rules for the proper exegesis of the Torah which also is attributed to Ishmael, even though *Sipra* as a whole is usually assigned to the school of Akiba; this list was eventually incorporated into the daily prayer book.

The nature of rabbinic literature makes it difficult to reach secure conclusions about the details of Ishmael's life or teachings, but it can be noted that numerous sources (e.g., *b. Ketub.* 105b; *Ḥul.* 49a; *t. Ḥal.* 1:10) assign him a priestly ancestry, and that he seems at some point to have taken up residence in the southern portion of the Land of Israel (*Ketub.* 5:8). A widespread tradition includes among the martyrs of the Hadrianic persecution a teacher named Ishmael (see, e.g., *Mek. Neziqin* 18), but aside from Finkelstein (1938) and Porton (1976–82: 2.129–33) most modern authorities agree that the reference, if at all historical, must have been to some other individual (see Lieberman 1973: 737–38, Safrai *EncJud* 9:83–86).

In the mystical literature of the *hêkālôt* ("heavenly palaces"), Ishmael's name appears very frequently; in fact he and Akiba are the main teachers in whose names these traditions are reported. No satisfactory explanation of this connection has been proposed. Talmudic tradition reports that Akiba was also connected to the *merkābâ* movement (chariot-throne mysticism), but asserts no such link for Ishmael. Perhaps Ishmael's name was attached to these materials through his well-known association with Akiba.

J. Neusner (1969) has observed that the names of Ishmael's closest disciples are generally absent from the Mishnah, and has hypothesized that Ishmael's followers fled to Babylonia during the Bar Kokhba war and the Hadrianic persecution and did not all return to Israel when it later became possible to do so; this would imply a very important role for Ishmael's students in the transfer of rabbinic Judaism to Babylonia during the middle and late 2d century C.E.

ISHMAELITES [Heb *yišmᵉʿêʾlîm*]. In the OT there are five contexts in which this group of people is mentioned. In the Joseph story, it is variously the Ishmaelites or the Midianites (or both together) who transport and sell Joseph to Egypt (Gen 27:25, 27ff.; 39:1). In Judg 8:24 the Midianites are (again) called Ishmaelites. The Ishmaelites are listed in Ps 83:7 among a number of peoples hostile to Israel (Edomites, Moabites, Hagarites, and Amalekites). 1 Chr 2:17 identifies one of David's officials as an Ishmaelite, who is identified as an "Israelite" in 2 Sam 17:25. According to 1 Chr 27:30 an Ishmaelite was in charge of David's camels.

A. Name and Identification
1. Ishmael
2. Sons of Ishmael
B. History of Research
C. The Rise and Decline of the Ishmaelites
1. The 8th Century B.C.
2. The 7th Century B.C.
3. The 6th and 5th Centuries B.C.

A. Name and Identification

1. Ishmael. Ishmael, the eponymous ancestor of the Ishmaelites, and his mother Hagar are the subject of two biblical narratives. According to Genesis 16, Abram fathered Ishmael, but the jealous Sarai drove the still-pregnant Hagar into the desert (vv 3–6). There an angel revealed to Hagar the eventual destiny of the child she would soon bear. However, in v 15 (usually assigned to P, but see Thompson 1987: 89–91) Abram is portrayed as being present for the birth of his son, and indeed it is he who gives the child the name "Ishmael."

In Gen 21:1–21, Sarah, after giving birth to Isaac,

(again) incites Abraham to expel Hagar and Ishmael, who at this time is at least 15 or 16 years old (cf. 16:16 with 21:5, 8). In a passage that has long baffled commentators, the outcast Hagar carries her (approximately 15-year-old) son into the wilderness, where she abandons the crying child (Heb *yeled*, usually reserved for sub-teenagers!) under a bush (vv 14–16). At this point, an angel intervenes and (again) reveals the destiny of the child.

It is evident from the repeated emphasis on Ishmael's destiny that these two similar stories serve an ethnographic purpose: "He will be a wild ass of a man, his fist against all, and everyone's fist against him" (16:12). This verse describes not an individual person, but the bedouin lifestyle. The same holds true for Gen 21:20–21 (Knauf 1989: 22–24). However, this does not mean that the intention behind the two narratives is solely ethnographic (cf. Trible 1984: 9–35; Görg 1986).

In the P source (or redactional layer), the basic content of the two narratives, Genesis 16 and 21:1–21, is condensed into four sentences and a short dialogue. Gen 16:3 and 16:15–16 state the relationship between Abram, Hagar, and Ishmael baldly. When Abram fails to believe God's promise of another son and wishes to designate Ishmael as heir of the covenant, Yahweh rejects this (Gen 17:15–19). Abram is reassured, however, that Ishmael shall also become the father of a large people (v 20). The fulfillment of this promise is described in Gen 25:12–17, where the twelve sons of Ishmael, all well-known and powerful Arab tribes, are listed.

Yišmaʿ(ʾ)el is a typical W Semitic personal name, a sentence name of the type imperfect (preterite) plus subject (theophorous element). The type is attested from the earliest W Semitic texts (second half of the 3d millennium B.C.) to Pre-Islamic Arabic (first half of the 1st millennium A.D.; Knauf 1989: 38, n. 170). Even without the stories about Ishmael in Genesis 16 and 21, and the list of the sons of Ishmael in Gen 25:12–17, it could still be concluded from the generic term *yišmēʿ(ʾ)ēlîm* that this group of tribes derived itself from an eponymous ancestor named *yišmaʿēl*.

2. Sons of Ishmael. It is a subject of scholarly dispute whether the "Ishmaelites" of the biblical sources outside the P source have anything to do with the "Sons of Ishmael" listed in Genesis 25; and, whether there are extrabiblical references to "Ishmael" as an ethnonym, particularly with reference to the Arabian tribal entity *Su-mu-(ʾ-)*AN, mentioned by Sennacherib and Ashurbanipal (see B below). The "Sons of Ishmael," in any case, are well attested both inside and outside the OT.

NEBAIOTH (ancient Arabic **Nabayāt*) is called the "firstborn of Ishmael," and listed first in Gen 25:13. This may reflect a specific Palestinian point of view (Knauf 1989: 108–9). His sister is married to Esau/Edom in Gen 28:9 and Gen 36:3 (with two different names, cf. Knauf 1989: 93, n. 509). For Isa 60:7, they are breeders of small stock *par excellence*. Ashurbanipal seems to have been the first Assyrian ruler who established contacts with this Arabian tribe (Ephʾal 1982: 221f.; Knauf 1989: 93–95). According to the Thamudic inscriptions from Jebel Ghuneim near Taymāʾ, the people of Taymāʾ had to fight at least one war against the *nbyt* (**Nabayāt;* Winnett and Reed 1970: 90–92). These inscriptions are dated to the 6th century B.C. by Winnett (1980), and to ca. 400 B.C. by Roschinski (1980) and Knauf (1989: 76–77). Linguistically, it is impossible to connect the later Nabataeans with the Nebaioth; historically, it can be argued that the Nabataeans derived from the Qedarites (Knauf 1989: 92–111).

KEDAR (more properly, Qedar) is listed second in Gen 25:13, but was undoubtedly the most numerous and the most powerful tribe among the "Sons of Ishmael." Queens, and later kings, of the Qedarites are attested in the Assyrian inscriptions from 738 B.C. until the reign of Ashurbanipal (see C below; Ephʾal 1982: 223–227; Knauf 1989: 2–5, 66, 96–108). In 599/98 B.C., the Neo-Babylonian king Nebuchadnezzar led a campaign against this tribe. The Babylonian offensive is reflected in Jer 49:28–33 (Dumbrell 1972; Knauf 1989: 103). For Jeremiah (2:10), and for Deutero- and Trito-Isaiah (42:10 and 60:5–9), these represent in general the inhabitants of the desert E of Palestine. The latest texts that refer to them are Ezek 27:21; Isa 21:16f.; Cant 1:5; and Pliny, *HN* V.11.(12).65.

ADBEEL, probably identical with Nodab (1 Chr 5:19; Albright 1956: 13; Knauf 1989: 67–68), is attested in the inscriptions of Tiglath-pileser III (Ephʾal 1982: 215f.; Knauf 1989: 66–67).

MIBSAM and MISHMA occur together in 1 Chr 4:25 in the genealogy of Simeon. This may reflect the presence of members of these two tribes in S Palestine in the Persian period (Knauf 1989: 68). Mishma may be mentioned by Ashurbanipal under the name of Išammeʾ, which can represent Arabic **Yuṣ,āmiʿ*, an imperfect of the III stem with the meaning "(The ones) who joined Ishmael–*Ṣ,amaʿ)il*" (Weippert, *RLA* 5: 172–73; Knauf 1989: 9, n. 40).

DUMAH, in classical Arabic Dūmat al-Jandal, now al-Jawf at the lower end of the Wādī Sirḥān, was the political and cultic center of the Qedarites during the reigns of Sennacherib and Esarhaddon (Knauf 1989: 69, 81–88). Whether Isa 21:11–12 relates to this central N Arabian town is unclear.

MASSA is mentioned in Assyrian texts from the 8th and 7th centuries B.C. (Albright 1956; Ephʾal 1982: 218; Knauf 1983b) and in 4th century B.C. Thamudic inscriptions from Jebel Ghuneim near Taymāʾ (Winnett and Reed 1970: 101–2). "Massaʾ" is usually restored in Ps 120:5 (Müller, *TRE* 3: 573, but cf. Knauf 1989: 72, with n. 363) and in Prov 30:1. The admonitions of Prov 31:1–9 are attributed to the mother of a "king of Massaʾ."

HADAD may be attested as a clan in the Jebel Ghuneim inscriptions (Knauf 1989: 73–74). This would place the tribe in the vicinity of Taymāʾ.

TEMA (or Taymāʾ) was a major trade center in N Arabia, as is attested by Jer 25:23–24; Isa 21:13–15; Job 6:19. The town paid tribute to Tiglath-pileser III in 734 B.C. For ten years (between 553 and 543 B.C.) it was the residence of the Neo-Babylonian king Nabonidus. When the Minaeans gained the supremacy over the incense route from the Sabaeans (cf. Job 6:19!) ca. 400 B.C., Taymāʾs role in the trans-Arabian trade seems to have declined to the favor of Dedan/el-ʿUlā, where the Minaeans established a colony (Knauf 1989: 74–80). How much of the archaeological and epigraphical heritage of Taymāʾ derives from the time of Nabonidus (Bawden et al. 1980; Bawden 1981; 1983; Winnett 1980; Abu-Duruk 1986) or rather from the Per-

sian period (Roschinski 1980; Knauf 1983c: 37–41), is disputed. Recent archaeological work has enhanced our understanding of this heritage considerably (Livingstone et al. 1983; Aggoula 1985; Cross 1986).

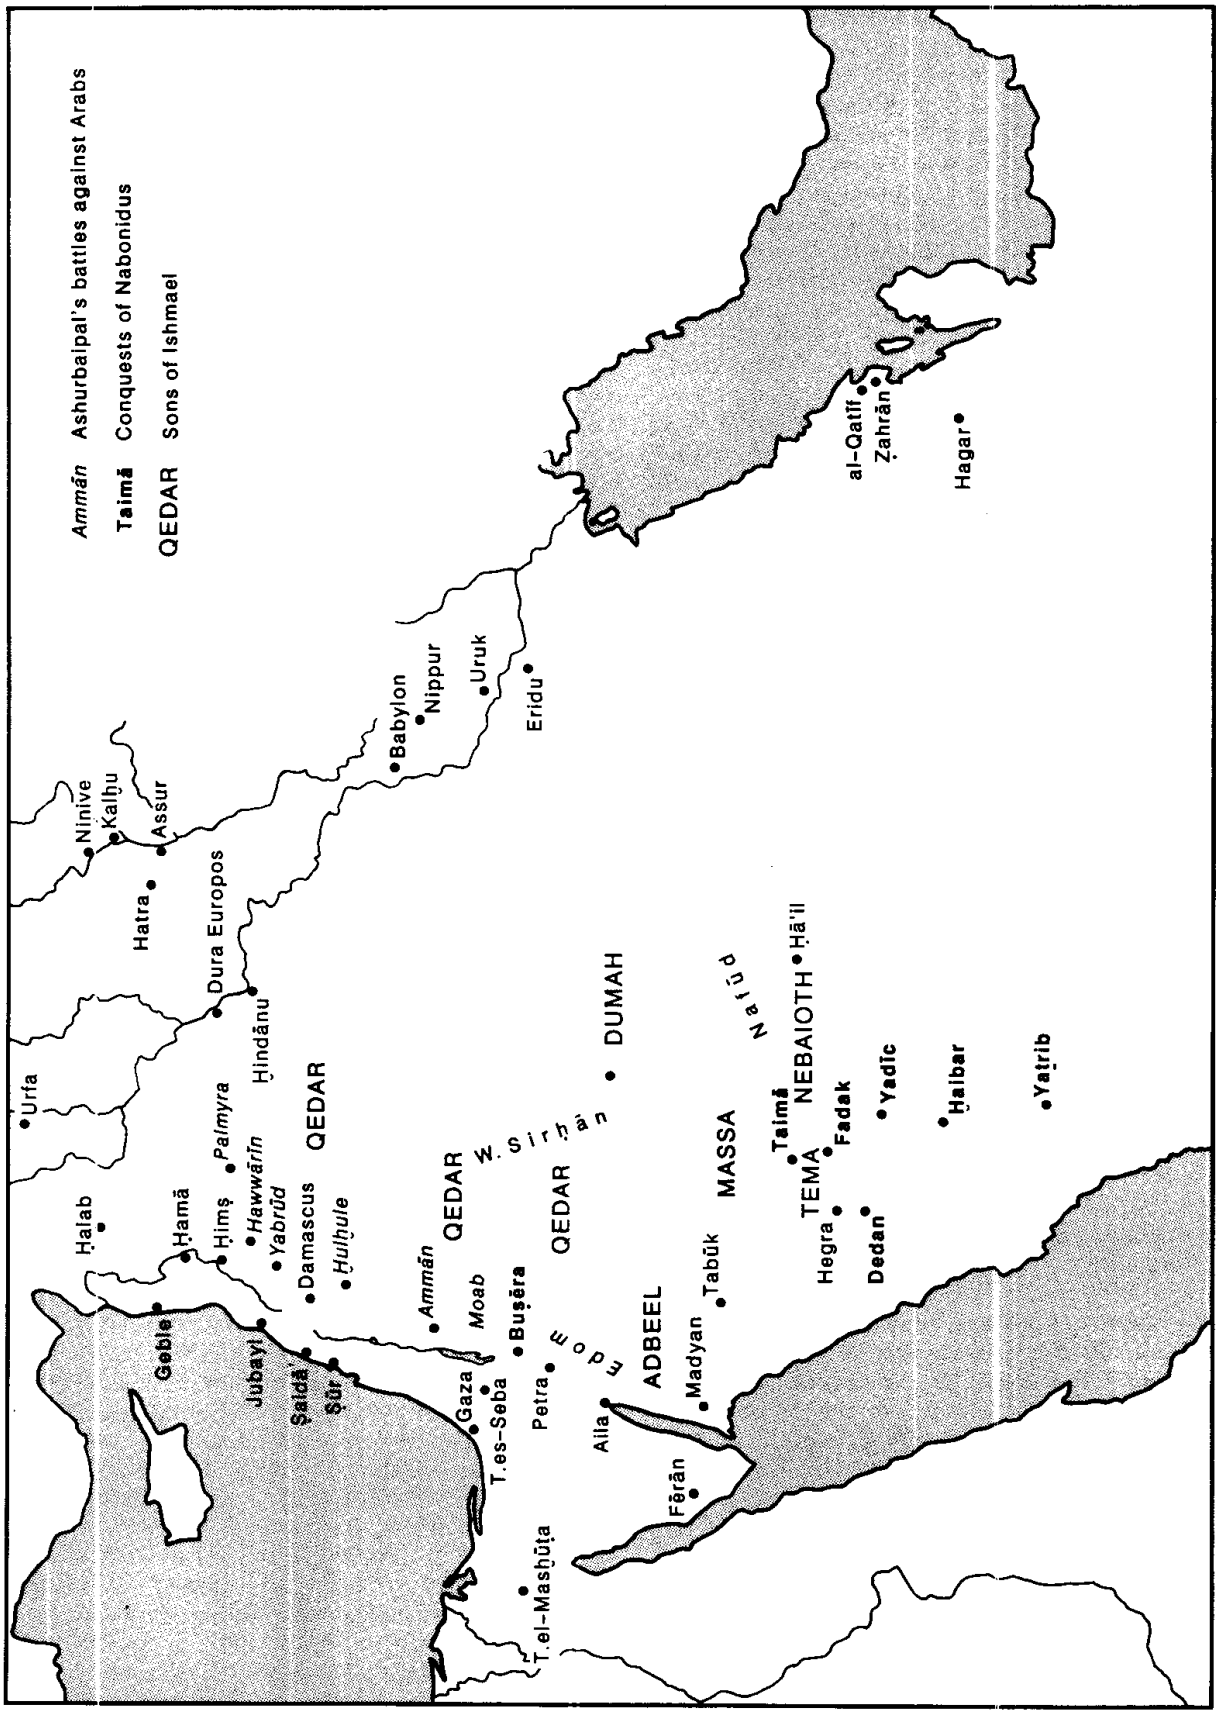
JETUR is apparently located in N Transjordan according to 1 Chr 5:19 (a tradition most probably stemming from the Persian period). The tribe, better known under its Greek/Latin name "Ituraeans," moved into the Biqaʿ valley of Lebanon in the 2d century B.C. and became famous—or infamous—for its fierce raids (Marfoe 1979: 23–25; Knauf 1984: 19–21). The Roman imperial army recruited from them a number of elite units of archers. The Ituraeans are attested in Safaitic inscriptions as well as in the Greek and Latin literary record (Knauf 1983c: 41–47; 1989: 80f).

NAPHISH is associated with Jetur in 1 Chr 5:19, but with Massaʾ in a recently published cuneiform letter to the Assyrian king Ashurbanipal (K 5580 = CT 53, 289; Knauf 1983b: 34–36).

KEDEMAH (or Qedmah) is the only "son of Ishmael" not attested in any extrabiblical source, giving rise to the assumption that this "tribe" is nothing but a transformation of the *"bene qedem"* (the "People of the East") into a tribe in order to make the number of Ishmael's sons the requisite twelve.

B. History of Research

The basic outlines of a history of the Ishmaelites that became the accepted view for over a century were drawn by T. Nöldeke in 1864 (pp. 3–6). According to this view, the Ishmaelites were part of the early history, or even prehistory, of Israel, not attested after ca. 1000 B.C. With the *formgeschichte* school of thought, the assumption of a J source and an E source in the Pentateuch, and the widely shared acceptance of an early date for both, it became possible to see in the Ishmaelites only a minor tribe in the Negeb desert of S Palestine, somehow bordering upon the "Isaac-People" around Beersheba. This view was based upon Genesis 16; 21:1–21; 37:25; 27f.; 39:1; 1 Chr 2:17; 27:30; and Judg 8:24, but had to ignore the Assyrian evidence which was not yet known to Nöldeke. However, this evidence was known to Meyer (1906: 322–26) and Noth (*RGG* 3: 935–36), who nonetheless reconstructed their histories of the Ishmaelites along similar lines.



Full justice was done to the Assyrian evidence by Dumbrell (1970: 184–246). According to him, the Ishmaelites were a major tribal confederacy extending all over N Arabia. They took over from the Midianites ca. 1100 B.C., and were succeeded, in turn, by the Qedarites in the 8th century B.C., who in turn fell victim to the Nabataeans. Knauf (1989) agrees with Dumbrell's geographical and political concept of the Ishmaelites, but not with his dating. The Midianites, according to his view, do not belong in this series of N Arabian desert supremacies (Knauf 1983a; 1988), nor were the relationships between the Ishmaelites and the Qedarites, or between the Qedarites and the Nabataeans, as antagonistic as Dumbrell assumes, if for no other reason than because the latter (in each case) were originally a tribe (or a clan) of the former.

Ephʿal (1982), who most completely collated the cuneiform evidence for Arab tribes of the first half of the 1st millennium B.C., returned to the view that the Ishmaelites, a S Palestinian tribe not of Arab extraction and not attested later than 1000 B.C., had nothing to do with the various "sons of Ishmael" subsequently listed by the P source of the Pentateuch and attested in the Assyrian, Aramaic, and ancient N Arabian inscriptions (Ephʿal 1982: 233–240). Knauf (1989), on the contrary, assumes that Genesis 16; 21:1–21; 25:12–17, and the Assyrian texts of the 8th–7th centuries B.C. all testify to the same ethnic and political entity: an Ishmaelite tribal confederacy extending over the whole of N Arabia from the time of Tiglath-pileser III to the time of Ashurbanipal.

The issues underlying these different views are the date and the reliability of the OT references to Ishmael, and the question whether biblical Ishmael is identical with the ethnic group *Su-mu-(ʾ)-il* mentioned by Sennacherib and Ashurbanipal. The answer to the first question depends on one's position with respect to recent discussions of the Pentateuchal sources. According to Ephʿal, who wrote the bulk of his work before this discussion was renewed in the 1980s, all biblical references to Ishmael antedate the end of the 10th century B.C. It is only the list in Gen 25:12–17 that must be later, according to the epigraphic evidence for the tribes listed therein. Ephʿal assumes that the author of this list sought a common ancestor for the individual Arab tribes of his day, and that he found the traditional (but by his time meaningless) name of Ishmael suitable for this purpose (Ephʿal 1976; 1982: 233–240). For Knauf, the oldest traditions in Genesis 16; 25:13–15; 37:25, 27f.; and 39:1 are more or less contemporary (early to mid-7th century B.C.; see Knauf 1989: 35–45, 61–65). In his view, Gen 21:1–21 is later than the P account (which consists of Genesis 17; 25:12–17; Knauf 1989: 16–25). Also 1 Chr 2:17; 27:30; Ps 83:7 are assumed to be without historical value for the preexilic period (Knauf 1989: 10–14), as is Judg 8:24, which is a gloss from the exilic period.

As for the identity of *Yišmaʿel* and *Šumuʾil* (*Su-mu-*[ʾ-]AN), Ephʿal denies any possibility of the equation (1976: 230; 1982: 167, 230). He does not realize, however, that Assyrian *s* consistently represents W Semitic *š* in proper names, and that Assyrian *u* occurs in a number of Arabian names in Assyrian transcriptions instead of Semitic *a* (probably due to a pronunciation in ancient Arabic that resembled the *tafkhīm* of contemporary Arabic). Assyrian Šumuʾil therefore renders, in all likelihood, an ancient N Arabian tribal name *Sˌama*ʿ*(ʾ)il*, which had the same meaning as *Yišmaʿ(ʾ)il*. Both historically and linguistically, the identity of Ishmael/*Yišmaʿil* with Šumuʾil/*Sˌama*ʿ*(ʾ)il* is highly probable (Knauf 1989: 5–9, 45).

Minor points at issue are the identity of Beer-Lahai-Roi (Gen 16:13f.) and that of the mother of Ishmael, Hagar. According to the *formgeschichte* method, the enigmatic passage Gen 16:13f. is the core of the "tradition," originating in connection with a place of unknown location, Beer-Lahai-Roi, which was the Ishmaelites' cultic center where they worshipped a certain El-Roi (Noth, *RGG* 3: 935–36, and many others). According to Knauf (1989: 45–49), Gen 16:13f. is a postexilic learned addition to Gen 16:1–12, a short story of high literary quality. Lahai-Roi *(lḥyrʾy)* is structurally possible as an ancient N Arabian personal or tribal name. A tribe or a clan of this name may have given its name to a well within its area of pasturage. There is no hard evidence that a god "El Roi" ever existed. The cultic

ISH.01. Ishmaelites in the ANE.

center of the Ishmaelites was Duma, and their deities were ʿAttaršamayn, Daʾa(y), Nuha(y), Ruḍā, Ab(b)irīlu, and ʿAttar-Qurumâ (Knauf 1989: 81–88).

Hagar has been connected with the Hagarites, an Arab tribe of N Transjordan and central Arabia in the Persian and early Hellenistic periods. The problem, however, arises from the fact that the Hagarites are attested later than the Ishmaelites (Meyer 1906: 328; Knauf 1989: 49–52). The most prominent "Hagar" of the ANE was a trading metropolis in E Arabia, the Gerrha of the Greek sources (see HAGAR). It is possible that the Hagar-Ishmael relationship depicted in the OT actually indicates some sort of political relationship between the central N Arabian Ishmaelites and E Arabia in the 1st millennium B.C. For the time being, however, nothing can be said positively due to the lack of sufficient archaeological and epigraphical data on E Arabia for the period 1500–500 B.C. (Potts 1983; Knauf 1989: 53–55; but cf. also Potts 1984 and 1985).

The contributions of Musil to the history of N Arabia in the 1st millennium B.C. remained outside the mainstream of scholarly discussion. This explorer discussed most of the tribes, and the sources that were available in his day, in the appendices of his travelogues (Musil 1926; 1927). However, he completely disregarded the secondary literature and was in turn disregarded in subsequent research. It is his original observations on Arab tribal life at the beginning of the 20th century, more than his attempts in historical reconstruction, that make his books a necessity for anyone who wants to study the ancient Arabs.

C. The Rise and Decline of the Ishmaelites

The Ishmaelites were the first central N Arabian desert power to appear in history. The Midianites (end of the 2d millennium B.C.) had been geographically a rather restricted group of sedentary and semisedentary agriculturalists, pastoralists, craftsmen, and traders; they never exerted political power beyond their small homeland (Knauf 1983a; 1988). The participation of the Arab Gindibu with 1000 camels in the battle of Qarqar in 853 B.C. (Ephʾal 1982: 75–77) remained an isolated episode not to be repeated for the next hundred years. The Ishmaelite tribal confederacy that reached its zenith during the heyday of the Assyrian empire comprised camel-breeding bedouin tribes and oasis towns. Tribes and towns together were able to organize and control long-distance trade through the deserts of Arabia. The Assyrian references to Ishmael/Šumuʾil all belong to the 7th century B.C. Some of the tribes of Ishmael, however, are attested as early as the end of the 8th century B.C.; attestations continue through the 3d century B.C. (Qedar) and even later (Yetur). The rise and decline of the Ishmaelite tribal confederacy can be traced as follows:

1. The 8th Century B.C. The first reference to a tribe of the *Yišmaʿʾel/Šumuʾil/Šamaʿʾil* confederacy comes from the year 738 B.C., when Tiglath-pileser III campaigned in N and central Syria and received a tribute of male and female camels from Zabībê, queen of the Qedarites (Weippert 1973; Ephʾal 1982: 82f.; Knauf 1989: 4f.; see *ANET,* 283). While this Assyrian king laid siege to Damascus in 733 B.C., he conducted a campaign against another queen of the "Arabs," Shamshî, whom he regarded as successor to Zabībê, charging Shamshî with having broken Zabibe's oath of fealty. His booty consisted of camels, incense, and spices (Ephʾal 1982: 83–87; Knauf 1989: 3f.; see *ANET,* 283). The same Shamshî paid tribute to Sargon II in 716 B.C., together with the Pharaoh of Egypt and Yithaʿʾamar (i.e., Yathaʿʾamar Bayyin bin Sumuhūʿalīy) of Sabaʾ (Knauf 1989: 2f.; see *ANET,* 286). This tribute was due, in all probability, to the Assyrian seizure of Gaza, the Mediterranean port of the incense route. In a similar situation a number of tribes and towns of Ishmael had already paid tribute to the Assyrians in 734 B.C. These were Massaʾ, Taymâʾ, and Adbeʾel, who acted together with the Midianite tribe of ʿEpha, two other tribes, and the Sabaeans (see *ANET,* 284). This list of Arabian tribes, towns, and states, all of which can be aligned along the incense route through W Arabia, are the first attestation of this route and its trade (Weippert 1982: 25, 51; Knauf 1989: 2, n. 10; 3, n. 16).

The picture that emerges is quite clear: at the end of the 8th century B.C., the tribes of Ishmael, or at least some of them, dwelt along the incense route and controlled the incense trade. One of them, the Qedarites, held a territory that spread from the central Syrian desert through S Syria to S Palestine. See Fig. ISH.01. The extent of the tribal territory implies that it was a camel-breeding tribe; an implication supported by the listing of camels among the tributes paid. It is not known whether or not the tribes of Ishmael, or some of them, formed a confederacy as early as the end of the 8th century.

A cylinder seal, bought at the Syrian port city of Jeble, once belonged to *Baraq ʿabd ʿAttaršamayn.* ʿAttarsamayn (a goddess) was the chief deity of the Ishmaelites. It is possible, therefore, that the seal belonged to an official (e.g., a priest with political functions) of the confederacy who had it inscribed with his name. The inscription dates to the 8th (Knauf 1989: 82, n. 445) not the 9th century B.C. (Herr 1978: 40) and may be the first, albeit indirect, attestation of the Ishmaelite confederacy. This remains uncertain, since other people and tribes worshipped this goddess as well.

Obviously, it was not until the establishment of the "incense route" and the Assyrian take-over of the political power and the economic organization of the Near East that larger political entities—powerful tribes and tribal confederacies—emerged in N Arabia. The economic upsurge of the Near East, and the growing demand for incense from the 8th century B.C. onward, brought increasing political and economic power to those who controlled the Arabian deserts. This may have prompted the camel-breeders of Arabia to organize themselves into larger, politically more powerful tribes. On the basis of their riding technique, it is appropriate to call the desert tribes of the 9th to 6th centuries B.C. "proto-bedouin" (Dostal 1959; 1979; Knauf 1983a; 1983d: 30; 1986: 22–24). Their saddle technique did not allow them to use a spear, a lance, or a sword while seated on camelback. Therefore, they had to dismount for battle and were at a severe disadvantage against, e.g., the Assyrians. Assyrian reliefs give ample illustration of this (Knauf 1989: 22f., with n. 95).

The first rulers of the "Arabs" (referring here only to N Arabians) were, to a large extent, women. Seventh century B.C. Assyrian references describe the functions of these Arab queens as partially cultic in nature (Abbott 1941;

Knauf 1989: 2–6, 24, with n. 105; 1986: 25, with n. 20). Queen Shamshi may be depicted on an Assyrian relief, now in the British Museum (Knauf 1989: 3; *ANEP*, 58: 187).

2. The 7th Century B.C. The tribal confederacy of Šumuʾil/*Šamaʿʾil*/Ishmael is clearly attested for the first time in texts from this century. The confederacy is lead by the tribe of Qedar, specifically by this tribe's ruling family. The political and cultic center of this family and, presumably, the whole tribe was Duma at the lower end of the Wādī Sirḥān (Knauf 1989: 1–5, 81–91). The individual tribal leaders fought each other constantly, allied themselves to the Assyrians, and fought the Assyrians when they were allies of Assyria's enemies. Assyrian attempts to establish a vassal kingdom in Arabia failed. This, and growing pressure exerted by the proto-bedouin on the decaying Assyrian empire (an empire weakened by epidemics and ruled by kings whose attitudes towards daily affairs were governed less by rational decisions than by irrational fears; Spieckermann 1982), may have led to a final campaign against the Arabs, probably fought ca. 644 B.C.—a campaign that was cruel even according to Assyrian standards (Knauf 1989: 96–103).

The growing importance that the Assyrians attributed to the Arabs is reflected, at the same time, by the increasing references to Arabian affairs in the various editions of Ashurbanipal's annals (*ANET*, 297–301). These annals give a vivid account of the fear and hostility that the Assyrians felt towards the Arabs. They cannot, however, be taken at face value as factual accounts; they owe their narrative sequence mostly to literary composition and redactional compilation (Weippert 1973–74; Ephʾal 1982; Knauf 1989; these three authors agree in their redaction-critical approach to Assyrian literature more than in their assessment of how much reliable factual evidence this literature contains).

The following political events can be stated with certainty. Between 691 and 689 B.C. Sennacherib conquered Duma, took queen Teʾelḫunu captive, and deported her gods. He installed Ḥazāʾil, a tribal leader who had previously supported Teʾelḫunu, as vassal king of the Arabs (Ephʾal 1982: 118–23; Knauf 1989: 4f.; 81f.). Preceding the conquest of Duma, Sennacherib mentioned "gifts" from Taymâʾ and Šumuʾil (Ephʾal 1982: 124f.). Ḥazāʾil was succeeded by his son Yauthaʿ.

Between 676 and 673 B.C., another tribal leader, named Wahb, "rebelled" against Yauthaʿ and was defeated by Assyrian support (Ephʾal 1982: 125–30; Knauf 1989: 99). According to Ephʾal, Yauthaʿ rebelled against Esarhaddon between 673 and 669 B.C., but according to Knauf (1989: 98–100) the texts refer only to one "rebellion" of Yauthaʿ, and this was directed against Ashurbanipal who defeated him sometime before 649 B.C. Yauthaʿ disappears after his defeat, and another "king" of Qedar, Abyathaʿ bin Śahrî, was appointed "king of the Arabs" by the Assyrians. ʿAmmuladdin, yet another king of Qedar, pillaged Syria before, during, or after the "rebellion" of Yauthaʿ, and was defeated by the king of Moab, Kamosh-ʿaśā.

Sometime before 649 B.C. the Assyrians established trade contacts with the Nebaioth; one of their caravans heading for Assyria was plundered by a shaykh from the tribe of Massaʾ (Knauf 1989: 93f.). After 649 B.C., another Qedarite shaykh, Yuhaythiʿ bin Birdād (who may have been a relative of the family of Ḥazāʾil), united most of N Arabia under his rule. About 644 B.C., the Assyrians conducted two major campaigns against him and his followers. The Assyrians crossed the Syrian desert, passed the vicinity of Palmyra, and ended their pursuit of the Arabs S of Damascus. Both Nebaioth and Abyathaʿ bin Śahrî fought alongside of Yuhaythiʿ despite what allegiance they may have previously sworn to the Assyrians. Ashurbanipal captured some tribal leaders in the course of this campaign, but not Yuhaythiʿ, who was the first and last ruler ever to be called "king of Šumuʾil" in the sources (Knauf 1989: 99–103). The Assyrian literary accounts of these Arabian wars are supplemented by a series of palace reliefs that show defeated camel riders (*ANEP*, 20: 63).

The tribes that are mentioned in the 7th century B.C. Assyrian texts as fighting side-by-side are Qedar, Nebaioth, Massaʾ, Naphish, and probably Mishmaʿ (Isammeʾ). Adbeel is no longer mentioned in the 7th century records. Duma is clearly attested as the political center of the tribe of Qedar and as the seat of the six deities of the "kings of the Arabs." Among these were ʿAttarsamayn, Ruḍā, and Nuhay, who are frequently attested in the Thamudic inscriptions of Nejd. These three deities are invoked together in one inscription from the vicinity of Duma which may well date back to the 7th or 6th century B.C. (Winnett and Reed 1970: 80; Knauf 1989: 81–88). After Duma was conquered by Sennacherib, it is not mentioned in any source for another five hundred years.

Although Sennacherib mentions Taymâʾ alongside of Šumuʾil, it is rather unlikely that this city formed part of the Ishmaelite confederacy. The pantheon of Duma, the Ishmaelites' capital, and that of Taymâʾ are quite different in their structures, and comprise different gods. The chief deity of the Ishmaelites and of Duma was a goddess, while the chief deity of Taymâʾ was a god. This difference would likely preclude any significant political unity among these two cities, given the political nature of religion in the ANE (Knauf 1989: 81–91).

It is quite clear, then, that not all of the (twelve!) "sons of Ishmael" listed in Gen 25:13–15 were actually part of the Ishmaelite confederacy. The rather fluid and unstable nature of bedouin tribal confederacies may mean, in the case of the Ishmaelites, that tribes who joined the leaders of the confederacy on one occasion did not join on the next. Clearly, membership in a common political superstructure did not mean for the N Arabian tribes that they were no longer able to fight among one another, nor did the actions of one shaykh of the large tribe of Qedar necessarily determine the actions of other parts of this tribe, or reflect the others' attitudes. It is as difficult for the modern historian to describe this type of political entity and its history as it was for the Assyrians to deal with it politically and militarily.

Arguing from the structure of the list in Gen 25:13–15, Knauf (1989: 89) suggests that only the first seven of the twelve tribes/cities actually formed part of the Ishmaelite confederacy in the 7th century B.C. (Qedar, Nebaioth, Adbeel, Massaʾ, Duma, Mishmaʿ). However this reconstruction has been complicated by the publication of an Assyrian letter that clearly derives from the context of the major Assyrian–Arab wars of the mid-7th century B.C. (Knauf

1983b) and mentions the tribe Naphish (which, according to Knauf, belongs to the latest additions to the Gen 25:13–15 list).

3. The 6th and 5th Centuries B.C. Since it is unknown how much of the Assyrian accounts of their victories over the Arabs of the mid-7th century B.C. are fictional, the disappearance of the term "Ishmaelites" (Šumu'il) from the documentary sources after the collapse of the Assyrian empire need not necessarily be attributed to the success of the Assyrian campaigns. Presumably the nonurban population of the ANE, including the bedouin, was less affected by the turmoil, wars, epidemics, and chaos of the late 7th and early 6th centuries that marked the transitions from the Assyrian and Neo-Babylonian empires to that of the Persians. When the Persians started to reorganize the W part of their inherited empire, they had to reckon with only two politically noteworthy ethnic groups in Syria-Palestine: the kings of the Phoenician coastal cities, and the "kings that lived in tents" (Knauf 1989: 63, n. 300). Arabs had gained power in the territories of Ammon, Moab, Edom, and S Palestine and, from then on, formed a considerable part of the population of these areas (cf. Ezek 25:1–14). It was this territorial and political extension of their realm, resulting in decreased contacts between the disparate tribes and clans, not military defeat by one of the empires, that brought the Ishmaelite confederacy to an end.

The Qedarites remained in power between the Euphrates and the Gulf of Aqaba well into the 5th century B.C. In 599/598 B.C., Nebuchadnezzar campaigned against them in the Syrian desert. In the middle of the 5th century, a shaykh of Qedar, Guśam bin Śahr (the biblical Geshem) ruled over S Palestine, the Sinai to the borders of Egypt, Transjordan and NW Arabia, all areas under Persian control. This fact demonstrates clearly the rise in prominence of the Arabs among the ethnic and political groups of the ANE between the 7th and the 5th centuries B.C. Aramaic dedicatory inscriptions left by Geshem's son at Tell el-Maskhūṭa (ancient Patoumos) in the E delta of Egypt ca. 400 B.C. prove that Geshem was a Qedarite (Dumbrell 1971). A Lihyanite inscription testifies that the influence of "Geshem the Arab" (Neh 2:16) extended well into the Ḥijâz. On the basis of an inscription from Taymâ', the Lihyanite reference can now be confidently dated to the middle of the 5th century B.C. (Aggoula 1985: 66; Cross 1986); the dating of the Lihyanite kingdom and the Lihyanite inscriptions had previously been the subject of controversy (Roschinski 1980; Knauf 1989: 104–106).

The sphere of influence of Geshem the Qedarite was actually contiguous with the region that later became the Nabatean empire. Knauf assumes that the Nabateans were a Qedarite clan which moved into S Jordan in the course of the 6th century B.C. The "Nebaioth" of Isa 60:7; Gen 28:9; 36:3 may actually refer to the Qedarite clan **Nabaṭ* and not to the more distant Nabayat of the Taymâ' area (Winnett and Reed 1970: 100; Knauf 1989: 108f.). Most likely, the "tents of Qedar" mentioned in Cant 1:5 (probably from the 3d century B.C.) refer to the Nabatean bedouin camping between Palestine and the Šalamaeans in the N Hijaz (Knauf 1989: 106–107). See also SHALMA. Around 400 B.C. the Persians lost control over Egypt, Arabia, and probably S Jordan. With the disappearance of the power that supported them, the supremacy of the family of Guśam bin Śahr of the tribe of Qedar came to an end. This opened the path to wealth, fame and glory to those tribes and clans formerly under their control that were now either active enough to seize their chance, or enjoyed a favorable enough strategic position along the international trade routes. The Nabataeans, as is well known, had already accumulated a considerable fortune when they first appear in the literary record under their own name in 312 B.C.

ERNST AXEL KNAUF

ISHMAIAH (PERSON) [Heb *yišmaʿyāh*]. **1.** A Benjaminite warrior from Gibeon who joined David's band at Ziklag (1 Chr 12:4; cf. 1 Sam 27:6). Ishmaiah is noted as "a mighty man among the thirty and a leader over the thirty." What exactly "the thirty" refers to is not clear. It is possibly a technical term for the king's bodyguard. This group therefore could have consisted of a varying number of men at different times (Elliger 1935). This possibly explains why Joab can be said to be "over the thirty" in 11:20 and Amisai as "chief of the thirty" in 12:19—Eng 12:18 (Myers *1 Chronicles* AB). Perhaps this also explains why Ishmaiah does not appear as one the thirty in 2 Sam 23:24–39. The allusion in 1 Chr 12:1 to events at Ziklag, which occurred before David became king, participates in the Chronicler's "all Israel" theme by portraying northerners as coming to David's side even before the death of Saul, a Benjaminite himself.

2. A member of the tribe of Zebulun and father of Obadiah (1 Chr 27:19). 1 Chr 27:16–24 lists the leaders of the tribes during the reign of David; Ishmaiah is noted as the leader of the tribe of Zebulun. The tribal list varies from that given in Numbers 1. Here the tribes of Asher and Gad are not included and Aaron and Levi are listed as two separate groups. The specific bureaucratic task of the tribal leaders is not clear but vv 23 and 24 suggest that they were responsible in some way for assisting in a census.

JAMES M. KENNEDY

ISHMERAI (PERSON) [Heb *yišmĕray*]. Son of Elpaal, a Benjaminite (1 Chr 8:18) appearing in an extended Benjaminite genealogy (1 Chr 8:1–40). The name occurs nowhere else in this form in the MT, the Apocrypha, or the deuterocanonical literature. The name itself comes from the verbal form *šāmar* meaning "keep" or "preserve," and may be a somewhat abbreviated form which means "may [Yahweh] preserve." The family of Ishmerai, according to 1 Chr 8:12 is associated with Ono and Lod. Ezra 2:33, Neh 7:37, and 11:35 bear witness to this association. However, the fact that these cities and their satellite villages are located in the maritime plain in what is traditionally Danite territory (Adams and Callaway 1965: 55) poses an interesting problem. Myers (*1 Chronicles* AB, 60) has suggested that Benjaminites may have settled this region during the reign of Rehoboam. There is little mention of Dan in 1 Chronicles (2:2; 27:22) which may reflect that this inheritance had been absorbed by Ephraimite and Judahite groups. Ishmerai is called a "chief living in Jerusalem" (1 Chr 8:28). Besides implications of social organizations, this designation may reflect a mixing of the tribal groups of Judah and Benjamin at various points from the time of the kingdom's schism. Coggins (*Chronicles* CBC, 54) has indicated that tribal mixing resulted in certain areas never being absorbed into definite tribal holdings, with Jerusalem being a prime example. Judges 1:8, 21 show Judahite and Benjaminite groups struggling to control Jerusalem.

G. EDWIN HARMON

ISHPAH (PERSON) [Heb *yišpâ*]. Son of Beriah (1 Chr 8:16) appearing in an extended Benjaminite genealogy (1 Chr 8:1–40). The name means "smooth" or "swept bare." This is the only appearance of the name in the MT, and it does not occur in the Apocrypha or the deuterocanonical literature. Ishpah and his relatives are associated with the city of Aijalon (1 Chr 8:13). Ishpah is called a *roʾšê hāʾābôt* of those who settled in Aijalon and drove out the residents of Gath. Myers (*1 Chronicles* AB, 60) has indicated that this reference is an indication of tribal mixings that occurred throughout Israelite history. Rudolph (*Chronikbücher* HAT, 77) has emphasized the geographical breaks in this genealogy which show parallel lists of Benjaminite families and their dwelling locations at a particular time, probably either during the reign of Josiah or the postexilic period. Williamson (*Chronicles* NCBC, 82), however, suggests that there is no apparent structure to this genealogy. As strange as it seems both scholars may be correct. With the mixing of tribal groupings, traditions emphasizing one tribal group over another and vice versa would have held sway at different periods of time depending upon which group was in control at a given time. 2 Chr 11:10 indicates that Aijalon, among others, belonged to Judah and/or Benjamin, however, 28:18 clearly states that it belongs to Judah. According to 1 Chr 6:6 Ephraim took Aijalon over from Dan. Because of its strategic location, this kind of transfer from tribal grouping to tribal

grouping would not be unusual (Adams and Callaway 1965: 61).

G. Edwin Harmon

ISHPAN (PERSON) [Heb *yišpān*]. One of the eleven sons of Shashak, the Benjaminite (1 Chr 8:22) appearing in an extended Benjaminite genealogy (1 Chr 8:40). The meaning is somewhat difficult, but could be translated "he will hide" or a "strong one." This is the only occurrence of the name in the MT, and it does not appear in the Apocrypha or the deuterocanonical literature. Both Braun (*1 Chronicles* WBC 124) and Coggins (*Chronicles* CBC, 54) point to the scarcity of material associated with the names found in 1 Chr 8:6–27. However, the text states that Ishpan was a *ro'šê 'ābôt,* and one of the *tōlĕdôtām ro'šîm* living in Jerusalem. This points to probable mixing of tribal groups which intensified after the monarchical schism. One might infer a high status for Ishpan in political, social, and military circles, because of his designation as a head of a family and a genealogy. In early Israel (Harmon 1983: 153) the *bēt 'āb* would have been the primary social unit which further comprised the *mišpāḥā,* the clan or protective association of families (Gottwald 1979: 258), and then the *maṭṭeh/šēbeṭ,* or tribe. The head of the family may have functioned much like the bigmen of anthropological terminology. Though tribes eventually became more of a geographical designation than an organizational one (Anderson 1969: 34; de Geus 1976: 133), the social pattern would have held without great change to the time of Ishpan.

ISHTAR (DEITY). The principal goddess of ancient Mesopotamia (See Wilcke, *RLA* 5: 74–87). Comparative evidence suggests that the Akkadian (Assyro-Babylonian) deity was perhaps masculine (Heimpel 1982: 13–15), but when the Akkadians assimilated Sumerian culture, Ishtar was adjusted to correspond to the feminine Sum goddess Inanna; both Ishtar and Inanna were personifications of the planet Venus. The extraordinarily diverse characterizations of Inanna-Ishtar in the subsequent literature, together with traditions from a multiplicity of shrine sites, would indicate that other goddesses were also gradually subsumed into the Inanna-Ishtar complex.

Astarte was the W Semitic counterpart of Ishtar, but it should be emphasized that Ishtar and Astarte are not simply to be identified (see Fulco *EncRel* 1: 471). In later Greek and Roman mythology Aphrodite and Venus undoubtedly had absorbed some Ishtar and Astarte traditions from the East (Astour 1967: 267, n.2).

The principal image of Ishtar that emerges from the extant hymns and myths is a goddess of love and sexuality, and it is here that she is closely associated with the shepherd-king Tammuz (or Sum Dumuzi) in a large complex of stories. Most notable are the parallel Sum *Inanna's Descent to the Nether World* (*ANET,* 52–57) and Akk *Descent of Ishtar* (*ANET,* 106–9). After a passionate courtship with Dumuzi, Inanna (or Ishtar) visits the netherworld to contend there with her sister Ereshkigal. Ereshkigal has her killed, but Inanna's servants revivify her and bring her back to earth. Here, although there are different and even contradictory traditions, she evidently finds Dumuzi at best indifferent about her apparent death. She sets demons after him and they drag him down to the underworld. Eventually it is arranged that he dwell there half a year, on earth the other half.

The relationship between Inanna-Ishtar and Dumuzi-Tammuz was ritualized in Mesopotamian cult with the sacred marriage: the mating of the king with a sacred temple prostitute renewed the generative forces in nature. The seasonal cycle was seen as a mirror of Dumuzi's yearly descent into and ascent from the underworld, a religious element that wends its way even to the temple courtyard in Jerusalem (see Ezek 8:14). Some (e.g., Pope *Song of Songs* AB) hear strong echos of the Ishtar-Tammuz tales throughout the Song of Songs.

A rather petulant Ishtar appears in the epic of *Gilgameš.* She tries to seduce the hero, but he points out to her the less than gracious treatment she has meted out to her other lovers, especially Tammuz.

Among the many hymns to Inanna-Ishtar, the work entitled *Nin-me-šár-ra* (Hallo and van Dijk 1968) is the richest in epithets for Ishtar: "Queen of the divine decrees, resplendent light, righteous woman clothed in radiance, beloved of Heaven and Earth." It is widely thought that the "queen of heaven" in Jer 7:18; 44:17–19, 25, is actually Ishtar. The women of Jerusalem and subsequently the women of the Egyptian diaspora burn incense and pour our libations to the goddess and make cakes with her image. They complain (Jer 44:18) that not doing so brings disaster. Porten (1968: 165, 176–78) argues that this may be Anat rather than Ishtar. He cites the position of Anat in the Jewish texts from Elephantine in Egypt. Other Egyptian evidence (see Fulco 1976: 23–28) suggests Asherah-Qudšu as a candidate.

WILLIAM J. FULCO

ISHVAH (PERSON) [Heb *yišwâ*]. Second son of Asher. In the genealogical list of Jacob's family (Gen 46:8–27), his children are listed by families, according to their mothers. Ishvah is a grandson of Jacob and Leah by her maid Zilpah (Gen 46:17; 1 Chr 7:30). The name Ishvah does not appear in the list of the clans of Asher (Num 26:44–47). The absence of Ishvah among the clans of Asher has been explained differently by scholars. Some say that Ishvah is a variant name of ISHVI, but according to Gen 46:17 and 1 Chr 7:30 Ishvi is listed as the third son of Asher. Others say that the two names represent the same clan, that the Chronicler copied the dittography of Genesis (Curtis *Chronicles* ICC, 153). It is possible that only the name of the family of Ishvi is given because Ishvah died childless. Wieder (1965: 161) has demonstrated that the Hebrew names Ishvah and Ishvi probably were abbreviated theophoric names derived from an Ugaritic word meaning "to rule."

Wieder, A. A. 1965. Ugaritic-Hebrew Lexicographical Notes. *JBL* 84: 160–64.

CLAUDE F. MARIOTTINI

ISHVI (PERSON) [Heb *yišwî*]. **1.** The son of Saul ben Kish and Ahinoam, the daughter of Ahimaaz (1 Sam 14:49). The MT vocalization would seem to relate the name to the Hebrew root *šwh*, "to resemble, to be like; to be smooth, even." The name would represent an imperfect verbal form "he will smooth" or "he will requite." As such, it could be a hypocoristicon of a common category of name composed of a verbal element followed by a deity name. Alternatively, the consonantal Hebrew text *yšwy* is perhaps to be understood as a passive *Qal* participle meaning "with a damaged hand" (so IPN 227, n. 17). G^L (LXX) reads Iessiou, which would seem to presume an underlying Hebrew text of *yšyw* or *yšyhw* (for the latter, see Driver 1890: 92), while G^B reads *Iessioul,* presuming a Hebrew original *yšywl*. On the basis of G^L's presumed *yšyw*, it might be possible to suggest that the MT consonantal text *yšwy* arose accidentally through metathesis of the final two letters (i.e., Klein *1 Samuel* WBC, 142).

It is common practice to suggest that the LXX reading *Iessiou* reflects an underlying Hebrew form *ʾîšyô* or *ʾîšyahû*, "man of Yahweh," and that the name is a variant form of ESHBAAL, the name of one of Saul's sons in 1 Chr 8:33 and 9:39, which appears as ISH-BOSHETH in 2 Sam 2:8, 10, 12, 15; 3:8, 14, 15; 4:5, 8, 12 (so i.e. Driver 1890: 92; Gray 1896: 121; Budde *Samuel* KHC, 106; Dhorme 1910: 127; Stoebe *Erste Buch Samuels* KAT, 276; Soggin 1975: 32, n. 1). The presumption is that Eshbaal was the original form of the name, and that with the passage of time, the epithet *baʿal*, "lord," which had originally been applied to Yahweh, came to be equated with the storm deity Baal and fell from favor. This is to have led to the substitution of the term *bōšet*, "shame," on the one hand, and in the case of 1 Sam 14:49, of *Yo/Yahu*, the original deity to whom the epithet "lord" was intended to be related. All forms of the name in the LXX presume an initial *yod*, however, not an initial *alep*, and there is no textual evidence that would support the proposed emendation.

A minority favor viewing Ishvi as an additional son of Saul's, separate from the individual Eshbaal/Ishbosheth (i.e. *IPN* 228, n. 17; McCarter *1 Samuel* AB, 254). Even if one were to equate Ishvi with Eshbaal, the list of Saulide family members in 1 Sam 14:49 would still be missing Abinadab. It is not possible to argue that the list in 14:49 is a specious genealogy intended only to introduce family members who will figure in the subsequent narrative segment devoted to Saul, 1 Samuel 15–2 Samuel 1 (indirectly, Miscall 1986: 97). Abinadab appears alongside his father and brothers Malchishua and Jonathan at the battle of Gilboa in 1 Samuel 31, and so logically should have been included in the list in 14:49. A plausible explanation for the differences between the two lists of royal offspring found in 1 Sam 14:49 and 1 Chr 8:33 (= 1 Chr 9:39) would be that the list in Samuel was derived from an early source that reflected the birth order of the royal family before the arrival of the two youngest children, Abinadab and Eshbaal, while the list in Chronicles reflects a later stage, after the death of the second-born son, Ishvi, and the subsequent birth of two additional sons, Abinadab and Eshbaal.

2. A son of Asher, the eponymous son of Jacob and founder of the tribe bearing his name (Gen 46:17; Num 26:44; 1 Chr 7:30). In biblical historiographic tradition, Ishvi is to have been among the descendants of Israel who went to Egypt to join Jacob during the prolonged famine (Gen 46:17). Similarly, his *mišpāḥâ*, "maximal lineage or clan" (Lemche 1985: 260–72) is reported to have been among those who were part of the census taken during the wilderness wandering period, after the Baal of Peor incident (Num 26:44).

The occurrence of the name in 1 Chr 7:30 reflects the Chronicler's use of the same genealogical tradition as the one in Gen 46:17. The identical set of names appears in the same sequence, including what appears to be variant readings of the name in question side by side: Ishvah and Ishvi. It should be noted that various manuscripts read "Ishvah" instead of "Ishvi" as the name of Jacob's son in Num 26:44, but are unanimous in their use of Ishvi to designate his family group. This may suggest that Ishvi is a gentilic form and that the correct spelling of the nominative absolute form of the Asherite name in question should be Ishvah.

DIANA V. EDELMAN

ISKANDER, KHIRBET (M.R. 223107). An EB IV site in Jordan which has provided unequivocal evidence of a sedentary character for this period which had earlier been characterized as nomadic.

A. Identification of the Site
B. Location and Topographical Description
C. Exploration of the Site
D. History of the Settlement
E. Early Bronze I
F. Early Bronze IV
G. Cemeteries
H. Sociocultural Considerations

A. Identification of the Site

The ancient name of the site is unknown. The name Iskander appears to derive from the nearby Roman site of Iskander and the adjacent modern village of the same name, both of which are located ca. 2 km to the W of the EB Age site. Although an attempt has been made (Bernhardt 1960) to identify the latter with the biblical site of Jahaz (Num 21:23; Deut 2:23; Judg 11:20), the fact that Kh. Iskander's periods of occupation are the Late Chalcolithic through EB IV periods renders this correlation untenable. Recently, based on Glueck's and the recent expedition's survey work, the site of Kh. Medeinyeh with its Iron Age occupation has been suggested as the biblical site of Jahaz (Dearman 1984).

B. Location and Topographical Description

Kh. Iskander lies approximately 24.0 km S of Madaba and some 400 m W of the bridge where the Madaba-Dhiban road crosses the perennial Wâdī el-Wâlā. This region is called the Mishôr in the biblical text (e.g., Deut 3:10; 4:43) and is perhaps best described as a mountain tableland. The site rises ca. 20 m above the landscape and covers ca. 7.5 acres; its S boundary is steeply cut by the bank of the Wâlā. The Iskander settlement is strategically situated at a major crossing of the ancient Roman road, undoubtedly the same route as the biblical "King's Highway." Today the area in the immediate vicinity of Iskander supports intensive agriculture: orchards and fields with grape vineyards, olive groves, and deep plowing for field crops. The character of the occupational history of the area indicates that the valley has historically been agriculturally productive.

C. Exploration of the Site

While the site has been known for some time (Schick 1879; Brünnow and von Domaszewski 1904; Musil 1907), Glueck (1939: 127–29) was the first systematically to survey and record its architectural features and to date the site to the EB IV. He observed extensive domestic occupation within the walls of a thick perimeter fortification that included square towers. Based on large standing and fallen *menhirs, menhir*-circles, and platform foundations, he concluded that a large cemetery lay E of the site. It was not until soundings by P. Parr (1960), however, that definitive evidence for important EB IV sedentary occupation at the site became known. In his two trenches on the E ridge, Parr identified multiphased EB IV occupation, as well as Late Chalcolithic/EB I materials. His walled, cobblestoned courtyard and earlier massive fortifications in Trench I appear to correlate with discoveries of the present expedition (below). S. Richard became director of the current excavations which conducted its pilot season of survey and soundings in 1981 (Richard 1982), followed by three major seasons of excavation in 1982 (Richard 1983; Richard and Boraas 1984), 1984 (Richard 1986; Richard and Boraas 1988), and 1987 (Richard 1989). Work has concentrated primarily in three areas: Area A at the SW corner; Area B at the NW corner; Area C at the SE corner; and in cemeteries D, E, and J (to the S, E, and W of the site respectively). The seven phases uncovered thus far (in Area B) include one (phase G) from the EB I, and six (F-A) in the EB IV.

D. History of the Settlement

The current excavations have confirmed Parr's earlier findings of two periods of occupation—the Late Chalcolithic/EB I and the EB IV. The current expedition has concentrated on the EB IV strata on the mound, specifically to examine sedentary adaptations in a way that should offer suggestions about the nature of this enigmatic culture and its relationship to the preceding (EB III) urban city-state system. The EB IV (formerly MB I or Intermediate EB-MB) period has traditionally been considered a "nomadic interlude" between the urban EB and MB Ages (Richard 1987a). Although Kathleen Kenyon disassociated EB IV culture from the EB Age proper (*CAH*^{3} 1/2: 532–94), a growing body of evidence from Transjordan and, in particular Kh. Iskander, demonstrates strong continuities with EB III traditions, including urban traditions. Kh. Iskander is the first-known fortified site in the EB IV period, although surveys in Jordan have identified at least a half dozen other walled sites at that time. It is increasingly evident from excavations in Jordan over the past 15 years that the EB IV was a period of urban regression, not a nomadic interlude (Richard 1980; 1987a, b). Given this new view from Transjordan, it is now evident that the model of pastoral-nomadism, as suggested by Dever (1980), has important regional applications, but is not comprehensive enough to characterize the totality of EB IV remains.

E. Early Bronze I

The lowest level reached thus far is Phase G in the Area B probe. It consists of a partial structure associated with EB I pottery (e.g., a red-slipped omphalos base and several sherds of line-group painted wares). The probe is on the N edge of the site and has yielded no evidence of a fortification system, from which it appears that the site was an unwalled village. Parr's earlier work, the results of our sherd survey, and the discovery of an EB I tomb (see below) suggest, however, that the site sustained a rather significant occupation during the EB I.

F. Early Bronze IV

1. Area B. The EB IV is characterized on the tell by three stages of occupation, which encompass six phases: prefortified (Phase F), fortified (Phases E–B), and postfortified (Phase A). This profile is derived primarily on discoveries at the NW corner in the Area B domestic complex.

The earliest phase (F) is thus far evident only by the corner of a domestic structure lying immediately below the NW corner fortifications and above the EB I layer. The data suggest that it was a transitional open settlement in the EB IV prior to the erection of the fortifications.

There are two wall systems, the earlier inner wall founded in Phase E and the later outer wall founded in Phase D. The Phase E system is composed of a base of massive stones and a superstructure of mudbrick faced with large cobbles. This wall and superstructure slope at an angle of ca. 30°, perhaps indicating destruction by earthquake. Apparently the site was immediately rebuilt and strengthened, and involved buttressing the fortifications, building an outer wall and towers, and filling the interior with rubble (Phase D).

The Phase D settlement consists of an eleven-stone course, 3 m high, and 2.5 m wide defensive perimeter wall on the N edge of the site. A 20 m stretch of this wall has been exposed (B4, B3, B8, B12). A foundation trench containing an EB IV holemouth and the rim of an imported caliciform cup from Syria of the "white on black" variety provided the date for the erection of this later defensive line. Steps uncovered in 1987 make it clear that the corner structure was a tower. Excavations on the interior of the wall have not reached the founding domestic occupational level.

The earliest evidence for occupation within the fortifications is the Phase C (may equal Phase D) "lower storeroom" in B8. This level lies immediately below the "bench-room" of Phase B. The pottery, EB IV whole and restorable vessels along with extraordinary quantities of sherds, was found in a matrix of mudbrick debris and rubble, clear evidence of the destruction of Phase C. The E wall of this room bonded into the outer fortifications and provides additional evidence for the EB IV date of the fortifications.

The Phase B remains provide a partial architectural plan of the domestic area within the fortifications. The excavated area comprised two rooms of a large building whose total dimensions are not yet known. B8-B7, a bench-lined "upper storeroom," contained quantities of whole and restorable EB IV pottery. Storejars containing carbonized grain lay on the bench. Alongside the bench, resting on a pavement was a pithos with rope molding.

In an adjoining room, excavation uncovered a perfectly preserved stone-lined bin constructed of eight upright slabs (ca. 1 m high), with a well-hewn circular stone (ca. 0.80 m in diameter) at the bottom. The area around the bin was plastered. The nature of the material culture associated with this bin, including the unusual quantity (large storejars in particular) and quality of the pottery, indicates that the building complex functioned as a public facility—the evidence suggests a cultic use. The bin contained a variety of botanical remains (indicating perhaps a *favissa*), and nearby were both a hearth and ash pit as well as miniature vessels. On the surface nearby were two goat horns and a beautifully painted bowl (perhaps an offering dish) containing a bovine hoof. Finally the Iskander bin closely parallels the *favissa* found at Arad in association with the *bamah* and the twin-temples.

Phase A represents the latest EB IV occupation on the mound. Extensive domestic occupation in broad- and long-room houses with common walls were located about 4 m S of the outer fortifications, which were certainly not in use in this phase. The nature of the evidence in Phase A contrasts with that of Phase B where, as noted above, the material remains suggest a different set of activities.

One large room, 8.5 m × 3.5 m, accommodated cooking activities as attested by its two-phased ṭabûn, several large firepits or hearths nearby, and its ash-covered surface. An adjacent courtyard contained a number of pounding stones and a ṭabûn built at the junction of two walls. Large saddle querns and grinding stones were numerous in this phase. Located just beyond the housing area were a series of small work areas or pens at the edge of the mound. In 1987, we uncovered an interesting house structure inside of which were a large stone mortar, a square stone table with a center depression, a round stone worktable, and an unusual stone platform with a shelf. Notably, two of the Phase A buildings proved to be "pillar" buildings, once the later phased blockages were removed.

On the basis of the plans we now have for area B, we may observe that town planning at Kh. Iskander is not inconsistent with the settlement plans for EB II–III urban sites such as Arad, Bâb edh-Dhrâʿ, and Numeira. Series of interconnected broad- and long-room houses of various sizes are arranged around courtyard areas. The pottery storeroom with its grain containers, the cooking installations, food preparation accoutrements, etc. underscore the sedentary and agricultural basis of this community. As at Arad, the habitation arrangement probably implies an extended family social organization.

2. Area C. At the SE corner of the mound, excavation has revealed a complex of buildings, some of which are monumental in character. Three phases have been excavated: Phase C (bottom) was a domestic level with rectangular houses; Phase B was a domestic level whose distinguishing feature was its interconnected broad-room houses with well-made walls still preserved to a height of ca. 1.25 m; and Phase A (1–2), a level whose public function is seen in the discovery of a gateway.

A considerable horizontal exposure in Phase B showed what appeared to be a string of workshops. The best evidence came from Square C6, where a number of stone slab constructions/platforms were found in a context with hammerstones and quantities of flint debitage, implying specialized activities connected with a flint-knapping workshop.

In Phase A, a profound alteration in the architectural plan and function of Area C is evident with the construction of what appears to have been a gateway: it is a complex that comprises two chambers ("guardrooms") which flank a gypsum-coated passageway lined with benches on either side. At the N end, a stepped platform forms the boundary of the passageway, although it extends beyond the line of the building complex. These steps lead to a cobbled courtyard and beyond to the "upper town." At the S, where steps give access to the passageway, this complex adjoins an E-W wall line, the one that Glueck had earlier noticed. The gate complex is not entirely symmetrical. The W structure is better preserved, better constructed, and included a fully intact stone pavement; no corresponding pavement was uncovered in the E chamber, which is further differentiated by a partition wall. Bin-like features

adjoin this structure on the E. The 1987 season's investigation of the W perimeter of the gate complex revealed the largest (ca. 11.0 m long), most massively constructed building on the tell, against whose walls abutted the W flank of the gateway.

Parr made similar discoveries in his Trench 1 (apparently just E of our Area C). His cobbled room, enclosed on the N by a 0.75 m × 1.25 m wall, bears a certain resemblance to the Area C western chamber.

3. Area A. Although excavation has not been extensive in Area A (the SW corner of the mound), the wall from Area C continues to form the N boundary of domestic structures. The "Glueck" wall appears to cross Area A on the S. This continuous wall appears to characterize the latest phase, and may represent a type of perimeter fortification of a diminished settlement after the monumental outer fortifications went out of use.

G. Cemeteries

The expedition explored two cemeteries, Area D on the ridge S of the site across the wadi, and Area E immediately E of the site. In the latter, several chamber tombs have disclosed the typical EB IV disarticulated burials. E3, a very small chamber tomb, contained two skulls—one of a child—disposed on either side of a central bonepile. Four vessels had been set at the entrance. Shaft tombs also appear to exist in this cemetery. Cemetery D comprises a hillside cemetery of numerous shaft tombs. Excavation of four of these tombs shows them to be of the round shaft, single chamber variety. Disarticulated multiple burials and typical EB IV grave goods characterized the group. Notably, one tomb included close to 100 vessels, mostly red-slipped and burnished.

In 1987, the expedition discovered its first pre-EB IV usage of the cemeteries in Area J, west of the tell. It was an unusual structure cut into the bedrock. This was divided by a rough stone wall, and was used as a collective burial place during EB I. West of the wall were disarticulated interments including at least 15 skulls, many of which were found totally fragmented or smashed below rocks. East of the wall, an antechamber yielded only pottery goods. A similar construction exists at Jericho in tombs K2 and A13. An EB IV tomb also came to light in Cemetery J.

H. Sociocultural Considerations

The results of four seasons of excavation at Kh. Iskander demonstrate clearly that sedentary strategies, in this case, a small town or regional center, were important socioeconomic components of the EB IV culture. The growing list of EB IV settlement sites from Transjordan corroborates this view. Moreover, irrespective of an almost universal stratigraphic break throughout Palestine-Transjordan ca. 2350 B.C., recent discoveries have shown many continuities with the EB tradition: (1) red-slipped and burnished pottery; (2) multiple burials; (3) shaft tombs; (4) similar metal types; (5) bench-lined broad- and long-room houses; (6) massive fortifications; (7) public complexes; (8) permanent storage facilities; (9) similar lithics; (10) significant pottery production; (11) multiphased sedentary occupation; (12) evidence for sociopolitical stratification; (13) sanctuaries; (14) significant amounts of food production equipment; and (15) town planning. Almost all the reasons Kenyon cited for designating the period a seminomadic one are now untenable (*CAH*[3] 1/2: 567–68).

In light of the strong continuities with EB Age tradition, it is difficult to support any view (including the terminology) of this period as "intermediate." The most important obstruction to a view of the EB IV peoples as indigenous has been the misconception that the shift from EB III to EB IV was from sedentarism to nomadism; in reality the shift was from urban to nonurban i.e., to village/town and pastoral adaptive strategies. Indeed the only conceivable means to understand the level of sedentarism in EB IV and the continuation of EB III urban traditions is to posit a model of cultural change, especially for Transjordan, which is less abrupt than hitherto believed (Richard 1980; 1987a).

Sociocultural change at the EB III/IV horizon (in this case greater pastoralism and village/town life as opposed to urban settlement) is better understood as a change in emphasis of production and organization in response to irreversible stresses on the urban system, than as an abrupt shift to a new sociocultural phenomenon (see Salzman 1978). Newer views on sociocultural change suggest a greater fluidity in subsistence strategies (cultural adaptation) along the urban/nonurban continuum. It is this fluidity that provides the mechanism for change. Thus, depending on circumstances (e.g., political stability) there will be a greater or lesser stress on a range of adaptive strategies that are institutionalized with the culture (see Salzman 1978; 1980). As the new data for sedentism mount, the explanatory value of these new views of cultural change are manifest.

Having recovered the "missing" sedentary component of EB IV society, we must now look for newer hypotheses to explain the variation in adaptive strategies. Such hypotheses should be broad enough to explain also the transition to mixed subsistence strategies and concomitant decentralization of political control and the abatement of urban complexity at the EB III/EB IV transition. Such a model should explain both continuity and change at the EB III/EB IV transition. It has recently been suggested that the model of specialization/despecialization is a conceptual construct that is applicable to the organizational shift from specialized modes of production to the despecialized nonurban economies that appeared at the end of the third millennium B.C. (Richard and Long fc.). This model allows for a more process-oriented view that explains culture change at the EB III/EB IV transition as well as the variation in adaptation in EB IV.

Thus, the research at Kh. Iskander forces a reassessment of this period. In light of new data and current scholarly trends, there is no compelling evidence to suggest that there was an invasion; that Amorite nomads from Syria overran the country; or that town/village life was completely eradicated at the end of EB III. Indeed, the growing evidence for cultural continuity between EB III and IV supports our contention that the collapse of the city-state system and the subsequent adaptation to nonurban and pastoral subsistence strategies were a result of gradual internal processes (for an opposing view see Amiran and Kochavi 1985). Such a view of the EB III/EB IV transition is totally in concert with the perspective that a

cultural continuum can be traced throughout the EB Age (ca. 3400–2000 B.C.), notwithstanding great peaks of adaptation and change in the process from preurban and finally to nonurban social systems (Richard 1987a).

SUZANNE RICHARD

ISMACHIAH (PERSON) [Heb *yismakyāhû*]. One of ten overseers *(pĕqîdîm)* responsible for gifts brought into the temple during the reign of Hezekiah (2 Chr 31:13). King Hezekiah and Azariah the chief officer of the temple appointed Ismachiah and the other nine. Their role was to assist Conaniah and his brother Shimei in managing "the contributions, the tithes and the dedicated things" that were brought into and stored in the temple (2 Chr 31:12–13). The name means "Yahweh supports/sustains" (*HALAT* 2: 399; cf. *IPN* 28, 196; LXX *samachia*).

ISRAEL COURT. See TEMPLE, JERUSALEM.

ISRAEL, HISTORY OF. This entry consists of four articles that survey various periods of the history of ancient Israel and the critical issues associated with reconstructing that history. The first article focuses on the premonarchic period (ca. 1200–1000 B.C.), dealing especially with the question of the Israelite "conquest" of Canaan and the subsequent rise of the Israelite monarchy. The second article provides a comprehensive treatment about how archaeological evidence associated with the LB-early Iron Age transition bears upon the question of the Israelite "conquest." The third article sketches broadly the political history of the monarchy up to the Babylonian exile (ca. 1000–586 B.C.). The fourth article addresses the problems of method arising from the nature of biblical books dealing with the period after the Babylonian exile (ca. 538–330 B.C.), and offers a tentative historical reconstruction with attention to the ideological tendencies of the sources. In addition to these articles, other entries discuss particular individuals and places, neighboring peoples and nations, biblical books, and critical methodologies. Note also the following entries: CHRONOLOGY (HEBREW BIBLE); COURT NARRATIVE; COVENANT; EPHRAIM; EXODUS, THE; GALILEE; KING AND KINGSHIP; MESHA STELE; NEGEB; PALESTINE, ADMINISTRATION OF; PALESTINE, ARCHAEOLOGY OF; SYRO-EPHRAIMITE WAR. For the later periods, see also MACCABEAN REVOLT; JEWISH WAR; BAR KOKHBA REVOLT.

A. Merneptah's "Israel" and the Earliest Israel

According to the Egyptian inscription of Merneptah, some sort of ethnic entity called "Israel" must have existed in Israel shortly before 1200 B.C. However, the question that concerns us is the nature of the relationship between the "Israel" in the inscription and the historical Israel which we encounter in the OT. The OT describes this Israel in the pre-national period as a tribal society consisting of twelve tribes, unified by a common historical past and by a common monotheistic religion (the worship of Yahweh). The relevant passage in the Egyptian text informs us that "Israel is laid waste, his seed is not" (*ANET,* 378).

For quite some time, scholars preferred to believe that this passage referred to a unified Israelite society of twelve tribes, but they had a variety of reasons for claiming this. On the one side were scholars who attempted to retain, in one form or another, the OT description of Israel's conquest of Canaan, and who accordingly regarded Merneptah's reference to Israel as the final proof that the Israelite conquest had already taken place by this time (cf., e.g., Kaufmann 1953; Albright 1963: 24–34; *BHI*[1], 97–127). On the other side were a number of (mainly German) scholars who abandoned the attempt to reconcile the biblical account of the conquest with the actual historical development which eventually led to the emergence of Israel (see Alt, *KlSchr* 1: 89–175; Noth 1950: 67–82). But the latter group also reckoned with an ethnic Israelite entity which was held together in the premonarchic period by the presence of an Israelite amphictyony, that is, a tribal league of twelve tribes (Noth 1930). They felt that Merneptah's inscription could be related to this entity in some fashion. See AMPHICTYONY.

However, a critical reevaluation of the OT sources and the social situation which existed in pre-national Israel has forced scholars to surrender the notion that Israel was organized in an amphictyony in the pre-national period (Mayes 1974; de Geus 1976; Lemche 1984a). Moreover, recent studies of Israel's origin have been forced to reject the OT claim that Israel, understood as a nation, could have arisen outside of the borders of Palestine (Mendenhall 1962; Gottwald 1979; Lemche 1985; Ahlström 1986). The process which led to the emergence of the historical Israel, understood as that state which dominated the whole of Palestine as well as some of the surrounding lands under the kings David and Solomon, was much more complicated than the biblical account allows; moreover, this development can hardly have been concluded before the 10th century or shortly before.

This is to say that we are left with a historically certain reference to an "Israel" in Palestine around 1200 B.C.; by the same token, however, we encounter a complicated course of events which is only marginally reflected in the OT accounts of Israel's past. This also means that although Merneptah's "Israel" is situated at the beginning of the long development which led to the emergence of the historical Israel, it is far from certain that the Egyptian inscription refers to any extensive ethnic group in then-contemporary Palestine. On the contrary, there is reason to believe that the Israel in question comprised at most the nucleus of the later Israelite state. However, it is very difficult to be more precise about the extent and nature of this Israel, apart from the fact that Merneptah's Israel seems to be associated with the mountainous region of central Palestine (see Ahlström 1986: 37–43).

B. Sources for the Earliest Israel

Two types of sources are at least theoretically relevant to the study of pre-national Israel: the OT historical narratives about Israel in the time prior to David and Solomon (so-called internal evidence), and the information which derives from sources other than the OT (so-called external evidence). The latter type of evidence consists mainly of materials which have emerged through archaeological excavations in Palestine and the surrounding regions. These archaeological materials consist mainly of mute material remains, which is to say that they are not connected with any written evidence which might explain them to us. However, some individual inscriptions have also come to light, and these sometimes shed sporadic light on events transpiring in Palestine in this period. In addition to these finds, there are some of a more or less accidental nature, such as the discovery of the Amarna correspondence in Egypt in 1888, which nevertheless may be of importance for the description of the historical course of events in Palestine in the last part of the 2d millennium B.C.

The fundamental problem facing any scholar who concerns himself with the history of Israel is that it is difficult to correlate the two types of evidence so as to unify them into a connected picture of the historical course of events. It would be more correct to say that it is only occasionally that we seem able to establish some agreement between an OT source and the extrabiblical materials, at least as far as the period before 1000 B.C. is concerned (some students of the history of the united monarchy in the 10th century B.C. would even go further to include the period 1000–900 B.C. in the so-called dark age preceding Israel's really "historical" periods [cf. Garbini 1988: 21–32]).

1. The OT as a Historical Source. The OT contains a collected description of Israel's pre-national history; this account is related in the Pentateuch plus the books from Joshua to the first or second book of Samuel (depending on whether one includes the episode of Saul's kingship within the history of the monarchy or of the pre-national period).

However, no part of this OT narrative is contemporaneous with the events it depicts and which, according to the biblical chronology (translated into modern terms), are supposed to have taken place in the period between 2300 B.C. (the traditional date of Abraham's departure from Mesopotamia) and 1000 B.C. (the accession of David to the throne). The temporal distance is possibly closest in the case of the description of a battle that took place between an alliance of Canaanite kings and an Israelite coalition of tribes which is related in Judges 5 ("the Song of Deborah"). This text has often been held ultimately to derive from pre-national times, although there is no agreement as far as a precise date is concerned (see, among others, Mayes 1969; 1974: 84–105; contradicted by Ahlström 1977; 1986: 54). But even in this case individual scholars have dated the text to a period subsequent to the introduction of the monarchy into Israel (cf. Garbini 1978).

In any case, we are forced to assume that literally every source relative to Israel's pre-national history was first

written down after the formation of the Israelite state around 1000 B.C., that is, some or even many generations after the events mentioned in the sources in question. On the other hand, there is today no consensus among scholars as to just when the earliest portions of the historical literature were written down; the suggested dates have fluctuated between the 10th century B.C. for the "Yahwist" or "J" source (cf. von Rad 1944; Noth 1948) and the 7th century, or even down to the 6th or 5th centuries (see, among others, Schmid 1977; Van Seters 1975; 1983; and the survey of research by Whybray 1987). However, no one disagrees that the *conclusion* of the composition of the historical literature of the OT cannot have taken place before the end of the early postexilic period.

The question as to whether the authors of the historical literature in the OT have described the events of the pre-national period in a historically correct way depends on the date one assigns to the earliest part of this literature. It is naturally not unimportant whether the Yahwist lived during Solomon's reign or shortly after, or under that of Josiah, or perhaps that of Xerxes or some other ruler of the Persian period. If the earliest parts of the historical literature are in fact removed from the pre-national period by more than half a millennium, this would automatically dictate that we regard the historical contents of this literature with appropriate scepticism. However, there might be some reason to suppose that one or another historical event managed to survive in traditional transmission and hence was more or less correctly described back in the 10th century. The latter point of view, which has been dominant in OT scholarship up to the present, has sometimes been challenged on the grounds that it is reasonable to ask whether the biblical historians intended to write history in any sense (cf. Halpern 1988, who claims that a historical interest underlies OT narratives), and even whether, in the event, they were actually able to (cf. Coote, who defends an early date for the Yahwist in Coote and Ord 1989, but who, in Coote and Whitelam 1987, completely ignores the OT account in his attempt to explain the historical developments connected with the emergence of Israel).

The various attempts which have been made to argue for the historicity of at least the nucleus of the OT narrative on the basis of an earlier oral tradition which is thought to have preceded the written stage (see *FSAC*, 64–76; cf. also *CMHE*, and, recently, Hendel 1987; expressly negative toward this approach is Van Seters 1975) have been unsuccessful. Even if the biblical historical narratives may derive to a greater or lesser degree from orally transmitted stories which are susceptible to comparison in terms of narrative technique with other poetic literature from the ANE (particularly the Ugaritic epic literature has been employed as the narrative model for the OT narratives), the question of their historicity cannot be determined in this fashion, because such oral traditions are, in the nature of things, incapable of objective control (further on this see Lemche 1985: 377–85, and the survey of literature on the subject in Kirkpatrick 1988). It is even conceivable that, if it were shown that parts of the Israelite traditions concerning the earliest periods hold a variety of characteristics in common with the epic literatures from other parts of the Near East, we should then be forced to conclude that the Israelite traditions are ahistorical, like the vast majority of the stories with which they have been compared.

In itself, the composition of the OT historical narrative furnishes us with reason to wonder whether its author(s) was/were actually able to write history. Although the "author" (sing., for convenience' sake) of the historical books does not call attention to the phenomenon, the work contains a wide variety of different genres, all pieced together: myths, sagas, fairy tales, genealogical lists, lists of officeholders, laws of various types (religious as well as secular), and so forth; he never signifies when he shifts from one type of information to another, or indicates that one tradition is more reliable in a historical sense than another.

Some scholars have attempted to explain the failure of OT history writers to write history in a technical sense by pointing to the possibility that the authors in question lived in a different epistemological "space" than their modern colleagues. To this end they have characterized Israelite history writing as *prelogical* or *mythical* (see Lemche 1984b; on history writing in antiquity, see Liverani 1973a, with examples in Liverani 1972; 1973b; 1974; 1977); that is, they have held it to have been dictated by other than strictly scientific interests. This even applies to sizable narratives like, for example, the story of David's rise to power (roughly 1 Samuel 16 to 2 Samuel 6, although the delimitation of this narrative is uncertain both as far as its beginning and its conclusion are concerned; see Grønbaek 1971), which displays considerable structural similarities with a N Syrian royal inscription from the 15th century B.C. relating how King IDRIMI of Alalakh acceded to his throne (*ANET*, 557–58; and see Buccellati 1962). The narratives about David and Idrimi follow a common scheme which was borrowed from the fairy tale genre, and which seems to have been used to defend successful pretenders against the imputation of usurpation (cf. Liverani 1972).

In this connection, however, it is not unimportant that biblical narrative art is guided by a certain *diachronic interest*, which is to say that the individual events in the course of a story are related according to a chronological scheme which structures the entire narrative. But it should be pointed out that the concern with chronology in OT narratives can be advanced as an argument in favor of the view that Israelite history writing did not predate the earliest Greek history writing, which implies that it is to be dated to the exilic period or even later (Van Seters 1983).

We should note that the study of OT historical literature as a source for Israel's earliest history is inhibited by the fact that no event which is related in the OT historical books is touched on by other ANE written sources: it is only in the Omride dynasty in the 9th century B.C. that Mesopotamian sources begin to mention historical figures of Israelite origin who also appear in the OT.

Accordingly, whoever attempts to derive historical information from the OT sources is necessarily forced to attempt his own analyses of the OT traditions in order to argue for the possibility that these sources contain historical information. In other words, one is in reality left to one's own devices to determine the question of historicity. From the point of view of scientific method this is very much a problematical procedure, because its results often

have the character of postulates which can be neither confirmed nor disconfirmed.

There seem to be only two ways out of this dilemma, which consists in the facts that we cannot control the information contained in the witness of the OT and that other ancient written evidence provides no help. The scholar can either choose to ignore the OT information, as is the case in a number of recent reconstructions of Israel's pre-national history (see Frick 1985; Coote and Whitelam 1987), or he can attempt to confront the information in the OT with the results of archaeological excavations in Palestine and surrounding regions.

2. The Value of Palestinian Archaeology as a Historical Source. Since the close of the 19th century, no region in the Near East has been so intensely explored as Palestine. However, it has been the case that the archaeology of Palestine has been, for most of its history, narrowly connected to OT scholarship in general. In the early phase of this study, archaeological activity was dominated by biblical scholars, with the result that there have been jurisdictional disputes between the biblical scholar and the archaeologist, who in many cases was one and the same person. See ARCHAEOLOGY, SYRO-PALESTINIAN.

The question as to who was eventually to win this struggle was virtually a foregone conclusion. It would have been extremely difficult, if not actually impossible, for the archaeologist to justify his activity in the region if his conclusions were not in some way capable of correlation with the information contained in the OT or NT. Archaeological excavations in Palestine have practically never been able to produce the spectacular sorts of results which have characterized many excavations in both Egypt and Mesopotamia, or which the archaeologists active in Asia Minor or N Syria are justifiably proud. Admittedly, there have been a great many finds, but these have been modest in kind; particularly the epigraphical materials have been extraordinarily limited, although we must not forget that many important small texts have been found.

One's immediate impression upon studying the results of Palestinian archaeology is that, at least in pre-Hellenistic times, the material culture of Palestine was extremely poor. Nowhere do we find temple complexes such as those for which Mesopotamia and Egypt are famed. Nor has a palatial complex been unearthed anywhere in Palestine which could measure itself even approximately with the royal dwelling in N Syrian Ugarit. The great golden treasures which have above all been found in excavations of Egyptian tombs or in ancient Ur, in S Iraq, are entirely lacking in Palestine. And the closest thing we have to a palace archive in Palestine is the collection of bullae which were perhaps attached to documents in the Jerusalem archives towards the close of the period of the monarchy (cf. Avigad 1986), although the documents themselves are lost forever.

It was only by virtue of their usefulness for allowing us to confirm or disconfirm the accuracy of certain biblical information that the individual results of excavations have been able to distinguish themselves and legitimate so much archaeological activity. It is therefore obvious that the archaeology of Palestine had to develop into a *biblical archaeology*, the primary goal of which was to correlate its results with OT information. Thus the sites which were chosen for excavation corresponded to this underlying intention; scholars concentrated their efforts to a high degree on the best-known sites mentioned in the OT (with the exception of Jerusalem, which, because of modern construction only allowed itself to be explored to a limited extent). Such sites included especially the towns of Jericho and Shechem.

Finally, the biblicistic element in earlier Palestinian archaeology was also expressed in the rather over-simplifying interpretations of the OT materials which were sometimes proposed even by such superb American archaeologists as W. F. Albright and G. E. Wright, or, in fact, even by their diametrical opposite, the English archaeologist K. M. Kenyon (Kenyon 1960). Kenyon's work contains numerous examples of historical interpretations which are not on the same level as the then-contemporary historical research which was being conducted into the OT texts.

As far as the sometimes problematical character of Palestinian archaeology is concerned, the discussion of Israel's conquest of Canaan may serve as a model, since the point of departure of countless archaeological investigations seems to have been the concern to find evidence of the Israelite occupation of the country shortly before 1200 B.C. A number of destructions of well-known Palestinian towns which must have taken place during the transition from the Late Bronze to the Early Iron Age were thus understood as direct evidence of the Israelite conquest (cf., e.g., the sections dealing with traces of the Israelite settlement in the chapters on the LB and Early Iron Ages in *ArchPal* 1960: 80–109, 110–45).

However, as matters developed archaeology began to create so many problems for the presumed historical accuracy of the OT account of the conquest of Canaan that it eventually became increasingly difficult to retain the conviction of historicity underlying the OT narrative. The best-known of these many difficulties are those accruing around the date to be assigned to the destruction of Bronze Age Jericho, which had to be pushed back for archaeological reasons to the 16th century B.C. (cf. Kenyon's date of 1580 B.C. [1960: 316] with her defense of the historicity of Joshua 5–6 [*EAEHL* 2: 563–564]). Even more clear is the evidence from the excavation of Ai, which is also supposed to have been destroyed in the course of the Israelite invasion under Joshua, since it was demonstrated already by J. Marquet-Krause, the early French excavator of the town, that Ai was not immediately resettled after its destruction at the end of the EB Age (around 2300 B.C.). Marquet-Krause's conclusions have been confirmed by later American excavations undertaken since World War II, although it is now apparent that Ai was resettled in the early Iron Age. See AI (PLACE).

These clear conclusions, which so evidently annihilate the historical value of the OT account, had to have consequences sooner or later for the historical discussion of the Israelite settlement, just as they also led to warnings about the use and misuse of archaeology in the study of the OT (see, e.g., Noth 1971: 34–51; de Vaux 1970). Ultimately, this situation has led to the demand that the archaeological work be conducted for its own sake, and that its conclusions be drawn before one proceeds to involve the OT texts in the discussion of the interpretation of the archaeological materials (see Lemche 1985: 391).

As it happens, when we separate archaeology from the study of the OT texts we discover that the archaeological evidence has a decisive statement to make in connection with the reconstruction of the course of events in Palestine in the second half of the 2d millennium B.C. Admittedly, it has become more and more difficult to retain the biblical account of this course of events, but archaeology has, for one thing, produced material which allows the historians scope for further work. Furthermore, by increasing the distance between its results and the OT sources it has brought about a reevaluation of the character of the OT sources themselves. Archaeology can show us concretely that the OT narratives of the conquest cannot be taken at face value in a historical sense; rather, we see that in the OT we have reflections formulated at a late date about the question of Israel's origin. We find narratives which, admittedly, contain such things as etiological legends which associate particular localities with particular events in the historical narratives.

C. The Historical Investigation of the Earliest Israel

Confronted with the previously described source materials (OT texts composed long after Israel had begun to be governed by kings, and archaeological finds), the historian who intends to describe Israel's history in the premonarchic period is forced to make a number of choices. These choices have, above all, to do with securing appropriate methods for deriving historical information from the written sources. However, as far as the OT is concerned, even before the choice of method is made a decision has to be arrived at as to whether the OT may be used to provide any historical information whatsoever about the past.

There is somewhat of a consensus among scholars as to the understanding of the OT sources: only a handful are prepared to ignore the OT information entirely (cf. perhaps most prominently Frick 1985; Coote and Whitelam 1987). Moreover, an important question is whether OT scholars' choices in this regard have been made solely on the basis of the sources present in the OT, correlated with archaeological data, or whether other features have played a role, most notably the OT's character as sacred scripture for two religions. Ultimately, the historian's method is determined by his or her *understanding of the Bible.*

1. The Traditional Historical Approach. The traditional historical study of the OT has been characterized by a number of special features (cf. Lemche 1987–88; cf. also Sasson 1981; Coote and Whitelam 1987: 11–16). First, the various accounts of Israel's history have usually been very detailed. In this connection, the analysis of premonarchical Israel's history has generally received the lion's share of attention (this is every bit as striking in such early accounts as that of Kittel 1932 as in more recent ones, such as Donner 1984–86, where this analysis fills in reality half the work). These accounts have usually been founded on very extensive analyses of the OT texts, which have been searched in order to derive historical information.

Second, only a few histories of Israel contain cohesive sections dedicated to the epistemological questions which, because of Israel's practically unique history, must be posed.

Third, the lack of methodological reflection has invariably entailed that modern histories of Israel have been written along the premises laid down by the Israelite history writers themselves; it is the authors of the historical books of the OT who have established the *agenda* for the historical reconstructions of later times. This applies to the subdivision of the history of Israel into a series of discrete historical epochs, a "patriarchal period," a "sojourn in Egypt," a "conquest," a "period of the judges," and a "period of the monarchy." But it also applies to scholars' descriptions of the individual periods, which not uncommonly seem like attempts to "translate" the OT accounts into historical reports. There is extensive use of the renarration of OT history or even of "rationalistic paraphrases" of it (a notable recent example of this is *HAIJ*). In this process, OT narratives are usually "cleansed" of all mythical, not to mention "miraculous" features, so as to appear as secular rather than sacred history.

Fourth, the concern to develop methods suitable for studying OT texts for their historical content was determined by historical preoccupations; but this entailed that other concerns, such as the literary qualities of OT literature, were neglected. For example, when scholars chose to incorporate the study of legends and sagas into historical research on the earliest Israel, they emphasized those aspects of such studies which sought to find "historical nuclei" in folkloristic materials. At the same time, other competing views of folklore scholars (which were highly skeptical of the question of historicity or which did not regard this aspect as important in the creation of sagas and legends) were neglected.

Fifth, by the same token the lack of historical consciousness in much recent scholarship on Israel's history has meant that the gaps in that history have often been closed by the imagination (frequently characterized as "common sense") of the individual scholars, since they have attempted to produce cohesive accounts of the historical sequence on the basis of the OT narratives. This has entailed that such accounts lack any comprehensive historico-methodological foundation.

Sixth, the treatment of "external evidence" (see above) in the various histories of Israel has often been eclectic, in the sense that they have either been used to confirm OT statements or else they have been distorted slightly so as not to collide with those statements. This tendency has been especially notable in connection with the study of the Israelite patriarchs (on this method, see esp. Thompson 1974). An expression of this tendency is the enthusiasm which has greeted new discoveries from the ANE, such as, e.g., the Mari texts (ca. 18th century B.C.) or those from Ugarit (14th/13th century B.C.).

If one reads through any number of descriptions of the earliest history of Israel dating from the end of the 19th century (i.e., from Stade 1887 up to de Vaux 1971–73) one sees the features mentioned above recurring time and again. Particularly striking is the extent to which this historiography has concentrated on the discussion of questions concerned with the historical identity of the figures who feature in this early phase of Israel's history, from Abraham to Moses and Joshua, to the judges, who are supposed to have exercised some type of leadership in Israel before the introduction of the monarchy. Research has to a large extent been concentrated on isolated individuals and events, whereas the broad outline has usually

been drawn in such a way as to connect one important figure from Israel's past with yet another.

Naturally, there are exceptions to this picture, as, for example, in several sections of Noth's important history of Israel which appeared shortly after World War II (Noth 1950). Noth's study was in turn based on a number of publications by the important German scholar A. Alt, in which the latter used a broader brush in his attempts to depict the outline of early Israelite history (cf., e.g., Alt, *KlSchr* 1: 89–175; 2: 1–65). Nevertheless, it would not be wrong to claim that the various descriptions of Israelite history before the monarchy have often looked more like historical analyses of OT texts than synthetic surveys of Israel's history.

2. The Modern Study of Israel's Earliest History. The historical studies since the early 1970's have, to some extent, pointed to new directions, not least because of the stimulus provided by a number of individual studies which have cast doubt on the historical contents of the OT narratives.

The historicity of the patriarchs came into focus when T. L. Thompson and J. Van Seters more or less simultaneously and with complementary arguments posed a number of well-chosen questions to the traditional understanding of the patriarchal period as a historical phase in Israelite history (Thompson 1974; Van Seters 1975). Several studies have since appeared which have advocated the view that Abraham, Isaac, and Jacob once did live, perhaps in the early 2d millennium, and that their memory is preserved in OT narratives. See ABRAHAM. It would nonetheless be correct to assert that these efforts, too, must take their point of departure in the researches of Thompson and Van Seters. Moreover, a number of OT scholars have now abandoned the idea that the patriarchal period was ever a historical epoch (cf. Soggin 1984: 89–108; Lemche 1988: 114–16; cf. already Noth 1950: 114–20).

The account of Israel's sojourn in Egypt, the exodus, and the wilderness wanderings under Moses' leadership were previously defended fiercely in most studies (cf., e.g., *FSAC*, 249–72; *BHI*[1], 110–20); current research now regards them with extreme skepticism. Thus, today the story of Joseph and his brothers seems to be a historical "novel" which was written in the 1st millennium (Redford 1970; *IJH*, 167–203) rather than an ancient historical record. Correspondingly, the other parts of the narrative complex stretching from Exodus to Numbers can hardly be other than late "recollections" of the historical past of the nation which were current in the 1st millennium B.C.

The OT narrative of Israel's conquest of Canaan has been efficiently neutralized by modern scholarship and may no longer be assigned historical worth as a source for the events which led to the formation of the Israelite people. A number of alternative conceptions of Israel's origins have now taken its place. On the other hand, the OT account of the period of the judges has been slightly rehabilitated, not so much because the narratives in the book of Judges deserve historical credence, but rather because the framework for the history of the period of the judges—the "amphictyony" which numerous scholars in Noth's train alleged for the pre-national period—no longer exists. In 1930 Noth presented the hypothesis that pre-national Israel was organized as an amphictyony along Greek lines, which is to say, he held that it was a union consisting of twelve tribes (Noth 1930). Noth's position, however, came under heavy fire, particularly in the 1970s (cf. esp. Mayes 1974; *IJH*, 285–331; de Geus 1976), and has today been abandoned by the majority of OT scholars (Lemche 1984a).

Taken together, these developments require us to surrender the idea that the OT historical accounts comprise a coherent narrative capable of forming the foundation for a reconstruction of pre-national Israelite history. Historians have accordingly seen themselves to be forced to employ other methods to depict the historical development of Palestine prior to the year 1000 B.C. These methods have to be based on the archaeological materials and not on the OT stories. By the same token, however, new methods are also required for the evaluation of the archaeological data, and primary among these methods are sociology and social anthropology.

It is likewise also necessary to incorporate insights deriving from modern historical study into the investigation of Israel's history. It is characteristic of recent historical research that there is still a powerful interest in the detailed description of the past, to the extent that such description is at all possible; at the same time, however, such research attempts to focus on the relationship of the individual historical events to a greater historical perspective. The terminology employed here is that of the *Annales*-school of French historians, namely *la longue durée*. The ruling concept is that a historical event cannot be studied in isolation; rather, it is inevitably part of some greater context or chain of events which, taken together, form the pattern of development which can be described and reconstructed by historians (on this and the study of Israel's history, see Whitelam 1986: 55–62; Coote and Whitelam 1987: 17–25).

D. Sociology and the Study of Israel's Earliest History

In the last couple of decades a third path toward the exploration of the earliest history of Israel has been increasingly attempted by a growing number of scholars. Through the study of population groups in preindustrial societies, such researchers have argued that "our contemporary ancestor" can help provide information which is also relevant to the evaluation of ancient Israel. By studying people who live in a society which (in terms of means of production) is still undeveloped, it may be possible to isolate characteristic features capable of generalization as "rules," and so to explain phenomena which we either know from the OT narratives about Israel in the pre-national period, or which we have deduced from the archaeological materials. See also ANTHROPOLOGY AND THE OT; SOCIOLOGY (ANCIENT ISRAEL).

The last two centuries of OT scholarship have seen many attempts to employ viewpoints, just as we have also seen a number of treatments of Israelite society (the best known is probably de Vaux 1961; but see also Pedersen 1926–40). Characteristic of these early efforts was, on the one hand, the lack of a coherent sociological theory and, on the other, a very limited sociological background material.

The lack of adequate theory underlying the attempts by OT scholars to describe Israelite society is probably owing

to the inadequate sociological background of such scholars, which they have on occasion defended by their conviction that such an education is not necessary (cf. also Gottwald 1979: 5–7). Instead, one frequently encounters so-called common sense observations in conjunction with social phenomena which, in the eyes of a skilled sociologist, can only seem to be arbitrary or even directly misleading.

As far as the lack of materials is concerned, already prior to World War II there existed a limited number of social anthropological studies of Near Eastern social phenomena. However, the social-anthropological exploration of the Near East was deficient both with respect to quality and to extent, in comparison with other social anthropological fields of interest, such as sub-Saharan Africa, Melanesia, and so on. It was first in the time after World War II that a properly scientific study of the Near East began, which is to say, that it was also first at this time that it became possible to incorporate sociological methods into the study of social conditions in ancient Israel.

In general, sociology/social anthropology has been used in two ways by OT scholars. (1) The most ambitious method leads to the presentation of "model solutions" on the basis of the available sociological data, following which the models in question are used as heuristic tools in the study of ancient Israel. (2) A second path is less ambitious as far as what it expects to be able to derive from sociology/social anthropology; it balks at the use of models, on the assumption that such models do not sufficiently take account of the mutability of human nature, that is, of man's ability in a given situation to choose between numerous alternatives.

The first-mentioned approach has been preferred above all by a considerable number of American OT scholars. In America its development has gone hand in hand with the emergence of new archaeological methods (the "New Archaeology") which have been developed specifically to describe the historical development of peoples who have not left written records behind them. In studying a number of traditional ethnic groups, social anthropologists who pursue this course seek to isolate a limited number of individual phenomena or variables which they regard as characteristic of certain types of social organization. Thus, by assigning the numerous variables to such types of social organization as "band societies," "tribal societies," "chiefdoms," and "states," they believe it is possible to work out "heuristic models" for each type of society. It is further thought that such models are useful for the investigation of the social and political systems of other ethnic groups of which scholars are only sporadically informed. This social anthropological method or approach may be called *cultural evolutionism*.

For example, evolutionistic scholars would think it sensible that, if we possess limited information showing that a small number of all the variables which are normally associated with a "chieftainship" were present in a given society, then they are entitled to supplement the available information with other variables which belong to the same organizational level, and so ultimately to term the society in question a "chieftainship." Thus, if only a limited number of the variables which figure in the model of the chieftainship are present in the OT witness about Israel in the pre-national period, evolutionistic scholars would accordingly deduce that Israel in the period of the judges was a chieftainship (cf., e.g., Flanagan 1981), and, necessarily, that the other variables must also have been present.

Moreover, if the source materials permit a chronological distinction between the variables attested, so that some may be assigned to a relatively primitive socio-political stage of organization (tribal society) while others may be assigned to a higher stage (kingship), such evolutionistic studies enable the historic analysis of periods which had previously been held to be prehistoric.

Among the OT scholars who have chosen this approach in one form or another, we find primarily those who have advocated the notion that Israel arose in consequence of a revolutionary movement in Palestine during the transition between the Bronze and Iron Ages (Mendenhall 1962; 1973; Gottwald 1979; cf. among others also Chaney 1983). Disregarding their respective differences, what Mendenhall and Gottwald have in common is that their use of cultural evolutionistic views has been idiosyncratic and at least to some extent not anchored in their respective social anthropological foundations (in Mendenhall's case, Service 1962; for Gottwald's, Fried 1967). In particular, both have introduced a variable pertaining to ideology and religion which is not to be found in the works of their "originals" (cf. Lemche 1985: 209–16).

Other scholars have directed their investigations either within the framework of the same social-anthropological school, or else on its periphery; they have thus introduced into the study of ancient Israelite history a number of heuristic models which both complement one another and compete with one another internally (e.g., Frick 1985; Coote and Whitelam 1987). It is further characteristic that, as the social anthropological models scholars have used in recent decades have become increasingly complicated because ever more variables have been included within them (a fact which has opened the possibility of variation on the basic model), the various models of pre-national Israelite society have become correspondingly sophisticated, but at the same time also less immediately intelligible (see in this respect Flanagan 1988).

The strength in this approach is the relatively clear results it produces, since in practice it has been possible to offer well-founded descriptions of the structure and history of pre-national Israelite society, in the process also characterizing the various social processes which led Israel from the status of a tribal society to that of a state ruled by kings.

However, this method also has its obvious weaknesses, because it rests on a number of assumptions which are not self-evident (Lemche 1985: 216–19). A fundamental assumption of the method is, for example, that human societies generally follow the same developmental course and are determined by the same forces. In other words, it is presupposed that there is only a relatively limited number of variables present in the sources bearing on a given society, and also that it is possible to interpret these variables in such a way that they can be seen to be determinative for the reconstruction of the social development. If the number of variables grows too large, the model becomes impenetrable and hence useless as a heuristic tool. If one further introduces an element of uncertainty, by noting that a given variable figures on several different socio-

political levels (e.g., if one observes that segmentary social systems exist in tribal societies, chieftainships, and states), then it becomes necessary to pose serious questions as to the ultimate usefulness of the entire method. Finally, there is a variable for which it is virtually impossible to provide scientific controls: namely, the multiplicity of human nature, which includes man's ability to distinguish between different possibilities.

To describe Israelite social development in the prenational period by means of heuristic models of the sort mentioned above it would have to be the case that peoples on the same level of development always choose either the same or analogous solutions to the problems which necessitate even basic changes in their respective societies.

In order for pre-national Israel to develop into a state, it was essential that, at particular times in their history, the pre-national Israelites should choose solutions to the political, economic, social, and ecological problems which arose and which required a restructuring of the society, if the effects of such problems were to be absorbed so that the society might survive. Such problems were no doubt present in the earliest Israelite society, and some of them may conceivably be demonstrable on the basis of the available source materials. However, it is far from certain that the solutions which the early Israelites chose were invariably such predictable ones that they can be fitted into a heuristic model of the development of societies at the same sociopolitical stage as early Israel.

There is therefore a latent danger that the use of heuristic models borrowed from cultural-evolutionistic social anthropology can provide only very superficial answers to historical questions. This in turn means that we do not really know what happened in early Israel. We possess what are in fact only very general and quite banal conceptions as to the social development of Israel prior to the introduction of the monarchy, namely the assumption that Israel developed from a tribal society into a monarchy. What determined this course of development are factors of which we are still painfully ignorant.

It is therefore necessary to supplement or replace the heuristic method with alternative procedures which pave the way to a greater degree for the acknowledgment of the endless richness of variation of human societies.

One such procedure would entail the inclusion of as much social anthropological material as possible in one's analysis of pre-national Israel. It is essential that we include in our evaluation socio-anthropological accounts of as many traditional societies as possible which are at an evolutionary stage comparable to that of pre-national Israel. Of course, the ideal solution would entail that the OT scholar in question himself participated in the examination and description of such traditional societies, but, apart from rare exceptions, this possibility is generally excluded. In place of such experience, the OT scholar must study ethnographic reports of fieldwork studies conducted in traditional societies with a view to determining for himself the sorts of social, political, and religious forces which obtain in such societies (e.g., Lemche 1985: 84–244). It is only in this manner that the concerned scholar can hope to avoid the impression of superimposing a mold upon his study of ancient Israel, as all too easily occurs if his work is based on heuristic models alone whose basis is a quite limited number of variables.

In this way it should be possible to arrive at a fruitful interplay between heuristic models and actual societies, so that the scholar in question will be better able to evaluate his source materials, not only with respect to his efforts to describe the historical course of events, but also with respect to recognizing how limited are his possibilities to describe this course of events. No matter what sociological method should happen to be chosen, the goal remains to arrive at a characterization of prenational Israelite history. Cultural evolutionism seemingly produces the most spectacular results. However, scientific controls on this approach, which are provided by the application of the alternative sociological method, reveal that evolutionistic models are based on a much less solid foundation than is immediately apparent when we consider the historical reconstructions which have been presented by adherents of the cultural evolutionistic method.

E. Israelite History in the Pre-national Period

1. The OT Narrative and "External Evidence." a. The OT Narrative. According to the OT, the history of Israel begins when Yahweh, the God of Israel, chooses a man named Abram and dispatches him on a journey from Mesopotamia to the land of Canaan, the promised land, where he is intended to become the ancestral father of Yahweh's peculiar people, Israel. Abram/Abraham travels to this land and becomes the father of a son, Isaac, who in turn sires two sons, Jacob and Esau. The former eventually receives the name "Israel" and becomes the tribal ancestor of the Israelite people.

Neither Abraham, Isaac, nor Jacob succeeds in becoming fully sedentary in the land of Canaan, and indeed Jacob is ultimately forced to abandon Canaan with his twelve sons, the tribal ancestors of the later Israelite tribes, and to take up residence in Egypt. In Egypt, Jacob's line in the course of 400 years develops into a nation. With Yahweh's aid and the leadership of Moses they manage to depart from Egypt and return to the land of Canaan. The return journey across Sinai and up through the region E of the Jordan takes 40 years, but Yahweh has revealed himself during this period as Israel's true and only God; he has also bound the Israelite people to himself in a covenantal relationship.

Under the leadership of Joshua and in a massive wave of conquest Israel moves into the land of Canaan and, following Yahweh's explicit orders (and admitting only a few individual exceptions), eradicates large portions of the Canaanite population. After the conclusion of the conquest, the depopulated Canaanite territory is redistributed among the Israelite tribes, Joshua himself presiding over a ceremony in which the covenant between Yahweh and Israel is confirmed.

After the death of Joshua there follows a period in which the Israelites forget who their God is, so that they begin to worship the gods of the Canaanites. Yahweh punishes Israel's apostasy by allowing foreign enemies to assail and plunder the country. However, he also saves it as soon as the Israelites return to Yahweh and pray for help. The saviors who are sent by Yahweh are the "Judges" of Israel who govern Israel in peace and ensure the maintenance of

the right religion as long as they live. However, whenever any Judge happens to die, Israel relapses to her old ways, so that history repeats itself.

Ultimately the problems confronting the Israelite tribes become so serious that divine assistance is not felt to be sufficient: the Israelites demand a king. At the request of the Israelite people, the last Judge, Samuel, is forced to find a successor, a king, a man able to free Israel from her dire situation. At the same time, however, it is proclaimed to the Israelites that the introduction of the monarchy must be seen as the final treachery against Yahweh, who is Israel's real king. Furthermore, it is predicted (although one has to "read between the lines" to appreciate this) that this treason will have weighty consequences at some future time.

b. The "External Evidence." First of all, it is important to note the simple fact that the ANE sources from the 3d and 2d millennia B.C. do not contain a single direct reference to any of the features mentioned in the OT narrative. There is not a single reference to Abraham the patriarch, or to Joseph and his brothers in Egypt, or to Moses and the Exodus, or to the conquest of Canaan, or even to a single one of the Judges. Furthermore, when we turn to the period during which the Israelite monarchy developed, we discover that the ANE sources are completely silent on the subject of Israelite kings until we come to Omri in the 9th century B.C.

In other words, the use of ANE evidence to illuminate the biblical historical account is always a matter of indirect references and information, never of direct mention. In order to exemplify the nature of such "external evidence" it will be necessary briefly to present some examples of the sorts of information in question, and to point to the types of problems associated with them.

In the case of Abraham, the narrative about the biblical patriarch mentions a number of localities which must be acknowledged to be historical, namely Ur in Chaldea and Haran in upper Mesopotamia, in addition to numerous sites in Palestine which are mentioned by name (Shechem, Bethel, Ai, Hebron, etc.). The connection with upper Mesopotamia is additionally strengthened by the fact that some of the proper names connected with the members of Abraham's family who continued to dwell in Mesopotamia are also place names in the vicinity of Haran. Taken in isolation, this sort of "external evidence" implies only that the biblical narrators made use of place names and localities which were known in their own time either as existing localities or as names preserved by tradition. Thus the references to such names tells us nothing about the historical contents of the narrative.

On the other hand, the way some of the names are mentioned shows that the Abraham narratives cannot have been concluded before a very late point in time. Thus, for example, Ur is said to be situated in Chaldea, which only became the case after the Chaldeans settled in the S part of Mesopotamia, that is, not earlier than the 9th–8th centuries B.C.—long after the time when, according to the biblical chronology, Abraham is supposed to have lived (towards the close of the 3d millennium B.C.). These sorts of "errors" have often been explained as anachronisms (on the debate concerning anachronisms in the patriarchal narratives see Westermann *Genesis 2* BKAT, 62–64; Thompson 1974: 298–308), a possibility which must be taken seriously. On the other hand, such "anachronisms" correspond to the finds the archaeologist uncovers during excavation which make possible a precise date for the concluding phase of a given archaeological stratum. The patriarchal narratives could not have received their final form before the latest "anachronistic" datum in them was worked into the story. But this does not rule out the possibility that there could be older components in the story.

Concrete information from Israel's environment of a similar nature also recurs in connection with the other epochs in the OT account of Israel's earliest history. The Egyptian sources never directly refer to the presence of the Israelites in Egypt, although analogous phenomena are described in some documents which, among other things, describe the entry of Semitic nomads into Egypt (*ANET,* 259), just as they also mention the presence of *ʿapr.w* (*ḫab/piru,* possibly "Hebrews") in Egypt (Greenberg 1955: 55–57; Bottéro 1954: 165–75). The description in Exodus of the forced labor of the Israelites in the construction of Pharaoh's garrison cities, Pithom and Rameses (Exod 1:11), is often seen by scholars in relation to conditions which obtained under the 19th or 20th Dynasty, when Egypt was ruled by a number of pharaohs called Rameses.

While this sort of "external" information shows that the Israelites, or their ancestors, *could* have been present in Egypt in the time of the New Kingdom, it does not *prove* that this was the case. In the first place, it is entirely possible that the Israelites were originally *ḫab/piru.* See HABIRU, HAPIRU; HEBREW. However, this particular sociological phenomenon appeared everywhere in the ANE in the 2d millennium B.C., from the Zagros mountains in the NE to Egypt in the SW, and from the Persian Gulf in the SE to Asia Minor in the NW. The term accordingly designates a population of heterogeneous ethnic origins which was so far-flung that they cannot possibly be identified with the early Israelite population. In short, even though the earliest Israelites may have been part of the LB *ḫab/piru*-movement, this does not prove that the Israelites were ever in Egypt simply because *ḫab/piru*-peoples were also present there.

Furthermore, not even the information pertaining to Pharaoh's garrison cities, Pithom and Rameses, can decide the issue and prove that the Israelites were in Egypt, since archaeological and topographical research leaves open the question as to which sites are actually designated, when they were founded, and where they were situated (Redford 1987; cf. Bietak 1987).

Other types of "external evidence" include such things as proper names, usages and customs, relationships to particular sociological phenomena (were the patriarchs or Israelites nomads or *ḫab/piru,* or was Abraham a wandering merchant [Albright 1961]?) or ethnic groups (were the Israelites Amorites or Aramaeans?). But we shall have no certainty in this area as long as Israel's environment continues to deny us information about particular individuals whom we otherwise know from the OT account of the prenational period, and also because it is not possible to reestablish a socio-historical framework which is so exclusive that, for example, the patriarchs must necessarily

belong within it—a procedure which would entail assigning the patriarchs to the period to which such a framework could be dated.

Admittedly, most, but not all, information of a historical, sociological, or economic nature pertaining to the patriarchs may be compared with "external evidence" from the 2d millennium B.C. However, such comparisons require the use of materials which extend, in terms of time, over most of a millennium, and, in terms of space, run from the NE part of Mesopotamia to the Persian Gulf and to the Mediterranean and Egypt to the W and SW. Finally, the year 1000 B.C. is by no means some kind of *magical* barrier. Most or even all of the individual details in the patriarchal narratives (or, for that matter, in the account of the Israelite sojourn in Egypt) can be seen against a Near Eastern background which locates the patriarchs in the 1st millennium B.C.

"External evidence" is important to the extent that it is able to show that certain components in the OT narratives about Israel's earliest history were not free inventions. Rather, it helps us to see that in writing their stories about the ancestors of Israel the "historians" (so to speak) created a socio-cultural framework for their heroes and heroines, a framework whose authenticity is confirmed by other ANE sources. On the other hand, "external evidence" cannot be used to show that the patriarchs ever existed, or that Israel was ever in Egypt.

Against this, it has been argued that the OT account of Israel's earliest history cannot be *disconfirmed,* and that scholars cannot therefore allow themselves to claim that Israel was *not* in Egypt. Of course, this is correct, but this counterargument accords the OT narratives the status of postulates which are not subject to scholarly criticism as to their historical contents. On the one hand, it is conceivable that what we find in the narratives is true; on the other hand, scholars can neither prove nor disprove this. This means that the narratives in question have no role to play in a scientific analysis of Israel's past, since the only argument which can be advanced for their inclusion is that we *think,* that is, "believe," that there are historical elements in them. In this connection it might be argued, as in the question of Moses' historicity, for example, that Moses is a necessary presupposition for the understanding of the earliest history and prehistory of Israel, and, further, that if he had not lived it would have been necessary to invent him (the expression is supposed to derive from N. Soederblom; cf. de Vaux 1971–73, 1: 311 n. 33); it is then possible to reply, with Liverani (1976: 153), "That's what they did!"

2. Early Israelite History. a. Choice of Method—Delimiting the Object of Study. Ultimately, the history of pre-national Israel must be written without the aid of the OT narratives. The time prior to the formation of the state (and perhaps also somewhat later in the monarchical period than is usually assumed) is, from a scholarly point of view, *prehistory* (i.e., in technical terms, "the time without history"), since there are no contemporary written sources which inform us as to events in Israel before the introduction of the monarchy.

Of course, it is true that some scholars have argued in favor of a distinction between this history-less prehistory and early history *("Frühgeschichte/protohistory")*, where the latter is held to reside in the dusky terminator separating the history-less past and historical time proper. They thus hold that it should be possible to glimpse the contours of this early history in the sources which date from the historical time (Malamat 1983). This view is problematical in that it presupposes as given that the late sources may possess historical information about the past, and also because it assumes that we are able to cross-examine the information contained in the late sources in such a way that it is possible to distinguish between historical information and ahistorical story (Lemche 1984b).

This means that in our efforts to reconstruct Israel's earliest history we must renounce the possibility of reconstructing that history prior to Israel's emergence in Palestine. We must stop attempting to describe the history of the patriarchal age, or Israel's situation in Egypt, or in the desert. Even though we have to deal in certain cases with periods of Israel's prehistory, as the OT itself asserts, we are unable to check the OT information in such a way as to permit us to write a coherent historical account. Accordingly, our narrative about Israel has to start at a point in time at which it is possible, in however rudimentary fashion, to shape for ourselves a picture of Israel's early existence.

Instead of "retelling" yet again the OT narrative of Israel's earliest history, the historian's primary task now is to concentrate on the *scene* against which Israelite history unrolled, which is to say that the historian must attempt to account for the development in the area in which Israel arose and existed. Moreover, the historian must do this on the basis of sources which derive from the period, a period which may be termed "Israel's formative time."

This method is not new. The most famous example of a similar approach in OT studies is Alt's use of *territorial history ("Territorialgeschichte")* in his pathfinding study of Israel's emergence (Alt, *KlSchr* 1: 89–125). By studying the socio-political features which obtained before Israel settled in Palestine and again after the completion of the process of settlement, Alt thought it possible to determine the character of Israelite settlement, and thus to render an account of Israel's origin and earliest history in Palestine.

Alt's reconstruction of the developmental history of Israel must be regarded today as outdated (although one should not forget the fact that it still has many adherents among OT scholars). The reason for this does not have to do with the method which Alt employed, but rather with the sources which formed the basis of his theories. In part, the source materials have grown considerably thanks to the addition of extra information; moreover, we have studied the sources for almost three-quarters of a century, with the result that we are now better able to evaluate the information contained in those sources which were already available to Alt. Thus we are better off than Alt was on three decisive points.

First, today we are much better informed about the ANE civilizations of the LB Age, a remark which also applies to the situation in Palestine. Admittedly, the source materials available to Alt consisted mainly of the Amarna correspondence; these have been only slightly supplemented by the addition of individual documents from Palestine itself. But if we move beyond the narrow borders of Palestine, we discover that it is now possible to form a much better impression as to the history, culture, and political and

social system of the region by studying a number of archives which have been found since 1925, or which only since that time have made an impression on the scientific community. In particular there are the archives from Ugarit and Alalakh, but additional information is also derivable from the archives of the old Hittite capital of Hattusas (modern Bogazköy in Turkey). It is now possible to draw the broad outline of the history of Syria in the LB Age (for surveys extending up to ca. 1970, see Klengel 1965–70). It is likewise possible to reconstruct in some detail the social life of the Near Eastern states in this period (on Ugarit, see Rainey 1962; Heltzer 1976; 1982; cf. also Buccellati 1967).

Second, archaeological work both within and outside of Palestine has not merely provided researchers with much more extensive materials than those which were available to Alt. Rather, the changed archaeological methods since 1970, including above all the modern archaeological concern to study entire areas instead of concentrating on the excavation of the great tells, has enabled scholars to stratify the archaeological history of sizable parts of the later Israelite region (cf. esp. *AIS*).

Third, the appearance of a truly scientific socio-anthropological study of Near Eastern societies in the decades following World War II, including particularly studies of nomadic societies and their relations to other types of societies in the region, has entailed that the sociological observations which also figured in Alt's reconstructions have either had to be extensively modified or exchanged for other sociological theories.

Taken together, these facts mean that the scientific description of the history of Israel before the emergence of the monarchy has had to be rewritten (strikingly expressed by Gottwald 1975 in the form of a number of demands which would have to be met by any renewed discussion of Israelite history). At this time, however, it is too early to claim that the modern reconstruction of Israelite history has been fully established, although a number of possibilities now present themselves for the consideration of the scholar. Thus every historical reconstruction offered at present necessarily has a hypothetical character, even if the main lines of such reconstructions are by now relatively well drawn.

b. Palestine in the LB Age. Considering the modest size of the region (ca. 28,000 sq. km), it is remarkable that Palestine seems to have been subdivided into a number of mini-states throughout the entire Bronze Age, each with a more or less sizable town as its center, and each governed by a king. This political structure, which we can barely make out, at least as far as the EB Age (3d millennium B.C.) is concerned, became sharply defined in the MB Age (the first half of the 2d millennium B.C.), as we can deduce from the Egyptian EXECRATION TEXTS.

This political structure survived the Egyptian conquest of the country in the 16th century B.C. Indeed, it would even be possible to assert that the political fragmentation of the country made the task of its occupiers easier; they tended to leave the political structure untouched, with the exception of appointing their own political governor for the region. On the other hand, the Egyptians were able to play the various mini-states off against one another in a sort of "divide and conquer" policy which prevented the emergence of any effective opposition to the Egyptian dominance. Thus the Egyptian occupation did not lead to peace in Palestine; rather, it augmented the tendencies to political divisiveness and the internal rivalries of the various states which were already latent in the area. In this connection, two factors were especially important:

(1) On the economic level, the Egyptian occupation represented a burden on the resources of the region because of the taxes which the Egyptian provinces were obliged to pay. Admittedly, we do not know the precise dimensions of this taxation, but its consequence seems to have been a gradual but nevertheless noticeable decline in the material culture of the region in the LB Age. This development seems to have accelerated in the 14th century B.C. (Kenyon 1979: 206), possibly as a result of difficulties presented to the trade exchanges caused by the establishment of the Hittite Empire around 1400 B.C. Also, the Palestinian states had perforce to bear the consequences of the later conflicts between the Egyptian armies, which utilized Palestine as a staging-ground, and the Hittite troops. Palestine was, however, outside of the immediate combat zone, which was located further to the N in Syria.

(2) On the ideological plane, the Egyptian dominance also created problems by utilizing a political ideology which was foreign to the local Palestinian kings, since the Egyptian political ideology could not guarantee the security of these kings. A consequence of the Egyptian attitude towards their subject-kings was that the latter were forced to fend for themselves. The Egyptians apparently only intervened in conflicts between the various kings in the event the Egyptian sovereignty was directly threatened by particularly ambitious vassals (Liverani 1983).

We do not know the details of the socio-political structure of the Palestinian mini-states. However, it would be reasonable to assume that the local societies were reminiscent of those situated in the larger states to the N, Ugarit and Alalakh, from which we possess a wealth of information. Briefly, the structure in question may be characterized as a *palatine system* in which the palace was the all-dominating center of the state, and in which the king, enthroned in his palace, was regarded as the ideological (religious), political, and economic center. The king had at his disposal a corps of both civilian and military functionaries who controlled the various social sectors. Everything suggests that economic life and the production of manufactured goods was also directed from the palace. The ordinary population consisted in part of artisans who, at least in the case of N Syria, were subject to the palatial administration; and of peasants, who made up the largest social group in the society. The slaves were located at the bottom of society, but we have no idea how extensive the practice of slavery was in the Palestinian states.

It was characteristic of the Palestinian area, in contradistinction to the larger Syrian states, that there was little village structure outside of the urban centers, since one of the notable features of the LB Age was a clearly-defined decline in the number of villages in the country (Thompson 1978: 32; 1979: 66). To a large extent, the peasant population must have dwelt in the towns where they could be protected by the defensive walls and by the local military. In consideration of the very limited territorial extension of the individual states, this did not rule out agricul-

ture around the towns, although the marginal areas must have been neglected. Considerable transition of the peasant population to other occupations, including nomadism, is likewise probable.

The reasons for the decline of village culture are not difficult to describe. Throughout the history of the ANE the peasant populations were exposed groups (see extensively on this Lemche 1985: 164–201). In the first place, they had to bear the tax burdens of the state more than any other group in society, since agricultural products are immediately convertible in any economy based on barter. In the second place, to the extent that the peasant populations lived in villages they were practically unprotected. When peace obtained in the country, the peasants had no need of protection. Maintaining order was ordinarily the job of the state authorities, and during more hostile times the struggle between the states was much concerned with the control of the villages and their ability to pay taxes. Palestinian peasants accordingly had only two possibilities open to them: they could seek the protection of the walled towns—and in this connection we note that, particularly in the earlier part of the LB Age, a sizable increase in the population of the towns seems to have taken place (Kenyon 1979: 189–92)—or they could abandon their occupation and land in order to flee and try to find security elsewhere.

In the latter event, a number of escape routes were possible. The peasants could either become nomads, a process which was made all the easier by the fact that most of the peasant societies in question also to some extent practiced *transhumant* pastoralism; or they had the possibility to become *ḫap/piru,* that is, refugees who survived either by fleeing to other states or by becoming outlaws in the impassible mountainous regions in Palestine. We do not know how sizable a percentage of the peasant population chose to survive as nomads on the margins of the existing states. However, if we compare the developments in the LB Age with other and similar situations in Palestine's history—occasions when village culture declined sharply (see the survey in Coote and Whitelam 1987: 27–80)—then we must assume that the desedentarization of the peasants was in fact considerable.

Furthermore, it is clearly implied by the written sources from this period that the refugee problem eventually reached such dimensions that the Egyptian suzerains were compelled to intervene, although it does not look as if the problem was ever solved. At all events, the refugees *(ḫap/piru)* figure in the sources all the way from the days of Amenophis II (ca. 1450 B.C.; cf. Greenberg 1955: 56, no. 159; Bottéro 1954: 167, no. 183) to those of Sethi I (ca. 1310 B.C.; Greenberg 1955: 56, no. 160; Bottéro 1954: 168, no. 184; Albright 1952). The main part of the evidence derives from the Amarna correspondence from the first half of the 14th century B.C. (Greenberg 1955: 32–50; Bottéro 1954: 85–118). The Amarna letters also show that the phenomenon gave cause for alarm in the small Palestinian states, especially because it was possible to designate anyone in opposition to those in power as an *ḫap/piru,* i.e., an enemy of the Egyptians (cf. Mendenhall 1973: 122–41; Liverani 1979a).

But whether the peasants chose an existence as nomads or instead decided to flee entirely and try their luck as *ḫap/piru,* the consequences for the Palestinian states remained considerable. On the one hand, the reduction in the number of peasants—with the attendant probable reduction of land under cultivation—meant a painful decline in the base of taxation. Moreover, this must have taken place at a time when the Egyptian overlords felt the need to levy even greater imposts on their provinces. On the other hand, the increase in population which was no longer subject to control by the states (nomads and outlaws) constituted a threat to trade relations, including the international trade between the Egyptian region and the Syro-Mesopotamian sphere, since the caravans must have made tempting targets for bandits and for the raids of the nomads. Thus the socio-political development towards the close of the LB Age contributed to the collapse of what had been, in economic terms, an "internationalist" phase based on the exchange of trade goods; and this collapse no doubt in turn accelerated the political disintegration of the area. We cannot claim that the city-state system in Syro-Palestine completely succumbed during the transition from the LB Age to the early Iron Age (the period from the 13th to the 11th centuries B.C.), as a considerable number of towns survived the economic and political turbulence of the period. It remains nevertheless true that the power relationships in the country changed significantly during the early Iron Age. Not the least important reason for this was the beginning of a new socio-political process which led to the emergence of wholly new centers of power in the Iron Age, and which culminated in the appearance of the state(s) of Israel.

c. Palestine in the Early Iron Age. The most important change in the evolution of Palestine in the early Iron Age (the period between 1200 B.C. and the beginning of the 1st millennium B.C.) was the reflowering of village culture in the entire country. This development already seems to have started prior to the close of the 13th century B.C., but it accelerated in the subsequent couple of centuries (fundamentally on this development, see *AIS*).

As we have seen, this flowering of village culture did not mean that the towns disappeared at the same time, even though the archaeological picture of the urban societies in this period points to a serious crisis which affected a number of the larger towns. Admittedly, certain towns were in fact destroyed in the course of this period, particularly towards the end of the 13th century or the beginning of the 12th century B.C. Others, however, lived on and show no signs of destruction; indeed, some of them continued down into the 10th century (the time of the Israelite monarchy).

There is no simple answer as to why things took this course, such as, for example, suggesting that the destruction in this period of several urban societies was a facet of the Israelite invasion and conquest of the country, as scholars previously assumed. There seem to be no correlation between the distribution of destruction and the OT account of Israel's invasion of the land of Canaan.

On the other hand, the results of the archaeological excavations and surveys do suggest a completely different explanation of the socio-political development than the one which appears in the OT. Most notably, it has proven to be practically impossible to distinguish between the material culture of the early Iron Age village societies and that which prevailed in the urban societies, except, of

course, for the fact that the material culture in the villages was never as rich as it was in the towns. Moreover, with the sole exception of the Philistines, it has proven to be extraordinarily difficult to point to so-called index fossils which might imply the presence of foreign immigrants, since such a presence literally always manifests itself in the form of a pottery tradition which differed radically from that which obtained in the rest of the country. In general, it would be correct to characterize the material culture in both the villages and the towns as a continuation of the material culture of the LB Age, even if the level of this culture depreciated considerably.

This does not mean that there are no archaeological "novelties" associated with the Iron Age, when compared with the previous period; there was in fact a new house type which appears in a number of villages (the so-called four-room house). However, the distribution of these structures was not confined to Israelite territory, since it also appeared in the Philistine region and elsewhere. Furthermore, this type of house does not seem to have appeared before the development of the Iron Age villages; rather, its appearance went hand in hand with the general development of the material culture in the Iron Age (*AIS*, 254–59). See also HOUSE, ISRAELITE. Other, supposedly "new" elements might be mentioned in this connection, such as the so-called collared-rim jar, which Albright in particular (*ArchPal*, 118–19) associated with the arrival of the Israelites in the country. However, here also we are dealing with a cultural feature whose roots lay in the LB Age and which, incidentally, was not confined to the later Israelite territory (*AIS*, 275–85).

In short, there are no indications that Palestine was struck by any sizable wave of immigration from the surrounding regions in the period between ca. 1300 and 1000 B.C., with the exception, of course, of the Philistine settlements along the coast, which have their own history. See PHILISTINES. This means in turn that an explanation of the origin and early history of Israel is to be sought in the context of a more general evaluation of the socio-political development of the region, which is reflected in the emergence of an extensive village culture in the early Iron Age. It is furthermore essential that any reconstruction of this history be based on conditions in Palestine itself, and not, for example, be grounded in the information in late literary sources about foreign peoples and conquerors—a process which has, in the scholarly discussion of the problem, allowed these foreign *ethnoi* to serve as some sort of *dei ex machina*, that is, as simplistic explanations for developments which can in reality be explained without recourse to such "models" (on this sort of explanation in scientific literature, see Adams 1968; Tritsch 1974).

An especially interesting characteristic of the revived village culture of the Iron Age was the fact that it was largely concentrated in areas which either had not previously been under cultivation, or which had been unexploited marginal areas during the LB Age. This applies especially to the Galilean highlands to the N and the mountainous region of central Palestine; but it also applies to the Negeb desert and the hill country to the S. Scholars have previously pointed to at least three technical innovations as factors which enabled this change in the settlement pattern: (1) the introduction of iron tools, (2) the introduction of cement-lined cisterns for collecting rainwater, and (3) the introduction of the technique of terracing the mountain slopes to retain the soil after clearance of the natural mountain vegetation (*ArchPal*, 110–13; de Geus 1975; Gottwald 1979: 658–59; and, as far as points 2 and 3 are concerned, Lemche 1988: 90). However, all three claims now seem to be untenable (*AIS*, 202). As far as iron is concerned, there was no decisive breakthrough before the 10th century B.C. when steel technology was developed (Waldbaum 1978: 24–27); until then the material had been useless for the production of durable tools. As far as the cisterns and terraces are concerned, the techniques in question already existed at an earlier date; thus it was more a matter of more extensive use of known technology than of the discovery of new technology (Hopkins 1985: 265–69; on terracing, see also Borowski 1987: 15–18). The fact that both cisterns and terracing were in greater use after 1200 B.C. than earlier is best explained by the nature of the newly-cultivated territories, and by the political factors which necessitated the cultivation of the areas in question. The technologies in question, like other corresponding ones—such as the extensive use of storage pits in Iron Age complexes (Hopkins 1985: 149–51)—were the basic presuppositions which made the settlements in the mountainous regions and on the borders of the desert at all possible. Therefore they must have been known *before* the settlements; they could not have been introduced after the settlements were established.

This fact further implies that the concept of the Israelites as nomads wandering in from the deserts and steppe areas E and SE of the cultivable lands in Palestine and Transjordan can scarcely be maintained. The new settlements must have been established by people who had lived in contact with the pastoral culture of Palestine. Naturally, the identification of such groups is debatable. Parallels from later periods in the history of the region suggest that nomads must have had some share in the process of settlement, but in the event these would have been nomads who had been in contact with the sedentary population for a long time in a variety of forms of symbiotic coexistence.

However, there are a number of factors which suggest that we cannot reckon with an automatic sedentarization of nomads; the process must have been coerced by other circumstances. In the first place, only some parts of the regions which became subjected to cultivation in the Iron Age were actually suited for flocks and herds. As long as the mountains were covered with forest (as they were to a large extent in the Palestinian highlands until the LB Age; cf. Rowton 1967), they were unsuited to raising flocks and herds to any significant extent. It was only in the valleys and in the northern Negeb that it was possible to herd sheep, goats, and cattle on a large scale. In the second place, it is a fact that Near Eastern nomads do not voluntarily submit to sedentarization. The primary reason for this is economic, since, at least in theory, the nomadic way of life contains more possibilities for economic expansion, and thus for population expansion, than does agriculture (ecological factors profoundly circumscribe the growth of agriculture in the Near East). Ethnographic studies of the sedentarization of nomads have shown that nomads continue to resist sedentarization even when political organizations beyond the control of the nomads themselves (i.e.,

centralized states) force them to do so. Such resistance is not always successful. However, some nomads may voluntarily "sedentarize" if the already-existing peasant society contains population elements which are *ethnically* related to the nomads (on nomadism in the Near East, see Lemche 1985: 84–163; on the process of sedentarization, see esp. pp. 136–47).

Thus any theory which seeks to explain the emergence of the villages, and which at the same time allows for the possibility of nomadic participation in this process, will necessarily assert that the mountain settlements were introduced by people who could not have been nomads per se. Rather, they were people who attempted to perpetuate a way of life which they had known previously in other regions of the country. The nomadic elements which subsequently participated in these settlements must have understood themselves to be so closely related to this peasant population that this relationship encouraged their sedentarization. On the other hand, there is no reason to imagine that the city states in any way participated in the settlement process, or that they forced the nomadic elements of the hill-country to give up that way of life. Neither these city-states nor the Egyptian empire (which still nominally ruled the area) possessed the strength necessary to influence and control developments in the highlands.

Thus our materials suggest that the process of settlement in the mountains was begun by peasants who came from parts of Palestine which had already known agriculture (i.e., from the territories of the city-states in the lowlands along the coast and in the valleys in the N part of the country). In this connection it is relevant to include the refugee problem which was so characteristic of the LB Age, and which is connected with the *ḫabiru* movement. It was already pointed out above that the main body of these refugees consisted of peasants who, under insupportable economic and political pressures, were forced to abandon their lands and seek their survival outside of the sphere of influence of the city-states and the authority of the Egyptian empire. In the course of time, it became possible for this "outlaw" population group to consolidate their toehold in the highlands and, through socio-political integration, to achieve such a degree of independence that they were able, as tribes, to administer their own territories, settle in them, clear new land for a growing population, and defend them against outside interference. In the course of all this, their successes became so appealing to their nomadic cousins (who, in most cases, must have had the same origins) that parts of the Palestinian nomadic population also settled in these new villages. Moreover, at least in the N Negeb these elements must have comprised the most important segment of the population of the newly-established settlements (on Tel Masos, see Fritz 1980).

This process is explicable in sociological terms, since the social structure of this mixed peasant and nomadic population underwent only slight changes. The main lines of the fundamental social structure of the new societies were preserved; only a single new element was added: the tribal society. This is to be explained on the basis of the fact that the fundamental social structure of preindustrial Near Eastern societies has survived unchanged for thousands of years. It does not mean that major changes did not occur on the local level, or that relationships were identical from site to site and through all time. Rather, it means that all of these societies were fundamentally constituted as kinship structures, either real or false. The lowest level of these societies consisted of *nuclear families* (in individual cases "extended families" consisting of several nuclear families). The ascending stages thereafter consisted of *minimal lineages, lineages, maximal lineages* and *clans.* All or most of these levels will have been present no matter how the political structure of the society as a whole was organized—i.e., they were independent of whether or not there were centralized states.

Only the highest level of the socio-political structure, the tribe, appears to have clashed on occasion with the forces of the state, since the tribe as a form of political organization competed with the state administrative organs. To put it another way, the state performed the same functions as the tribal organization, that is, the state's primary function was to protect the interests of its citizens. The tribes had themselves arisen out of what were previous nontribal societies to meet a common need perceived by its members, thus forming a type of organization capable of offering protections to the individual family, lineage, or clan which they could not provide for themselves. Just as the state provided a *forum* for the life and well-being of its citizens, the tribe designated the extreme horizon for the existence of its members. If one was not a citizen of a state, one was automatically regarded as a foreigner; if one did not belong to a tribe, one was not embraced by the reciprocal protective system which the tribe represented. There was, however, a single decisive difference between state and tribe, namely that the state controlled its citizens by the exercise of *political force;* to this end it possessed mechanisms for getting its way with the citizens. By contrast, the members of the tribe were united by ties of *social solidarity* based on the fact that they were, at least on the ideological plane, related by kinship ties (on the transformations of Near Eastern state-citizens into tribal members and vice versa, see Salzmann 1978).

No written source deriving from the early Iron Age tells us what names the tribal organizations in question actually used. Probably part, if not all, of the twelve "official" Israelite tribes came into being in conjunction with these new developments in the highlands and the N Negeb during the LB-early Iron Age transition. On the other hand, there is no reason to believe that it was only the twelve Israelite tribes attested in the OT which took part in this process. An Egyptian inscription from ca. 1310 B.C. mentions some groups which might well have been tribes active in the region around Beth-shan (*ANET,* 255; Albright 1952). None of the tribes in question is mentioned in the OT although it has been supposed that the patriarch Abraham might have been the apical ancestor of one of them, namely the tribe *Rhm* (cf. Liverani 1979b). Another of the names, *Yrmt,* is familiar to us as a toponym which, in the geographical lists in the book of Joshua (21:29), appears as Jarmuth, in the tribal territory of Issachar. On the other hand, the third name mentioned in the inscription, *Tyr,* is not attested elsewhere.

Correspondingly, the Song of Deborah (Judges; which is probably the oldest source in the OT regardless of whether or not it derives from the premonarchic period)

informs us of the existence of tribal units which did not receive placings in the official lists of Israel's twelve tribes. These are Machir and Gilead; in the OT the former figures as a toponym, while the latter is a clan within the tribe of Manasseh.

Such indications show that the course of the sociopolitical process in the early Iron Age was much more complicated than is suggested by the much later OT sources. At the same time, it shows that the OT information about the twelve tribes and their tribal territories cannot be regarded as information deriving from prenational times. Rather, in the OT we are dealing with a systematic reconstruction of early Israelite history which was undertaken at a much later date. Similarly, the tribal boundaries mentioned in the book of Joshua must be seen to reflect the district subdivisions of the later Israel, whether or not the description of the tribal territories in Joshua 13–21 derive from early monarchical times or were first composed in the reign of king Josiah, or even later (see the summary by Miller in *IJH*, 235–36).

The connection between the process of retribalization adumbrated here and the social movements which were already so prominent in the LB Age is possibly also supported by the use of the term "Hebrew" in the OT. In the Bible the term appears in certain contexts as a designation for the early Israelites. The most remarkable such usage probably occurs in the books of Samuel, where it is always the Philistines who employ the term of the Israelites (1 Sam 4:6, 9; 13:3, 19; 14:11, 21; 29:3). Although the contexts in question do not necessarily harken back to Israel's pre-national time, they do nevertheless imply, like other OT references to the Israelites as Hebrews (esp. in Exodus 1–15) that, in the eyes of the city-states, the tribal societies in the highlands were regarded as "Hebrew" societies, which probably means *ḫab/piru* (Lemche 1979; and, partially, Na'aman 1986). See HEBREW. This does not necessarily mean that there was a direct line connecting Israel's origin to, for example, the *ḫab/piru* movements of the Amarna period; but it might be taken to suggest that the authorities in the early Iron Age (and perhaps even later) city-states linked the developments in the highlands with the *ḫab/piru* phenomenon. Admittedly, with the single exception of the very late text of Jonah 1:9, there is no evidence to suggest that the Israelites ever called themselves "Hebrews." This fact need not mean very much, however, since there are also no ANE sources which show that the *ḫab/piru*-peoples ever applied the term to themselves. Rather, *ḫab/piru* was a social designation which was employed by the official authorities to refer to a special group of needy people; it had no ethnic connotations. Such ethnic connotations probably emerged only later in Israel when the "Hebrews" mentioned in the OT were also regarded as Israelites.

One particular problem adheres to the question of the motives underlying the process of retribalization in the mountain regions and in the Negeb in the early Iron Age. As the development has been sketched out here, it has been explained in terms of political, economic, and social relationships. However, there is some question as to whether some *ideological motivation* also lies behind the origin of earliest Israel. George Mendenhall, the first scholar to suggest that Israel's emergence was the result of a social process taking place in the Palestinian highlands rather than the result of the immigration of foreign peoples from other parts of the Near East, especially characterized the process as an expression of a conscious, ideologically-motivated reaction to the city-state system. As he saw it, the peasants had suffered such intolerable conditions that they were forced to rebel against that system (Mendenhall 1962). Thus the proponents of this theory have chosen to see Israel as the result of a *peasants' revolt* against the feudal Canaanite political "establishment," a revolt which was, additionally, influenced by the introduction of a new religion into Palestinian society. Mendenhall accordingly gives the honor for the arrival of the god Yahweh, which in reality means the arrival of the group of people who had encountered Yahweh in "the desert," to the early "Yahwists." It was they, he holds, who created an ideology which was able to serve as a focus of centralization for the dissatisfied forces in the country. This also meant that when the new society constituted itself as a tribal league (Mendenhall originally retained much of Noth's conception of an Israelite amphictyony), the statutes of the Yahwistic religion—i.e., the covenant between Yahweh and Israel—served as the constitution of the new Israelite society. Mendenhall sees this society as essentially an *egalitarian* one, that is, a society in which all Israelites, at least in theory, were on the same footing.

However, this thesis, which has been revised and developed by N. K. Gottwald (1979), has a number of serious weaknesses, a situation which above all relates to the fact that it is impossible to check in a scholarly manner. Since these early Israelites have not bequeathed to us so much as a single document, it is impossible to say what conceptions they entertained as to their situation or to the divine. The "revolutionary hypothesis," as Mendenhall's reconstruction of Israel's origin is usually called, stands or falls on the question of whether the OT description of the origin of Israelite religion can bear religio-historical analysis. In this connection it is correct to assert that there is no indication that the OT sources pertaining to the earliest Israelite *religion* differ qualitatively from the OT information about early Israelite *history*. This means that scholars intending to reconstruct the religious history are obliged to renounce the use of the OT narratives for this purpose, just as they cannot use them for their reconstructions of the historical course of development. It is therefore possible that early Yahwism had a completely different content than the OT narratives suggest. It is probable that early Israelite religious life differed significantly from the idealized conception in the OT account which, in its present form, derives from the early Judaism of the postexilic period.

Concrete criticism of this hypothesis may be directed against the following individual issues. First, according to Mendenhall and others, Yahweh's rule in ancient Israel was founded on the Sinai covenant as Israel's earliest constitution. However, analyses of the Sinai narratives in Exodus–Numbers reveal that they may possibly have been written in a period separated by half a millennium from the events depicted in the Sinai stories. As far as the idea of the covenant is concerned, particularly the German scholar L. Perlitt (1969) has argued that there could not possibly have been an Israelite covenantal theology prior

to the Deuteronomistic movement around the middle of the 1st millennium B.C. Moreover, Mendenhall had claimed that Hittite treaties in the 2d millennium B.C. offer the best parallels to the Sinai covenant and the OT covenantal theology. However, later investigations have shown that comparative materials from the 1st millennium B.C., above all the Assyrian treaties from the 8th–7th century, contain parallels which are at least as appropriate (McCarthy 1963; the texts have been collected in Parpola 1988). But see also COVENANT.

Second, the concept of a peasant revolt (particularly as it is developed by Gottwald) is an over-simplification in that it presupposes that the process followed a coordinated plan whose goal was the establishment of an alternative government and state in Palestine which would be able to compete with the city-states. This concept of peasants deliberately and militantly revolting is romantic, since sociological studies of historical peasant revolts have shown that they are usually uncoordinated, spontaneous, and lack any clear goal. Alternatively, they have been led by members of the intellectual or political elite in the societies in question.

Finally—and this applies particularly to Gottwald's discussion of "egalitarian" Israel—the theories about revolutionary Israel confuse two different logical categories with one another. In Gottwald's terms, early Israel was an egalitarian society because it was a *segmentary* society. However, all ANE societies were segmentary, whether they were organized in tribes or in states. Segmentation has to do with a socio-political mode of organization. By way of contrast, egalitarianism is an *ideological* category. There is no necessary correlation between segmentary society and egalitarian ideology. Moreover, a segmentary society can possess an egalitarian ideology without in fact being organized as an egalitarian society. Indeed, there exist clear examples of segmentary societies which are ideologically egalitarian, but which have to be regarded as hierarchically, that is, rank-organized. There are also societies in which the egalitarian ideology, which primarily serves to strengthen the ties of solidarity among its members, is also used to oppress less wealthy members of the tribes (see, comprehensively, Lemche 1985: 202–44).

The revolutionary hypothesis may therefore be left out of account in the study of the process which led to the emergence of early Israel. The nature of the OT source materials do not permit us either to confirm or disconfirm the hypothesis, for which reason it remains a mere postulate. By the same token, it has the feel of a modern theory whose basis is modern European conceptions of traditional societies; but it is one which has no foundation in scholarly social anthropological studies of traditional societies. The theory has, however, one advantage, namely that it may serve as a point of departure for scholarly reconstructions of the history of emergent Israel in the early Iron Age. It describes this process as one which took place within the borders of Palestine, since it renders superfluous the notion of the immigration of foreign peoples to explain this development. Moreover, in so doing it does not assign to the OT narratives a value as historical sources which (because they derive from a much later time) they cannot bear.

At the same time, along with other theories which go beyond it and which are based on a more realistic foundation, the revolutionary hypothesis opens the possibility for studying the on-going development of early Israel up to the formation of the state as a continuous process. By way of contrast, the OT account of Israel in the period of the judges actually describes this phase of Israelite history as essentially unchanging, a variety of homoiostasis, as if the process of becoming had already ceased with the establishment of the tribal society back in the pre-national period, a situation which first became unbalanced when new circumstances demanded a new form of government.

d. Formation of the Israelite State. There is a tradition in OT research which insists that we separate the study of the formation of the state from the descriptions of the process of Israelite settlement and of the situation of the tribes of Israel in the period of the judges. Thus the formation of the state seems to constitute a special period in early Israelite history.

In terms of chronology, it is correct that the formation of the Israelite state, which the OT connects with the figure of Saul, took place a couple of centuries after the close of the LB Age. Thus it might seem superficially to be the case that this distinction between the settlement process and the formation of the state is valid from an academic point of view. However, the introduction of improved methods of historical analysis, including above all the concept of *la longue durée* under the influence of the French *Annales* school, suggests that the OT tripartition into a "settlement period," a "period of the judges," and a "monarchical period" disrupts the actual historical process. It distorts this process in an unfortunate way, in that it severs the connections between the various phases in early Israelite history. It would therefore be more correct to regard the formation of the state as the final consequence of the formation of the Israelite tribal societies at the beginning of the Iron Age. In short, we should study the establishment of the Israelite state against the background of the previously-adumbrated socio-political process and as an expression of the continued dynamic thrust of that process.

At the same time, such an approach demands that our historical analysis ignore the tendency to write personality-centered history which has characterized most of the descriptions of state-formation in ancient Israel. No doubt remarkable figures did take part in the process which led to the Israelite monarchy; such names as Samuel, Saul, and David announce themselves automatically. However, such individuals should rather be seen as the results of a social development which followed its own imperatives rather than as agents directing the process which resulted in the state. Any study of the great personalities involved in this phase of Israelite history would necessarily be confined to points on a line, rather than to the line itself; it would concentrate on isolated individuals, break the continuity of the process, and thereby sunder the historical course of development. It is, incidentally, remarkable that such emphasis on the continuity of the process does not entirely conflict with the OT account, since also that narrative recalls that there were tendencies within Israelite tribal society towards the emergence of chieftainships or even kingships. The well-known examples are from the territory of Manasseh, where the judge Gideon is said to

have been offered the monarchy by grateful kinsmen (Judg 8:22–23), and where Abimelech subsequently made himself king of a city-state whose center was at Shechem (Judges 9).

The formation of the state has been only brusquely treated at best in recent OT research, in the sense that only a few *synthetic* surveys have appeared; of these, by far the most important is Alt's old study which appeared between the two World Wars (*KlSchr* 2: 1–65). It is only very recently that new investigations have appeared which employ sociological background insights to create organic perspective on the course of the evolution of the state and its presuppositions (cf. esp. Gottwald ed. 1986; see also Frick 1985, as well as the reconstruction of the establishment of the monarchy in Lemche 1988: 102–4, 130–41).

In the following, we shall disregard the attempts to write history from a personality-centered point of view. Instead, an effort will be made to depict the establishment of the monarchy as the consequence of the emergence of Israelite tribal society, assuming that the reasons for the development of the monarchy should be sought in circumstances internal to Israelite society, rather than outside of it.

Although it is somewhat crude and simplistic, the presuppositions which required the tribal societies to be replaced by one or more states may be subdivided into economic and political spheres where each sphere contains numerous factors. Therefore, the following listing can make no claim to being exhaustive:

(1) Economic Reasons for the Changes in the Tribal Society. The Israelite tribes dwelt in a region which may best be described as a marginal territory, that is, the highlands of Palestine and the territory E of the Jordan, as well as the steppes which especially border along the N part of the Negeb. In terms of area the territory is fairly limited. Even in the most favorable conditions, in which the precipitation is higher than normal, the region could only feed a small population. As far as the Palestinian highlands are concerned, this means that once they had been deforested and cleared of their natural growth to make room for cultivation, there were no further possibilities either for economic expansion or for population increase. The steppes, too, must have had only limited flexibility for an agriculture which was dependent from year to year on shifting quantities of rain. Here it was only possible to compensate for the regular cycles of drought by raising sheep and goats.

The development of village culture which is now archaeologically demonstrable in early Iron Age Palestine enables us to assert that this ecological factor was decisive. The continual growth of settlements throughout the period points to a considerable population increase, which in turn means that there was increased pressure on the natural resources of the country. All factors suggest that this led to a stressful situation which must have had an impact on Israelite tribal society. The ideal solution for such a dilemma would be expansion of the territory controlled by the Israelite tribes. However, such expansion could only have taken place if it included absorbing the cultivated areas belonging to other political entities, meaning, above all, the city-states in the coastal plain to the W and in Jezreel to the N. It is likely that such a compulsion to expand may be read directly from the course of events well into the monarchical period. The early Israelite monarchy dealt decisively with these ancient city-states, while at the same time it competed with the Philistine pentapolis in the S part of the coastal plain for control over the fertile marginal highland known as the *Shephelah*.

A second consequence of economic stress within the Israelite tribal societies may have consisted in the weakening of the "egalitarian ideology" (i.e., the feelings of solidarity within and among the tribal societies). At all events, a growing degree of inequality between individual Israelite family groups has been suggested by modern researchers as having contributed to the collapse of tribal society (Chaney 1986; Gottwald 1986; Coote and Whitelam 1986). Such a state of affairs cannot be proven on the basis of the sources presently available to us. However, it is not unknown in the history of the Near East, including up to the present. Its consequence would have been that the more fortunate Israelites were in a position to bind their poorer kinsmen to them by means of contracts which transformed what were originally independent peasants into indentured peasants in the service of their fellow countrymen. Over the course of time the latter took on the character of local petty nobles or wealthy farmers.

(2) Political Reasons for the Collapse of Tribal Society. Connected with the above situation in which inequality grew in the tribal society while the society itself was exposed to ecological pressure, was the increasing tendency toward centralized government. The egalitarian ideology which, as mentioned above, contained the possibility for exploitation, was capable of developing into a tyrannical system (cf. Black 1972) in which solidarity is employed as an argument which serves to keep the poorer part of the population down. Since, according to the ideology, all members of the society are "brothers," i.e., members of the same family, protests against the behavior of local "big men" are tantamount to objections to familial solidarity, and therefore constitute a threat to the survival of the society.

One consequence of such a situation would be the bifurcation of the society into wealthy patrons and bonded peasants, each class with its own peculiar interests. The wealthy patrons would naturally tend to support the establishment of a type of government capable of protecting their interests, creating in the process a power apparatus which would be able to repress the less fortunately situated part of the population. In the first instance, the solution to this political problem would probably have consisted in the election of chieftains who, following the notional tribal ideology, would still count as everyone's kinsmen. Thus the wealthy would have found their *primus inter pares*, which would have allowed them to continue to believe that they controlled the chief. On the other hand, the peasants would have been able to regard the chief as their "big brother," that is, their protector. Furthermore, the emergence of such a chieftainship would have been a politically unifying factor, in that it better enabled the tribal society in question to compete with other societies for control of the resources of the country.

The risk involved with their new system was that, sooner or later, the chieftain might conceive interests, such as dynastic ones, which no longer agreed with the wishes of

those who had elected him. As a rule, this sort of situation could take one of two possible outcomes: either the chieftainship, and thereby the tribe, dissolved through internal faction and conflict, or the chief's interests won the day, so that he was able to figure as the sole ruler, that is, as a *king* endowed with the potential to build a centralized power apparatus as an adjunct to the perquisites of royal office. In such a course of development, both wealthy patrons and bonded peasants are the losers, since none of them are in any position to control the king's actions. One might say that, while a tribal society hires its chief, the king hires his people so that they may serve his interests. In the latter situation the tribal ideology and feelings of solidarity no longer play any kind of role. Accordingly, we note that centralized authority and the tribal system have to collide sooner or later, and in such a way that one or the other must disappear.

Yet another political possibility is that a tribal society may become encapsulated by superior political units. This may happen at any time in the history of the tribe, and it invariably leads to changes in the structure of the tribe. "Encapsulation" means that political formations arise on the borders of the tribe in question which are on a more centrally structured level than the tribe itself. For example, if a tribe which has not yet made the transition into a chieftainship comes into contact with other tribes which have made this transition, there is a considerable possibility that the tribe in question will experience difficulties in asserting its independence, and it may instead ultimately have to pay tribute to the "foreign" chieftainship.

A contributory cause of the relatively weak political position of the tribe is the status of the members of the tribe, which in this sort of society can best be characterized as individualistic and autonomous. The individual members of the tribe are autonomous as far as their economic strategies and their alliances with other members of the tribe are concerned. There are countless ethnographic records which show that even in wartime, and even if several tribes are involved, this does not interfere with the autonomy of the individual. Rather, he is invariably left to himself to decide whether he wants to go off to war with his kin or whether he prefers to stay home.

The individualism which manifests itself within the individual tribe is also able to affect behavior at higher levels, for example, if a tribe is a member of a coalition of tribes. In this event, it would be up to the individual tribe to decide for itself whether it chooses to participate in the greater fellowship, even in time of war. It is not difficult to point to a parallel example of this phenomenon on the basis of the OT materials. In Judges 5 we note that the list of tribes constituting the Israelite army clearly indicates that most of the tribal units which the poet thought *should* have lent their contingents to the common defense in fact did not take part.

Incidentally, this point is one of the important reasons why the notion of an Israelite twelve-tribe league in 1200 or 1000 B.C. is unrealistic, when seen from a sociological point of view. At this level, too, the various members of the coalition would have been characterized by individualism and guided by autonomous interests to such an extent that such a league, understood as a stable political organization, is illusory.

If a tribal society were to be confronted with a centralized state, the sort of politically atomized and individualistic structure depicted above would exercise a decisively negative influence on the society's ability to survive. The probable upshot would be that if drastic changes did not occur in the political structure of the tribe in question, it would dissolve and be integrated into the state which had challenged the tribal society. Another possible consequence is that the tribe might make the transition from tribal society to an organized state led by a king. This might happen in the course of an extremely short period of time, and the development could well permit the society to survive.

It is impossible to say just how many of the factors mentioned here were responsible for the transformation of the Israelite tribal society into a centralized state with its own kings. However, there are indications among the archaeological materials and in the OT sources which suggest that all of these factors, and presumably more besides, played contributory roles. The OT itself regards the decisive factor as the collision with foreign states. In the face of the confrontation with the Philistine city-states in the coastal plain, the Israelite tribal organization had to give way and, in order to survive, it transformed itself into a state. The Philistines were at the time in the process of occupying Israelite territory in central Palestine. Seeking a way out, the Israelites first chose for themselves a chieftain, Saul (we should not be confused by the fact that the OT uses Heb *melek* for both chieftains and kings; in organizational terms, Saul's monarchy was actually more of a chieftainship than a monarchy, although it contained in it the seed of the later development). However, the Philistine challenge was so grave that the Saulide chieftainship was not equal to the task. Only the self-made king David, who could permit himself to ignore narrow tribal interests, was able to transform the Israelite tribes from a defensive to an offensive force, one which proved able to unite almost the whole of Palestine under a single prince in the course of a very short span of years.

If we disregard the descriptions of the individuals, the OT account of the introduction of the monarchy appears to contain sufficient information to enable us to write the history of this epoch. A foreign entity, namely the union of the five Philistine coastal cities, would all by itself have been able to assemble more resources than the ordinary Canaanite city-states could have done. Thus it would have represented a power factor with which a noncentralized Israelite tribal system could not have dealt merely by assembling its own traditional resources. Thus the chieftainship arose as a direct answer to the foreign political challenge; it was subsequently replaced by the monarchy in order to complete the task of defending the independence of the members of the Israelite tribes.

At this point, however, it must be permissible to ask whether the actual historical development was so simple as is recounted in the book of Samuel. For example, it has been suggested that Saul's battles with the Philistines in reality represented not merely an Israelite war of liberation, but rather are to be seen as an expression of an Israelite tendency to expansion which was specially directed towards the N regions (Ahlström 1986: 90–92). In the event, the actual course might suggest that parts of

what later became Israel had already organized themselves as a chieftainship by around 1000 B.C. Thus the warlike altercations in the period were not merely a question of defense against external enemies; they had perhaps just as much to do with gaining control over the rich Galilean territories and the traditional trade routes to Syria in the N.

If this was the case then David's foreign policy may have followed a course already mapped out by the chieftain, Saul. The difference was that David was able to dispose over much greater resources than Saul had done, and in particular was able to utilize as his base of operations the entire central Palestinian area. At the same time, he created what was, admittedly, at first only a limited centralized state apparatus, and so he became the founder of the real Israelite monarchy as such.

This was the beginning of the end for the Israelite tribes since, although the days of foreign encirclement soon seemed to have come to an end, the independence of the tribes also speedily ended. There is relatively little information in the OT about the developments which led to the disappearance of the tribal society. However, it is noteworthy that persons who appear at the beginning of the time of the monarchy are occasionally mentioned as belonging to one or another tribe (e.g., Jeroboam the son of Nebat was an Ephraimite, just as Baʿasha the son of Ahijah came from the tribe of Issachar); such references to tribal affiliation disappear already in the course of the 9th century B.C. Such relationships were apparently no longer relevant, because Israelite society was now organized into centralized kingships in a way that did not depart significantly from the political system of the LB Age. As far as their policies are concerned, the Israelite kings do not seem to have been guided by narrow Israelite interests. Rather, they followed their own political and economic goals irrespective of the possible consequences for the Israelite populace. Seen in this way, there is a certain degree of irony present in the history of the Israelite tribes from the close of the LB Age down to the early part of the monarchical period. When this phase of Israelite history had come to an end, the ordinary Israelite was in reality in a situation which was not significantly different from the one his ancestors had experienced several centuries earlier under the kings of the Canaanite city-states.

ARCHAEOLOGY AND THE ISRAELITE "CONQUEST"

The purpose of this article is (1) to summarize and evaluate recent archaeological data that bear on the early Israelite settlement in Canaan in the 13th–11th centuries B.C.; (2) to critique current explanatory models of Israelite origins in the light of this newer data; and (3) to suggest ways of harmonizing the archaeological and textual evidence that may eventually lead to better syntheses. The approach throughout is heuristic, rather than definitive in attempting solutions.

A. Issues in the Discussion
B. An Archaeological Critique of the Conquest Model
1. Israel in Egypt
2. The Sinai Tradition

3. The Transjordanian Campaigns
4. The Conquest of Canaan
C. New Data, New Models
1. Survey and Excavation
2. Early "Israelite" Villages?
3. "Peasants' Revolt"
D. Archaeological Identification of "Israelite" Ethnicity
E. Toward a New Synthesis of Archaeology and Biblical History
1. Facing the Dilemma
2. Methodological Considerations
3. Toward a Synthesis?
F. Conclusion

A. Issues in the Discussion

The problem, although exceedingly complex, may be stated rather simply by focusing on the several levels at which the majority of scholars encounter difficulties. There is first the *historical* problem, which faces the task of ascertaining, if possible, what really happened in the Israelite settlement of Canaan, that is, of getting at the "history behind the history." It is now recognized by nearly all that the biblical tradition concerning Israel's emergence in Canaan, while our only direct literary source, is limited by its nature as theocratic literature—particularly the "conquest" version in Joshua. But is it possible to write a "secular history" of Palestine in this period that will elucidate Israelite origins better by placing them in a larger context, based chiefly on archaeological evidence?

This leads to a *methodological* problem. What are the possibilities and limitations of each of the two basic types of data from which history may be reconstructed? In short, how are the two histories related, if at all? Are they parallel, or does one take *precedence?*

Finally, there is what appears to be, at least, a *theological* problem. In Israel's recitation of the "mighty acts of God," the central events are Yahweh's redemption of the Israelites from Egyptian bondage, his subsequent granting of miraculous victory over the Canaanites to the Twelve Tribe League, and finally his deliverance of the promised land to the settlers as the sign and seal of his covenant with them. These are the formative events that constitute Israel's existence, the very heart of her Credo. But if these events have no basis in the actualities of history, is not Israel's faith, and ours, without foundation? As one noted biblical archaeologist and theologian, G. E. Wright, put it in his classic *God Who Acts: Biblical Theology as Recital:* "In Biblical faith, everything depends upon whether the central events [i.e., Exodus-Conquest-Settlement] actually occurred" (1952: 126). But what if they did *not* occur?

B. An Archaeological Critique of the Conquest Model

The regnant theories that attempt to explain the emergence of Israel in Canaan are too well known to need documentation here. They are: (1) the "conquest" model, espoused chiefly by Albright and his followers in America, as well as by Yadin and several Israeli scholars; (2) the "peaceful infiltration" model, first proposed by Alt and the German school in the 1920s, but still widely influential; and (3) the "peasants' revolt" model, introduced originally by Mendenhall in the 1960s and recently elaborated by Gottwald. All of these models make some use of the archaeological data, but only the first is heavily dependent upon such evidence. Yet because these are models developed and employed mainly by *biblical* historians, the pertinent archaeological data have not always been adequately evaluated. As Syro-Palestinian archaeology and biblical studies have increasingly diverged (see ARCHAEOLOGY, SYRO-PALESTINIAN AND BIBLICAL), such a critique becomes a task for specialists. Let us look first at the "conquest" model. This model presupposes several sequential phases, each of which, however, presents archaeological difficulties.

1. Israel in Egypt. As is often observed, there is no direct archaeological evidence that any constituents of later Israel were ever in Egypt. The only Egyptian textual reference, the well known "Victory Stela" of Merneptah (now dated ca. 1207 B.C.; see further Stager 1985b) mentions "Israel" as a "people," probably an ethnic element, not in Egypt but in Canaan, with no apparent knowledge of any Egyptian derivation. Nor is there anything in the material culture of the early Israelite settlements in Palestine that points to an Egyptian origin for that culture. The few Egyptian scarabs and possible house-types (as at Tel Masos; Fritz and Kempinski 1983) can easily be explained by the continuity of Egyptian elements from the local LB Canaanite culture into the early Iron Age.

Among the scant references in the Hebrew Bible to specific details of an Egyptian sojourn that might be identified archaeologically is the reference to the Israelites being in servitude in the Delta cities of Pithom and Rameses (Exod 1:11). Pithom is possibly to be identified with Tell el-Maskhuta, or with Tell el-Reṭabe (Holladay 1982: 3–6); and Rameses has now almost certainly been located at Tell ed-Dabʿa near Qantir by the recent excavations of Manfred Bietak (1979). The significance of the new data is considerable. First, all three sites are among the few Delta sites that are now known from recent excavations to have been Canaanite colonies in Egypt in the Middle Kingdom (Dynasties 12–17, ca. 1991–1540 B.C.). Tell ed-Dabʿa was, in fact, the Hyksos capitol of Avaris, destroyed ca. 1540 B.C. with the expulsion of the Hyksos at the beginning of the 18th Dynasty. Second, these sites also have Ramesside levels of the 13th or 12th centuries B.C. Thus Tell ed-Dabʿa, although deserted throughout the New Kingdom after its destruction, was *re*occupied precisely in the time of Rameses II, in the early–mid-13th century B.C. (Rameses II = 1304–1237 B.C.). (Cf. Bietak 1979; but see Dever 1985a for the raising of dates for the earlier levels.) Tell el-Maskhuta has no known Ramesside occupation, but Tell el-Reṭabe, like Tell ed-Dabʿa, was occupied in the Middle Kingdom, abandoned in the New Kingdom, then reoccupied in the 20th Dynasty and onward (ca. 1200 B.C. onward).

Is it merely fortuitous that these Delta sites, known to the biblical writers, *did* have a substantial Canaanite presence in the so-called Patriarchal period, and then were rebuilt under Egyptian aegis in Ramesside times, which is when an Israelite sojourn in Egypt would have to be placed archaeologically? The new evidence is not conclusive, of course (i.e., there are questions regarding the exact location and date of Pithom), but it may lend support to the long-held view of some biblical scholars that at least *some*

constituent elements of later Israel had actually stemmed from Egypt, i.e., the "House of Joseph." Only one thing is certain, and that is that the scant Egyptian evidence at least points unanimously to a 13th century B.C. *date* for an Israelite "exodus," if any. (See Hermann 1973: 19–50; Miller *IJH*, 246–52; contra Bimson 1981.)

2. The Sinai Tradition. The "crossing of the Red (Reed) Sea" is obviously a miraculous tale that can in no way be validated or even illuminated by archaeological investigation. Furthermore, of the subsequent "wandering in the wilderness" theme (Num 33:1–49), little can be said archaeologically. If indeed the Israelites are to be pictured as a band of wanderers, or even as semi-sedentary pastoralists, we would still probably find no remains of their ephemeral camps in the desert. Thus all attempts to trace the "route of the Sinai crossing" have been doomed to failure, reduced as they are to inconclusive efforts to identify hazy topographical references in the Bible with modern Arab place names that usually have no clear historical associations. E. Anati has recently claimed (1986) that he has located biblical Mt. Sinai at Har Karkom, in the W Negeb near the present Egyptian border, but few will find the petroglyphs and other data convincing evidence that this is anything more than another of the "holy mountains" frequented from time immemorial by the nomads of the desert.

The only 2d millennium B.C. Sinai route that is attested archaeologically is the N route along the coastal dunes, which recent archaeological investigation has indeed illuminated, precisely in Egyptian New Kingdom times (Oren 1984 and references there). But this is precisely the route that was bypassed according to the biblical tradition, because of Egyptian control. All we can say is that recent, extensive exploration of the entire Sinai by Israeli archaeologists, geologists, and others has turned up virtually no MB-LB presence in the central or S Sinai. Our current detailed knowledge of this remote and hostile area calls into question the biblical tradition of a million-and-a-half or more people migrating there (Num 11:21) for some forty years (Deut 2:7). The barren terrain and sparse oases might have supported a few straggling nomads, but no more than that.

The description of a thirty-eight-year encampment at Kadesh-barnea (Deut 1:19–2:15), which is prominent in the biblical tradition and gave rise to an important pilgrimage-festival in the time of the Monarchy, has long intrigued biblical scholars and archaeologists. Following the topographical indications in the Bible, Kadesh-barnea has been quite plausibly identified since the 19th century with the well-known oasis at ʿAin el-Qudeirat, near Quseima on the modern Israel–Egypt border. The small *tell* near the spring was sounded in 1956 by Moshe Dothan and was then extensively excavated to virgin soil in 1976–1982 by Rudolph Cohen. The latter has shown conclusively that these remains consist of three successive Israelite forts (Levels I–III) of the 10th–7th/6th centuries B.C., with nothing whatsoever of earlier occupation, not even scattered sherds (Cohen 1983). Thus the Kadesh-barnea episode, on present evidence, has little historical basis and appears to have become significant only in the united monarchy, when the Exodus tradition was crystallizing.

3. The Transjordanian Campaigns. The first phase of the conquest of Canaan, according to biblical accounts, focused on central and S Transjordan, which the tribes of Gad, Reuben, and half-Manasseh are said to have occupied (Numbers 21). The incoming Israelites are portrayed as encountering a settled population in Ammon, Moab, and Edom. Among specific cities mentioned as taken (and by implication destroyed) are Heshbon and Dibon; transparently identifed with the large *tells* of *Hesbân* and *Dhibân*, respectively. Yet the extensive excavation of both has revealed that neither had any LB occupation. Hesbân had scant 12th–11th century material, with Iron Age occupation beginning principally in the 10th century B.C. (Geraty 1983). Dhibân may have had some Iron I material, but nothing earlier, and most of the Iron Age remains were 8th–7th century B.C. (Dornemann 1983: 45, 63; Sauer 1986: 8–18). Thus neither site can have been destroyed by the Israelites under Joshua in the mid-13th century as required by Num 21:21–30. The same is probably true of Madeba (Num 21:30), which has produced thus far only a 12th century tomb for this horizon (Dornemann 1983: 34, 35).

Elsewhere in Transjordan, the general picture of LB and early Iron I occupation is complex, but it is clear that there is relatively little sedentary occupation of *southern* Transjordan in LB. N. Glueck's surveys in the 1930s–1940s already suggested this (although he interpreted the evidence as *supporting* the biblical tradition of early Israelite settlement). Subsequent correction and expansion of Glueck's site maps, including the discovery of a few more LB Age sites farther N in the Jordan valley and up on the plateau, has not substantially changed this view. Newer excavated evidence from Amman, the Beqaʿ valley, Sahab, Irbid, Tell es-Saʿidiyeh, Deir ʿAlla, Kataret es-Samra, and a few other sites, as well as surveys from N Jordan, the Jordan valley, and Edom, all yield the same picture. Moab and Edom were not yet established, fortified kingdoms that would have posed any threat to Israelite tribes moving through the area, and even Ammon was rather sparsely occupied and defended. (For the most authoritative review, see Sauer 1986: 6–14; and cf. Dornemann 1983: 20–24). Thus throughout most of S Transjordan in LB-Iron I, outside the few settled towns, pastoralists and nomads must have dominated the countryside, like the "Shasu" tribes well known from Egyptian New Kingdom texts (Giveon 1971). In Moab, Heshbon and Dibon did not become significant urban centers until the 9th–8th centuries B.C. (Dornemann 1983: 63; Sauer 1986: 10, 15, 16). Ongoing excavations of the Iron Age sites in Edom indicates that the majority of these, including ʿArôʿer, Buseirah (Bozra), Tawilan, and Umm el-Biyarah, were first settled only in the 8th or 7th centuries B.C. (Dornemann 1983: 47–63; Sauer 1986: 14–19). Thus the notion of large-scale 13th–12th century B.C. Israelite military campaigns in S Transjordan, or even of peaceful settlement there, is no longer tenable; the occupational history of the region simply does not fit (contra Boling and Wright *Joshua* AB). As for destructions, the only known LB II destructions are farther N—at Deir ʿAllā, Tell es-Saʿidiyeh, and Irbid—in Gilead; and in all cases, both the biblical identification and the agents of destruction remain unclear.

4. The Conquest of Canaan. The biblical tradition of the main phases of the occupation of the land of Canaan

W of the Jordan is too well known to need summarizing here (cf. the principal accounts in Joshua, plus Num 21:1–3 and Judges 1). Since the infancy of modern topographical research and archaeology more than a century ago, biblical scholars and archaeologists have sought to locate the numerous cities said to have been taken and to identify 13th–12th century "destruction layers" that might be attributed to incoming Israelites. Indeed, confirming the Israelite conquest of Canaan archaeologically became one of the major priorities on the agenda of the "biblical archaeology" movement led by Albright and his followers from ca. 1925–1970, which adopted almost exclusively the "conquest" model presented in the book of Joshua (see also Lapp 1967). This approach was also taken up by several prominent members of the "Israeli school," notably Yadin (1979; but cf. Aharoni *WHJP* 3: 94–128). And the effort still continues among a few conservative biblical scholars, some of whom, however, opt for the now totally discredited "high date of the Exodus" (thus Bimson 1981). Rather than reviewing the vast bibliography (see Miller *IJH*, 213–84), the latest and best archaeological data can be summarized in chart form (see table; and see further the latest syntheses in Callaway 1988, and especially Finkelstein *AIS*).

Canaanite Sites Claimed to Have Been Taken by the Israelites.

SITE	REFERENCES	BIBLICAL DESCRIPTION; REMARKS	ARCHAEOLOGICAL EVIDENCE	
1.	Zephath/ Hormah	Num 21:1–3; Judg 1:17	"Destroyed."	If Tel Masos, no LB occupation there.
2.	Jericho	Judg 6:1–21	"Destroyed."	No LB II occupation.
3.	ʿAi	Josh 8:24	"Destroyed."	No LB II occupation.
4.	Bethel	Josh 8:17; Judg 1:22–28	"Destroyed."	Destruction at end of LB II.
5.	Jerusalem	Josh 10:1–27; Judg 1:8, 21	Texts contradictory.	LB II occupation, but no evidence of destruction.
6.	Libnah	Josh 10:29, 31	"Destroyed."	Tell es-Sâfi? Occupation?
7.	Lachish	Josh 10:31, 32	"Destroyed."	Level VI destroyed ca. 1150 B.C.
8.	Hebron	Josh 14:13–15; 15:13, 14; Judg 1:10	Texts imply capture but no destruction described.	No evidence.
9.	Debir	Josh 10:38, 39; 15: 15–17; Judg 1:11–13.	"Destroyed."	If Tell Beit Mirsim C, yes; if Tell Rabûd, no.
10.	Makkedah	Josh 10:28	"Destroyed."	If Kh. el-Qôm, no LB II.
11.	Eglon	Josh 10:34, 35	"Destroyed."	Tell el-Ḥesi IV?; no destruction.
12.	Hazor	Josh 11:10–13	"Destroyed," but described as still existing later.	Lower City, Gnl. Str. XIII, violently destroyed ca. 1200.
13.	Dan	Judg 18:11–28	"Destroyed."	LB II occupation, whether destruction at end unclear.
14.	Gaza	Judg 1:18	"Taken."	No evidence.
15.	Ashkelon	Judg 1:18	"Taken."	No evidence.
16.	Ekron	Judg 1:18	"Taken."	No evidence.
17.	Heshbon	Num 21:25–30	"Destroyed."	No LB II occupation.
18.	Dibon	Num 21:30	Destruction implied.	No LB II occupation.
19.	Medeba	Num 21:30	Destruction implied.	No evidence.

It is obvious that of the nearly 20 identifiable LB/Iron I sites that the biblical writers claim were forcibly taken by the Israelites under Joshua or his immediate successors, only Bethel and Hazor have any *archaeological* claims to destructions, i.e., historical claims supported by extrabiblical evidence. And even here, there is no conclusive data to support the notion that Israelites were the agents of destruction. (The new evidence dating the destruction of Lachish VI to Rameses III or later, ca. 1150 B.C., is much too late; cf. Ussishkin 1985). Thus the "conquest" model derived principally from the book of Joshua, so promising in the beginning, is now seen to have fared rather badly in more recent research. We must conclude that as an overall model for understanding the origins of Israel, the whole notion of a literal "Exodus-wilderness wanderings-Conquest" episode is now unproductive and indeed detrimental, since it is challenged by current archaeological and historical research. The possible experience of some tribal elements in Egypt and Transjordan, or the scattered violence accompanying early phases of the settlement in Canaan, were undoubtedly minor factors. The emergence of Israel must be seen rather as part of a larger, enormously complex, long drawn-out process of socio-economic change on the LB/Iron I horizon in Palestine with many regional variations. Newer and more sophisticated models, as well as a "secular history" of Palestine (particularly settlement history) are required if we are to understand Israel's origins adequately. Furthermore, it may be the continuity with Canaanite culture, *not* the changes, that in the long run turns out to be the most significant factor.

C. New Data, New Models

Today there are considerable data to support "non-invasion" models of the Israelite settlement in Canaan. Although these data are recent and scarcely published, and thus remain largely unknown to most biblical scholars, archaeological excavations and surveys in the past fifteen years have brought to light hundreds of small, Iron I sites of the late 13th–11th centuries B.C. These are located primarily in the central hills, but are also found as far N as Galilee and southward into the N Negeb. Nearly all are very small, unwalled sites, many founded *de novo* in the late 13th or 12th century, and most abandoned by the 11th century. If we could identify these Iron I sites as "early Israelite" villages, they would yield the *first* such *external* evidence we have found of this phase of the Israelite settlement of Canaan. Yet we must defer that question for the moment.

1. Survey and Excavation. The evidence can only be summarized very briefly here. Most of the new Iron Age sites noted above have been discovered through Israeli surface surveys, still largely unpublished: those of I. Finkelstein in Ephraim; of A. Zertal in N Ephraim and Manasseh; of several Tel Aviv University archaeologists in the Shephelah and along the Sharon Plain; and of Zvi Gal in Lower Galilee (see references in Finkelstein 1986; *AIS;* Gal 1989; Stager 1985a; Dever 1987; Dever fc.b.; Zertal 1987). Finkelstein, for instance, has discovered no fewer

than 409 Iron Age I sites E of Aphek up into the Jerusalem hills, of which more than 75 were first founded in Iron I. In the central hills area, L. Stager (1985a) has shown that the number and density of settlements increased dramatically just after 1200 B.C.—from 23 LB sites, to 114 Iron I sites, 97 of them first founded in Iron I. Although the individual LB sites were larger urban Canaanite sites (median size = 12–13 acres) and the individual Iron I sites were smaller villages (median size = 2–3 acres), the total occupied area in the central hills region surveyed by Stager rose dramatically from ca. 175 acres in LB to ca. 475 acres in Iron I. Demographers would hardly attribute this sharp increase to natural growth alone. Clearly there has been an influx of new settlers; but who *were* they, and where did they *come* from?

Actual excavations have been undertaken on relatively few of these Iron Age I villages, notably by J. A. Callaway and R. Cooley at ʿAi and Radannah (the latter possibly biblical Beeroth), N of Jerusalem (Callaway 1985; 1988); by A. Mazar (1981) at Giloh, on the S outskirts of Jerusalem; by M. Kochavi, I. Finkelstein, and others at ʿIzbet Ṣarṭeh, near Aphek (probably biblical Ebenezer; Finkelstein 1986); and by A. Kempinski and V. Fritz (1983) at Tel Masos, in the N Negeb (possibly biblical Hormah; on all the above, see further, with bibliography, Dever 1987; Stager 1985a).

ʿIzbet Ṣarṭeh is particularly significant, since it can probably be identified with a known Israelite site; it has only three levels, all belonging to the 12th–10th centuries B.C., all relatively well exposed in excavation (up to 35 percent); and the material has now appeared in a definitive final publication (Finkelstein 1986). Stratum III, of the late 13th–early 11th centuries, consists of a simple "oval courtyard settlement" that may reflect a herdsmen's encampment (contra Finkelstein's settlement of "recently sedentarized desert nomads"; 1986: 108). After abandonment and a gap in occupation, it was succeeded by stratum II, a substantial village of perhaps 100 or so, with several four-room courtyard houses and many stone-lined silos, dating to the late 11th century B.C. Stratum I represents a decline, but continues into the early 10th century, after which the site was permanently abandoned. It is noteworthy that ʿIzbet Ṣarṭeh was peacefully established, and although it was abandoned at the end of each phase, there were no restrictions. The economy, especially that of strata III–II, was based on agriculture and animal husbandry. The pottery is in *strong* continuity with the LB Age Canaanite repertoire, most closely paralleled by the Iron I N Shephelah and hill country sites (Gezer, Beth-shemesh, Giloh, Shiloh, etc.), but it also has lesser affinities with coastal Canaanite or Philistine sites (Aphek, Tell Qasile; on the above, see especially Finkelstein 1986; and cf. the greater stress on ceramic continuity in *AIS*, confirmed by Dever fc.a.).

Only preliminary reports are available for some of these sites, but already we may draw at least a *provisional* picture of the material culture—and possibly of the social structure and even of the ethnic identity—of these villagers.

(1) We can see a significant shift in *settlement patterns* from the LB to Iron Age I. The typical Iron I sites known thus far are located mostly in the central regions of Canaan, especially the hill country, not on destroyed LB *tells* (where they had been sought). They are founded *de novo* and peacefully, in the late 13th–early 12th century B.C., in a decentralized or nonnucleated pattern of settlement. This growth of new settlements resulted in a sharp rise in population in the central hills in early Iron I.

(2) We have a shift in *settlement type* as well, from large, walled urban to nonurban sites. Most of the Iron I sites are small, unwalled hilltop villages, with a population of from several dozen to as many as 300 or so. All these villages are characterized by a distinctive and homogeneous style of "four-room" courtyard house (often misleadingly called the "Israelite" type-house), which usually features rock-hewn cisterns and subterranean silos. Such self-contained courtyard houses—really "peasant farmhouses"—are ideally suited to an agrarian economy; and, indeed, similar houses are found widely throughout rural areas of the E Mediterranean, from ancient to modern times. See also HOUSE, ISRAELITE.

(3) The *economy* of these Iron I villages was largely self-sufficient, based mainly on small-scale but intensive terrace farming, with some admixture of livestock herding and primitive "cottage industry." A few trade items, however, principally ceramics, indicate that these villages were not totally isolated, but had limited contact with the Canaanite urban centers some distance away.

(4) A changed *technology* is now in evidence, marked particularly by the mastery and extension of terrace agriculture to exploit the cleared hillsides, aided perhaps by the utilization of iron implements, now gradually coming into use in Palestine. Lime-plastered cisterns, while known long before, were now more widely adopted to solve the perennial problem of summer water shortage in the hill country. Ceramic production generally followed that of the LB Canaanite culture, with the introduction of a few new forms (including the popularization of the "collar-rim" storejar), generally inferior in manufacture.

(5) The *social structure* of these small Iron I villages appears to be much less "stratified" than that of the urban LB Age, with no indications of a hierarchically-ranked social order, no "elite" residences or palaces, and no public or adminstrative structures, not even sanctuaries or temples. The rather stereotypical house-plans show little variation and are clustered closely together; their type and arrangement do not even differ significantly from village to village. The general picture to be derived from the new archaeological data for Iron I is that of a simple, agrarian, cohesive society, probably kin-based. The villages are in relatively close proximity; they are apparently organized for internal occupation, but have little need for defense against external pressures. Although the simpler Iron I social and political structures mark a retrogression from the "state-level" organization of the LB to a "tribal level," some sophistication is nevertheless still seen in a few epigraphic remains, including an abecedary from ʿIzbet Ṣarṭeh that may suggest fairly widespread literacy.

(6) In terms of *provenance,* it must be stressed that there is no evidence whatsoever in the material culture that would indicate that these Iron I villagers originated outside Palestine, not even in Transjordan, much less in Egypt or the Sinai. There is nothing in the material remains to suggest that these are "pastoral nomads settling down"—on the contrary, they appear to be skilled and well-adapted

peasant farmers, long familiar with local conditions in Canaan. What is "new" is simply the *combination* and adaptation of existing cultural elements—such as the courtyard houses, silos, and terrace agriculture—with a few novel elements. This distinctive "hybrid" material culture served as the basis for the agricultural settlement of the hill country and the emergence of a distinctive new social order, as well as, in all probability, a new ethnic identity and solidarity. Nevertheless, the overall cultural traditions of these Iron I villages show rather strong continuity with LB Age Canaan, especially in the pottery.

(7) Finally, in terms of *duration,* nearly all of these Iron I villages were abandoned by the late 11th or early 10th century B.C., with the growth of a more concentrated urban culture at the beginning of the united monarchy and the emergence and full development of the true "Iron Age" or "Israelite" culture.

2. Early "Israelite" Villages? On the basis of the foregoing cultural traits, it would be tempting to conclude that these new Iron I sites represent the first definitive *archaeological* evidence we have had of the formative phase of the Israelite settlement in Palestine. These would then be the very early Israelite villages described typically in the book of Judges (thus A. Mazar 1981; Stager 1985a; Callaway 1985; 1988; Fritz 1987; Finkelstein 1986; *AIS*). If that proposition should be sustained by further data, these discoveries would constitute the most significant correlation yet between archaeology and biblical history.

Before we can be quite so sanguine, however, we must address several neglected, yet crucial, questions in the interpretation of the archaeological data—particularly as these data relate to textual analysis and historical reconstruction (see further Dever fc.a.).

a. Social and Economic Structure. Skeptics have often observed that "archaeologists do not dig up social systems." Perhaps not; but they do uncover traces of social systems, since modern archaeology concentrates on recovering the "material correlates" of both individual and collective human behavior. See ARCHAEOLOGY. What do recent data reveal about the social and economic structure of the Iron I villages?

(1) Social Structure. As Stager has shown (1985a), the typical four-room courtyard houses, their clustering into larger units, and the overall village plan, all appear to be a direct reflection of the social structure embodied in the terminology of the Hebrew Bible, especially in Judges. Thus, in ascending levels of complexity, we can recognize: (1) in the individual house, Heb *geber,* which really designates the conjugal or *"nuclear family"* of 4–5 people; (2) in the compound, or cluster of 2–3 such houses, Heb *bêt ʾāb,* "house of the father," meaning "lineage," or in sociological terms an "extended or multi-generational" family, of up to 20 persons; (3) in the whole village plan, with several family compounds, Heb *mišpāḥâ,* "family" in the larger sense of "clan," with anywhere from several dozen to several hundred related persons; (4) in the grouping of many such villages, Heb *šēbeṭ* or *maṭṭeh,* "tribe"; and (5) in the overall distribution of settlements, Heb *ʿam yiśrāʾel* or *bĕnê yiśrāʾel,* or "tribal confederation," "nation" (the latter two *not* separated by Stager). If this analysis, probably the best example yet of the newer style of "biblical archaeology," is correct, then the archaeological remains corroborate the textual evidence decisively. Early Israel was a kin-based (or "segmentary") society, strongly egalitarian. Archaeology shows that the characteristic settlement type and distribution of the Iron I highland villages reflect the essential social structure of early Israel—almost precisely as the book of Judges (Joshua much less so) has faithfully preserved it in the written record.

(2) Economy. The subsistence system of the Iron I villages is equally clear. The economy is based primarily on small-scale but intensive agriculture, with some admixture of specialized stockbreeding. This is indicated by the relatively isolated location of the villages away from river valleys and major trade routes, but in areas still suitable for hillside farming and herding. Furthermore, the efficient size and compact layout of the villages, as well as the family-based social structure, are well suited to such an agrarian economy. The typical four-room courtyard house is an ideal "peasant farmhouse," with provisions for the number of people, animals, and installations typically needed for an individual household production unit (Stager 1985a: 11–17). Finally, the new technology reflects a successful adaptation to hill country agriculture, particularly the near perfection of the art of terracing hillsides, excavating waterproof cisterns in the bedrock, and constructing stone-lined storage silos.

(3) The "Domestic Mode of Production." The socioeconomic structure that we confront in these Iron I villages is thus obviously simple and agrarian. On a cultural-evolutionary scale of development we could regard it as being at a "pre-State" level, either "tribal" or "chiefdom" (Service 1962). This is also suggested by the biblical sources, especially Judges-Samuel, in their vivid and often detailed description of conditions in the premonarchical periods (Frick 1985). Unfortunately, because of the "idealist" bias of most biblical historians (and even the biblical writers themselves) little research has been done either on the material and technological basis of early Israelite culture, or on its social consequences.

Recently, however, there has been growing interest in early Iron Age agriculture (cf. de Geus 1976; Stager 1985a and references there; and especially Hopkins 1985; Borowski 1987). Certainly Gottwald (1979) has gone furthest in his determined "program of historical cultural-material research into early Israel" (1979: 650–63). Many regard this, of course, as economic determinism, others as simply 20th century Marxism projected back upon early Israel. But the archaeologist, who specializes in material culture, can only applaud Gottwald when he declares: "Only as the full *materiality* of ancient Israel is more securely grasped will we be able to make proper sense of its *spirituality*" (1979: xxv). Thus Gottwald's *Tribes of Yahweh expands* upon the sociological and anthropological approach of Mendenhall's "peasants' revolt" model by looking not only at ideological factors like "Yahwism" as the driving force behind Israelite social structure and solidarity, but also at the agrarian economy and technology of the supposed peasants. Gottwald makes admirable use of what little the "new archaeology" could offer in the mid-1970s, sensing correctly that its research objectives are complementary to his own, but there were few data available then (see also Chaney 1983). In our view, Gottwald's materialist perspective on early Israel seems more promising than most later

treatments of a more conventional sort, based as they are almost solely on the biblical texts (thus Halpern 1983) which are clearly limited in their usefulness.

It is not merely early Israelite agriculture and technology at which we must look, however, but rather at the *total* subsistence system and its related social system. This is what Marx and Engels (unlike some later Marxist theorists) meant by "mode of production," which delineated not simply an economic system, but a *social-evolutionary stage.* The "mode of production" included a society's adaptation to its environment, technology, class structure, political organization, conceptual systems, and even religion.

Marshall Sahlins' *Stone Age Economics* (1972) elaborates further on the "Domestic Mode of Production" (DMP) that often characterizes peasant or pre-State societies. At this level of social evolution, the individual self-sufficient household is the basic unit of production, and production is for consumption rather than for exchange, hence family labor and cumulative skills are more significant than technology. The DMP, according to Sahlins, tends to be "anti-autocratic" by nature, but it nevertheless obliges household groups to form voluntary social compacts, i.e., to pool labor and resources. Sahlins observes: "As the domestic economy is in effect the tribal economy in miniature, so politically it underwrites the condition of primitive society—society without a Sovereign" (1972: 95). This would be an astonishingly accurate portrait of early Israel, whose only sovereign was Yahweh. A unique "theology" was organically related in part to a distinctive technology, economy, and social order. While archaeology can get at the former only partially and with some difficulty (i.e., evidence of possible cult *practice*), it is superbly equipped for investigating the latter, even though this task has been neglected until recently. A beginning *has* been made, but much more must be done on peasant economy and society if we are to comprehend Israel's origins in Canaan—especially if we are increasingly to employ the "peasants' revolt" model.

b. Continuity and Coexistence. In asking what is new *archaeologically,* and thus culturally, in the Iron I villages, we must remember that Palestinian archaeology has long been dominated by a certain biblical notion of "political history" and has thus sought unicausal explanations of cultural change in general. Furthermore, in this case of the Israelite settlement, the almost-exclusive adoption of the "conquest model" by those of the Albright school has meant that stress was placed upon the *discontinuity* between the LB/Canaanite and Iron I/Israelite cultures. The result was twofold: (1) a reductionist view of the emergence of Israel, as due to a relatively abrupt, violent, and complete triumph of newcomers who overwhelmed Canaan ca. 1250–1200 B.C.; and (2) an overemphasis on the supposed cultural discontinuities throughout the transitional LB-Iron I horizon in the 13th–11th centuries B.C.

Recently, however, newly accumulating archaeological evidence has shown that the abruptness of the break has been greatly exaggerated (cf. Kempinski 1985). We now know that many LB II sites were not destroyed at all, by either Israelites or Sea Peoples. Also, Egyptian New Kingdom influence did not cease with the 19th (First Ramesside) Dynasty ca. 1200 B.C., but extended perhaps as late as the time of Rameses VI, ca. 1140 B.C. (especially at sites like Megiddo, Beth-shan, and Lachish; cf. Tadmor 1979; Weinstein 1981; Ussishkin 1985; A. Mazar 1985). And Canaanite material culture flourished well into the 12th and even 11th centuries B.C. in some areas, particularly in ceramics, where, apart from imports or Philistine Bichrome ware, it is often difficult to distinguish 13th from 12th century pottery (A. Mazar 1981; Wood 1985; Dever 1987). Finally, not even the appearance of iron provides a firm criterion for the beginning of the "Iron" Age, since iron begins as early as the 14th century B.C. but comes into common use only in the 11th–10th centuries B.C. Furthermore, its connection with the new technology and culture is more debated than ever in recent research (cf. Stager 1985a: 10–11).

The logical conclusion to be drawn is that the "invasion hypotheses" of which earlier archaeologists were inordinately fond are almost never useful models, certainly not for the LB/Iron I transition. We must look rather at the largely *indigenous* factors in socio-cultural change. For example, we need posit no hypothetical external forces whatsoever to account for the actual changes that we observe in the material culture of Palestine on the LB/Iron I horizon (except for the impact of the Sea Peoples, who were indeed newcomers). It cannot be stated too categorically: the emergence of Israel in Canaan was not an isolated, "unique" event, but rather an integral (albeit small) part of a gradual, exceedingly complex set of socio-economic, cultural, and political changes on the LB-Iron I horizon in the Levant, with many regional variations. It was but one episode in the long settlement history of Palestine and cannot be understood apart from the larger context of that history (see especially Coote and Whitelam 1987). The early Israelites, who first appear in our textual sources at this time, may have come to constitute a distinct *ethnic group* by the late 13th–early 12th centuries B.C., but there is no archaeological evidence whatsoever that they were recent arrivals in Canaan, much less an invading military horde. And the ensuing struggle between Israelite and Canaanite culture continued for centuries, even to the end of the Monarchy (Dever 1984; see also Fritz 1987 and his "symbiosis hypothesis").

Having enunciated a general interpretative principle, however, we need to be as specific as possible on the elements of continuity/discontinuity, since so much hangs on this question, and yet previous discussions seem inconclusive.

(1) Continuity. Of the diagnostic feature enumerated above for the Iron I villages, the pottery, in particular, shows strong continuity with the 13th century LB Age repertoire. For instance, the pottery of ʿIzbet Ṣarṭeh, which is no doubt Israelite, is virtually *identical* to that of the 13th–12th centuries B.C. at nearby Gezer, which both archaeology and the biblical tradition agree is non-Israelite (i.e., LB Canaanite, with some new Iron I Philistine elements). The *only* significant difference is that ʿIzbet Ṣarṭeh has "collar rim" storejars, while Gezer does not; and Gezer has much more Philistine pottery. This is precisely what we should expect. It is interesting that Finkelstein had argued in his Hebrew dissertation (1983) that the ʿIzbet Ṣarṭeh pottery reflected a "Transjordanian pastoral-nomadic" origin, but in the full publication of the site (1986) he quite correctly makes no mention of such a possibility.

(See SETTLEMENT OF CANAAN, which also posits a Transjordanian background for early Israelite culture, but cites no *archaeological* evidence; Boling 1988 adduces some data but none that is decisive). It needs to be emphasized that not only is the Iron I village pottery in direct continuity with the typical local LB ceramic repertoire, but its further development in the 12th–early 11th centuries B.C. cannot be explained *otherwise*. This is seen in all the principal forms: storejars, kraters, bowls, cooking pots, even juglets, chalices, and lamps (cf. A. Mazar 1981; Finkelstein 1986: 38–92; Dever fc.a). The principal continuity between the LB Canaanite material culture and the early Iron I "Israelite" material culture is seen in the pottery. Yet it must always be remembered that among archaeologists and anthropologists pottery is regarded as our most sensitive medium for perceiving cultural contact and cultural change.

(2) Discontinuity. On the other hand, several diagnostic features of the Iron I villages are clearly innovative, specifically settlement type and distribution; and an almost total shift to a nonurban, agrarian economy and social structure (see above).

(3) Continuity, Discontinuity, and Adaptation. Still other features show a mixture of continuity and discontinuity and must therefore be evaluated most judiciously. For instance, hillside terraces, rock-hewn cisterns, and stone-lined silos now appear in relatively greater proportions, and they do indeed seem to characterize the technology of our early "Israelite" villages. But it is only the *combination* and *intensified* use that are new. All these elements have clear antecedents in the MB-LB Age, and even earlier (Stager 1985a: 5–10 and references there).

The case of the four-room courtyard house, or "Israelite type-house" (Shiloh 1970), is even more instructive. It is true that only in the Iron Age, and most often in the Iron I villages in question, does this distinctive house style become ubiquitous. But a few prototypes do appear in the LB; and a growing number of fully developed houses of this style are now known from obviously *non*-Israelite Iron I sites both in Palestine and in Transjordan (cf. A. Mazar 1981: 10, 11; Stager 1985a: 5–10; Finkelstein 1986: 121–24). Thus the four-room courtyard house was not so much an "Israelite invention" (and therefore a reliable diagnostic trait) as it was a successful adoption and modification of a common Iron I style of peasant farmhouse, one which was peculiarly suitable to early Israel's agrarian economy and social order. See also HOUSE, ISRAELITE.

Finally, we note the problem of the "collar rim" storejar, which Albright, Aharoni, and others had thought another "Israelite type-fossil." These pithoi are simply large variants of the LB-Iron I storejar, with a reenforcing band around the neck. They are particularly suitable for storage of liquids and foodstuffs, and it is probably for that reason that they are especially common in the Iron I villages we have discussed. But they are now known from LB contexts, as well as from non-Israelite sites in both Palestine and Transjordan (Ibrahim 1978; A. Mazar 1981: 27–31; Finkelstein 1986: 76–84).

All the above elements do indeed *become* "Israelite"; but they are not exclusively so, they are not necessarily innovations, and the individual elements in themselves cannot define "Israelite ethnicity."

c. Ultimate Origins. Another, larger aspect of LB-Iron I continuity must now be examined, namely the question of early Israel's *ultimate* origins. Is the demonstrable continuity with local LB Canaanite culture compatible with the customary models for the Israelite settlement; and, if so, is the archaeological evidence decisive for any *one* of them?

(1) "Conquest." Clearly, from our discussion the conquest model is ruled out. The founders of the Iron I villagers do not appear to have been newcomers to Palestine, much less settlers displacing Canaanites in the urban centers by military force. The few sites actually destroyed ca. 1200 B.C. were destroyed either by the Philistines, or by unknown agents; and none is resettled within a reasonable time by people who could be implicated in the destruction, or could otherwise be identified as "Israelites."

(2) "Peaceful Infiltration." The "peaceful infiltration" model has fared somewhat better, in that it always eschewed sudden conquest in favor of a process that envisions the Israelites emerging in Canaan gradually and largely without armed conflict. That may not have squared very well with the archaeological picture as viewed a generation ago when Alt and others advanced the "peaceful infiltration" model in the face of the dominant Albrightian interpretation, but the newer data surveyed above tend to confirm it in general. In certain *specifics*, however, this model, although relatively sophisticated, is not broad enough to accommodate some of the newer data (contra SETTLEMENT OF CANAAN). In its classic form, it assumed that the Iron I hill country settlers were pastoral nomads immigrating from Transjordan at first seasonally and then gradually becoming fully sedentarized (see Weippert 1971; 1979). More recently, however, this notion of *Siedlungsgeschichte*, or the sedentarization of nomads, has come under criticism from better informed ethnographic studies of pastoralists. (In addition, the "nomadic ideal" posited by some scholars as basic to the biblical writers has been shown to be largely a modern fiction). Furthermore, nearly all the archaeological data we have seen in the material culture of the Iron I sites, now that they are finally being investigated, contradicts *both* these notions of Transjordanian and pastoralist backgrounds. The Iron I pottery derives directly from LB traditions, which *must* be local to W Palestine, since there is no appreciable LB occupation in S Transjordan (contra both this model and the biblical tradition).

As for "pastoral origins," relatively few of the new Iron I villages suggest nomads gradually becoming farmers. Only Giloh and ʿIzbet Ṣarṭeh III appear to be "fortified herdsman's encampments," and even so there is no evidence that the occupants are either newcomers or former nomads. The houses at Tel Masos have been interpreted as modeled upon bedouin-like tents (Fritz 1981), but this is generally disputed (Stager 1985a: 17). Furthermore, the evidence of cattle breeding and of sophisticated ceramics at Tel Masos suggests anything but pastoralists settling down. Elsewhere, the Iron I hill-country sites exhibit a very advanced, multifaceted agricultural technology, one that was labor-intensive but nevertheless almost ideally adapted to high-risk agriculture under difficult conditions in this former marginal zone (see Hopkins 1985; Stager 1985a: 5–9; Borowski 1987). These are hardy first-generation farmers, i.e., refugees from the cities, much less

recently sedentarized pastoralists (or "urban peasants"). They appear rather to be farmers who already had a thorough knowledge of local agricultural conditions in Canaan and needed only to adapt their experience to the hill country. The fact that the new technology is really a *combination* of strategies already utilized in the MB-LB Age, and thus well-proven, is further evidence of the Iron I villagers' local Canaanite derivation. It could be argued on the other hand that they merely borrowed this technology. But if they were really recently sedentarized Transjordanian pastoralists, they would have had little access to the source, isolated as they were in the hill country far from the centers of Canaanite culture.

All things considered, both the ethnographic and archaeological evidence militate against the "peaceful infiltration" model for the emergence of Israel, despite the fact that its notion of Transjordanian origins is consonant with some strands of the biblical tradition.

3. "Peasants' Revolt." The "peasants' revolt" (or "internal conquest") model seems more compatible with current archaeological data and theory than any other—especially in the modified form advanced by Gottwald (1979), with its emphasis on the role of technology and economy in social change. This model presumes that the early Israelite movement was made up of various dissident elements of LB Age Canaanite society, mostly dispossessed peasant farmers, who colonized new areas in the hinterland and there adopted a less stratified social order better suited to an agrarian economy. That appears very similar to the picture derived from the newer archaeology, except that Gottwald's "revolutionary, egalitarian" social (and religious) force presumed to be behind this movement is not susceptible to direct archaeological illumination. Of course, these former Canaanite "peasants" were already "liberated" (to use Gottwald's phrase) by the time we encounter them in the Iron I hill-country villages, so that they are now freeholders and self-sufficient homesteaders. But their *background* as peasant farmers is still clear in the archaeological record, as is the distinctiveness of their emerging social structure *vis à vis* old Canaan. Thus at least some aspects of the "peasants' revolt" formulation are now well attested archaeologically—a measure of support (if not confirmation) that no other model can boast. The nucleus of later Israel appears to have derived from the local LB culture of Canaan through relatively normal social processes of peasant withdrawal and what has been termed "retribalization," rather than originating outside Canaan and then either being superimposed on the local population or displacing them entirely in the early Iron I period. (For the possibility of *some* extra-Palestinian elements, however, see below.)

D. Archaeological Identification of "Israelite" Ethnicity

If the point has been made that the early Israelites in Canaan were largely of local derivation, we still have not answered the question of who they *were*. That is, how did they differ from Canaanites, how and when did they come to identify themselves as "Israelites," and what did that self-consciousness mean culturally? These, of course, have always been recognized as the fundamental questions, all attempting to ascertain: What was "*unique*" about ancient Israel, and *when* did it emerge as such? (cf. Lemche 1985; Thompson 1987). But until recently both biblical theologians and historians have sought the answers almost exclusively through the analysis of *texts*. That may be methodologically sound, as far as it goes, for "ethnicity" is usually defined mainly in terms of self-image; a social group may constitute a separate ethnic group if the majority of its members feel themselves to be a distinct "people." And certainly some biblical texts do posit a strong sense of "Israelite" ethnicity as though it characterized the tradition from beginning to end. Yet it is increasingly recognized that the biblical texts are often late, elitist, and propagandistic. And because the Bible is theocratic history, Israel is often portrayed in such radically disjunctive terms with respect to neighboring peoples that the result is more caricature than characterization. (To be fair, many other biblical texts do portray Israel in a less flattering—and thus more realistic—light.)

What was it that really constituted the distinctiveness of Israelite culture, spiritually *and* materially? It is suggested here that the biblical texts alone cannot and should not be expected adequately to illuminate "ethnicity," and, moreover, that it is only through the contribution of archaeology that we can achieve a more balanced picture, both by putting the biblical texts into larger context, as well as by supplying some of the missing information. It may be objected, of course, that even the "new archaeology," with its incomparably more sophisticated techniques, is ultimately limited, too, in its ability to discern thought processes *behind* material culture remains, and thus is powerless to illuminate such matters as self-consciousness or "ethnicity." It must be admitted that without the Merneptah reference to "Israel" ca. 1210 B.C. and the later biblical texts, we would not be sure that our Iron I villages are indeed "Israelite." That is, we could recognize the emergence of a distinctive new culture ca. 1200 B.C. in Canaan, but it would remain anonymous, we would not be able to affix a specific *ethnic label* to it. But even so, the mere name, however valuable, does not define, much less "explain," the nature and origin of this new culture. Only the *combination* of the textual and artifactual data—of history and archaeology—can aid in this inquiry.

Archeology can certainly contribute more than it has thus far to the identification of "Israelite ethnicity." It can do so first because the "new archaeology" is multidisciplinary in nature and therefore attempts to elucidate culture in *all* its aspects, not merely to describe "ceramic culture" and then proceed immediately to the writing of "political history" (as the older-style "biblical archaeology" really did). Surely ancient Israelite culture had its secular components, no less formative than its religious components, and it is these that archaeology can often illuminate uniquely and brilliantly. And *both* aspects of a culture must be so illuminated if it is to be comprehended in its own terms, rather than in some "idealistic" scheme that robs it of its variety and vitality.

Second, archaeology today is strongly behavioral. It focuses not merely on artifacts in themselves, but on the archaeological record as a whole, which is seen to reflect the "material correlates of human behavior." Archaeologists may not be very well equipped to be "paleo-psychologists" (as Binford reminds us); but if they cannot get at

ideology, they nevertheless have an unparalleled opportunity to analyze the material *consequences* of human behavior, insofar as they reflect upon the thoughts and actions that produced the artifacts they study. Surely these "material correlates" of behavior, if anything, are clues to ethnicity.

Here we are clearly advocating a structural-functional model, at least at the fundamental level of analysis—without, however, denying the validity, and indeed the necessity, of a historical-cultural model at the higher level of synthesis (much as Gottwald 1979: 622–49; also 1985: 230–38). Thus the attempt at an archaeological identification of "ethnicity" need not be susceptible to the charge of reductionism, or material determinism. Nor is such an attempt necessarily confined to the old-fashioned "trait-list" approach that most archaeologists today would find unproductive.

Whatever model we may adopt in assessing the archaeological evidence for "Israelite ethnicity," we must begin by assuming that no matter what *else* early Israel was (or later thought itself to be), it was *also* a minority ethnic group in a multi-ethnic society in Iron I Canaan. By "ethnic group" we mean, at minimum, a social group that: (1) is biologically self-perpetuating; (2) shares a fundamental, uniform set of cultural values, including language; (3) constitutes a partly independent "interaction sphere"; (4) has a membership that defines itself, as well as being defined by others, as a category distinct from other categories of the same order; and (5) perpetuates its sense of separate identity both by developing rules for maintaining "ethnic boundaries," as well as for participating in inter-ethnic social encounters. (See further Barth 1969: 9–38.) It is especially important to note certain ways in which ethnic groups typically originate, maintain themselves, and assimilate or otherwise change. The *origins* of ethnic groups, in particular, are difficult, often impossible to ascertain (cf. Barth 1969: 17, 18), even where we have historical documentation; but we can point to some *reasons* for both the existence and the persistence of such groups.

It would seem that early Israel clearly qualifies as an ethnic group in the above definition, although that does not imply the unity that later biblical writers presupposed. The question here is simply to what degree *any* of this ethnic identity may be reflected in the archaeological remains, particularly of the early Iron Age village culture surveyed above. And would a positive identification of these villages as "Israelite" help one to choose between the various models proposed for understanding Israelite origins (whether by confirming, contradicting, or modifying biblical tradition)?

The results of our inquiry, even at best, may seem meager, for the question of archaeological identification of ethnicity is one of the most vexed interpretive issues in current archaeology. (For orientation, see Kamp and Yoffee 1980, with programmatic suggestions that the authors evidently regard positively but that are actually unachievable.) The usual "ethnic markers" would consist of such features as language (including "body language"), physical type, dress, food preferences, kinship patterns, general cultural and social values, religion, and the always-nebulous "self-identity." It is obvious that *none* of these traits will be very well represented, if at all, in the archaeological record—even if we regarded a "trait-list" approach as adequate. And their origins will remain even more obscure. But *collective behavior* will often be reflected archaeologically, i.e., the economy in settlement types and distribution; technology and subsistence practices in both artifacts and "ecofacts"; social structure in house form and function; social stratification in elite goods in tombs and elsewhere; ideology in expressions in art; and even religious practices in cultic remains.

We have already treated the archaeological data on settlement patterns, technology, subsistence, and social structure. We concluded that *all* the newer data are consonant with some strands of the biblical tradition, especially in Judges-Samuel. Thus we regard Stager's seminal work on the "archaeology of the family" in early Israel (1985a) as an almost ideal model of the proper dialogue between the "new archaeology" and biblical history, indeed a point of departure for all future studies. Yet even Stager begs the question. He *assumes* that the Iron I hill-country villages are "Israelite," and his own research goes further than anyone else to date in demonstrating that, but nowhere does he explicitly state his conclusion (or, for that matter address the radical implication for biblical history and scholarship).

Can we do better? Perhaps; but not without vastly improved research designs and much more survey and excavation focused *specifically* on this problem. For instance, we have very few Iron I cemeteries, which potentially would be most revealing; and even fewer cultic installations (on the latter, see Dever 1987). We may even hope, in time, for definitive epigraphic discoveries. Meanwhile, we need many more excavation and research projects that are conducive to *cross-cultural* comparisons. In practice, this would entail excavating, with identical research designs and preferably simultaneously, several small one-period Iron I sites in various areas of Israel and Transjordan that could be presumed on independent (textual) witness to be: (1) Canaanite; (2) Philistine; (3) Israelite; and (4) Ammonite-Moabite-Edomite. The excavations would concentrate on total, systemic retrieval of all cultural deposits, which methods already introduced by the "newer archaeology"; then on exhaustive intersite comparisons. The results of such a deliberate archaeological research program—carried out over a ten-year period or so, and properly integrated with ethnographic, textual, and other studies—might well prove decisive. The question "Who were the early Israelites *archaeologically*?" is now theoretically answerable. And when we do answer it, one suspects that the "peasants' revolt" or "indigenous peasant" model—already the most fruitful for research—will be further enhanced. (The most explicit attempt thus far at resolving the problem *archaeologically*, based on new data, is Finkelstein, although he adopts a modified "peaceful infiltration" model and at first scarcely refers to Gottwald's work; see Finkelstein 1986: 201–13; and further *AIS;* for a critique of Finkelstein, see Dever 1989).

E. Toward a New Synthesis of Archaeology and Biblical History

The problem with which we began this survey has not yet been resolved, either on the basis of textual or archaeological evidence.

1. Facing the Dilemma. The dilemma is simply that in ancient Israel's Credo and epic literature—indeed in her cult and tradition as a whole—the Exodus-Sinai-Conquest themes are absolutely fundamental. It is the "conquest of Canaan" that is the fulfillment of Yahweh's promise, the constitutive event that brings his Israelite people into existence. Yet if there is little *real* history in Israel's proclamation of her "salvation-history," is the tradition any more than a pious fraud? (For the latest, most radical view, see Lemche 1985.)

All critical scholars recognize that the biblical sources in the Pentateuch and Deuteronomistic History are relatively late, composite works that simply cannot be read at face value as history. Even the *earliest* written materials, the several archaic poems such as Exodus 15, are probably not eyewitness accounts. Thus concerning Exodus 15, dealing with the "crossing of the Red Sea"—which Cross dates to just after 1200 and regards as "a primary source for the central event in Israel's history" (*CMHE,* 123)—we must ask: "*What* event?" Are there any external data that would confirm that we are dealing here with history, and not myth?

Today, skeptical voices dominate the scene. As G. E. Wright himself acknowledged in his Introduction to the Anchor Bible *Joshua:* "In this book ancient Israel recorded her belief as to how the nation came to live in ancient Palestine. Yet during the last century a majority of those attempting to apply the methods of modern historiography to Hebrew tradition have said the book is wrong; it never happened that way at all" (page 4). And now, as we have seen, the cumulative results of a century of *archaeological* investigation powerfully buttress the negative view of the conquest, much to the consternation of those who expected the "archaeological revolution" to confirm the tradition. Where does that leave us?

2. Methodological Considerations. Assuming that we cannot simply dismiss either the textual or the artificial evidence, there are nevertheless some methodological approaches that may lead at least to partial solutions.

a. Two Traditions. First, we need to recall that there are *two* strands to the tradition as elaborated by the Deuteronomistic History: that preserved in Joshua, and that in Judges. While modern archaeology may call into question the historicity of Joshua, it provides rather dramatic corroboration of the account in Judges, even in obscure details. In the view advocated here, it is futile, indeed unnecessary, to attempt to reconcile these two conflicting versions (as Wright 1946). Instead of trying to "salvage" Joshua archaeologically, future research into Israelite origins should concentrate on Judges, as by far the most realistic and reliable source. There, the results will likely *not* be so negative.

b. Reconciling Joshua and Judges? If one asks, however, *why* the Israelite historiographers preserved two diametrically opposed versions of their own history, we can at least offer new critical approaches that may prove constructive. Recent structuralist analyses, such as those of Polzin (1980), Gottwald (1985), and others, have suggested that the redactors of the DH were fully aware of the radically divergent nature of the Joshua and the Judges materials they incorporated, but they left them in tension in a deliberately dialectic manner. As Gottwald (1985: 258) puts it: "By counterposing speech about how the Canaanites *must be* and *were* destroyed against speech about how Canaanites *remained* in the land and were even *accepted* into Israel, DH [the Deuteronomistic history] weaves an ironic exposition on the problematic of carrying out God's commands."

Another explanation for why the tradition has deliberately obscured much of its own origins is offered by Coote and Whitelam (1987). They suggest that the story of Israel's humble origins in social conflict did not suit the propagandistic purposes of the elite "House of David" in its rise to power and were thus downplayed, a point that Mendenhall had made earlier.

Finally, of the Joshua tradition, however folkloristic it may be, it must nevertheless be acknowledged that these materials may contain some raw source-data for the historian: (1) Archaeologically, we should observe that the evidence does not rule out the possibility that *some* constituents of the later Israelite tribal confederation may have derived from Egypt. In this connection, it is worth remembering that many biblical scholars have long held that only the "House of Joseph" (or elements of the later tribes of Benjamin and Judah—which have so obviously shaped the tradition) was ever in Egypt. The fact that most of the numerous Iron I villages we now have are precisely in the area of the Benjamin–Judah tribal territories may seem to lend credence to that suggestion. However, even if this area is the chief locus of early Israelite occupation, there is no direct *archaeological* evidence of Egyptian origins for the settlers, as we have seen, so the question must remain open.

(2) Even the minimalist "peasants' revolt," or "internal conquest," model would allow for *some* of the military actions against the Canaanites described in the book of Joshua. Thus armed conflict may have been a contributing factor in the cultural struggle, even if not the principle cause.

3. Toward a Synthesis? Is it possible to move further, however, in reconciling what may seem to be conflicting approaches to archaeological and textual reconstructions of Israelite origins? There would seem to be two primary possibilities for a synthesis, at least of method, if not of results. (See further Dever fc.b., for a symposium on this problem.)

a. Parallel Histories. The notion of producing two *alternate* versions of early Israelite history has recently become an option for the first time, due to the growing sophistication and maturity of the newer archaeology. At the "descriptive" level, the first approach would assay a history of ancient *Israel,* based on the biblical texts and focusing mainly on political and religious history. The second, or "secular," approach would utilize archaeological remains and extrabiblical texts to outline a socio-economic history of *Palestine,* primarily in the Bronze–Iron Ages in this connection (but extending, of course, from earliest to relatively modern times). As the "normative" level, the first approach might result in a history of the religion of Israel (or at least a history of the literature *about* that religion), and possibly even in an OT theology. The "secular" approach, however, would necessarily be confined to the illumination of Israelite cultic practice in its larger ANE context, without reference to theology, i.e., its significance

for the modern religious community, Jewish or Christian. (See the provisional efforts of Lemche 1985; Thompson 1987).

Each of these separate histories would concentrate on one class of data, and each would be pursued by competent specialists. Needless to say, these two disciplines would both be devoted to legitimate, truly historical tasks. Yet however ideal such a division of labor might seem in theory, in actual practice these two histories would tend to remain *parallel.* They might be complementary, but they would never converge; each would present but a partial view of the total reality we seek to comprehend, the phenomenon of ancient Israel in all its richness and diversity.

b. Converging Histories. Far more preferable, it would seem, would be a *combination* of the two approaches, "sacred" and "secular"—or at least a dialogue between the two, which would point toward a truly multidisciplinary synthesis. And today there are indeed signs of such a development, bringing together the insights of the discipline of Palestinian archaeology in its newer guise, coupled with the newer sociological and anthropological approaches to the early history of Israel.

We have already outlined the nature and contribution of archaeology in this cooperative task, both here and elsewhere. See ARCHAEOLOGY. In biblical studies, the most promising trends are seen in the early analysis of Gottwald in his *Tribes of Yahweh* (1979), together with de Geus' *Tribes of Israel* (1976). More recently, the work of Marvin Chaney (1983) points in the same direction, as does Gottwald's *The Hebrew Bible—A Socio-Literary Introduction* (1985) and N. P. Lemche's *Early Israel* (1985). We have also called attention to two recent, specialized treatments of early Israelite agriculture, one by a biblical scholar (Hopkins 1985) and one by an archaeologist (Borowski 1987). Perhaps the most ambitious interdisciplinary synthesis yet may be the work of R. B. Coote and K. W. Whitelam, *The Emergence of Israel in Historical Perspective* (1987), based on a comprehensive settlement-history of Palestine from earliest to modern times. Finally, although it deals with a slightly later horizon, Frick's *The Formation of the State in Ancient Israel: A Survey of Models and Theories* (1985; see also Frick 1979) also rests upon the newer methodology and approach. All these recent analyses embody socio-anthropological models, as well as the newer archaeology.

Despite the recent proliferation of works on early Israel, however, many remain more traditional, based almost exclusively on the biblical texts, such as Halpern's *The Emergence of Israel in Canaan* (1983); Åhlström's *Who Were the Israelites?* (1986); and Miller and Hayes' *A History of Ancient Israel and Judah* (1986). These and other attempts at synthesis may be faulted for making little or inept use of the abundant archaeological data now available. Even B. Mazar's *The Early Biblical Period: Historical Essays* (1986; see also Mazar 1981), while masterly, is almost totally out of touch with both the methods and results of modern archaeology. It is regrettable that most biblical scholars still cling to the notion that artifacts without texts are "mute"; that archaeological evidence can only serve to "clarify matters of historical detail," or is useful "only when correlated with specific items in biblical history" (thus *HAIJ* 102, 189; cf. also Miller 1976: 5, 40–48; 1982; *idem* in Knight and Tucker 1985: 1–30). On the contrary, given the skepticism of most biblical historians on the value of the biblical tradition for the premonarchic history of Israel, archaeology is rapidly becoming our *primary* datum (see also Callaway 1985; 1988; Lemche 1985: 385).

Clearly we are implying that a *multi*disciplinary approach to reconstructing early Israelite origins is preferable, indeed infinitely superior. Why do we assume that? In the first place, this approach helps to break the circular reasoning inevitably involved when the biblical texts alone are utilized to write the early history of Israel. One has only to browse through the various essays in the recent handbook *The Hebrew Bible and Its Modern Interpreters* (Knight and Tucker 1985) to see how inconclusive—indeed how devoid of much *real* history in the usual sense—most of current biblical criticism is when largely text-based and confined to the biblical tradition. This is true whether the methods are those of literary form, traditional, canonical, or structuralist criticism (see especially the essays of Ackroyd, Knierim, and Knight). The result tends to be simply a history of the *literature* concerning the religion of Israel and her self-understanding of her experience in Canaan. Only new data from other sources, and perhaps new models from other disciplines, can break that impasse.

Albright's original intuition—that nothing except the "external" evidence from archaeology could throw *new* light on the tradition as received—was sound; he erred only in assuming that archaeology would always confirm, never challenge, the "historical" reconstruction presented in the Hebrew Bible. Archaeology, in particular, allows us to get at the "history *behind* the history." At the same time, it broadens the picture by supplementing political history with socio-economic and cultural history.

Second, the multidisciplinary approach, particularly in the new "secular" archaeology, allows us to focus on factors in cultural change in addition to primarily *ideological ones,* especially on the role of ecological adaptation, subsistence and economy, technology, and social structure. These *material* factors are obviously powerful agents in shaping history, yet concerning them the Bible is largely silent.

Finally, the multidisciplinary approach to history-writing—like archaeology today—is more systemic, more processual, and is thus more truly "explanatory" than the traditional, purely descriptive approach. We may be able to learn not only *what* happened in the past, but *why* (i.e., apart from "theological explanations").

c. Faith and History. A final issue must be addressed, if only to acknowledge its fundamental importance to the current discussion of Israelite origins. The issue is simply this: if archaeological data are now as "primary" as those in the biblical texts, they may force a radical rewriting of the early history of Israel, one at variance with the tradition at crucial points. But does that not *undermine* the religious significance of the tradition? To put it another way, how shall those who espouse biblical faith remain *historians,* and not take flight into the realm of "supra-history"? (Cf. further Porteous 1970–71.) It may be a matter of balance. That is, while the fallacy of historicism has by now been well exposed, how shall we avoid the other extreme, that of existentialism? It was precisely this issue, never resolved, that vexed the earlier "biblical archaeology" movement, aligned as it was with Neo-orthodox-style "biblical theology" in the 1950s–1960s (cf. Dever

1980; 1985b). The new "secular" archaeology might simply declare this a "non-issue," but in doing so it would forfeit any possibility for the dialogue that we regard as essential to *both* disciplines (specifically on the issue of the Israelite settlement, see Dever fc.a., Dever fc.b.).

The "faith and history" issue has generated a literature much too vast to be surveyed here. What we *can* do is to point to two methodological principles that should govern the input of archaeology. First, insofar as we are historians, it really *is* important to ascertain "what happened in history," as nearly as possible. Obviously, this historical inquiry must proceed independent of any theological presuppositions or biases, but the inquiry is not thereby *irrelevant* to questions of belief, as several current schools of biblical interpretation seem to imply. History cannot be allowed to become merely hermeneutics. (See further Knierim's enlightening analysis of the current situation in biblical criticism in Knight and Tucker 1985: 123–65.) Second, whatever the results of our historical investigation, the outcome should not be considered determinative in matters of religious belief, one way or another. Stendahl's prescient exposé of the weaknesses of the "biblical theology" movement criticized G. E. Wright's notion that religious *meaning* for us consists of our affirming the Bible's claims concerning "God's saving acts in history." Stendahl (*IDB* 1: 424) reminded us that "History does not answer such questions: it only poses them." And *archaeology* cannot answer these questions of faith, either. Archaeology can illumine historical events, but it cannot confirm the theological inferences drawn from those events, past or present.

F. Conclusion

Ancient Israel's problem in comprehending her own history was the same as ours: how to account for the unique *reality* of the people of Israel. The biblical writers fell back on the only analogy they had, historical experience, which for them was their own first-hand knowledge of the power of Yahweh over their pagan neighbors, and his ability to save and shape them as his people—despite their obscure origins, their lack of merit, and their disobedience. In the end, the biblical writers concluded that Israel's election was nothing less than a "miracle"; and who are we, their spiritual heirs, to disagree?

Although archaeology may be successful in recognizing in the material remains certain elements of human behavior and social organization, it reaches its limitations when it comes to ideology. Archaeology does not yet, and probably cannot, comment on the complex, diverse, tangled, and on occasion conflicting political or religious motivations behind the emergence of ancient Israel. We may tend to agree that "Yahwism," whether a revolutionary social movement or not, was probably the driving force. But we cannot define "Yahwism" archaeologically beyond describing religious *practice*. We can only suppose that in the cultural vacuum following the collapse of Canaanite society in the 12th century B.C., there arose in central Palestine a new ethnic consciousness and solidarity, a new polity, a new social order. The emergence of this ethnicity need not have been accompanied by a "revolt" at all; it may be viewed rather as simply a normal and even predictable historical development in the evolution of complex society. Archaeology may provide an "ecology" in which socio-economic change becomes explicable, but it cannot explain the ultimate *derivation* of that change. Insofar, however, as the ideology of the Israelite movement found concrete expression in new economic, social, and religious *forms*, we can hope to trace these forms in the archeological record, since this comprises the "material correlates" of human behavior.

A. Sources

There are three types of sources that the historian can use in reconstructing the history of the monarchy in an-

cient Israel: the Bible, epigraphical material, and archaeological data. While these sources make the monarchic period the best documented era in the life of ancient Israel, still significant problems remain. The most obvious of these is the chronology of the Israelite monarchy. No universally accepted dating system existed in the ANE. Compounding this problem is the apparent artificial scheme that the Deuteronomistic Historian used in determining various time periods—for example 40 years for the reigns of David (2 Sam 5:40) and Solomon (1 Kgs 11:42) and 480 years from the Exodus to the building of the temple (1 Kgs 6:1).

The first securely dated event in the history of the two kingdoms is the surrender of Jerusalem to Nebuchadnezzar on March 15–16, 597 B.C.E. The Babylonian Chronicles (*ANET,* 564) supply the exact date. All other dates in the chronology of the two kingdoms are approximate within a range of ten to two years. The closer one gets to the fall of Jerusalem, the more precise dating becomes. Theoretically, with the date of Jerusalem's fall in hand, it should be possible to date the other events in the history of the two kingdoms by using the relative chronology provided by the Bible. That is not possible since the Bible's chronology does not allow for precise calculation. It may reflect a schematic rather than an exact presentation of the chronology of the monarchic period. Second there are serious discrepancies between the MT and the LXX that make it difficult to use the Bible to reconstruct this chronology. Any such chronology should be considered approximate (Miller 1967a; Thiele 1984; Wifall 1968). See also CHRONOLOGY (HEBREW BIBLE).

1. Biblical. There are two major blocks of biblical material that purport to tell the story of the Israelite monarchy. The first is part of what M. Noth *(NDH)* has called the Deuteronomistic History of Israel that includes Joshua to 2 Kings with Deuteronomy as its theological preface. The portion dealing with the monarchic period includes 1 Samuel to 2 Kings. Though the Deuteronomistic History (DH) tells the story of ancient Israel's monarchy, its purpose was to explain the fall of both Israel and Judah as the result of infidelity to Yahweh (2 Kgs 17:7–23; 21:10–15). Whatever details the modern historian can distill from the books of Samuel and Kings to reconstruct the history of monarchic period are secondary for the ancient writer who wished to assign the blame for the fall of the ancient Israelite states on those who ruled it.

The books of Chronicles also tell the story of the monarchic period but from a perspective that differs from that of the DH. At the center of the Chronicler's concern is the temple of Jerusalem. The stories about David and Solomon deal with the building of the temple. Interest in later kings depends on their loyalty to the temple. That is why the Chronicler all but ignores the rulers of the N Kingdom. In matters that pertain to the history of the monarchy, the books of Chronicles rarely differ from parallel texts in Samuel and Kings.

The Latter Prophets also provide some material for historical reconstruction. Prophets such as Amos, Isaiah, and Jeremiah found themselves directly involved with the king or his ministers (Amos 7:10–13; Isaiah 7; Jeremiah 21). Other prophets, such as Hosea and Micah, describe the social, economic, and religious realities created by the monarchy.

2. Epigraphic. A second category of materials for reconstructing the history of the monarchy is epigraphic materials: inscriptions and other texts from throughout the ANE. These are particularly helpful because they are usually contemporary with the events they describe. Little epigraphic material has survived from ancient Israel. Some inscriptions, ostraca, seals, and seal impressions have surfaced and provide important information. The most famous of these is the 8th century inscription from the Siloam tunnel (*ANET,* 321). Ostraca (8th century) from Samaria (*ANET,* 321) are administrative texts while those from Lachish (6th century) are military communiqués (*ANET,* 321–22). Several seals, seal impressions and bullae from 6th century Jerusalem bear names of people who may be associated with persons known from the Bible (Shiloh 1986).

More significant have been the recovery and deciphering of ANE texts that relate to the history of ancient Israel. The first of these to mention events in Israel's monarchic period date from the 10th century and are Pharaoh Shishak's pylon at the temple of Aton at Karnak and his stele found at Megiddo (*ANET,* 263–64). The first inscription to mention an Israelite king is the stele of Mesha of Moab (9th century) that refers to "the house of Omri" (*ANET,* 320). The Black Obelisk of Shalmaneser III (9th century) has the only contemporary portrait of an Israelite king. It shows Jehu kneeling in tribute before the Assyrian emperor (*ANEP,* 100a). There are other Assyrian and Babylonian texts that make direct references to Israelite and Judahite kings (The Black Obelisk, *ANET,* p. 281, and the Annals of Sennacherib [7th century], *ANET,* 287–88).

3. Archaeological. Besides the literary sources, there are significant nonliterary data that can help the historian have a more complete picture of the monarchic period. The archaeological record clearly marks the 9th century as the apex of ancient Israel's security and prosperity. Remains from the 8th to the 6th centuries suggest economic decline and military weakness with significant destruction of cities.

Unfortunately the archaeological record of the monarchic period is silent for the most part. Only rarely do epigraphic data emerge with the nonliterary material. This makes the interpretation of the archaeological remains difficult. It is not always possible to correlate the archaeological record with the biblical text. Archaeology is useful in helping the historian understand the physical conditions and everyday life of the monarchic period. But with careful use of the more recent technological advancements and cross-disciplinary insights, archaeological evidence may—though with difficulty—clarify matters of historical detail. Archaeology is most useful in illuminating the state of the general material culture.

B. Origins of the Israelite Monarchy and National State

1. Settlement of the Tribes in Canaan. The Late Bronze Age (1550–1200) was a period of great empires in the ANE. The land of Canaan was between two rival imperial powers. To the S was Egypt and to the N was Mitanni and

the Hittites. They sought to control Canaan because of the lucrative trade routes that passed through the region.

The end of the LB Age witnessed the disintegration of these imperial powers. The kingdom of Mitanni was in decline. The Hittite Empire took its place. The Hittites and Egyptians wore themselves out in the contest for hegemony over Canaan. This created a vacuum of power that smaller political entities began to fill. This was the period when tribal groupings, city-states, and small kingdoms emerged in Canaan. This was when the Israelite tribes made their appearance in the sparsely inhabited central highlands of the Cis- and Transjordan regions of Canaan. The Amarna Letters (*ANET,* 483–90) describe the unsettled conditions in Canaan in the 14th century with the breakdown of Egyptian hegemony.

It is not certain exactly when the Israelite tribes came into distinct existence in Canaan. Outside of the Bible, the only mention of the name, Israel, occurs in the Merneptah stele (*ANET,* 376–78) from the late 13th century. It is not certain whether the term, Israel, refers to a place or a people. It can only be said that Egypt probably encountered some kind of entity called Israel. Due to this lack of clarity in information, historians of ancient Israel have developed several hypothetical models to describe the settlement period. The nomadic infiltration model claims that before the founding of the monarchy the Israelite tribes were nomads who began to settle in the highlands of central Canaan. A second model uses the archaeological record to suggest that the biblical narratives of Joshua are historically accurate as they describe ancient Israel's entrance into the land as the result of a military conquest. G. Mendenhall (1962) saw the Israelite settlement of Canaan as the result of a socio-political process that he described as a "peasants' revolt." N. K. Gottwald (1979) used a sociological model based on Marxian categories in his massive elaboration of Mendenhall's hypothesis.

2. Early Attempts at Monarchy. When the Israelites entered Canaan in the middle of the 13th century, they claimed their land without the benefit of a highly centralized political or military establishment. They continued to live without a monarchy or other forms of strong centralized authority for 200 years. The Israelite tribes prized their autonomy. When faced with military threats from Canaanite city-states such as Hazor (Judges 4–5) or from bedouin raiders such as the Midianites (Judges 6–8), the Israelite tribes depended on military leaders who emerged in response to specific crises. It was in the aftermath of such a crisis (1 Samuel 8–10) that the first attempts at establishing a permanent form of leadership took place (Halpern 1981).

The first bid at establishing a monarchy in Israel took place after Gideon's victory over the Midianites. The Israelites offered to accept Gideon and his heirs as their permanent rulers but Gideon declined their offer (Judg 8:22–23). Abimelech, Gideon's son, supported by the non-Israelite population of Shechem, led a brief and tragic experiment with a monarchic form of government (Judges 9). A more successful effort at establishing the monarchy took place in the mid-11th century when the Israelite tribes began expanding beyond their enclaves in the central highlands of Canaan. In doing so they met resistance from the Philistines with whom they had to contend for supremacy in Canaan. Saul had shown himself capable in dealing with a threat from the Ammonites (1 Samuel 11). He led the Israelite armies against the Philistines as well (1 Samuel 13–14). His initial success led to his election as king of the Israelite tribes. Saul's death and the devastation of the Israelite army during a conflict with the Philistines (1 Samuel 31) did not end the Israelite experiment with the monarchy because of the achievements of David who was the founder of the Israelite national state and its monarchy.

Near the end of the 11th century the Israelite tribes united under David to form a small national state. The state David founded bifurcated into the Kingdom of Israel and the Kingdom of Judah following the death of Solomon. In the 8th century B.C. the rise of the Neo-Assyrian Empire signaled a new age of imperial power in the ANE and the end of small national states such as Israel and Judah. The Israelite kingdoms were able to rise and flourish when the absence of imperial powers made this possible. The succession of imperial powers beginning with Assyria made it difficult for small national states to survive in the region.

There is no consensus on attitude of the DH toward the establishment of the monarchy since the composition history of 1 Samuel 7–15 is unclear (Birch 1976). Noth *(NDH)* held that the Deuteronomist opposed the monarchy. Sociological analysis sees a royal versus an egalitarian dialectic in these texts. There is no need to conclude that the Deuteronomistic tradition had a negative view of the monarchy (Campbell 1986). The text reflects mixed attitudes. There is rejection when the institution of the kingship led Israel to cease trusting in God. There is approval when the king acts responsibly toward the law (Gerbrandt 1986).

C. Davidic–Solomonic Empire

1. Sources. Though the Bible contains much material about David, the modern historian cannot use it all uncritically to reconstruct the history of the ancient Israelite monarchy. The Chronicler is dependent upon the presentation in Samuel and Kings. The Chronicler's use of this material shows that historical considerations are secondary. The principal concern of the Chronicler is the presentation of David as the great Israelite hero who organized the worship of the Jerusalem temple. The Chronicler ignores all problems of David's reign to avoid detracting from the image of David as a pious king wholly devoted to Yahweh.

The portrait of David in the books of Samuel comes from pro-David circles and is dependent in part on legendary material. Despite this, it is the judgment of most historians that there are historical persons and events behind these traditions (*HAIJ,* 159–60). Unfortunately there are no ANE texts other than the Bible that mention David, and the archaeological data presently yields little that is useful for clarifying matters of historical detail (*IJH,* 340–43). What follows is dependent upon the narratives in Samuel and Kings with the recognition that determining what from these narratives belongs to the historical and what belongs to the legendary is subjective to some extent (Carlson 1964).

2. David (ca. 1000–961). Following the death of Saul, the Philistines asserted their control over the central high-

lands. Abner, Saul's general, survived the Israelite defeat and sought to prevent the monarchy from dying with Saul. He crowned Ishbaal (Ish-bosheth), one of Saul's surviving sons, as king of Israel at Mahanaim (2 Sam 2:8). David persuaded the elders of Judah, his own tribe, to anoint him as their king. They did so and he ruled over Judah at Hebron for seven years (2 Sam 2:1–4, 11).

The Philistines probably considered the division of Saul's kingdom with Ishbaal at Mahanaim and David at Hebron as convenient for their purposes. They believed that Saul's kingdom was no more. In its place were two small rival kingdoms. David strove to forge a new and powerful Israelite kingdom.

David's rise to power over Israel became easier because of the death of Abner (2 Sam 3:26–27). Without Abner's support Ishbaal's position became untenable and the king's own officers assassinated him (2 Sam 4:1–7). The way was now clear for David to take the throne of all Israel, which the elders of Israel offered to him voluntarily so that military force or political maneuvering on David's part became unnecessary (2 Sam 5:1–5). This was the end of the first Israelite dynasty and the beginning of a new age for the monarchy under David whom later generations would remember as the paradigm of the Israelite king (Weiser 1966).

David's first act in consolidating his position was to take Jerusalem, which had remained a Jebusite enclave between the territories of Judah and Benjamin. David made the city his capital (2 Sam 5:6–12). Since Jerusalem was not under the control of any tribe, David's choice had the appearance of not favoring any single faction of the Israelite coalition. David also brought the ark of the covenant to Jerusalem and place it in a special tent (2 Sam 6:17). This move had the double effect of presenting David as the protector of Israel's ancient religious traditions and of making Jerusalem the new religious center of Israel. The presence of the ark in Jerusalem marks a new moment in Israel's life, but it also emphasizes continuity with ancient traditions (Campbell 1975; Timm 1966).

The conquest of Jerusalem was the first step David took to expand his kingdom beyond the territories of the Israelite tribes. This brought him into direct conflict with the Philistines who took immediate action by sending two military forces against David. He defeated both armies (2 Sam 5:17–25). After his victories over the Philistines, David moved against the Transjordanian kingdoms. His victories there brought the King's Highway under Israel's control (2 Sam 8:2; 9:6–14). David then subjugated the Arameans and by that extended Israel's frontier to the Euphrates (2 Sam 10:15–19). His victory over Edom (2 Sam 8:12) gave him a port on the Red Sea.

Despite David's spectacular rise to power, his military victories, and his religious gestures, there was still some Israelite support for the dynasty of Saul. David tried to eliminate any possible rivals from Saul's family (2 Sam 21:1–4). Out of respect for the memory of his friend Jonathan, he spared Mephibosheth, Jonathan's crippled son. David gave him what remained of Saul's estates, but required him to live in Jerusalem (2 Samuel 9).

While David showed that he was a political and military genius, his personal life was a shambles. His desire for Bathsheba, the wife of a Hittite mercenary, led David to acts of adultery and murder (2 Samuel 11). Second while David was able to manage a small empire, he had little control over his own family (2 Sam 14:28–33). Ultimately this lack of control laid the foundation for the first revolt against David, a revolt led by his son Absalom, who took advantage of popular grievances against his father and had himself proclaimed king at Hebron. Joab killed Absalom bringing his revolt to an end. Led by the elders of Judah, the people reinstated David to the throne (2 Samuel 15–19). Despite this reinstatement, support for David was still not unanimous. A second revolt broke out. Sheba ben Bichri from Saul's tribe of Benjamin led this new threat to David's rule. David moved quickly to crush this rebellion (2 Samuel 20).

Without question it was David who transformed the loose coalition of Israelite tribes into a national state with himself as king and founder of a dynasty. There is no single explanation for David's success. He was a master of both military and political affairs, but it was only the absence of a foreign imperial power in Canaan that allowed these qualities to emerge in an Israelite of the 10th century. The Philistine menace that Saul was unable to keep in check led the fiercely independent Israelite tribes to submit to David's rule since David eliminated that menace. David had to face serious internal problems despite his military and political successes. He had to put down two revolutions one of which his son Absalom led. Despite these problems David survived and his dynasty ruled for more than four hundred years. His most lasting achievement was his decision to make Jerusalem the center of the nation's national life.

3. Solomon (961–922). One measure of the difficulties that David faced was the struggle for the succession to the throne. The narrative of the succession takes up 2 Samuel 9–20 and 1 Kings 1–2. Estimates of the historical value of these chapters range from L. Rost's view (1982) that they were work of an eyewitness to the events described to the J. A. Soggin's assertion (*IJH,* 338) that these chapters are a "novel." Even if one agrees with Soggin that the story of Solomon's succession was the product of a storyteller's imagination, it is still possible to draw some historical conclusions from the narrative. Solomon was not the heir apparent to David but gained the throne following court intrigues. These took place in David's dotage when he was no longer effectively in control as king. Though Solomon replaced his senile father on the throne, the narratives make it appear as if Solomon displaced Adonijah who had begun functioning as king (1 Kgs 1:5–8).

The story of Solomon's succession may not be an objective record, but it is not the pro-Solomon propagandistic document that Miller and Hayes believe it to be (*HAIJ,* 200). It is as searing an indictment of the monarchy as one finds in the Bible. To be sure the critique is indirect, but the reader cannot but be appalled by the spectacle created by David and his family. There is adultery, murder, rape, fratricide, rebellion, and intrigue—all perpetrated by those who present themselves as leaders of Israel.

Despite this veiled voice of protest, Solomon ruled a people who had become accustomed to the centralized administration of a king. He sought to consolidate the gains that his father David made. Though Solomon met some internal opposition to his accession to the throne,

politically inspired marriages and negotiated alliances secured international recognition for David's successor. He protected the borders of his kingdom by peaceful relations with neighboring kings (1 Kgs 3:1; 5:1–6; 11:1–3).

David's foreign policy was so successful and his military victories so complete that Solomon's reign was peaceful for the most part. This enabled Solomon to take advantage of Israel's unique geographical position as the commercial crossroads in the ANE. Israel controlled the two main and several secondary commercial roads in the region. Solomon also had ports on the Mediterranean and Red Seas (*IJH*, 373–76).

Solomon's commercial success led to great building projects that served to showcase his wealth and power for his subjects and potential rivals. David's Jerusalem was confined to the Ophel hill. Solomon enlarged the city by building his palace to the N. The temple that Solomon built was one component of his palace, but it was the temple that received the most attention in the Bible, which sees the temple as Solomon's greatest single achievement (Busink 1970; Parrot 1957). Solomon also built outside of Jerusalem. He fortified Megiddo, Gezer, and Hazor (1 Kgs 9:15–19). The archaeological record of these cities points to much activity in Solomon's day though archaeologists debate what can be attributed to Solomon and what was built because of local initiative (Kenyon 1971).

Solomon surrounded himself with able administrators to ensure that his projects ran smoothly and were adequately financed (1 Kgs 4:1–6; Mettinger 1971). Unfortunately these building projects emptied Solomon's treasury faster than he could fill it so that he had to tax his people to make up the balance. In addition, able-bodied people had to present themselves for unpaid labor on these projects. Solomon's financial problems moved him beyond centralization to despotism. His policies of taxation and forced labor were a source of discontent and contributed to the undoing of his empire following his death (Redford 1972; Mendelsohn 1962).

The income from commerce and taxation was still insufficient to support all Solomon's building projects so he ceded twenty cities in Galilee to Tyre to ease his financial problems (1 Kgs 9:10–13). There were other signs that his empire was in trouble. Both Edom and Aram successfully rebelled against Israelite rule (1 Kgs 11:14–25). The most serious threat to Solomon's rule came not from outside but from within Israel. Encouraged by the prophet Ahijah, Jeroboam became the leader of those Israelites who opposed Solomon's rule. Ironically Jeroboam had been Solomon's administrator of forced labor (1 Kgs 11:26–40).

What helped prevent Solomon's empire from disintegrating during his lifetime was the theological support that propped up his rule. Like all ANE monarchies, the kingship in Israel needed religious support to maintain its legitimacy. The belief that God had chosen David and his descendants to rule Israel forever (2 Samuel 7) was the theological support for Solomon's rule. Both Saul and David became kings because of arrangements made by the people over whom they ruled. Theirs was a charismatic kingship acknowledged by popular consent. Solomon came to the throne without such popular support. His claim to the throne rested on a dynastic principle in which God became the guarantor of the dynasty. Such a pattern of kingship was no different from that of other nations in the ANE (Kenik 1983; Johnson 1967).

D. Kingdoms of Israel and Judah

1. Collapse of the Davidic–Solomonic Kingdom. The development of a royal ideology that supported the Davidic dynasty was not enough to secure the throne of Solomon for Rehoboam his son. The succession was not an issue in Jerusalem (1 Kgs 11:43b). It was another matter in Shechem where "all Israel" came to confirm Rehoboam as king. The people that the new king went to meet were representatives of the tribes, clans, and settlements of the hill country N of Jerusalem. These people evidently had grievances so serious that they wanted to negotiate with the king. When they asked Rehoboam to modify Solomon's policies of taxation and forced labor, he refused. The assembly then rejected Rehoboam (1 Kgs 12:16). The king fled to the safety of Jerusalem and did not try to compel the loyalty of the northerners.

The assembly at Shechem did not replace the monarchy by reverting to a tribal form of government. Instead it rejected the Davidic dynasty and offered the kingship to Jeroboam, the leader of the anti-Solomonic faction. He established a new state with its capital at Shechem (1 Kgs 12:25).

The book of Kings treats the action of the assembly at Shechem as an act of apostasy though it was sanctioned by the prophet Ahijah (1 Kgs 11:23–39). This interpretation of events following Solomon's death is a reflection of DH's views on the legitimacy of the Davidic dynasty and the centrality of Jerusalem. The Shechem assembly and Jeroboam ignored both (Aberach and Smolar 1969; Klein 1970).

A more balanced evaluation of the circumstances following Solomon's death should conclude that the actions of the Shechem assembly were not surprising given Rehoboam's decision to continue his father's internal policies. The readiness of the northerners to abandon the Davidic dynasty shows that a "united kingdom" never existed. David and Solomon ruled over a "dual monarchy" in which the N and S tribes shared a king in common (2 Sam 3:10; 19:11–15, 43; 24:1–91; 1 Kgs 1:35). Following Solomon's death the dual monarchy collapsed. Replacing it were two small kingdoms that existed alongside each other for about two hundred years. The N kingdom was known as Israel or Ephraim. Its center was the hill country N of Jerusalem though it included the regions of Gilead and Galilee as well. The S kingdom was known as Judah and included the S hill country and the Negeb.

2. Politics of the Two Kingdoms. The S kingdom (Judah) was a sacral and centralized society ruled by what its citizens believed was the divinely chosen Davidic dynasty. It was a slow-moving, conservative, and highly traditional society. Jerusalem and its temple were the focus of Judah's national and religious life. Although the monarchy introduced Judah to foreign cultural perspectives, it absorbed these by modifying gradually its social system and religious traditions without significant social disruptions. Stability was the hallmark of the S kingdom. That is why it retained a single dynasty throughout its existence.

The N kingdom (Israel) did not enjoy the benefits that a stable political structure provided. In its 200 years of

existence, it had 19 kings, only 10 of whom succeeded to the throne. Nine came by way of *coups d'état.* Assassination was the fate of seven of Israel's kings. One committed suicide. Theoretically Israel valued the type of leadership that emerges in times of crisis over a hereditary monarchy. In reality, several of Israel's kings were little more than opportunists.

Though religiously, ethnically, and culturally the two kingdoms were parts of one whole, politically they were independent. The N kingdom was the more prosperous and powerful. It had more natural resources, a large population, and a greater military capability. In terms of international relations, Israel and Judah were just two of several minor kingdoms in Canaan (Alt 1966a).

3. Economy of the Two Kingdoms. Though the Davidic–Solomonic kingdom was no more, the economic development and social change that the monarchy brought continued in both kingdoms. Neither Israel nor Judah was a significant political power, however, they enjoyed surprising economic prosperity. The combined population of the two kingdoms was probably one million (800,000 in Israel and 200,000 in Judah) at the height of their prosperity at the end of the 9th century. The population of the two kingdoms was becoming stratified. Just distribution of wealth did not accompany economic growth. The agrarian economy had to support a monarchy, its bureaucracy, and an army. The burden became increasingly more difficult. It led to the injustices that the prophets of the 8th century (Amos, Hosea, Micah, and Isaiah) condemned with so much passion.

Both kingdoms were responsible for maintaining several institutions that had serious economic effects. First there was compulsory military service that provoked great resentment (2 Kgs 25:10). Peasants had to leave their fields and flocks not to defend themselves and their families but to advance the king's political and commercial adventures that were of no concern to them. Second was the burden of forced labor that was the spark that set off the N tribes on a course independent of the Davidic dynasty. Despite this, the hated system continued involving up to one quarter of the population to work on royal building, commercial, and agricultural projects. Taxation took away what little the peasants were able to glean from their work. With the rise of the neo-Assyrian and neo-Babylonian empires, the peasants also had to provide the bulk of the tribute that the two kingdoms had to pay to their imperial masters.

Both the Bible and the archaeological data document the stratification of Israelite society because of the economic developments in the monarchic period. Amos (4:1) in the N and Isaiah (3:14–15) in the S criticize the effects of economic stratification that created poverty in the two kingdoms. The prophets denounced the splendid buildings of the wealthy: Amos 3:15; 5:11; 6:4; Hos 8:14; 12:8; Isa 2:7. Excavations of sites like Tirzah, Shechem, and Hazor show that at one time every family lived like its neighbors, but the 8th century saw these cities divided between the well-built homes of the wealthy and hovels of the poor (Kenyon 1964; 1971). The prophets excoriated the new wealthy class whose prosperity fed off the misery of the poor (Mic 2:1–12; Isa 5:8). Some poor people even had to sell themselves or their children into slavery to pay the debts they owed to the king or to their wealthy neighbors (2 Kgs 4:1–7; Amos 2:6). The political division of the Davidic empire into two rival states had its economic and social parallel in the life of the people who formed two classes: the rich and the poor. Poverty then was the creation of the monarchy and the economic practices it spawned (King 1988).

E. Israel and Judah: Jeroboam I—Fall of Israel (922–721)

1. Period of Conflict (922–876). Jeroboam I (922–901) took steps to establish the N kingdom as religiously independent of Judah. He proposed the old shrines at Dan and Bethel as alternatives to Jerusalem. He changed the date of the pilgrimage festivals and dislodged the Levites who were royal administrators and presumably loyal to the Davidic dynasty (1 Kgs 12:26–32).

The Egyptians welcomed the split of Solomon's kingdom since it fit into their plans to reassert their control over Canaan. Five years after the split, Egypt invaded the territories of the two kingdoms (1 Kgs 14:25–28). Despite its victories, Egypt was unable to maintain a permanent presence in the region (Mazar 1957). Rehoboam built a series of forts to guard his S frontier from Egyptian incursions (2 Chr 11:5–12).

There were continual border hostilities between the two kingdoms throughout the reign of Rehoboam and into that of his successor Abijah (also known as Abijam 915–913). Abijah was able to take the territory of Benjamin and add it to his kingdom. Such reverses at the hand of Judah weakened the prestige of Jeroboam. When he died, Nadab, his son, (901) ruled Israel for just one year. A military *coup* led by Baasha (900–877) deposed Nadab (1 Kgs 15:25–32).

After Asa (913–873) succeeded Abijah in the S, he induced the Arameans to invade the N kingdom. With the army of Israel occupied in the N, Asa had a free hand in the S. He moved Judah's N border to Mizpah where it remained until the fall of the N kingdom.

The continuous ill-fortunes of Israel at the hands of Aram and Judah were a serious problem for Baasha. Though he was able to hold onto the throne, his son Elah (877–876) was not. After a brief reign, Elah was assassinated by Zimri (876). When news of the *coup* reached the Israelite army, the soldiers acclaimed their commander Omri as king. Omri marched to Tirzah where Zimri had already established himself as king. When Zimri saw Omri's army approaching the city, he despaired and committed suicide after a reign of just seven days (1 Kgs 16:15–19).

2. Period of Cooperation (876–842). Omri's seven-year reign (876–869) reversed Israel's fortunes. He ended the Aramean threat to the N kingdom. He revived Israel's commercial fortunes by aligning himself with Phoenicia. He sealed the alliance with the marriage of his son Ahab with Jezebel, the daughter of Ethbaal, king of Sidon. Omri ended 50 years of fruitless conflict with Judah by giving his daughter Athaliah in marriage to Jehoram, the heir to the throne of the S kingdom. Omri retook Moab and this brought the King's Highway under his control. All this brought a new era of peace and prosperity to Israel. Omri was the greatest king to rule over the N though the Bible pays scant attention to him. Knowledge of Omri's achieve-

ments comes from extrabiblical sources (Timm 1982; Whiteley 1952).

Ahab (869–850) followed Omri on the throne of Israel. It was the first successful dynastic succession in the N kingdom. From a military, economic, and political perspective, Ahab's reign was remarkably successful. His only defeat was the loss of Moab at the end of his reign. Excavations at several cities in the N show that Ahab's reign was one of economic growth and military strength (Hennessy 1970). Ahab's greatest military achievement took place at the battle of Qarqar, which the Bible ignores. Ahab led a coalition of small states that successfully engaged the Assyrians and prevented them from taking control of the region. Ahab led the largest force in the coalition (*LAR* 1: 595–596, 601, 610–611).

Ahab's most serious problems were internal. His Phoenician wife Jezebel promoted the worship of Baal in the N kingdom. The prophet Elijah forcefully opposed her. The conflict between Elijah and Ahab over Jezebel's activity dominates the portrait of Ahab in the Bible and makes it appear as if he were a weak and ineffective ruler when the opposite was true (1 Kgs 17:1–22:40).

Ahab continued Omri's policy of cooperation with Judah. When the Arameans invaded Israel in 851, Jehosaphat, the king of Judah, joined Ahab in battle. While the Israelite–Judahite coalition prevented Aram from taking more than the N part of Israelite's Transjordanian territories, Ahab fell in battle (1 Kgs 22:34–35).

Jehosaphat's reign (873–849) was a time of peace and prosperity for Judah primarily because of its alliance with Israel. He increased Judah's commercial interests, strengthened its administrative apparatus, established a centralized judicial system, reorganized the army, and fortified many cities (1 Kgs 22:41–51).

In Israel Ahaziah (850–849) succeeded his father Ahab. A deterioration of the good relations that existed with Judah marked his reign. He died childless and his brother Jehoram (also known as Joram 849–842) succeeded him. Jehoram tried to retake Moab. Jehosaphat joined him in this unsuccessful adventure. This failure bred discontent among the army and population.

In Judah Jehosaphat's son Jehoram (849–842) came to the throne amid some internal problems that led Jehoram to have members of his family and court executed (2 Chr 21:4). He also had some external problems. Edom rebelled causing Judah to lose its control of the King's Highway and the income that came with that control (2 Chr 8:20–22). There has been some speculation that the Jehoram of Judah and the Jehoram of Israel were the same person. This means that the two kingdoms would have been one under the rule of the same king (*HAIJ*, 280–84). While this hypothesis has not been proven to be fact, what is certain is that a period of decline began in both kingdoms.

The decline of the last years of Jehoram of Israel had tragic consequences for the dynasty of Omri. The religious conservatives opposed the dynasty because of the willingness of the royal family to promote the worship of Baal. With the rapid economic development fostered by the Omrides, there came discontent because of the social and economic stratification in the kingdom. With wealth and power in the hands of a few, the many were ready for revolution. The revolution that came was another military *coup*.

3. Revolution and Its Aftermath (842–786). The revolution that put Jehu (842–814) on the throne of Israel was the most bloody in the history of the N kingdom. Jehu assassinated Jehoram and executed every other member of the royal family that he could find. In doing so he destroyed the political connections with Tyre and Judah that were the basis of Israel's prosperity (Miller 1967b). This left Jehu to face the Arameans alone. Fortunately for Israel, the neo-Assyrian empire under Shalmaneser III began pressuring the Arameans. When the Assyrians made their appearance in Aram, Jehu rushed to present himself to Shalmaneser to make his obeisance and offer his tribute as a loyal vassal (*ANET*, 281).

Because of Jehu's submission to Assyria, Israel was free from Aramean harassment for a short time, but the Assyrians could not remain in the region for long. This gave Hazael, king of Aram, a free hand to deal with Israel. He seized all Israel's territories in Transjordan. There was no improvement upon the accession of Jehu's son Jehoahaz (815–801). Hazael led a march through the N kingdom on his way to Judah. He thoroughly subjected the Israelite army. Eventually Assyria reasserted its domination of Aram. With the arrival of Adad Nirari III in Damascus in 806 (*ANET*, 281), Israel was free from the Aramean pressure.

Judah too felt the effects of Jehu's revolution. Ahaziah, king of Judah (842), happened to be visiting in Jezreel when Jehu began his purge. He met the same fate as Jehoram (2 Kgs 9:27–28). Athaliah (842–837), Ahaziah's mother, seized power in Judah upon his death. To secure her position she tried to kill the male heirs of the Davidic house. Only one of her grandsons, Joash, managed to escape (1 Kgs 11:1–3). Athaliah was the only ruler of the S kingdom who was not a descendant of David. She aroused opposition from the priests of Jerusalem, and Jehoiada, one of these priests, led a *coup* against her. Athaliah was assassinated and Joash (837–800) came to the throne (2 Kgs 11:4–20).

It is intimated (2 Chronicles 24) that Joash had a falling out with the priests who were his principal supporters. Their opposition may have led to his assassination (2 Kgs 12:20–21). His son Amaziah (800–783) succeeded him. At this time Aram was in a period of decline and this freed Amaziah to retake Edom. Buoyed by his success in the S, he fought the N kingdom for dominance in the region. Israel's new king, Joash (also known as Jehoash 801–876) defeated Amaziah (2 Kgs 14:13–14). This war sealed the separation between Israel and Judah. After the latter's utter defeat, there was no real hope of reuniting the two kingdoms. The defeat also sealed Amaziah's doom. He was assassinated—the third ruler of Judah in succession to die this way (2 Kgs 14:19). Ironically the aftermath of this war ushered in a period of peace and prosperity for both kingdoms.

4. Period of Prosperity (786–746). The rejuvenation of the N kingdom that began with Joash reached its apex during the forty-year reign of Jeroboam II (786–721). Both Joash and Jeroboam were able rulers and their combined 56 years on the throne were a time of territorial expansion and economic success. Israel so dominated the

Arameans that Jeroboam eventually annexed Aram to his kingdom. The Bible features military success of the N kingdom (2 Kgs 13:7, 25; 14:23–29) while excavations at sites such as Samaria and Megiddo reveal its economic prosperity. Amos condemned the darker side of the wealth that the few in Jeroboam's kingdom enjoyed at the expense of the poor. Hosea added his voice to these critiques and put special emphasis on the popularity of Baal worship in the N kingdom. The façade of peace and prosperity did not blind the prophets to the social and religious disintegration that was to be the undoing of the N kingdom.

Though largely ignored by the Deuteronomist, the reign of Uzziah in the S (783–742) was just as successful as that of Jeroboam II in the N. The Chronicler provides a more complete picture of a most prosperous period in Judah's history. Uzziah reorganized Judah's army and led it on several successful campaigns. His victory over the Arabs in the SE (2 Kgs 14:22; 2 Chr 26:2–15) opened the Negeb to intensive agricultural settlement as revealed by archaeology. There is no prophetic commentary on Uzziah's reign, but he did have problems with priests. The Bible attributes Uzziah's leprosy to his attempt to get some priestly prerogatives for himself (2 Chr 26:16–21). Jotham (742–735) acted as regent for his father during his illness and succeeded upon his death. Jotham continued Uzziah's policies and enjoyed similar success.

5. Fall of Israel (746–721). Following the death of Jeroboam II, anarchy reigned in the N kingdom. Zechariah (746–745), Jeroboam's son and the last of Jehu's dynasty, was assassinated after only six months on the throne. Shallum (745) who replaced him ruled for only one month before Menahem (745–738) deposed him. Menahem became a vassal of the Assyrians who required that he pay a heavy tribute to keep his throne (2 Kgs 15:19–20). His son Pekahiah (738–737) continued the policy of submitting to the Assyrians. This led to his assassination by Pekah, one of his military advisors who wanted to rebel against Assyria. After taking the throne of Israel, Pekah put aside old animosities and joined Aram in an anti-Assyrian coalition. They tried to enlist Judah but failed. The coalition collapsed before Assyrian military power. The Assyrians reduced Israel to a rump state ruled by Hoshea (732–724) who assassinated Pekah.

The rulers of Judah handled the Assyrian presence in the region more adroitly than the kings of Israel. Ahaz (735–715) refused to join the anti-Assyrian coalition (Oded 1972). When Pekah tried to depose him, Ahaz sought support from the Assyrians despite Isaiah's advice to the contrary (Isa 7:1–9). Both the Philistines and the Edomites began to exert additional pressure on Judah. Matters go so bad that Ahaz sacrificed his son in an attempt to avoid imminent disaster (2 Kgs 16:3). He also introduced non-Israelite forms of worship in the temple to secure his rule by any means available (2 Kgs 16:10–17).

Unfortunately for Israel, Hoshea did not remain a compliant vassal to Assyria as did Ahaz. Upon hearing of Tiglath-Pileser's death in 724, Hoshea began negotiations with Egypt to secure its support for a revolt against Assyria. When Hoshea made his move, Shalmaneser V, the new Assyrian monarch, easily swept Israel's army aside. After a three year siege, the Assyrians destroyed Samaria, incorporated what remained of the N kingdom into the Assyrian provincial system, and exiled many of Israel's leading citizens (Oded 1970). By 721, the Kingdom of Israel ceased to exist as an independent nation.

The Assyrians rebuilt Samaria and made it the capital of one of their provinces. They absorbed the remnants of the Israelite army into their own. They also repopulated the territory of the former N kingdom with foreigners after deporting a portion of the native population though most of Israel's population remained in their land (Otzen 1979). Because of later conflicts with the people of the Samaria, the Jews of the postexilic period refused to consider the Samaritans as legitimate Israelites because of the intermarriages that took place between the remnants of the native Israelite population and the foreigners introduced by the Assyrians (Coggins 1975).

F. Final Years of Judah (715–687)

1. Judah and the Neo-Assyrian Empire. In view of Israel's fate, the policy of Hezekiah (715–687) toward Assyria seems like folly. He reversed the pro-Assyrian policy of his father Ahaz and began plotting with the Philistines, Egyptians, and Babylonians against Assyria. He prepared for the revolt by strengthening Jerusalem's fortifications and securing its supply of water (2 Kgs 20:20; *ANET,* 321; Broshi 1974). He wrote to the Israelites in the Assyrian provinces of Megiddo and Samaria for support (2 Chr 30:1). Hezekiah signaled his intention to rebel by removing all Assyrian appurtenances from the temple. This led the Deuteronomist to present him as a religious reformer (2 Kgs 20:1–7; Rowley 1962; Ackroyd 1984).

The Assyrians marched through Syria-Palestine in 701. They captured 46 cities in Judah before they began their siege of Jerusalem (*ANET,* 287). At first Isaiah opposed Hezekiah's plans (Isa 31:1–3), but once the siege of Jerusalem was under way the prophet tried to lift the spirits of the city (Isa 10:24–34). Though Jerusalem's fall appeared to be imminent, the Assyrians inexplicably broke off their siege. This led to the belief that Jerusalem was impregnable. Though Jerusalem did not fall to Assyria, Judah had to pay an increased tribute, the kingdom suffered the loss of some territory, and Hezekiah had to swear allegiance to Assyria (2 Kgs 18:14). Isaiah described the outcome of Hezekiah's rebellion as the desolation of Judah (Isa 1:7–9; Cogan 1974).

Judah retained its nominal independence throughout the long reign of Hezekiah's son, Manasseh (687–642). He had little choice but to be a compliant vassal, for Assyria's power was at its height in the early part of the 7th century. The Deuteronomist portrays Manasseh's reign as the darkest in the history of the monarchy because of the non-Israelite cults that flourished in Jerusalem during his reign (2 Kgs 21:1–18; McKay 1973). The Chronicler paints a different picture of Manasseh. Second Chronicles describes a presumed exile of Manasseh to Babylon where purportedly he repented (33:10–13). Attempts have been made to associate this text with an anti-Assyrian rebellion in which Manasseh supposedly participated. It is more likely that the tradition about Manasseh's conversion is legendary. It is unlikely that he ever swayed from his subservience to Assyria (Nielsen 1967).

Manasseh's successors did not enjoy long and peaceful reigns like his. Of the last six Davidic rulers one was

assassinated, two died during wartime, and two died in exile. Manasseh's immediate successor, Amon (642–640) died during a *coup* led by anti-Assyrian elements at court. The conspirators were themselves executed by the "people of the land" who placed Amon's eight-year-old son Josiah on the throne (2 Kgs 21:19–26; Malamat 1953; for the role of the "people of the land" see Soggin 1963; Talmon 1967; de Vaux 1964; see also AM HA'ARETZ).

2. Reign of Josiah (640–609). Josiah is the hero of the Deuteronomist who portrays him as a great religious reformer inspired and guided by the "Book of the Law" (2 Kings 22–23). Josiah's program was less a religious reform than a cultural revolution or an effort at national liberation (Lohfink 1977; Weinfeld 1964). The Assyrian empire was disintegrating and Josiah recognized that its hegemony in Syria-Palestine was ending. He had dreams of restoring the old Davidic empire (2 Kgs 23:15–20). His emphasis on the centrality of Jerusalem (2 Kgs 23:21–23) had as its purpose to secure the people's commitment to the dynasty and his political program in the struggle that was ahead.

Josiah's plans ended with his death in 609. He fell at Megiddo while leading the army of Judah against the Egyptians who were trying to prop up a tottering Assyria as a buffer against the emerging Babylonian empire. Josiah saw that it was to his benefit to support Babylon though he should have been content to sit on the sidelines while the great powers settled matters between themselves. With Josiah's death, Judah began an inexorable slide to its destruction as a political entity (Malamat 1955; 1973). In less than 25 years, the Judean state and Davidic dynasty were no more.

Josiah's defeat at Megiddo meant that Judah had to trade masters. It fell under Egyptian hegemony. The pharaoh Neco's first act was to depose Josiah's son Jehoahaz (also known as Shallum, 609) whom the "people of the land" placed on the throne because he wanted to pursue the anti-Egyptian policy of his father. The pharaoh took Jehoahaz prisoner and made his brother Eliakim king with the throne-name Jehoiakim (609–598). Jehoiakim had no choice but to be subservient to Egypt.

3. Judah and the Neo-Babylonian Empire. Judah's destiny passed into Babylonian hands when Nebuchadnezzar defeated Egypt at the battle of Carchemish in 605. Jehoiakim accepted his new master, but four years later he foolishly rebelled (2 Kgs 25:1–2). The Babylonians moved against Jerusalem in 598. Jehoiakim died at the outset of the siege (2 Kgs 25:6). Jeremiah implies that Jehoiakim was assassinated (Jer 22:18–19); but Jer 36:30 and 2 Chr 36:6 assert that he was exiled to Babylon. Jehoiachin (also known as Jeconiah and Coniah 598–597) succeeded his father and surrendered to Nebuchadnezzar after three months. The king, his family, and many leading citizens went to Babylon as prisoners following the surrender of Jerusalem in 597.

Nebuchadnezzar allowed Judah to retain nominal independence. He chose Mattaniah, the third of Josiah's sons to succeed the exiled Jehoiachin as king of Judah. The Babylonians gave him the throne-name Zedekiah (2 Kgs 25:17). Zedekiah (597–587) was unable to deal with the conflicts among his people on how to react to the Babylonian hegemony over Judah. What finally tipped the scales in favor of a second rebellion was the visit of Pharaoh Psammetichus II to Judah in 591. The pharaoh promised to support any rebellion against Babylon. Ezekiel 17 alludes to these negotiations (Greenberg 1957). When Egypt provoked Babylon by invading Phoenicia, Zedekiah withheld his tribute from Nebuchadnezzar.

The Babylonian reaction was swift. Zedekiah soon realized that his rebellion was going to fail so he fled from Jerusalem. The Babylonians captured him near Jericho and led him to exile (2 Kgs 25:5–7). The Babylonians entered Jerusalem, destroyed the temple and palace, and razed a large portion of the city. They executed representatives of the various strata of Judahite society and led the rest of Judah's leadership class into exile (2 Kgs 25:8–21). The Davidic dynasty ended in 587.

Despite this rebellion Nebuchadnezzar did not annex Judah to Babylon nor repopulate it with foreigners as did the Assyrians in Israel. He appointed an administrator named Gedaliah from the local population (2 Kgs 25:22–24). There is some speculation that the Babylonians appointed Gedaliah as king replacing the exiled Zedekiah. The book of Kings does not mention Gedaliah's title (2 Kgs 25:22)—the title "governor" supplied by some English translations is without textual basis. A military officer from the Davidic family assassinated Gedaliah, his family, and his Babylonian guards (2 Kgs 25:25–26; Jer 40:13–41:3). Fearing reprisals, many Judahites fled to Egypt taking with them a reluctant Jeremiah (Jer 41:17–43:7). Gedaliah's murder prompted a third exile in 581. There are no records of what happened in Judah after this. The DH ends with a reference to Jehoiachin's parole in Babylon in 561 (2 Kgs 25:27–30), but without any explicit statement that Judah or its dynasty had any future. The Davidic dynasty would never rise again (Stern 1975).

Imperial powers ruled Judah directly until the victory of the Maccabees in 164. The Hasmonean and Herodian dynasties then ruled in the territories of the former Israelite kingdoms into the Roman period though many Jews considered both dynasties as usurpers of the rights that properly belonged to the Davidic dynasty (see *Psalms of Solomon* 17). Messianism developed in early Judaism as one way to express hope for the eventual restoration of Davidic rule.

LESLIE J. HOPPE

POST-MONARCHIC PERIOD

Coming out of what historians call the ages of confusion in the ANE (see Roberts 1980: 118–30) the story of ancient Israel is an obscure one. Little reliable historical data is available for historians to utilize with confidence. Apart from retellings of biblical stories—so-called histories of Israel—and hints gleaned from imperial annals, little may be asserted with any certitude about the relation of the Hebrew Bible to history. This state of affairs is especially true of the period between Cyrus of Pasargadae and Alexander of Macedon when Indo-European hegemony dominated the Near East (ca. 500–332 B.C.E.). The Persian period, as it may be called, was the first stage in the seven-centuries-long gestation period of what may now be regarded as the roots and origins of (orthodox) Judaism. Between the Babylonian destruction of the first Jerusalem temple (587/6 B.C.E.) and the Roman destruction of the second Jerusalem temple (70 C.E.) were created the formative elements of Judaism as a major religious system. These two demolitions focus attention on the centrality of the Jerusalem temple for the period and emphasize the importance of outside imperial powers in determining the shape of Jewish religion. Transformed by Babylonian and Persian influences, the fragments of Israelite religion which survived the devastations of land and culture were transfigured into a series of sectarian and diffused religious communities which dominated the period and provide what little we know about the early stages of the Second Temple era.

A. Interpretive Ground Rules

1. Ideological Control. The problems of data and interpretation for the Persian period are such that it is necessary to delineate the limited terms of reference for handling the available biblical sources. Throughout the Hebrew Bible there is a tendency, which is virtually a principle, for the writers to retroject their material into the distant past. This is obvious in the Pentateuch and the Deuteronomistic History; but it is hardly less obvious in the collection of the prophetic texts which are prefaced by colophons placing them in a past determined by the DH (e.g., Isa 1:1; Jer 1:1–3; Amos 1:1; Hos 1:1). Setting the books in the past helps to conceal period and place of authorship as well as authorship itself. Attention is directed toward the text and not to the conditions or context of its production. If this artifice of concealment is also to be found in the writings set in the early Second Temple period, then it would be wise to read the literature traditionally assigned to that period as coming perhaps from a somewhat later time. This would help to explain the confusion of data and detail which abound in the books of Haggai, Zechariah, Isaiah 40–66, Ezra-Nehemiah, and Chronicles. It would acknowledge an ideology of concealment in the Second Temple period and alert the historian to the need to explain such constructions. James Joyce's character Stephen Dedalus talked about "silence, exile, and cunning," and an exploration of the literature of the Second Temple period, especially during the Persian era, would do well to keep those three elements of silence, exile, and cunning to the fore in analyzing this obscure period of the production of biblical texts. In the absence of reliable evidence for reconstructing the history of the period, the literature set in this period may not be the most reliable guide for a historical analysis; historical accuracy cannot be assumed in the absence of data to the contrary. Subtler forms of literary and ideological investigation are required to provide a properly historical account of the matter. Even then, hypothetical reconstructions of scholars will not necessarily bear much resemblance to actual events in the past. This acknowledgment of ignorance and, more importantly, of the consequences of such ignorance must be a fundamental ground rule for investigating the Persian period.

2. Obscurity of Data. If the ideological control of literature is an important datum of this period, the obscurity of the available data should also be recognized. Information is eclipsed by ignorance and obscurity, which makes every historical account of the period open to serious debate. It is easy enough to amalgamate a number of elements drawn from each literary source and so to form an idealized picture of the Jewish community in and around the Jerusalem of the 5th and 4th centuries. However, the sources really do not permit such a selective production. They are confused ideological constructs which often telescope characters and events (see Blenkinsopp *Ezra* OTL, 41–47) and which to some extent must be regarded as sectarian documents attempting to present a particular picture of the "past" as a legitimation of the present (i.e., the present of the writer). The interpretation of documents is far from straightforward and the nature of the documents is not easily determined. In the case of the Ezra-Nehemiah, Chronicles corpus (whether all from one or multiple authors) the very textuality of Ezra-Nehemiah (what Eskenazi happily called "the perpetuation of documents" [1988: 87]) puts the historian in a quandary about what textuality may indicate regarding the production of that strange work (there really is nothing else like Ezra-Nehemiah in the Hebrew Bible). Thus, the amalgamation approach is unacceptable because it only results in a form of "rationalizing paraphrase" of texts long recognized to be themselves partisan constructs of ideological groups in conflict with other groups.

While the texts presented as reflecting the Persian period may well be indispensable sources for our knowledge of the period (see Blenkinsopp *Ezra* OTL, 38 with reference to Ezra-Nehemiah), it is a compromised indispensability which they possess and one which undermines their reliability as historical resources. The precise amount of weight the historian should allow to this evidence is difficult to judge, but to ignore these inherent difficulties is to participate in the ideological distortion of the material rather than to practice historical reconstruction.

3. Tentativeness of Conclusions. Having acknowledged the difficulties of reconstructing the history of the Jewish communities in the Persian period, it becomes necessary to recognize that all accounts of the period and each scholar's account of it are open to question. It is also very important to avoid the tendency in biblical scholarship to equate textual exegesis with history. Repeating what is to be found in texts is not history writing. We lack the necessary extra-textual information to move from exegesis to historiography. Material remains of the period (as analyzed in Stern 1982) are remarkably uninformative in relation to biblical texts. Furthermore, archaeological data require interpretation and contextualization, so they cannot simply be assumed to bear on a specific text (just because the writer brings the two into conjunction). The many technical and substantive issues involved here cannot as yet be handled within biblical scholarship, which lacks a sound methodology for dealing with these matters. A properly theoretical account of how best to read the literature of the Second Temple period remains to be developed. In the absence of such important requirements, any attempt at delineating the history of the period is more likely to become an outline of the contents of the various pieces of literature associated with the period. There are too many serious gaps in our knowledge and the textual sources are too obscure, as well as ideologically compromised, adequately to write the history of the Persian period. See also PERSIAN EMPIRE. Therefore, this discussion must be regarded as a mere sketch of the main features of the period, which indicates areas where scholars struggle with the method and data available to write a history of the Persian era in relation to the different Jewish communities which developed then.

B. The Period

1. Major Influences. The facts and relevant data have been rehearsed many times in the standard "History of Israel" volumes, which may be referred to for details and discussions of the most important issues (see especially *CHJ* 1; Widengren *IHJ* 489–538; *HAIJ*, 438–75; and particularly cognizant of the difficulties of writing the history of this period is Lemche 1988: 173–96). See also PALESTINE, PERSIAN ADMINISTRATION; EZRA-NEHEMIAH, BOOKS OF; and CHRONICLES, BOOK OF 1–2. The hegemony of the neo-Babylonian empire under the leadership of Nebuchadnezzar and his family, a relatively short-lived empire (ca. 605–539), was brought to an end by the emergent Persian imperium under the leadership of Cyrus II of Pasargadae. In the space of a decade, Cyrus had conquered Media, Lydia, and Babylonia, and in 539 the city of Babylon fell to Gobryas "without a battle" (see the pro-Persian report cited in *HAIJ*, 439). Under neo-Babylonian domination the city of Jerusalem and the state of Judah had been devastated, the temple of the god Yahweh demolished, and some leading citizens deported to Babylonia (others had fled to Egypt). In an ideologically constructed account 2 Kings 17 posits a similar fate for the state of Israel in the 8th century at the hands of the Assyrians. With the Babylonian deportation of powerful families and the collapse of what remained of the Judean state (already a puppet state of the Egyptians until the emergence of the Babylonian power), the roots of what later became Jewish and Christian communities began to grow. For more than the next two-and-a-half millennia the Jewish communities would flourish more outside the region of Palestine than they would inside it. This diasporic nature of the community would be one of its most enduring qualities and must be traced to the 6th century and afterwards.

Babylonian and Persian (Iranian) influences would shape these communities and provide a cross-fertilization of religious, ideological, and social structures which would determine the matrix out of which came Jewish sectarian religion. A third major influence would be Egypt where refugee groups of Jews spread throughout the land after fleeing from the invading imperial powers. The two great areas of influence, Babylonia and Egypt, were embodied in the foundational myths of the communities as stories about Abraham (Babylonia) and Moses (Egypt).

The Jews of Egypt and the Jews of Babylon told different stories but both stories have been incorporated into the Hebrew Bible in terms of the story of the Jews of Jerusalem (see Garbini 1988: 133–50). From the province of Judah/Judaea comes the epithet "Jew" (Heb *yĕhûd*) which describes the people who lived there and gave their allegiance to Jerusalem; yet the term is used indiscriminately of communities in Babylonia, Persia, and Egypt. A careful scrutiny must, therefore, be made of all the literature in order to allow for the ideological nature of the terms of reference which reflect the Jerusalem/Judaea center of influence. At the same time, note that the term "Jew" in this period was on the way to becoming a marker of religious ideology and practice, i.e., identity, and not simply an indicator of geophysical origin. In the Second Temple period groups in Egypt, Babylonia, Persia, and Palestine ("the holy land" as it came to be called in the literature of this period) developed many different strategies of religious affiliation which have tended to be lumped together by subsequent writers as if there had been a uniformity of ideology, praxis, and identity throughout the period. The extant literature of the period, including Qumran, the apocalypses, and early Christian literature, reveals a wide diversity of beliefs and practices. Terms derived from conciliar Christianity and the period of the Talmuds attempted to impose a false uniformity on what were many and diverse groups.

According to Stern (1982: 229), the Babylonian destruction of Jerusalem had little effect on the culture of the Israelite period. Life continued as before and changes only began to appear with the emergence of the Persian hegemony. From a regional perspective, the collapse of the Jerusalem economy and the concomitant defeat of whatever state apparatus Judah possessed were not major features of the 6th century. Yet from the perspective of the Hebrew Bible the destruction of Jerusalem was a people-endangering catastrophe and the subsequent deportation of the leading citizens to Babylonia was a veritable emptying of the land. The contrast between the story of the material remains of the larger geophysical area and the ideological writings of a certain social stratum of the smaller territory is striking. In much of these writings the deportees are represented as superior to the people of the land who were not deported to Babylonia (e.g., Jer 24:29), and a good deal of the writing appears to support an ideology of control over the land on behalf of the deported group. The phrases "people of the land" (Heb *ʿam hāʾāreṣ*) and "people of the exile" (Heb *ʿam haggôlâ;* sometimes *bĕnê haggôlâ*) in the literature related to the period would appear to reflect an ideology of conflict, with special claims to status and land being made on behalf of the deported party. This claim to the land is one of the most fundamental features of the Second Temple period and is the basis of many of the foundational stories in Genesis 12–50 and the Tetrateuch (or the Pentateuch and the Deuteronomistic History as some classifiers would label what is traditionally known as the Torah and the Former Prophets). Temple and land are the key concepts in the development of the Persian period and tend to subsume most of the literature of that time (including such books as Isaiah, Jeremiah, and Ezekiel which may owe their present form to the Greek period). That means the literature must be read primarily in ideological terms rather than in modern historical terms, though historical elements in the texts are not ruled out by this judgment. The myth of "the empty land" (2 Chr 36:21) is a good example of the difference between reading literature as ideology and reading it as history. At this juncture in history the land lost some people; very much a minority of people, even important people of status were deported. Most people lived on in the land as if nothing, except the burning of Jerusalem, had happened. But from an ideological point of view, the few who were deported were the cream of society and the nucleus of the future. The Persian party represented in the literature of Ezra-Nehemiah as the exiles (or the descendants of the original deportees) returned from Babylonia in order to occupy the "empty land" and to claim it as their divinely appointed territory.

Much of what constitutes the Hebrew Bible is the myth of this claim—how much is a matter for debate.

Where ideology is concerned history has a habit of being subverted. The Babylonian control of the Judaean territory by the deportation of some of its leading citizens and powerful interests became the legitimation of a party takeover bid in the Persian period. Denunciations of the Jerusalem elite which appear in Jeremiah and Ezekiel have become, with time, justifications of a later foreign group's claim to control the Jerusalem economy and cult. The biblical literature primarily must be read from an ideological viewpoint and only secondarily from a historical perspective. The two are to some extent mingled (rather like a double helix) but the ideological predominates and determines how the history is read. Thus conventional biblical scholarship generally treats the Persian period under the terms "exile" and "restoration" (e.g., Ackroyd 1968; *BHI*); hence the traditional markers pre- and postexilic. The ideological perspective of the texts colors the attempt of modern scholarship to be historical. See, for example, Jer 24:29 where the deported citizens are treated as noble and good in contrast to the rubbish which inhabits Jerusalem (cf. Ezek 11:14–21). Similar attitudes may be found in the Ezra-Nehemiah corpus where the incoming foreigners impose their values and ideology on the people of Jerusalem. These key factors of ideology, conflict, and partisanship constitute the essence of the sectarianism which dominates the literature of the period. Thus sectarianism is the ideological key to understanding the whole period of the Second Temple and it must be regarded as having had its origins in the Persian period.

According to Haggai, Zechariah, and Ezra-Nehemiah the (re)building of the temple in Jerusalem was the primary activity of the period immediately following the defeat of the Babylonians. Sheshbazzar and Zerubbabel are variously credited with the operation of rebuilding the temple and scholars differ in their attempts to reconcile the problems caused by this information (cf. Ackroyd *CHJ* 1: 136–43). Rationalization of awkward data is a standard procedure in biblical scholarship and tends to reflect particular ideological commitments within the guild. Whatever the facts may have been in the matter of the temple, it is clear from the biblical literature that claims about reestablishing the temple cult were an important aspect of constructing the story of the Persian period. The temple was the center of economic, ideological, and religious control in the community and control of it gave immense power in the province to the party which could acquire and maintain that control. It is impossible to determine whether the rebuilding of the temple actually took place between 539 and 516 (the dates deduced from the biblical literature) or whether these dates reflect an ideological presentation of the rebuilt temple coinciding with the new (Persian) era to legitimate the party in control of the temple whenever the documents were written. In spite of the tendency of scholars to accept the text at face value it should be noted that it is characteristic of the biblical literature to retroject "facts" into the past.

2. Spheres of Activity. The fortunes of the various communities in Babylonia, Egypt, and Palestine are not easy to reconstruct for the Persian period. Material remains give little particular information and the general picture they afford of social life in the era is sketchy in the extreme. Aramaic papyri, parchments and ostraca from Egypt, especially from the border posts of Syene and its adjacent island of Elephantine, give some idea of life in a Jewish colony during the 5th century B.C.E. (see *ArchEleph; CHJ* 1: 376–400). The colony was a socio-military one under the command of Persians and the documentation from there reflects legal and contractual features of life in a Persian outpost. The presence of a temple of the god *YWH* there has surprised many biblical and Jewish scholars, but only because the Hebrew scriptures espouse the centrality of Yahwism in Jerusalem. Elephantine indicates that other shrines to the god Yahweh flourished and it may well be the case that Deuteronomistic ideology was only enforceable among the Jews of Jerusalem in the Second Temple period. So little is known about the social circumstances of the diasporic communities outside Palestine that, as with the perception of the Babylonian depopulation of the land, it is difficult to state what was normative and what otherwise. The religion of the cult in Elephantine suggests that the god Yahweh had a female consort (Anath), which reflects the normal type of Semitic religion in the ANE as opposed to the special ideology of Yahweh-alone religion constructed by the deuteronomists for the Jerusalem cult (see Smith 1971). Opposition to the Jewish communities in Egypt from Palestinian Jews (Jeremiah 44) may indicate social and political conflicts as well as ideological differences which developed in the Persian era. However, too much hard data should not be extrapolated from rare and isolated sources which are themselves open to various and disputed interpretations.

We know from much later periods that Jewish communities in Egypt (Alexandria) and Babylonia were important centers of Jewish religion and it is a reasonable assumption that the roots of these communities were put down in the Persian period. But documents which purport to be about that period only obscurely convey the information: e.g., in Jer 29:4–7, a letter attributed to the prophet Jeremiah, the image is presented of a free society in which Jews own land and may flourish as a community. This may well be an accurate depiction of the Jews of Babylon—but of what century? Can the letter really be dated to the period *immediately* after the deportation of 597? The chapter in Jeremiah where it appears is a complex and highly edited piece of writing which reflects ideological conflicts between the Jews of Babylon and the Jews of Jerusalem. What do they represent and what period do they reflect? The scholarly tendency to read the chapter at face value is bad exegesis and leads inevitably to misprisions of the text. But without controls on the text or extra-textual information the historian is forced back on exegesis and ceases to be a historian (the central problems of the literature of the period will be dealt with in the next section).

The exceptional wealth of written source material for the Persian period in Babylonian history affords much information on administrative, legal, and domestic affairs in the province (Dandamayev *CHJ* 1: 330–42). Because Babylonia was one of the richest satrapies of the Persian empire it may be assumed that communities living there had ample opportunities for material development and the Jews there must have shared in this affluence. This is a

reasonable assumption made in the absence of concrete evidence.

Jewish names appear in the documents (cuneiform tablets) from the archives of the business houses of Murashu found at Nippur and dated to the second half of the 5th century (Bickerman *CJH* 1: 344–48). The house of Murashu managed land property and acted as agents for the maintenance of the crown land by controlling tenure and collecting rents and taxes. Jews in the region of Nippur held land or military fiefs and could mortgage their land to the house of Murashu, renting it back under yearly terms. These Murashu archives depict a range of activities which included Jewish participants and thus a sketchy picture of Jewish life in Babylonia emerges from a careful scrutiny of the documents. Jews could become agents of the Persian government or could manage the canals which were the center of the great Babylonian irrigation economy. Some Jews named their sons *Shulum-babili* "welfare of Babylon" (a phrase which has echoes in Jer 29:7). There is some evidence that the banking family Egibi was Jewish and this would further indicate an integration of the Babylonian Jews into the structures of the administration of the Persian satrapy of Babylonia (Baron 1952: 109; Garbini 1988: 92, 192–93). Fictional aspects of this interpretation may be found in the books of Daniel, Esther, and Tobit. At the other end of the social spectrum the Murashu documents refer to a small number of Jewish slaves.

According to Ezra-Nehemiah the reconstruction of Jerusalem in the 5th century was undertaken by agents of the Persian authorities who came from the imperial city of Susa (Nehemiah) and from Babylonia (Ezra), and who imposed on the Palestinian community Persian structures. There are enormous difficulties of doing history from this ideological biblical material. In addressing the issue of Ezra's existence, the majority of scholars tend to affirm that he did, while an important minority of scholars says "no" (Blenkinsopp *Ezra* OTL does not debate the question; see also Garbini 1988 and Smith 1971). Commentators on the Ezra-Nehemiah corpus readily recognize the difficulties of the literature and its tendency to stitch events and persons together in a curiously fictional mode and yet without Ezra-Nehemiah there is no account of the reconstruction of Jerusalem. Once more "silence, exile, and cunning" best determine the matter.

Ezra-Nehemiah traces the founding of the Second Temple to the decree of Cyrus which permitted the repatriation of the Jews of Babylonia and the return of some fifty thousand Jews to Jerusalem led by Sheshbazzar with the ancient vessels of the previous Jerusalem temple. The foundations of the temple were subsequently laid in a context of the correct liturgical observances. Throughout the reigns of Darius I, Xerxes, and Artaxerxes, sustained local opposition disrupted the community, though the temple was completed by 516 in the reign of Darius under Zerubbabel and Joshua (see Haggai; Zechariah 1–8). In the time of Artaxerxes (I or II—which is not certain), Ezra the scribe arrived with further repatriates and imposed on the Jerusalem community a Persian injunction to follow traditional laws. Confiscation of land and the breaking up of marriages contracted with the local Palestinian people followed the imposition of Ezra's law with the support of prominent pietistic laymen in the community. At least that is what appears to have happened, but the Ezra text breaks off in mid-sentence and is continued by the story of Nehemiah. By order of the Persian king, Nehemiah made two delegated visits to Jerusalem, assisted in the rebuilding of the wall of Jerusalem, opposed Palestinian involvement in the project, and broke up various marriages of the kind which Ezra had previously broken up. He also imposed strict Sabbath regulations on the work economy of the city (Neh 13:15–22; cf. Jer 17:19–27). There are sufficient similarities between the functions of Ezra and Nehemiah to make the competent reader of the biblical text wonder to what extent they represent the same story told with variations, and to what extent the stories are a patchwork quilt of social and ideological movements of the Second Temple period reflecting dimly discerned historical events. Every writer on the subject offers a different opinion and one of the most dominant views in 20th century biblical scholarship insists on treating Nehemiah's visit to Jerusalem as occurring *before* that of Ezra's. Placing Ezra's visit in 458 (traditional view) or 399 (revised view), with Nehemiah's visit assigned to 445 (with a second visit some years later), avoids having the two working together as appears to be the case in Nehemiah 8, but it must be freely admitted that the corpus abounds in problems which are not easily rationalized.

There are glimpses of a struggling community in and around Jerusalem in parts of Nehemiah which would fit with what little we know about the period from the Murashu documents. Neh 5:1–5 provides a good example of people having mortgaged their land to pay their taxes and complaining about the enslavement of their children and the loss of their property. As Blenkinsopp says of this section, "The traditional agrarian economy was thereby slowly undermined, holdings which had stayed in the same family for generations were enclosed, and we begin to see the emergence of the great estates which flourished during the Hellenistic period" (*Ezra* OTL, 67). This creation of latifundia in the Second Temple period can be found reflected in a number of texts which have been assigned conventionally by biblical scholarship to the wrong period. Thus 1 Kings 21 in its treatment of Naboth's vineyard (cf. what may be the older story of the Naboth murder in 2 Kgs 9:21–26) is more likely a reflection of the 5th–4th centuries than of the 9th–8th centuries (see Rofé 1988b). Also, the standard references to similar practices in Isa 5:8–10 and the so-called 8th century prophets (Isaiah, Micah, Amos, Hosea) should be treated as observations on developments in the Persian and Greek periods. While this view of the matter runs counter to most commentators on these prophets, it seems to be a better account of property relations, especially in the light of Leviticus 25–27, in biblical times than is posited otherwise. It is also a good example of that misdirection in texts which leads to their misprisions. The acquisition and exchange of land in biblical times remains a topic on which little definitive knowledge is as yet available. If the Ezra-Nehemiah corpus contains reliable historical information, then the material in Nehemiah 9 suggests that land was one of the most fundamental issues in the Persian period.

3. From Ezra-Nehemiah to Alexander of Macedon. Practically nothing is known about the period between

Ezra-Nehemiah and the conquest of the Persian empire by Alexander of Macedon as far as the Jewish communities are concerned. The protracted Persian-Egyptian wars, the Tennes rebellion, and other events of the period appear to have left no identifiable impression on any surviving literature. At this point historians often have recourse to Josephus (*Ant* 11) or to Diodorus Siculus (Dio. 16) for incidents in the reign of Artaxerxes III which may have had some bearing on the life of the Jerusalem community (see *IHJ*, 474–75). With the transition of power from Persian authority to the Greeks little changed for the Jewish communities throughout the empire. Time would eventually bring about the Hellenization of some of the communities and this transformation in turn would contribute greatly to the eventual development of later Jerusalem.

C. The Literature

In a very real sense any history of the Persian period must also be a treatment of the Jewish literature of the period because the material remains do not afford sufficient data to construct a proper history. Yet the literary aspects of the Jewish communities in this period are fraught with interpretative difficulties as well as the general principle of misdirected periodization. In conventional biblical scholarship a good deal of the Hebrew Bible is assigned to a production period before the fall of Jerusalem to the Babylonians (e.g., the Yahwist or J writer, the bulk of the DH, the original material in the 8th century prophets) and only the lesser material is thought of as having come from the Persian period. One consequence of this judgment is that the pre-catastrophe period is regarded as the great age of Hebrew literature and religion and the so-called postexilic era as a period of degeneration and poor literary production. This approach to the Hebrew Bible needs a radical rethinking and a complete transformation in the evaluation of literary and religious matters. There are clear signs of such a transformation in current biblical scholarship.

The Hebrew Bible was the product of the Second Temple period, though how much of it was produced in the Persian era cannot be determined. If this literature is to be taken seriously, then its production reflects on the creativity and importance of the Second Temple period as the foundational matrix of the roots of Judaism—matched only, perhaps, by the post-70 C.E. rabbinic period which produced the Talmuds. Elements of the Hebrew Bible may have been produced in writing before the Persian era, but there is no concrete evidence for this presupposition nor is it possible to say which parts existed in writing before the destruction of the temple. It is logical to locate the framing of the various scrolls and the production of the bulk of the biblical books in the period of the Second Temple because one of the most dominant traits of that period is the production of writings which later became scripture for many religious communities. Temple and texts are therefore two of the key elements in the understanding of the period. This period has traditionally taken back seat to the so-called classical ages of religious thought and the great "writing" prophets, which has resulted in little valuable investigation that can help us understand the era. This consistent underevaluation of the Persian and Greek periods skews the whole history of the roots of Judaism and renders much scholarly work irrelevant as an assessment of the productions of the period. A thorough revision of theories about the origins and significant processes of the creation of the Hebrew Bible is urgently required in biblical scholarship, after which it should be possible to reevaluate the true importance of the Second Temple period.

Here it is only possible to note the productions of Genesis and the primary narrative about Israel's origins, the DH and the various writings incorporating anthologies of prophetic material, wisdom sayings and discourses, and the Psalms. What became the Torah (Genesis-Deuteronomy) ends with the death of the greatest of all prophets, Moses, and the DH ends with the death of the last Judean king. An eschatologizing hermeneutic can be detected in the production of Isaiah, Jeremiah (only to a very limited extent), Ezekiel, and the book of the Twelve (prophets). This is especially apparent in the book of the Twelve, in particular in the appendices to Zechariah 1–8 (Zech 9–14; Malachi). No specific date can be given to these productions but the period of the 4th–3d centuries would make sense for the prophetic collections (along with Chronicles, Ezra-Nehemiah, and possibly a good deal of the DH and elements of Torah). Conventional scholarship favors an earlier dating for Torah but mainly because it insists on viewing Ezra's lawbook as some form of the Pentateuch. There is little or no hard evidence for this claim and its only force is as a commonplace of traditional scholarship. Our ignorance of these matters is almost total, and it is part of the problem of reconstructing the history of the Second Temple period that we know next to nothing about how, when, or why these writings were produced. That they were produced is self-evident, but no *reliable* information is available which would take the matter beyond the level of scholarly hypotheses. From Ezra-Nehemiah to the Qumran scrolls we have a family resemblance of the production of scrolls imposing regulations of purity on the community and differentiating between various groups in a fundamentally sectarian way. A key to understanding this phenomenon is the (lay) interpretation of texts, and reflections of this practice are to be found in many of the writings of the period (e.g., Isa 29:9–14; 30:8–14; Jer 36; Dan 9:2).

A brief treatment of the Persian period cannot become an investigation of the production of the Hebrew Bible and the periodization of the Second Temple era into Persian, Greek, and Roman is at best a convention rather than a reflection of substantive differences in the development of the various Jewish communities in the empires. Yet the student of the period ought to be aware of the fact that the biblical books were put together in the Second Temple period and that this process was part of the structural developments which constituted the communities of the time. This makes the presentation of Ezra with his imposition of a document (possibly Iranian) on the Jerusalem community regulating its identity and behavior a very important reflection of the period. And this remains the case whether Ezra is regarded as a historical or a fictional character and whether he is assigned a date in the 5th or 2nd century (see Garbini 1988: 151–69 for this second option). The Temple Scroll of Qumran, the Priestly Writing incorporated into the Pentateuch, Ezekiel 40–48,

and other ritual texts indicate various moves to impose regulatory ritual character on the communities of Jews living in the Second Temple period and allow us to characterize the period in terms of its emphasis on ritual purity and identity. Elements of this character are also to be found in the NT Gospels and some of the writings of Paul, thus indicating a continuity of concern with halakic interpretation and ritual prescription throughout the whole period of the Second Temple.

The book of Ezekiel apart, most of the writings which later formed the prophetic collection appear to be less concerned with ritual purity (Haggai and Malachi belong more with the halakic mode) than with ethics and expectations. However, the colophons introducing many of these scrolls suggest that a final stage of the editing made them supplementary to the DH (i.e., to be read in the light of that collection as a kind of *Ergänzungstext*). Later rabbinic understanding of these texts read them as commentary on Torah, but in the Second Temple period it is unknown how they functioned or what relationship they may have had to whatever constituted Torah. Here our ignorance of the period is part of the problem for historical reconstruction. The Qumran texts' use of the prophetic texts (Dan 9:24–27) may represent a common understanding of them in the 2d century which maintained earlier uses of them, but we do not know what was normative and what innovative in the communities of the period. The collections of prophetic texts may have functioned as revitalization movements throughout the period or may have supported oppositional groups in conflict with the urban centers or may even have opposed the cult centers in the name of inspired individuals (see Blenkinsopp 1977 for a very good treatment of the opposition between prophecy and Torah). What is urgently needed in (professional) biblical scholarship is a good theoretical treatment of the prophetic literature which would contextualize it in the period of its production as writing rather than the usual historicist treatment which reads it as the expositions of its colophons.

The production of the literature of the past (which is how most of the biblical literature is presented, cf. the introductions to Proverbs, Qoheleth, Jonah, and especially Ben Sira) in the Second Temple period may reflect a movement to differentiate between past and present in terms of warranting authorities, as well as a concealment of ideological controls on the receiving communities. At the same time such literature facilitated the role of the authoritative (and authorized) interpreter who could lead the community in the correct interpretation of the texts. Nehemiah might be regarded as the classical example of this activity which seems to have bypassed priestly authority on issues of purity and temple regulation (see Smith 1971: 101–2); the "correct/legitimate teacher" of Qumran may be seen as an equivalent interpreter of texts. Here then are to be found the roots of the scriptural interpreter figure so important in the development of post-Second Temple Judaism, one element of which was Christianity.

The problematics of the literature of the Second Temple period are formidable. The Ezra-Nehemiah corpus is complicated by its association with Chronicles. Some scholars identify the Chronicler as the producer of the two works, while a small group of scholars insists that the Chronicler is *not* the author of Ezra-Nehemiah (e.g., Eskenazi 1988; Williamson *Ezra* WBC; Blenkinsopp *Ezra* OTL 47–53, opposes this latter view). The difficulty of determining such issues directly relates to the diversity of evidence deemed relevant to it. Individual scholars must decide questions like the historicity of Ezra by relying on the weight they give to extratextual considerations.

Some biblical literature, such as Job or Lamentations, may have been produced in the Persian period, other pieces, such as Esther, Tobit, Judith, and Susanna, while set in the Assyrian-Babylonian-Persian periods were most probably produced in the Greek period. These variations of presentation and production illustrate further difficulties in dealing with Jewish literature of the Second Temple period. The tendency to set a story in the (distant) past is so prevalent that it must indicate some ideological value reflecting the past as authoritative. It certainly conceals the period of (and reason for) production and misdirects the attention of the historian who may be tempted to use the work for historical reconstruction. Beautiful women of immense power flourish in these novellas (e.g., Esther, Judith, Susanna), Jewish figures run the empire and guide the thoughts of the pagan emperor (e.g., Mordecai and Daniel), and various shrewd stratagems save the Jewish people from annihilation (see the books of Esther and Judith). While the books have a certain lyrical and romantic charm, it is difficult to credit them with any historical or social value which would illuminate either the Persian or the Greek period. They may be used to construct a sense of fantasy or aspiration among various Jewish groups of the period, or be thought of as reflecting teaching aids inculcating loyalty to group identity and religious affiliation (cf. the Maccabean literature of the Greek period). In many cases they illustrate in story form the (moral) principles behind Torah and as such may be seen as typifying the piety of various Jewish communities in the Second Temple period. At the same time, it cannot be ruled out that the tales of Jewish pietists flourishing in the corridors of power (Babylonian, Persian, Greek) may reflect the political and social integration of Jews (individual or in groups) in the structures of power or may represent the internalization of imperial values as a result of being a low-status group among the communities of the empire (cf. the story of Joseph in Egypt).

D. The Roots of Sectarian Judaism

It would be difficult to exaggerate the importance of Babylonian, Egyptian, and Persian influences on the development of Judaism in the Second Temple period. It may be rather difficult to itemize them or to separate them into coherent strands, but the foreign context of much of the ideological influence on the Jerusalem community cannot be denied. Whatever the historical truth behind the stories in the literature of the period (especially Jeremiah, Ezra-Nehemiah), it is hard to avoid the conclusion that a Persian instrument of control was used to construct in Jerusalem an ideologically defined elite group commanding the regulation of temple purity and religious identity. The subsequent production of apocalypses also points in the direction of Persian influences, especially the Gathic teachings about fate after death in Zoroastrianism (see Boyce *CHJ* 1: 298–301). If an elite from the Persian satrapy of Babylonia

did travel to Jerusalem in order to restructure temple and community in ways quite contrary to what previously had obtained there, then it must be admitted that a Persian shaping of Jewish thought was one of the most fundamentally creative forces in determining the roots of Second Temple Judaism. Behind the complex textuality of Ezra-Nehemiah may be discerned the creation of a sect distinct from the general populace of Jerusalem and its environs. The later community of Qumran may afford perfect parallels to this emergent sectarianism in 5th–4th century Jerusalem. In fact, it might be a sound methodological principle to treat the whole period of the Second Temple as a single period dominated by sectarian ideology and struggles and to read *all* the literature as bearing on different aspects of these ideological struggles (including a good deal of the Gospels and Paul in the NT).

A history of the different Jewish communities in Babylonia, Egypt, and Palestine cannot be written because of a lack of data, so the argument here must be based on an attempt to read what data there are in the light of how the communities developed in the Roman period. A reading of the book of Isaiah will show some evidence of sectarian pressures in the Second Temple period (small wonder that the Isaiah scroll should feature so much at Qumran). Conflict over the temple is obvious in Isa 65:1–7; 66:1–6, and the closing chapters of Isaiah sharply differentiate between the servants of Yahweh and their opposers (65:13–16). Reference to those "who tremble at his word" (66:5; cf. Ezra 9:4; 10:3) in contrast to an unnamed group which shares certain Yahwistic beliefs in common indicates some inner-community conflict which is best described as sectarian (see Blenkinsopp *Ezra* OTL for a good analysis of the sectarian tendencies of the Second Temple period; see also Rofé 1988a). Conflicts of interpretation have always been a major feature of sectarian readings of texts and the use of controlling documents in Ezra-Nehemiah to enforce purity and identity points to sectarian aspects at the root of the developing Jewish community in Jerusalem. The long history of argument about texts and their meanings which has characterized Jewish and Christian communities (so quintessentially sectarian are these religions) has its beginnings in the Second Temple period when documents and texts were produced in order to shape, regulate, and control religious parties in contradistinction to the larger populace occupying the territory.

The precondition of this sectarian development was the destruction of the temple by the Babylonians and the isolation of a deported elite in different cultural surroundings. The Babylonian deportation provided a radicalizing enculturation of Judean elements which helped to create the impetus toward change in a later period. Some of the impact of Babylonian culture on Judean religious thought may be seen in the polemic against idols in Isaiah (40–48) and in Isaiah's use of the hymns to Marduk as models for a Yahwistic rhetoric. Elements of Babylonian cosmogony also helped to transform the Canaanite mythology of pre-catastrophe Israelite thought in the direction of the myth of Yahweh the creator (here Isaiah 40–66 and Genesis 1 are rather different examples of Babylonian influence). While the general outlines of Babylonian and Persian influences on Jewish thought may be straightforward, it is far from clear how the dynamics of these transformations worked. In superficial terms what went into the Babylonian deportation were elements of polytheistic Yahwism and what, some centuries later, came back from Babylonia was a transformed Yahwism capable of reshaping Palestinian culture effectively. The controlling ideological myth of the Hebrew Bible produced in the Second Temple period (i.e., that Yahwism was as old as Abraham) needs to be read as a direct indication of the fact that Yahwism came from Mesopotamia, but not in the distant past of the Bronze age. Rather, it came out of Babylonia as a direct consequence of an elite's experiences arising out of the deportation. Only the Jerusalem territory in Palestine, however, afforded the Persian group the opportunity to impose their ideology on whatever factions would support them.

This account of what may have taken place during the Persian period would account for the priority of Genesis over Exodus in the Hebrew Bible (see Garbini 1988). The Egyptian Jewish communities had a rather different myth which made Egypt the source of the nation and Moses the revealer of Yahwism and creator of the community. Much of the Hebrew Bible (especially the deuteronomistically influenced sections) is very hostile to Egypt and all things Egyptian and yet the story of Moses and the people in Egypt remains the central feature of the Bible. The denunciations of the Egyptian Jews in Jeremiah 44 are typical of such sectarian fervor and the DH is extremely hostile to most Israelite involvements with Egypt. Yet the basic myth of the Exodus is required to give legitimation to the Jews of Egypt and is only put into perspective from a Babylonian point of view by having Abraham precede the period of the Exodus and function as the "father" of the nation. Second Isaiah is an important reflection of the emergence of Abraham as a founding feature of the nation's history (Isa 41:8; 51:1–2), but the traditional dating of this part of Isaiah by scholars to the 6th century is undoubtedly rather early (see Torrey 1928 for a late 5th century date; see ISAIAH, BOOK OF).

The Babylonian ideology which shaped parts of the Bible has deformed the record in a number of ways by creating the myth of an "exile and return." This may be seen in the Ezra-Nehemiah volume, also in part of Chronicles, Isaiah, Jeremiah, and Ezekiel (cf. Zech 1). From this perspective (i.e., the production of the *ʿam haggôlâ* party) the Babylonian deportation was a *temporary* taking into exile of a favored group of people (see Jer 24; 29: 10–14) which eventually returned in triumph to Jerusalem after seventy years (or at least their descendants returned some generations later). From the Babylonian perspective, those who had remained behind and who had survived the Babylonian depradations of Jerusalem counted for nothing (note how this reverses the ideological force of 2 Kings 17). In fact, the myth of the "empty land" (2 Chronicles 36; Leviticus 26) simply wrote these survivors out of existence. Thus the triumphal procession which went back from Babylonia to Jerusalem (Ezra 1) took over an empty land, rebuilt the temple, and constituted the official inheritors of all the sacred traditions. This is the Babylonian myth enabling a sectarian takeover of Jerusalem by an elite which determined identity and purity in accordance with its ideological regulations. A squalid deportation of disruptive elements has been thereby transformed into a significant exile of leadership elements awaiting the work

of Yahweh in restoration. As an enabling myth it has certain charms and a good deal of power. Unfortunately it has misled generations of biblical scholars into taking it seriously as if it were a historical account without ideological factors. Jewish history is dated by reference to it, (e.g., preexilic, postexilic, etc.). But there are very important contrary elements in the Hebrew Bible which need to be taken into account to provide a balance to this myth.

These other elements also probably represent sectarian movements in the Second Temple period and therefore should be noted as evidence for the complexity of sectarian Judaism in that period. Jeremiah 42 indicated a different and distinctive Palestinian perspective on the period after the fall of Jerusalem. The flourishing of Jewish communities in Egypt throughout the period points to an alternative account of things. Diasporic communities in the empires of Persia, Greece, and Rome also indicate a nonrecognition (or acceptance) of the myth of exile and return in the specific terms of the Jerusalem sectarian elite. In fact, the diffused diasporic communities are evidence for rather different perspectives on the deportations of the Babylonian period. Jer 29:4–7 counsels permanent residence in Babylonia (the supplementation of the text by 29:10–14 attempts to deconstruct the sound counsel of permanence). That some Jewish communities regard themselves in exile and looked forward to an eventual return to Palestine need not be denied, but whether this view was normative for *all* Jewish communities cannot be determined. The myth of a return belongs to a particular set of sectarian beliefs and values which was probably not shared by all (perhaps not even many) Jewish communities.

A more important distinction should be made with reference to the motif of "exile and return." Much of the literature of the Second Temple period recognizes a category of exile after the destruction of Jerusalem in 587/86, but it does not recognize any return in subsequent centuries. This literature (usefully surveyed by Knibb 1976) represents Israel as being in exile for centuries; virtually in permanent exile. (See the interpretation of the seventy *weeks* of years in Dan 9:24 which replaces the seventy years of other texts.) Exile becomes a symbol in this literature; a symbol for the alienation of the group (or sect) from power in Jerusalem, or one related to messianic expectations which alone would restore the people to their land. Here the Qumran literature has a rather different understanding of exile from that represented by Ezra-Nehemiah and one wonders if these differences do not indicate a clash of ideological and sectarian holdings. If the origins of Qumran were to be traced to Babylonian reform groups which only arrived in Palestine during the Maccabean period, this would account for its nonrecognition and for its belief that the exile as punishment of Israel's sins had continued unbroken to its own time (see CD 3:10–14, and the discussion in Davies 1983: 119–25). Whatever the origins of Qumran may have been, the community clearly believed in exile as a continuing experience, even though it might be regarded as living in its own land. The books of *1–3 Enoch,* Baruch, *4 Ezra, 2 Baruch,* the Qumran *Damascus Document,* and the *Testament of the Twelve Patriarchs* all represent exile as a permanent state of the community and recognize no restoration or return from exile. All this literature may be no earlier than the 2d century B.C.E. but it puts the biblical material which focuses on "exile and return" into perspective by suggesting that there is a preponderance of one type of literature on the subject included in the Hebrew Bible. If this is a correct judgment, then we must recognize the sectarian nature of the biblical material as being one-sided in its emphasis. The claim that the exile had ended with a restoration to Jerusalem would inevitably empower those running the cult center in Jerusalem. Other voices can be heard in different texts, and a much greater divergency of opinion has to be allowed for in the Second Temple period. It is important that developments in the Persian period should not be narrowed down to an uncritical acceptance of the ideology behind Ezra-Nehemiah.

Other factors which contributed to the sectarian developments of Jewish communities in the Persian period included the transformation of circumcision into a symbol of group identity in religious (rather than tribal) terms. This was facilitated by the deportation of Judeans to Babylon where a normal cultural trait became something special by virtue of a new social context. Many scholars also see in the disruptions caused by the Babylonian deportations the acceleration of institutions such as the sabbath into significant religious occasions. So little historical information is known about the sabbath (outside the ideological texts contained in the Pentateuch which have little intrinsic historical value, there is not much in the Hebrew Bible which is informative about it) that it would be unwise to turn the 6th century into a "pandora's box" of cultural creations. Indeed, a reliable historical account of the sabbath has yet to be written and until one is produced it would be better to recognize the sabbath as a sectarian element in the Second Temple period reflecting the sectarian literature generated by the ideological movements of that period. Scholarly speculation also claims to find in the deported communities in Babylon the beginnings of the creation of the synagogue. No evidence exists for this claim and the lack of data for life in Babylonia is such that we do not know how the deportees constructed the institutional aspects of their religious life. Sabbath and synagogue may have come out of Babylonia in the Greek period but we know nothing of a definitive nature about either institution.

What the Persian period may have given to the Palestinian Jews was the beginnings of a temple sectarian party. A temple community was created in Jerusalem which was to determine the shape of nondiasporic Jewish communities for centuries and, in many cases, to create the terminology with which Jewish history has been written ever since. Comparative work on temple communities (what Weinberg 1976 terms *Bürger-Tempel-Gemeinde;* cf. Blenkinsopp *Ezra* OTL, 69) suggests a model for describing the Jerusalem community as a cult with high social and economic status in the land. Control of the temple is a wealth-creating operation which endows the party in charge with powerful opportunities for shaping and controlling the community. Temple taxes, maintenance of the expiatory rites, control of the temple lands and herds, collection and disbursement of funds, enforcement of sabbath prescriptions, regulation of trade and merchandising, and the oversight of purity rules and membership of the cult would afford enormous power to those in charge of the temple. As the economic center of ancient cities, the temple afforded

virtually unlimited power to the families controlling it. The history of the Second Temple period is very much one of control of the temple and conflict between sectarian parties vying for that control, with a variety of regulatory documents and visionary programs relating to the cult center constituting a dominant element of what eventually became the Jewish scriptures of a later period.

E. Conclusion

According to Ezra 9:1–4, the "holy race" (i.e., the deportees who had returned from Babylonia) had corrupted itself by mixing with the peoples of the lands and a great divorcing ceremony was imposed on all those who wished to purify themselves from such assimilation with the godless of Palestine. Whether historical or ideological (conceivably both) the material in Ezra 9–10 epitomizes the sectarian spirit of the Second Temple period with its drive to create a sacred enclave of "pure" returned deportees (and their descendants). Purity of people, of priesthood, of temple and correct interpretation of texts became the guiding principles of the period, though it is arguable that the Chronicler had a broader view of things. The paucity of data and the complexity of interpreting what data exist do not make the historian's task an easy one. The material is capable of being interpreted in a number of ways and the reading of it followed in this article is very much informed by how the Jewish communities developed in the post-Persian period (hindsight is inevitable given the obscurity of the period and the indeterminacy of the documents). The appearance of Cyrus in Isa 44:28; 45:1 (whether as gloss or genuine element in the text is disputable and immaterial to the point being made here) indicates an interpretation of the period which wished to make the Persian emperor the key to understanding the reconstruction of Jerusalem. It is a historicizing of the text which makes the foundational element in the community's existence an event in the (distant) past and has the same ideological profile as the statement in Ezra 6:14, "They finished their building by command of the God of Israel and by decree of Cyrus and Darius and Artaxerxes king of Persia." Such imperial authorities gave the temple a pedigree which was unimpeachable in the community.

The Persian imperial power gave way to the irresistible conquests of Alexander of Macedon in the late 4th century, though biblical literature hardly reflects anything of the transition from one empire to the other. A summary of the transition appears in 1 Macc 1:1–9 as the background to the Maccabean struggle in the mid-2d century. This literature only appears in the Greek Alexandrian canon of the Bible (LXX), it is therefore obvious that the Hebrew canon maintains the principle of using only literature which directs the attention to the pre-Hellenistic period. Much of the literature usually associated with the Persian era most likely comes from the Greek period, but scholars have a great tendency to date biblical books according to the period in which they are set (Daniel being a notable exception here). More important than this academic tendency is the need to recognize the ideology of concealment behind the presentation of so much material as taking place in the Persian era. Portraying events in the distant past, the documents took on a legitimation of antiquity and shaped influence from past authorities. While biblical scholarship has tended to play down the importance of the Second Temple period, treating it as an age of decline in contrast to the period before the fall of Jerusalem, it is important to see that the real significance of the period is determined by the fact that it produced the Hebrew Bible and that therefore all our evaluations of different periods need to be modified by a serious reassessment of the period. Whether the Persian period was more significant than the Greek period must be left open to debate, because periodization is a category imposed by historians on the data which awkwardly maps the contours of an age without adequately representing them. Different accounts may be given of the period (see Cross 1975), but the reading which I have followed is intended to emphasize the fact that "the day of small things" (Zech 4:10) is not something to be despised.

ROBERT P. CARROLL

ISRAEL, SOCIOLOGY OF ANCIENT. See SOCIOLOGY (ANCIENT ISRAEL).

ISSACHAR (PERSON) [Heb *yiśśākār* (Q); *yiśśāśkār* (K)]. **1.** The eponymous ancestor of the Israelite tribe of Issachar, and the fifth son that Leah bore to Israel's eponymous ancestor Jacob (Gen 30:17–18). The etymology of the name is problematic, and any attempt to understand it must begin with a brief review of the narrative that culminates in the birth of Issachar.

Leah's ability to bear children seemingly came to an end after the birth of Judah, Jacob's fourth son. Leah's envious but barren sister Rachel then arranged to have her handmaid Bilhah bear children for Jacob on her behalf (Gen 30:1–8), a stratagem that the now-barren Leah also utilized with her handmaid Zilpah (vv 9–13). Each handmaid bore two sons to Jacob. When Reuben, Leah's oldest son, discovered some mandrakes (believed to have aphrodisiac properties), and when Rachel expressed an interest in acquiring them (v 14), the stage seems to have been set for Rachel herself to begin bearing sons for Jacob. But Leah gave Rachel the mandrakes on one condition: that she agree to let Leah sleep with Jacob that night. Indeed, that night Leah conceived Issachar (Jacob's ninth son; vv 15–17).

This story itself contains two folk etymologies for the name Issachar, both based on wordplay involving the root *śkr*, "to hire, pay wages, recompense." In v 16, when Leah first informs Jacob that he is to sleep with her, she says "I have surely hired you *(śākōr śēkartîkā)* with my son's mandrakes." Then, after Issachar's birth, Leah notes that the child is "my compensation *(śēkārî)* for me having to give my handmaid to my husband" (v 18). Attempts to attribute these two popular etymologies respectively to J and E (Speiser *Genesis* AB, 232) underestimate the literary art of the writer, who was trying to create some memorable way by which the name of an eponymous ancestor would become especially meaningful.

The only thing that seems relatively certain is that the name indeed seems to be linked to the root *śkr*. The Ketib seems to suggest an original *yēš śākār*, "there is recompense" (cf. Jer 31:16; 2 Chr 15:7), but this yields a very unusual linguistic construction for a personal name. For the same reason, it is equally problematic to view the name straightforwardly on the basis of the Qere, which appears to be a *Nip'al* imperfect ("he hires himself out"). Wellhausen (1871: 95) suggested that a more typical personal name construction would be *'îš* + divine name (in this case, the Egyptian god Sokar); the name would hence mean "devotee of Sokar." The name for many Israelites seems to have contained echoes of **'îš śākār*, "man of hire, hired workman" (GesB, 322; *KB*, 408). Although such wordplay is not attested textually, these echoes surface in Gen 49:15, where Jacob "blesses" Issachar by noting that his territorial land was so appealing that, to obtain it, he "became a slave at forced labor" (Heb *lĕmas-'ōbēd*).

The tribal territory of Issachar is described in Josh 19:17–23, and enough place names there have been identified to confirm that it consisted of the E section of the fertile Jezreel valley and the low hills SE of Mt. Tabor. See GALILEE (PRE-HELLENISTIC) C.3.a. Deut 33:18–19 suggests that the tribe of Issachar shared a common mountain sanctuary with Zebulun. See TABOR, MOUNT. The two also shared a common boundary (Saarisalo 1927). Issachar is often listed along with Zebulun, his "younger brother" whom Leah subsequently bore to Jacob. Interestingly, the younger Zebulun is often given priority in these lists (*IDB* 2: 770–71).

LB sources indicate that in the 14th century the E Jezreel area was worked by Canaanite kings using forced labor (EA 365), and from this Alt (*KlSchr* 3: 169–74) suggested that this was evidence of the tribe's early settlement and status among the Canaanites, a claim that has been widely followed (see *NHI*, 78–79; *LBHG*, 175). He furthermore claimed that since there is no S border for Issachar in Joshua 19 its N border actually constituted part of the original description of Manasseh's territory; thus, the tribe no longer existed as a functioning entity when the Joshua 19 list was compiled in the time of the Judges, and thus Issachar is conspicuously absent in the Gideon story (set in the E Jezreel valley). Indeed, there is some evidence of close ties between Issachar and Manasseh: Tola, a man of Issachar, dwelt in Mt. Ephraim (Judg 10:1); Shimron the son of Issachar may apparently be associated with Mt. Shomron, Samaria (Gen 46:13; 1 Kgs 16:24); and Jashub, another son of Issachar (1 Chr 7:1), may be connected to the place Jashub mentioned in the Samaria ostraca (*LBHG*, 223, 325).

Gottwald (1979: 216), on the other hand, contends that the tribe of Issachar coalesced around Canaanite serfs in the Jezreel who, aided by already-free Israelite tribes in the highlands of Galilee and Samaria, rejected their underclass service to their masters in nearby city-states (Megiddo, Taanach, Beth-shean). Thus, he suggests that the tribe, as a functioning unit, appeared late rather than disappeared early. Indeed, one of the judges, Tola, is said to have been from the tribe of Issachar (Judg 10:1), and Issachar is listed as the 10th of Solomon's administrative districts (1 Kgs 4:17).

GARY A. HERION

2. A levitical gatekeeper, the seventh of Obed-edom's eight sons, and namesake of the patriarchal/tribal ancestor (Gen 30:15–18; 49:14–15); mentioned once in the OT (1 Chr 26:4–5). Issachar served with his family (the Obed-edom clan) at the S gate of the temple precinct and the storehouses related to it (26:15). By bracketing their list (26:4–8) with the Korahite family of Meshelemiah (26:2–3, 9), the Chronicler presents Issachar and the Obed-edom clan as descendants of Levi through Korah (1 Chr 26:1, 19; 9:17–20). If the Chronicler intends all four persons named Obed-edom in his Davidic narrative to refer to the same individual (the Gittite, 1 Chr 13:13–14; 15:25; gatekeeper-musician, 15:18; gatekeeper, son of Jeduthun, 16:38; gatekeeper, son of Korah 26:4, 15), he has left clues that Issachar's ancestry and therefore his clan's professional credentialing was at best complex (Williamson 1979: 253–54). The size (26:8; cf. 16:38) and fitness (26:6, 8) of the family for temple service are stressed, perhaps giving further indication of debate over their place in the levitical

divisions in the time of the Second Temple whose architecture 1 Chronicles 26 seems to assume.

DAVID L. THOMPSON

ISSHIAH (PERSON) [Heb *yiššîyāh*]. Var. ISSHIJAH. The name of three different persons mentioned in the OT.

1. The son of Izrahiah and, according to 1 Chronicles, a military leader from the tribe of Issachar during the reign of David (1 Chr 7:3). While it is possible that the Chronicler found Isshiah in source material from an earlier military census (Williamson *1 and 2 Chronicles* NCBC, 46, 76), the stylistic characteristics of 1 Chr 7:1–5 suggest that the unit was composed by the Chronicler himself. Isshiah may represent a postexilic name that the Chronicler retrojected into the time of David in order to establish impressive military support for David's rule.

2. The son of Rehabiah and one of the "remaining Levites" who, according to the Chronicler, casts lots before David, Zadok, and Ahimelek in order to receive his place among the levitical household leaders (1 Chr 24:21). Although Liver (1968: 8. 29–32) believes that this list may have originated from an authentic source composed during the reign of David or Solomon, most commentators have attributed the list in which Isshiah appears to a time later than the main composition of Chronicles, either to the late Persian period (Williamson 1979: 259–60, 265–68) or, more commonly, to the Maccabean era (Rudolph *Chronikbücher* HAT, 163–65). The style of the list, however, corresponds closely with the compositional techniques of the Chronicler. The Chronicler may have borrowed the name from a postexilic individual in order to complete a suitable list of levitical names for the reign of David.

3. A member of the family of Harim who lived in the Persian province of Judah during the mission of Ezra (Ezra 10:31). Ishijah married a non-Judean wife. He consented to divorce her during the reforms of Ezra under the threat of complete ostracism from the Jerusalem temple-state. Though the list of Ishijah's peers may be abbreviated (Rudolph *Ezra und Nehemiah* HAT, 97–99), it is generally agreed that the names in the list of Ezra 10:18–43 authentically represent individuals from the Persian province of Judah during the mission of Ezra.

JOHN W. WRIGHT

ISSHIJAH (PERSON) [Heb *yiššîyāh*]. Var. ASAIAS. A descendant of Harim and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:31). According to Noth, the name Isshijah is derived from the root *nšh* and may mean "Yahweh will forget"; but we are left wondering who or what Yahweh will forget. Alternatively, Noth suggests the meaning "Yahweh will cause to forget"—perhaps an older child who died or a previous barrenness (*IPN,* 211; cf. also Manasseh). In the parallel text of 1 Esdr 9:32, the name Asaias appears in the position Isshijah holds in Ezra 10:31. Isshijah was a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:32; Neh 7:35). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

ISTALCURUS (PERSON) [Gk *Istalkouros*]. A descendant of Bigvai whose son Uthai returned with Ezra to Jerusalem from Babylon (1 Esdr 8:40). In Ezra 8:14, ZACCUR occurs in the place of Istalcurus, and both Uthai and Zaccur are listed as brothers. Swaim (*IDB* 2: 771) suggests that "Uthai the son of Istalcurus" in 1 Esdras is a "corruption of 'Uthai and Zaccur' in the parallel Ezra 8:14." Swaim's conclusion can be supported by a portion of the manuscript tradition, but Hanhart (1974) still preferred "Istalcurus" in his critical edition of 1 Esdras. The Vg adds to the complexity of this problem in identification by listing Uthai as a son of Zaccur (Lat *filius zaccuri*).

MICHAEL DAVID MCGEHEE

ITALIAN COHORT [Gk *speira Italikē*]. An auxiliary unit in the Roman army, one of whose centurions became the first reported Gentile to receive the gift of the Holy Spirit and to be baptized in the name of Jesus (Acts 10). CORNELIUS, the centurion, sent one of his devout soldiers along with two servants to bring Peter back to Caesarea; there, upon hearing Peter, Cornelius and several others were converted.

The Italian Cohort was probably an infantry unit with a paper strength of 500 or 1,000 troops, roughly the size of a modern army battalion. Inscriptional evidence suggests that this unit was the *Cohors II Italica Civium Romanorum* or "Second Italian Cohort of Roman Citizens" (*ILS* 3/2: 9168). Originally the unit was composed of men from Italy; Cheesman hypothesizes that they may have been freedmen enrolled by Tiberius and transferred E to the area around Caesarea (1914: 66). Once in the East the cohort would have drawn replacement recruits from the local area, including many Syrians. Inscriptional evidence shows that Proculous, a Syrian officer, was transferred with this same unit from the province of Syria in 69 C.E. to aid the accession of Vespasian to the throne. The cohort was shortly moved back to Syria and remained their until at least 157 C.E. (Broughton 1933: 441–42).

Because there is no evidence that the Italian Cohort was stationed near Caesarea before the 60s, Haenchen doubts

the accuracy of Acts 10:1 and suggests that Luke's mention of the unit is anachronistic. He further notes that Roman troops cannot have been stationed in Caesarea during the years 41–44 when Herod Agrippa ruled the area as a semiautonomous kingdom (*Acts* MeyerK, 346, n. 2). However, Acts only places Cornelius and his cohort in Caesarea between the time of Paul's conversion ca. 35 C.E. (9:26) and the death of James in 44 C.E. (12:1–2); Roman troops would have been stationed in Caesarea from 35 to 41 C.E. Furthermore, there is no evidence that the Italian Cohort was stationed anywhere else during this period. Therefore, Luke's account in Acts 10:1 may have been accurate. See also PW 4/1: 231–356.

MARK J. OLSON

ITALY (PLACE) [Gk *Italia*]. The word "Italy" appears four times in the NT. Rome was the capital of Italy and of the Roman Empire, which ruled most of the NT world. Sometimes Rome is used synonymously with Italy. See ROME.

The first account of Jews visiting Italy is found in 1 Maccabees 8, where the account of a Jewish delegation was sent to Rome by Judas Maccabeus to sign a treaty with the Romans (ca. 160 B.C.). Later delegations were sent by his brother, Jonathan, and then by Simon to renew the alliance (1 Macc 12:1–4; 14:16–19, 24). Jews first received importance in Italy after Pompey conquered Palestine for Rome in 63 B.C. They increased in number under the protection of Julius Caesar. Christianity was probably introduced to Italy at an early date when the "visitors from Rome" returned to their country after Pentecost (Acts 2:10). Paul's letter to the Romans was written about 58 A.D., and it recognized many Christians who were both Jewish and Gentile (Rom 1:13).

The first NT reference to Italy pertains to Aquila and Priscilla who moved to Corinth from Italy because of the expulsion of Jews from Rome by Claudius in 49 A.D. (Acts 18:2). In Corinth they met Paul and aided in his ministry. The second reference is to the decision of Paul to claim his right as a Roman citizen to stand trial before Caesar (Acts 27:1). On his journey, Paul sailed along the coast of Italy, where he met Christians who offered their hospitality and who welcomed him to Rome (Acts 28:13–16). The third reference is a salutation in the letter to the Hebrews from those who "come from Italy" (Heb 13:24), which may help to determine the community from which the letter arose.

The adjectival form "Italian" occurs in Acts 10:1, to refer to an Italian cohort (band, military unit). Cornelius was the Roman centurion in charge, whom some consider the first gentile convert to Christianity.

ITCH. See SICKNESS AND DISEASE.

ITHAI (PERSON) [Heb *ʾîtay*]. One of David's champions, the son of Ribai from Gibeah of Benjamin, Saul's stronghold (1 Chr 11:31 [Gk *Aithi*]). 2 Sam 23:29b names one Ittai (Heb *ʾittay;* Gk *eththi*) in the parallel list. Since Ittai is designated as "the son of Ribai of Gibeah of the Benjaminites," the same person is meant.

D. G. SCHLEY

ITHAMAR (PERSON) [Heb *ʾîtāmār*]. The fourth son of Aaron and Elisheba. Unlike his brothers Nadab, Abihu, and Eleazar, Ithamar has a name of uncertain derivation. The etymology most often given, "isle of palm trees" (e.g., BDB, 16), hardly commends itself for a personal name. A more promising etymology is suggested by the various early NW Semitic names from Mari (ca. 18th century B.C.E.) seemingly containing *t*-infixed forms of the root *ʾmr,* which in some Semitic languages means "say, command" (Hebrew, Phoenician, Aramaic, Arabic) and in others "see" (Ugaritic, Akkadian). The form *ʾîtāmār* most closely resembles the Arabic eighth form (Gt) of the root *ʾmr, ʾītamara* ("he obeyed"); the loss of the final short vowel is expected in Hebrew. A NW Semitic dialect might also have contained a form **ʾītamara* < **ʾiʾtamara,* for in Ugaritic, in this very word, the root *ʾalep* quiesces; note the coexistent spellings *yʾitmr* (*CTA* 2.1.32) and *ytmr* (*CTA* 3.1.22). There may be cognate personal names attested in Mari: *Taʾtamar, Atamra,* and *Atamri-ilu;* we may even have a parallel name from Canaan proper in the slightly older Execration Texts from Egypt (*APNM,* 168). If such is the etymology of Ithamar, the name means either "He appeared" or "He obeyed."

In the Elohistic (E) source Aaron appears besides two men named Nadab and Abihu (Exod 24:1, 9), but their relation to him and to each other is unspecified. Since in the Priestly (P) source Aaron has four sons who are priests—Nadab, Abihu, Eleazar, and Ithamar (Exod 6:23; 28:1; etc.)—it is reasonable to suppose that likewise in E Aaron is the father of priests named Nadab and Abihu. What induced the priestly author, or his sources, to add the names Eleazar and Ithamar to the list?

The answer is that the author of P was a Zadokite priest claiming descent from Eleazar (Ezra 7:2–5; 1 Chr 5:30–33; 6:35–38). Although in P Eleazar is Aaron's third son, he inherits his father's office due to the mishap recorded in Leviticus 9–10 at the inauguration of the Tabernacle, where Nadab and Abihu die and Aaron is left, as in E, with only two sons. Much is obscure in these chapters, but the following interpretation is tentatively offered.

In Lev 9:2, 7–11 the priests sacrifice a calf as their own purification offering (usually rendered "sin offering," but see Milgrom 1971) and then a goat as the people's (Lev 9:3, 15). Instead of eating the goat as commanded in Lev 6:17–23—Eng 6:24–30), however, Aaron's sons burn it (Lev 9:15, 10:16), which is the correct practice only in the case of a priest's purification offering (Lev 6:23, cf. 4:8–10; 9:2, 7–11). Perhaps the priests fear to bear the sin of the community. To conclude the ceremony, a miraculous fire comes forth from Yahweh and ignites the offerings

(Lev 9:24). Then Nadab and Abihu kindle "strange fire" (i.e., fire not sent down by Yahweh) in their censers and are killed by another emission of divine fire (Lev 10:1–7). Perhaps the deity is displeased, too, by their failure to eat the people's purification offering. After this disaster, part of the ceremony is reenacted (Lev 10:12–15; cf. 9:17, 21), and only then does Moses discover that the priests had not followed proper procedure the first time (Lev 10:16). Although Moses addresses Eleazar and Ithamar, Aaron responds: "They [my four sons] have sacrificed today their purification offering and their holocaust before Yahweh and [nevertheless] such a thing [the death of two sons] has happened to me. Would it be right in Yahweh's opinion for me to eat the purification offering today?" (Lev 10:19). Moses accepts this argument. It seems that, because of the ritual pollution caused by the deaths of Nadab and Abihu (and perhaps by their crime as well), Aaron, Eleazar, and Ithamar are temporarily unfit to consume the people's offering. The story's most important outcome, for our purposes, is that Eleazar and Ithamar are left as sole priests of Yahweh, with the former the chief priest (Lev 10:12–15; Num 3:4).

Whence such a strange story about the Aaronic succession? It is widely believed that this is one of several biblical traditions originating in rivalries between priestly families; the best parallel is the rebellion of Korah in Numbers 16–17. In other words, some priests boasts Aaronic descent through Nadab and Abihu, but the Zadokites, of the clan of Eleazar, rejected their claims by telling a story of the crime and premature deaths of their adversaries' ancestors. Who these rivals were is a mystery, but below a possible solution is given. At any rate, if Nadab, Abihu, and Eleazar are ancestors of clans, this is presumably true of Ithamar as well.

Unfortunately, the priestly author gives no indication of who among his contemporaries claimed descent from Ithamar. We only know that they were in charge of the Levites, in particular of the lesser clans of Gershon and Merari (Exod 38:21; Num 4:28, 33; 7:8). We thus infer that there was in Jerusalem a minor priestly clan descended from Ithamar.

The Chronicler, however, gives Ithamar and his descendants greater stature. According to 1 Chr 24:3, 6, 31, David's two priests were Zadok the son of Ahitub (cf. 1 Chr 5:34; 6:37–38; Ezra 7:2) from the house of Eleazar, and Ahimelek (1 Chr 18:16 has "Abimelek," which is widely attested in ancient textual witnesses; see *CMHE*, 212, n. 66) the son of Abiathar from the house of Ithamar. In all, eight Ithamarite clans and sixteen Eleazarite clans ministered in David's day (1 Chr 24:3–19). Abiathar was the scion of the house of Eli, which had served in the important shrine at Shiloh. In other words, the Chronicler ascribed the Shilonite priesthood to the line of Ithamar.

The Chronicler's record of David's priests is related to 2 Sam 8:17, "Zadok the son of Ahitub and Ahimelek the son of Abiathar were priests." This reading is regarded as the result of textual error by almost all commentators, who either assume that Ahitub is Abiathar's grandfather or Ahimelek his father (*CMHE*, 212–14), since Zadok and Abiathar are elsewhere David's priests (e.g., 2 Sam 17:15). The simplest explanation is that Zadok did have a father named Ahitub and Abiathar did have a son Ahimelek named for his murdered grandfather (1 Sam 22:18–19) who shared his father's duties towards the end of David's reign. By this interpretation 2 Sam 8:17 is textually intact but chronologically misplaced. It is true that elsewhere Abiathar's son is called Jonathan (2 Sam 15:27, 36; 17:17, 20; 1 Kgs 1:42–43), but he was famous as a runner, not as a priest, and may have had an older brother. But even if 2 Sam 8:17 is corrupt, we cannot attribute the error to a careless scribe whom the Chronicler blindly followed. Ezra 7:5 and 1 Chr 6:37–38—Eng vv 11–12—record that during the monarchy there was a later Zadok the son of Ahitub. If the Chronicler's patronymic of the original Zadok is erroneous, it must be consciously derived from subsequent priestly genealogy.

The author of Chronicles, however, was not free to fabricate traditions about Ithamar, nor can he have been totally ignorant of the clan's history, because Ithamarites were prominent in the postexilic restoration; according to Ezra 8:2, their head was Daniel (cf. Neh 10:7), while 1 Esdr 8:29 refers to a Gamael (possibly the Gamul mentioned in 1 Chr 24:17). Moreover, 1 Chr 23:15–18 lists Ithamarite families, and the last, Maaziah, is also the name of a priest contemporary with Nehemiah (Neh 10:9). Therefore, the Chronicler had to reckon with living tradition. If 2 Sam 8:17 is corrupt, it must have been willfully altered at the same time that the Chronicler was assigning to the Ithamarites an important role in his reconstruction of the Davidic cult (1 Chr 24:3–19). If the figure of Ahimelek the son of Abiathar is a fiction created in this period, he likely comes from the Ithamarites' own tradition.

In short, after the exile Ithamarite priests purported to be the heirs of the house of Eli. If their claim was valid, the house of Ithamar looms larger in Israelite history. Was it a ploy for greater prestige, or did the claim reflect preexilic history? This question cannot be answered definitively, for other evidence of the affiliation of the Shilonite priesthood is ambiguous. 1 Sam 2:27–36 speaks of the rejection of the house of Eli and its replacement by a "faithful priest who will perpetually serve [lit., 'walk before'] my anointed," i.e., Zadok (v 25). The crux is vv 27–28, which, partly emended to the Old Greek, reads: "I revealed myself to your clan [lit., 'father's house'] when they were slaves ['slaves' not in MT] to Pharoah's household, and I chose it from all the tribes of Israel to be my priest to ascend to [alternatively, 'to sacrifice upon'] my altar and to burn incense and to bear the ephod before me, and I gave your clan all the offerings of Israel." Some have regarded the reference to revelation as evidence that the Shilonite priests claimed descent from Moses (e.g., *CMHE*, 195–215), but Moses and his descendants were never slaves in Egypt. There may have been a Mushite (from *mōšeh*, Moses?) priesthood descended from Moses (*CMHE*, 195–215), but it is unlikely that it claimed sole legitimacy, as implied here. To our knowledge, only three groups in Israel ever claimed the exclusive right to be Yahweh's priests—the tribe of Levi (in Deuteronomy-Kings, Jeremiah, and Malachi), the house of Aaron (in P and Chronicles) and the family of Zadok (Ezekiel). The Shilonite priests were obviously not Zadokite, but might have been Aaronic or Levitic.

Our only direct evidence on the matter suggests that the

house of Eli was Aaronic. In the time of Solomon Abiathar possessed an estate in Anathoth (1 Kgs 2:26), and the 8th-century (Peterson 1977; Boling *Joshua* AB, 492–97) list of levitical cities assigns Anathoth to the Aaronids (Josh 21:18; 1 Chr 6:45—Eng v 60). The Zadokites were of the clan of Eleazar. If the Shilonites were Aaronid, they probably claimed descent from Ithamar, Nadab, or Abihu. In favor of the identification with Ithamar, perhaps, is 1 Sam 2:33, which says that there will always be an Elid by Yahweh's altar, reminiscent of Ithamar's role as minor clergy. But the same could have been true, in some period, of Nadab and Abihu. Despite postexilic claims, it seems unlikely that the Priestly writer considered Ithamar the ancestor of Eli, for Ithamar is a neutral figure in P, while other rival priests (Nadab, Abihu, Korah, and the Levites) are excoriated. The only Aaronids condemned in P are Nadab and Abihu, who also figure in the old, N E source, and hence they are prime suspects as the ancestors of the priests of Shiloh. Admittedly, the Chronicler denies that Nadab and Abihu had descendants (1 Chr 24:2), but this merely means that by his time there were no longer clans with that name; after the codification of the Torah, no one would claim such ancestry. Note that like Eli, Aaron loses two sons who die for cultic offenses.

On the other hand, "I chose him *from all the tribes of Israel*" (1 Sam 2:28; cf. Deut 18:5) might indicate that the clan in question is the entire tribe of Levi. The text then corroborates such passages as Deuteronomy 18, which seems to maintain that all the tribe of Levi are potential priests (cf. Deut 10:8; Jer 33:21–22; Mal 2:4–9). In particular, our passage recalls the blessing of Levi in Deut 33:8–11, which must be reconstructed with the help of the LXX and Dead Sea Scrolls (*CMHE,* 197). Both 1 Sam 2:28 and Deut 33:8, 10 entrust the priesthood with sacrifice and censing, and both allude to oracles, though Deut 33:8 mentions the Urim and Thummim, while 1 Sam 2:28 refers to the Ephod, a garment or a pouch associated with oracles in general (1 Sam 14:3, 18–19 [OG]; 23:9–12; 30:7–8) and with the Urim and Thummim in particular (1 Sam 14:41 [OG] cf. 28:6). Later, the P document arrogated the use of the Urim and Thummim to the descendants of Eleazar (Num 27:21), and though they were kept in a pouch called the *ḥōšen,* they still were part of the Ephod assemblage (Exod 28:25–28). If the Shilonite priesthood was Levitic, its rejection here accords with other texts that exclude the Levites from the priesthood in favor of the Zadokite clergy (cf. Num 16:8–10; Ezek 44:10–16; 48:11). Of course, the Zadokites were themselves Levites, but note that the brunt of the curse falls upon "your house" (vv 31–33, 36), i.e., the descendants of Eli. In any case, the Zadokites were wont to use the term "Levite" ambiguously—sometimes it included them but at other times it referred to the other Levites, their servants. But the theory of the Levitic (as opposed to Aaronic) ancestry of Eli rests primarily on the phrase "I chose it from all the tribes of Israel," and Deut 12:5, 14; 1 Kgs 11:32; 14:21 (= 2 Chr 12:13); 2 Kgs 21:7 (= 2 Chr 33:7), its closest parallels, refer not to a tribe, but to a shrine or to the city Jerusalem. We might also compare Deut 29:30, which speaks of punishing an *individual* (but cf. v 17) "from all the tribes of Israel." On the whole, it is more probable that the house of Eli was Aaronic.

In short, it is possible, but not demonstrable, that the Shiloh priesthood was of the clan of Ithamar. Before the exile, the house of Eli was anathema to the Zadokites, but after the exile, the issue was dead. Perhaps at that time, in order to enhance the prestige and antiquity of their lineage, the postexilic Ithamarites, hithertofore a minor Aaronic order subservient to the Zadokites, claimed descent from Eli, chief priest of Israel before Samuel.

WILLIAM H. PROPP

ITHIEL (PERSON) [Heb *ʾîtîʾēl*]. **1.** An ancestor of Sallu, a Benjaminite and provincial leader who agreed to settle in Jerusalem (Neh 11:7). Although Sallu's line is referred to in both the list in Nehemiah 11 and 1 Chronicles 9 (cf. v 7), Ithiel is not mentioned. This, like other differences in the two lists, suggests that there is no direct literary relationship between the two lists (contra Kellermann 1966: 208–27 and Mowinckel 1964: 146–47). Some, however, have conjectured that both writers were dependent upon common archival materials (Brockington *Ezra, Nehemiah and Esther* NCBC, 187; cf. Myers *Ezra, Nehemiah* AB, 185). In any event, the presence of Ithiel in the list provides no further evidence of use in resolving the problem. Apart from the probable significance of the name itself ("With me is God"), nothing is known about this Benjaminite patriarch (Brockington, 189).

2. Perhaps one of two sages to whom the words of Agur are addressed (Prov 30:1). Along with the other addressee (Ucal), their names may have symbolic significance. So understood, Ithiel may mean a number of things: "signs or precepts of God," "with me is God," or perhaps, "there is a God" (Toy *Proverbs* ICC, 519). However, the names are missing from the LXX and the Hebrew of the verse is corrupt (Whybray *Proverbs* CBC, 172). Accordingly, a number of translators and commentators treat this opening line as an introductory confession, reconstructing the original in a variety of ways (McKane *Proverbs* OTL, 644–46).

FREDERICK W. SCHMIDT

ITHLAH (PLACE) [Heb *yitlâ*]. A town listed in the tribal territory of Dan, before the tribe migrated N of the Sea of Galilee (Josh 19:42). The town is unidentified, but the context suggests that it was probably located somewhere between Nahal Ayyalon and Nahal Sorek.

GARY A. HERION

ITHMAH (PERSON) [Heb *yitmâ*]. One of David's champions, a select class of warriors directly attached to the king for special assignments, named in the list of 1 Chr 11:10–47 (v 46), a list which, up to v 41a, parallels that of 2 Sam 23:8–39. Ithmah, a Moabite, is found among the 16 persons mentioned in portion of the list which is unique to Chronicles (vv 41b–47). Characteristic of this portion is the fact that all of the identifiable places from which these champions came are in the area of Transjordan (Williamson *Chronicles* NCBC, 104).

RODNEY K. DUKE

ITHNAN (PLACE) [Heb *yitnān*]. A settlement of the tribe of Judah. Ithnan is only mentioned once in Josh 15:23, where it is listed among the settlements occupied by Judah in the aftermath of the conquest. Though the present literary context of the Judean town list is set in the period of Joshua, its original setting was as part of a post-Solomonic administrative division of the S kingdom. The date for the establishment of this system is debated, with suggestions ranging from the early 9th to the late 7th centuries B.C. Ithnan is in the southernmost district of Judah, the Negeb. An Ethnan is mentioned as one of the descendants of Judah in 1 Chr 4:7, but no certain connection can be made between these two.

The location of Ithnan is problematic. In the list it is placed between Hazor and Ziph, in a context which would place it in the E Negeb. Some would combine Ithnan and Hazor on the basis of the LXX reading, Asorionain, and read Hazor-Ithnan. Some have identified it with el-Jebaryiah on the Wadi Umm Ethnan (WHAB, 124), but this is too far S. Abel suggested it might be found in the vicinity of Imitnan 21.5 km S of Beer-sheba (*GP*, 351; M.R. 132050), but this too seems too far S.

JEFFREY R. ZORN

ITHRA (PERSON) [Heb *yitrā'*]. Father of Amasah, commander of the Israelite army under Absalom during the revolt against David (2 Sam 17:25 [Heb *yitrā'*]; 1 Kgs 2:5, 32, 1 Chr 2:17 [Heb *yeter* is a variant]) and who was later assassinated by Joab (2 Sam 20:5–10). Although it is stated that Ithra was an "Israelite" in 2 Sam 17:25, this is probably a textual error for "Ishmaelite" since the former description would be superfluous. The correct reading, "Ishmaelite," is preserved in 1 Chr 2:17.

Ithra was probably not legally married (in the traditional sense) to Amasah's mother, Abigail, who was also the sister of David (1 Chr 2:15–17). The language of the text in 2 Sam 17:25 suggests he may have had a casual encounter with Abigail ("he went into her" [Heb *bā' 'el*]). Scholars suggest that the relationship was a *ṣadiqa* marriage, one in which the wife and children remained with her parents, with the husband having visiting privileges (Hertzberg *I and II Samuel* OTL, 357; McCarter *II Samuel* AB, 393).

The provocative theory that Ithra was in fact Nabal (1 Samuel 25) and had married Abigail (David's sister!) for political advantage is extremely speculative (Levenson and Halpern 1980). Such a view postulates that David married his own sister after the death of Ithra/Nabal for a similar political benefit. But such an act would have been politically fatal for David. Moreover, the theory abounds with tenuous assumptions, an example being the unlikelihood of David having both a sister and wife with the name Abigail, when these are the only persons with this name in the Hebrew Bible.

STEPHEN G. DEMPSTER

ITHRAN (PERSON) [Heb *yitrān*]. **1.** A clan name in the genealogy of Seir the Horite in Gen 36:26. Ithran is listed as the third of four sons of Dishon and thus he is a grandson of Seir. The name also appears in the parallel genealogical clan list in 1 Chr 1:41. These clans, not to be confused with the Hurrians of Mesopotamia, inhabited the region of Edom prior to the coming of the Esau clans and are said to have been subsequently dispossessed by these more aggressive peoples (Deut 2:12–22). Their designation as "cave dwellers" may be a reflection of their true condition or a disparaging remark by their conquerors.

2. A clan name in the genealogy of Asher in 1 Chr 7:37. Ithran is listed as the tenth of eleven sons of Zophah in the sixth generation after Asher. This genealogy has no tie to a historical narrative as in Gen 36. The only relevant information associated with the listing is a summary of the number of fighting men provided by these clans as well as a certification of the clan chiefs as proven leaders of the people (1 Chr 7:40). The Gk codex Alexandrinus has *yetren*.

VICTOR H. MATTHEWS

ITHREAM (PERSON) [Heb *yitrĕ'ām*]. The sixth and youngest son of David born at Hebron, during David's seven-year reign as king there (2 Sam 3:5; 1 Chr 3:3). The rest of his sons were born in Jerusalem. The name of Ithream's mother was Eglah. Of David's six wives at Hebron, Eglah is the only one specifically called "David's wife." This could indicate some special stature or significance accorded her. See also DAVID, SONS OF.

DAVID M. HOWARD, JR.

ITHRITE [Heb *hayyitrî*]. A gentilic adjective describing the clan or tribe of two of David's distinguished warriors (2 Sam 23:38 = 1 Chr 11:40). The names of the soldiers were Ira and Gareb. The Ithrite clan, located near Kiriath-

Jearim, was associated with the lineage of Caleb (1 Chr 2:53). It was probably an indigenous clan of Canaan, incorporated into the Caleb tribe during the Israelite settlement of the land (cf. Josh 9:17, Mazar 1963: 318–19). The placement of Ira and Gareb at the end of the list in 2 Samuel argues for their non-Israelite origin, since this position seems to be reserved for such persons (Mazar 1963: 318–19).

There is some evidence that Ithrite in the above lists should be read Jattirite (Heb **hayyattīrî*). This would then be an adjective describing the location from which the two warriors came, i.e., the town of Jattir (M.R. 151084) in the hill country of Debir (Josh 15:48; 21:14; 1 Chr 6:42—Eng 6:57). The evidence of the LXX, particularly in 2 Samuel, suggests this reading. For Gareb's name, B reads the gentilic as *eththenaios* (cf. A: *tethriteis*). In Chronicles, B reads consistently a long vowel after the Heb *t: eitheiri, iotheiri* (cf. also the Syriac). However, this evidence remains inconclusive. The simplest solution is to follow the MT.

ITTAI (PERSON) [Heb *ʾittay*]. **1.** Leader of a mercenary troop from Philistine Gath, he evidenced great loyalty to David at the time of the latter's flight from Absalom (2 Sam 15:19, 21, 22). The Bible narrates a number of encounters that David had on his flight from Jerusalem at the time of Absalom's revolt (2 Sam 15:13–16:14). Upon exiting from the city, David reviewed the troops accompanying him. Following the Cherethites and the Pelethites was a contingent of six hundred men from Gath (2 Sam 15:18; but see McCarter [*II Samuel* AB, 364] who excises the number 600; many commentators [e.g. Driver *NHT* 242] restore the name Ittai in this verse). David turned to Ittai, their leader, and pleaded with him to turn back and serve the new king. After all, Ittai was a foreigner and an exile, why should he take upon himself David's additional burden (vv 19–20)? Ittai, however, refused to abandon David and swore to share his fate, whether good or bad (v 21). Presumably impressed with his loyalty and devotion, David tersely assented (v 22). Two aspects in particular of this story have struck commentators. First is David's selfless concern for those serving him, even in a time of great personal stress (Smith *Samuel* ICC, 343). Second is the great loyalty, indeed love, which David commanded from his followers (Hertzberg *I and II Samuel* OTL, 342). David rewarded Ittai's devotion in what Hertzberg (342) terms "the way in which a king expresses his thanks" by appointing him, along with Joab and Abishai, to the command of one third of his troops each in the war against Absalom (2 Sam 18:2). Although there is a play on words on the name Ittai in the Hebrew of the MT, in which David asks Ittai (*ʾittay*) why he is "with us" (*ʾittānû*, 2 Sam 15:19), the etymology of the name, whether Hurrian, Hittite, general Semitic, or specifically Yahwistic, is unclear (see the discussions in Delcor 1978: 411–13, and McCarter, 370).

2. One of David's mighty men, called the "thirty" (2 Sam 23:29; but see Naʾaman 1988 for an argument that the Hebrew consonantal *šlšym* should be pointed *šālīsîm* "officers" and not as in the MT *šĕlōšîm* "thirty"). He was the son of Ribai from Benjaminite Gibeah, the home also of Saul. In the parallel passage in 1 Chr 11:31, he is named Ithai (*ʾîtay*). See also DAVID'S CHAMPIONS.

CARL S. EHRLICH

ITURAEA (PLACE) [Gk *Itouraía*]. ITURAEANS. A short-lived principality located in the Biqâʿ valley of Lebanon, founded by an Arab tribe of N Transjordan, who migrated into the Biqâʿ valley in the course of the 2d century B.C. Ituraea became a Roman vassal state in 63 B.C. and was split up in various petty principalities in 36 B.C. One of these was "the Ituraean country and Trachonitis" (Luke 3:1), ruled by Philippus, son of Herodes the Great (4 B.C.–A.D. 34).

The Ituraeans tribe is listed among the "sons of Ishmael" (7th century B.C.) in Gen 25:15 and 1 Chr 1:31 (Heb *yĕtûr*); in this list, they form, however, a redactional addition, probably from the 5th century B.C. See ISHMAELITES.

Thus, the origin of the Ituraeans cannot be traced beyond N Transjordan in the late Persian or early Hellenistic periods. 1 Chr 5:18–22 reports a war waged by Reuben, Gad, and half of Manasseh against "the Hagrites, Jetur, Naphish, and Nodab" (5:19), which is dated by 1 Chr 5:10 to the reign of Saul. See also HAGAR; HAGRITES; NAPHISH; NODAB. Because orthographically the name "Jetur" cannot have entered the biblical tradition before the 7th century B.C. (see JETUR), this dating must be incorrect. Most probably, the Chronicler (or one of his redactors, Knauf 1989: 49–52) had in mind contemporary Arab tribes from N Transjordan (and a conflict between them and Judean settlers?) when he wrote his account, which then dates to the 4th–3d centuries B.C.

Whereas the LXX transcribes Heb Jetur in Gen 25:15 (*Ietoúr*), it renders the tribe's name by *Itouraîoi* in 1 Chr 5:19. Under the Greek form of its name (and the corresponding Latin, *Ituraei*), the tribe became widely known in antiquity, and was infamous for its ferocity (cf., e.g., Cic. *Phil.* II, 8 [19]; 44 [112]; XIII, 8 [18]).

In the first half of the 2d century B.C., the tribe was still living in N Transjordan (Eupolemos Frg. 2 = Eus. *Praep. evang.* IX 30,3). By this time, the Ituraeans may have started to infiltrate Galilee. In 104/103 B.C., the Hasmonean Aristobulos conquered the Ituraean territory in Galilee and Transjordan, and forcefully converted the inhabitants to Judaism (*Ant* 13.11.3 §318). The Ituraeans, however, kept the area of Lake Huleh and Paneas (Caesarea Philippi; Schottroff 1982: 134). Most of the tribe may have migrated into the Biqâʿ valley at this time in order to escape Aristobulos. A migration of the Ituraeans is mentioned in the Safaitic inscription CIS V 4677; another Safaitic inscription, CIS V 2209, is dated to "the year of the Ituraean war," which is not a very precise date, given the belligerent character of this early bedouin tribe. Three Safaitic inscriptions (CIS V 784, 2209 and Ox 58) were

written by Ituraeans (in Safaitic, *ʾl yzr;* Winnett in Winnett and Harding 1978 *ad* WH 3735; Knauf 1989: 81). These inscriptions do not necessarily antedate 103 B.C., since Ituraeans may have pastured in the Haurân area well after this date (cf. Luke 3:1, and the alleged cooperation of the Ituraean Zenodorus with the "robbers" of Trachonitis, i.e., the Safaites, before 24 B.C.; see below). The Safaitic inscriptions found in the Biqâʿ (Ghadbân 1971; Harding 1975) cannot be attributed to Ituraean authors with any certainty. As early as in the time of Tiglath-pileser III, the Biqâʿ was frequently visited by Arab nomads (Eph'al 1982: 95–97; Knauf 1984).

In the Biqâʿ, the Ituraean tribal leader Ptolemaios (85–40 B.C.) founded a principality with its capital at Chalcis (ʿAnjar; but see Will 1983); he minted coins and acted as supreme priest at the central sanctuary of Baʿlbak-Heliopolis (Schottroff 1982: 138f.). In 85 B.C., he tried in vain to gain possession of Damascus; however, the people of Damascus preferred the rule of a more distant Arab, the Nabatean Aretas (*Ant* 13.15.1–2 §387–393; *JW* 1.4.7–8 §99–103). In 64/63, Pompey conquered the fortresses of Ptolemaios and imposed a tribute of 1000 talents upon him (*Ant* 14.3.2 §39). Ptolemaios' son Lysanias (40–36 B.C.) allied himself with the Parthians who occupied Palestine in 40 B.C.; he was subsequently beheaded when Rome regained its oriental realm (*JW* 1.13.1 §248–49; 1.22.3 §440; *Ant* 15.4.1 §91–92). Marc Anthony gave the Ituraean principality (together with other areas) to Cleopatra as a gift. Octavian/Augustus reversed this decision in 30 B.C. and invested Zenodoros, the son of Lysanias, with the S part of the previous Ituraean realm: the Huleh Area, Paneas, and the Trachonitis. Because Zenodoros could not, or would not, pacify the predatory bedouin in these areas (the same people who left the majority of the Safaitic inscriptions), Trachonitis was transferred to Herod the Great in 24/23 B.C. (*Ant* 15.10.1–2 §342–353; *JW* 1.20.4 §398–99). When Zenodorus died in 20 B.C., Herod "inherited" what had remained in the former's possession (*Ant* 15.10.3 §354–55; *JW* 1.20.4 §400). After Herod's death in 4 B.C., this area became the tetrarchy of his son Philippus (4 B.C.–A.D. 34; Luke 3:1), who refounded Paneas as Caesarea Philippi. In 20 B.C., the Ituraean principality of Chalcis in Lebanon had ceased to exist; whatever Chalcis is mentioned in later references must be sought in N Syria (Schmitt 1982). In 15 B.C., Baʿlbak became a Roman colony.

Although the Ituraeans adopted the paraphernalia of statehood in the course of the 1st century B.C., including Greek names for their tribal leaders, they basically remained a bedouin tribe, pasturing in the mountains, extorting taxes from the peasants within their reach, and conducting raids into neighboring territories. For the sake of raiding, they constructed fortresses, fortified camps, or used natural strongholds for gathering (Strabo 16.2.18; Marfoe 1979). Knauf (1989) interprets Tell Ḥîra (Kuschke et al 1976: 32–34) as such a fortified camp of the Ituraeans. Although this peculiar type of military architecture can be linked to the Ituraeans, this does not imply that they became sedentarized. Even after the dismissal of Zenodorus, the last Ituraean ruler, Aemilius Palatinus, a subordinate of the Syrian governor Quirinius (Luke 2:2), had to fight against the Ituraeans in Lebanon; he conquered one of their "castles" (CIL III 6687; Schottroff 1982: 133, n. 33).

The Romans finally pacified the Ituraeans by exploiting their belligerent habits to the benefit of the empire: they recruited eight cohorts and one *ala* from the Ituraeans (Holder 1980; Schottroff 1982: 148–152; Dabrova 1986), especially archers. The paradoxical fact that more "Ituraeans" became Roman soldiers than probably ever really existed can be explained by the high reputation which the Ituraean archers had achieved in the course of the civil war (Lukan *Bell. Civ.* 7.230, 514) and subsequent military encounters. Consequently, these fierce elite units of "Ituraean archers" were being replenished with any recruits who happened to have expertise as archers, regardless of whether or not they were actually of Ituraean descent. Thus, as part of the Roman army, these "Ituraean" cohorts preserved the tribe's name long after the dispersion of the tribe itself (*Hist. Aug. Aurelian* 11.3).

ERNST AXEL KNAUF

IVORY. Ivory was used in the ANE primarily as a medium for sculpture from Chalcolithic times until the close of the biblical period. Since this study was prepared for a biblical dictionary, it is not intended as a comprehensive treatment of ivory-working in the ancient world, but rather as a discussion of the uses of ivory in the Levant. While this article is devoted primarily to ivory, representative types of objects fashioned in bone will be cited as ancillary products, since several fine objects (not discussed elsewhere in this volume) were also fashioned from bone.

There were four key periods of ivory-working: the Chalcolithic period, the Late Bronze Age, the Iron Age, and the Greco-Roman/Byzantine period. While the repertoire, style, and techniques of production changed radically during the periods under consideration, two facets of ivory use have remained constant: the use of ivory for small-

scale carving of the human figure, which began as early as the Chalcolithic period, and the use of plaques for relief-carving and incision, which began in the LB Age.

A. Production

1. Material. Recent technical studies have focused attention on the differing types of ivory available (Caubet and Poplin 1987: 273–306; Reese 1985) and have thereby added a significant dimension to the study of ivory-working. While the tusks of the Indian and African elephants were primarily utilized, hippopotamus ivory was also used. However, it may be premature to determine the preference of one kind of material for one type of object vis à vis another type, or changes in popularity of material from period to period.

2. Technique. The ivory worker would carve, incise, bore holes, or combine any of these techniques. In the Chalcolithic period, incision was rarely used, and the utilization of ivory as a flat plaque—as a miniature wall surface—did not begin until the LB. The technique of openwork was also introduced into the repertoire of Palestinian ivory-working during the LB Age, probably no earlier than ca. 1400 B.C.

3. Workshops and Sources of Raw Material. Few workshops have been found. Barnett concurs with the excavator that a Chalcolithic workshop was discovered in the excavations of Bir Safadi, near Beer-sheba, where "a work bench, an elephant tusk, three awls with bone handles, and probably a bow-drill" were found (Barnett 1982: 23), yet he does express reservations (Barnett 1982: 76, n. 26). Nevertheless, the discovery of elephant tusks at a site suggests the existence of a workshop, or a way station in the transportation of tusks to a workshop. Elephant tusks have been found in subsequent periods in Syria at sites such as Ras Shamra, Chagar Bazar, and Alalakh, suggesting the existence of workshops at these sites.

While the elephant tusks apparently came from herds which roamed in Syria until the Iron Age (Barnett 1982: 23), hippopotamus tusks would have come from Africa where until recent times, hippopotami were common.

4. Society. Ivory objects were undoubtedly expensive and constituted a class of luxury items produced for the upper class—or in some instances, for a clerical group—and represented community wealth. We know little about the craftsmen who produced the items, but it is likely that sociologically they were part of the general class of craftsmen who, by analogy from Egyptian Middle Kingdom (Erman 1971: 446) and New Kingdom sources, were viewed as common laborers (Montet 1981: 157), though the craftsmen themselves recognized their own talent, as demonstrated in one Middle Kingdom text (Montet 1981: 158). Though we lack information from the Bible and other sources about the status of craftsmen in general, and the ivory worker in particular, it is unlikely that in the Iron Age their status differed substantially from that of Egyptian craftsmen.

B. The Periods

1. The Chalcolithic Period. A great age of ivory-carving dawned in the Levant in the Chalcolithic period. The phenomenon had no known local antecedents—it emerged as a fully developed style. It appears, however, to have been a regional phenomenon that was limited to the area around Beer-sheba (Bir es-Safadi and Tell Abu Matar). On the basis of the associated ceramic assemblages and C_{14} tests of material from the ivory workshop at Safadi, the ivories date to ca. 3320 B.C. ±300. The repertoire consists primarily of stylized, standing human figurines. These figures have prominent noses; circular eyes consisting of perforations in the ivory which were filled with another substance, or, as in the case of one example, with a rondel, which probably housed another substance for a pupil (Perrot 1957: Pl. III.1); circular, knob-like ears; oftentime short necks; narrow, angular shoulders; thin, spindly arms which descend vertically from the shoulders; hands bent at a 90° angle at the wrists and resting on their waists; and elongated legs. Both male and female figurines are found, though not in pairs. The head of an almost complete male figure found in a subterranean house has two rows of holes bored around the contour of the face for the application of a beard, and the top of his head is hollow. Though one is tempted to think that all the heads hollowed out at the top are males, one such head (found without a body) has no holes surrounding the face. The statue of this male figure is more rigid and somewhat less three-dimensional than the females, who have large breasts, thickened calves, and slightly flexed legs. Assuming that only the figures with holes bored along the outer contours of the face are male, the female figurines outnumber the males, but the sample is too small to permit the positing of definite ratios. The figurines are relatively large. The nearly complete male figure, whose left foot is missing, measures 33 cm tall. An example of a female figurine purchased on the antiquities market, whose feet are missing, measures 29 cm.

Though human figures in ivory are known from Egypt in late Pre-Dynastic times (a period generally corresponding with the Palestinian Late Chalcolithic), the Egyptian figures differ significantly from the Palestinian examples and were not prototypes for the Palestinian examples. Indeed, the single Egyptian example from a Badarian grave, a figurine of the Beer-sheba culture which resembles a 12 cm headless pregnant woman, was in all likelihood an import from Palestine (Liebowitz 1978: 28–29 n. 13).

Though the tusks used by the Palestinian Chalcolithic ivory carvers may have come from elephant herds which are presumed to have existed at that time in Syria (Barnett 1982: 23), no examples of ivory statuettes, or for that matter, significant ivories of any kind, are known from Chalcolithic Syria. Indeed, the suggestion that the Beer-sheba tradition "derives from the north or northeast and descends via the Jordan valley," and that "it is in the north that it may have continued, after the trail is lost in the south" (Barnett 1982: 24), has no basis from evidence. The homogeneity of the Palestinian ivories, the existence of a workshop in Safadi, and a stylistic link with Egypt, all suggest that the impetus for ivory-carving and the raw material as well, may have come from Egypt rather than the N. Yet the distinctive quality of the Palestinian ivories indicates that they were locally made, and that they represent a native tradition. The link with Egypt in the Chalcolithic period is not an isolated phenomenon. Other indications of links with Egypt include the discovery of shells

and fish from the Nile at several Chalcolithic sites (Reese, Miemis, and Woodward 1986: 79–80) and an Egyptian building found at ʾEn-Besor.

The only other ivory objects found in this phase include a small carving of a pin handle (or possibly the headdress of a figurine) in the shape of a bird (identified as bone), a bell-shaped pendant, a fragment of what may be a hippopotamus head, and a fragment of an arc-shaped plaque with two concentric rows of punctuate dots. A 3.5-cm horned head purchased on the antiquities market is an isolated example, yet stylistically accords with the Beer-sheba ivory assemblage (Tadmor 1985). The human figure was clearly dominant and of greatest interest to the sculptor and the society for which the objects were crafted. Nevertheless, the purpose and meaning of the objects are indeterminant.

The use of bone was fairly widespread and was used for utilitarian objects such as awls fashioned from long bones, and polished flat-bone tools, fashioned from ribs tapered to a point at one end and pierced at the other.

2. The Late Bronze Age. Following a virtual halt in ivory production in the EB and MB periods, it resumed in the LB. However, the resurgence was gradual, and few objects dating to the LB I period are known. The great age ivory-carving in the LB-Levant, as in the Mycenaean world, was in the LB II period. During the LB, there was an expansion both in the repertoire and the technique of ivorywork. A genre from this period which exhibits the most complex compositions in ivory in the Levant, consists of a series of plaques depicting feasts and military scenes. Examples are found at Megiddo and at Tel Farah (S). While the example from Tel Farah (S) and one of the examples from Megiddo are incised, the series of four plaques from Megiddo are carved in relatively bold relief. Though these feast and military scenes show different degrees of Egyptianizing tendencies, they clearly betray a non-Egyptian origin. It may also be argued that these plaques were locally made, and were not imported from sites in Syria, since no objects of the type have been found in Syria.

Fragments of openwork plaques depicting females dressed in long robes have been found at Megiddo, and represent another tradition of ivory-carving. Another series of openwork plaques featuring Anubis, Bes, and winged female sphinx figures was also found at Megiddo, and apparently came from the same workshop. Again since evidence of this technique was unknown in Syria, it seems that the Megiddo examples of this technique also represent a local Palestinian tradition (Liebowitz 1987). Though the proposed idea of a local, Palestinian school of ivory-working contrasts with prevailing opinion, the discovery of ivory tusks at Megiddo (Barnett 1957: 165, no. 3) further supports the idea.

Ivory sculpture in the round constitutes another important genre. An excellently carved figurine of a nude female wearing a polos cap decorated with alternating lotus blossoms and buds, and the small, frequently overlooked statuette of a seated king, whose throne resembles that on the incised ivory plaque depicting a feast and military scene at Megiddo, are minor masterpieces of ivory-carving. Objects such as hands (e.g., the 13.5 cm example restored from fist to mid-forearm found at Lachish VI; Ussishkin 1983: 115, Pl. 26: 2), represent an example of the use of ivory for approximately half-life-sized statues. In these cases ivory would have been used to represent fleshy parts of the statue only; the clothed part of the statue would have been made of another material.

Ivory was also used in this period to produce a variety of objects associated with perfumes and cosmetics. A class of objects in the shape of naked slave girls holding before them lidded bowls, was found at several sites in Israel, including Megiddo, Beth-shan, and Tell es-Saʿidiyeh. While the type originated in Egypt, where it was usually made out of wood or stone; examples found at sites in Canaan are normally made of ivory and are rendered in less detail than those from Egypt.

Additional toilet objects made from ivory include a series of duck-shaped cosmetic vessels, the lids of which consisted of the wings of the duck, which swiveled open and closed. The necks and heads of these ducks were made of separate pieces attached to the cosmetic bowl. Examples of this type were found at many sites including Megiddo, Lachish, a tomb near Shechem, Tel Dan, and most recently at Acco. Though an example from Megiddo was said by the excavator to date to the LB I period, the tomb also had LB II material, and it is likely that the Megiddo example is out of context and that objects of this type did not appear until the LB II period.

Ivory working continued in the Levant into the middle of the 12th century and part of the Megiddo VIIA hoard may date to that period as evidenced by discovery of a model pen case inscribed with the cartouche of Rameses III.

Following the LB, there is only sporadic use of ivory in Palestine until the Iron II period.

Bone work in the LB is essentially limited to awls, pins, and spindle whorls. It was exceptional to find the Hathor sistrum handle from Bethel made from bone, since it was customary to make such sophisticated items in ivory.

3. The Iron Age. Few ivory objects have been found which date to the Iron Age I. A 3 cm long, well-carved lion's head from an Iron I context was found at Tel Masos—though it is presumed to be a Phoenician import (Crüsemann 1983: 99). However, as noted above, the true resurgence of ivory-working did not occur until the 9th and 8th centuries B.C. While an overwhelming mass of Iron Age ivories was found at Nimrud, other important collections were found at Khorsabad; Arslan Tash in Syria; at Samaria, the former capital of the N kingdom; and some small objects at Zincirli and Carchemish.

The ivories at Samaria, which apparently came from furniture (and possibly from inlaid walls), were found in one or more of the rooms of the Omride palace complex. These shed light on the reference to an ivory house built at Ahab (1 Kgs 22:34) and indirectly on the reference in Amos (6:4) in which he describes the people of Samaria as those "that lie upon couches of ivory." While none of the Iron Age ivories displays the complex compositions which characterized the LB, several LB motifs—such as cherubs and palm fronds—are repeated in variation. The Iron Age cherubs differ from the LB cherubs at Megiddo in that they are placed in Nilotic settings and usually wear a distorted type of Egyptian double crown. The prominent Iron Age palms have long, drooping fronds. On the other hand, many new motifs and radical changes in technique

appear. The repertoire of Egyptianizing motifs (such as the infant Horus on a lotus blossom and a plaque featuring Isis and Nepthys) is expanded, and new non-Egyptianizing motifs (such as the woman at the window, and standing, winged human figures) are introduced. Barnett, in his pioneering work in 1939, had already distinguished between the Phoenician style with its Egyptianizing tendency and the Syrian style (i.e., N Syrian).

The change in repertoire in the Iron Age is seen also in that ivory was not used for cosmetic items, which are not even well documented in the archaeological record for this period. However, stone vessels with round, relatively small central depressions and dotted circles and other geometric patterns incised on the flat, encircling rims have been found at numerous sites both in the N and S of the country.

The techniques of ivory-working in the Iron Age were similar to those of the LB, with the added decoration, however, of glass paste and semiprecious stones.

Only random objects of ivory were found at other sites either in the N or S kingdoms. However, the annals of Sennacherib list furniture with ivory inlay among the spoils following the campaign in 701 (*ANET*, 288).

The question remains unresolved if any ivories were produced in Palestine—either in the N or S kingdoms—or if all were produced in N Syria, or, as Winter argued, possibly in a S Syrian school with its center of production at Damascus (Winter 1981).

While use of bone is even more limited in the Iron I period than in the LB, in the Iron II, there is a resurgence of bone work for luxury items, and elongated pendants decorated with incised dots and circles, or by horizontal grooving are found at many N and S sites dating from the 10th to the 7th or 6th centuries. The bone assemblage of the Iron II period is also characterized by bone spatulae (rounded at one end and pointed at the other, and which were apparently used in weaving), spindle whorls, pendants, tubes (possible serving as handles), and flutes.

4. Greco-Roman/Byzantine Period. In this era, corresponding with the Second Temple, Rabbinic, and Early Christian periods, ivory-working was less prevalent in Palestine and few objects of ivory have been found. While the Hellenistic period witnessed a wide repertoire of small-scale ivories, at places such as Bactria, Mysa, and Begram (Barnett 1982: 65–68), practically nothing of ivory is known from Palestine.

In the Roman period, bone replaced ivory even in Rome itself (Barnett 1982: 69); only isolated fragments and small simple objects of ivory have been found in Palestine. Bits of ivories were found in the apse of the synagogue at Ma'on, and a pin, identified as ivory by the excavators, was found at Khirbet Shema. Interestingly, no references to ivory are found either in the Mishnah or the Babylonian Talmud. The use of bone, however, was more prevalent. Bone was used for combs, spoons (cosmetic?), pins, and needles. However, it must be pointed out that the identification of the material of small objects is often neither clearly specified nor scientifically identified, and in some published reports, plates illustrate small objects that are often labeled "ivory and bone objects." Nevertheless, the apparent dearth of ivories in Palestine accords well with the written report and with the situation in Rome, as attested to by both the archaeological record and the literary evidence.

IVVAH (PLACE) [Heb *ʿiwwâ*]. An unidentified place which served as one of the many examples of towns which could not survive the Assyrian onslaught in 2 Kings 18:34 (= Isa 36:19) and 2 Kgs 19:13 (= Isa 37:13). Though the occurrence of Ivvah alongside Hena and Sepharvaim in 2 Kgs 19:13 seems textually sound, Isa 36:19 and the LXX, however, omit the phrase *hēnaʿ wēʿiwwâ* which suggests a textual problem in 2 Kgs 18:34. The Targum interprets the words *hnʿ wʿwh* in 2 Kgs 18:34 as verbs ("transported and carried off"). Perhaps *ʿiwwâ* is a variant of the place called *ʿawwâ* in 2 Kgs 17:24 whose location is also uncertain. M. C. Astour (*IDBSup*, 807) regards *ʿiwwâ* as the result of a dittography of an original *ʾyh mlk sprdym hnʿwh* (= "Where is the perverse King of the Sapardians?"). This otherwise attractive proposal is unsatisfactory because such an adjectival use of the *Nipʿal* participle of *ʿwh* after a noun is as unattested in the Hebrew Bible as

the places he attempts to explain are in the ANE. Moreover, even if such a construction were allowed, the supposed dittography would yield *ʿiwwâ* only after additional emendations to the text. For the moment, one must concur with Cogan and Tadmor (*2 Kings* AB, 233) that Ivvah remains as enigmatic as ever.

HECTOR AVALOS

IYE-ABARIM (PLACE) [Heb *ʿiyê hāʿăbārîm*]. Var. IYIM. Hebrew for "ruins of Abarim," a place visited by the Israelites in their passage from the wilderness to the plains of Moab. Although no site has been linked to Iye-abarim with certainty, Num 21:11–12 points to a location between Oboth and Wadi Zered, and at least two sites in this area have been proposed: (1) Muhai, located ca. 11 miles SE of Mazar, is on the wilderness side of Moab, but it is N of the Zered; and (2) Medeiyineh (M.R. 223041) is on a hilltop that rises out of the Zered canyon and would therefore be more like the place of encampment that followed Iye-abarim. Num 33:44–45 seems to indicate that this site was in Moabite territory and that its shorter name was Iyim.

GERALD L. MATTINGLY

IYYAR [Heb *ʾîyāyr; ʾîyār*]. The second month of the Hebrew calendar, roughly corresponding to April and May. See CALENDARS (ANCIENT ISRAELITE).

ʿIZBET ṢARṬAH (M.R. 146167). A site situated on a moderate hill NE of Rosh Haʿayin and SW of Kafr Qasem, next to a place known as ʿIzbet Ṣarṭah, which has seen seasonal agricultural activity over the past few generations by the inhabitants of the village of Sarta. The hill is at the W end of a spur overlooking the coastal plain. Three km to the W, on the other side of the strategic Aphek pass and on the sources of the Yarkon River, lies Tel Aphek. Quarrying which took place on the periphery of the hill during the British Mandate has altered its natural shape. Rock cut cisterns scattered down the slopes supplied water to the inhabitants.

The site was discovered in 1973 by an archaeological survey team from Tel Aviv University directed by M. Kochavi, and four seasons of excavations were conducted between 1976–1978 under the direction of M. Kochavi and supervised in the field by I. Finkelstein.

Three strata were uncovered at ʿIzbet Ṣarṭah. The earliest two are from the Iron Age I and the last is from the beginning of the Iron Age II. Six more Iron Age I sites were discovered in the vicinity during the survey; these were situated in similar locations on the border between the foothills and the coastal plain. Various considerations, which include the general pattern of settlement of the region, the architectural features of the site in each level, and the pottery finds, all lead to the conclusion that the inhabitants of the site belonged to the Israelite population of the hill country.

The earliest level, Stratum III, was established at the end of the 13th century or at the beginning of the 12th century and was abandoned at the beginning of the 11th century B.C.E. The settlement of this period had an elliptical layout and covered an area of some 2.2 dunams. In the center of the site was a large oval courtyard surrounded by a wall on the outside of which were attached rooms in a row, similar to "casemates." The only entrance into the rooms was from the courtyard with no openings between the adjoining rooms. The width of the rooms is not uniform and in contrast to the inner wall, the outer wall of the site does not form a single line. The walls were constructed of large stones, of which only a single course has survived, with the natural rock usually forming the floors of the rooms. The entrance to the settlement was on the NE side of the site—a narrow opening between two monolithic posts leading into an area paved with stone slabs. Within the courtyard were several stone-lined storage pits. A very light colored brick material was found in every place where excavation of this stratum took place; this had been leveled at a later period, to serve as foundations for the structures of Stratum II. The settlement of Stratum III seems to have been peacefully abandoned, thereby leaving behind only a few complete vessels, among which were three collared rim jars. Since this was the first occupation on the hill, the pottery sherds apparently reflect the accumulation during the whole period of activity. Among the earliest finds were a small sherd of a stirrup jar of the Late Mycenaean III type, part of a krater decorated with the "gazelle and palm" motif, the sherd of a krater with a "palm" motif in applied relief, bases of "Canaanite" jars, cooking pots with rims, and various bowls in the LB tradition. Several rims of rounded bowls with red slip and sherds of jars with unmolded straight rims provide a date for the end of activity in Stratum III. The ceramic repertoire attests the close contacts of the inhabitants with the nearby coastal plain. Since the site is situated on the border between the hill country and the coastal plain, its history reflects the political changes in this sensitive area. The Israelite expansion from the center of the hill country to its W fringes can probably be attributed to the period immediately following the destruction of Canaanite/Egyptian Aphek and prior to the Philistines establishing themselves there (or, for mutual economic reasons, to the period prior to the destruction of Aphek). The site was probably abandoned as a result of the increasing tension between the Israelites and Philistines in the region at the beginning of the 11th century, a tension which led to the decisive battle at EBENEZER a short time later (some have identified ʿIzbet Ṣarṭah as Ebenezer; Kochavi 1977; Kochavi and Demsky 1978; Cross 1980).

Following a gap in occupation, settlement was reestablished towards the end of the 11th century B.C.E., once conditions were suitable for a renewed Israelite westward expansion from the hill country, possibly during the reign of Saul. Stratum II is completely different from Stratum III in its layout, with a certain degree of planning evident. In the center of the settlement, which covered an area of some 4 dunams, a large four-room house was erected. This was surrounded by dozens of storage pits, densely excavated into the light mudbrick material and into the structures of the previous level. On the edge of the settlement a belt of small houses were built. The central house measured 12 x 16 m. The outer walls, 1.4 m thick, were built of large fieldstones; only 2–3 courses have survived. Parts of the walls were robbed of their stones in later periods for secondary use. Two rows of pillars made of flat

stones divide the three longitudinal units. The side units were paved with stone slabs, with the natural rock together with compacted earth forming the floor in the courtyard. A small room was attached onto the building from the outside. The average volume of a storage pit at ʿIzbet Ṣarṭah is about 1.3 m^3. Their floors were composed of the natural rock or of small stones, with the lining made with small- and medium-sized stones. Several storage pits lean against the walls of the central building and at times the pits touch one another. A total of 43 silos of Stratum II were excavated. In various places between the pits a compacted earth floor was unearthed. In one of the silos (No. 605) the ʿIzbet Ṣarṭah ostracon was found (see Kochavi 1977; Demsky 1977; Naveh 1978). It is worth noting that at least two of the smaller houses built on the edge of the settlement were also constructed in the four-room plan. The peripheral houses do not join one another, hence the settlement had no defense system. Stratum II existed for a short time only—a decade or two at the most—and its abandonment is attributed to the increase of the Philistines' power in their struggle against Saul.

A short time later, at the beginning of the 10th century B.C.E., occupation of the site was renewed, once again for a very brief period (Stratum I). The settlement was much smaller; the four-room house was restored and several new silos were dug to replace the old ones that had gone out of use. The peripheral buildings of Stratum II were not reused. The central four-room house underwent certain changes: partitions were built between the pillars; two rooms were added on its N side and various installations were constructed within its rooms. The ceramic repertoire of Stratum I is similar to that of Stratum II, and only a quantitative study of the different types made it possible to distinguish between them. The renewed activity at the site can be attributed to the resumption of the westward expansion of the Israelites during the reign of David. A short time later, once the fertile plain of the Yarkon basin opened up to Israelite settlement, ʿIzbet Ṣarṭah was abandoned once and for all.

During the Byzantine period some agricultural activity occurred. A terrace wall made of large stones which appear to have been taken from the older structures was erected on the edge of the top of the hill, and other walls were constructed to enclose heaps of stones gathered from field clearing.

The excavations of ʿIzbet Ṣarṭah shed light on several issues which lie at the heart of research into the settlement processes and the material culture of the Israelite population during Iron Age I. The history of the site represents the ethno-demographic developments in a sensitive region which lay on the W periphery of the Israelite settlement. The occupation of the site reflects periods of expansion from the heart of the hill country towards the edge of the coastal plain, while the two gaps of occupation reflect periods of retreat from the foothills. As for the material culture, the fact that a large part of the site was excavated, allow a nearly complete reconstruction of its layout within the different levels, contributing to the study of the early Israelite architecture and its relationship to the socio-economic system of the inhabitants. The ceramic repertoire shows two different tendencies: the influence of the hill country culture on the one hand and of the coastal plain traditions on the other.

ISRAEL FINKELSTEIN

IZHAR (PERSON) [Heb *yiṣhār*]. IZHARITE. **1.** A son of Kohath [Heb *qĕhāt*] and grandson of Levi (Exod 6:18; Num 3:19 [KJV Izehar]; 1 Chr 5:27–28—Eng 6:1–2; 1 Chr 6:1, 3—Eng 6:16, 18; 23:12). See KOHATH. Izhar was the brother of Amram, Hebron, and Uzziel and the uncle of Moses, Aaron, and Miriam (1 Chr 5:28–29—Eng 6:2–3). Less fortunately, he was also the father of Korah, Nepheg, and Zichri (Exod 6:21; 1 Chr 6:22–23—Eng 6:37–38), as Korah was the prominent ringleader of the infamous rebellion in the wilderness (Num 16:1). See KORAH. While Amminadab is said to have been the father of Korah in one text (1 Chr 6:7—Eng 6:22), "Izhar" is most likely to be read there instead of the name "Amminadab," as in LXX A and L (Gk *issaar*). This would be in line with the observation that while every other list of Kohath's children always includes Izhar, no other levitical list ever mentions Amminadab (*IDB* 1: 108). See AMMINADAB. In the wilderness period, as one of the four important Kohathite families their place of encampment was reportedly on the S side of the tabernacle and their assigned charge was the care of the ark, table, lampstand, altar, and vessels of the sanctuary (Num 3:27 [KJV here Izeharites], 29, 31). In 1 Chr 6:18–23—Eng 6:33–38 Izhar's name is cited as proof of the strong levitical pedigree of Heman, David's chief levitical singer. Izhar is also said to count among his descendants Shelomith/Shelomoth and his son Jahath (1 Chr 23:18; 24:22). Other known Izharites include Chenaniah and his sons who were asked to serve as officials and judges outside the temple (1 Chr 26:29).

2. A Judahite, the son of Ashhur by his wife Helah (1 Chr 4:5, 7). Instead of Izhar, the name of this person should more probably be read as "Zohar" (see MT's Q "and Zohar" = Heb *wĕṣōhar* [LXX *kai saar;* LXX L *eisar*] instead of MT's K *yiṣhār*). His father Asshur is said to be the son of Caleb and is apparently credited with the founding of the village of Tekoa (1 Chr 2:24). See ASSHUR; TEKOA. The name Izhar/Zohar occurs as part of a larger genealogical delineation by the Chronicler of Hezron ben Perez ben Judah's supposed two sons, Jerahmeel (1 Chr 2:25–41) and Caleb (1 Chr 2:18–24, 42–55; 4:1–7). These fragmentary lists suggest additions to the tribe of Judah not by birth, but by adoption and territorial absorption over time.

ROGER W. UITTI

IZLIAH (PERSON) [Heb *yizlî'â*]. Descendant of Benjamin (1 Chr 8:18) appearing in an extended genealogy (1 Chr 8:1–40). The name occurs nowhere else in this form in the MT, the Apocrypha, or the deuterocanonical literature. Izliah is a son of Elpaal. The meaning of the name is uncertain (cf. Noth *IP*, 248). According to 1 Chr 8:12, the family of Elpaal, and thus Izliah, is associated with the sites of Ono and Lod. This association is further referred to in Ezra 2:33, Neh 7:37, and 11:35. Ono and Lod are located in traditional Danite territory in the maritime plain (Adams and Callaway 1965: 55). A settlement by Benjamin of this area during the reign of Rehoboam is proposed by Myers (*1 Chronicles* AB, 60). The relative scarcity of Danite material in Chronicles suggests a possible absorption of tribal inheritance by Judahite and Ephraimite tribes. The fact that Izliah and others associated with Lod and Ono are called *ro'šê 'ābôt*, or heads of families, and "chiefs living in Jerusalem" (v 28), may reflect some tribal mixing of Judah and Benjamin at various points after the monarchical schism. This designation also holds implications for social organization. Coggins (*Chronicles* CBC, 54) has shown that tribal mixing caused certain areas, like Jerusalem itself, to be never fully absorbed into any one tribal holding. Judahite and Benjaminite groups are seen struggling for control of Jerusalem in Judg 1:8, 21.

G. Edwin Harmon

IZRAHIAH (PERSON) [Heb *yizraḥyāh*]. A descendant of Issachar (1 Chr 7:3). His name means "May Yahweh shine forth." Izrahiah is listed as a great grandson of Issachar but in what time period the Chronicler might have viewed him as having lived is not clear. If, along generational lines, one compares Izrahiah's descent from Issachar with Moses's descent from Levi in 1 Chr 6:1–3, it appears that the Chronicler views him as contemporary with Moses. In 1 Chronicles 7 the list of descendants from Issachar and other N tribes serves to emphasize the Chronicler's "all Israel" theme.

James M. Kennedy

IZRAHITE [Heb *yizrāḥ*]. A descriptive adjective of Shamhuth, one of twelve commanders supervising monthly courses of men in the armed service of the king (1 Chr 27:1–15; v 8). The term (lit. "Izrah") is probably intended to be a gentilic designation for one from the otherwise unknown place Izrah (therefore RSV, "Izrahite"), although the term is missing the usual gentilic indicator *(î)*. Variants of this designation occur in other lists which apparently refer to the same person, who is one of David's champions, although in these lists his name is spelled differently: Shammah of Harod (lit. "the Harodite," 2 Sam 23:8–39, v 25) = Shammoth of Harod (lit. "the Harorite," 1 Chr 11:10–47, v 27). "Harorite" in the Chronicler's text might be explained as a scribal error for "Harodite," arising through the confusion of similar letters (*h* for *ḥ* and *r* for *d*). Alternatively, it might be suggested that some transmitter of the text, recognizing a corruption, borrowed the designation from a different Shammah, Shammah the Hararite of 2 Sam 23:33 (= Shagee the Hararite of 1 Chr 11:34). The widely divergent "Izrah" in 1 Chr 27:8 suggests again that the designation of Shamhuth was recognized by some transmitter as missing or corrupt; and, perhaps, in seeking to restore it the transmitter drew on a recognized gentilic adjective occurring elsewhere in the same list, "Zerahite" (vv 11, 13; Heb *zrḥ;* see BDB; Curtis *Chronicles* ICC, 192).

Rodney K. Duke

IZRI (PERSON) [Heb *yiṣrî*]. Person who receives the fourth lot cast (1 Chr 25:11) to determine the duties of the sons of Asaph, Heman, and Jeduthun listed in 1 Chr 25:2–4. The problem is that Izri does not appear in 1 Chr 25:2–4 as one would expect; however, the name Zeri appears in 1 Chr 25:3 in precisely the spot where Izri would be expected, since the sons of Jeduthun receive all but one of the even-numbered lots cast up to fourteen in 1 Chr 25:9–31. This fact, plus the similarity of the two names, suggest that Izri and Zeri are variant names for the same person.

Most scholars suggest that the list in 1 Chr 25:9–31 is literarily dependent upon the list in 25:2–4 (Williamson 1979: 255–57). Thus, Izri would be an expansion of an original Zeri, which is identical to a word which means "balsam" (RSV "balm," Jer 8:22, 46:11, 51:8). In contrast, Petersen contends that 1 Chr 25:9–31 contains the more original forms of the variant names (1977: 68, 92). He suggests that Zeri *(ṣĕrî)* is a shortened form of Izri *(yiṣrî)*, which in turn should be understood as an abbreviated form of *yṣryhw*, "God created *[yṣr]*."

J. Clinton McCann, Jr.

IZZIAH (PERSON) [Heb *yizzîyāh*]. A descendant of Parosh and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:25 = 1 Esdr 9:26). According to Noth, the name "Izziah" is derived from the root *nzh* and may mean "Yahweh will sprinkle," referring to a cultic purification or absolution (*IPN*, 245). A slight variation occurs in the parallel text of 1 Esdr 9:26 where the LXX renders the name *iezias*, while the form in Ezra 10:25 is *iazia*. Izziah was a member of a family group which returned from exile with Zerubbabel (Ezra 2:3; Neh 7:8). For further discussion, see BEDEIAH.

Jeffrey A. Fager

J. The abbreviation (of German "Jahvist") used by scholars to designate the Yahwist source in Pentateuchal source criticism. See YAHWIST ("J") SOURCE.

JAAKAN (PERSON) [Heb *yaʿăqān*]. A clan name in the genealogy of Seir the Horite in 1 Chr 1:42. Jaakan is listed as the third son of Ezer and he is thus a grandson of Seir. The Horites are not to be confused with the Hurrians of Mesopotamia. They are described as the original "inhabitants of the land" in Gen 36:20. They occupied the region of Edom until the incursions of the Esau clans drove them out. This conquest is paired in the text with the conquest of Canaan by the tribes of Israel. The designation of the Horites as "cave dwellers" may be a reflection of their use of these natural shelters for themselves and their animals or it may be a disparaging remark by their conquerors to demonstrate how "uncivilized" they were. The name Jaakan appears in this form only in 1 Chr 1:42 (Jakan in KJV). In some Gk mss and in the parallel genealogical clan list in Gen 36:27 it appears as Akan.

Jaakan's name apparently became associated with two places in the region of Edom, Bene-Jaakan (Num 33:31–32) and Beeroth Bene-Jaakan (Deut 10:6). This probably reflects the usage of water resources at these sites by the Horite clans and perhaps the control over water rights by the clan of Jaakan. Matthews (1986: 123) discusses a similar example of the regular use and proprietorship over wells and springs in Genesis 26 by Isaac and his herdsmen. Names were often given to clan wells and eventually these names were expanded or modified to include the name of the principal clan in the area.

VICTOR H. MATTHEWS

JAAKOBAH (PERSON) [Heb *yaʿăqōbâ*]. Simeonite family leader (1 Chr 4:36). Jaakobah is included in a list of Simeonites who migrated to "the entrance of Gedor" (v 39, the RSV follows the MT; however, the LXX reading "Gerar" is usually favored) in search of suitable grazing for their flocks. The Chronicler attributes this movement to the time of King Hezekiah of Judah (715–687/86). According to Noth (*IPN*, 177–78, 197) the name means "may (the deity) protect."

DANA M. PIKE

JAALA (PERSON) [Heb *yaʿălāʾ*]. Var. JAALAH. A servant of Solomon who was the progenitor of a family which returned from Babylon with Zerubbabel (Neh 7:58). The variant Jaalah occurs in the parallel passage Ezra 2:56 (Heb *yaʿălâ*) and 1 Esdr 5:33 (Gk *ieēli*).

MICHAEL DAVID MCGEHEE

JAAR (PLACE) [Heb *yaʿar*]. A poetic reference to KIRIATH-JEARIM [Eng "city of forests"], or its environs, in Psalms 132:6. The noun is the Hebrew word for "forest," and the precise phrase is *biśdê-yaʿar*, literally, "in fields of [other ancient texts read 'a field of,' see *BHS* and BDB: 961] a forest" (cf. LXX); but parallelism with Ephrathah and consistent allusion throughout the Psalm to the resting place of the ark of the covenant make it likely that *yaʿar* is better translated as a *nomen proprium loci*, hence, "the fields of Jaar." The reference may be to Kiriath-jearim (on the border between Benjamin and Judah) itself, or to the open areas around it. This literary-critical decision squares well with the history of traditions. The ark was returned, via Beth-shemesh, to Kiriath-jearim, where it remained for some 20 years, whence David brought it with pomp and circumstance to Jerusalem (1 Sam 6:20–7:2; 2 Sam 6:1–15; 1 Chr 13:5–8). Psalm 132 is a preexilic festival liturgy uniting the traditions of the ark, the clan of David, and the election of Zion (cf. 2 Samuel 7 and Ps 78:68–71). The song celebrates the movement of the ark from the fields of Jaar, on the N edge of David's Ephrathite clan territory, to Zion, which David chose as the seat of his dynasty. It is not surprising, therefore, that 2 Chr 6:41–42 quotes Ps 132:8–10 to conclude Solomon's prayer at the dedication of the temple where the ark eventually came to rest. This allows also a better understanding of Micah's reversal of the traditions: the God who came from Jaar of Ephrathah to settle in Zion will abandon the capital for older roots in Bethlehem of Ephrathah (4:14–5:1—Eng 5:1–2).

LAMONTTE M. LUKER

JAARESHIAH (PERSON) [Heb *yaʿărešyāh*]. Benjaminite family leader (1 Chr 8:27). Jaareshiah is listed with other Benjaminites as a resident of Jerusalem. This situation illustrates a certain mixing between neighboring tribes, a trend facilitated in this case by the location and

status of the city of Jerusalem. Although this list of names appears to reflect a certain period, no time indicators have been included by the Chronicler. On the basis of Ar *ġarasa* and Akk *erēšu*, the name probably means "may Yahweh plant" (Fowler *TPNAH*, 110).

DANA M. PIKE

JAASIEL (PERSON) [Heb *yaʿăśîʾēl*]. The name of two different persons mentioned in the OT.

1. The son of Abner, Saul's cousin, who is reported to have been made the official in charge of the tribe of Benjamin during David's administration (1 Chr 27:21). The nature of his office is not clear. The list enumerating the leaders of the tribes is not found in the books of Samuel or Kings. It seems to be associated with David's census (1 Chr 27:22), and might preserve the names of individuals within various areas and groups who were made responsible for overseeing the registration of the local citizens during the census. None of the names of the officials appear elsewhere in biblical tradition, so the historical reliability of the list cannot be ascertained. Jaasiel's appointment to oversee Benjamin in such a capacity is plausible in light of his father's negotiations with David to remove Eshbaal from the throne of Israel. See ABNER. His appointment may have been made in the wake of Abner's murder, as a gesture of goodwill by David, to demonstrate his innocence in Abner's death. Jaasiel would have been a Benjaminite by birth, perhaps a member of the clan of Matri like Saul, and would have been a logical candidate to oversee a census among his fellow Benjaminites.

2. The "Mezobahite," perhaps a conflation of "the Zobahite" and "from Zobah," named as one of David's elite corps of warriors in 1 Chr 11:47. He is the last of 16 names added to the list of "the thirty" by the Chronicler, none of which are found in the parallel list in 2 Sam 23:18–39. Most of the additional names are associated with places of origin in Transjordan (Klein 1940). The epithet "Zobahite" could be equated either with Aram-Zobah, which would be consistent with the geography of the other additional names (Rudolph *Chronikbücher* HAT, 103), or with Benjaminite Zoba W of Jerusalem (modern Ṣuba), the probable home of another hero, Igal ben Nathan (2 Sam 23:36) (Klein 1940: 101). In the latter case, it might be possible to identify the two Jaasiels.

DIANA V. EDELMAN

JAASU (PERSON) [Heb *yaʿăśû*]. Israelite, descended from Bani (Ezra 10:37), who gave up his foreign wife because of Ezra's influence in the postexilic community. Jaasu is included in a list of about 110 men, subdivided into priests, Levites, singers, gatekeepers, and Israelites (the most numerous), who participated in this action. The MT consonantal form of the name, ending in *-w* (K *yʿśw*), is represented in the English form Jaasu, although the traditional Hebrew vocalization ends in *-ay* (Q *yʿśy*). The LXX renders Jaasu not as a personal name, but as a verb, *epoiēsan* "they produced." Jaasu is not included in the 1 Esdras 9 parallel to this list. Noth designates this as a "wish" name meaning "(the deity) should treat well" (*IPN*, 206).

DANA M. PIKE

JAAZANIAH (PERSON) [Heb *yaʾăzanyāh, yaʾăzanyāhû*]. Var. JEZANIAH. **1.** One of the troop commanders, who, following the destruction of Jerusalem in 587/6, chose to join Gedaliah, the ruler of Judah, at his administrative center at Mizpah (2 Kgs 25:23; "Jezaniah" in Jer 40:8). He is identified as "the son of the Maacathite." Although this could signify that Jaazaniah was from the clan of Maacah (cf. 1 Chr 2:48) and thus a native Judahite, it is also possible that he was from either the settlement of Abel Beth Maacah in N Galilee (cf. 2 Sam 20:14) or the small Aramean kingdom of Maacah (cf. Josh 13:11, 13). Presumably Jaazaniah and his men were among those who, fearing Babylonian reprisals for the assassination of Gedaliah (Jer 41:18; 2 Kgs 25:26), fled to Egypt (Jer 43:5–7). An onyx seal discovered in a tomb at Tell en-Naṣbeh (usually identified with biblical Mizpah), and which probably dates from the 6th century B.C.E., is inscribed *lyʾznyhw ʿbd hmlk* ("[belonging] to Jaazaniah, servant of the king"). Beneath the inscription is the figure of a fighting cock. While certainty is impossible, it may be that the Jaazaniah of the seal is to be identified with the Jaazaniah of 2 Kgs 25:23. Each of the following suggests that the owner of the seal was a high-ranking official: the title *ʿbd hmlk* ("servant of the king"), the representation of the fighting cock, and the fine quality of the seal itself. The name Jaazaniah also appears in a list of names contained in another contemporary document, one of the ostraca (Ostracon I) found at Lachish ("Yaazanyahu son of Tobshillem" and "Hagab son of Yaazanyahu" [*DOTT*, 213]).

2. Son of Jeremiah (not the prophet), and presumably a chief of the Rechabite community which had taken refuge in Jerusalem at the close of Jehoiakim's reign (Jer 35:3). Tested by the prophet Jeremiah, the Rechabites demonstrated that they had remained faithful to the command of their ancestor Jonadab.

3. Son of Shaphan and one of the 70 idolatrous elders seen by Ezekiel in a vision (Ezek 8:11). The fact that Jaazaniah is the only elder mentioned by name suggests that he was a prominent member of this group. There is good reason to believe, however, that the words "and Jaazaniah son of Shaphan standing in their midst" are a later gloss.

4. Son of Azzur and one of the 25 men seen by Ezekiel in a vision and against whom he was commanded to prophesy (Ezek 11:1). Jaazaniah and Pelatiah, the only men whose names are provided, are identified as "princes (*śārîm*) of the people." That is, they were leading officials (cf. e.g., "the princes of Judah" in Jer 26:10). Whereas the death of Pelatiah is mentioned in Ezek 11:13, nothing is said of the fate of Jaazaniah.

JOHN M. BERRIDGE

JAAZIAH (PERSON) [Heb *yaʿăzîyāhu*]. Son of Merari the Levite (1 Chr 24:26, 27). He is mentioned in a list of levitical families which received assignments from King David for service in the temple, soon to be built. That the Chronicler considered Jaaziah to be a literal son of Merari, even though he is never mentioned in the Pentateuch or 1 Chr 23:31 with Merari's other sons Mahli and Mushi, is evident from the structure of vv 27–30, in which descendants of Merari's three "sons" mentioned in v 26 are listed. Jaaziah and his descendants are placed even before Mahli and Mushi, while Kish (v 29), a son of Mahli (1 Chr 23:21), is listed after his father. For the name Jaaziah, the LXX reads *ozia*, Uzziah, in both verses. The name probably means "may Yahweh nourish" (Fowler *TPNAH*, 100).

DANA M. PIKE

JAAZIEL (PERSON) [Heb *yaʿăzîʾēl*]. Var. AZIEL. Levite musician (1 Chr 15:18). Jaaziel participated in the ceremony which accompanied the transfer of the ark of the covenant from Obed-edom's house to Jerusalem during the reign of King David. The musician Aziel (Heb *ʿăzîʾēl*) in v 20 must be considered the same individual. The LXX preserves *oziēl*, Uzziel, in both vv 18 and 20. It is also possible that the first Jeiel mentioned in 1 Chr 16:5 (Heb *yĕʿîʾēl*, Gk *Iiēl*) is this same Levite musician. The name probably means "may El nourish" (*TPNAH*, 100).

DANA M. PIKE

JABAL (PERSON) [Heb *yābāl*]. Son of Lamech and Adah, and the brother of Jubal, a descendant of Cain (Gen 4:20). Jabal is described as the father of tent dwellers and herds (Heb *miqneh;* for the more general meaning, "possessions," cf. below). It is not clear from the sentence construction (4:20) whether Jabal is said to have originated the practice of herding animals or whether he was the first to travel with his herds by living in tents (*GHBW*, 142 n. 10; Wenham *Genesis 1–15* WBC, 95 n. 20). These two concerns have been compared with the labors of Amynos and Magos, who were connected by Philo of Byblos with the origin of villages and sheep herding (Cassuto 1961: 235; Attridge and Oden 1981: 45).

Wordplay is apparently found in the word *miqneh*, which shares consonants with the name of Jabal's ancestor, Cain (Heb *qyn*). Paronomasia also seems to occur in the name, Jabal, whose root, *ybl*, is the same as that of his brother, Jubal, and suggests the first caretaker of livestock, Abel *(hbl)*. (Cf. also the roots of the name of the half-brother, Tubal-Cain, *tbl* and *qyn*.)

The comparison with Abel suggests the development from sheep herding to the raising of livestock in general, perhaps either as part of an urban economy (if Cain's descendants are to be associated with urban culture; cf. Wallis 1966: 134–35) or as part of a nomadic lifestyle (if Cain's descendants are to be associated with the Kenites; cf. Miller 1974: 168). This latter interpretation is also likely if *miqneh* is understood in its more general sense of "possessions"; and thus describes Jabal's occupation as that of a "tent-dwelling trader" (Sawyer 1986: 160). The root *ybl*, common to many ancient Semitic languages, conveys the meaning, "to bring"; if compounded with a theophoric element, Jabal could mean, "(divine name) leads (in procession)" (North 1964: 380). The proposal to take the name as a noun, "wanderer (nomad)" (Gabriel 1959: 417), is less likely.

RICHARD S. HESS

JABBOK (PLACE) [Heb *yabbōq*]. One of the four major streams of Transjordan, now known as the Wadi Zerqa or the *Nahr ez-Zerqa*, "the blue river." Its sources are near Amman, the biblical Rabbath-ammon. Its upper courses flow in a NE direction to modern Zerqa. From there the stream curves to the W where the lower courses rapidly descend into the Great Rift valley, a drop that begins at ca. 820 m above sea level to ca. 300 m below. It joins the Jordan river just N of Adam, ca. 37 km N of the Dead Sea. Its total length is about 100 km.

Gen 32:22 locates Jacob's struggle with his divine adversary at the ford of the Jabbok near Penuel. Several scholars have noted that the Hebrew text of this passage suggests a wordplay: Jacob (Heb *yaʿăqōb*) wrestled *(wayyēʾābēq)* at the Jabbok *(yabbōq)*. It has also been suggested there may have been an older form of the story in which the adversary was a river demon.

According to Num 21:24; Josh 12:2; and Judg 11:13, 22, the Jabbok served as the border of Sihon's kingdom; the upper course separated it from the Ammonites to the E and the lower course from Og of Bashan's kingdom to the N. After Israel moved into the region, the lower course served as a boundary dividing the half tribe of Manasseh on the N from Gad and Reuben on the S (Deut 3:12, 16; Josh 12:2–6). Noth and Bartlett have argued, however, that this division of the land is the result of a Deuteronomist

compiler who, in an attempt to portray the kingdoms of Sihon and Og as contemporary, reorganized the traditional threefold division of this region—the plain, Gilead, and Bashan—into a twofold division with the middle area of Gilead (through which the Jabbok flows) being divided between the two kings. Thus, instead of seeing the Jabbok as dividing areas, the river was originally viewed as the central feature of the one mountain range of Gilead.

Eusebius indicates that in later times the E-W stretch of the Jabbok did serve as a border, separating the territories of Gerasa and Philadelphia (*Onomast.* 102.19, 21).

The valley in which the Jabbok flowed served as a major highway between the Jordan valley and the Transjordanian plateau. It was along this route that Gideon pursued the Midianites (Judg 8:4–9); this route was also used by Shishak in his conquest of Palestine. Sites along the route included Adam, Succoth, Penuel, and Mahanaim.

RANDALL W. YOUNKER

JABESH (PERSON) [Heb *yābēš*]. The father of Shallum, king of Israel (2 Kgs 15:10, 13–14). Jabesh, however, may be a place name, rather than a personal name. If such is the case, the phrase "son of Jabesh" would refer to Shallum's place of origin, "a person from Jabesh," and not patronymic. This would suggest that opposition to Jehu's dynasty came from the region of Jabesh-Gilead. In Assyrian records Shallum is referred to as a "son of a nobody."

PAULINE A. VIVIANO

JABESH-GILEAD (PLACE) [Heb *yābēš gilʿād*]. Var. JABESH. An ancient city in Transjordan, which became part of the Israelite state during the early Monarchy, probably under David.

A. Location

The ancient name, which means "well-draining soil of Gilead," is preserved in Wadi el-Yabis, one of the main E-W tributaries that cuts through the N Gileadite hill country and empties into the Jordan. A site somewhere along the wadi is probable. Proposed locations include ed-Deir/Deir el-Halawe (Abel, *GP* 2, 352); Miryamim (Merrill 1881: 325; Oliphant 1881: 160–61); Meqbereh–Tell abu Kharaz (Glueck 1943); and Tell Maqlub (Merrill 1881: 440; Naor 1947; Noth 1953: 28–30; Simons *GTTOT,* 315; Aharoni *LBHG,* 379; Ottosson 1969: 195–96). Two factors are pertinent for locating the site. According to 1 Sam 31:11–13, men from Jabesh were able to reach Beth-shan on the W side of the Jordan in the Jezreel valley to retrieve the bodies of Saul and his sons from the city walls by traveling all night from their city. The text does not specify whether the men departed in the morning and traveled all day and night to arrive in the early morning hours of the following day, but still under cover of darkness, or whether they left only in the evening and traveled overnight. Accordingly, any site along the Yabis that lies somewhere between eight and twenty hours travel time from Beth-shan, with evidence of Iron I occupation (1200–1000 B.C.), is a possible candidate.

According to Eusebius, Jabesh-gilead lay in the vicinity of the sixth Roman milestone on the road from Pella to Gerasa (*Onomast.* 110.11–13). No milestone #6 has been uncovered, but a #5 milestone has been found at Kufr Abil (Thomsen 1917: 66–67). Assuming Eusebius' identification is accurate, Tell Maqlub (M.R. 214201) is the only possible candidate for Jabesh. It lies within the range of travel time described in 1 Sam 31:11–13, and has yielded evidence of Iron I occupation in surface survey (Glueck 1951: 214). The site lies on the N edge of a fertile bend in the Yabis River, at the point where the Roman road crosses the wadi. A modern road also crosses the wadi at this point, and it is likely that the pre-Roman road through the N hill country similarly forded the wadi here. Ancient Jabesh apparently was strategically located to control the flow of traffic crossing the wadi below it.

B. History

Jabesh is depicted as an Israelite city as early as the premonarchic period in Judges 21 and 1 Samuel 11. Nevertheless, 2 Sam 2:4–7 indicates that the city stood in a treaty relationship with Saul during his reign, and that David tried to persuade the city to switch its allegiance from the Saulide house at Saul's death and become allies of the newly-founded Davidic state of Judah, centered in Hebron. The phrase "do good" in v 6 is ancient technical treaty language (Moran 1963: 173–76; Edelman 1984: 202–3). Since Jabesh apparently was not incorporated into the Israelite state until sometime after the reign of Saul, the two depictions of the city as "Israelite" in the premonarchic period should be understood as literary fictionalizations. They probably are to be associated with the later idealization of premonarchic Israel as a union of twelve tribes, which were comprised of groups whose territory eventually became included within the borders of the Davidic-Solomonic state.

The Jabesh-gileadite practice of cremation and subsequent interment of the remaining bones (1 Sam 31:11–13) points to their non-Semitic background. No evidence yet exists that links any Semitic group with cremation as an accepted form of burial. On the other hand, both textual and archaeological material indicates that it was an accepted custom among groups of both Greek and Anatolian backgrounds, and that on the Greek mainland, it became the dominant form of adult burial during the 11th–10th centuries B.C. (Kurtz and Boardman 1971: 26, 33, 37). An excellent description of the Greek rite is found in the Odyssey (24.11.60–80). In Anatolia, it was the regular form of burial for kings (Bittel 1940; Otten 1940: 3–5). The cremations known from Hamath (Riis 1948: 47, 210–12) and the Amman airport "temple" crematorium (Herr 1983) both are associated with local Semitic pottery traditions, but in each case, have non-Semitic features. At Hamath, the pottery has Cypriot and Mycenaean decorative motifs and inscriptions written in Hittite and Phrygian, while at the Amman structure, a significant amount of imported Mycenaean ware, together with lesser amounts of imported Cretan, Cypriot, and Egyptian objects are

found alongside the local ware in the burials. In both cases, it appears that the cremations should be associated with non-Semitic groups who had recently arrived in the two regions.

Saul's rescue of Jabesh-gilead from Ammonite oppression (1 Sam 11:1–11) is reported to have been the military deed that led to his elevation to kingship over Israel. As mentioned above, the story's depiction of Jabesh-gileadites as Israelites who appeal to their brethren for help cannot be historically accurate. The setting of the battle at the beginning of Saul's career, before he had built up a professional army and had the military support of his state's citizenry, is also impossible. The battle presumes that Saul was known to have been an established power in Transjordan, which would have had to be the case for them to take on the national Ammonite army with any chance for success. See SAUL (PERSON).

1 Sam 14:47 indicates that Saul waged successful war against the Ammonites, and there is no reason to doubt that at least some of the details found in the present account in 1 Samuel 11 have been derived from an account of one of those battles—one that involved Nahash's siege of Jabesh-gilead, and Saul's successful lifting of the siege by surprise attack. What is not certain is whether Jabesh would already have established the treaty with Saul prior to the battle, so that he became involved out of treaty obligations, or whether the treaty was arranged in the wake of the battle, after Saul voluntarily aided the city, perhaps as a result of overtures that promised the treaty in exchange for assistance in the existing crisis. In either case, the battle could not have been the historical event that triggered Saul's initial coronation as king. The story's use is part of the tripartite kingship ritual pattern (designation of the candidate, testing, coronation) to structure the current account of the introduction of the kingship in 1 Samuel 9–11, which required the military testing of the king-designate before his final coronation (Edelman 1984).

DIANA V. EDELMAN

JABEZ (PERSON) [Heb *yaʿbēṣ*]. A person introduced abruptly into the genealogy of Judah (1 Chr 4:9–10). No other detail regarding him except the content of his prayer is given. There appears to be a play on the name in the text in that the name Jabez is related to "pain" (Heb *ʿoṣeb*) in v 9 on the one hand and to "hurt" (Heb *ʿoṣbî*) in v 10 on the other. Curtis (*Chronicles* ICC, 107), assuming that he was the founder of Jabez the town (cf. 1 Chr 2:55), suggested that Jabez may be a Calebite scribe belonging to the family of Hur. Williamson (*Chronicles* NCBC, 59), on the other hand, sees no substantial evidence to suggest a connection between the two names.

H. C. LO

JABEZ (PLACE) [Heb *yaʿbēṣ*]. A city of Judah, apparently near Bethlehem, but not yet identified. It is only mentioned as the city of the Kenite families of scribes who descended from Hammath where the Tirathites, the Shimeathites, and the Sucathites resided (1 Chr 2:55). The meaning of this name is etymologically explained in 1 Chr 4:9. There a man was called Jabez by his mother's words "I bore him with pain (*ʿṣb*)." Here the Hebrew verb *ʿṣb* is apparently understood as the transposition of the other verb *ʿbṣ* which is neither used in Hebrew nor in Aramaic, but probably an Amorite verb which corresponds to the Hebrew verb *ʿṣb*. People commonly understood that Jabez meant "He (=God) causes pain" suggested from the word "in pain." However, because of dual meanings of the Hebrew verb *ʿṣb*, it may be also possible to see another meaning "He (=God) fashions (=makes)" suggested from his mother's word "I bore." Then the latter meaning of this name is quite suitable as a city name like Yabneh, "He builds," which may be taken as an Amorite noncausative *Yaqtel* verbal pattern like Yahweh.

YOSHITAKA KOBAYASHI

JABIN (PERSON) [Heb *yābîn*]. **1.** The King of Hazor who, along with his allies fought Joshua and Israel (Josh 11:1–14). That Jabin held a position of preeminence is made clear by the initiative that he had taken to summon the kings and groups of people in N Canaan when the region was under threat. The powerful alliance brought together by Jabin was defeated by Israel. Jabin was finally killed and Hazor put to the torch.

2. The King of Canaan, who reigned in Hazor, when Deborah was judging Israel (Judges 4). Sisera was the commander of Jabin's army. Deborah instructed Barak to engage Sisera in a battle and Sisera's army suffered a crushing defeat. Eventually, both Sisera and Jabin were killed.

The discussions concerning the Jabin in the two episodes have not reached unanimity in details and conclusion. One opinion holds that "Jabin" is a dynastic name of the kings

of Hazor. It is noteworthy that the Mari texts of the 18th century B.C. as well as the Amarna Letters of the 14th century B.C. make reference to the city-state of Hazor. These indicate some measure of continuity. Another opinion holds that both episodes are in fact two varying traditions of the same event; they belong together. A third opinion points out that in Judges 4, Sisera is central to the story while chap. 5 does not mention Jabin at all. Therefore, the account in Judges may actually be about Sisera, who governed in Harosheth-ha-goiim, meaning the forested region of the gentiles as indicated by the LXX reading. It is possible that the battle of Merom (Joshua 11) took place subsequent to the battle of Deborah (Judges 4–5). Archaeology in this region supports an initial penetration by the Israelites and battles being fought much later. One such battle may have been given a national orientation and become a part of the conquest stories in the book of Joshua. The Deuteronomistic History has made use of the two episodes to contrast the strength of the enemies and the victory that is possible when the leaders are obedient to the Lord.

PAUL BENJAMIN

JABNEEL (PLACE) [Heb *yabnē'ēl*]. Var. JABNEH. **1.** A town along the N border of the tribe of Judah (Josh 15:11), which is probably the same Philistine town (Heb *yabnēh*) conquered by Uzziah, king of Judah (2 Chr 26:6). Two essentially unexcavated sites named "Jabneh" are attested in the region: Yavneh-Yam (M.R. 121147), a large site situated along the Mediterranean Sea S of Kibbutz Palmahim; and an inland site associated with the Arab village of Yibna (M.R. 126141) situated on the coastal plain between Lod and Ashdod, S of Nahal Sorek. The biblical site is identified with the latter, which contains Iron Age, Hellenistic, and Byzantine remains. In the Hellenistic period the town was called Jamnia/Iamnia (the name having gone from Jabneel to Jabneh to Jamnia).

Judah Maccabeus—or, according to Josephus (*Ant* 13.6.7), Simon—captured and burned the city (2 Macc 12:8–9). In Hellenistic times, Jamnia had a Jewish population, and by the time of Alexander Janneaus it was listed among the cities under his control, and had a totally Jewish population. From the fall of Jerusalem in 70 C.E. until some time around the Bar Kokhba revolt (132–135 C.E.), the reconstituted Sanhedrin met at Jamnia, which then became a great spiritual and intellectual center of Jewish learning. See JAMNIA (JABNEH), COUNCIL OF.

In rabbinic texts the vicinity of Jabneh was part of a significant district region referred to as "the South" (as opposed to Galilee, known as "the North"). Following the Bar Kokhba revolt, much of the city was Samaritan, and a Christian population predominated by the 5th century. While Jamnia of the post-Temple period is tentatively identified with the Yibna site, no regular excavations have been conducted there and there is no evidence to substantiate this identification. A 1988 salvage excavation on the NE slope of the tell yielded only an assemblage of 6th century Byzantine pottery. Three sondages cut on the NE and NW sides of the tell to determine the N extent of the Byzantine occupation yielded traces of architecture, and possibly Hellenistic and additional 6th century Byzantine pottery. Thus far, no 1st century C.E. pottery has been identified to warrant identifying this site with the post-Temple Jamnia. However, tombs excavated about 1.5 miles S of the tell contain pottery from the end of the Hellenistic period, Herodian lamps, a coin of Emperor Tiberius, as well as later finds dating to the Byzantine period; this suggests that these tombs, as well as those located on a hill about 1.5 km N of the tell containing complete 2d century C.E. lamps, served as the necropolis for the tell, which was probably occupied during the early rabbinic period (1st–2d century C.E.).

2. A town along the S border of the tribe of Naphtali (Josh 19:33) in E lower Galilee, identified in the Jerusalem Talmud (*Meg.* 1:1, 70a) with Kfar Yamma (Khirbet Yamma; M.R. 198233), a large, unexcavated site on the grounds of Moshava Jabneel. However, the paucity of LB and Iron Age sherds at Kh. Yamma, in contrast to the plethora of archaeological remains of those periods at Tel Yin'am (M.R. 198235) suggests that biblical Jabneel should be identified with the latter, which is located 1.5 km NE of modern Moshava Jabneel. For a summary of the results of excavations, see YIN'AM, TEL.

While the LB town that existed on the tell has been identified with Yenoam of Egyptian New Kingdom texts, that identification is no longer considered reliable, although the plethora of LB finds and evidence for fiery destruction levels accord with the Egyptian texts. The consensus of opinion is that Tel Yin'am is identifiable with Jabneel. Like the Judean Jabneel further S, the name underwent a change from Jabneel to Jabneh to Jamnia, and ultimately to Yin'am.

HAROLD A. LIEBOWITZ

JABNEH (PLACE) [Heb *yabneh*]. See JABNEEL (PLACE); JAMNIA (JABNEH), COUNCIL OF.

JACAN (PERSON) [Heb *ya'kān*]. A Gadite, who was a son of Abihail and one of seven kinsmen, who are named alongside four (or three; see SHAPHAT) tribal leaders (1 Chr 5:13). According to 1 Chronicles 5, Jacan and his kinsmen lived opposite the Reubenites in "Bashan as far as Salecah" (v 11) and "in Gilead, in Bashan . . . and in all the pasture lands of Sharon to their limits" (v 17). Although Num 13:24–28 assigns Gilead to Gad, neither Bashan, which is too far N, nor Sharon, which is too far W, is mentioned. It may be that the reference in 1 Chronicles 5 to Bashan reflects confusion about the N boundary of the tribe or about the extent of Bashan (cf. Deut 3:10). The inclusion of Sharon within Gad's allotment coincides with a reference in the Mesha Inscription (line 13; *ANET,* 320) to an otherwise unknown city or region by that name in Transjordania.

The claim that Jacan and the other sons of Abihail were enrolled "in the days of Jotham . . . and . . . Jeroboam" (1 Chr 5:17) is problematic, since several years separated their reigns (unless Jotham's co-regency with his father Azariah/Uzziah is counted). Neither Jacan nor the others named in the Chronicler's genealogy for Gad (1 Chr 5:11–

17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15).

M. Patrick Graham

JACHIN (PERSON) [Heb *yākîn*]. JACHINITES. Three individuals mentioned in the OT bear this name.

1. A son of Simeon, the second son of Jacob and Leah. His name is included in the genealogy of Jacob's family at the time they migrated to Egypt to see Joseph. The genealogy of Simeon is presented in four different places in the Hebrew Bible. In the identical genealogies of Gen 46:10 and Exod 6:15, Jachin is the fourth of six sons of Simeon. In the genealogy of 1 Chr 4:2–25 and in the list of Simeon's clans in Num 26:12–14, Jachin is the third of five sons, the name of Ohab being omitted. He is probably identified with Jarib, who appears in the parallel list of Simeon's sons in 1 Chr 4:24. Jachin was the ancestral head of the Jachinites, a clan of the tribe of Simeon (Num 26:12).

2. A priest who was the 21st chosen by lot at the time when David organized the priests for service in the temple (1 Chr 24:17). He was one of the outstanding men from among the sons of Eleazar and Ithamar who were selected to form the 24 priestly courses in Israel (Williamson 1979).

3. One of the priests who came from Babylon and who lived in Jerusalem (1 Chr 9:10; Neh 11:10). His name is included among those who were chosen by lots to live in Jerusalem (Neh 11:1–2, 10). The appearance of Jachin among the priestly list and his association with two other priests, Jedaiah and Jehoiarib, has been debated. Bartlett (1968: 4, n. 1) has suggested that since Jachin's name is replaced by Jarib in 1 Chr 4:25 and since he appears without pedigree, his name was entered on the list because of his association with Jehoiarib. Williamson regards the name of Jachin in the book of Nehemiah as a gloss which later redactors thought to be a correction to the text (Williamson, *Ezra, Nehemiah* NCBC, 343).

JACHIN AND BOAZ [Heb *yākîn, bōʿaz*]. The names given to two pillars that flanked the entrance to the Jerusalem temple. They are described in 1 Kgs 7:15–22, 41–42 and are also mentioned in 2 Chr 3:15–17, which parallels the Kings source. In 2 Kgs 25:16–17 and Jer 52:17, 20–23, the pillars are again described in the context of the report of the Babylonian sack of the temple in 587 B.C.E.

The temple texts that present Jachin and Boaz contain detailed information, but the exact appearance and function of the pillars remains difficult to reconstruct. The biblical verses describing them are replete with textual problems and obscure technical words. Furthermore, there are discrepancies between the information in the core text of 1 Kings 7 and the other places that mention these pillars. Both of these problems are to be expected. Textual difficulties are often present when specific technological language is involved. Inconsistency in details arises when the structure presented in one set of texts is hundreds of years older than that in another set. In the case of the temple, alterations and refurbishings over the centuries surely took place (Meyers 1982).

Despite these difficulties, the information in the Bible provides a good idea of the physical appearance of the pillars. According to the Kings account, each stood 18 cubits high (ca. 26.5 ft.) and was 12 cubits (ca. 17.5 ft.) in circumference. The pillars were made of cast bronze and were hollow, with the metal being four fingers (ca. 3 inches) thick. Each pillar was surmounted by a bowl-shaped capital (or double capital, so Yeivin 1959) five cubits (ca. 7.5 ft.) in height, giving the pillars a total height of 23 cubits (ca. 34 ft.).

The capitals were elaborately decorated, with "nets of checker work," "wreaths of chain work," and "two rows of pomegranates." Although these features cannot be exactly understood, the text (1 Kgs 7:19) apparently summarizes them as "lily-work," a designation that relates the capitals of Jachin and Boaz to the complex floral capitals that were characteristic of monumental architecture in the ANE. Egyptian architecture in particular is notable for its use of plant forms in structural elements, and the Phoenician workmanship responsible for the Jerusalem temple no doubt meant the use of many of the Egyptianizing forms that characterized Phoenician and W Syrian art.

Once fabricated by Hiram of Tyre, the pillars were erected at the entrance to the temple, the one on the S being called Jachin, perhaps meaning "the establisher," and the one on the N named Boaz, which is also the name of the great-grandfather of David. See BOAZ (PERSON). Their enigmatic names, their great size, the use of a term *(gullâ)* meaning "bowl" for part of their capitals, and ambiguity about whether they were freestanding or structural elements has led to much speculation about the role of these prominent elements of the Jerusalem temple. They have been called cressets (Albright 1942, following W. R. Smith; cf. Myres 1948); and they have been identified as fire altars, obelisks, phalli, twin mountains, sacred stones, pillars of heaven, and trees of life (see, e.g., Scott 1939; *IDB* 4: 534–60; Wright 1941; and the summary of the literature in Busink 1970). The variety of suggestions indicates a strong measure of conjecture.

All of these suggestions focus upon the symbolic nature of the pillar and upon an understanding of them as freestanding. However, analyzing the Jerusalem temple in relation to contemporary Syrian architecture has led to the supposition (Ouellette 1976) that the pillars were functional, just as were the pillars in an analogous building at Tell Tainat.

The symbolic nature of Jachin and Boaz deserves the attention that it has received. That they are fundamentally decorative (and therefore symbolic) rather than structural (and therefore functional) can best be demonstrated not by any analysis of their form but rather by noting their place in the biblical presentation of the temple and its furbishings. The description of Jachin and Boaz comes at the beginnings of the description of the series of bronze

vessels that were fashioned for use in the rituals of the temple courtyard. The pillars are thus categorized by the text itself as temple appurtenances, all of which have strong symbolic value. Yet, as first in that series, they follow immediately upon the description of the construction of the temple itself and of the royal palace complex. That description is summarized (in 1 Kgs 7:9–12) by reference to the stonework of all these structures, in particular the masonry of two courts ("the great court" and the "inner court of the house of Yahweh") and the *ʾûlām* (RSV "vestibule"), which may itself be a court since it appears in this short list of courts. The position of the pillars in the Kings account is thus transitional: from the buildings, notably the courtyards, to the appurtenances. While the second category may dominate, the participation of the pillar in the first category—courtyard architecture—also is present. If this be the case, a structural role that is compatible with their being freestanding is indeed possible.

Greater understanding of the symbolic and structural significance of the columns comes from considering their architectural location. They flank the entry to the *ʾûlām*, a word translated by so many different words in the English versions as to reveal the uncertainty about its identity as part of the temple. Close analysis of the *ʾûlām* (Meyers 1983a) and the details of its construction indicates that it belongs, architecturally and conceptually, to the world of courtyards as they functioned within Near Eastern buildings. The temple precincts as a whole contained courts; but the temple itself, as an essentially private dwelling for Yahweh, had its own indispensable courtyard. Jachin and Boaz thus belong to the structural category of pillars as gateposts rather than as load-bearing elements.

As gateposts, Jachin and Boaz were extraordinarily elaborate and large. With their ornate capitals, their shiny bronze surfaces, and their great height, they stood out against the rather flat and relatively unbroken exterior that the fortress-like temple would have presented to the viewer. Since the grandeur of the temple construction and decoration was largely contained inside the building itself, and since the interior was not public space (that is, it was off-limits to laity and to the general clergy), the imposing pillars at the entrance represented to the world at large that which existed unseen within the building.

The symbolic value of the pillars is contained in their position as gateposts. Archaeologically retrieved parallels and representations of entry pillars in ancient artistic sources indicate that the doorposts or gateposts of a temple convey to the viewer the notion of passage: that the god meant to inhabit the earthly dwelling (the temple) has indeed traversed the threshold of the building, entered the sanctuary built for the deity, is accessible to the human community, and legitimizes the political unit that has constructed the temple.

In the case of the Solomonic temple, the entry pillars proclaimed that Yahweh had entered his abode in Israel. Furthermore, since Jerusalem under David and Solomon had become the capital of an empire, a unique situation in the political history of the Near East, the monumental palace-temple complex signified both for the inhabitants of Israel and for the representatives of vassal and foreign states (including Solomon's wives and their entourages) that came to Jerusalem, the authority of the imperial rule of the house of David. Within the ancient religious-political conceptualization, the presence of the nation's God, Yahweh, in the temple adjoining the palace helped to legitimize Solomon's reign (Meyers 1983b).

Neither foreigners nor most Israelites had access to the temple, or to the holy ark that signified Yahweh's unseen presence. Yet they all could see Jachin and Boaz, which communicated visually the entrance of God to this abode. The very size of the pillars in relation to temple entry column bases excavated at analogous buildings in the Levant is significant. The pillars flanking the Jerusalem temple's entry were considerably larger according to the dimensions in 1 Kings. This magnitude was appropriate to the religious and political role of Jerusalem and its state buildings as the seat of an empire.

CAROL MEYERS

JACKAL. See ZOOLOGY.

JACKAL'S WELL (PLACE) [Heb *ʿên hattanîn*]. A place located outside the ruined walls of Jerusalem, apparently between the Valley Gate and the Dung Gate (Neh 2:13). The Heb name can also be translated "Spring of the Dragon" or even "Eye of the Dragon" (in which case it would not necessarily even allude to a source of water). The LXX instead reads *pēgē tōn sykōn,* "fountain of the figs." The Dung Gate is undoubtedly located near the juncture of the Hinnom and Kidron valleys, but the location of the Valley Gate is problematic. See VALLEY GATE (PLACE). If it provided exit from the City of David to the Tyropoeon valley, then Jackal's Well should be located in the Tyropoeon valley N of the Dung Gate, outside the 10th century W wall of the City of David, but inside the W wall that was built when Hezekiah enlarged the city in the late 6th/early 7th century B.C. However, if the Valley Gate provided exit from Hezekiah's larger Jerusalem to the Hinnom valley, then Jackal's Well would be located in that valley W of the Dung Gate. No known source of water exists in either the Tyropoeon or Hinnom valleys, and

hence most scholars simply equate Jackal's Well with En-rogel outside the Dung Gate at the juncture of the Hinnom and Kidron valleys.

GARY A. HERION

JACOB (PERSON) [Heb *yaʿăqob*]. Var. ISRAEL. **1.** The biblical patriarch and eponymous ancestor of the twelve tribes of Israel. See JACOB NARRATIVE.

2. The son of Matthan and father of Joseph, the husband of Mary, according to Matthew's genealogy tying Joseph to the house of David and Solomon (Matt 1:15, 16). The name Jacob was apparently a common one in several periods of Jewish history. Jacob the son of Isaac is known elsewhere in this same genealogy (1:12) as Jesus' ancestor, and according to Albright and Mann (*Matthew* AB, 4–5) Jacob was a characteristic name of the last two centuries B.C. The major point of discussion about Jacob as the son of Matthan in 1:15 and 16, who does not appear elsewhere in any other genealogy or list of Jesus' ancestors, is his relation to Heli as the son of Matthat in Luke 3:23. See MATTHAT (PERSON) for discussion of the major proposals, although Gundry (1982: 18) posits simply that Jacob was put in place of Heli by Matthew "to conform to the fathering of the patriarch Joseph by the patriarch Jacob." The solution is probably more complex than this. A few late mss include "of Jacob" after Joseph and before "of Heli" in Luke 3:23.

STANLEY E. PORTER

JACOB NARRATIVE. Jacob was the younger son of Isaac and Rebekah, twin brother of Esau, and father of the 12 sons after whom were named the 12 tribes of Israel. He is the central figure in the cycle of stories in Gen 25:19–35:29 and reappears as a lesser figure in the Joseph stories (Genesis 37–50). In separate popular etymologies, the Heb name *yaʿăqōb* is connected with Heb *ʿāqēb*, "heel," because Jacob was born clutching the heel of his brother Esau (Gen 25:26), and with the verb *ʿāqab*, "cheat," because Esau said that Jacob had cheated him twice (27:36). The name may be a shortened form of Heb *yʿqb-ʾl*, "God protects," a name known from extrabiblical sources (Noth 1953). Jacob later received the name "Israel" as a mark of his struggle (32:29) and piety (35:10), and his descendants were later identified by this name ("children of Israel").

Biblical Jacob is unknown outside the Bible, although the general congruence of the patriarchal narratives with customs and artifacts known from archaeology to belong to the 2d millennium (especially the material from Nuzi and Mari) has sometimes been used to support his historicity. Later scrutiny called much of that argument into question (Van Seters 1975; Thompson 1974) on the grounds that the alleged parallels were inexact or unrepresentative, or had been misunderstood. For example, the claim that possession of household idols (Gen 31:19) helped constitute the family of Jacob as a legitimate clan has been given up (Selman 1980: 110). Some writers have refused even to attempt historical reconstructions (*HAIJ*, 79). Where historical questions remain open, Jacob has been dated to the 1900s B.C.E. (Bimson 1980: 84), and a number of extrabiblical customs are seen to retain their pertinence (Selman 1980: 125–229; see also Morrison 1983).

Until recently, critical scholarship assumed that the documentary hypothesis was a key to understanding the Jacob material, namely, strands of J and E with later additions or redaction by P (Van Seters 1975 dates J to the Exile rather than to the time of Solomon; *CMHE*, 293–325, and Hendel 1987 hold to the early oral-epic origin of JE, enlarged and ordered by P late in the Exile). Noth had postulated an East-Jordan Jacob and a West-Jordan Jacob, the latter stories being secondary and less interesting (*HPT*, 89ff.). Farmer (1978) approaches the story as folklore, focusing on how trickster figures such as Jacob and Samson, operating from a position of weakness, trick others or are themselves tricked. Oden (1983) employs data from the field of anthropology.

Meanwhile a plethora of holistic literary treatments have appeared, based on a reassessment of the form and style of "narrative" (Frei 1974; Alter 1981) and reflecting a fundamental hermeneutic shift. In general, this approach does not deny the composite character of the Jacob material, but downplays the cycle's prehistory in favor of questions of meaning, and it sets aside historical questions as inappropriate to the material (Fokkelman 1975; Clines 1978; Buss 1979; Thompson 1987). Such is the general perspective of the present article, which is more about the Jacob cycle than about Jacob and is literary rather than biographical in method.

A. Structure of the Jacob Cycle
B. The Cycle's Stories
C. Meaning

A. Structure of the Jacob Cycle

The stories of the Jacob cycle have been artfully arranged to gather around Jacob's return to the land of his birth, Canaan, after a hasty flight and long residence abroad to avoid his brother's revenge. They are thus informed by a dual tension: (1) How can the duplicitous Jacob become the father of God's people? and (2) How can he inherit the promise made to Abraham and Isaac if he leaves the land which God has given to them? The fundamental theme of the cycle has to do with the life and character of "Israel," that is, the people of God. The Jacob stories are about the essence and meaning of a people (Thompson 1987: 39–40). The biblical text presents the Jacob stories in a concentric pattern which has been independently observed by several scholars (Fishbane 1975; see also Fokkelman 1975: 240; Gammie 1979; otherwise Hendel 1987: 144, n. 20) and which is signalled both by cross-references in vocabulary and by thematic similarities. The cycle breaks into 2 equal halves at Gen 30:24–25, each having 7 matching segments, presented thematically in exact reverse order. The entire cycle is bracketed at beginning and end by genealogies of the 2 sons who stand outside the line of promise, Ishmael (25:12–18) and Esau (chap. 36), so that Jacob's role as the bearer of the promise is unmistakable.

The Unchosen Son (Ishmael) (25:12–18)
- **A.** Beginnings. Birth, prediction, early conflict between Jacob and Esau (25:19–34)
 - **B.** Relations with indigenous population (26:1–22)
 - **C.** Blessing obtained ["He took away (*lāqaḥ*) my *bĕrākâ*" (27:35–36)] (27:1–40)
 - **D.** Jacob's flight from Esau (27:41–28:5)
 - **E.** Encounter with God's agents (28:10–22)
 - **F.** Arrival in Haran: Rachel, Laban (29:1–30)
 - **G.** Children: Jacob acquires a family (30:1–24)

Jacob's return to Canaan begins as soon as Joseph is born

 - **G′** Flocks: Jacob acquires wealth (30:25–43)
 - **F′** Departure from Haran: Rachel, Laban (31:1–32:1—Eng 31:1–55)
 - **E′** Encounter with God's agent (32:2–3—Eng 32:1–2)
 - **D′** Jacob's approach to Esau (32:4–33—Eng 32:3–32)
 - **C′** Blessing returned ["Accept (*lāqaḥ*) my *bĕrākâ*" (33:11)] (33:1–20)
 - **B′** Relations with indigenous population (chap. 34)
- **A′** Endings. Death, fulfillment, Jacob and Esau together (chap. 35)

The Unchosen Son (Esau) (chap. 36)

The 2 segments on Esau's wives which frame segment C (26:34–35; 28:6–9) seem to stand outside the above topical descriptions.

Some of the thematic correspondences are especially clear. For example, segments B/B′ both deal with relations between the people of the promise and the indigenous residents of Canaan, in sharply contrasting modes. In terms of narrative sequence, however, B is out of order (since the twins have not yet been born, 26:11), and belongs to the 20-year period of Rebekah's barrenness (25:20, 26); its chronological dislocation was necessary for it to function topically in the cycle. *Placement and juxtaposition are among the writer's major techniques.*

This topical match between the segments in each of the halves is confirmed by several striking cross-references in writing. The numinous experiences in E/E′ each feature God's "agents" (or "angels"), an expression recurring nowhere else in the Bible. The same 2 sections also use the Hebrew verb *pāqaʿ*, "encounter," which occurs nowhere else in the sense of "reach a place," suggesting that the writer chose the unusual verb at 28:10 in order to effect the linkage with E′. Again, the occurrence of *bĕrākâ* "blessing" in the antonymic expressions "he took away your/my blessing" and "accept my blessing," both with the verb *lāqaḥ*, "take,' is the thread connecting segments C/C′.

Thus the cycle is not only a narrative sequence with its own inner movement, but an artful arrangement which invites the reader to compare each segment with its complement later (or earlier) in the sequence.

To illustrate: segments A/A′ clearly open and close the cycle. Certain information is repeated from earlier in Genesis in order to give the cycle a proper beginning: Isaac's birth (21:1–5), marriage (24:67), and Rebekah's family (24:15, 29), adding the characterization "Aramean." An oracle predicts that Rebekah's children will become two "nations," one submissive to the other. The twins are born, and both their prenatal struggle (v 22) and Jacob's manipulation of Esau (vv 27–34) prefigure Jacob's character as a loner who lives by his wits at the expense of other people, as well as the bad blood between the twins (chap. 27) and the later hostility between Israel and Edom (36:1, 8–9, 19; cf. Ps 137:7; Ezekiel 35).

A′ echoes the theme of A in conclusion: the deaths of Isaac, Jacob's wife Rachel, and Rebekah's nurse Deborah; Jacob's 12 sons are listed by name and mother, a "nation"; the twins, having come together (chap. 33), stand at their father's grave; and Jacob appears as a religious reformer (vv 1–7) and recipient of the full divine promise (vv 9–25).

B. The Cycle's Stories

Segment A (25:19–34). Jacob and Esau were born as a result of Isaac's intercession with God, because Rebekah (like Sarah before her and Rachel after her) was barren; offspring are the gift of God. Among the Bible's several husbands of barren wives, only Isaac prayed for a change (contrast Jacob in Gen 30:2), marking him as a man of piety and intimating a synergism which runs throughout the whole cycle.

Rebekah's only words in this section arise out of the prenatal jostling of the twins, but the Hebrew sentence is incomplete: "If so, why am I . . . ?" The text leaves Rebekah musing uncertainly about the events which her pregnancy portends; hers is an unfinished question, a verbless and ambiguous reflection which prefigures her incomplete and partial role in the cycle as a whole, just as the jostling forecasts enmity between the twins.

The oracle which she sought disclosed that her children would become separate peoples of unequal power, and that the nation springing from the older would be submissive to the younger. By identifying the sons with the peoples who sprang from them, the oracle at once implies a collective as well as an individual reading of the stories that follow: They recount the outward and inner movements of Jacob, the son of Isaac and Rebekah; but they refer also to the movements, the calling, and the character of the people named "Israel" after him. A collective reference is also suggested by the allusions associated with the naming of Esau: His hirsute appearance at birth (Heb *śēʿār*, 25:25; 27:11) alludes to his country Seir (33:16), while his ruddy color (Heb *ʾadmônî*, v 25) and preference for red stew (Heb *hāʾādōm*, v 30) refer to his region Edom. By contrast, the name Jacob is explained with reference to personal behavior, since the collective reference belongs especially to his second name, Israel.

The narrative moves from the birth of the twins directly to an event showing that their relationships as adults realized the conflict portended by prenatal and birth events. Jacob took advantage of Esau's fatigue and hunger by requiring him to trade his birthright for some food. The cycle has thus barely opened when Esau has ceded to Jacob the *bĕkōrâ*, his inheritance rights as firstborn. In a rare show of appraisal, the text says that Esau "spurned" his birthright. Yet, Jacob's behavior was hardly exemplary: His hand was clearly on Esau's heel, and the pairing of this episode with the birth story types Jacob's character as the grasping and manipulative.

This falls short of expectations, as compared with Abraham and Isaac and in view of Jacob's subsequent role as the father of the Israelite people. The dissonance is even in the text, for in the parallel description of the twins' way of life (25:27), opposite the assessment "Esau was a skillful hunter," we read, "Jacob was a blameless man" (Heb *ʾîš tām*, exactly as Job 1:8; 2:3). Translations use attenuated words ("plain" KJV, "quiet" RSV, "mild" JPS), but *tām* clearly implies moral excellence. This, then—moral excel-

lence—is to be Israel's vocation; and the same story which asserts it so boldly goes on to show Jacob as something other than blameless. The disparity introduces a tension at the beginning of the cycle which is not fully relaxed until the end.

Segment B (26:1–33). This story belongs chronologically to the time before the twins were born, but its placement within the cycle gives it pertinence to him. It opens with a direct reference to Abraham's behavior in an earlier famine (v 1: the reference is thematic, not chronological, since a minimum of 64 years in narrative time separates the 2 [10 years 16:3; 14 years 16:16 and 21:5; 40 years 26:20]). As Abraham had done, Isaac started out for Egypt, but in the "Philistine" city of Gerar, God appeared to warn against leaving the land and to reiterate to Isaac the Abrahamic promise of land and progeny (vv 2–5).

Isaac's anxiety over their safety in Gerar proved to be unfounded (vv 6–11), and the juxtaposition of this episode to v 5's prolix "my charge, my commandments, my laws, my teachings," suggests that residence in the land also required obedience to the divine pattern for life. To "remain in the land" is synonymous with obedience to Torah (Ps 37:3).

The use of "Philistine" suggests the story's rise at a time when relations with the Philistines were a problem to Israel. In the cycle, however, they typify the land's indigenous residents, because Isaac visits them as a stranger and is subject to pressure from them.

Isaac's prosperity under divine blessing led to envy and to contention over water rights; he had to move several times, thereby surrendering valuable excavated wells in the process, before finding "space" (vv 12–22; "Rehoboth" is symbolic). Following this sacrificial determination to occupy the land amicably, another divine appearance (at the pilgrim site of Beer-sheba) reiterated the promise of progeny, and added the promise of God's presence (v 24, unique to the Jacob cycle, see also 28:15, 20; 35:3).

A final threatening approach of the Philistines resulted in a treaty (Heb *bĕrît* "covenant") between the 2 groups, sealed with a feast and the exchange of oaths (vv 23–33). The treaty episode interrupts the account of digging one more well (vv 25b, 32), so that the servant's report, "We have found water," takes on symbolic importance: Water is life, especially in the arid Negeb where Beer-sheba is located, and so also is the treaty life. Isaac has shown that it is possible to occupy the land of promise, to observe Torah, to prosper, and to maintain good relations with the other residents. He has found life. The other treaty, between God and Abraham, is also in the background: Although the word *bĕrît* is not used in the promise reports of chap. 26, it has been used in the earlier promises which are now being extended to Isaac (15:8; chap. 17); it, too, is life.

This segment on indigenous relations stands between 2 sections (A and C) on relations between Jacob and Esau, which are marked as a pair by common themes (e.g., Jacob outwits Esau to his own advantage) and by similar key words, such as *bĕkōrâ* and *bĕrākâ* ("birthright" and "blessing"). These words not only sound alike but are visually similar on the written page—*bkrh* and *brkh*—being distinguished only by the transposition of the middle 2 consonants.

This placement both links Isaac's example with the subsequent B′, a different mode of engagement with the people of the land, and unmistakably juxtaposes Isaac's style of relationship to Jacob's. The juxtaposition announces, "Jacob may be living by strife and deceit, but if you want to see life under the promise, in the middle of all the ambiguity of threatening sociopolitical relationships, take a look at Isaac." The story also stresses the need for the recipients of the promise to maintain residence in the land, something which will add additional tension in segment C.

Segment C (27:1–40). In the second of the paired stories of dealings between Jacob and Esau, Rebekah led Jacob to deceive his father into bestowing the patriarchal blessing—*bĕrākâ*—on him instead of on Esau the firstborn. Jacob disguised himself as Esau, and, although the blind Isaac was never free from suspicion, the ruse worked: The father ate his favorite dish and conferred on Jacob a promise of agricultural prosperity and hegemony over other people, including his brother (vv 28–29). Only when Esau actually showed up to receive the blessing did Isaac discover the trick; the blessing was already Jacob's, but Isaac gave Esau a similar promise of bounty along with the promise that he should eventually free himself from Jacob's yoke (vv 39–40).

This detailed and extended story—7 times as long as the *bĕkōrâ*—shows Jacob firmly in the legal and financial position of the firstborn. Both stories involve manipulation, and both involve meals, to which Isaac's amicable covenant meal with Abimelech is a pointed contrast. They offer complementary explanations of Jacob's priority, the shorter being more favorable to Jacob (there is no outright deception, and Esau "spurns" his birthright), the latter being marked by a deliberate and callous duplicity involving Rebekah as prime mover (the verbs in vv 14–17 have Rebekah, not Jacob, as their subject). Jacob's impersonation of Esau symbolizes his priority: He dresses in Esau's clothes and simulates Esau's tomentose appearance (vv 15–16); he smells of the outdoors (v 27); he twice says, "I am your firstborn" (vv 19, 24). He has taken Esau's place.

The Masoretic editors of the Hebrew text have signalled this in another way in Isaac's reply to Jacob's address in v 18. Isaac says "Yes?" (Heb *hinnennî*), a common locution normally spelled *hinnēnî*, but with 2 doubled "n"s only here and in Gen 22:7 where Isaac's address to Abraham and the father's reply are in the identical words. In both stories the father replies to the younger but favored son.

This linkage also highlights the tension which the second episode of cheating introduces into the cycle. In Gen 22:7 Isaac was the obedient and compliant son, enquiring about sacrificial procedures; but in Gen 27:18 Jacob—equally born by divine intervention—says, "I am Esau, your firstborn." How can such mendacity inherit and bear the promise? And indeed, the fathers' replies in each case signal this, for Abraham said to Isaac, "Yes, my son," but Isaac said to Jacob, "Yes, *who are you,* my son?" Thus, one of the central themes of the whole cycle of stories comes to expression—the unclear identity of Jacob.

The story expresses this ambiguity in other ways. In talking to Rebekah about the deception, Jacob offered descriptions of both himself and Esau (v 11), in which there are wordplays pointing beyond the immediate situa-

tion. Esau, said Jacob, is a hairy man (Heb *ʾîš śāʿîr*). The adjective is a homophone of *śāʿîr* "he-goat, buck," and thus alludes playfully to Esau's outdoor life and to the skins of kids with which Jacob disguised himself (v 16). I, said Jacob, am a smooth man (Heb *ʾîš ḥālāq*). The same adjective occurs elsewhere of deceptive speech (Prov 5:3; 26:28). Who are you, Jacob? By his own mouth, he is not a "blameless man" (25:27), but a "slippery man."

Although Isaac could give the patriarchal blessing to only one of his sons, he also gave Esau a promise very similar in that it predicted the same agricultural boons—the fat of the land and the dew of heaven (in reverse order, vv 28 and 39). Translations usually obscure this similarity, since the preposition *min* can mean both "have a share in" and "be far from," but the reader of the story in Hebrew may wonder if there is still a chance for Esau to recoup his position, especially since Isaac told him he would throw off Jacob's yoke.

Segment D (27:41–28:5). Esau's anger at a second supplanting (v 36) made it necessary for Jacob to flee, and his mother arranged his departure for her own country where he could stay with her brother Laban (vv 41–45), representing the trip to Isaac as required so that Jacob should not marry a local woman (27:46–28:5). Classical literary criticism has seen these two sets of arrangements as duplicate accounts from different sources: The former, which calls Rebekah's homeland "Haran," from JE, and the latter, using "Paddan-aram" from P. But each paragraph plays its own role in the movement of the narrative.

This sly provision for Jacob's sudden need to leave home is the cycle's final glimpse of Rebekah. Her last words follow the "if . . . then . . ." pattern of her first (25:22), but here the sentence is complete: *lāmmâ lî ḥayyîm* "What good will life be to me?" (v 46). These 2 sentences—freighted with import by their position—show Rebekah preoccupied with her own feelings and well-being. Her single significant action has been to engineer the deception by which her second-born son Jacob, instead of Esau her firstborn, received Isaac's blessing. Her way of life has affinities with that of her brother Laban (29:15–30; 31:6–7, 14–15, 41–42), and Jacob's own slippery character displays a family resemblance.

This way of life is new in the Genesis narratives. Apart from their lies about their wives (chaps. 12, 20, 26), both Abraham and Isaac are exemplary persons, and in chap. 26 Isaac is conscientious and sacrificial in his relations with the herdsmen of Gerar. The term "Aramean," found first in Rebekah's genealogy (25:20; 28:5) and elsewhere applied to Laban alone (31:20, 24), while obviously denoting the N Syrian region of their origin as "Aram," seems also to connote this behavioral pattern in the Haran side of the family; "Aramean" is new in the Jacob cycle, even though all the other genealogical information of 25:20 is already found in 24:15, 28.

It is thus a central tension within the cycle whether Jacob will actually become the chosen leader which later Israelites knew him to be. His departure from Canaan raises the possibility that he has abandoned the land promised to Abraham and which Isaac has resolutely occupied at great cost (chap. 26), and has adopted another way of life altogether. Deut 26:5 describes him as "an Aramean given up for lost."

Before Jacob left, Isaac gave another blessing, this one clearly linked to earlier traditions in Genesis by the words "fertile and numerous" (28:3), alluding to Gen 1:28 and 9:1: Like Adam and Noah, Jacob is to be the start of something new and big, becoming "an assembly of peoples." Isaac went on (28:4) to link Jacob with the Abrahamic promise and possession of the land, something new in the narrative and especially incongruous in view of his imminent departure. Unlikely as it seems, Jacob has been marked as the bearer of the promise.

At this point, Esau does not look as bad as later tradition painted him (especially Heb 12:16, which called him "irreligious"), since he has been victimized in both stories of rivalry with Jacob. His rehabilitation is further suggested by the 2 snippets of information about his wives which frame the deception story (26:34–35 and 28:6–9). The first reports that his Hittite wives "were a source of bitterness" to his parents; the second notes that he married Mahalath, the daughter of Ishmael, Isaac's half-brother. Moreover, Esau remains in Canaan, and the promise concerns the land (28:4).

This, then, is the situation: Jacob has spurned the Abrahamic promise and has decamped the land which the promise conveyed to Abraham's offspring; Esau has received a patriarchal promise only slightly less complete than Jacob's, and has married within the Abrahamic family in order to please his parents; he is on the land. The narrative retains Esau more as a peer than as a subordinate, and everything points toward his regaining his lost privileged position. Naturally, the informed reader knows that this did not happen, but the story's willingness to let this prospect arise heightens the tension which Jacob's moral deficiencies and his flight have already raised.

Segment E (28:10–22). In a brief but pivotal episode—the only event from his journey to the north—Jacob dreamed of a stairway between earth and heaven, with God's agents going up and down on it. The Lord stood beside him and promised him the land, innumerable offspring, and the divine presence to protect and return him to the land (vv 13–15). Jacob awoke, recognizing the numinous character of both the place and his experience, and responded by setting up a stone pillar and naming the site Bethel, "God's House" (vv 16–19). He reciprocated the promise by a conditional vow, "the Lord shall be my God" (v 21).

The stairway (traditionally "ladder"; the word does not occur elsewhere in the Bible) is a symbol of the accessibility of God's help and presence, a theme distinctive to the Jacob stories. It is not a means for human ascent; God's agents go up and come down. The stairway is like a fireman's pole: when people are in need, helpers come down to render it. Their place is not in heaven, but on earth, where the divine presence is required.

In Jacob's life, this event is epochal because (a) it is the first time that the divine promise which had come to both Abraham and Isaac now comes to Jacob, directly from God (earlier only from Isaac in Gen 28:3–4), and because (b) it is the first time that Jacob shows any interest whatsoever in the religious side of his family tradition (previously only focusing on priority over Esau). The divine initiative arrested him as he was in flight from his land and his people,

and Jacob was sufficiently moved to acknowledge God's presence and to perform religious acts.

The sections 28:6–9 and 10–22 interrupt what would otherwise be a summary account of Jacob's trip to Haran (28:5 plus 29:1; 28:10 duplicates 28:5), suggesting that each element had an earlier and different context. The genealogical interests of vv 6–9 have led many scholars to associate it with P, and the use of "Elohim" in segment E′ connects it with E. The Bethel story certainly functions as an etiology of a sacred place and location of a sanctuary where the faithful later came to worship and pay tithes (v 22). But its incorporation into the Jacob cycle has enlarged its function and meaning. Particularly the use of "YHWH" (vv 13, 16, 21) shows the story's links with Israel's distinctive religion, and gives to Jacob's words in v 21 a confessional character which marks the event as a kind of conversion, occurring just as he seems firmly to have closed the door on becoming what later generations knew he became: the ancestor of Israel, God's people.

At the same time, Jacob's vow falls short of hearty embrace of the promise. Its conditionality ("If . . ." v 20) is confirmed by its content. In reiterating it (vv 20–21a), Jacob omits all references to the land, progeny, expansion, and the families of the earth—essential to the patriarchal promise (vv 12–14); he is preoccupied with personal well-being (he adds food and clothes), and he alters (v 21) the promise of v 15 in subtle ways (e.g., "I [the Lord] will bring you back" becomes "if I [Jacob] return," and "this land" becomes "my father's house"), all of which shows that Jacob wishes to retain the initiative and is more interested in the family estate than the land. In short, although the Bethel event marks Jacob's awakening to God and to the promise, he is still a "smooth man," and his vows appear to be as much a bargain as a commitment.

Segment F (29:1–30). Jacob's 20-year residence in Haran (31:38, 41) is recounted in the stories of Segments F–G and G′–F′. He married, serving his mother's brother 14 years as a bride price; 11 sons and a daughter were born to him by 4 women; and he eventually became wealthy in livestock and servants. His relationships with Laban (in whom Jacob almost met his match in craftiness) dominate these sections. The initial encounter was apparently cordial (vv 13–14), and the final scene is of a covenant meal between them (31:51–54), but in between the 2 men circle warily, each looking to his own advantage.

Jacob's first contact with his mother's people was at a well where shepherds were gathered with their flocks. As they spoke, Laban's daughter Rachel arrived with his flock. The well (v 2) introduces a double entendre (Prov 5:15; Cant 4:15): The large stone on the mouth of the well intimates that Rachel will be hard to get; when Jacob, singlehanded, rolls the stone from the mouth, we have not only a show of masculine strength, but also an intimation that Jacob will marry her. There is no other example in the Bible of a man kissing a woman (v 11).

Jacob stayed with Laban, and after a month proposed to work 7 years in order to marry Rachel. Laban agreed, but when the time was up he substituted his older and less-attractive daughter Leah, a deception Jacob did not discover until the next morning. When Jacob protested, Laban pled local custom, and offered to give him Rachel at the same time, in exchange for another 7 years of work. Thus Jacob came to have 2 wives, each of whom had a maid.

There is an ironic fitness in Laban's deception. Jacob's reach for the rights of the firstborn son (Esau, Heb *bĕkōr* 27:32) got him the firstborn daughter (Heb *bĕkîrâ* 29:26), as well. He, eschewing the place of the younger son (*sāʿîr* 25:23) was at first denied the younger daughter (*śeʿîrâ* 29:26). The man who imposed this sentence was the brother of the woman who led Jacob to deceive Isaac. Jacob's befuddlement is so complete that he did not discover the substitution even in intercourse.

Jacob and Rachel initially have a romantic and tender relationship. She was shapely and beautiful (v 17), and Jacob's first 7 years' work seemed like only a few days because of his love for her (v 20). To fall in love is to become vulnerable, and in this relationship the loner began to emerge from his private world of wit and manipulation. As the stairway dream signalled a new direction in Jacob's relation to God and the promise, so does his love for Rachel in his relationships with other people.

His relationship with Laban was more complex. The uncle embraced and kissed the nephew (v 13), as Jacob and Esau were to do later (33:4), and regarded Jacob as an insider who might suitably marry his daughter (v 19). But Laban's exclamation, "You are truly my bone and my flesh" (v 14) has as much to do with Jacob's duplicity as it does with blood, since Laban said this after Jacob had told him all that had happened (v 13), presumably including the reason for his flight from home. The young Laban had been remarked for his cupidity (Gen 24:22, 30–31); the fact that Jacob brought no rich gifts with him did not save him from the mature Laban's canny eye. Fourteen years' work would buy many gold bracelets.

Segment G (29:31–30:24). The narrative next turns to the building up of Jacob's family through the birth of 12 children (including his daughter Dinah). The names of the 11 sons have popular etymologies attached to them which, for the most part, have to do with the wives' standing with one another or with Jacob. The sense of rivalry and even hostility is very strong (Levi 29:34, Naphtali 30:8, Joseph 30:23), reflecting the reality of a polygamous household and perhaps also of tribal rivalries in later years. None of the names is distinctly theophoric, but God/the Lord is mentioned in most of the explanations.

The Lord favored Leah because she was unloved, and consequently she bore 4 sons. Rachel became envious and burst out at Jacob, "Give me children, or I shall die," a peremptory demand which recalls Rebekah's brusque rhetoric (25:22; 27:46). Jacob's response (v 2) was in kind, and Rachel then offered him her maid Bilhah, using identical words to Sarai's (Gen 16:2), "that I also may acquire a family through her" (v 3). The story thus compares her not only with Leah but tacitly with her husband's grandmother, Israel's primal progenitress, as well. Two sons were born to Jacob through Bilhah, and 2 more through Leah's maid Zilpah. Rachel sought fecundity with an aphrodisiac (v 14), the only result of which was that Jacob returned to Leah, who bore him 2 more sons (vv 15–20).

Rachel thus remained childless, although Jacob had 10 sons by the other 3 women of the household. The birth of her son Joseph marks the midpoint of the Jacob cycle, and

came about because "God remembered Rachel" (v 22). The expression is rich in associations (Noah, at the height of the flood [Gen 8:1], or the subsequent birth of the prophet Samuel in answer to Hannah's prayer [1 Sam 1:19]), and implies God's redemptive attention to people's needs, especially in connection with the covenant (Exod 2:24). With 12 children, Jacob has grown into a complete family. (Dinah is the 12th; the 12th son, Benjamin, was born later on Canaanite soil [35:16–19] although the concluding summary of the cycle lists him as one of the 12 sons born in Paddan-Aram [35:22b–26]). Jacob can now return home.

Segment G′ (30:25–43). But before Jacob was actually to go back, his growth as a family must be matched by his wealth. This and the preceding section—the 2 innermost sections of the cycle—match each other well: The competitiveness and trickery (30:15) of the wives is matched by Laban's new tricks; the growth of both groups does not come without difficulty, but in the end is ample. Since the Israelite people were later often known as a "flock" under God's care (e.g., Ezekiel 34; Pss 77:21; 78:20–22; 79:13; 96:6–7; 100:3), the collocation is especially apt; *figurally the 2 groups are the same.*

Jacob asked Laban's permission to go back to his homeland: The required time had been more than served (v 26). But when Laban urged him to stay in his service and to name his wages, Jacob proposed to take all the irregularly colored animals out of Laban's flocks as a nuclear flock of his own. The wily uncle agreed, but at once culled and moved those animals, so that Jacob still had nothing. Jacob responded with certain obscure procedures by which Laban's good flocks bred miscolored offspring; these then became Jacob's, in accordance with the agreement. In the end, his large family was equalled by his enormous holdings of servants and livestock (v 43).

Segment F′ (31:1–32:1—Eng 31:1–55). Jacob once more decided to return home. Although his mother had told him that she would send for him, the story is silent about her. There were 3 reasons for his decision: hostility from Laban's sons (v 1), a change in Laban's attitude toward him (v 2), and instructions from the Lord to do so (v 3). The synergism of human motives and divine direction is striking. He discussed it secretly (v 4) with Rachel and Leah, referring to Laban's guile, crediting God with his wealth, and reporting a dream in which "God's agent" had directed him to return home (vv 7–13). The wives supported Jacob's decision, describing themselves as "outsiders" in their own clan, since Laban had "sold us and used up our purchase price" (v 15).

It was not only Jacob who credited God with his wealth; the angel said the same thing (v 12), and the wives also, adding that the wealth was justly theirs (v 16). The story thus responds to the brothers' charge that Jacob had grown rich at Laban's expense.

Both here and in his earlier wish to return, Jacob spoke of his "land" (30:25; 31:3, 13), as does the summary of his departure (v 18). This language goes beyond that of his previous vow, which spoke only of returning to his "father's house" (28:21); Jacob will now do more than possess the estate; he will occupy the land. (Laban speaks only of "your father's house" [v 30], since he knows nothing of the promise.) Moreover, although Jacob was Rebekah's favorite, he left "to go to his father Isaac" (v 18). Where is Rebekah?

This time Jacob did not ask permission, but left while Laban was away shearing sheep. Unknown to Jacob, Rachel stole the household idols (v 19), perhaps for their religious and financial value. When Laban learned what had happened, he pursued, overtaking them near Canaan. Warned by God not to mistreat them, Laban nevertheless berated Jacob and accused him of stealing the household idols. Swearing death to anyone having the idols, Jacob invited Laban to find them. He searched all the tents, finally coming to Rachel's. She had hidden them, and, by a ruse, prevented Laban from finding them.

It was Jacob's turn to berate Laban, and he did so, more harshly than Laban deserved under the immediate circumstances, but not more so, considering the past 20 years. In a speech (vv 38–42) summarizing their relations during that time, Jacob accused his shifty uncle and cited his own conscientious service and God's protection. In exile, the "slippery man" of Canaan was learning to be a "blameless man."

Laban proposed a treaty (Heb *bĕrît*, "covenant"), marking the boundary between them by a heap of stones; each swore by his own deity (v 53), and sealed the agreement with a sacrifice and a meal. Within the story, it is the first meal that Jacob has ever eaten with anyone, and a distinct contrast to the 2 meals which he had arranged and used to get the better of Esau. The narrative thus does not allow Jacob to leave Haran without a reconciliation with Laban—unsought by Jacob—which put an end to 2 decades of mistrust.

Segment E′ (32:3–3—Eng 32:1–2). Parting amicably from Laban, Jacob continued his journey to face a similar encounter with Esau in which he has no blamelessness to plead. In a matching spiritual event to the stairway dream, God's agents encountered him. Jacob said, "This is God's camp," and named that site Mahanaim, "Doublecamp." The name is or resembles a Hebrew noun (dual number), a form used for objects which occur naturally in pairs, such as hands and ears. His own entourage is one camp (cf. 32:8—Eng 32:7), and God's agents form the other—a natural pair. He can go on to meet Esau in tandem with the same divine company that he met at Bethel and that have been with him ever since (see 31:11).

Segment D′ (32:4–33—Eng 32:3–32). The cycle returns to Esau, who has not appeared since the end of segment D, and who is now mentioned together with the two geographical names to which the cycle early made allusion (segment A). Expecting Esau to attack, Jacob broke his retinue into 2 camps so that at least half might escape. (He is now a "people" [v 7], a term never applied to Abraham or Isaac.)

He then prayed for help, another first (vv 9–12). First, his *address* to God reaches back in time by speaking of the "God of Abraham and Isaac," and forward by using "Yahweh," the distinctive name of Israel's deity. Second, as *grounds* he quotes the divine directive (from 31:3) pursuing which he had come to the present hazardous moment, substituting "deal bountifully with" for "be with." His return to the promise at the end of the prayer uses words ("offspring as the sands of the sea") which have not appeared in the cycle applied to Jacob (28:14 spoke of the

"dust of the earth"); the narrative telescopes the promises here, drawing this line from Gen 22:17—the promise to Abraham—and identifying Jacob with the promise in its historical depth. Third, he *acknowledges* God's gifts. He had left Canaan in naked flight, and was now two camps. His words "I am unworthy" (v 10), literally, "I am too small" (Heb *qāṭōntî*), express more than unworthiness; they also allude to Jacob's being the younger (*qāṭōn* 29:15, 42) and to the reversal of primogeniture (Brueggemann 1982). Fourth, the *petition* beseeches rescue from Esau, specifically mentioning the mothers and children; the language is that of the biblical psalms (e.g., 31:16; 59:2–3; 142:7; 143:9). The absence of any acknowledgement of wrongdoing is noteworthy.

"A man wrestled with him until dawn" (v 24). This best-known of the Jacob stories remains mysterious. In their southward march they had reached the river Jabbok and were camped on its N bank. During the night after Jacob had dispatched the gifts to Esau, he got up and took his family over to the S bank; he did the same with his possessions—no motive for this is given. Jacob remained alone in the camp. There is no "angel" in this story (an interpretation found in Hos 12:4), and the introduction of an adversary is abrupt and unexpected. Is it Esau, taking revenge in kind by a sneak attack in the dark? The match was even, but the adversary managed to wrench Jacob's hip at its socket before asking for release as the dawn broke. Jacob refused, "unless you bless me." The adversary required him to say his name—"Jacob"—and then changed it to "Israel," giving a popular etymology by which it means "he strives with God." When Jacob asked his adversary's name, he was told, "You must not ask my name," and they parted (see Gen 35:9–15). Jacob named the place "God's Face," and went his way, limping, as the sun rose. A dietary etiology concludes the story.

In its present form and position, the story concerns struggle with people and with God (see also Kodell 1980). The unnamed "man" symbolizes every person with whom Jacob struggled—Esau, Isaac, Laban—and yet, the "man" at the beginning of the story is certainly God at the end, for who else is it whose name cannot be spoken? When else did Jacob strive with God? The story, therefore, in an overt polyvalence, blends Jacob's conflict with people and with God into one event. The larger narrative also suggests this identification. First, Jacob prayed, "Rescue me (Heb *haṣṣîlēnî*) from my brother" (v 11), then he named the wrestling-site "God's Face," saying, "My life has been rescued" (Heb *wattinnāṣēl*, v 30). Second, after wrestling, he said, "I have seen God face to face" (v 30), and when he met Esau, he said, "To see your face is like seeing God's face" (33:10).

To utter his name was to speak his character—"cheat"—making good the lack of any confession in the prayer, and acknowledging that his alienation from Esau was not an episode but a way of life. The story is thus made psychologically and theologically profound by superimposing on one another Jacob's need to face his own character, his relations with people, and his relation with God.

The limp suggests the costliness of the lonely struggle. It also shows Jacob advancing to meet Esau in a painful vulnerability; whatever he might have thought previously of victory in struggle or of escape (v 8) is now quite impossible. He limps. But the sun is rising, and he is on his way to becoming a new man, a process begun as the sun was setting (28:11).

Segment C′ (33:1–20). The story moves immediately to the encounter between the 2 brothers. Jacob now leads his entourage, having previously followed it from behind. His elaborate obeisance before Esau (v 3) is without parallel in the Bible. But Esau does not want a fight: they embrace, kiss, and weep.

In the next segment (B′) the text plays on two Hebrew words similar in appearance and sound: *maḥăneh* "company" (32:3, 8–9, 11, 22 [—Eng 32:2, 7–8, 10, 21]), and *minḥâ* "gift" (32:14, 19, 21–22 [—Eng 13, 18, 20–21]; cf. *bĕrākâ* and *bĕkōrâ* in segments A and C). Now in 33:8, 10, the *maḥăneh* has become the *minḥâ*; Jacob urges Esau to accept the company/gift as a sign of the acceptance of his person. Then comes the jolt (Fishbane 1975), "Please take," Jacob urged, "my blessing *(bĕrākâ)*" (v 11). Dropping *minḥâ,* he utilizes the same noun and verb used by Esau and Isaac when Jacob took the blessing which was not his (27:35–36). The pairing of *minḥâ* with *maḥăneh* throughout these 2 sections makes the use of *bĕrākâ* particularly obtrusive, and the reference to segment C is very clear.

Yet, this is as far as the narrative can go in describing the reconciliation, for Jacob did not actually return the right of primogeniture, and historically Israel never conceded Edom's priority. Dramatically and symbolically, Jacob's acceptance by Esau could have been marked by a meal; its absence suggests that the reconciliation fell short of the solidity which Israel felt with the Syrian homeland of Rebekah and Rachel, and the narrative expresses this overtly by Jacob's wariness of Esau's two offers of company and assistance (vv 12–16).

They went their separate ways, Esau to Seir and Jacob to Canaan. His first act there was to buy land and set up an altar; by naming it "El, the God of Israel," he identified himself with the land and with the God who wrestled with him and gave him the name which became that of the people of God. Apart from the etiology of 32:33 it is the cycle's first use of the name "Israel" since it was given.

Segment B′ (34:1–31). Jacob's family settled on land that Jacob bought near Shechem. Dinah, his daughter by Leah, was raped by Shechem (his name is the same as the city's), son of the city's chief, Hamor. Jacob's involvement in the episode which followed is minimal, being restricted to the notice that he was silent about the rape until his sons came in from the field (v 5), and to his protest against his sons' subsequent actions (v 30).

Shechem wished to marry Dinah. His father's negotiations were entirely with Jacob's sons; Hamor even referred to their sister as "your [plural] daughter" (v 8). He proposed intermarriage between the family of Jacob and the Shechemites, to include full and free rights in the land. The brothers agreed, provided the Shechemite men accepted circumcision (already a mark of the Abrahamic tradition, Genesis 17). Then the newcomers would mingle and become "one people" with them (vv 16, 22). The Shechemites agreed. But on the third day, Dinah's uterine brothers Simeon and Levi attacked the city by surprise, killing all its men, including Hamor and Shechem, and taking Dinah away. The other brothers followed and pillaged the town, taking the women and children and all its

wealth. The story closes with Jacob's effete protest that Simeon and Levi have made him "odious" in the land; he fears an attack which his small forces could not resist. The sons say only, "Should he treat our sister like a whore?"

The violence and duplicity of this story surpass anything ever done by Jacob, Rebekah, or Laban. Jacob's protest—feeble and motivated by fear of revenge rather than by moral outrage—and his silence at the outset raise the question whether we have here the new or the old Jacob; indeed, the new name is not used at all in the story (except in the anachronistic national sense in v 7).

To be sure, the threat was great and the accommodation proposed by Hamor ("one people," vv 16, 22) went far beyond the treaty designed by Abimelech (Gen 26:29 [segment B]); to "intermarry" *(hitḥattēn)* was forbidden (Deut 7:2–3; Josh 23:12; Ezra 9:14); and the Shechemites were clearly seeking their own advantage at Jacob's expense: "Their cattle and substance and all their beasts will be ours." The story is a justly sharp warning against sexual irregularity and against assimilation. But the circumcision proposal was a ruse from the beginning; the brokers spoke "with guile" (Heb *bĕmirmâ,* v 13) and never intended intermarriage.

The cycle, therefore, presents 2 paradigms for relationships with the residents of the land: First, a sacrificial self-giving which leads to "space" and to mutual acceptance and respect; second, a murderous and vindictive exclusivism. In segment B (Gen 26:1–33), Isaac's way resulted in God's blessing and agricultural prosperity: He found water. There is but one word of evaluation in B′: "guile" *(mirmâ).* But, given the larger Israelite religious context, that is quite enough. It is the same word already used of Jacob's deceit of Isaac (27:35), and otherwise occurs 37 times, always negatively, exclusively in the Prophets and Wisdom literature (except 2 Kgs 9:23). Jer 9:5 (—Eng 9:6) uses *mirmâ* twice, and also alludes to Jacob by using the verb *ʿāqab* (also twice, in 9:3—Eng 9:4). The word *mirmâ* is almost a code word for social evil, and particular condemnation falls on guileful speech (Ps 52:6; Dan 8:25; 11:23). Note its use in Hos 12:1, 8, enclosing a passage which refers to Jacob.

Thus Jacob found that it was not easy to shed a whole way of life; more was yet needed before the promise (segment A) can be realized.

This chapter has long been a textbook example for source critics, who see in some of its internal confusions evidence that 2 versions have been combined—one from J (Hamor speaks) and one from P (Shechem speaks).

Segment A′ (35:1–29). The last chapter of a cycle of stories should be highly important, especially in an "anatomy," where the ideas are as important as the stories. Chap. 35 has generally puzzled scholars because it comprises discrete and diverse fragments, a feature which may find a parallel in early Arabic biographies (Delitzsch), and because parts of it duplicate earlier material (Jacob becomes Israel, he names Bethel). But everything here plays a role, either in bringing some of the cycle's themes to a conclusion or in echoing something in segment A. There are 7 fragments to consider.

1. Vv 1–7. Responding to God's direction, Jacob led a pilgrimage to Bethel, preceded by religious reforms involving his own household and (in the context of chap. 34) the Shechemite captives. The language of Jacob's appeal to the people, especially "Rid yourselves of the alien gods in your midst" (v 2), makes him the prototype of later reformers who called on God's people to repent: Joshua (Josh 24:23) and Samuel (1 Sam 7:3). Who are you, Jacob? The sly loner of segment A has become the zealous religious leader of a people (vv 2, 6).

2. Vv 9–15. God appeared, not only to bless Jacob, but also to change his name to "Israel," and to reiterate the twofold promise of progeny and land previously given to Abraham and Isaac. The cycle knows 2 traditions of Jacob's name-change, one associated with the wrestling in Transjordan (segment D′) and one here with Bethel in Canaan. The former is a personal episode in which Jacob struggled to lay aside his fractious and estranging way of life; the latter follows his engagement in the religious life of his people, showing that the story of Jacob as person was also read and told of Jacob as national progenitor. Accordingly, the Heb *wayĕbārek ʾōtô* (v 9) should be translated "he blessed him" but at 32:30 "he took leave of him" (so JPSV), since the blessing and promise come only after Jacob shows this collective concern. The story can now call him "Israel" (v 21), which it has not done previously.

The promise uses the words "be fertile and increase," which Isaac had also used (28:3, see segment D). The hint there of Jacob as the first man—who, like Adam and Noah, initiates something new and big and who can justly inherit the promise of the land—can now be seen enfleshed in the chastened and returned Jacob. Now the new beginning can occur, because Jacob cares about his people.

The cycle also knows two traditions of the naming of Bethel, one on Jacob's flight (segment E), and one here upon his return. The pair of duplicate name-givings in A′, therefore, link it specifically with the 2 previous epochal religious experiences of Jacob's life: when God arrested his attention and obtained a preliminary if wary response (28:10–22), and when God brought Jacob to face himself and his wider relationships with both people and the divine (32:22–32). It forms itself a third, in which Jacob's development comes to the necessary stage of religious leadership in a distinctly Israelite context. The placement of vv 9–15 at the close of the cycle is necessary in view of the process through which Jacob passed, but it also nicely balances segment A's giving of the name "Jacob" with the giving of the new name "Israel."

3. V 8. Verses 1–15 form a unity enclosed by references to Bethel at beginning and end. Verse 8 is geographically appropriate, but intrusive in every other way. It may be understood in connection with segment A's hint that Rebekah's role in the cycle will be incomplete. When A′ reports 3 deaths—two of them expected through the passage of time—the absence of any word about Rebekah becomes noticeable. What *has* happened to her?

Rebekah's unfinished question (25:22) finds its complement here in 35:8, which is not so much the notice of Deborah's death as a non-notice of Rebekah's. As far as the cycle goes, Rebekah's life is an unfinished story. After her complaint, "What good will life be to me?" (27:46) we never hear of her again. She had told Jacob, "When your brother's anger subsides, I will bring you back from Haran" (27:44–45), but Jacob's return has its own motives (31:1–3). Rebekah disappears from the story without a

trace. The necrology of v 8 is positioned anomalously between 2 paragraphs showing the new Jacob at his best: He leads a religious reform, and he receives a new name and the divine promise. Its obtrusive position is hermeneutic: The Aramean way of life is gone; Israel—both person and people—will put away alien gods and will occupy the land of promise.

4. Vv 16–21. As they travelled from Bethel, Rachel died giving birth to Benjamin. Jacob's sons now number 12, and the death of the beloved wife signals that the cycle is drawing to a close. But it closes on a note of hope: Rachel's name for the infant—Ben-oni "Son of my suffering"—looks backward, to her untimely death and to the rivalries and disappointments of the years in Haran; but Jacob's alternate name "Son of the right hand," looks forward by suggesting his own favor and by evoking the right hand of God which saves (Isa 41:10; Pss 20:7; 118:15–16).

5. V 22a. The brusque notice that Reuben slept with Bilhah, who is called Israel's concubine rather than Rachel's maid, also suggests the passing of the old order. Reuben was Jacob's firstborn; to sleep with a man's women is to lay claim to his position.

6. Vv 22b–26. Segment A had said that 2 peoples would issue from Rebekah. The list of the 12 sons, grouped by mother, matches this prediction, in that one of these peoples (the 12 tribes of Israel) sprang from one of Rebekah's sons.

7. Vv 27–29. Finally Jacob reaches his father Isaac, at the ancestral residence of Abraham and Isaac (Gen 13:18; 23:2; 25:9). There Isaac died, and the story which began with prenatal jostling closes with the brothers Jacob and Esau joined in burying the father who prayed for their birth.

The divine plan for Jacob has been achieved, against human custom (primogeniture) and against human suitability (Jacob is the one who seeks his own advantage at others' expense, in flight from intimacy). Yet it has come about without any divine overriding of Jacob's "free will"; all human actions have adequate human motivation, including the pivotal decision to return to Canaan. In and through these actions, the sovereign will guides human thought and choice in a gracious interplay both reasonable and mysterious.

C. Meaning

The cycle's internal indications that "Jacob" is a collective reference for Israel find their parallel in the Bible's frequent use of "Jacob," either alone or in parallelism with "Israel," to denote the nation and/or the religious community (e.g., Deut 32:9; Jer 10:25; 30:7; Isa 10:21; 17:4; Ps 44:5; see BDB, 785). Note Isa 29:22–23, which expressly equates "Jacob" with "his children": "For when he [Jacob]—that is, his children—behold what my hands have wrought in their midst, they will hallow My name." The same equivalence is frequent in Second Isaiah where the Lord (a) addresses "Jacob/Israel" directly (40:27; 41:8, 14; 43:1, 22; 44:1, 2, 21, 23; 44:4; 48:12, 21; 49:5), (b) speaks of having given "Jacob" over to disaster (42:4; 43:28), and (c) speaks hopefully of "Jacob's" return to the Lord (49:5–6; 59:20). Some of these refer to the "servant," a figure whose identity is ambiguous, but others refer unmistakably to the prophet's audience and readers. The presumed exilic setting of Second Isaiah suggests a particular linking of the narrative's out-and-back axis with the experience of exile and (hope for) return; the exilic or early postexilic period would be a time in which this particular figural reading of the Jacob stories might have developed (Cross has noted similarities between P and Second Isaiah, *CMHE,* 322–23). One could also compare Second Isaiah's assertion of the Lord's presence with the people (Isa 41:10; 43:2, 5) with God's promise to be with Jacob and not leave him, a motif that is distinctive to the Jacob stories and is especially enshrined in the two theophanic passages about the Lord's agents (explicitly in Gen 28:10–22; implicitly in 32:2–3—Eng 32:1–2).

The tradents and users understood themselves as "Israel," automatically giving the stories a referred meaning in which they are also about the people of the covenant, whose existence and survival were often against both convention and suitability. The narratives are "typical and representational rather than realistic" (Blenkinsopp 1981: 41). When prominence is given to political relationships, especially under the influence of the documentary hypothesis, the cycle has to do with Israel's hegemony over her enemies and her occupation of the land (de Pury 1975; *CMHE,* 263–64), both in the time of Solomon (the Yahwist) and later after the Exile (P, see McKenzie 1980: 230–31). But in the present biblical context, religious interests come to the fore. Jacob's vocation is to be an *ʾîš tām,* a "moral person" (Gen 25:27). Note how many of the Isaiah passages stress repentence, redemption, and obedience to Torah (14:1; 27:9; 29:22–24; 41:14; 43:1, 22–28; 44:21–22; 48:21; 49:5–6; 59:20). The question of Israel's origins is a question of "the essence and meaning of a people. It is ideological rather than historiographical"; the existence of Israel as a people does not depend on a physical or political context but on their observance of the Lord's commands and statutes (Thompson 1987: 40, 194). Jacob's return to the land means not just Israel's return to the land from exile (McKay 1987) but also Israel's return to God. The cycle was paradigmatic for their own character and vocation, and in turn for the people of God in every time and place.

There are other inner-biblical indicators of the Jacob cycle's religious use. In Hosea 12, "Jacob" denotes what was left of the N kingdom and is the object of the prophet's preaching; note especially the "Jacob"/"us" equivalence ("[Jacob] would find Him at Bethel, and there He speaks with us," Hos 12:5—Eng 12:4) and the return (Heb *šûb*) motif in Hos 12:7—Eng 12:6. In Isa 49:5–6, the statement that the Lord "will bring back (Heb *šôbēb*) Jacob to Himself" suggests a figural reading of Jacob's return; furthermore, Israel as a "light to the nations" expresses the idea of service and mission intimated in Gen 30:30 (one of Jacob's 4 anomalous uses of YHWH). Brodie (1981) argues that the Jabbok story has been constructed to reflect the oracle in Jer 30:1–13; the cycle has been shaped by a sermon. Jer 9:3 warns against trusting even a brother, "for every brother takes advantage" (Heb *ʿāqôb yaʿqōb* [the form differs from the name "Jacob" only by a single *šĕwa*]), and v 5 adds, "You dwell in the midst of deceit *(mirmâ),* in their deceit they refuse to heed me, declares the Lord" (v 5); in v 3's resonance with "Jacob" and v 5's use of *mirmâ* we see

a figural application of the Jacob material to Israel's moral life.

The cycle, therefore, is not historical; it is homiletic, and bears the marks of shaping to that end. The individual "Jacob" and the collective "Israel" overlap—even coalesce—at the artistically most significant points in the cycle: the beginning, the ending, and the middle. At the beginning, this overlap is accomplished by identifying the twins with nations (Gen 25:23) and by allusions associated with Esau's name; at the ending, by Jacob's receiving the name "Israel" (35:10) and by his engagement in the religious life of his people (vv 1–7); and at the middle by the collocation of the sections on children and flocks (Gen 29:31–30:43). It is a cycle about the people of God.

STANLEY D. WALTERS

JACOB'S WELL (PLACE) [Gk *Pēgē tou Iakōb*]. The only well which is specifically mentioned in the NT, and the place where Jesus talked with the Samaritan woman (John 4:6). It is not mentioned by that name in the OT, even though Jacob's dwelling is reported to be in that region.

The text in John connects the well with the city of Sychar (John 4:5), but opinions on the identification of this town are divided between those who see in the place-name the modern town of Askar located N of this well and others who associate Sychar with Shechem. See SHECHEM; SYCHAR. The former position favoring Sychar was held by the Old Syriac Bible, Jerome, and more recently Albright. Two of the most-frequently used arguments are the alleged corruption of Sychar to Shechem, and the text of Genesis 33:18 which mentions Jacob as having dwelt before the city, i.e., to the E of it. This identification has been shaken by recent archaeological evidence according to which Shechem ceased to exist by the 1st century B.C. Thus, nearby Askar receives more attention today despite the fact that the town is not as close to the traditional well as the proponents of this thesis would wish; in addition to this, Askar has its own well whose water is not as good as the one of the well in question.

Yet in spite of the difficulties connected with the identification of the city of Sychar, the well has been confidently identified with *Bir Yaʿaqub* (M.R. 177179) in the proximity of Tell Balatah. This well is located at the entrance to the ravine which separates Mt. Ebal from Mt. Gerizim in a Greek Orthodox church that has been under construction since 1903. This location is plausible since it agrees with the evidence from the narrative, namely that the well is found at the foot of Mt. Gerizim (John 4:20) and about 1 mile SE of Nablus. It is near the fork of a road which comes from Jerusalem and branches to Samaria and Tirzah respectively.

The authenticity of this well is not only based on the details from the story, which agree with its identification, but also upon the fact that all traditions—Jewish, Samaritan, Christian, and Muslim—support it. This led A. Parrot to declare that this site is the most authentic of all the Holy Places in Palestine. The earliest evidence comes from A.D. 333 when Pilgrim of Bordeaux mentions a pool or a bath filled with water from this well. Also, Eusebius in the 4th century speaks of the well in his *Onomasticon.*

According to Jerome there was a church in this place toward the end of the 4th century, a fact confirmed by the story of Arculf's pilgrimage in A.D. 670, which states that the church was built in the shape of a cruciform. Archaeological excavations of the site have unearthed the ruins of an old crusader's church which dates to the 11th century. In 1881 a stone was discovered nearby which is believed to have been a cover of the well.

The well itself is ca. 100 feet deep, a fact reminiscent of the woman's words in John 4:11. The water is clear and cool and visitors today are still offered a cup of this refreshment. The upper part of the well is built in masonry, while the lower is cut through rock. The words from John 4:6 can be translated as "on the well" which suggests that the well was covered by stone blocks. The well is supplied in 2 ways, by underground sources and also by surface water—like rainwater. Based on the use of the Gk word *phrear* (4:11) some are inclined to call the source a draw-well. The water source was certainly not a cistern, nor is it today but rather a rich supply of water at a great depth.

Some of the important parallels between the report of John and the actual description of the place demonstrate the author's good knowledge of the geographical data of this Palestinian region.

ZDRAVKO STEFANOVIC

JACOB, LADDER OF. This pseudepigraphon is a haggadic exegetical expansion of Jacob's vision (Gen 28:11–22) with apocalyptic elements. Seven chapters describe the ladder stretching into heaven; the first 6 are probably Jewish, and the final one is an expansion by a Christian, who prophesies regarding the birth and crucifixion of Christ. The document is preserved only in 2 Slavonic recensions. Since these texts are part of the Explanatory Palaia (*Tolkovaja paleja*), which is a medieval Slavic reworking of OT stories, there is not sufficient data to discern how much of each text, if any, antedates 200 C.E. Critical work and discussion of this document is just beginning. Nothing certain can be reported regarding the original language, provenience, date, or character of the *Ladder of Jacob.*

The original language of chap. 1–6 may be Gk (Lunt, *OTP* 2: 403). They seem to be written by a Jew—perhaps late in the 1st century C.E. or sometime in the 2d century C.E.—who wrote for readers ignorant of Hebrew. The choice of the base text (esp. Gen 28:13–15) and the emphasis on the land (1:9) may indicate a Palestinian provenience.

Monotheism is stressed in the document. Angels, which in most Jewish pseudepigraphical works descend from heaven to earth and then ascend back into heaven, are described instead as first ascending and then descending. The source for this imagery is Gen 28:12b (cf. John 1:51). The angel sent to Jacob "to understand the meaning of the dream" (3:2) is Sariel, who is "in charge of dreams" (3:2). The Voice in this document is a hypostatic creature, as in the *Apocalypse of Abraham,* the *Apocalypse of Sedrach,* and other documents (Charlesworth 1985: 19–41). The work is anti-astrological, in contrast to the *Treatise of Shem.* Apocalyptic emphases permeate the work, with predictions of exile, slavery, and persecution, but angels, and even God, will fight for Jacob's descendants (as in 1QM), and the eschaton will be blessed: "And through your seed all the earth and those living on it in the last times of the years of completion shall be blessed" (1:11; Lunt *OTP* 2: 407).

JAMES H. CHARLESWORTH

JACOB, PRAYER OF. A document preserved in only one 4th-century Gk papyrus. Greek is probably the original language. The work must antedate the 4th century, and parallels with other similar works indicate that the prayer was composed in the 2d or even late 1st century C.E. The provenience seems to be Egyptian because of the veneration of Sinai and links with other Egyptian documents. The author is thought to be a Jew; he refers to himself as "[fro]m the rac[e] of Israel" (line 14), prays to the "Lord God of the Hebrews" (line 13), and is influenced by Jewish magic.

Interesting features include the claim that God sits "upon (the) mountain of h[oly] [S]inaios" (line 8) and that the author is immortal, indeed an angel: "an ear[th]ly angel,/ as [hav]ing become immortal" (line 19). E. R. Goodenough (1953: 161–207) rightly saw that the author is an angel on the earth; but how and when the author became an angel, presumably through some magical means, is unclear. See also *OTP* 2: 715–23, and *PGM,* 148–49.

JAMES H. CHARLESWORTH

JADA (PERSON) [Heb *yādāʿ*]. Younger son of Onam and grandson of an important leader in the tribe of Judah, Jerahmeel, by his wife Atarah; mentioned twice in the genealogies of 1 Chronicles (1 Chr 2:28, 32). Jada is the brother of Shammai (whose descendants are enumerated for 18 generations in 1 Chronicles 2) and father of Jether and Jonathan. Jether died without issue (v 32) and Jonathan's 2 sons, Peleth and Zaza, complete Jada's genealogy. Variant spellings of Jada appear in the LXX, although many scholars consider those genealogies corrupt (especially Codex Vaticanus); however, the genealogies of Jerahmeel in the MT are viewed by most contemporary scholars as being in good order. Williamson (1979: 352) summarizes recent source critical scholarship of the genealogies in 1 Chronicles 1–9 concluding that 2:25–33 (of which Jada is a part) and 42–50a form a related unit. This independent source was used by the Chronicler and probably already contained the distinctive parallel opening and closing formulae.

Although little is known of the clan of Jerahmeel, cur-

rent scholarship concludes a preexilic origin and historical nature to the Jerahmeelite genealogy (Jerahmeelites do not appear in discussions of the restoration). This clan is mentioned in 1 Sam 27:10 and 30:29, in connection with the Kenites, as inhabiting the S portion of Judah at the time of David. Some scholars identify them with foreign elements in Israel (Gen 15:19) and the shift of Edomites from S Judah northward following the destruction of Jerusalem (Braun *1 Chronicles* WBC, 45; Myers *1 Chronicles* AB, 15). Elmslie (*Chronicles* CBC, 15) suggests that names of Jerahmeelite ancestry may not reflect either specific individuals or places but rather preserves the idea that these formerly nomadic families now enjoyed a more settled life. More recent scholarship favors viewing all of the names listed as personal (Braun *1 Chronicles* WBC, 45). Specific dating of Jada is impossible at this time and suggestions range from before the Exodus (Keil 1872: 67) to a time closer to the period of restoration. See Braun (*1 Chronicles* WBC, 46) for discussion and evaluation. The name Jada is derived from the verb meaning "know" and some of the many suggestions offered for the meaning of this name are "the caring one," "(God) has cared," "known," "skillful," and "shrewd one."

W. P. STEEGER

JADDAI (PERSON) [Heb *yadday*]. See IDDO.

JADDUA (PERSON) [Heb *yaddûaʿ*]. The name of 2 different persons mentioned in the OT.

1. A leader of the people and a signatory to the covenant established by Ezra (Neh 10:21). Some scholars conjecture that the name is a shortened form of either the name, Jolada (Neh 3:6) or Jedalah (Ezra 2:36). If so, the name, Jaddua, means "Yahweh has known or cares for" (Brockington *Ezra, Nehemiah and Esther* NCBC, 182; cf. *TPNAH* 168).

2. A high priest during the postexilic period (Neh 12:11, 22). According to v 11 he was the son of Jonathan. Although this may be (Brockington, 200), it is more likely that an error has been made in copying the text and that, as v 22 would seem to suggest, he was the son of Johanan (Brockington, 199–200; Ward *IDB* 2: 787; Myers *Ezra, Nehemiah* AB, 195). According to Josephus, he "shared" the office of high priest with Manasses early in the reign of Alexander the Great (*Ant* 11.8.2). Precisely what Josephus means is unclear, unless Manasses served as Jaddua's assistant or *sāgān*. Beyond what we know about Jaddua, no further information about the order of succession to the high priesthood is again available until the Hellenistic period (Albright 1949: 54, 55). More significant is the clue that his name may provide to a date for the final compilation of Ezra-Nehemiah (Brockington, 200). However, any conjectures ventured on this basis must be tempered by the possibility that Jaddua's name has been added to the manuscript (Ward *IDB* 2: 787; Myers, 198).

FREDERICK W. SCHMIDT

JADDUS (PERSON) [Gk *Ioddous*]. The progenitor of a family of priests which returned from Babylon with Zerubbabel (1 Esdr 5:38). When the family was unable to establish its priestly lineage by genealogical records, the men were excluded from serving as priests (1 Esdr 5:38–40 = Ezra 2:61–63 = Neh 7:63–65). Neither Ezra nor Nehemiah record the name "Jaddus," using in its place "Barzillai" (Ezra 2:61; Neh 7:63). There are, however, a number of manuscripts in which 1 Esdras states that Jaddus took the name of his father-in-law Barzillai when he married Agia.

MICHAEL DAVID MCGEHEE

JADON (PERSON) [Heb *yādôn*]. One of those who repaired the wall of Jerusalem following the return from Babylonian exile (Neh 3:7). Newman (*IDB* 2: 787) offers 2 possible derivations for the name: (1) from an Arabic word meaning "frail" or (2) a shortened form of *ydnyh*, which occurs in the Elephantine Papyri and means "Yahweh rules." Jadon is identified as a "Meronothite." This appellation occurs elsewhere only in 1 Chr 27:30. Meronoth has been identified with Beit Unia, which lies about 3 miles NW of Gibeon (*IDB* 2: 787). Since the entire identifying clause reads "Melatiah the Gibeonite and Jadon the Meronothite, the men of Gibeon and of Mizpah," it stands to reason that Meronoth should be connected with Mizpah. This Mizpah would be the "Mizpah of Benjamin," which has been identified with Tell en-Nasbeh (*IDB* 3: 407–8). In fact, Batten (*Ezra and Nehemiah* ICC, 210) suggests reading "Mispite" for "Meronothite." Brockington (*Ezra, Nehemiah, and Esther* NCBC, 136–37) offers the more-balanced suggestion that Meronoth must be in some way identified with Mizpah. Therefore, Jadon was from Meronoth, which probably lay in the vicinity of Mizpah of Benjamin.

MICHAEL L. RUFFIN

JAEL (PERSON) [Heb *yāʿēl*]. The wife of Heber the Kenite (Judg 4:17) who gave shelter and then murdered Sisera, commander of the Canaanite coalition armies of Jabin, king of Hazor. He had been defeated by the combined armies of Israel under the leadership of Barak and Deborah (Judg 4:16). What motive did she have for her act? She was a member of a splinter group of the generally pro-Israelite Kenites (Judg 4:11; cf. Fensham 1964), who originated in the N of Sinai and evidently were metalworkers who had peaceful relations with Hazor (Judg 11:16; *YGC,* 38–42). Sisera naturally would expect sanctuary since this small seminomadic clan would be dependent upon good relations with its neighbors for trade and for land to live on (Soggin *Judges* OTL, 77). Caught in a

dilemma of conflicting loyalties, she evidently made a political choice, since the text makes no mention of a personal motive. The story of Jael and Sisera is told twice: once in prose form (Judg 4:17–22) and a second time as part of the ancient poem, the Song of Deborah (Judg 5:24–27). Because of differences in reconstructing the chronology of the period of the Judges, the mention of Jael as a contemporary of Shamgar (Judg 5:6) has been variously understood as a textual problem or a historical one (cf. Soggin *Judges* OTL, 85–86). Others see no problem with the reference at all (Boling *Judges* AB, 109). The phrase "wife of Heber the Kenite" (Judg 5:24) is often interpreted as an interpolation from Judg 4:16 on metrical grounds, although Boling (*Judges* AB, 114) retains the phrase, also appealing to the metrics of the poem. Jael means "ibex" or "wild goat" (United Bible Societies 1972: 46), and is a member of a broad class of nontheological personal names in the Semitic world using the names of animals for women (Stamm 1967: 329).

KIRK E. LOWERY

JAGUR (PLACE) [Heb *yāgûr*]. A settlement of the tribe of Judah (Josh 15:21). Jagur is only mentioned once, in Josh 15:21, where it is listed among the settlements occupied by Judah in the aftermath of the conquest. Though the present literary context of the Judean town list is set in the period of Joshua, its original setting was as part of a post-Solomonic administrative division of the S kingdom. The date for the establishment of this system is debated, with suggestions ranging from the early 9th to the late 7th centuries B.C. Jagur is in the southernmost district of Judah, the Negeb.

The location of Jagur is problematic. It is mentioned 3rd in the list of Negeb towns, and it may be that the explanatory clause which begins the list, "toward the boundary of Edom," does point to an area in the E Negeb. It is placed between Eder (probably a mistake for Arad) and Kinah (probably to the N of Arad, somewhere along the Wadi el Qeini). Arad inscription 42 mentions Jagur in a very fragmentary context (*AI,* 76). Its probable mention in Josh 15:21 near Arad, and the occurrence of Jagur on an ostracon from Arad, suggest a location in its vicinity. Both Abel (*GP,* 353) and Simons (*GTTOT,* 142) place it at Khirbet el-Gharrah, 18 km E of Beer-sheba (M.R. 148071).

JEFFREY R. ZORN

JAH/JAHVEH/JAHWEH. See YAHWEH.

JAHATH (PERSON) [Heb *yaḥat*]. **1.** A Judahite, the son of Reaiah and the father of Ahumai and Lahad (1 Chr 4:2). Williamson (1979a: 351–59) has argued that the Judahite genealogy of 1 Chr 4:2–4 reflects a preexilic source, whose beginnings may be detected in 1 Chr 2:50b–52. It should be noted, however, that Reaiah represents a family name of a group that returned from exile with Zerubbabel (Ezra 2:47 [= Neh 7:56]) and that an explicit relationship is drawn between Jahath and his kin and Zorah, a town inhabited by Judahites in the Persian period (Neh 11:29). These facts suggest that Jakim and kin represent individuals from the postexilic period that the Chronicler has transposed back before the reign of David in order to construct a genealogy that reflects the social realia of the Chronicler's own day.

2. The name of several Gershomites who appear with slightly divergent lineages in different genealogical lists within 1 Chronicles (1 Chr 6:5, 28—Eng 6:20, 43 and 1 Chr 23:10–11). Jahath first appears in 1 Chr 6:5 (—Eng 6:20) as the grandson of Gershom through Libni and as the father of Zimmah. He appears soon after in 1 Chr 6:28 (—Eng 6:43) within the genealogy of Asaph. This text portrays him directly as the son of Gershom and the father of Shimei. Zimmah becomes one generation removed as Jahath's grandson, rather than his son. In 1 Chr 23:10–11 Jahath represents a Gershomite whom David assigns to the maintenance of the Temple and its cult. Here Jahath is portrayed as the son, rather than the father, of Shimei. The relationship between these 3 instances of "Jahath the Gershomite" may be interpreted in several ways. Most commonly, modern interpreters have regarded the variance in these Levitical genealogies as an indication of later additions to 1 Chronicles that reflect the changing status of Levitical families in the Second Temple period (Rudolph *Chronikbücher* HAT, 57–59, 155). Curtis and Madsen (*Books of Chronicles* ICC, 130–35) attempted to emend the texts in order to remove inconsistencies. Yet the stylistic commonalities of the narrative frameworks where Jahath appears suggest that the Chronicler himself consciously altered the arrangement of the lists in order to generate different Levitical lists for distinct purposes and historical eras. The Chronicler, therefore, may have borrowed the name "Jahath" from a Benjaminite family of his day and utilized it to construct artificial genealogical lists.

3. The son of Rehabiah and one of the "remaining Levites" who, according to the Chronicler, casts lots before David, Zadok, and Ahimelek in order to receive his place among the Levitical household leaders (1 Chr 24:22). Liver (1968: 8.29–32) believes that this list may have originated from an authentic source composed during the reign of David or Solomon; most commentators, however, have attributed the list, in which Isshiah appears, to a time later than the main composition of Chronicles—either to the late Persian period (Williamson 1979b: 259–60, 265–68) or, more commonly, to the Maccabean era (Rudolph, 163–65). The style of the list, however, corresponds closely with the compositional techniques of the Chronicler. The Chronicler may have borrowed the name from a postexilic individual in order to complete a suitable list of Levitical names for the reign of David.

4. A Levite from the family of Merari, who, according to the Chronicler, supervised the renovation of the Temple

during the reign of Josiah (2 Chr 34:12). Curtis and Madsen (p. 506) describe 2 Chr 34:12 as "a characteristic addition of the Chronicler." The Chronicler seems to have borrowed the names of Jahath and the other Levitical foremen from prominent Levitical names elsewhere in his work. Jahath's appearance within the reign of Josiah provides an important illustration of the Chronicler's use and reuse of Levitical names in his attempt to legitimize his version of the history of Judah.

JOHN W. WRIGHT

JAHAZ (PLACE) [Heb *yahaṣ*]. Var. JAHZAH. A settlement in Transjordan known from the OT and the Mesha Inscription. The present state of scholarship does not allow for a conclusive identification of Jahaz although there are several viable proposals (below).

According to various accounts, the Amorite king, Sihon, whose capital was located as Heshbon (Tell Hesban), came to Jahaz to oppose the Israelite tribes as they passed through Transjordan (Num 21:23; Deut 2:32; Judg 11:20). The geographical details are vague, but imply that Jahaz was located S of Heshbon, perhaps along the E border of the settled plateau as it stretched out to the desert. This possibility is complicated by the difficult issues regarding the wilderness itineraries and by the question of how to depict Israel: as passing around Edom and Moab to the E, or rather passing through their territories.

Jahaz is included in Reuben's tribal inheritance (Josh 13:18) and is made a levitical city (Josh 21:36). Prophetic oracles of a later period presuppose Jahaz is a Moabite town (Isa 15:4; Jeremiah 48:21, 34 [v 21 reads "Jahzah" as does 1 Chr 6:78]). Precisely this kind of conflict is presupposed in the Mesha Inscription (lines 18–21) from the 9th century B.C.E. which narrates that Moab regained Jahaz from an Israelite king who had fortified the town. Mesha notes that he "annexed" Jahaz to Dibon (Tell Dhiban), almost certainly as part of his efforts to regain control of the plateau between Madeba and Dibon.

The Mesha Inscription states that Israel had fortified 2 towns, Ataroth and Jahaz. Ataroth (*Kh. 'Atarus*) is located ca. 14 km NW of Dibon on the edge of the W slopes of the plateau. Since Dibon was Mesha's administrative center, somewhere between it and Ataroth was the effective border between Israel and Moab. The obvious candidate for such a demarcation is the N tributary of the Wadi Mujib (the biblical Arnon), which cuts through the plateau in a SW direction from its beginnings near the E edge of the settled plateau. This wadi is known by various modern names as one climbs W–E: Wadi Heidan, Wadi Wala, Wadi Remeil, and Wadi et Themed. Jahaz, therefore, should be located along or just N of this wadi system and E of Ataroth.

Among the likely possibilities are the following:

1. Khirbet Libb (M.R. 222112), ca. 11 km N of Dibon on the King's Highway, is now the site of a modern village which obscures the Iron Age ruins. This location would fit the comment of Eusebius that Jahaz was between Madeba and Dibon (*Onomast.* 104.9).
2. Khirbet Iskander (M.R. 223107), a site just W of the modern King's Highway as it crosses the Wadi Wala, and ca. 6 km N of Dibon. Limited excavations suggest the site is primarily EB IV; no architectural remains as yet have been found from the Iron Age.
3. Khirbet Remeil (M.R. 228114), an Iron Age fort ca. 5 km NE of Iskander set on an isolated hill. The exposed ruins provide evidence of a walled enclosure and tower/fortress complex. An unresolved question is whether Remeil is large enough to be known independently or whether the fort was used in the service of a larger settlement nearby such as Kh. Medeiniyeh.
4. Khirbet Medeiniyeh on the Themed (M.R. 236110), ca. 2.5 km NE of Kh. Remeil. This tell projects substantial wall lines and a possible moat that Nelson Glueck likened to Maiden Castle in England. The site's size and surface pottery suggest it is the largest predominately Iron Age settlement along the E edge of the settled plateau.
5. Khirbet Qureiyet 'Aleiyan (M.R. 233104), ca. 8 km NE of Dibon, is a series of Iron Age ruins.
6. Jalul (M.R. 231125), located ca. 5 km E of Madeba, this is the largest tell in the area with surface remains indicating Iron Age occupation. It is located too far N to meet the criterion of placement between Madeba and Dibon. It is, however, located SE of Hesban nearer the edge of the desert.

Among these options, Khirbet Medeiniyeh is the best possibility as the site of Jahaz. It is the largest site in the immediate vicinity, just as Ataroth is for the W section of the plateau, and it is located along the proposed border between Israelite-controlled territory and Moab as deduced from the Mesha Inscription. If the presence of pottery figurines among surface pottery is any indication, it was also a cultic center. If a site on or near the King's Highway is sought, then either Khirbet Libb or perhaps Khirbet Iskander are likely choices.

J. ANDREW DEARMAN

JAHAZIEL (PERSON) [Heb *yaḥăzî'ēl*]. A personal name which combines an imperfect form of the verb *ḥzh* "see" with the substantive *'ēl* "God" and may be understood as expressing a request for help (*IPN,* 27, 198): "may God see," or as a simple statement, "God sees." Bauer (1930: 74) allows that it might reflect an older perfect meaning: "God has seen." Five individuals are so named.

1. A Benjaminite relative of Saul listed among those

who came to David at Ziklag (1 Chr 12:5—Eng 12:4). These 23 are described (v 1) as "mighty men" (Heb *gibbôrîm*) and as "warriors" (Heb *ʿōzre hammilḥāmāh*; Gordon 1955: 88, Gray 1965: 42, 263). They were "equipped with bow" and were ambidextrous in shooting arrows and slinging stones (v 2). Curtis and Madsen (*Chronicles* ICC, 196) believed those listed were Judeans.

2. One of the priests (1 Chr 16:6) appointed during the reign of David to sound "with trumpets" (Heb *hāṣōṣrôt*) continually before the ark of the covenant of God. His name is omitted from the original reading of Codex Sinaiticus and from the list of priests in 1 Chr 15:5. In the LXX his name is rendered *oziēl* (cf. 15:18, 20).

3. A Levite, the 3d son of Hebron who was a son of Kohath (1 Chr 23:19; 24:23), one of the familial divisions of the Levitical organizational structure attributed to David.

4. A Levite, son of Zechariah, whose lineage was traced to Asaph (2 Chr 20:14). As a son of Asaph he was a member of that guild of temple musicians, instrumentalists, and singers (1 Chr 25:1–2; 2 Chr 35:15) whose musical function was also described as prophesying (Heb *nibbĕʾîm*, 1 Chr 25:1, cf. 2b). Speaking "in the midst of the assembly" (2 Chr 20:14) in true prophetic fashion, he delivered a salvation oracle (Shearer 1986: 194, 241) in response to the king's lament. "All Judah and inhabitants of Jerusalem and King Jehoshaphat" (v 15) were assured the Lord would engage and be victorious (vv 15b, 17) over a threatening coalition of enemy forces from the E and SE.

5. According to the MT of Ezra 8:5 the father of an unnamed member of the sons of Shecaniah who, along with 300 males of the extended family (Blenkinsopp *Ezra-Nehemiah* OTL, 161; *IB* 3) returned with Ezra to Judah from Babylonian exile during the reign of the Persian King Artaxerxes. The LXX (Codex Alexandrinus) and 1 Esdr 8:32 name *Zathoēs* (RSV Zattu) as the eponymous ancestor with Jahaziel as the father of Shecaniah who is the living head of the returning group.

RODNEY H. SHEARER

JAHDAI (PERSON) [Heb *yahday*]. Descendant of Caleb and father (or mother) of 6 sons (1 Chr 2:47). Whether this person is a man or a concubine (of Caleb's) is not certain (cf. 2 Chr 2:48); nor is it certain that this portion of the genealogy is in its original position. On the difficulties of the genealogy in 1 Chr 2:42–50a see Williamson (*Chronicles* NCBC, 54–55) and Braun (*1 Chronicles* WBC, 40–41). This name, meaning "directed of the Lord," occurs nowhere else in biblical literature.

CRAIG A. EVANS

JAHDIEL (PERSON) [Heb *yaḥdîʾēl*]. Manassite tribal leader in Transjordania. The name means "May God rejoice" (*ḥādâ* + *ēl*). He is described as a mighty warrior and included in the part of the tribe of Manasseh that occupied the area from Bashan to Mount Hermon (1 Chr 5:24). According to 1 Chr 5:26, these Manassites, along with the Gadites and Reubenites in Transjordania, were exiled by the Assyrians under Tiglath-pileser III. This note finds support in other texts (e.g., 2 Kgs 15:29) that mention the Assyrian campaign in Galilee and Gilead during the Syro-Ephraimitic War (ca. 733 B.C.E.).

The list of 7 "mighty warriors, famous men, heads of their fathers' houses" in 1 Chr 5:24, which includes Jahdiel, is not part of a larger sequence, but is a genealogical fragment. It makes no attempt to relate any of the 7 men to Manassite clans, and in none of the other genealogies for the tribe (Num 26:29–34; Josh 17:1–2) is one of the 7 mentioned (unless Epher is the corrupted form of Hepher, who appears in the other lists). This has led some to question the source and accuracy of 1 Chr 5:24 (Williamson *Chronicles* NCBC, 66–67). In addition, the verse itself shows evidence of textual corruption. Although Jahdiel's name occupies the prominent 7th position in the present form of the Heb text, there is a *waw* (a conjunctive particle) that precedes the 1st name on the list, and this may indicate that the name (or names), which originally began the sequence, have been lost.

Finally, it is surprising to find Manasseh treated at all in 1 Chronicles 5, since the tribe is the subject of a much more extensive genealogy in 1 Chr 7:14–19. It may be that the author or a later editor was motivated to treat Manasseh with the other Transjordanian tribes in chap. 5, since Manasseh itself was divided into 2 segments—one in Transjordania (1 Chr 5:24) and one in W Palestine (1 Chr 7:14–19; Williamson NCBC, 66–67).

M. PATRICK GRAHAM

JAHDO (PERSON) [Heb *yaḥdô*]. A Gadite who is mentioned only in 1 Chr 5:14. The suggestions that his name should be spelled *yaḥday* or *yaḥdōy* are supported (but by no means established) by the Gk mss that conclude the name with an *iota*. It may be that the name was derived from the imperfect form of the Heb verb *ḥādâ* "rejoice" and expresses the desire that deity rejoice over the one named (Noth *IP*, 28, 210). Usually, however, the name has been associated with *yāḥad* "to be united" and given no particular meaning aside from its significance as a personal name.

M. PATRICK GRAHAM

JAHLEEL (PERSON) [Heb *yaḥlĕʾēl*]. JAHLEELITES. Third of the 3 sons of Zebulun mentioned in the genealogy of Jacob (Gen 46:14). Jahleel was the grandson of Jacob and Leah by their 6th and youngest son Zebulun (Gen 30:20). His name is included among the 33 sons and grandsons of Jacob and Leah (Gen 46:15) who descended with their families to join Joseph in Egypt, after Jacob heard that his son was alive. Jahleel became the clan leader of the Jahleelites, one of the clans of Zebulun (Num 26:26); however, nothing else is known about Jahleel and his family

outside these two genealogical lists. His name does not appear in the Chronicler's list because in the genealogies of the sons of Jacob (1 Chronicles 4–7) the name of Zebulun is not included among the genealogies of the other tribes

CLAUDE F. MARIOTTINI

JAHMAI (PERSON) [Heb *yaḥmay*]. Descendant, perhaps grandson, of Issachar according to the genealogy of 1 Chr 7:1–5. See 1BSAM.

M. STEPHEN DAVIS

JAHZAH (PLACE) [Heb *yahṣâ*]. See JAHAZ.

JAHZEEL (PERSON) [Heb *yaḥṣᵉʾēl*]. Var. JAHZIEL. JAHZEELITES. The 1st of the 4 sons of Naphtali (Gen 46:24). Jahzeel was also the grandson of Jacob and Bilhah (Gen 30:7–8), the maid whom Laban gave to his daughter Rachel at the occasion of Jacob's marriage to Rachel (Gen 29:29). He is included in the genealogy of the family of Jacob at the time the patriarch sojourned to Egypt to visit his son Joseph. Nothing is known about Jahzeel. According to the list of the clans and tribes of Israel in the book of Numbers, Jahzeel became the ancestral leader of the clan of the Jahzeelites, one of the clans of Naphtali (Num 26:48). In the genealogy of Naphtali in 1 Chr 7:13, Jahzeel's name is spelled Jahziel (Heb *yaḥṣîēl*).

CLAUDE F. MARIOTTINI

JAHZEIAH (PERSON) [Heb *yaḥzĕyāh*]. An opponent of Ezra's investigation of the men who had married foreign women (Ezra 10:15 = 1 Esdr 9:14). Noth categorized the name Jahzeiah as a "wish name" meaning "may Yahweh see" (*IPN*, 198). The Hebrew text reads literally that Jonathan and Jahzeiah "stood 'against' (*ʿal*) this," and most scholars take this to mean that they were opposed to the plan to have officials investigate the alleged marriages between Israelite men and foreign women on a case by case basis (so the RSV). It is possible to translate *ʿal* as "beside," implying their support for this program. In addition, the LXX reads "were with me on this," a reading apparently based on a slight emendation of the Hebrew text (from *ʿāmĕdû* to *ʿimmādî*). This may receive further support from the parallel text in 1 Esdr 9:14–15 which states that Jonathan and Jahzeiah "undertook the matter on these terms, and Meshullam and Levi and Shabbethai served with them as judges." On the other hand, the context in Ezra 10 implies that the majority of the people supported the plan and only these two opposed it. However, they may well have favored the forced divorces and were opposed only to the delay in implementing Ezra's policy. Regarding the two who "helped" Jonathan and Jahzeiah in their opposition, Meshullam was a companion of Ezra (8:16) and Shabbathai was a Levite whose name suggests he was from a family of strict observers (Clines *Ezra, Nehemiah, Esther* NCBC, 130). Thus, Jahzeiah probably sought even swifter and harsher treatment of the offenders (Williamson *Ezra, Nehemiah* WBC, 156).

JEFFREY A. FAGER

JAHZERAH (PERSON) [Heb *yaḥzērâ*]. A member of the priestly brotherhood of Immer and the grandfather of Maasai. In 1 Chr 9:12 he is listed in the genealogy of Maasai, who was one of the priests to settle in Jerusalem following the return from exile. A similar list in Neh 11:13 records the name as Ahzai, and gives his grandson's name as Amashsai. The genealogies presented in these 2 texts are as follows:

1 Chr 9:12

Immer → Meshillemith → Meshullam → Jahzerah → Adiel → Maasai

Neh 11:13

Immer → Meshillemoth → → Ahzai → Azarel → Amashsai

Scholars generally assume that the list in 1 Chronicles is dependent in some way upon that in Nehemiah, and the former appears to be a later updated version which reflects continuing developments and interests in the postexilic community. The priority of the list in Nehemiah is supported by the fact that the names in v 13 are better attested than are those in 1 Chr 9:12. Thus Maasai, though attested elsewhere, is likely a scribal error for Amasai or its variant Amaśai, both of which are reflected in the conflated reading Amashsai found in Neh 11:13.

The preferable reading of the name Jahzerah, therefore, is Ahzai. While the name Jahzerah is dubious in meaning, the name Ahzai is well attested in such forms as Ahaz and Ahaziah ("The Lord has seized"). The name Jahzerah perhaps found its way into the list in 1 Chr 9:12 because of the association of the name Hezir (from the same root as Jahzerah) with the eponym Immer in 1 Chr 24:14–15 where they are listed together as the 16th and 17th courses of priests established by David. In addition, Neh 10:20 juxtaposes the names Meshullam and Hezir. It seems possible, then, that the name Ahzai was changed in the development of the tradition to Yahzerah under the influence of the association of the names Immer and Meshullam with Hezir. For further discussion see *1 Chronicles* WBC and *Ezra Nehemiah* NICOT.

RODNEY R. HUTTON

JAHZIEL (PERSON) [Heb *yaḥăṣîʾēl*]. See JAHZEEL.

JAILOR, PHILIPPIAN. See PHILIPPIAN JAILOR.

JAIR (PERSON) [Heb *yāʾîr; yaʿîr* Q/*yaʿûr* K]. The English spelling represents 2 Hebrew personal names with different spellings. Spelled with *ʾalep*, 3 persons mentioned in the OT bear this name ("Let [God] enlighten"). A fourth, spelled with *ʿayin*, is named in 1 Chr 20:5 ("Let [God] arouse").

1. An eponymous son of Manasseh in Num 32:41; Deut 3:14; 1 Kgs 4:13 (cf. Josh 13:30). For the related gentilic

JAIRITE, see 2 Sam 20:26. Jair acquired control of a number of villages in Gilead, more specifically in the region of ARGOB (Num 32:41), which is equated with Bashan in Deut 3:14. The group came to be known as Jair's Villages (see also HAVVOTH-JAIR). In 1 Chr 2:22, theology may have crept into genealogy (Myers *1 Chronicles* AB, 14). There Jair's father is Segub of Judah and his mother a daughter of Machir, which may also stand for Manasseh.

2. One of the leaders of Israel in the pre-monarchy era (Judg 10:3–5), about whom very little information survives. The designation "minor judge" should be taken as a merely quantitative description of narrative scope, not suggestive of an office different from that of the so-called deliverer-judge (Mullen 1982). Jair was a Gileadite whose leadership lasted for 22 years. He had 30 sons and controlled 30 towns. His tomb was at Kamon, usually identified with modern Qamm, on the Jordan-Irbid road, a location considerably S of Argob-Bashan. Yet there is surely some relation to 1. above.

3. A Benjaminite, with no indication of relationship to the above. Jair is the (immediate?) ancestor of Mordechai, Esther's guardian (Esth 2:5).

4. The father of Elhanan who killed Lahmi the brother of Goliath, according to 1 Chr 20:5. But according to 2 Sam 21:19, the one who slew Goliath was Elhanan son of Jaareoregim. The latter may be corrected on the basis of LXX LMN and 1 Chr 20:5, to read "a Jearite." Elhanan's home Bethlehem is closely associated with Kiriath-jearim, "village of the Jearites" (McCarter *2 Samuel* AB, 449).

ROBERT G. BOLING

JAIRITE [Heb *yā'îrî*]. An adjective used to describe Ira, one of David's personal priests (2 Sam 20:26). The adjective refers to clan origin, Jair having been the head of a clan in the tribe of Manasseh (Num 32:41; Deut 3:14; 1 Kgs 4:13; 1 Chr 2:22, 23). The obvious problem that arises from this data is that Ira is a non-levitical priest. Some scholars propose the reading "Yattirite" instead of "Jairite" since Yattir was a priestly city in the hill country of Judah (cf. LXX [Codex Coislinias, Basiliano-Vaticanus] and the Peshitta). Ira would then probably have been a Levite. This expedient, however, is unnecessary since it is clear in the early monarchy that a special class of priests served the king (Armerding 1975; McCarter *2 Samuel* AB, 256–57).

STEPHEN G. DEMPSTER

JAIRUS (PERSON) [Gk *Iairos*]. A Greek form of the Hebrew proper name, *Yā'îr*, "he enlightens" (Num 32:41; Deut 3:14; Josh 13:30; Judg 10:3; Esth 2:5). Jairus is identified as a "ruler of the synagogue," (*archisynagōgos*), a title associated with a broad range of duties within the ancient synagogue. He comes to Jesus and asks him to heal his dying daughter (Mark 5:21–24, 35–43; Luke 8:40–42, 49–56; cf. Matt 9:18–19, 23–26 where Jairus is not mentioned by name). In the interval between Jairus' request and the arrival at his house, the girl is reported dead; Jesus insists she is merely sleeping and raises her up. Mark transmits his command in Aramaic, *"Talitha, koum,"* "Little girl, arise"; while Luke has only the Greek, "Child, arise." Matthew does not report a command.

Scholars disagree as to whether Jesus' reference to the child's sleep is meant literally, figuratively (1 Thess 5:6) or as a synonym for death (1 Thess 5:10). In any case, the 3 evangelists clearly mean to report a miracle of Jesus and not a mere misunderstanding of the girl's state.

In all 3 synoptic accounts, the story of the raising of Jairus' daughter is interrupted by the story of Jesus' healing the woman with a hemorrhage. Scholars disagree as to whether the 2 stories were joined by Mark and the arrangement retained by Matthew and Luke, or if they were joined in an earlier, pre-Marcan cycle of miracle stories.

Since the name "Jairus" is missing in Matthew's account and in MS D of Mark, some scholars question whether it was original to Mark's version or was added by a later scribe. Luke may have supplied a name for an anonymous figure as later writers were known to do, and a scribe may have then added it to Mark in light of Luke's account. However, more recent opinion generally favors the view that the occurrence of Jairus's name is at least as old as the traditions of his daughter's resuscitation.

CLAUDIA J. SETZER

JAKEH (PERSON) [Heb *yāqeh*]. The father of Agur according to Prov 30:1. Beyond this reference nothing is known of Jakeh, and the LXX does not even recognize *yāqeh* as a proper name. As the verse is translated in the RSV, he was from a place known as Massa, but even this is questionable. See discussion in AGUR; LEMUEL. Traditionally, the name Jakeh was associated with David, while Agur was identified as Solomon. The name is derived from various Hebrew stems by modern authors. It is most often traced to an Arabic word with the meaning "to preserve." Another possible Hebrew stem is identical to the one given above except for a *mappiq* in the final *he*. This stem basically means, "to be obedient" (*BDB*, 429). It is possible that either of these stems was attached to a divine name (Gemser *Sprüche Salomos* HAT 16, 103). The resulting form would be *yākehyāh* ("Yahweh preserves" or "one obedient to Yahweh"). The stems mentioned do not occur often enough to provide a certain etymology.

DONALD K. BERRY

JAKIM (PERSON) [Heb *yāqim*]. **1.** A Benjaminite, the son of Shimei and inhabitant of Jerusalem (1 Chr 8:19). Geography seems to provide the organizing principle of the genealogical list in which Jakim appears. He thereby provides important demographic evidence for the population of Jerusalem at some point in its history. Rudolph (*Chronikbücher* HAT, 77) has argued that either Josiah's reign or Nehemiah's governorship provides a suitable background for the appearance of Benjaminites in Jerusalem. The commonality of the names of the 9 sons of Shimei with names recorded elsewhere in Chronicles or in Ezra and Nehemiah (Curtis and Masden *The Books of Chronicles* ICC, 162) suggests that Jakim represents a segment of the postexilic, rather than the preexilic, population of Jerusalem.

2. A priest who received the 12th position in the priestly order of the temple during David's reign (1 Chr 24:12). An evaluation of the historical reliability of his appearance depends basically upon the literary context of 1 Chr 24:1–19. Though generally agreed that this list of priests originated after the Exile, its exact date remains debated. Liver (1968: 9.33–52) associates the 24-course priestly organization to the reforms of Nehemiah, while Williamson (1979: 262–68) assigns it to the late Persian period. Due to genealogical connections between 1 Chr 24: 7–18 and the Hasmonean priestly claims, Dequecker (1986: 94–106) dates the list to the Hasmonean era. The stylistic characteristics of the list, however, seem to link the list to the time of the composition of Chronicles. The Chronicler may have retrojected the name "Jakim" into the reign of David from an individual from Jerusalem in his day.

JOHN W. WRIGHT

JALAM (PERSON) [Heb *yaʿlām*]. The 2d son of Esau and Oholibamah (Gen 36:5, 14; 1 Chr 1:35). He is counted among the Edomite "tribal chiefs" (Heb *ʾallûpîm*) in Gen 36:18, and as such was likely considered to be one of the Edomite clans (or tribes?). The name could be interpreted as an animal name **w/yʿl,* "ibex," or perhaps it could be derived from **ʿlm,* "to be strong (?)". Psalm 55:20 [—Eng 55:19], which read *yšmʿ ʾl wyʿnm wyšb qdm,* could be emended to read *yšmʿ>l wyʿlm wyšb qdm,* "Ishmael, Jalam, and the inhabitants of the east."

ULRICH HÜBNER

JALON (PERSON) [Heb *yālôn*]. One of the sons of Ezrah (1 Chr 4:17). Nothing is otherwise known of him.

H. C. LO

JAMB [Heb *ʾayil*]. An architectural term. The Heb word is found in the description of Solomon's Temple, where it refers to the "doorposts" (RSV) of the entrance to the inner sanctuary (*dĕbîr*). The RSV uses the word "jamb" to translate the 18 occurrences of *ʾayil* in Ezekiel's temple description (between Ezek 40:9 and 41:3). Although the exact nature of these architectural elements is difficult to determine, a prominent feature of the jambs that were part of the courtyard gateways was that they were decorated with palm trees. This detail is omitted for the jambs of the doorways of the temple building itself.

CAROL MEYERS

JAMBRES (PERSON). See JANNES AND JAMBRES.

JAMBRI (PERSON) [Gk *Iambri*]. The sons of Jambri from Medeba waylaid and killed John, brother of Jonathan the Hasmonean, on his way to parley with the Nabateans (1 Macc 9:36). Jonathan and Simon proceeded to exact revenge for the murder of their brother by attacking the Jambrites at a wedding celebration (9:37–42). The Gk *iambri* would appear to be derived from the Heb *bĕnê yāʿamrî.* The personal name *yʿmry* was found on a Nabatean inscription dated from ca. 39 C.E. (*CIS* 2/1/2: 195; Clermont-Ganneau 1888: 185). It is thus plausible that the Jambrites were themselves a Nabatean clan; however, the text in 1 Maccabees does not so indicate. Josephus refers to the Jambrites as "sons of Amaraios (*amaraious*)" (*Ant* 13.1.2 and 4 §§11, 18–21). Older scholarship contended that Josephus reflected the original Heb behind the LXX which was Jambri was "Amorite" in that Num 21:29–31 identifies Medeba as an Amorite city (Marcus 1933: 233, n.d). Goldstein (*1 Maccabees* AB, 384) posits that Josephus' use of Amaraios suggests the Semitic *ʿmry* which, through slurring, doubling *yod,* or scribal corruption, resulted in *amaraious.*

MICHAEL E. HARDWICK

JAMES (PERSON) [Gk *Iakōbos*]. It is unclear how many different persons bear this name in the NT, where it occurs 42 times (the majority of these are in Mark; the name never occurs in John). The name was evidently quite popular in the 1st century. Three persons bearing the name James are relatively familiar to us from the NT. Fully half of the occurrences refer unquestionably to James the son of Zebedee, one of the twelve disciples chosen by Jesus. Next most frequently referred to, in about a quarter of the occurrences, is James the brother of Jesus, who was to assume the leadership of the early Jerusalem church. See JAMES, BROTHER OF JESUS. A second disciple named James is mentioned in all four lists of the Twelve, being specified as the son of Alphaeus. Beyond the clear references to these three, we know of probably at least two

others named James: one a son of a certain Mary (unless this James is to be regarded as the "brother" of Jesus mentioned above, and thus in reality his cousin, or unless he is to be identified with James the son of Alphaeus); the other the father of the Judas who is listed as one of the Twelve in the Lukan lists. The identity of two other persons named James remains unclear: the author of the book of James (Jas 1:1) and the brother of the author of the book of Jude (Jude 1). These probably refer to the brother of Jesus, at least pseudonymously, but it is still possible that one or two other persons could be in view. If so, and if these two are not the same and not to be identified with any of the other persons named James mentioned above, we could have up to as many as seven individuals bearing the name James in the NT.

1. James the son of Zebedee. Among the first of the twelve disciples called by Jesus were James and his younger brother John, "the sons of Zebedee" (by which expression they are sometimes referred to without the mention of their specific names, as in Matt 20:20; 26:37; 27:56; John 21:2). According to Matt 27:56, the third of the three women watching the crucifixion at a distance was "the mother of the sons of Zebedee." Matthew's source (Mark 15:40) refers to this third woman as Salome. If, as seems probable, Matthew is identifying Salome for his readers, rather than substituting another woman, then the wife of Zebedee and the mother of James and John was Salome. The further speculation that this Salome was a sister of Mary, the mother of Jesus, and that therefore James and John were cousins of Jesus, rests on a very precarious identification of the unnamed "sister of his mother" among those standing beside the cross, mentioned in John 19:25 (cf. the reference to "many other women" at the crucifixion in Mark 15:41).

Because Zebedee has "hired servants" (*misthōtoi,* Mark 1:20) and Salome seems to have materially supported Jesus during his Galilean ministry (Mark 15:40–41; Matt 27:55–56; cf. Luke 8:2–3), it is arguable that James and John grew up in a relatively prosperous home. Like their father, they were fishermen and had become partners with Simon Peter in a fishing business (Luke 5:10) in Bethsaida on the Sea of Galilee, presumably near their home.

James the son of Zebedee is never mentioned in the NT apart from reference also to his brother John. Since he is almost consistently named first (except in Luke 8:51; 9:28; and in the list of the eleven in Acts 1:13), and John is repeatedly designated "the brother of James" (while the reverse never happens, except in Acts 12:2, where it is necessary to indicate which James was martyred), he was probably the elder of the two. He has also sometimes been called "the greater," in order to distinguish him from others named James in the NT (cf. James "the less" in Mark 15:40).

In the lists of the Twelve, his name is the third (Matt 10:2; Luke 6:14; Acts 1:13), except in Mark 3:17, where it is the second, probably in order to group the names of the three—Peter, James, and John—who formed the inner, privileged circle of disciples. These three alone were allowed to accompany Jesus to witness the raising of the little daughter of Jairus (Mark 5:37 = Luke 8:51), to witness the transfiguration of Jesus (Mark 9:2 = Matt 17:1; Luke 9:28), and to accompany Jesus in the garden of Gethsemane (Mark 14:33; cf. Matt 26:37). The three are joined by Andrew in the private questioning of Jesus that leads to the Markan eschatological discourse (Mark 13:3; cf. too the presence of these four at the healing of Peter's mother-in-law, Mark 1:29).

The immediate response of James and John to the call of Jesus, even to the point of leaving their father with the servants in the boat (Mark 1:19–20 = Matt 4:21–22), suggests the possibility of some previous contact. If, on the other hand, Peter and Andrew had learned of Jesus as disciples of John the Baptist (John 1:35–42), James and John would undoubtedly have heard the good news from them.

According to Mark 3:17, Jesus gave the appellation "Boanerges" to James and John, an Aramaic name meaning probably "sons of thunder" or "sons of trembling." This has been taken to indicate the volatile temperament of the brothers as revealed, for example, in their suggestion that the unreceptive Samaritans be consumed by fire called down from heaven (Luke 9:54; cf. Mark 9:38). Further evidence of a certain impetuosity on the part of the brothers may be seen in their extraordinary request to sit at the positions of honor on either side of Jesus when he came into his glory (Mark 10:35–37; the request is made by their mother, according to Matt 20:20–21).

In his response to their improper request, Jesus tells the brothers that they must be prepared to "drink the cup" that he is to drink and to be "baptized with the baptism" that he must accept, i.e., to be killed (Mark 10:38 = Matt 20:22). Their easy acceptance of this eventuality is followed by the ominous prophecy of Jesus that it would indeed be so. This came true for James who, so far as can be known, was the first of the Twelve to suffer martyrdom (Acts 12:1–2), and the only one of the Twelve whose martyrdom the NT records. Probably in A.D. 44, but not later, Herod Agrippa I killed James in a campaign against the Church designed apparently to gain the favor of his Jewish subjects. Given the importance of James in the synoptic tradition, it is remarkable that this reference to the martyrdom of James is the only mention of him in the book of Acts after the list of the eleven in Acts 1:13. Book IV of the *Apostolic History* of Abdias attempts, in the fashion of the NT apocrypha, to fill in this gap by recounting some of the (fictional) deeds of James.

Eusebius records a tradition from Clement of Alexandria's *Hypotyposes* that the guard (or possibly accuser) who brought James to the court was so deeply affected by his witness that he became a believer on the spot and then went with James to be beheaded with him, after having first received forgiveness from him (*Hist. Eccl.* 2.9.2–3). Much later tradition (6th or 7th century) alleges that James preached the gospel in Spain and accounts for the fact that James (St. Iago) was to become the patron saint of Spain. Further romantic tradition maintained that the body of James was placed in a ship which was guided by angels to Iria in NW Spain, and was ultimately brought to Santiago de Compostela, where the shrine of St. Iago remains the goal of pilgrimages to this day.

2. James the son of Alphaeus. One of the twelve apostles about whom nothing is known. He is referred to only four times in the NT, namely in the four lists (Matt 10:3; Mark 3:18; Luke 6:15; and Acts 1:13). Here he is always called

James the son of Alphaeus and his name is firmly fixed in the ninth position, at the head of the third group of four names. He is known in church tradition as James "the Less" in contrast to the son of Zebedee, who is known as "the Great." This does not, however, require identifying him with the James, the son of Mary, referred to in Mark 15:40, who is designated *ho mikros* ("the small" or "the younger," so RSV). On this possible but unnecessary identification, see below.

In the only other occurrence of the name Alphaeus in the NT, Levi is described as "the son of Alphaeus" (Mark 2:14; Levi is probably another name given to Matthew, cf. Matt 9:9 and Luke 5:27). This has naturally given rise to the speculation that Levi (Matthew) and James were brothers. But since the evangelists seem eager to point out pairs of brothers among the Twelve (as in Peter and Andrew, and James and John) but never refer to Matthew and James as brothers, this conclusion seems very improbable.

The only further question that calls for discussion is whether this James is possibly referred to in any of the other occurrences of the name in the NT, although this may initially seem unlikely since he is so consistently referred to as "the son of Alphaeus." Several possibilities have nevertheless been argued.

a. Jerome (*adv. Helvid.*), who was followed by Augustine, in fact identified this James with the James who is elsewhere called "the brother" of Jesus. He and his brother Joses (= Joseph) are then understood as the sons of the Mary mentioned in Mark 15:40 (= Matt 27:56; cf. Mark 6:3), who in turn is identified as the Mary who is the husband of Clopas and the sister of the mother of Jesus according to John 19:25. The fact that James is the son of Alphaeus, however, necessitates the further speculation that Clopas and Alphaeus are names of the same person. The acceptance of such an implausible conclusion (despite the later argument that the two names trace back to the same Aramaic name, *hlpy*) is to be explained by Jerome's desire to defend the perpetual virginity of Mary, and so to understand the "brothers" of Jesus as in reality cousins (with the added advantage that James "the brother of Jesus" who assumes so important a position in the early Church becomes one of the Twelve).

b. James the son of Alphaeus has also been identified as the James referred to in the Lukan lists (Luke 6:16; Acts 1:13) in the phrase "Judas of James," by understanding this as "Judas the brother of James" (so KJV). This view is taken up by proponents of the preceding view to identify this Judas with the "brother" (in their view "cousin") of Jesus mentioned in Mark 6:3 (= Matt 13:55). In these two lists, however, nowhere is the relationship of brothers indicated by the simple genitive (in Luke 6:14 Andrew is very specifically "the brother" [*ton adelphon*] of Simon Peter) and Luke regularly inserts *adelphos* when it is called for (cf. Luke 3:1; 6:14; Acts 12:2). The most natural understanding of the simple genitive is "the son of," as in the case of "James of Alphaeus," which is universally understood as "the son of Alphaeus."

c. It remains a possibility, although an extremely remote one, that James the son of Alphaeus is the author, or pseudonymous author, of the book of James (Jas 1:1), and further that he is the brother of Jude who is referred to in Jude 1. James the son of Alphaeus is so consistently known as such in the lists of the Twelve, in order to distinguish him from others bearing the same name, that it is most improbable that he is in view here, where the name occurs without the similar designation. There is furthermore reason to believe that the James in view in these two instances is meant to be James the brother of Jesus.

Late tradition relates the legend that James the son of Alphaeus labored in SW Palestine and Egypt and that he was martyred by crucifixion in Ostrakine, in lower Egypt (Nicephorus, 2.40; but in Persia according to Martyrologium Hieronymi [*Patrol.* 30.478]).

3. James the son of Mary. If the arguments presented above are sound, then this James is yet another James, and again one of whom we know next to nothing. He is probably referred to four times in the NT, in each instance as the son of Mary. He is mentioned alone in Mark 16:1 and Luke 24:10 (where his mother is mentioned as a witness of the empty tomb), while in a second pair of passages he is mentioned with his brother Joseph (Matt 27:56), who is also called Joses, a Grecized form of Joseph (Mark 15:40; cf. 15:47). The way the mother of these brothers is named, not to mention that she is named after Mary Magdalene among the women at the crucifixion of Jesus, makes it virtually impossible that she is the same Mary as the mother of Jesus. We have, therefore, to reckon with a second Mary who had sons named James and Joses (cf. Mark 6:3, where two additional brothers of Jesus, Judas and Simon, are also named). If this Mary can be identified with the Mary the wife of Clopas, the sister of Mary the mother of Jesus, in John 19:25—at best a matter of speculation—then this James would be a cousin of Jesus.

In Mark 15:40 this James is called *ho mikros,* obviously to distinguish him from others named James. This epithet probably refers to the small stature of this James (cf. Luke 19:3) or possibly to his youth, but less likely is the view that it is used metaphorically to suggest his relative unimportance. The later custom of referring to the apostle James the son of Alphaeus as "the Less," in comparison with James the son of Zebedee as "the Great," probably depends (and perhaps mistakenly) on this passage, although there is little else that supports the view that this James is the same person as James the son of Alphaeus.

4. James the father of Judas. This James is mentioned only in the Lukan lists of the apostles (Luke 6:16; Acts 1:13), as the father of the apostle Judas, who is listed in the eleventh position but whose name does not occur in the other two lists (the same as the Judas in John 14:22?). It is very unlikely that the simple genitive *iakōbou* is to be understood as "the brother of James" (see above). The name of the father is apparently used to distinguish his son from the other, the infamous, Judas among the Twelve. There is no reason to identify this otherwise unknown James with any of the persons of the same name discussed above.

DONALD A. HAGNER

JAMES, THE APOCRYPHON OF (NHC I,2). A Coptic translation of an originally Greek document that gives an account of the teachings of Jesus in the form of a postresurrection discourse of the Lord and dialogue with two of his disciples, James and Peter. Since the document is untitled in the original, scholars have assigned its title on the basis of the text's own reference to itself as a "secret book" (Gk: *apokryphon*) that allegedly was revealed by Jesus to his brother, James the Just. It survives as the second of five tractates of Codex I of the Coptic Gnostic Library from Nag Hammadi, which was buried in the 4th century and discovered in Egypt in 1945. The Coptic (Subachmimic) text, which is well preserved, is conserved in the Coptic Museum of Old Cairo. When first published in 1968, the document was referred to as the "Apocryphal Letter of James" (*Epistula Iacobi Apocrypha*). Today it is customarily cited with the abbreviation *Ap. Jas.*

Although *Ap. Jas.* has the external appearance of a letter (prescript: 1.1–8; proem: 1.8–2.7; postscript: 16.12–30) and narrates accounts of Jesus' postresurrection appearance (2.7–39) and ascension (15.5–16.11), the body of the text (2.39–15.5) has no narrative structure. Instead, it is composed largely of sayings: parables, prophecies, wisdom sayings, rules for the community, and creedal formulas make up the bulk of the traditions presented as instructions of the risen Lord. The letter frame is a secondary addition by the editor of *Ap. Jas.*, designed to preface the revelatory discourse and dialogue that constitute three-fourths of the text, and constructed to give that revelation the authority of a "secret book" which only the elect were privileged to receive.

Since *Ap. Jas.* apparently has not been quoted or referred to in other early Christian literature, and is extant solely in translation in a 4th-century Coptic manuscript, the identification of the sources of its traditions and of the date and nature of its composition has been a matter of considerable debate. However, a clue is provided in the opening scene of the text (2.7–16), which purports to describe the disciples' scribal activity as "remembering what the Savior had said" and "setting it down in books." This scene portrays a situation in which the literary production of sayings of Jesus was still being vigorously pursued; it reflects a time in which written texts with scriptural authority were not yet normative. The reference to "remembering" provides the critical clue to the date and character of this activity, since this term was employed technically in the early Church to describe the process of creating, collecting, and transmitting sayings of Jesus (*1 Clem.* 13.1–2; 46.7–8; Papias's "Exegesis of the Sayings of the Lord," in Eus. *Hist. Eccl.* 3.39.3–4, 15–16; Polyc. *ep.* 2.3; Jude 17; Acts 20:35; John 2:17, 22; 15:20). The widespread use of the formula of "remembering" to introduce collections of sayings, both oral and written, and to refer to their composition in written documents, was a practice which began with the relatively free production of sayings traditions and which continued, despite the existence of written gospels, without restriction to the Gospels of the NT. The fact that every such reference to "remembering" is attested in documents that date from the end of the 1st to the middle of the 2d century C.E. strongly suggests that *Ap. Jas.* was also composed during this period. By identifying its discourse and dialogue as the "remembered" words which the risen Lord revealed privately to James and Peter, *Ap. Jas.* indicates that the text is to be understood principally and programmatically as a collection of "secret sayings" of Jesus.

Examples of early and independent sayings embedded in *Ap. Jas.* include the following: "I shall go to the place from which I have come" (2.24–25); "Truly I say to you, no one ever will enter the kingdom of heaven ⟨unless⟩ I bid him" (2.29–32); "For it (the kingdom) is like a date palm ⟨shoot⟩ whose fruits dropped down around it. They caused the productivity (of the date palm) to dry up" (7.24–26, 28); "For the kingdom of heaven is like an ear of grain which sprouted in a field. And when it ripened, it scattered its fruit and, in turn, filled the field with ears of grain for another year" (12.22–27). Some of *Ap. Jas.*'s sayings are also found in the canonical Gospels. The beatitude, "Blessed are those who have not seen [but] have [had faith]," that is preserved in *Ap. Jas.* 12.40–13.1 = John 20:29 is the closest parallel with any saying in the NT.

Careful examination of this and other parallels provides no evidence that *Ap. Jas.* is literarily dependent on the NT as a source for its traditions. In a few instances, sayings that are transmitted as words of Jesus in the Synoptic Gospels are, in *Ap. Jas.*, preserved as questions or comments of the disciples. This use of originally discrete sayings to compose discourses and dialogues marks an important stage in the development of the tradition leading from the simple collection of sayings to the creation of longer revelation discourses and dialogues. As a wisdom book based on an independent sayings collection that was contemporary with other early Christian writings which presented sayings of Jesus, *Ap. Jas.* is to be acknowledged as a primary source of, as well as witness to, the Jesus tradition.

JAMES, BROTHER OF JESUS. One of the various Christians named James in the NT is the James who is identified as "the Lord's brother" (Gal 1:19), a "pillar" of the Jerusalem Church (Gal 2:9), a participant in the conference(s) at Jerusalem (Gal 2:1–10; Acts 15:1–20), and as one who experienced the risen Lord (1 Cor 15:7). It is generally agreed that this person, mentioned by Paul in 1 Cor 15:7; Gal 1:19; 2:9, 12 is the same man referred to by Acts 12:17; 15:13; 21:18. As "the Lord's brother," this person is also equated with the James of Mark 6:3 (= Matt 13:55); Jas 1:1 and Jude 1.

The degree of blood relationship between James and Jesus has been debated at length. See JESUS, BROTHERS AND SISTERS OF. Explanations fall into 3 categories. (1) Some hold, following the most normal interpretation of the NT language, that James was a son of Joseph and Mary, evidently born after Jesus. (2) Others, with reference to various apocryphal sources, maintain that James was an older foster brother of Jesus, i.e., a son of Joseph by a previous marriage. This view has been held by many Protestants and is favored by the Greek Orthodox and other Eastern churches. (3) A third interpretation theorizes that James and Jesus as brothers were, according to Semitic idiom, cousins. This third approach concludes that since James is called an apostle (Gal 1:19), he was in fact James the son of Alphaeus (Mark 3:18), also known as James "the Younger" (Mark 15:40), the brother of Joses. The mother of James and Joses, named Mary in Mark 15:40 and Matt 27:56, is taken to be identical with Mary the wife of Clopas (equated with Alphaeus), the sister of Jesus' mother, referred to in John 19:25. By this reasoning Jesus and James would have been first cousins. While this has been the preferred Roman Catholic explanation, the German Catholic exegete Pesch (*Markusevangelium I* HTKNT, 322–24) has affirmed the validity of the first approach, thus stimulating renewed debate among Catholics (see Rahner 1983: 218–31).

The identification of James the brother of the Lord with James the son of Alphaeus has caused him to be known in Christian tradition as "James the Less" (from Mark 15:40 KJV) in contrast to "James the Great," the son of Zebedee. (There is no doubt that James the brother of the Lord is to be distinguished from the son of Zebedee since the latter James was martyred about 44 C.E. and therefore could not be the James referred to by Paul and Acts.)

Whatever the blood tie between James and Jesus (see the critical evaluation of the three views by Filson, *IDB* 1: 471–72), it is evident from references to James in Paul's letters and Acts that this man played a significant leadership role in the Jerusalem church. In a much discussed statement in Gal 1:19 (see e.g. Trudinger 1975; Howard 1977), Paul appears to accord to James the status of apostle, although not necessarily implying that he was one of the Twelve. Rather, like himself, Paul includes James among all those apostles to whom the risen Christ had appeared (1 Cor 15:7). Since James is not known to have been one of the followers of Jesus before his death, it is possible that it was this postresurrection appearance of the Lord which produced in James a conversion to discipleship comparable to that which Paul himself later experienced (Bruce 1977: 87).

James is also referred to by Paul, along with Cephas and John, as reputed to be one of the "pillars" *(stuloi)* of the Jerusalem church (Gal 2:9). The metaphor could be an eschatological one which originated not with Paul but with the Jerusalem Christians. Paul was apparently aware that they spoke of their leading apostles as "pillars" because of the positions of importance they believed Paul, James, and John would occupy in the eschatological temple in the age to come (Barrett 1953: 12–13). Paul evidently regarded the views of the pillar apostles as important, yet he was also concerned to preserve the independence of his own apostleship. Hence, he reports that James and the others, having "perceived the grace" given to Paul, extended "the right hand of fellowship," i.e., approved the mission of Paul and Barnabas to the gentiles (Gal 2:9). At the same time the pillar apostles affirmed that their own mission was to the circumcised. The only restriction attached to their approval was that Paul and Barnabas should "remember the poor" (2:10), probably meaning the believers in Jerusalem.
